THE

THE PRINTER TO THE READER.

READER,

THY cheerful Acceptance of my former Endeavors in this kind for the Good of my Native Country, hath encouraged me, though with great Care, Labor, and Coſt, to preſent thee with the Learned, Judicious, and Worthily renowned *Riverius* his *Practice of Phyſick*. He is an Author now living, and ſufficiently known: And his Work will ſpeak for it ſelf, and praiſe him in the Gates.

And if thou ſhalt ſhew a Friendly Countenance to this worthy Stranger, who now ſpeaks Engliſh, I ſhall be thereby encouraged by all other means to ſtudy to promote thy Good by bringing thee more acquainted with this, and other excellent Authors.

And whereas ſome, either out of envy, or miſ-underſtanding, do condemn Works of this Nature, publiſhed in our Mother Tongue, alleadging chiefly, That ſuch Books encreaſe the number of Empericks; are a hinderance to learned and able Phyſitians; alſo occaſion ſome to hurt themſelves by raſhly practiſing on their own Bodies. I ſhall Anſwer to theſe Objections in order.

Firſt, as for Empericks: Theſe Books, and ſuch as theſe publiſhed in Engliſh, are ſo far from making more Empericks, that they will ſpoil thoſe that are, and make that we ſhall have fewer of them. For an Emperick being one that gives Phyſick (Hab Nab, as wee uſe to ſay) relying only on Experience, and what he hath ſeen done before him, not being able to give any reaſon touching the Diſeaſe, its Cauſe, or Cure: Theſe Books will teach ſuch perſons how to go upon good grounds, and to be able to give a ſolid Reaſon for what they do, and of Empericks, make them Rational Phyſitians, if they be men of good Natural Parts, though they be ignorant of all Tongues but their Mothers.

As for the hurt which is hereby pretended to be done to learned Phyſitians, it is a meer Imagination, and no learned Phyſitian that bethinks himſelf well, will ſo judg. For the uſe of theſe Books reſpects chiefly the Poor of this Nation, together with Sea-farers, and Soldiers. But for the Rich that have Money to ſpare, and bide at home, no otherwiſe (in point of practice) than for an honeſt Curioſity, and delightful Speculation. What rich man is there ſo mad, who reading a Chapter in theſe Books, and ſeeing what a world of Conſiderations and Cautions do belong to the knowledg and orderly Cure of every Diſeaſe, but will be more fearful than ever he was before to commit himſelf to the Cure of any but a learned Phyſitian. Now it is not by the Poor, but by the Rich, that the learned Phyſitian maintains himſelf; the poor are but a trouble to him, only before ſuch Books as theſe were extant in the Engliſh Tongue, Conſcience (ſomtime) forced the learned Phyſitian to take care of the poor, becauſe the unlearned were wholly unable: Whereas now there may be found Induſtrious men that know no more Languages than their Native one, who may in a rational way contribute to the Neceſſities of the Poor. Nay, theſe kind of Books are profitable to the learned Phyſitians; for many of the Gentry, eſpecially of the Ladies and Gentlewomen, viewing the ſtate of their own Bodies in ſuch Books as theſe (as in Looking-Glaſſes) will perceive certain Diſeaſes in themſelves, either now in being, or likely ere long to ſeize upon them, which otherwiſe they would never have ſo much as dream'd of; and thereupon crave the Advice and Aſſiſtance of the learned Phyſitian.

Alſo the Ladies and Gentlewomen being well read in ſuch Books as theſe, will better know how to demean themſelves towards their Huſbands, Children, or other Relations and Friends in their reſpective Sickneſs in point of ordering them, and will be more apprehenſive of the Phyſitians Directions, and ſo better able to practice them; alſo more capable of his Reaſons, and Prognoſticks, and ſo more confident and cheerfully obedient. All which wil very much advance the Cure, and conſequently the Honor and Gain of the learned Phyſitian: for as *Hippocrates* notes in his firſt Aphoriſm, *It is not enough towards the Cure that the Phyſitian do what is fitting; but the by-ſtanders and friends of the Sick muſt play their part, or all will not be well.*

And in the third place, Whereas it is objected, That people reading theſe Books, will practice upon themſelves and hurt themſelves.

I Anſwer, If they do, they have none to blame but their own folly; for it is not the intent of the Publiſhers of theſe Books, that every one that can read Engliſh, ſhould dare to take, of their own Heads, ſuch Medicines as are deſcribed in the ſaid Books. But our intent is, That where

in

in the Country there is no learned Physitian at hand; at Sea, in the States and Merchants Ship, where the Chyrurgion is compelled to act both his own, and the Physitians part; In Armies and Legners, &c. an ingenious and diligent Chyrurgion, Apothecary, or any other that hath from his youth been exercised in these kind of studies, and conversant about the sick, may attain such a competent knowledg in the Causes and Methodical Cure of Diseases, as they may with honor to themselves, and profit to the sick (by Gods Blessing) supply the place of a more learned Physitian. For the use of such persons, these Books are intended, and for diligent Midwives; and not that every Fool should turn Physitian, or that every Reader should tamper with him or her self.

Also divers Honorable Ladies and Gentlewomen, that out of a truly Christian and Charitable Disposition have not disdained, but counted it a great Honor to be helpful to the poor in the time of their sickness, may by perusal of these Books, and the like, confirm and encrease their knowledg, and become honorable Instruments in the Hand of God, of much relief and comfort to many poor distressed Creatures in their respective Countries and places of Habitation. For the worthy sakes of which honorable Ladies and Gentlewomen in the first and chiefest place, and for the ease of all others unacquainted with the Greek and Latin Tongues, and consequently unable to understand divers terms of Art, and other words drawn from the said Tongues (which it was necessary to retain for brevity sake, and to avoid tedious Circumlocutions) I have caused a *Physical Dictionary* to be added at the end of these Books, explaining all such terms of Art aforesaid, as are used therein.

When the Reader meets in these Books, with the names of Simple or Compound Medicaments, and desires a more full knowledg of them, let him have recourse to the *London Dispensatory* in English, where he may be satisfied; for it had been an endless and vain work, to repeat what hath there been said. If there occur accidentally the name of any Disease which the Reader would better understand, let him look into the Table of the Contents of the Chapters of these seventeen Books, and he shall find the Chapter intituled from that Disease; in the beginning of which Chapter he shall find the said Disease described and explained.

Also the Reader may please to take notice, That many hard phrases in these Seventeen Books are explained in the Context, by more easie words following, which signifie the same with the foregoing hard word. As for example, MASTICATORIES, or *Chewing Medicines*, giving the Reader to understand, that *Masticatories*, is as much as to say,

Medicines

Medicines that are only chewed in the mouth to bring away Rhewm by ſpetting.

So GARGARISMS, that is, *Medicines to Gargle in the Throat*: A PLETHORICK, or *full Body*: EMPYEMA, or *Corrupt matter gathered between the Cheſt and Lungs*: HYPOCHONDRIA, or *Parts under the ſhort Ribs*: A VESICATORY, or *Plaiſter to draw Bliſters*. Many ſuch paſſages there are throughout theſe Books, where the latter Clauſe is an expoſition of the former.

And that thou maiſt know to whoſe great Induſtry and pains thou art obliged for the Engliſhing this moſt excellent piece of Art, know that (by reaſon of eight ſeveral Editions in Latin, of which there hath been fifteen thouſand Books ſold) it hath been three times tranſlated at my charge, By *Nicholas Culpeper*, Phyſitian and Aſtrologer; *Abdiah Cole*, Doctor in Phyſick, who hath practiſed Phyſick twenty nine Yeers in the Service of three of the greateſt Princes in Europe: and *William Rowland*, a Knowing Phyſitian: and alſo by an eminently learned and pious Phyſitian, who deſires not to be named, being (as he ſaies) content with the applauſe of his own Conſcience, which tels him that while he was imployed about this Work, he was doing that which would weigh down in profit to his Country, all the good that all the Phyſitians in *London* did or could do in the ſame time; a work that tends to profit many millions, not only of this Generation, but of all that ſhall follow, till the world become one great Bone-fire; or this Nation and Language periſh together. And it hath been (he ſaies) a long time his Opinion, That it is more rational, manly, generous, and Chriſtian, whilſt God ſhall pleaſe to afford him Food and Rayment, to imploy his time and pains in Actions largely conducing to the good of Man-kind, though little advancing his own Fortunes, than in matters of petty and poor Concernment, that bring great gain with them: In which generous Reſolution, God (the Author of it) will, he hopes preſerve him to his dying day; at which time the fruit and profit of his Labors will comfort him, but all the gain in the world will do him no good at all.

Uſe our Labors with Diligence, Care, Ingenuity, Compaſſion towards the ſick, and in the fear of God. Attribute the Succeſs and Honor of all thy Endeavors to him: Bleſs him for the *Light* he diſcovers to this Generation, denied to ſo many Millions of our Anceſtors: Bleſs him for the Piety and Noble Generoſity of our Governors, that give us leave to *Be* as *Good* as we *Will*, and to *Do* all the *Good* we *Can* (though ſeeming to croſs private Intereſt) Oh! what would we have given for this ſingle Priviledg a few Yeers ſince? Or what would the poor Proteſtants in *France* and *Germany* give for the like Favor? How many of them

them have been lately Maſſacred, or made fly from all that was neer and deer to them for want of ſuch a Mercy as this?

Finally, Pray for thoſe that have taken pains in the Work, and among the reſt, for

Thy hearty Wel-wiſher

From my Printing-houſe in
Leaden-Hall, June, 2. 1655.

PETER COLE.

The Names of ſeveral Books Printed by Peter Cole *in Leaden-Hall*, London, *and are to be ſold at his Shop at the ſign of the Printing-preſs in Cornhil, neer the Exchange.*

Eight ſeveral Books, by Nich. Culpeper, *Gent. Student in* Phyſick *and* Aſtrology.

1 A Tranſlation of the *New Diſpenſatory*, made by the Colledg of Phyſitians of *London*. Whereunto is added, The *Key to* Galen's *Method of Phyſick*.

2 A *Directory for Midwives*, or a *Guide for Women*. Newly enlarged by the Author in every ſheet, and Illuſtrated with divers new Plates.

3 *Galen's* Art of *Phyſick*, with a large Comment.

4 The *Engliſh Phyſitian Enlarged*; being an *Aſtrologo-Phyſical* Diſcourſe of the vulgar Herbs of this Nation; wherein is ſhewed how to cure a mans ſelf of moſt Diſeaſes incident to Mans Body, with ſuch things as grow in *England*, and for three pence charge. Alſo in the ſame Book is ſhewed, 1 The time of gathering all Herbs, both Vulgarly and Aſtrologically. 2 The way of drying, and keeping them and their Juyces. 3 The way of making and keeping all manner of uſeful Compounds, made of thoſe Herbs. The way of mixing the Medicines according to the Cauſe, and Mixture of the Diſeaſe, and the part of the Body afflicted.

5 The *Anatomy of the Body of Man*, Wherein is exactly deſcribed, the ſeveral parts of the Body of Man, illuſtrated with very many larger Braſs Plates than ever was in Engliſh before.

6 A *New Method* both of ſtudying and practiſing Phyſick.

7 A Treatiſe of the *Rickets*, being a Diſeaſe common to Children; wherein is ſhewed, 1 The Eſſence, 2 The Cauſes, 3 The Signs, 4 The Remedies of the Diſeaſe; Publiſhed in Latin by Dr. *Gliſſon*, Dr. *Bate*, and Dr. *Regemorter*, tranſlated into Engliſh. And corrected by *N. Culpeper*.

8 The *Practice of Phyſick*, containing ſeventeen Books.

A Godly and Fruitful *Expoſition* on the firſt Epiſtle of *Peter*. By Mr. *John Rogers*, Miniſter of the Word of God at *Dedham* in *Eſſex*.

The Wonders of the *Load-ſtone*. By *Samuel Ward* of *Ipſwitch*.

An *Expoſition* on the Goſpel of the Evangeliſt St. *Matthew*. By Mr. *Ward*.

Clows Chyrurgery.

Marks of Salvation.

Chriſtians Engagement for the Goſpel, by *John Goodwin*.

Great Church Ordinance of Baptiſm.

Mr. *Love's* Cale, containing his Petitions, Narrative, and Speech.

Vox Pacifica, or a perſwaſive to peace.

Dr. *Preſtons* Saints ſubmiſſion, and Satans Overthrow.

Pious Mans Practice in Parliament Time.

Mr. *Symſons* Sermon at Weſtminſter.

Mr. *Feaks* Sermon before the Lord Major.

Mr. *Phillips* Treatiſe of Hell.

——— of Chriſts Geneology.

Eaton on the Oath of Allegiance and Covenant, ſhewing that they oblige not.

Eleven Books of Mr. Jeremiah Burroughs *lately publiſhed*; *As alſo the Texts of Scripture upon which they are grounded.*

1 The Rare Jewel of *Chriſtian Contentment*, on *Phil.* 4. 11. Wherein is ſhewed, 1 What *Contentment* is, 2 It is an Holy Art and Myſtery, 3 The Excellencies of it, 4 The Evil of the contrary ſin of Murmuring, and the Aggravations of it.

2 *Goſpel Worſhip*, on *Levit.* 10. 3. Wherein is ſhewed, 1 The right manner of the Worſhip of God in general; and particularly, In Hearing the Word, Receiving the Lords Supper, and Prayer.

3 *Goſpel Converſation*, on *Phil.* 1. 17. Wherein is ſhewed, 1 That the Converſations of Beleevers muſt be above what could be by the Light of Nature, 2 Beyond thoſe that lived under the Law, 3 And ſutable to what Truths the Goſpel holds forth. To which is added, *The Miſery of thoſe men that have their Portion in this Life only*, on *Pſal.* 17. 14.

4 A Treatiſe of *Earthly-Mindedneſs*, Wherein is ſhewed, 1 What Earthly-mindedneſs is, 2 The great Evil thereof, on *Phil.* 3. part of the 19. Verſe. Alſo to the ſame Book is joyned, A Treatiſe of *Heavenly-Mindedneſs, and Walking with God*, on *Gen.* 5. 24. and on *Phil.* 3. 20.

5 An *Expoſition*, on the fourth, fifth, ſixth, and ſeventh Chapters of the Propheſie of *Hoſea*.

6 An *Expoſition* on the eighth, ninth, and tenth Chapters of *Hoſea*.

7 An *Expoſition* on the eleventh, twelfth, and thirteenth Chapters of *Hoſea*, being now compleat.

8 The *Evil of Evils*, or the exceeding Sinfulneſs of *Sin*, on *Job*, 36. 21.

9 Precious Faith, on 2 *Pet.* 1. 1.

10 Of Hope, on 1 *John.* 3. 3.
11 Of Walking by Faith, on 2 *Cor.* 5. 7.

Twelve ſeveral Books of Mr. William Bridge, *Collected into one Volumn.* Viz.

1 The Great Goſpel Myſtery of the Saints Comfort and Holineſs, opened and applied from Chriſts Prieſtly Office.
2 Satans Power to Tempt; and Chriſts Love to, and Care of His People under Temptation.
3 Thankfulneſs required in every Condition.
4 Grace for Grace; or, the Over-flowing of Chriſts Fulneſs received by all Saints.
5 The Spiritual Actings of Faith through Natural Impoſſibilities.
6 Evangelical Repentance.
7 The Spiritual Life, and In-being of Chriſt in all Beleevers.
8 The Woman of Canaan.
9 The Saints Hiding-place in time of Gods Anger.
10 Chriſts Coming is at our Midnight.
11 A Vindication of Goſpel Ordinances.
12 Grace and Love beyond Gifts.

A Congregational Church is a Catholick Viſible Church. By *Samuel Stone* in *New England.*

A Treatiſe of Politick Powers, wherein ſeven Queſtions are Anſwered, 1 Whereof Power is made, and for what ordained. 2 Whether Kings and Governors have an Abſolute Power over the People. 3 Whether Kings and Governors be ſubject to the Laws of God, or the Laws of their Countrie. 4 How far the People are to obey their Governors. 5 Whether all the people have, be their Governors. 6 Whether it be Lawful to depoſe an evil Governor 7 What Confidence is to be given to Princes.

The Compaſſionate Samaritan.

Dr. *Sibbs* on the Philippians.

The Beſt and Worſt Magiſtrate. By *Obadiah Sedgwick.*

The Craft and Cruelty of the Churches Adverſaries. By *Matthew Newcomen.*

A Sacred Panegerick. By *Stephen Martial.*

Barriffs Military Diſcipline.

The Immortality of Mans Soul.

The Anatomiſt Anatomized.

King *Charls* his Caſe, or an Appeal to all Rational Men concerning his Tryal.

Mr. *Owens* ſtedfaſtneſs of the Promiſes.

A Vindication of Free Grace; Endeavoring to prove, 1 That we are not elected as holy, but that we ſhould be holy; and that Election is not of kinds, but perſons. 2 That Chriſt did not by his Death intend to ſave all men, and touching thoſe whom he intended to ſave, that he did not die for them only if they would beleeve, but that they might beleeve. 3 That we are not juſtified properly by our beleeving in Chriſt, but by our Chriſt, beleeving in. 4 That, that which differenceth one man from another, is not the improvement of a common ability reſtored through Chriſt to all men in general, but a principle of Grace wrought by the Spirit of God in the Elect. By *John Pawſon.*

Six Sermons preached by Doctor *Hill.* Viz.

1 The Beauty and Sweetneſs of an Olive Branch of Peace, and Brotherly Accommodation budding.
2 Truth and Love happily married in the Church of Chriſt.
3 The Spring of ſtrengthening Grace in the Rock of Ages Chriſt Jeſus.
4 The ſtrength of the Saints to make Jeſus Chriſt their ſtrength.
5 The Beſt and Worſt of *Paul.*
6 Gods eternal preparation for his Dying Saints.

The Biſhop of *Canterbury*'s Speech on the Scaffold.

The King's Speech on the Scaffold.

The Magiſtrates Support and Burden. By Mr. *John Cordel.*

The Diſcipline of the Church in *New England*, by the Churches and Synod there.

A Relation of *Barbadoes.*

A Relation of the Repentance and Converſion of the *Indians* in *New-England*; By Mr. *Eliot*, and Mr. *Mayhew.*

The Hiſtory of *Montroſs*: and his Actions for Charles the Firſt. His paſſions for Charles the Second King of *Scots.*

The Inſtitutes of the Laws of *England* by *John Cowel*, Octavo.

A deſcription of the Grand Signors *Seraglio*; or Turkiſh Emperors Court. By *John Greaves.* Octavo.

The reigning error Arraigned at the Bar of ſcripture, and Reaſon. By *Francis Fulwood.* Octavo.

The ſtate of Future Life. By *Thomas White.* Twelves.

The Royal and delightful Game of *Picquet*, written in French, and now rendered into Engliſh. Octavo.

De copore Politico: or, The Elements of Law, moral, and politick. By *Thomas Hobs of Malmſbury.*

The Hiſtory of the Rites, Cuſtoms, and manner of life, of the preſent *Jews* throughout the World. Octavo.

The *London* Diſpenſatory in Latin in Folio.

The *London* Diſpenſatory in Latin in Twelves.

A Poem upon the late Fight at ſea, between the two great Fleets of *England* and *Holland.*

Theſe ſeveral Books of Phyſick and Chyrurgerie will ſhortly be printed in Engliſh.

Riverius Obſervations, with fifteen hundred and ſeventie other Hiſtories and Obſervations of other men.

Riolanus Anatomy.

Bartholinus Anatomy.

All the Works of *Daniel Sennertus*, except ſome few, not proper for Tranſlation.

The *Idea of Practical Phyſick*, being a compleat Body of Phyſick.

And *Fernelius* his Works.

Theſe Books of Divinity will ſpeedily be printed.

Mr. *Burroughs*, on 1 *Cor.* 5. 7. and 18, 19. 29. And fifty nine Sermons on *Matthew*, 11. 28, 29, 30.

Seventeen Books of Mr. *Thomas Hooker*, being the ſubſtance of many Sermons preached in *New-England.*

Several pieces of Mr. *Bridge* of *Yarmouth. Viz.*

1 *Scripture Light the moſt ſure Light:* compared with, 1. Revelations and Viſions. 2. Natural and ſupernatural Dreams. 3. Impreſſions with and without Word. 4. Light and Law within. 5. Divine Providence. 6. Chriſtian Experience. 7. Humane Reaſon. 8. Judicial Aſtrology. Delivered in three Sermons on 2 *Pet.* 1. 19.

2 *Chriſt in Travel:* Wherein, The 1. Travel of his ſoul. 2. The firſt and after effects of his Death. 3. His Aſſurance of Iſſue. 4. And His ſatisfaction therein. Are opened and cleered in three Sermons, on *Eſay*, 53. 11.

3 *A Lifting up for the Caſt-down*, in caſe of 1. Great ſin. 2. Weakneſs of Grace. 3. Miſcarriage of Duties. 4. Want of Aſſurance. 5. Affliction. 6. Temptation. 7. Diſſertion. 8. Unſerviceableneſs. 9. Diſcouragements from the Condition it ſelf. Delivered in thirteen Sermons on *Pſalm*, 42. 11.

His Four Sermons concerning
1 Sin againſt the Holy-Ghoſt.
2 Sins of Infirmities.
3 The fifth Monarchy.
4 The Good and means of Eſtabliſhment.

Franciſci Tayleri, Capitula Patrum: Hebraicè & Latinè edita. Una cum Annotationibus ſenſum locorum difficilium Experimentibus.

Franciſci Tayleri, Lamentationes Jeremiæ variis, Denuo è fontibus Hebraicis tranſlatæ, cum Paraphraſi Chaldaica, Maſora magna & parva, & Commentariis Rabbi Shelomoh, Jarchi & Aben Ezræ, è Buxtorfii Bibliis magnis excerptis.

The

The Author to the Reader.

FIfteen Yeers ago (Friendly Reader) to Satisfie the Desires of my Auditors, I undertook to explain unto them the Methodicall Cure of all inward Diseases of the Body; which that I might accomplish the sooner, I medled not at all in a manner with the Theory, knowing ful well that any Student might with ease enough fetch the same from divers Authors: which notwithstanding they could not so easily do in point of Practice, because of the almost infinite Company & variety of Medicaments, wherewith the Books of those that have delivered the Practical part of Physick do swarm; with which Young Beginners are so confounded, that they remain amazed, not knowing which to choose. I conceived it would be most profitable for them, if out of such a multitude of Medicaments, I should select the most choice, and which were most frequently used, and dispose them into the same order which we are wont to observe in our Practice, when we attend the Cure of our sick Patients.

This Method of teaching, gave such content to our Students of Physick, that as many as came flocking to this University to study, after that I had finished the same, did all earnestly desire to have written Coppies thereof; and many of them did frequently exhort me, and earnestly Beg, that I would suffer it to be printed; and so for the future free all Men from the tedious Labor of writing it out. But I, who never had the thought (being very free from Self-Love) that my Writings were of so much worth, as to be published in Print, especially this Method of Practice, which was slipt from me as a thing only begun with rude Notes, hastily huddled up to perform my daily task of Reading, and half maimed for want of the Theoretick part: I thought it better to beleeve my own Conscience than their too favourable Opinion. I pondered likewise in my Mind, that it was a very hazardous thing, to subject my Reputation to the Judgment of the whol World, and (as it commonly falls out) to the biting Teeth of envious detractors; especially in this polished Age, abounding with neat and passing fine Witts, who are hardly pleased with such workes as have been wrought with the greatest Industry possible, and who are wont to peep curiously to spy spots in the shining Sun. Nevertheless this unperfect Birth of mine; which I desired to keep close and hidden, was sent into the wide World by one of my Schollers, who without my knowledg, and against my will, gave that imperfect, homely and unpolished work to a Printer of Paris to print. And this Child of mine which I did count Abortive, was more pleasing and found greater Favour in the Eyes of Strangers, than in its Fathers; for all the Books of this first Edition, were suddainly sold off. A second Edition, and a little after a Third was procured by the same Printer, by which all Europe was filled with Copies. Nevertheless, some yeers after, there came out three other Editions within two yeers time, one at Lions, and two other in Holland viz. at

Tergow

Tergow *and the* Hague. *In the mean while, I received very many Letters, out of the Chief Cities of* FRANCE, GERMANY, HOLLAND, *and* ITALY, *from Doctors of Phyſick, whom I was acquainted with, when they ſtudied Phyſick in this Univerſity; ſeriouſly expoſtulating, that this Work was Lame becauſe it wanted the Theory of the Diſeaſes, and withall adviſing me that it would be worth my pains, to ſpend ſome part of my ſtudies that way. Conceiving at length that it was fitting to conſent unto their juſt requeſts, I laboured with all my might as far as my Employments and Health would give me leave, to finiſh and publiſh this Theoretick part; inſomuch that at laſt (Bleſſed and Praiſed be God) I brought the ſame to a concluſion. Accept it (freindly Reader) with a cheerfull mind, being Joyned to the foreſaid Practick part, ſo that in one continued Diſcourſe thou maieſt Behold the* Nature, Differences, Cauſes, Diagnoſtick, *and* Prognoſtick Signs, *together with* the Cure of all Diſeaſes. *I Suppoſe this Child of mine will merit highly thy Favour, being now adorned in all its parts, and advanced to a far greater Degree of Perfection; and ſeeing that thou wert pleaſed with it in its Cradle and Swadling-Clouts; now that it is greater and hath attained its perfect Stature of Body, it will not, I hope, Diſpleaſe thee. Enjoy it with Gods Bleſſing, and whatever thou ſhalt learn therefrom, let Chriſtian Charity cauſe the to employ it for thee Good of thy Neighbour. Alſo I deſire thee to take notice, that many faults were crept into the former Editions through the negligence of Printers, all which I have carefully corrected in this Edition. And furthermore, I have added many and thoſe very Choice Medicaments, to the Cures formerly printed, which will not a little conduce to the happy cure of difficult Diſeaſes. Farewel.*

From my Study at *Monpelier*,
the firſt of *July*, 1653.

Lazarus Riverius.

An EPIGRAM, ſhewing who are Doctors of Phyſick, and who not.

Doctors or *Teachers* they of *Phyſick* are
(Whether by Pen they do it, or in Chair
With lively Voyce) that teach the way to know
Mans Nature, *Health*, and *Sickneſs*, and do ſhow
Diſeaſes, *Cauſe*, and *Cure*. But they who ſpend
Their Life in *Viſits*, and whoſe *Labors* end
In taking *Fees*, and giving *Paper-ſcrowls*
FACTORS of *Phyſick* are; and none but *Owls*
Do count ſuch *Doctors*, that *no Latin* know,
From whence that *Name* did to our Language flow.

W. B. *Doctor and Factor Of Phyſick.*

The Contents of all the Seventeen Books.

The First Book of the Practice of Physick.

Of the Diseases of the Head.

The PREFACE.

Chap. 1. *Of the Cold Distemper of the Brain.* 8
Chap. 2. *Of Drouzie Diseases, called,* Coma, Lethargy, Carus, *and* Apoplexy. 9
Chap. 3. *Of Waking Coma.* 16
Chap. 4. *Of the Sleeping Diseases called,* Caroche, *and* Catalepsis, *or* Congelation. 16
Chap. 5. *Of the Palsey, or* Paralysis. 18
Chap. 6. *Of a Convulsion.* 24
Chap. 7. *Of the Epilepsie, or Falling-sickness.* 28
Chap. 8. *Of the Falling-sickness in Children.* 33
Chap. 9. *Of Giddiness, called* Vertigo. 35
Chap. 10. *Of* Tremor, *or Trembling.* 37
Chap. 11. *Of* Phrenitis, *or Phrensie.* 38
Chap. 12. *Of the Imposthume, and* Spacelus, *or Mortification of the Brain.* 44
Chap. 13. *Of* Mania, *or Madness.* 45
Chap. 14. *Of Melancholly:* 48
Chap. 15. *Of a Catarrh, or Defluxion.* 50
Chap. 16. *Of the Head-ach.* 56

The Second Book of the Practice of Physick.

Of the Diseases of the Eyes.

The PREFACE.

Chap. 1. *Of* Gutta Serena, *or* Amaurosis. 62
Chap. 2. *Of the Disease of the Vitrous, or Glassy Humor.* 66
Chap. 3. *Of the Diseases in the Crystalline Humor.* 66
Chap. 4. *Of the Diseases of the Watery Humor, and especially of a Suffusion.* 68
Chap. 5. *Of the Enlarging, or Dilatation of the Pupilla.* 74
Chap. 6. *Of the straitness, or Contraction of the Pupilla.* 75
Chap. 7. *Of* Albugo, *or the white Spot called Pin and Web, and of other Colours of the Cornea changed.* 76
Chap. 8. *Of* Ophthalmia, *or Inflamation of the Eyes.* 78
Chap. 9. *Of* Hypopyon, *or Matter under the* Cornea. 85
Chap. 10. *Of* Phlyctænæ, *or Blisters in the Eyes.* 86
Chap. 11. *Of the Ulcers in the* Cornea *and* Adnata. 86
Chap. 12. *Of a Cancer in the* Cornea. 87
Chap. 13. *Of the Rupture of the Cornea.* 88
Chap. 14. *Of the Coming forth of the* Uvea. 89
Chap. 15. *Of* Ægylops, *and Fistula Lacrymalis,* 89
Chap. 16. *Of Rhyas and Encanthis.* 90
Chap. 17. *Of Epiphora.* 91
Chap. 18. *Of* Pterygium, *or Haw in the Eyes, called* Unguis. 93

The Third Book of the Practice of Physick.

Of the Diseases of the Ears.

The PREFACE.

Chap. 1. *Of Deafness, and thick or dull Hearing.* 95
Chap. 2. *Of Noise in the Ears.* 99
Chap. 3. *Of Pain in the Ears.* 101
Chap. 4. *Of those things which come forth of the Cavities of the Ears preternaturally.* 106

The Fourth Book of the Practice of Physick.

Of the Diseases of the Nostrils.

The PREFACE.

Chap. 1. *Of the Ulcer of the Noſtrils, and* Ozæna. 108
Chap. 2. *Of Sarcoma, and Polypus.* 110
Chap. 3. *Of the loſs of Smelling.* 111
Chap. 4. *Of the Stink of the Noſtrils.* 112
Chap. 5. *Of Coryza, or Poſe.* 112
Chap. 6. *Of Sternutation, or Neezing.* 113
Chap. 7. *Of Bleeding at the Noſe, called* Hæmorrhagia. 114

The Fifth Book of the Practice of Phyſick.

Of the Diſeaſes of the Tongue.

The PREFACE.

Chap. 1. *Of the Inflamation of the Tongue, and other Tumors of the ſame.* 123
Chap. 2. *Of the Tumor called* Ranula *under the Tongue.* 125
Chap. 3. *Of the Taſte being Hurt.* 126
Chap. 4. *Of the Palzey of the Tongue, and the Hurt Motion thereof.* 127

The Sixth Book of the Practice of Phyſick.

Of the Diſeaſes of the Teeth, Gums, Jaws, Pallat, and Wind-pipe, or Larynx.

The PREFACE.

Chap. 1. *Of the Tooth-Ach.* 129
Chap. 2. *Of the blackneſs and rottenneſs of the Teeth.* 134
Chap. 3. *Of the Eroſion or eating away, and of the Exulceration of the Gums.* 134
Chap. 4. *Of bleeding at the Gums.* 135
Chap. 5. *Of the Ulcers of the Mouth, and Jaws.* 136
Chap. 6. *Of the Relaxation of the Uvula, or Falling Down of the Pallat.* 137
Chap. 7. *Of* Angina, *or Quinzie, or Squinvie.* 138

The Seventh Book of the Practice of Phyſick.

Of the Diſeaſes of the Breaſt.

The PREFACE.

Chap. 1. *Of* Aſthma, *or difficulty of Breathing.* 146
Chap. 2. *Of* Pleuritis, *or a Pleuriſie.* 152
Chap. 3. *Of* Peripneumonia, *or Inflamation of the Lungs.* 158
Chap. 4. *Of* Empyema, *or matter in the hollow of the Thorax.* 160
Chap. 5. *Of the Dropſie in the Breaſt.* 163
Chap. 6. *Of* Hæmoptysis, *or Spetting of Blood.* 164
Chap. 7. *Of* Phthiſis, *or Conſumption.* 169

The Eighth Book of the Practice of Phyſick.

Of the Diſeaſes of the Heart.

The PREFACE.

Chap. 1. *Of* Syncope, *or Swooning.* 178
Chap. 2. *Of the Palpitation, or Breathing of the Heart.* 182
Chap. 3. *Of Weakneſſe.* 245

The Ninth Book of the Practice of Phyſick.

Of the Diſeaſes of the Stomach.

The PREFACE.

Chap. 1. *Of Want of Appetite, or Loathing of Meat,* 249
Chap. 2. *Of Dogs Appetite, called* Fames canina. 254
Chap. 3. *Of* Pica *and* Malacia. 256
Chap. 4. *Of the Thirſty Diſeaſe, called* Sitis Morboſa. 258
Chap. 5. *Of the Hurt Concoction of the Stomach.* 259
Chap. 6. *Of* Singultus, *or Hiccough.* 262
Chap. 7. *Of* Nauſea, *and Vomiting.* 295
Chap. 8. *Of Vomiting Blood.* 269
Chap. 9. *Of the Diſeaſe called Cholera.* 272
Chap. 10. *Of Pain in the Stomach, called* Dolor Ventriculi. 274
Chap. 11. *Of the Inflamation. Ulcer, and Impoſthume in the Stomach.* 277

The Tenth Book of the Practice of Phyſick.

Of the Diſeaſes of the Inteſtines, or Guts,

The PREFACE.

Chap. 1. *Of the Chollick.* 230
Chap. 2. *Of the Iliack Paſſion.* 285

Chap.

Chap. 3. *Of Astriction, or binding of the Belly.* 288
Chap. 4. *Of Lientery, and Cœliack Passion.* 289
Chap. 5. *Of Diarrhœa.* 291
Chap. 6. *Of* Dysenteria. *or Dysentery.* 295
Chap. 7. *Of Tenesmus.* 303
Chap. 8. *Of* Fluxus Hepaticus, *or Flux of the Liver.* 305
Chap. 9. *Of the Worms.* 307
Chap. 10. *Of the Immoderate Flux of the Hæmorrhoids.* 313
Chap. 11. *Of the Pain of the Hæmorrhoids.* 316

The Eleventh Book of the Practice of Physick.

Of the Diseases of the Liver.

The PREFACE.

Chap. 1. *Of the Hot Distemper of the Liver.* 320
Chap. 2. *Of the Inflamation, Imposthume and Ulcer of the Liver.* 323
Chap. 3. *Of the Stoppage, or Obstruction of the Liver.* 327
Chap. 4. *Of the Jaundice.* 333
Chap. 5. *Of the Scirrhus of the Liver.* 335
Chap. 6. *Of the Dropsie.* 336

The Twelfth Book of the Practice of Physick.

Of the Diseases of the Spleen.

The PREFACE.

Chap. 1. *Of the Inflamation of the Spleen.* 347
Chap. 2. *Of the Pain of the Spleen.* 348
Chap. 3. *Of Obstruction, Tumor, or Puffing up of the Spleen.* 348
Chap. 4. *Of the Scirrhus, or Hard Swelling of the Spleen.* 349
Chap. 5. *Of Hypochondriack Melancholly.* 350
Chap. 6. *Of the Scurvy.* 357

The Thirteenth Book of the Practice of Physick.

Of the Diseases of the Mesentery, Sweet-bread, and Caul.

The PREFACE.

Chap. 1. *Of the Obstruction of the Mesentery* 362
Chap. 2. *Of the Inflamation of the Mesentery.* 363
Chap. 3. *Of the Imposthume, Ulcer, and Scirrhus of the Mesentery.* 364
Chap. 4. *Of the Diseases of the* Pancreas, *or Sweet-bread.* 365
Chap. 5. *Of the Diseases of the Caul, or* Omentum. 366

The Fourteenth Book of the Practice of Physick

Of the Diseases of the Reins and Bladder.

The PREFACE.

Chap. 1. *Of the Stone in the Kidneyes, and Pain in the Reins, called* Dolor Nephriticus. 367
Chap. 2. *Of the Stone in the Bladder.* 378
Chap. 3. *Of the Inflamation of the Reins and Bladder.* 382
Chap. 4. *Of Pissing of Blood.* 385
Chap. 5. *Of the Ulcer of the Reins and Bladder.* 387
Chap. 6. *Of* Diabetes, *or extraordinary Pissing.* 390
Chap. 7. *Of Pissing the Bed, of Involuntary Pissing, or not containing of Urine.* 392
Chap. 8. *Of stoppage of the Urine, and Strangury.* 394
Chap. 9. *Of* Dysuria, *or Scalding of the Urine.* 397

The Fifteenth Book of the Practice of Physick.

Of Womens Diseases.

The PREFACE.

Chap. 1. *Of the Green-sickness, called* Chlorosis. 400
Chap. 2. *Of the stoppage of the Terms.* 403
Chap. 3. *Of the Immoderate Flux of the Courses.* 409
Chap. 4. *Of the Whites.* 413
Chap. 5. *Madness from the Womb.* 417
Chap. 6. *Of the Mother-Fits, or Womb-sickness.* 420
Chap. 7. *Of Inflamation of the Womb.* 431
Chap. 8. *Of an Ulcer of the Womb,* 434
Chap. 9. *Of a* Scirrhus, *or a Painless hard Swelling of the Womb* 490
Chap. 10. *Of a Cancer of the Womb.* 492
Chap. 11. *Of Mortification, or Gangrenation, and*

and Sphacelation, or Blasting of the Womb. 493
Chap. 12. *Of the Womb's Wind-and-Water Swelling, or Dropsie.* 494
Chap. 13. *Of the falling down of the Womb* 498
Chap. 14. *Of the Womb shut up, or Imperforated* 501
Chap. 15. *Of Barrenness* 502
Chap. 16. *Of Acute and Chronical Diseases of Women with Child* 509
Chap. 17. *Of Abortion or Miscarriage* 512
Chap. 18. *Of Hard Child-birth* 517
Chap. 19. *Of a dead Child.* 520
Chap. 20. *Of the After-birth retained* 521
Chap. 21. *Of Immoderate flux of the* Loches, *or Child-bed Purgations.* 523
Chap. 22. *Of Suppression of Child-bed Purgations.* 524
Chap. 23. *Of Gripings after Child-bearing* 525
Chap. 24. *Of Acute Diseases of Women in Child-bed* 527

The Sixteenth Book of the Practice of Physick.

Of Diseases of the Joynts, and Rheumatick Pain of the whol Body.

The PREFACE.

Chap. 1. *Of Pain in the Joynts, called* Arthritis, *or the Gout.* 531
Chap. 2. *Of the Hip-Gout, or Sciatica* 544
Chap. 3. *Of Rheumatick Pains of the whol Body* 547

The Seventeenth Book of the Practice of Physick.

Of FEAVERS.

The PREFACE.

SECT. I.
Of Simple Feavers.

The Preface.

Chap. 1. *Of the Feaver* Ephemera. 553
Chap. 2. *Of the Feaver* Synochus Simplex 554
Chap. 3. *Of an Hectick Feaver.* 555

SECT. II.
Of Putrid Feavers.

The Preface.

Chap. 1. *Of Continual Putrid Feavers* 560
Chap. 2. *Of the Symptomes which accompany Putrid Feavers.* 575
Chap. 3 *Of a Tertian Ague* 580
Chap. 4 *Of a Quotidian Feaver* 585
Chap. 5 *Of a Quartan Ague* 586
Chap. 6 *Of Compounded or Complicated Feavers, and particularly of a Semi-Tertian* 593

SECT. III.
Of Pestilential Feavers.

The Preface.

Chap. 1. *Of a Pestilential Feaver.* 611
Chap. 2. *Of the Measles, and small Pox* 637

THE FIRST BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Head.

The PREFACE.

IN *this our Treatiſe of Head-Diſeaſes, we ſpeak firſt only of thoſe which are in the ſubſtance of the Brain, and the Films which contain it: For although the Eyes, Ears, Tongue, Teeth, Gums, Jaws, and Pallat, go to the making up of the Head; yet we think it fit to ſpeak of their Diſeaſes in ſeveral Books for better Method ſake; And to call the Diſeaſes of the Brain and its* Meninges, *or Films, by the name of* Head-diſeaſes, *moſt properly ſo from the excellency of the parts wherein they are. Theſe come from the* hinderance *of the* Action *of the Brain, either in reſpect of* Sence, Motion, *or* Nutrition. *The Sence is divided into Internal, and External: The Internal hath the chief actions, as Imagination, Reaſoning, Memory; as alſo Sleep and Waking: the Diſeaſes of which are, Frenzie, Madneſs, Melancholly,* Catoche, Coma *waking ſleep, and* Coma *long ſleep, Lethargie,* Carus, *Apoplexy. The External Sences are five, namely, Sight, Hearing, Smelling, Taſt, and Feeling: But becauſe the firſt four have their peculiar Organs or parts, which have divers Diſeaſes, which we ſhall treat of in ſeveral Books: We will in this Book lay down and declare thoſe which belong to the*

sence of Feeling, because they come immediately from the Brain *and its Membranes or Films disturbed, and are either termed Palsies, which come from Sence destroyed or diminished; or Headaches, which comes from Sence depraved. When the actions of the* Brain *are hindred in respect of motion, there ariseth Convulsion, Falling-sickness, Palsey, Apoplexy, Giddiness, or swimming of the Head, called* Vertigo, *and Trembling: Finally, When the acting or working of the* Brain *is hurt or hindred in its* Nutrition, *or* Nourishment, *the Disease is either in distemperature, or disorder of the excrement of the* Brain, *of which cometh a Catarrh, defluxion or distillation. We shall bring all these Diseases under their proper Heads and Chapters, in that order which is most usual for the way of Cure: Therefore we shall first declare the Cold Distemperature of the Brain, and then all Diseases that come from thence, because the ground of their Cure is in the Cure of that. Afterwards we shall lay down the Diseases that come from a Hot Distemper, and Hot Humors; which will all more clearly appear in their several Chapters.*

CHAP. I.

Of the Cold Distemper of the Brain.

ALL Distempers are usually divided into Simple, and Compound; Material, and Immaterial. Simple or single Distempers are seldom seen; as also immaterial distempers, for they come from Primary Causes, and either vanish of their own accord, or with very smal Remedies or Medicines: But Material Distempers produce all the Diseases of the Head; therefore we will fall close to discourse of them; which few Authors have done, in handling them severally, because in the laying down of the Diseases which are produced of those Distempers, they are sufficiently explained. We therefore will transfer the handling of the Hot distemper of the Brain, and also the Moist and dry Distempers to the Chapters which contain those Diseases which are produced from them. But because the greatest number of Diseases of the Head come from a Cold and Moist Distemper of the Brain, we thought fit to discourse of that by it self in the beginning of this Treatise; that the Cure of that may be as the Foundation of the Cure of all Diseases coming from thence, and that the Medicines may be found in this Chapter which appertain to the Cure of their Cause: Therefore we will avoid the vain repetition of those Diseases, which is the Custom of almost all Writers of Practical Physick, who by that means enlarge their Volumns, and make the Art more difficult and tedious to yong beginners.

The Cold Distemper of the Brain which is Compound and Material, or joyned with Matter, is for the most part waterish and moist; because the Brain is that Mother of Moisture or Flegm, and Coldness long abiding draws moisture to it self. For albeit sometimes it is joyned with a Melancholly Humor, yet that Humor is seldom begot in the Brain as Flegm is, but it is for the most part lodged in the *Hypochondria*, or Parts beneath the Ribs, and sent from thence to the Brain, whereby most grievous Symptomes are produced.

The Causes of a Cold and Flegmatick Distemper of the Brain, are these:

1 Cold and moist Meats which eatily turn into Flegm; and also in the time of their Concoction, by cooling the Stomach and the Liver too much, produce abundance of Flegm, which after is sent up to the Brain.

2 Too great a quantity, not only of Meats which are too cold, but also of good and wholsom, which destroyeth the Natural heat, and begetteth Crudities.

3 Eating presently after or before meat, and before the former meat is concocted; whence come many Crudities, which send Flegm to the Head.

4 The

4 The ceaſing of a Natural cuſtom of vomiting, or purging flegm; or the omitting the Cuſtom of taking Purges, Sweats, Diuretricks, or provokers of Urine, or omitting of accuſtomed Exerciſe.

5 To be born of Parents troubled with a cold diſtemper of Brain.

6 Old Age, which by reaſon of the decay of Natural heat, produceth much Flegm: as alſo Youth by reaſon of Gluttony and diſorderly Diet.

7 A Cold and Moiſt dwelling, neer ſtanding Pools, Marſhes, Fens and great Rivers, open to the North winds, Snow and Rain.

8 Long and deep ſleep, eſpecially preſently after Meat.

9 A ſedentary idle life, without, or with too much Care, Study, or Sorrow, becauſe by diſperſing the Natural heat, eſpecially in the Brain, they make it cold.

10 To theſe may be added a hot and moiſt Liver, which ſends many Vapors to the Brain, which there condenſe or grow thick, and ſo turn into Flegm.

The Signs of a cold diſtemper of the Brain, are taken either from the Cauſes above mentioned, by the preſence of which we may eaſily conjecture of the condition of the diſtemper; or they are taken from the effects of the diſtemper; which that they may be particularly examined and tried, we ſhall fetch from their Originals, namely, from Actions, Paſſions, Excrements, and Habit of the Body.

1 The Animal Actions, which declare a cold Diſtemper of the Brain, are theſe; A heavy and dull Mind, a ſlow blockiſh Wit, an unfortunate Memory, a great inclination to ſleep, and long and deep continuance therein, except a Catarth, or Defluxion, Pain of the Head, or Paſſions of the Mind do hinder it: Dreams of Coldneſs, of Waters, as Rain, Snow, Floods, Pools, Seas, and of white things: A ſlowneſs and dulneſs of all the Sences: Slowneſs of Motion, yet continuance therein; becauſe groſs Spirits are more difficult to be diffuſed or diſſolved.

2 The Paſſions which declare a Cold Diſtemper of the Brain, are Cold Diſeaſes, as Palſies, Lethargy, Catarth, or Defluxion, and many others, with which if the ſick party have been formerly troubled, we may well conjecture that he is ſubject to this diſtemper of a cold Brain. This will further appear if the ſick man be better in clear, hot, and dry weather, than in cold, moiſt, winter, and rainy weather. Moreover, an often and plentiful ſending forth of ſnot and flegm from the Mouth and Noſtrils, is a clear demonſtration of abundance of cold Flegm and moiſture in the Brain.

3 From the Habit of the Body, we may have ſigns both general and particular of this Diſtemper: The general Signs are taken from the whol Habit or Conſtitution; for if the whol Conſtitution be cold and moiſt, then without queſtion the Brain, which is moſt cold and moiſt of all other parts, is the ſame: Therefore a Skin which is cold, ſoft, ſmooth, and white; a Body ſoft and ſlow, not fleſhy, with ſmal veins, declare a cold conſtitution or temper. The particular Signs of a cold Brain are in the Head; as paleneſs of Face, no Veins to be ſeen in the Eyes, ſoft hair, ſmooth, and thin, growing ſlowly, red, and not curling, continuing the whol life without baldneſs; and when the Head is quickly offended with outward Cold, and refreſhed with Heat.

As to the Prognoſis, or Prognoſtical part concerning this Diſtemper; It is hard to be cured, and often produceth grievous Diſeaſes: that which hath been long breeding is moſt hard to be cured; that which is Natural, Hereditary, and from the Birth, is never to be cured; as alſo that which is in old folks, if it hath been of long continuance. Winter is not a fit time for the Cure of this Diſtemper but Summer.

The Cure is wrought from two Indications or Intentions; namely by evacuating or diſcharging the flegm abounding, and correcting or qualifying the diſtemper of the Humor by its contraries, which muſt be done by Diet, Chyrurgery, and Phyſick.

The Diet muſt be hot and dry; and firſt make choyce of a pure Air, ſomwhat hot and dry, but not too hot, for that would diſſolve and powr forth the humors in the Head too ſoon, and ſo produce a diſtillation, and other diſeaſes which happen to thoſe who ſtay long in the Sun, or inflame their heads with too neer approach to the fire: The Air cannot be too dry, ſo it be temperate in its active qualities, but it had better be too hot than too cold.

Let not the Chamber of the ſick party be too little, too low, nor too moiſt or filthy, but open to dry winds which may paſs through: In moiſt, cloudy, cold times, the Chamber air may be altered with hot and ſweet Herbs ſtrewed upon floor; as Sage, Marjoram, Lavender, Roſemary, Tyme; or by burning the ſame, or other dry Woods, and eſpecially Juniper: let the fire be cleer, and ſuch as will dry the Air in the Chamber: Fumigations if they be not too ſtrong, do well to conſume moiſture; but they muſt be carefully uſed, they muſt be very gentle and moderate, otherwiſe they do hurt by melting and powring forth the cold humors too ſpeedily, which cauſe defluxions: and alſo you muſt conſider the Patients Conſtitution in the uſe of them, for ſome men are preſently brought to the Head-ach by any ſtrong ſcent, having their heads preſently filled with the vapor: A temperate and proper Fumigation is made of the pureſt Amber, putting little pieces thereof upon the Coals; it's

no way offenſive, dries well, and ſtrengthens the Brain, eſpecially the Indian Amber, called *Gum-Animi*; or you may preſcribe this following, which is thus compounded.

Take Wood Aloes and Benjamin, of each two drams; of Storax, called *Styrax Calamita*, one dram and an half; Frankinſence and Sandarach, of each two ſcruples; Gum-Animi and Cloves, of each half a dram: Make a groſs Pouder of them to be thrown upon the Embers.

Southernly winds, and thoſe that cauſe Rain are to be avoided, night-air, and eſpecially Moon-ſhine, which much offend the Brain: Very cold and North Winds are to bewared of, eſpecially when they ſuddenly are changed from the South; for ſuch a wind doth ſqueeze a Brain full of moiſt excrements, and ſends them down into the Body, even as a mans hand ſqueezeth a wet ſponge.

Secondly, A ſpecial care is to be had of Diet, for as *Hippocrates* ſaith in his Book of *Humane Nature*, Diſeaſes are partly from Diet, and partly from the Air wherein we breath: Therefore let the Diet be of good Juyce, eaſie concoction, neither cold, nor over nouriſhing: Therefore Mutton, Kid, Veal, are to be uſed, and which are better, yong Pidgeons, Chickens, Capons, Hens, Partridges, Black-birds, Thruſhes, and all kind of Mountain Fowl, and Yolks of new laid Egs: roaſt Meats are better than boyled. Take heed of hard fleſh, and of hard concoction, as Beef, Pork, Veniſon, Hares, Geeſe, Ducks, and Sea Fowl: as alſo of the Heads, Entrals, and Appurtinances of Beaſts. Eat Fiſh but ſeldom, and make choyce of thoſe which have ſolid Fleſh, coming out of ſwift Rivers, and ſtony places; boyl them in Wine, adding Vinegar, Butter, and Spice, which Sawce is to be allowed with other meat, unleſs the Liver be over hot; of which principally uſe, Nutmeg, Cloves, Cinnamon: never or ſeldom eat cold and moiſt Herbs, as Lettice, Purſlain, Spinage: but in Summer time we can allow a moderate uſe of Herbs which are gently cooling and drying, for the ſtrengthening of the Body, and fixing the Blood that it may not evaporate, as Endive, Succory, Sorrel, but they muſt be taken boyled, not raw. Roots of Parſly, Carrots, Parſnips, Mints, Hyſop, Water-creſſes, are very good. But you muſt avoid all things that eaſily diſturb the Head, and fill it with vapors; and they are of two ſorts: Either they are ſuch as diſcuſs and melt the Humors with their ſharpneſs, as Onions, Garlick, Muſtard, Rocker, Rhadiſhes: or ſuch as fill the Head with groſs vapors, as Milk, and all Milk meats: All manner of Pulſe, as Beans, Peaſe, &c. of which the red Peaſe are the leaſt hurtful, by reaſon of their opening and abſterſive nature; therefore the broth of them is allowed. You muſt avoid all green raw Fruit, which are not laſting eſpecially, and thoſe which are very moiſt: dryed Fruits may be uſed at ſecond or laſt courſes, as Raiſons, Almonds, Pine-nuts, Dates, and the like; but you muſt uſe them ſparingly, for they are for the moſt part hard of concoction. Pears boyled and Sugared, Citron Rinds Candied, Lemmon and Orange Pills Candied, may be eaten at the laſt courſe: but it is much better to take one ſpoonful of digeſtive Pouder after meat, whoſe Aromatical ſweet vapor aſcending with the vapor of what is eaten doth ſtrengthen and dry the Brain: It is made of Coriander Fruit, Annis ſeeds, Cinnamon, Nutmeg, with a double quantity of Sugar of Roſes. Let your Bread be of the beſt Wheat, wel baked and leavened, and made with Salt and Annis ſeeds: in a great diſtemper Bisket is beſt. Let your drink be thin wine of ſmal ſtrength, which wil not fill the Head with many vapors, wel mixed with Water; and alſo it is profitable one hour before meat to mix wine and water that the vapors may be allayed, and to boyl a little Coriander ſeed in the water that it may better ſtrengthen both Stomach and Brain: in ſtronger Diſeaſes uſe Hydromel, or Water and Honey. This is a good Rule in all Diet, To eat moderately, and to let the Supper be leſs and lighter than the Dinner. Sobriety, as in all Diſeaſes, ſo eſpecially in Head-Diſeaſes is of great concernment; for the Head by much food is filled with Humors and Vapors: and contrarily, by little and ſlender Diet it is emptied of them.

Thirdly, You muſt uſe moderate Exerciſe, and every day continue it, for too much reſt weakens the Natural heat, and makes it ſo dull that it cannot well concoct, and fills the Body full of Excrements: On the other ſide, Motion and Exerciſe ſtir up the Natural heat, help Concoction, expel Excrements, and cheereth the Spirits, and purifieth them, but you muſt exerciſe before meat, and after meat reſt for an hour or two, or at leaſt move very eaſily.

Fourthly, Uſe a mean in ſleep and waking, for as with moderate ſleep the ſtrength is repaired, ſo with too long the Body is made cold, burdened with excrements, eſpecially the Brain: but too much watching, makes the Body thin, ſpends the Spirits, and feeds upon the ſound parts of the Body. Let not therefore ſleep be too long, but according to cuſtom commonly ſeven hours are allowed, but more or leſs may be taken according as age and cuſtom ſhall require; if you offend in either extream, it is better to offend in too much waking than in too much ſleep. You muſt not ſleep ſtraight after meat, but two hours after at leaſt, having taken a gentle walk. You muſt ſleep with your head high, and upon one ſide; lying on the back is not allowed.

Fifthly, Al the Excrements of the Body are to be evacuated in their ſeaſon, of the Brain eſpecially; therefore every morning hawk from the Pallat, blow the Note, comb, and rub the Head with a courſe cloth, or ſponge, which will fetch the ſuperfluities of the Brain through the futures or ſeams of the Skull

Skull. The Belly muſt be kept open; and if it will not otherwiſe, uſe a Suppoſitory, or a Clyſter, or ſome gentle Lenitive at the Mouth. For the Excrements are not only taken away by ſo doing, but alſo by degrees ſomthing is fetcht from the Brain, or at leaſt ſomthing is retained and derived thereby from the Head, which was, or would have been ſent thither as to the weakeſt part.

Laſtly, You muſt have ſpecial care of the Paſſions of the Mind, from which our bodies are many times wonderfully altered and diſturbed; eſpecially of Anger and Sorrow: Sorrow diminiſheth the Natural heat, wounds the Spirits, whence comes ſmal concoction, and many Excrements: Anger makes a great boyling of the Blood, and motion of the Spirits, by which the Humors are diffuſed and diſſolved, and then if there be any Excrements in the Brain, preſently they are ſent to the weak and infirm parts, from whence ariſe many dangerous Diſeaſes.

The other two Means for Cure, namely, Chyrurgery and Phyſick, may be uſed as followeth:

In almoſt all Diſeaſes which come of the Humors, we uſe to make a general Evacuation by Blood-letting and Purging.

Blood-letting is not agreeable with Flegmatick Diſeaſes; but if in other parts of the Body Blood do abound, the Liver be inflamed, and the age of the Patient be flouriſhing, and conſiſtent with it, we may then let blood: for ſo will the aſcention of vapors into the head be hindred, and ſuperfluous Nouriſhment taken away, that Nature afterwards may more eaſily concoct what is raw and wateriſh in the blood; and then purging Medicines may be given more ſafe.

But if *Plethora*, or two great repletion do not Conſtrain, it is better before blood-letting to give a purge for Flegm by way of Potion, Bolus, Pills, or Pouder. The Forms whereof are as followeth.

Take of Senna half an ounce; Annis ſeeds, and Cloves, of each half a dram; Leaves of Mints and Bettony, of each half a handful; of the tops of Time, half a pugil: Boyl them to a quarter of a pint in Spring Water; ſtrain it, and infuſe in it two ſcruples of the beſt Agarick Trochiſcated; of Cinnamon half a ſcruple; ſtrain it again, and diſſolve in it three drams of *Diaphœnicon*, and one ounce of Syrup of Roſes. Let this be the Potion to be given with ſafe Government. Or;

Take *Diacatholicon*, and *Diaphœnicon*, of each half an ounce; make it into a Bolus with a little Sugar. You may ad two drams of *Diacarthamum*, and take away as much of the *Diaphœnicon*: or you may make it of equal parts of *Diacarthamum* and *Diaphœnicon*, without the *Diacatholicon*.

Or,

Take Pill. Cochie the leſs, two ſcruples; with the Water of Bettony make them into five or ſix Pills gilded; which let him take early in the morning, having eaten but a light ſupper over night.

The Pills of Agarick, and of Cochie the greater, are very fit for this purpoſe. For a Pouder.

Take Senna, Turbith, Hermodacts, of each a ſcruple; Diagridium half a ſcruple; one Clove: Give this pouder in Broth faſting.

After Blood-letting, if it be neceſſary, we come to the preparation and purging of the Humors, which may be done with the following Apozeme, or opening Drink.

Take the Roots of Cyprus, Flower-de-luce, Angelica, Zedoary, and of Elicampane, of each one ounce; the Leaves of Bettony, Marjoram, Balm, Penyroyal, Organ, Calaminth, of each a handful; of the tops of Time and Sage, of each half a handful; Annis ſeeds, Seſelis, or broad Cummin, Fennel ſeeds, of each three drams; Liquoris ſcraped, and Raiſons ſtoned, of each one ounce; the Leaves of Senna ſprinkled with *Aqua vitæ*, two ounces; Carthamus ſeeds bruiſed, and freſh Polipody of the Oak, of each one ounce; Agarick trochiſcated, Turbith, Hermodacts, of each three drams; Ginger and Cloves, of Each one dram; Stœchas, Roſemary, Sage, and Lavender Flowers, of each one Pugil, or ſmal handful: Boyl them in fair Water to two pints; ſtrain it and ad four ounces of white Sugar: clarifie it, and aromatize it, that is, make it ſweet with two drams of Cinnamon; let this be for four morning draughts.

In the firſt and laſt draught diſſolve of *Diacarthamum*, or *Diaphœnicon* three drams; and let him drink it with Phyſical Regiment.

Or if you ad no Electuary to the laſt doſe the day following, you may give the purging Pills above mentioned.

After Purging, that the Brain may be altered and ſtrengthened, and the Medicines purging, not leave any offence, the Patient may take this Bolus following:

Take of old Treacle one dram; Conſerve of Roſemary and Roſes, of each two ſcruples: with Sugar make a Bolus, which let him take in the morning two hours before meat, and drink after a ſmal draught of ſmal Wine.

But becauſe this is a ſtubborn Diſeaſe, and will not alwaies yield to gentle Medicines, we muſt fly to ſtronger. And then after Purging, we muſt uſe a ſweating Diet, which dries and warms the Brain and the whol Body; concocts crude and raw humors, & makes the thick humors thin, cuts thoſe which are ſlimy and clammy, clenſeth thoſe that are foul and dul, and ſends forth whatſoever is over

moiſt

moist by Urine, Sweat, or insensible transpiration. For the effect of all which it is very good to use a slender Diet at the time of taking it.

This Diet drink may be made either of a Decoction of Guajacum, or Lignum vitæ only, or by putting to it some Sassaphras, or Roots of Sarsaparilla, or those things which are most proper for the Head, as the Prudent Physitian shall think fit that wil consider the divers tempers and constitutions of Bodies; in respect of which he will prescribe a longer or shorter continuance of this Diet to fifteen, twenty, or thirty daies.

Now the Sweating drink is made as followeth:

Take of Chips of Guajacum, and Roots of Sarsaparilla, of each two ounces: infuse them twenty four hours in four pints of Water upon warm embers: then boyl them gently without smoak to the consumption of half; strain it through a Hippocras bag, and keep it in a glass bottle, and give half a pint warm in the morning, covering him warm, and provoking sweat.

Take of Sarsaparilla two ounces; infuse them twelve hours in twelve pints of Spring Water; then boyl them as before to the consumption of the fourth part; strain as before, adding Coriander seeds, Liquoris, Sugar or Cinnamon, as much as will make it pleasant. Use this for ordinary Table Drink at the time of the Diet; eating Bisket made with Annis seeds, roast Meat, not boyled, Almonds roasted, Raisons, Pinenuts, Prunes boyled with Sugar, and the like.

This is alwaies to be observed in the use of Sudorosick or Sweating Medicines: You must give a Purge once a week, and that day omit sweating, by reason that sweating expels only the thinner matter, leaving the thick which must be sent forth by stool. Moreover, because by the use of sweating Medicines the Body is often bound, you must give a Clyster every third or fourth day.

If the Disease be not yet cured, you may use these bags for the Head, in the time of sweat.

Take of Annis seeds, Fennel seeds, Bay-berries poudered, of each three ounces; of *Milium*, or Millet seed, or Hyrse, one pound; of common Salt half a pound: Fry them in a Pan, powring by degrees a little strong Wine upon them. With these fill two bags, apply them hot one after another to the mold of the head being shaven; do this presently after he hath taken the sweating Potion. Then wipe off the swear, and clap this strengthening Plaister to the Head.

Take of cleer Amber, Frankinsence, Mastick, of each one dram and an half; Galbanum, Opopanax, of each one scruple; of Misseltoe of the Oak two drams; male Peony seeds half a dram; Oyl of Nutmegs as much as is sufficient: Make a Plaister of them in an oval form. Or you may use the head strengthening Plaister in the Apothecaries Shops at *Mountpelior*, not in the *Dispensatory*, whose description followeth:

Take of Storax, Benjamin, Laudanum, of each four ounces; Peony roots, Flower-de-luce roots, Misseltoe of the Oak, Mastich, of each one ounce; liquid Styrax as much as is sufficient to make a Plaister: of which one ounce upon Leather in an oval form may be applied to the Coronal Suture.

If you desire a more drawing dissolving Plaister which is commonly called *Epispastick*, thus you must make it.

Take of *Emplaster de Mucilaginibus* two ounces; Flower-de-luce roots, Hermodacts, Pellitory of Spain, Staphisagre, Cubebs, Pidgeons dung, Mustard seed, of each one ounce; Nutmeg, Cloves, Cinnamon, long Pepper, and black Pepper, of each half a scruple; Liquid Styrax as much as is sufficient: Make a Body of Plaister, and spread a little upon Leather in an oval form for the mold of the head.

After General Evacuations, you may come to Particulars; which are made by Errhins or Juyces, for the Nostrils, sneezing pouders, Apoplegmatisms, or Medicines chewed in the Mouth.

Take Leaves of Marjoram, Sage and Bettony, of each one handful; beat them in a Marble stone Mortar, sprinkling by degrees Bettony Water, and white Wine, of each two ounces: Press out the Juyce and make an Errhine, which you may make sharper if you add half an ounce of Flower-de-luce roots.

It is a custom now adaies to rub the dry Leaves of Tobacco between the fingers, and to snuff up the Pouder: this fetcheth much humour from the Brain, and is at hand.

But the best Sternutatories are made thus:

Take the Leaves of Marjoram, Sage, Rosemary, all dried, of each half a dram; Pellitory of Spain and white Hellebore, of each one scruple; Musk three grains; which with a Quil may be blown into the Nostrils. Or,

Take Ginger, and Flower-de-luce Roots, or Orrace, of each one scruple; Castor half a scruple; Euphorbium six grains: Make them into Pouder. But the chiefest smelling Pouder is made of black Hellebore, with an equal weight of Sugar Candy finely poudered. Which also is excellent for curing a defluxion.

Apoplegmatismi, or Medicines drawing Flegm out of the Head, are either called *Masticatories*, that is, chewing Medicines; or *Gargarismi*, that is, Medicines to gargle in the Throat. A Masticatory is thus prepared,

Take of Pellitory of Spain two drams; Mustard seed and Staphisagre, of each one dram: Make them

them up with white Wax into little Balls; of which let one be chewed every morning, holding down the head.

A Flower-deluce root is uſual for the ſame purpoſe, which wil do good in ſmal infirmities. Maſtich alone chewed is the mildeſt Maſticatory, and it attracts, and draws humors to the mouth without heat and inflamation, which others do not.

A Gargariſm is thus made:

Take of Staviſagre half an ounce; Muſtard ſeed three drams; Pellitory of Spain one dram: Boyl them in Water and Honey to three ounces, in which diſſolve Vinegar of Squils two ounces.

In the uſe of theſe Medicines we muſt obſerve, That the Evacuation which is made by the Pallat, is more beneficial than that which is made from other parts, becauſe it is ordained by Nature for the only way by which the Head is to be purged and cleanſed. But the Noſe is made for ſmelling and breathing through, and Nature doth oppreſs and abuſe it, when ſhe ſends forth her ſuperfluous Excrements by it. Moreover the way of Evacuation by the Pallat is more ſafe, neither is the Brain ſo much ſhaked by it as by ſneezing. But Errhines, or Medicines that purge the head by the Noſe, do draw forth the matter more violently, becauſe not only the quality or vapor of the Medicine ſtir up the Brain as in Gargariſms, but alſo the very ſubſtance it ſelf.

We muſt alſo obſerve, That the uſe of Errhines or neezings is dangerous when the eyes are ſore, or the Noſtrils are ulcerated or ſore, and when the patient is inclined to bleeding at the Noſe, or to a giddineſs of the Head, which neezings wil ſuddenly bring by ſhaking the Brain too violently.

Liquid and moiſt Errhines are ſnuft into the Noſe from the palm of the hand, or by lying down are powred in; but the mouth muſt firſt be filled with Water or Wine, leſt that Medicine come by the Pallat into the mouth, although that which paſſeth through brings the humors more forcibly out of the mouth.

They muſt take heed of Gargariſms that are ſubject to Defluxions or Conſumptions.

Moreover, For particular Evacuations we may uſe *Veſicatories*, or Plaiſters that draw bliſters, to the Nape of the Neck. In the Diſpenſatory of *Mountpelior* is this Receipt, though it be not in any other.

Take of Galbanum and Ammoniacum, of each five ounces; of the Pouder of Cantharides, or Spaniſh Flyes, one pound and an half; Muſtard, Pepper, of each half a pound; Virdegreece and Pellitory of Spain, of each two ounces and an half; Euphorbium one ounce and an half; Wax one pound and an half; Pitch, Rozin, and Turpentine, of each one pound; Oyl a ſmal quantity. One ounce or two of this Plaiſter ſpread upon Leather, may be applied to the Nape of the Neck.

The Brain is alſo ſtrengthened by outward application of Pouders. Rhewm-Caps, by which it is comforted and made warm, and the remainder of the Humor diſperſed.

Take Pouder of Orrace half a pound; Storax and Benjamin, of each two ounces: pouder the Head with them every night, and comb it off in the morning.

This Pouder is very refreſhing by its ſcent, ſtrengtheneth the Head, dryeth the Hair: If you wil make it ſtronger, put Cloves, Nutmegs, and Cinnamon thereto.

Take *of Stœchas, Roſemary Flowers, and red Roſe Leaves, of each half a ſmal handful; dried Bettony two ſcruples; Coriander ſeed,* Lignum Rhodii, *Frankinſence, Orrace, Nutmeg, Maſtich, of each one ſcruple; Benjamin, Vernix, Mace, and Cloves, of each half a ſcruple. Pouder them, and wrap them in the thrids of Scarlet or ſweet Cotton, and with a piece of red Taffety make a Rhewm-Cap for the Head, to be ſewed in another Cap, or to be worn by it ſelf.*

The following Fumigation doth dry the Head.

Take *of* Lignum Aloes, *Frankinſence, Maſtick, cleer Amber, yellow Sanders, red Roſe Leaves, Bettony dried, of each one dram; Cinnamon, Mace, Cloves, Styrax Calamita, of each one ſcruple: make them all into groſs Pouder, which you muſt ſprinkle upon coals of fire, and let the Patient take the fume or ſmoak of it faſting, covering his head with a large linnen cloth to preſerve the fume, and opening his mouth: Let him do this twice or thrice in a week.*

But if by Fumes he find pain in his head, you may only perfume his night-caps every evening: For which uſe this following is eaſily prepared.

Take *of Frankinſence, Maſtich, Styrax Calamita, Benjoin, and Sandarach, of each half an ounce; Mace and Cloves, of each two drams: Make groſs Pouder of them.*

But becauſe this is a ſtubborn diſeaſe, and uſeth to produce new Flegm after both general and particular Evacuations, we ſhal preſcribe thoſe uſual Medicines by which the humor may ſometimes be drawn away, and the Brain preſerved longer in that ſtate, into which by Phyſick it is reſtored. To this end you may make a Magiſtral Syrup of thoſe Drugs which are in the Apozeme, or opening drink above written, taking three times as much of the purging things as before, which he may uſe twice or thrice in a Month, the quantity of two or three ounces in a Decoction of Bettony and Marjoram.

Or inſtead of Syrups he may uſe to take theſe Pills.

Take

Take *of the best Aloes half an ounce; Turbith that is Gummy, Hermodactls, and Agarick new made up, of each two drams; Diagridium one dram; Ginger and Cloves, of each half a scruple; Saffron and Salgem, of each seven grains. Pouder them all, and sprinkle them with the Water of Marjoram: then dry them in the shade, and make them into a Mass or Body with Oxymel of Squils; of which let him take half a dram or two scruples once in a week, two hours before Dinner.*

The day after his Syrup or Pills, as also twice or thrice in a week, let him take a quantity of this Opiate, or Electuary.

Take *of Conserve of Acorus Roots, or of Ginger, and Citron Barks candied, of each one ounce; the Conserve of Sage and Rosemary flowers, of each six drams; Nutmeg candied half an ounce; one candied Myrobalan, old Treacle, and confection of Alkermes, of each three drams; of the Pouder Diambra, and Diamoschi dulcis, of each one dram: with the Syrup of Citron Barks make it up: And let him take every morning two hours before meat, the quantity of a Chesnut; drink after it a little wine and water.*

This following Balsom doth more strongly corroborate the brain, of which he may take now and then three or four drops in wine or broth.

Take *of the Chymical Oyl of Nutmegs three drams; Oyl of Marjoram, Rosemary, and Amber, of each half a dram; Musk and Amber-greese, of each one scruple: with a little Oyl of a Mans Skull mix them together. You may make the Oyl of a mans Skull thus: Take the shavings or raspings of a Skull that was never buried, put them in a Retort, or Still so called, in as much white Wine as will suffice: Let them stand in* Balneo Mariæ, *that is, a kettle of warm water for some time; then distill it in Sand till it is dry; and you shall find the Oyl swimming upon the Water which is drawn off.*

Anoint your Nostrils within with this Balsom every night, and it wil strengthen the Brain wonderfully.

There is another cheaper for to anoint the Nostrils with: which is,

Take *the Oyl of Orange Flowers two drams; white Wax one dram; melt them gently, and put thereto Oyl of Amber half a dram; of the Chymical Oyls of Sage and Rosemary, of each fifteen drops; Oyl of Spike five drops; mix them together.*

It is also very good for the drawing away of the mattet which breeds continually in the Brain, by an issue in the hinder part of the neck.

Lastly, The baths which come out of Brimstone, Niter, Bitumen, as those called *Bellilucanæ*, are very good for the drying and strengthening of the Brain if it be washed therewith for some daies, after general evacuations are made. Daily experience teacheth us that most grievous Head-Diseases coming of cold Distempers are thereby cured. It is profitable also to drink those Waters for the strengthening of the stomach which alwaies doth sympathize with the head. Therefore I set down this digestive Pouder.

Take *of Coriander seed prepared one ounce; Annis seeds, and sweet Fennel Seeds, of each three drams; Cinnamon and Nutmeg, of each two drams; Coral, Ivory, and Pearl prepared, of each one scruple; Sugar of Roses as much as all the rest, or for rich folk twice as much, of which let him take a spoonful after every meal, not drinking or eating for three hours after.*

CHAP.

CHAP. II.

Of Drouzie Diſeaſes, called, Coma, Lethargy, Carus, *and* Apoplexy.

THere are four kinds of Preternatural ſleep, namely, *Coma*, *Apoplexy*, *Carus*, and *Lethargie*. We wil ſpeak of them together in this Chapter, becauſe they proceed from the ſame Cauſes, and are cured all the ſame way.

Theſe four Diſeaſes differ one from another after this manner:

In the Diſeaſe called *Coma*, *Cataphora*, or *Subeth*, according to *Avicen*, is a deep ſleep; but ſuch an one as from which the Patient is raiſed, openeth his eyes, and anſwereth, but preſently he is again in a deep ſleep.

In a *Lethargie*, the ſleep is like that of *Coma*, but it is joyned with a Feaver and Frenzy, or Dotage.

In *Carus* there is no Feaver as in Lethargy, but in *Carus* the ſleep is more deep and profound, ſo that when the ſick party is rowſed up, he ſcarce opens his Eyes, and anſwers not, as in the former, but yet being pinched he is ſenſible, and his breath comes freely.

In *Apoplexy* the ſleep is moſt deep, and a total privation of ſence and motion, except breathing: and ſo therefore the ſick doth neither open his eyes, anſwer, nor feel when he is hurt; as alſo he breatheth very difficultly.

There are many *Cauſes* of theſe Diſeaſes.

The firſt and chief cauſe is Flegm and wateriſh humor contained in the brain; of which (when there is but a final quantity, that moiſteneth and cooleth the ſubſtance of the brain, ſtopping up its pores and paſſages) cometh *Coma*.

But if the ſame quantity of Humor ſo gathered together, become putrified and corrupt, or grow into a tumor or ſwelling, or be diſperſed throughout the brain, it procureth a *Lethargie*.

When it is gathered in a greater quantity without corruption, and that the humor is ſucked up into the ſubſtance of the brain, it cauſeth a *Carus*.

And laſtly, When the humor is in ſo great a quantity that it doth not only fill the brain, but alſo the ventricles thereof, ſtopping and ſtraitening them, and alſo when it doth offend the Original of the Nerves which comes from the brain, and is placed in the baſis or bottom of the Skull, and when it hindereth the paſſage of the Animal Spirit, it begets an *Apoplexy*.

Secondly, Sleepy Diſeaſes ſpring alſo from abundance of blood in the brain; for if the ſtore of blood contained, be more raw, wateriſh, and cold, it thickens the Animal Spirits, and makes them unfit to move; as alſo the abundance of humor charging the brain, hindereth the free paſſage of the Spirits, and according as the humor is more or leſs in quantity, more or leſs in coldneſs, it produceth a greater or a leſſer Diſeaſe: So that both *Coma*, *Carus*, and *Apoplexy* may be cauſed thereby.

But drowſie Diſeaſes, eſpecially the *Apoplexy*, are uſually cauſed by blood out of its Veſſels, ſtopping and compreſſing the Ventricles of the brain, and that falleth out either from a vein broken in the brain, or from an over fulneſs of the Veſſels, or from ſome great bruiſe or contuſion of the head, or from ſome cut or punctured wound, by which the veins of the brain are divided, and ſo ſend forth much blood. And the Fracture only of the Skul, compreſſing of the brain may produce a dulneſs, drowſineſs or ſleeping Diſeaſe.

Thirdly, It is without doubt that a Tumor in the brain, burdening it with its weight, may produce a ſleepy diſeaſe. This is reported by *Platerus* to be found in a certain Barron, who for a long time was ſottiſh and ſleepy, did nothing rationally, nor deſired meat, neither did eat any thing but what was forced into him; went not to bed but by compulſion, but would ſit al day at the Table leaning on his arm, with his eyes ſhut, neither did he anſwer at any time without much asking and importunity, and then very little to the purpoſe. After his death his Skul was opened, and there was found in his brain, a great Kernel, hard, and of a callous body; the cauſe whereof might be ſome ſtroak upon the head, which he had received long before the beginning of his Diſeaſe.

Fourthly, Many Vapors flying into the Brain may be the cause of a sleepy disease: for if the vapors be many and gross, that they burden the animal Spirits, and darken them as with a mist, even as the clouds in the greater world darken and obscure the beams of the Sun. But if they be overmoist they do so wet the Brain that it becomes weak and faint in its functions and performances: Therfore Drunkards sleep profoundly from the vapor of the Wine, and the abundance of crudities sent up into the Brain. So Children that are troubled with the worms are often taken with sleepy diseases from the abundance of gross and thick vapors which arise from crude and watery humors. So in intermitting Feavers or Agues, sometimes in the beginning of the Disease there is irresistable sleep, by reason of the crude and stinking humors which are contained in the veins, especially in the Meseraick veins, which humors being made thin by the heat of the fit of the Ague, send many vapors to the head, and produce such a sleep as ends with his cold fit sometimes, and at other times continues to the end of the fit, according as the vapors are more gross or thin; or as they are more or less in quantity, and so are longer and sooner discussed and dispersed.

Fiftly, Many times so great a sleeping Disease is begot by the too frequent use of Medicines called *Narcoticks*, that do produce sleep; that many unawares by the unskilful use of Opium have slept their last. There is also the same stupifying force in some living Creatures: as in the *Torpedo*, or Cramp-fish. So *Plutarch* reports in the death of *Cleopatra*, That the sting of a Viper causeth deadly sleep. But in mans Body this stupid sleeping condition comes from the putrefaction of humors, which is seen in malignant and pestilential Feavers; hence it is that in those diseases they are very sleepy oftentimes, which is a certain sign of venenosity and malignity, and sometimes of death.

The Diagnosticks or Signs which shew the differences of these sleeping Diseases were set down in the beginning of this Chapter. But the Signs of the Causes that produce these Diseases are these:

When sleepy Diseases come from watery humors putrifying in the Brain, these are the signs: A Flegmatick Constitution, Old Age, Infancy, a cold and moist dwelling and season, a stopping of an accustomed spitting and blowing of the Nose, and when the sick man before the coming of the disease was troubled with heavines of the Head, dimnes of sight, and dulnes of the whol Body; and when in the Disease there is a defluxion of Rhewm from the Nose or Mouth; or when the sick party feeleth it trickle down his Throat.

That sleeping Diseases are bred of blood, appears by a plethorick or full Body, red Face, pain of the Head going before the Disease.

A Tumor or swelling in the Brain is scarce by any signs to be known, but is only manifest after death by opening of the Skull as was before mentioned.

That the Disease comes from vapors flying into the Brain, appears from those signs which shew the particular Diseases of those parts, from whence the vapors are sent up to the Brain. A surfet going before, with crude and sharp belchings, and other signs of crude humors in the Stomach, and other parts of the lower Belly, shew that the Disease comes from vapors which are sent from the Stomach. But if the Vapors come from Worms, you shal know that in the Chapter of them.

As for the Prognosis or foreknowledg of things in these Diseases, Every sleeping Disease is dangerous, but by how much the deeper the sleep is, and the sick man harder to be awaked, by so much greater is the danger; and therefore a *Carus* is more dangerous than a *Coma*, or a *Lethargie*; but an *Apoplexy* is worse than a *Carus*, for if it be violent, it is altogether incurable, as *Hippocrates* observeth in his 42. Aporism of the Second Section; which is thus: It is impossible to cure a strong Apoplexy, and not very easie to cure a weak one; a strong Apoplexy is when the breathing is uneven and disorderly, and sometimes intermitting, and if such a breathing is very violent the disease is stronger, if the breath be stopt it is most strong; but when there is some order in the breathing, the Disease is weaker, which is declared by *Galen* in his Comment upon the said Aphorisms.

A sleeping Disease is very dangerous which comes upon an acute Disease, for it either signifies the extinction of the Natural heat, or a poysonous malignant quality which hath seized on the Brain.

That Disease which comes by consent of the lower parts, and from vapors which arise from them, is less dangerous.

Men sick of a Lethargy, die within seven daies; if they live longer, they recover. *Hippocrates* in his Book of Diseases.

Sleeping Diseases in old men, are for the most part deadly; for in regard of their want of Natural heat, they having a weak concoction, and weak expulsion, it comes to pass that they cannot overcome and expel that humor which causeth the Disease, much less can they expel that humor which aboundeth in the Brain, for since the Brain is the coldest part of the Body, it must needs in old people have its heat diminished and extinguished sooner than any other parts.

In a Lethargy, if a Tumor happen under the Ears, or if matter or filth come forth of the Ears, and the symptomes abate, it is a sign of health, for it sheweth the strength Nature hath got over the cause of the Disease, which it expels before perfect concoction out of the Emunctuaries under the Ears,

or

or purgeth it out being turned into matter by the Natural paſſages.

They who are preſerved and cured of the Lethargy do uſe after to ſpit matter and blood, *Hippocrates* in *Coac.* and Third Book of Diſeaſes. This Opinion, ſay ſome, agrees not with Experience, for few have ſeen a true *Empyema*, or corrupt matter between the Breaſt and the Lungs, follow a Lethargy: But the Interpretation of *Mercurialis* upon the Aphoriſm is very right, for he ſaith, That *Hippocrates* meaneth by *Empyema* and *Empyicus*, not the diſeaſe of the Breaſt, but when filth is diſcharged by the Ears and Noſtrils. And *Galen* hath taught us in his Commentary upon Aphoriſm 8. Sect. 5. and Aphoriſm 44. Sect. 7. That *Hippocrates* by *Empyema* underſtands there, not only that ſuppuration and breeding of matter, which is in the Breaſt, but alſo that which is in al other parts.

It is a good ſign when a Phrenſie followeth a ſleepy Diſeaſe coming of a cold cauſe, becauſe by that violent heat which cauſeth a Phrenſie, the watery matter which begets a ſleepy Diſeaſe is concocted.

Men in Apoplexies die in ſeven daies, except a Feaver take them, *Hippocrates* 2. of Diſeaſes, and Aphor. 51. Sect. 6. but that Feaver muſt be a violent one, and eſſentially ſpringing from the inflamation of the Humors and Spirits, otherwiſe it will not diſcuſs the matter which cauſeth the Apoplexy: for if it be gentle, and only ſymptomatical, or happening to the Diſeaſe as an accident, as in an Apoplexy, coming from the burning diſpoſition of the head through too much blood contained in the veins thereof, then the Feaver doth not diminiſh the Diſeaſe, but rather cauſe ſome ſymptomes of madneſs, which weaken the Animal Faculties: and in this caſe a Frenzy coming upon a ſleepy Diſeaſe is not good; as we ſaid in the Prognoſtick before mentioned. Moreover, a Feaver that muſt diſſolve a ſleeping Diſeaſe, muſt have another condition, namely, That it come in the beginning of the Diſeaſe, whiles Nature is in ſome ſtrength to put forth ſtrong endeavors. For that Feaver which comes after the Diſeaſe hath long continued is not healthful, as *Hippocrates* in *Coacis*, ſaith, Apoplexies being like to be diſſolved, if a Feaver come upon them after they have long continued, are deadly.

A faint Sweat in an Apoplexy is evil, for it ſhews great oppreſſion of Nature.

For the Cure of theſe Diſeaſes, as of al other, three neceſſary means are required.

First, Order of Diet.

Secondly, Manual Operations, or Chyrurgery.

Thirdly, Medicines, or Phyſick.

The Diet in the beginning of theſe Diſeaſes muſt be very ſlender; becauſe they are very acute, or violent and ſharp; therefore the Patient muſt be fed only with thin broaths now and then: But in the time of the declination of theſe diſeaſes we may uſe the ſame Diet which is preſcribed in the Chapter before going, treating of the cold Diſtemper of the Brain.

The other two means are to be uſed by this following Method.

And becauſe ſleeping Diſeaſes are ſudden, and ful of danger, they require the Phyſitians chief diligence, and quick application of Medicines.

First therefore, when the Phyſitian is called to one taken with a ſleeping diſeaſe, he ſhall endeavor to raiſe the Patient from his deep ſleep, by offering violence to al his Senſes? and laying his eyes towards the Sun-beams, and cleareſt light; he muſt make a great noiſe in his Ears, and he muſt be called aloud by his own Name. He muſt put ſharp things to his Noſtrils, as Rue, Caſtor, Vinegar, and ſharp things into his Mouth alſo.

He muſt ſtir up his feeling with pinching, pulling of hair, by ligature or binding, bending of the fingers, and the like.

Make firſt a Clyſter of the common Decoction which is moſt ready, after this manner.

Take *of common Decoction for Clyſters, one pint and an half*: Hiera picra, *and* Diaphonicon, *of each one ounce*: *Oyl of Rue, and of Lillies, of each one ounce and an half*: *Houey of Roſes two ounces*: *Salt one dram*: *Make a Clyſter, give it preſently.*

While theſe things are doing, the Phyſitian ought ſeriouſly to conſider whether Blood-letting be fit or not; for in theſe Diſeaſes, as *Celſus* ſaid, Blood-letting either kils, or cures; and blood-letting is good, if blood be the principal cauſe, or the aſſiſting cauſe, or if it be *ſine qua non*, that is, a cauſe without which the diſeaſe would not be, if ſtrength permit. But his ſtrength is not to be looked upon as he is in his fit, when his Animal Actions are hindred, but as it was before the Diſeaſe came. For if the Patient was formerly ſtrong, he will endure blood-letting, except the Apoplexy be very ſtrong: and if his ſtrength be not taken away by reſolution of the parts, but by oppreſſion of them, then is blood-letting good. But if Blood offend no way, or if the ſtrength be quite gone, or the Patient very old, you may omit blood-letting, but otherwiſe preſently.

The firſt thing to be done either by night or day to one in any of theſe Diſeaſes, is blood-letting, nay, before the Clyſter, if it be not already adminiſtred: But his Arm muſt firſt be well rubbed and chafed.

And this is to be observed, That it is more profitable and safe, not to let out so much blood at once as you require, but by degrees in some hours distance; for by the repeating of blood-letting, the matter is more easily moved, and the strength more preserved. Look in the sick mans face after his first loss of blood, and feel his pulse; for if his face be better colored, and more lively, and his breath more free, and his pulse good, there is much hope, and you may let blood the second time with more confidence. Make the Orifice large, otherwise he will not bleed, his blood is so thick. The more plenty of blood he hath, the more he may lose: But if flegm abound you must bleed sparingly, lest the vital heat be lost, which is so absolute necessary for discussing and dissolving of this Disease.

A singular Example of large and often bleeding in an Apoplexy, is laid down by *Zacutus Lusitanus*, in his First Book of *the Chief Physitians*, and his 33. History, in these words: *A certain Noble yong Maid, fell first into a general forgetfulness of all things, and then into a true Apoplexy, with the flowing of her Courses: Unto whom when they had applyed many Medicines both above and beneath, as Ligatures, sharp Clysters, Cupping with Scarrification: the Indication which comes from the flowing of the Terms being neglected, and danger coming on through continuance: I perceiving her strength to be sufficient for it, havin, first rubbed her Thighs very well, and placed Cupping Glasses thereon; in the space of eight hours, opened the head Vein four times, and then she began to speak, and so recovered.*

Some of our late Practitioners, are so bold as to open the Jugular Veins in Apoplexies, and say they cure also: and in so doing they take this course: First they bind the Neck gently with a linnen cloth, after the Vein is opened, they presently loose it, and the blood flows well without a Ligature, which might attract it to the head: after they heal up the wound with a sticking Plaister, without binding, and so they affirm the blood will easily stop: which *Zacutus Lucitanus* confirmeth (though he useth Ligatures) in his 79. Observation in his first Book of the Admirable Practice of Physick, where he relates a Story of a most sharp Squinancy; in which, by the advice of most skilful Physitians, the Jugular Veins were opened; from whence followed (as he saies) a most dangerous flux of blood not to be stopt, which brought the Patient very weak. *Zacutus* being sent for, applies *Galens* Plaister, which he in his 5. Book of Method, and 4. Chapter, useth with good success for stopping blood in Arteries and Jugulars, and bending the Patients Neck gently, he comes to his strength, and is cured. This Plaister is made of Frankinsence, Aloes, the hairs of a Hare mixt with the white of an Eg, having twice as much Frankinsence as Aloes, as *Galen* teacheth in the place mentioned sometimes an equal part of each, when the Bodies are harder. And *Galen* commends the operation before written, when he saith, This Plaister stops the flux of the Jugular Veins without a Ligature or binding. But this I would take notice of, That the blood doth not flow forth so violently in one that hath an Apoplexy, as in one that hath a Squinzy, because the blood is congealed; as *Hippocrates* shews in his Second Book of Diseases, in the former, from whence the Veins and Arteries called *Caiodites* or Jugulars, are stopped: but in the latter the blood is hot and thin, because they who have the Quinzy have always an acute Feaver withal.

A few hours after bleeding you must purge without respect of time. Neither let the Physitian be too curious or fearful in purging, since the Disease doth much require it, and the time of the disease is not usually long. And that purge ought to be very strong because the humor is stubborn, and the Sences so drowned that they cannot be rouzed or stirred up without strong Medicines. And that Medicine is usually one ounce of the Electuary *Diacarthamum*, dissolved in Bettony Water with half a scruple of Castor. Or,

Take *Turbith four scruples: Agarick two drams: Ginger two scruples: Fennel seeds one scruple: Castor six grains. Infuse them in a sufficient quantity of Bettony Water: and in three ounces of it strained, dissolve the Electuary Diacarthamum three drams; Syrup of Roses one ounce. Let him drink it.*

Take *of Cochie Pills the less, one dram; Castor three grains: With Bettony Water make seven Pills, and if the party cannot swallow them, dissolve them in Sage, Lavender, or Bettony Water.* Or,

Take *of Cochie Pills the greater, and Pills of Agarick, of each half a dram: The Troches of Alhandal, Diagridium, and Castor, of each three grains: With Honey of Rosemary, make Pills, or dissolve it in Sage Water.* Or this Potion

Take *of Senna half an ounce: of white Agarick one dram and an half; of Turbith one dram: of Ginger and Galanga half a dram: Boyl them in Sage and Rosemary Water. In two ounces and an half of the strained Liquor put two drams of Diacarthamum the Electuary; and of Castor half a scruple; of simple Oxymel half an ounce.*

In a Lethargy, the purging Medicines must be milder from the beginning by reason of its continual Feaver accompanying; made of Agarick, with Rhubarb or Scammony; or of Pills of Hiera with Agarick; because Choller is that which carrieth the humors to the Head: Yet in the progress of the Disease, when the matter is flown to the Head, and sticks there, we may use the Purges above written.

Tralli-

Trallianus gives one ſcruple of Scammony with two ſcruples of Caſtor in Oxymel, by which he hath cured many deſperate Lethargies. And *Oribaſius* ſaith, That there is no better Medicine for a Lethargy to purge away that flegm which Choller brought to the Head, than Scammony and Caſtor.

It often happens that the Faculties are ſo oppreſſed that Phyſick wil not work, which is an evil ſign, and ſuch ſeldom recover. But becauſe *Celſus* ſaith, when things ſo fall out, we muſt uſe ſuch Medicines as are at hand, if they be proper for the Diſeaſe; which is ſo deſperate that we may uſe deſperate Medicines. For as *Severus* ſaith, The Phyſitians think ſuch Medicines better in deſperate caſes, than for the Patient without tryal to die an eaſie death. And as *Celſus* ſaith, Many things may be done in time of danger and neceſſity, which may wel be omitted at another time. Therefore when we have uſed thoſe Medicines without any ſucceſs, we may wel rife higher, namely, To thoſe Medicines which are made of Antimony; eſpecially to thoſe which are leſs vehement and furious, as *Aqua Benedicta*, of Dr. *Ruland*, made of the Infuſion of *Crocus Metallorum*; which purging both upwards and downwards, bringeth ſuch a quantity of Flegm, not only from the ſtomach, but the brain alſo, as ſometimes the Patient is cured only with this Evacuation. And I can witneſs upon my own Experience, That I ſaw a Noble man thrice in two years cured from the Apoplexy with this only Medicine. Although ſome learned men do forbid the uſe of Vomit in theſe Diſeaſes, yet we muſt yield to Experience, which dayly teacheth us, that Children affected with ſleeping Diſeaſes are more readily and ſafely cured by the vomiting Salt of Vitriol, than by any other Medicine.

The Tincture of Tobacco drawn with *Aqua vitæ*, and taken in the quantity of two drams, with Honey powred down the Throat doth excellently.

After you have given a purging Medicine, before it begins to work, and alſo while it worketh, you muſt think of all thoſe things which cauſe revulſion of humors, and bring them into practice, not only frictions or rubbings, and ligatures or bindings, mentioned before, but alſo Cupping glaſſes to the back, ſhoulders, arms, and thighs, without ſcarrification if he was formerly blooded, and with ſcarrification if blood-letting was omitted.

In an Apoplexy you muſt not apply Cupping glaſſes to the Breaſt or Hypochondria, or parts under the Ribs, leſt the Muſcles of the Breaſt and Belly being contracted, the Breath be hindred.

The chief and only Remedy in an Apoplexy eſpecially, is to apply Cupping glaſſes to the head: Which kind of Cure the famous Phyſitian *Fracaſtorius* being taken with an Apoplexy, did direct for himſelf by his Neck and ſigns; but for want of their underſtanding of them, he died.

Zacutus Luſitanus in his 33. Hiſtory, and the firſt Book of the Principal Phyſitians, reports that he cured a deſperate Apoplexy by ſetting a Cupping glaſs twice upon the hinder part of the Head with deep Scarrification.

A Veſicatory, or Plaiſter to draw Bliſters to the Neck behind, and to the Shoulders.

Let two or three ſharp Clyſters be given every day.

Take of Pellitory of the Wall, Hyſop, Calamints, Organ, Sage, Rue, and the leſſer Centaury, of each one handful; of Carthamus ſeeds half an ounce; of Fennel and Cummin ſeeds, of each three drams; of white Agarick tied in a linnen clout two drams; of Coloquintida tied with it, one dram and an half. Boyl them to one pint, ſtrain them, and ad to the Liquor of *Hiera Picra* half an ounce; of *Diaphœnicon* one ounce; of Oyl of Rue two ounces: Make a Clyſter.

The Chymical Phyſitians do uſually ad two ounces of *Aqua Benedicta* of Dr. *Ruland*, made of the Infuſion of *Crocus Metallorum*, and then it wil work ſtrongly.

You may give four or ſix ounces of the ſame infuſion at a time, and alſo you may take it out of the glaſs wherein the Infuſion was made, ſhaking it before, that it may have ſome of the feces or reſidents of the Powder in the bottom to make it more ſtrong. Therefore for the moſt part we do preſcribe Clyſters of *Aqua Benedicta*, or *Vino Emetico*, that is, the Infuſion of *Crocus Metallorum*, becauſe in many Diſeaſes, eſpecially Chollicks, it doth wonders.

Take of Emollient Decoction for Clyſters one pint; of *Diaphœnicon* one ounce; of Infuſion of *Crocus Metallorum* ſhaked together, four ounces, make a Clyſter.

If the Clyſter come not away in due time, give this Suppoſitory:

Take of the powder of *Hiera Picra* of *Galens* preſcription, two drams; of Coloquintida and Agarick the beſt, of each half a dram; of Diagridium one ſcruple; Salgem two drams; Honey boyled to a ſufficient conſiſtence or thickneſs, as much is ſufficient; make Suppoſitories.

It often falls out that the Muſcle of the Arſe called *Sphincter*, is ſo weak, that a Clyſter is given in vain becauſe it cannot be contained, which is a deſperate condition.

Apply Caſtor and Vinegar to the Noſe, which are ſaid to have a ſpecial quality againſt ſleep.

It is alſo very good to ſprinkle ſharp Vinegar upon a red hot Iron, that the Patient may receive the vapor in his Noſtrils. And it wil be better to put Nigella or Pepper-wort ſeeds, Rue ſeeds, or Caſtoreum to the Vinegar. But Vinegar it ſelf warmed and applied to the Noſe, if it be ſharp, ſtirs up the Patient powerfully; and more powerfully if you put to it Pepper and Caſtoreum. The Fume of Brimſtone doth alſo raiſe from ſleep.

The

The Hairs of a Goat burnt, or the horn of a Deer or Goat burnt, held to the Noſe, are moſt ſtrong for the raiſing up of him that is in a deep ſleep.

The fume or ſmoak of white Amber, is excellent for the awaking of men in ſleepy Diſeaſes; as alſo the Oyl of it often applied to the Temples and Noſtrils.

Rub alſo the ſoals of the Feet with Salt and Vinegar, anoint the hands with Oyl of Rue, and of Caſtorium; touch the tongue and pallat with old Treacle diſſolved in *Aqua Cæleſtis*, or *Apoplectica*. But take heed that your Treacle be not new, for then Opium will cauſe more ſleep. The Medicine called *Aura Alexandrina*, or *Confectio Anacardina*. You may alſo boyl Muſtard ſeed in Vinegar or ſtrong Wine, and waſh the Pallat therewith. Roots of Pellitory of Spain boyled in Oxymel, that is, Honey and Vinegar do the ſame thing. But with all theſe Medicines you may ſafely uſe Caſtoreum.

When you have purged the Body generally in all parts, you muſt then purge the Head either ſenſibly or inſenſibly.

Senſibly, by the Noſtrils and Pallat, by Errhines or Neeſings, which are preſcribed in the Cure of a cold Diſtemper of the Brain, and by the touching of the Pallat as before. To all theſe you may ad Rue, Caſtoreum, and Vinegar.

Concerning Neeſing, It is to be obſerved, That if the Diſeaſe remain and encreaſe; and if the Patient be hard to be raiſed, it is very profitable: but we muſt not uſe them too long, leſt they clog the Brain, and move the humors too much. But in the beginning of the Diſeaſe we muſt abſtain from unſeaſonable neeſing, becauſe it diſperſeth the humor which wil fix in other parts; from whence come ſtubborn Diſeaſes, or a ſmal ſleeping Diſeaſe turns into a ſtrong Apoplexy.

Laſt of all you muſt uſe thoſe things which reſolve the humor inſenſibly, which are compounded in this manner:

Take Bay-berries and Juniper Berries, of each one ounce and an half: Roots of Angelica, Zedoary, and Maſter-wort, call'd *Impatoria*, or Pellitory of Spain, of each one ounce: Leaves of Bettony, Sage, Roſemary, of each one handful: Rue, Savory, Marjoram, Lavender flowers, of each half a handful: Boyl them in Vinegar. Dip a Spunge or linnen cloth in this Liquor, and apply it warm to the Head. It is a wonderful thing to ſee what good this doth in ſleeping Diſeaſes: But you muſt rub the Arms and Hands, and the Legs and Feet with the ſame.

Take of Caſtor half an ounce: of Mans Hair burnt, three drams: of the Juyce of Rue, of Vinegar and common Oyl, of each two ounces. Boyl them to an Oyntment, and then anoint the Head therewith, after the Fomentation.

Take of Oyl of Pepper-wort called *Oleum Coſtinum*, of the Oyl of Caſtor, and of Euphorbium, of each one ounce: of the Pouder Muſtard ſeed, and Euphorbium, of each one dram: of Vinegar one ſpoonful: of Wax as much as wil ſerve to make an Oyntment.

If the Diſeaſe doth not decreaſe after al theſe are uſed, then you muſt apply a great Cupping glaſs to the crown of the Head, and to the hinder part of the Head.

But a Veſicatory is beſt if Euphorbium be in it, for that wil draw the humor outwardly which lyeth deep.

Some are ſo bold in the height of the Diſeaſe to burn the hinder part of the Head, between the firſt and ſecond Vertebra, or Back-bone with an actual Cautery.

Zacutus Luſitanus applied many in his time with good ſucceſs, as he witneſſeth in his firſt Book of Wonderful Practice, and the fourteenth Obſervation, in theſe words: *I being called to viſit a ſick man, who was for the ſpace of thirty daies taken with drouzineß and irreſiſtible ſleep, with a ſmal feaver, not able to hold open his eyes: He had uſed many evacuating, and diverting or repelling Medicines, but they perfected nothing; therefore I applied the Cautery with much benefit; for with a red hot Iron I ſcorched the crown of his head till it was hard and cruſty, as alſo the hinder part, and almoſt every where about his head, by which means he awaked, and the places burned beginning to matter, he aroſe and came to himſelf. By this means I remember I cured two ſleepers contrary to expectation, after all other means had been uſed in vain: and theſe were cured by the heat of the fire, melting, diſſolving the humor which came forth at their mouths and noſtrils many daies after.*

Others have an Ancient Cuſtom, to hold a red hot Frying-pan ſo neer the Head that it may burn the Hair, and not the Skin.

It is good in theſe Diſeaſes to give the Patient a little *Aqua Cæleſtis*, or Apoplectick Water; or other ſtrong Water, which by its piercing quality do very much good, and have freed many from Apoplexies preſent and approaching, if Blood be not predominant or chief in the Body, which wil be hurt by the uſe of ſtrong Waters.

Now there are many ſorts of Apoplectick Waters, in *Langius*, *Wickerus*, *Quercitanus*, *Crollius*, and others. But we ſhal here only lay down one Water invented by my ſelf, and made of the moſt proper Ingredients.

Take

Take of Peony Roots, and Miſleto of the Oak, of each two ounces: Calamus Aromaticus, Galangal, and Cyprus, of each one ounce: Bettony, Sage, Marjoram, of each one handful: Peony, Annis, Fennel, and Caraway ſeed, of each three drams: Lavender, Stoechas, and Roſemary flowers, of each a pugil: Nutmeg, Mace, Cloves, Cubebs, Grains of Paradice, cardamom, of each half an ounce: Cinnamon two ounces: Saffron, one dram and an half: the Species of *Diambra*, and *Diamoſchu*, of each two drams: Cut and beat them according to art, put them in a glaſs ſtill, and then powr in as much of the beſt Spirit of Wine as is ſufficient. Let it ſtand in *Balneo Mariæ*, or a kettle of warm Water with Hay in it for the ſpace of eight daies; afterwards draw it off, and keep the Water in a cloſe ſtopt glaſs bottle.

Now if the Diſeaſe decline, and his deep ſleep begin to ceaſe, you muſt omit al other Medicines and follow thoſe things only which ſtrengthen the Brain: which may be very wel done by the uſe of that Opiate or Electuary which I preſcribed in the Treatiſe of the cold diſtemper of the Brain. But if you wil uſe ſtronger than that, take the *Aqua Apoplectica* above mentioned.

Continue the uſe of Caſtor above all things, if the Diſeaſe continue, giving every morning three or four grains of it in the Oxymel of Squils, or ſimple Oxymel. *Trallianus* affirmeth that many overcome with this Diſeaſe, have been recovered only with this Remedy.

Outwardly you may uſe ſome Chymical Balſoms againſt Apoplexies, of which there are divers. We wil only diſcover one of the beſt unto you.

Take of *the Oyl of Nutmegs by Expreſſion, half an ounce*: *Ambergreece, Musk, and Civit, of each one ſcruple*: *the diſtilled Oyls of Spike, Amber, Cinnamon, Roſemary, Cloves, of each half a ſcruple. With this Balſom touch the pallat every morning, and drop ſome into the ears, and ſnuff ſome into the noſtrils. For this purpoſe the diſtilled Oyl of Nutmegs uſed in the ſame manner is much commended.*

Laſtly, We muſt obſerve, That in the Cure of theſe Diſeaſes, we muſt uſe leſs hot things, and loſe more blood, when the Diſeaſe is cauſed of blood; and alſo we muſt mix Medicines that purge Choller with thoſe that purge Flegm.

They which have been troubled with any of theſe Diſeaſes, and are cured, do uſe many times to relapſe and fal into the ſame again; which that you may prevent you muſt correct the cold Diſtemper of the Brain, as before is taught; by which Method you may prevent either Apoplexy, Carus, Lethargy, or Coma. And if the Brain be very cold after general Evacuations, you may often uſe *Aqua Apoplectica*; or theſe Tablets or Lozenges following:

Take of *Amber-greece half a ſcruple*; *the diſtilled Oyl of Annis ſeeds, Cinnamon, and Nutmegs, of each three drops*; *Oyl of Cloves one drop*; *Sugar diſſolved in Orange-flower-water, four ounces. Make theſe into Lozenges, and let him take a dram or two of it every morning.*

Pills to ſtrengthen the Head, are thus made:

Take of *Cubebs, Maſtich, Nutmeg, Cloves, of each one dram*; *Amber-greeſe half a dram*; *of Musk ſix grains. With Juyce of Marjoram make Pills, and let him take one ſcruple at a time twice in a week at his going to bed.*

This Pouder is much in uſe, and is much commended:

Take of *White Amber half an ounce*; *of the Pouder of the Electuary called* Diarrhodon Abbatis, *two drams*; *of Peony Roots, one dram and an half. Make a Pouder of them, and take a dram at a time in any Water for that purpoſe before every New Moon.*

It is good to hold Nutmeg in the Mouth, and to chew it very often.

Sweet Perfumes are to be uſed to the Noſe, eſpecially the Apoplectick Balſom.

Uſe Spices with Meat, after Meat a digeſtive Pouder, mentioned in the Cure of the cold Diſtemper of the Head.

If you fear a ſleepy Diſeaſe wil come from too much blood, you muſt firſt take ſome away by the Arm, and uſe al means to make the Piles or Hemorrhoid Veins to bleed, which is very good; for which you muſt purge with Senna and Rhubarb, and with cooling things.

If you fear an Apoplexy from Melancholly you muſt purge Melancholly, and provoke the Hemorrhoids, and give the Medicines preſcribed for the ſtrengthening of the Brain, eſpecially that pouder which is made of white Amber, Diarrhodon, and Peony Roots.

CHAP.

CHAP. III.
Of Waking Coma.

THE Disease called *Waking Coma*, or *Coma vigil*, is put among sleeping Diseases; yet because it is of another Condition different from the rest, we will treat of it in this Chapter by it self.

This *Coma vigil*, is a Disease in which the Patient lieth with his eyes shut as if he were asleep, when he is awake and distracted; and if you touch him, he presently openeth his eyes, and looks strangely, and falls asleep again, which is hindered by divers strange imaginations and fancies. This Disease *Galen* placeth as a mean, between a Frenzy and a Lethargy, and calleth it *Typhomania*.

The usual Cause of this Disease, is Choller mixed with Flegm, by which humors the Brain is made too moist, or it is swelled or inflamed; from whence, either the Tumor called *Erisypelas ædematosum*, or *ædema Erisypelatosum*. But because those humors are diversly mixed, sometimes a greater proportion of the one than of another, it comes to pass that the Diseases from them are divers: for if Choller be chief, then it is a *Delirium*, or Dotage, and the sick man sleepeth but little though his eyes be shut; but if Flegm prevail, the Patient doth sleep more, and is less doting, and being raised makes less noise, and is not so foolish.

This *Coma vigil* comes by sympathy from Chollerick vapors mixed with Flegmatick that fly into the Head; which happens in Feavers that come from mixed Humors, especially in half Tertians, which are made of a Tertian and a Quotidian. We may safely affirm that this Disease cometh from Vapors, simply hot and moist in strong Feavers, because sleep comes from moisture, and waking comes from heat.

The Diagnosis, or knowledg of this Disease, is plain enough by what hath been said, That they which have it, lie with their eyes shut, and seem to sleep, yet they cannot sleep, but toss and tumble, lift themselves up suddenly, strive to get out of the bed, and then fall again asleep. The divers Causes are easily known from what hath been said.

This Disease is accounted dangerous if the Brain have a Swelling or Inflamation, or if it be overcome with the humors above mentioned, namely, Choller and Flegm; or if it come of vapors which arise from the malignant Humors of a Pestilent Feaver.

If the Dotage, or Delirium be strong, it produceth a Convulsion, for it comes of a Humor or vapor which is very sharp, which falling upon Nervous parts causeth a Convulsion.

A true *Coma vigil* is cured as a Frenzy and Lethargy; and if it incline most to a Frenzy, then the Medicines proper for that are most to be used; if to a Lethargy, then the Medicines proper for that. But a Coma that cometh by Sympathy, is cured by curing the Malignant Feaver from whence it cometh; but the more peculiar Remedies must also be used which draw and keep humors from the Brain in the beginning of the Disease, as bleeding in the Arm and Foot, Vinegar of Roses applied to the Forehead, Clysters, Cupping glasses to the Shoulders, Back, Buttocks, Thighs, opening the Head Vein, applying Leeches to the Temples, and behind the Ears, and laying living Creatures to the Head to dissolve the Humor.

CHAP. IV.
Of the Sleeping Diseases called, Catoche, *and* Catalepsis, *or* Congelation.

THere is some Confusion among Authors about this *Catoche*; for some take it for *Coma vigil*, Waking Coma; others for *Catalepsis*: *Paulus* gave them the cause of their difference; in his Third Book, and the Eighth Chapter, he treats of a two-fold *Catoche*; and first under that name, he speaks of a *Coma vigil*; in the end, under the same name, he speaks of *Catalepsis*. Custom hath brought it to pass, that *Catoche*, and *Catalepsis*, are taken for one and the same Disease in all Authors; the Latins call it commonly *Congelation*, or stiffness of the Body.

It is a Disease seldom seen, and to be admired, and those Authors which have seen the Disease do think it so much worth the observation, as to describe the whol passage and History of it. First of all

all. *Galen* in his firſt Comment. Prorrhet. Sect. 2. Part 56. mentioneth a ſtory of a School-fellow of his, who when he had wearied himſelf with long Study, fell into a Catalepſis, or Congelation; *He lay* (ſaith he) *like a log all along, not to be bent, ſtiff, and ſtretched out, and ſeemed to behold us with his eyes, but ſpake not a word: and he ſaid that he heard us what we ſaid at that time, although not evidently and plainly, and told us ſome things that he remembred, and ſaid all that ſtood by him were ſeen of him, and could remember and declare ſome of their geſtures at that time but could not then ſpeak or move one part of his body.* But *Fernelius* in his third Book of the Parts of Diſeaſes, Chap. 2. relates two Stories, which are theſe; *One while he being very ſtudious and writing, was ſo ſuddenly ſtruck with this diſeaſe, that ſitting and holding his pen with his eyes open, and looking upon his Book, you would have thought he had been hard at ſtudy, til he was by calling and jogging found to want al ſence and motion. Another I ſaw like a dead man, lying along, with neither ſeeing, hearing, nor feeling when he was pinched: but he breathed freely, and whatſoever was put into his mouth, he preſently ſwallowed; if he were taken out of his bed he did ſtand alone, but being thruſt he would fall down, and which way ſoever his Arm, Hand, or Leg was ſet, there it ſtood fixed and firm: you would have taken him for a Ghoſt, or ſome rare Statue.*

You may read the like Stories in *Schenkius*, *Marcellus*, *Donatus*, *Rondeletius*, *Jacopine*, and others: From whom you may gather, That in this diſeaſe there is found a deſtruction, or hinderance of the internal and external Sences with a ſtiffneſs of all the Members; and ſomtimes the Senses are not ſo much hindered but the ſick party heareth thoſe that ſpeak unto him; ſomtimes the Members are not ſo ſtiff, but they may be bent and bowed by them that ſtand by, and put into divers Poſtures.

The Cauſes of this Diſeaſe are divers: *Galen* in his Comments, Aphor. 3. Sect. 2. ſaies that a Catalepſis comes from a cold diſtemper of the Brain, which diſtemper chiefly ſeizeth upon the hinder part of the Head, makes it ſtiff and thick, from whence the Nerves proceeding are alſo made ſtiff, and ſuch a diſtemper may ſeize upon al the Nerves, whether it come of an external or an internal cauſe: but ſome queſtion this cauſe, ſuppoſing that no living body can be ſo cold as to have ſuch a Congelation: But *Galen* anſwereth this in his 5. Chap. of his Book of the Difference of Diſeaſes, by a Reaſon taken from Experience, in theſe words; "For thoſe who in a journey are taken with cold, "which is unto death, are thus ſtiff, whom the Greeks call *Emproſtotonos*, or Bowers forward; "*Opiſtotonos*, or Bowers backward; *Tetanos* extended ſtraight: and others that are killed with "cold are taken with this Catoche or Congelation. Therefore *Galen* teacheth us, that a Catalepſis may be got by external cold, and Reaſon may eaſily perſwade us to it; for they which are killed upon the way with great cold, do firſt grow ſtiff, they have a ſtiffneſs or Congelation before they die, therefore cold may bring a leſs ſtifneſs than that which bringeth Death. So we ſee that Congelation of the Nerves, or Catalepſis, may come of a cold Diſtemper, and the ſooner if it be mixt with a dry diſtemper.

But this Diſeaſe is moſt often gotten by a cold and dry diſtemper joyned with matter, that is an Humor or Melancholly Vapor, from which cometh a Conſtipation or Congealing of the hinder part of the Brain, an extention of the Nerves, and alſo a ſtiffneſs of the ſame; from this humor it cometh (I ſay) not only in reſpect of its quality, which is cold and dry; but alſo in reſpect of its quantity, which by repletion makes a diſtention, or ſtretching forth of the Nerves.

Aetius in his ſixt Book, and fourth Chap. ſaith, that a Congelation may be cauſed of blood: Unto which thing *Rondeletius* conſents, ſaying, that it comes to paſs when the Veins and Arteries of the Brain are ſo full, that the Body groweth ſtiff, and diſtended or ſtretched out like thoſe bodies that are congealed with cold weather: he confirms his Opinion by a Hiſtory of a Noble woman taken with a continual Feaver, called *Synochus*, who had in the nineteenth day a Congelation, which was cured by a large flux of Blood from her Noſe.

Sennertus hath found out a new cauſe, which he ſaith is a congealing Spirit, by which the Animal Spirits are fixed, and made immovable: he denies that the force of congealing and fixing depends upon a cold and dry diſtemper, but riſeth from ſome hidden quality. Such Congealing Spirits are found in the greater World, as in Thunder, when men are thereby made ſtiff, and as it were congealed: As *Cardanus* reports of eight Mowers, which ſupping under an Oak, were ſtruck with Thunder ſo as they kept the ſame ſhape of Body, the one ſeeming to eat the other, or lay hold of the pot, another to drink, when they were all dead. It is uſually reported that Wine will be congealed in the Veſſel by the ſpirit of Thunder: In Earth-quakes, many times ſuch Spirits break forth ſuddenly out of the Earth, as make men and other living Creatures to be ſtiff and ſtark. Moreover, *Sennertus* addeth, that there is great congealing force in Nitre and other Minerals; he brings no Examples: We ſhal only bring one Inſtance taken from Lead, whoſe Vapor doth ſo fix and congeal Mercury, or Quick-ſilver, that it becomes thereby malleable, or to be beaten with the hammer.

This Opinion of *Sennertus* were not wholly to be rejected, if he had not made this the only cauſe of the diſeaſe, and caſt off all the reſt; which when they are allowed and confirmed by *Galen*, and

the best of Authors are not easily to be cast off and denyed. Nor is it needful that we fal to hidden Causes when there are enough visible and manifest, able to produce such effects as is before declared. And when *Sennertus* saies that this his congealing spirit is caused of a melancholly humor, he seemeth to differ from the common Opinion, which is, That a Congelation cometh of a cold and dry or Melancholly vapor.

The Knowledg of this Disease, or Diagnosis, is manifest from the Stories of *Galen* and *Fernelius* already mentioned; for the evil befals a man quickly, and leaves him in that posture in which it found him; and keeps him unmoved as if he were congealed: The diversity of Symptoms which we propounded before, is seen plainly. We forerel this Disease by the same signs as we do other sleeping Diseases, as the Symptoms are greater or less, so is the Disease more or less dangerous.

The way of Cure is Two-fold either in the time of the fit, or out of the fit: In the fit you may use those Medicines which are set down for sleeping Diseases: Out of the fit you must labor to cure Melancholly, the disease so called, if the Congelation come from a Melancholly humor or vapor, which is the most common cause of it; but if a cold distemper either inward or outward give this Disease a beginning, the Remedies which cure it are to be taken out of the first Chapter of this Book. And lastly, if plenty of blood have begot this Disease, or doth maintain and nourish it, it is very proper to diminish it by opening a vein.

You must advise the Patient to a hot and moist Diet, as in al Diseases that come from a Melancholly humor.

CHAP. V.

Of the Palsey, or Paralysis.

A Palsey, is the loss of Sence and Motion in some parts of the Body, by reason of the stopping of the Passages of the Animal Spirits.

There are many kinds of Palseys; for either it is in all the parts of the Body below the Head, and then it is called *παραπληγία*; or else it possesseth only one side of the Body, and then it is called *Hemiplegia*; or it possesseth but one part of the Body, and then it is called a *Particular Palsey*; although some Authors use all these terms, as *Paralysis*, *Hemiplegia*, *Paraplegia*, *Paresis*, and *Resolutio*, promiscuously for one and the same disease, which is a loss to Sence and Motion in any part of the Body.

There is therefore a double Palsey; one called *Perfect*, in which Sence and Motion is quite gone; another *Imperfect*, in which Sence and Motion are decayed and diminished, and if it be a smal diminution, it is not a Palsey, but a Numbness or Dulness, called *Torpor*, or *Stupor*, which is the way to a true and perfect Palsey, and the forerunner thereof.

There is another kind of Palsey, which is, When the Motion is hurt, and the Sence not; or when the Sence is hindered, and the Motion not.

The Causes of a Palsey are generally al those which hinder the passage of the Animal Spirits into the Nerves and Muscles.

The chief of al is a waterish Humor, which by stopping, compressing, condensing or making thick, refrigerating or making cold, hinders the passage of the Animal Spirits.

This watery Humor comes from the Brain, and fals upon the Nerves and Marrow of the Back: So a light Apoplexy turns into a Palsey, when the Humor that caused it falls from the Head upon the Marrow and beginning of the Nerves, and so gets into the substance of them, and shuts up those insensible Passages through which the Spirits come to the Parts; or descending by the hollow of the Back-bone, and by the Marrow of the Back and running upon the Nerves, it compresseth and streightneth them, whereby the Animal Spirits are hindered in their Motion.

Moreover, The same Humor may so thicken the substance of a Nerve by its coldness, that it cannot be passed through by the Animal Spirits.

And lastly, The Passage of the Animal Spirits to the parts of the Body may be so hindered by a simple distemper in cold and moistnes, that the Native temper of a Nerve, and the heat in it may be destroyed, and the Animal Spirit not perform his office; for the heat of the Animal Spirits must be joyned with the Natural heat of the part, for the performance of its Office.

There is a Controversie whether other Humors may be the cause of a Palsey which we will not omit though they are very seldom mentioned by others.

Trallianus in his first Book, Chap. 6. reports of a certain man that fell into a Palsey through sadness and grief, and after taking of *Hiera* he became immovable without motion, and had died if he had not used al moistening things for his meat and drink, and other things to bring him to a temperate condition,

condition, eſpecially many Baths and Oyntments of *Hydrætrum*, that is, of Water and Oyl beaten together.

Paulus in his Third Book, Chap. 28. and 43. talks of a Palſey which came of a Chollerick Chollick, which is cured by cooling means: and in our time the Chollick of the People of *Poitteurs* in *France* is very remarkable, for it turns for the moſt part into a Palſey; and all men of underſtanding acknowledg it to proceed of a Chollerick matter, of which I ſhal ſpeak more at large in my Treatiſe of the Chollick. An example is given by *Foreſtus* in his 97. Obſervation, and his tenth Book, of a yong man who had an extenuation for want of nouriſhment in his Limbs; and when he grew worſe by hot and dry Medicines, which Phyſitians preſcribed for him, was at laſt reſtored only by the taking and applying of moiſtening Medicines.

And Reaſon doth cleerly ſhew this: for Choller, Melancholly, or any other Humor falling upon the Nerves; if they fall upon them inwardly, they may ſtop the inſenſible paſſages of the Nerves, or if they fall upon them outwardly, they may ſo preſs upon them that they may bring a Palſey. Nor do the Reaſons which *Rondeletius* gives to the contrary any way convince; when he ſaith, That Choller and Melancholly do rather dry, than ſoften and mollifie the Nerves; and Choller is more likely to produce a Convulſion by his ſharpneſs and griping, than a Palſey: For although commonly a Palſey be called a Reſolution and ſoftening of the Nerves, which is alwaies in a Palſey that cometh of flegm, yet it is not requiſite that a Reſolution of the Nerves ſhould be in every Palſey, becauſe it comes more properly and eſſentially from a ſtopping and hindering of the paſſage of the Animal Spirits; which when it may be cauſed by a compreſſion or ſtraitening of the Nerves, and the like; it doth not alwaies proceed of ſoftening and mollifying. But the opinion of a Palſey coming from a relaxing and ſoftening of the Nerves came from hence; namely. Becauſe the parts which have the Palſey being not able to be ſtretched forth, ſeem as it were to be relaxed and ſoftened; for the motion of parts is by the extenſion or ſtretching forth of the Muſcles, and by the contraction or drawing together of the ſame to their Original; which extenſion when the parts do want, they are ſaid to be relaxed although they have neither been extraordinarily moiſtened nor ſoftened.

Moreover, Since there are divers ſorts and degrees of Choller, it is not neceſſary that every ſort ſhould have ſuch acrimony and ſharpneſs as is able to beget a Convulſion.

Furthermore, There is a various mixture of Humors, and flegm, or water may be mixed with that choller which produceth the Palſey, and ſo contemperate or mitigate his ſharpneſs. Such a mixture doth often happen in Baſtard Tertian Feavers, which are probable to be thoſe which *Fernelius* ſaith turn into Palſeys.

Finally, This is very manifeſt from the Scorbutick Palſey, or that which is joyned with the Scurvy, which hath often a Convulſion accompanying it (as *Galen* in many places, and *Sennertus* in his Book of the Scurvey, the fifth Chapter) and albeit a true *Scorbut* or Scurvy is ſeldom ſeen in our Country, yet we often ſee certain Scorbutick infirmities, in which ſome ſymptoms of the true Scorbut do evidently appear. And therefore in our 74. Obſervation, and the firſt Centaury; and in our 98. Obſervation, and the ſecond Centaury, were given two examples of Scorbutick Palſeys accompanied with Convulſions.

There may be divers other Cauſes of a Palſey which are little obſerved.

As firſt, A cold and moiſt Diſtemper ſimple and without matter, may by congealing of the Spirits, not only hinder their paſſages and influence upon the parts, but alſo by deſtroying the temper of the Nerves, make them uncapable of receiving the animal Spirits whereby they have Sence and Motion: and this cold and moiſt diſtemper from overcoldneſs of the air, or from the touching of a cold thing; as *Galen* teacheth 4. *de Loc. Aff.* Chap. 4. of a certain man who (when in a cold ſeaſon, and a great ſtorm, he had wrapt his wet Cloak a long time about his Neck) fel into a Palſey in his hand, the Nerves which come from the Neck and Marrow of the Back-bone, being thereby made too cold and moiſt.

Some of our late Writers have reported, That a Palſey may be procured by a ſtupifying or numbing quality, which is inherent in ſome Medicines and Poyſons and ſomtimes in the humors themſelves. And hence they ſay comes that Palſey which is caught by touching of the Torpedo or Cramp-fiſh: but it is not ſo much to be termed a Palſey which cometh by that way, as a Stupor or Stupifaction and numbneſs: ſuch like as that which Goldſmiths and Gilders have often by the touching and much uſing of Quick-ſilver; and Looking-glaſs makers alſo which is often ſeen in *Venice*. And *Platerus* ſuppoſeth that Wine by narcotick or ſtupifying quality begets Palſeys and Numbneſs: although others differ from his Judgment, yet *Fernelius* ſeems to favor his Opinion, affirming in the place above cited that he once ſaw a man whoſe skin by gluttony and drunkenneſs was all over ſtupified and inſenſible. And *Petrus Fabius* in his Notes upon *Altimar*, Chap. 14. relates a ſtory of a certain Barbar, who after he had been ſtrongly tipling of Wine, awaked at mid-night, and fell ſuddenly into an univerſal Palſey of all the parts of his Body beneath his face, ſo deprived of Sence and Motion that he felt not when he was cut and ſcarrified with a knife, not when he was pricked deeply

with needles: But his surfet and drunkenness being past, he was cured in the space of three daies, only by revulsions, and resolving Oyntments applied to the back: Notwithstanding this Author doth not impute this Palsey to the Narcotick or stupifying quality of the Wine; but to those gross vapors which arose from his surfet, and stopped the Nerves, and this cause may be accounted among others that produce this Disease.

We have shewed in our Treatise of sleeping Diseases, That there is a stupifying quality in corrupt and malignant Humors, which being carried to the Nerves, may hinder their Actions: and since the Humors which produce the Scorbut have a venemous and malignant quality, they may also have a stupifying force which may cause also a Palsey with the Scorbut, or a Scorbutick Palsey, although (as we said before) an obstruction or stopping or pressing of the Nerves may be sufficient to cause a Palsey alone.

Moreover, Tumers growing by the Back-bone, and its Nerves, may without doubt cause a Palsey by pressing upon the Nerves.

So the cutting and pricking of a Nerve may produce the same effect.

The dislocation, luxation, or making loose of any of the Back bones, or other Joynts, may cause the same by pressing upon the Nerves.

And lastly, The Condensation or thickning of the Nerves may hinder the influence and passage of the Spirits which comes either by too much exsiccation, or drying, or of a grosse Earthy Humor which is taken into the substance of them.

So in those that have the Leprosie called *Elephantiasis*, the sence and feeling of many parts is lost by reason of their growing too thick and hard by an Earthy and grosse Nourishment which they receive.

The Causes of different Palseys are these: In a perfect Palsey, which supposeth a perfect privation of both Sence and Motion, there is more plenty of the matter, which causeth it by a general obstruction, or stopping and binding of the Nerves. But in an imperfect Palsey there is less matter to stop and bind the Nerves, whereby it comes to pass that the passage of the Animal Spirits is not altogether so closed up, but it wil suffer some portion of them to have their recourse.

Sometimes the Motion is hindered, and the Sence not; because there it more vertue to cause Motion than to cause sence or feeling, in regard feeling is a kind of passion; but Motion consists altogether in action. Sometimes the Sence is hindered, and not the Motion, for in some parts of the body those nerves and their branches which serve for sence, do not serve for motion: as those nerves which are in the skin, if they only be hurt, the Sence only is hurt, which is seen in a particular Palsey, which is in one part only of the Body: But if the chief nerves which are carried to the Muscles be hurt, the sence cannot only be hindred, but the motion also.

The Diagnosis or Knowledg of this Disease is directed to three things; namely, The kind or sort of the Disease, the part affected, and to the cause that produceth it.

We may easily know what kind of Palsey it is, because the want of motion, and the privation of sence, are to be discovered by the eye.

It is harder to know the part affected; but it is found out by the knowledg of Anatomy, which declareth the original and joyning of the nerves.

For if the right side of the face or left hath the Palsey, and no other part be hurt, the Brain is only hurt in that part from whence the nerves are brought that come to those sides of the face: But if the parts under the head be hurt, together with the Face, then it is a sign that the Back bone is hurt as wel as the Brain: And if the parts beneath the Head are hurt, and not the face, the fault is only in the Back bone: If half the Body have the Palsey, only one half of the Back bone is affected; but if the whol body suffer, then is the original of the Back bone hurt. When the Palsey is in the Legs, the part affected is about the bottom of the marrow of the Back, and the *Vertebræ*, or turning Bones of the *Os Sacrum*, and so we must search out for the place whence the nerves spring, which are brought to that part which is troubled with the Palsey.

Sometimes also the searching into the outward Cause doth much avail for the knowledg of the part affected: Two examples whereof are brought by *Galen*; one whereof we mentioned before out of his fourth Book, *de loc. affect.* chap. 4. concerning a man in a cold stormy time wrapt his wet cloak so long about his neck til he fel into a Palsey in his hand. Another is in his first Book, *de loc. affect.* chap. 5. of *Pausinias Syrus*, who lost the sence of three fingers; and when *Galen* understood that he fel from his Chariot upon his back, he concluded that some part was hurt in the original of that nerve which comes from the seventh *Vertebræ*, or Spondil; therefore (after he had in vain applied Medicines to the fingers) he used means to the back, and so wrought a brave Cure.

The Diagnosis, or knowledg of the Causes of this Disease, if fetcht from the primary Causes, the Diseases afore going, and the temperament and constitution of the sick party: And therefore when external cold Causes and moist were before, when the patient is old, when he is flegmatick of Constitution, the weather cold, diet cold and moist, and an Apoplexy hath formerly been, it signifies that:

a dis-

a diſeaſe is approaching from a Cold Diſtemper, and Flegmatick Humor.

But when a Palſey is cauſed of a Chollerick Humor, or Melancholly, theſe ſigns declare: Feavers did go before, or are preſent, a Chollerick temper and Conſtitution, or elſe a Melancholly one; the coming of the diſeaſe in hot weather, Summer or Autumn; the uſe of Spices, Salt, and other hot Meats; heavy and long paſſions of Mind, avoiding of chollerick or melancholick humors, ſharp and ſowr; many ſharp defluxions falling upon divers parts, and putting them to pain; and laſtly, when pain and a convulſion accompany the diminiſhing of Sence and Motion, and the patient is the worſe when he takes hot and dry things, but the better by the uſe of cold and moiſt.

When Tumors, Luxations, or Diſlocations, or Wounds, cauſe a Palſey, they are evident of themſelves.

As for the Prognoſtick part in the Treaty of this Diſeaſe, you may foretel events as followeth:

1 A Palſey coming of flegm fixed to the ſubſtance of the nerves, is hardly cured becauſe it wil not be eaſie to diſcuſs or divide the Flegm from the nerves, by reaſon of their coldneſs, and their weakneſs in expulſion or ſending forth of that which offendeth, which muſt co-operate, or work together with the Medicine, and in regard of the deep ſcituation of the Spina and Nerves, ſo as the whol force of the Medicine cannot reach them, and becauſe the Patient muſt of neceſſity continue long in the uſe of Medicines, which for the moſt part people cannot endure, and therefore wil not be cured.

2 A Palſey coming after an Apoplexy is ſeldom cured, and often returns into an Apoplexy, by a new flowing of the ſame matter into the Brain, which is made weak by the former diſeaſe.

3 A trembling coming upon or after a Palſey is healthful, for it ſignifieth that the paſſages of the nerves are ſomwhat open, by which ſome of the Animal Spirit beginneth to paſs, for to move the Muſcles.

4 If the part affected hath an actual heat in it, there is hope of health; but if it be alwaies actually cold, it is difficult to be cured.

5 An Atrophy, or want of Nouriſhment in the Paralytick part, with great paleneſs, takes away al hope of cure; for it doth not only ſignifie a decay of the animal Spirit, but a neer extinction of the ſhews natural heat.

6 If the Eye on that ſide which the Palſey happeneth be hurt thereby, there is little hope; for it a great want of Spirits in that part.

7 A Palſey in the Legs and Feet is eaſier cured than in the upper parts, becauſe thoſe Nerves are harder and ſtronger.

8 In old men the Palſey is incurable, by reaſon of their want of natural heat.

9 In Winter a Palſey cannot be cured, but in the Spring and Summer it may, if other things agree.

10 A ſtrong Feaver coming upon a Palſey is good; for it may conſume the matter which cauſeth it.

11 A *Diarrhœa*, or loöſneſs coming upon a new and weak Palſey is good, for *Rhaſis* ſaith 1. *Cont.* that he hath ſeen many Paralyticks cured by a *Diarrhœa*.

The Cure of this Diſeaſe is to be altered according to the variety of the Cauſes: And ſince for the moſt part it cometh of flegm and a cold diſtemper, we muſt labor chiefly to take away that cauſe; which we muſt begin to do by a general cleanſing and emptying of the whol Body.

As for bleeding it can ſcarce do any good, becauſe the fault is not in the Blood, but Flegm; and this diſeaſe comes for the moſt part to old men, ſuch as are flegmatick and cold by nature. But if plenty of crude blood unconcocted ſeems to produce flegm, and to feed it, we may open a vein in his Arm on the ſound ſide of his Body, but take but little blood leaſt his weak natural heat ſhould be extinguiſhed.

After we have omitted blood-letting, or taken a very little away, we muſt go on to take away the antecedent Cauſe, which is a cold diſtemper of the Brain; which muſt be done as before was ſhewed by Apozemes, or opening drinks, by Pills, ſweating Diet, Bags for the head, Emplaiſters, Errhines for the noſe, neezings, Maſticatories, Gargariſms that draw flegm, Veſicatories or Bliſters, or Cupping head pouders, Caps, Fumes, Magiſtral Syrups, ordinary Pills, a ſtrengthening Opiate or Electuary, by Cauſtick or burning, by digeſtive Pouder and Baths.

A Diet Drink in this diſeaſe ought to be made of Guajacum alone, and his Bark; and after he hath taken a draught, he muſt have hot bricks applied to the diſeaſed parts, but firſt they muſt be quenched in a Decoction of this, good for the head made with white Wine and Vinegar, and be wrapped in a linnen cloth, for the ſtirring up of the weak heat which is in the parts; and every fourth or fifth day you muſt purge; but it is better to give a purging drink fifteen daies before you give the ſweating, that al the load of crude humors may be better caſt out, and afterwards the reliques and remainder may be diſcuſſed by the habit of the Body. Which may be thus made:

Take of *the chips of Guajacum, three ounces; of the bark of the ſame, one ounce; of ſpring Water four pints: Infuſe them twenty four hours: then let them boyl to the conſumption of half, adding*

ding in the concluſion one ounce of Senna: Turbith and Hermodactʃ, of each two drams. Let him take half a pint of this ſtrained every morning for fifteen daies, not ſweating.

Apply a Cauſtick to the hinder part of the Head, or to the ſound Arm if the other be affected. If the Legs be affected, apply a Cauſtick to them both.

After his Diet, let him uſe for his ordinary Drink, a Decoction of Guajacum, or Water and Honey, wherein hath a little Roſemary been boyled. Let him abſtain from Wine, which is very hurtful in this Diſeaſe; but if he deſire to drink Wine, let Bettony and Sage be boyled therein. And it is far better if in the Vintage time thoſe Herbs are put into a full Veſſel of new Wine.

If the Diſeaſe be perverſe and ſtubborn, omitting the uſual Pills and Magiſtral Syrup; after his Diet, uſe ſtronger Medicines, made thus:

Take *of Pill. Fœtida the greateſt, and Pill Cochie the leſs, each half a dram; of Troches of Alhandal four grains: Let him take them once every week.*

But becauſe the humor muſt be prepared before every purge, therefore for two or three daies before he takes the Pills, let him take three or four ounces of this following Water every morning two hours before meat.

Take *of the chips of Guajacum, four ounces: of the bark of the ſame, one ounce: of Sarſaparilla one ounce and an half: of China Root one ounce: of Saſſaphras ſix drams: of Lignum Aloes, Galangal, of each one dram and an half: of the Roots of Angelica, Peony, and Fennel, of each three drams and an half: of Peony ſeeds two drams: Infuſe them for twenty four hours in ſix pints of Water, and four pints of white Wine: After ad the Leaves of Bettony, and Ivy, and Sage, of each one handful: of the Flowers of Tile Tree, Primroſes, Stœchas, or French Lavender, and Roſemary, of each two pugils: of Lavender one pugil: of old Treacle half an ounce: of Citron ſeeds and bark, of each two drams and an half: of Polipody half an ounce: of Cinnamon ſix drams: Diſtil them in* Balneo Mariæ *according to art: and to every two pints and an half of the Liquor, put of* Manus Chriſti *prepared with the Oyl of Cinnamon, four ounces: Or inſtead of this Water you may uſe the Opiate preſcribed in the Chapter of the cold diſtemper of the Brain for the ſtrengthening of the Head: but you had better uſe the Opiate of* Montagnanus *deſcribed in the Cure of the Epilepſis.*

When other Purges do little good, it wil not be amiſs to come to the uſe of Chymical Vomits, if the Patient be ſtrong: and they are mentioned in the Chapter of ſleepy Diſeaſes: For they draw the ſtubborn Humors from the Root, and cure Diſeaſes which cannot be rooted out with ordinary Medicines.

In the daies wherein he takes no other Medicine, let him take the Cephalick Opiate mentioned in Chap. 1. or the Apoplectick Water, or Tabellets, or Lozenges, for ſleepy Diſeaſes formerly mentioned.

After Univerſal Medicines we muſt proceed to Topical or particular Medicines, for the part, for the ſtirring up of heat, and recalling the Spirits, and for drying and diſcuſſing in the Spinal Marrow where for the moſt part the Cauſe of the Diſeaſe lyeth.

Therefore let the part affected be dayly rubbed with warm cloaths, but gently, leſt that the Natural heat and ſpirits drawn thither ſhould be again diſperſed.

Alſo let Cupping glaſſes be applied to the heads of the Muſcles of the part affected; and let them be narrow mouthed, and applied very hot; but let them not ſtand on very long leſt they diſperſe too much. After apply a Plaiſter of Pitch, and the Rozin of the Pine tree, that what is drawn thither may be preſerved. Or rub gently the part benummed with green Nettles, or lay on Sinapiſms, or Medicines of Muſtard, while the part begins to grow red; but you muſt not let them lie while they make Bliſters, for ſo the Spirits and Blood would be diſperſed, but only til the part made red will not grow white by the impreſſion of the finger, but remain red ſtill.

Afterward anoint the part, and the Spinal Marrow with Oyls, Oyntments, and Balſoms, of which there are many forms in Authors. The Balſom of *Guido* which is prepared by the Apothecaries, is excellent for this purpoſe. This we uſe alone, or mixed with other Medicines.

It is made after this manner:

Take *of Oyl of Foxes, Earth-worms, and Caſtor, of each one ounce: of* Guido's *Balſom, three ounces: of* Aqua vitæ *half an ounce: of Oyl of Roſemary diſtilled, one dram and an half: Mix them for a Liniment. With which anoint all the Spinal Marrow very hot, and the parts alſo reſolved covering them with warm cloaths.*

This following Oyntment of *Valeriola* in his Obſervations, is much commended.

Take *of Sage Marjoram, Bettony, Bayes, Roſemary, and Primroſe leaves, of each one handful: of the Roots of Time, Acorus, or great Galangal, and Flowerdelice newly gathered, of each three ounces: of the Oyl of Foxes, of Indian Nuts, and Rue, of each one pound: of Oyl of Terepintine, half a pound: of the ſtrongeſt Wine one pound: of* Aqua vitæ *half a pound: Boyl them till the Wine be conſumed, then ſtrain them, and ad of Serapinum, or Sagapenum, Opopanax, and*

Bdellium,

Bdellium, of each two drams: Caſtor half an ounce: Mace, Nutmegs, Styrax Calamita, Benjamin, of each three drams: long Pepper and Pellitory, of each one dram: the greaſe of an old Cat, of a Serpent, and a Gooſe, of each one ounce: the Marrow of an Ox Bone, two ounces: the Juyce of Dwarf-Elder, Sage, and Balm, of each four ounces: of the beſt Wax, or Bee-glew which the Bees make at their entring into the Hive to keep out the cold, two ounces: Mix them, and with a ſufficient quantity of Wax melted into the foreſaid Oyls, make them into the conſiſtence of a thin Ointment; with which anoint all the back bone warm, laying ſoft wool or linnen cloth warm thereon.

But an Ointment of greater effect, and leſs trouble, is made in this manner:

Take of the Juyce of Squils or Sea Onions, four ounces: the Juyce of Cowcumber and Rue, of each one ounce: Euphorbium, Caſtor, Sagapenum, Ammoniacum, and Bdellium diſſolved in Vinegar, of each one dram and an half: Mirrh, Frankinſence, Pellitory, and Niter, of each one dram: the Oyls of Elder, Turpentine, and Euphorbium, of each half an ounce: Wax as much as is ſufficient: Make an Ointment.

You muſt chiefly uſe the Ointments in the time of his Diet, after the ſweating is wiped off, and after the time of bathing; for then the pores and paſſages of the Skin being open do more eaſily receive the Ointment.

Let the Linnen cloaths that are uſed after anointing be warmed with this Fumigation.

Take of Amber, Maſtich, and Mirrh, of each one dram: Frankinſence two ſcruples: Cloves, Nutmegs, Cinnamon, and Mace, of each half a dram: Wood of Aloes half a ſcruple: Pouder them, and ſprinkle them with the ſpirit of Wine, dry them, and do ſo five times, and then make a pouder to be thrown upon Embers.

If the Diſeaſe do not yeild to theſe, Cerats and Emplaſters muſt be laid to the Back.

Take of the Emplaſter of Bettony, Melilot, and Bay-berries, of each one ounce: Frankinſence half an ounce: Caſtor and Euphorbium, of each one dram: the ſeeds of Nigella or Gith, the ſeeds of Water-creſſes and Muſtard, the Roots of Pellitory, and of Sal Niter, of each half an ounce: with the Oyl of Bricks make them into the form of an Emplaſter, which apply upon Leather.

But this following is better.

Take of Pitch, Galbanum, Sagapenum, and Ammoniacum, of each one ounce: Pellitory, and Muſtard ſeed, of each half an ounce: Euphorbium two drams: yellow Wax three drams: With as much Oyl of Turpentine as is ſufficient make a Plaiſter.

You may alſo provoke ſweat in the part by the fume of the Decoction of Herbs and Roots proper for the Head boyled in white Wine, which you muſt do by putting it into ſuch a Veſſel as the Patient being faſting, may ſit ſo covered over it, that the Water may not touch him, but the vapor only. Or you may ſweat him with a dry Bath, called commonly *Stupha*. Let the vapor of the former Decoction be received from red hot ſtints, upon which it hath been ſprinkled.

A Decoction of Burdock and other Dock Roots, is much commended for provoking ſweat: But our women uſe the Decoction of Danewort, called *Ebulus*, for this, and diſeaſes of the joynts, by which they provoke ſweat violently.

When the Patient hath ſweat enough, get him to bed, and give one dram of Treacle with any proper Water diſtilled: He muſt bath thus twice or thrice in a week. In Autumn he muſt hold his Limbs in the hot Grapes, or Wine-preſs an hour or two; and afterwards anoint them with a proper Ointment before mentioned: this is to be done all the time of the Vintage.

Laſtly, Sulphur or Brimſtone, baths of Niter and Bitumen before mentioned, are very agreeable, and many times go beyond all other Medicines; if the Patient uſe them ſome daies for drink, bathing and waſhing the head; after that anoint it with one of the Liniments preſcribed.

The Chymicks have many Remedies for the Cure of this Diſeaſe: Among which, the beſt are, *Elixir Proprietatis*, Spirit of Tartar, and Balſom of Galbanum.

All the time of the Diſeaſe, let the parts affected be wrapt in the skins of Foxes, Hairs, or Lambs.

A Palſey which comes from Choller or Melancholly requires the ſame Cure which is preſcribed in the Cure of Hypochondriack Melancholly: but when the Diſeaſe is more Chollerick, you muſt make choyce of thoſe Medicines which are more cold.

CHAP.

CHAP. VI.

Of a Convulsion.

Spasmus, Cramp, or Convulsion, is an involuntary and continued retraction of the Nerves and Muscles to their Original.

Convulsion is two-fold: The one Proper, to which the Definition mentioned agreeth: The other Improper, which is called a Convulsive Motion: and they are thus distinguished: In a true Convulsion, the retraction of the Muscles is always; but in a Convulsive Motion, the retraction is every time new. Moreover, in a true Convulsion the Limb is immovable, in a Convulsive Motion it is moved divers waies, as in the Falling-sickness, which is the chief of Convulsive Motions.

They differ also in respect of their Causes; for a true Convulsion, is either from Fulness or Emptiness; but a Convulsive Motion is from Irritation or provocation. Lastly, they are distinguished, in that the true Convulsion comes from the Disease only; the Convulsive Motion from the faculty alone. Which, that Novices may rightly understand, they must know that *Galen* in his Second Book, *de symptom. caus.* chap. 1. hath thus distinguished the Symptoms of a depraved Motion: Some (saith he) are only the work of Nature, which is constrained to move so from some violent cause: Others accompany diseases, Nature not assisting their production: Others are by the agreement and concurrence of Nature and the Disease. Now *Galen* by the name of Nature, understands a Faculty: the Operations of the Faculty are, Neesing, Coughing, Yawning, Reaching, and Hiccoughs: But the operations of the Disease only, is Palpitation and Convulsion: But the operation of both the Disease and Faculty, is Trembling, and imperfect Palsey, or Resolution.

From *Galens* words above mentioned, there ariseth a great difficulty, when he mentions the Hiccoughs in the operations of the Faculty; for it continueth by Irritation, or provocation, and is a Convulsive Motion: But *Galen* recites a Convulsion among those operations which come only from the Disease. Yea *Hippocrates* in his 3. Aphorism, and Sect. 6. affirmeth that the Hiccough and Convulsion come of fulness and emptiness, and repletion and inanition, or fulness and emptiness make only a true Convulsion. For the resolving of which difficulty, we say that the word Repletion or fulness, in its large sence comprehends Provocation, according to many Authors, because the provoking causes are material, and therefore do in some sort fill the parts in which they are contained; but thus Repletion is not the immediate cause of Hiccoughs, but the mediate, because it doth provoke the part in which it is to expulsion, by its quantity or quality.

Lastly, We must know, and observe, *Hippocrates* and *Galen* do declare a Convulsive Motion by the general name of a Convulsion; so that they cannot be distinguished, but by the differences mentioned.

Again, A true Convulsion is divided into a total one, by which almost the whol body is contracted; and a partial one, which is only in some one Member.

An Universal or total Convulsion, is caused either from the Brain, when the Muscles of the Face are plickt together as well as the whol Body: Or from the Spinal Marrow, when the Muscles that move the Head, and Spina or Back, either before or behind, or both, are plickt and drawn together. Whence arise three kinds of Convulsions. The first called *Emprostotonos*, when the Body with the Neck and Head, is violently contracted and drawn forward, so that the Chin is joyned to the Breast, and the Body looks like the keel of a Ship; nay, it is sometimes like a Bow, and sometimes round, and the Head of the Patient is joyned to his Knees, and then the two Muscles which bend the Head forward are chiefly affected. The Second is called *Opistotonos*, when the Body is drawn backward, and in that, either the twelve Muscles which extend the head, or some of them are drawn together. The third is called *Tetanos*, when the Muscles both before and behind, are equally contracted, and the parts drawn by the opposite Muscles being ballanced remain stiff and straight, and that is called *Motus Tonicus*, which is a most violent springing from the contention of al the Muscles.

A Particular Convulsion is made from the contraction of the Muscle of some part coming from the hurt of that Nerve which is ordained for his motion, and sometimes it hath a peculiar name from the effect or symptome. So the Convulsion of those Muscles which move the Eyes, is called *Strabismus*: of the Jaws and Temples is called τρισμὸς. The Convulsion of the Mouth by Contraction of the broad Muscle on the one side, is called *Spasmus Cynicus*, a dog Convulsion, and a wresting of the mouth; but if the contraction be on both sides, it is called *Risus Sardonicus*, or a grinning. But the wryness of the mouth may be without a Convulsion, namely, from the Resolution of one Muscle, which being resolved, the muscle on the other side draws it to the sound part, and there is a distorti-

on

on or wryneſs which is improperly called a Convulſion: The Convulſion of the muſcles of the Yard is called *Satyriaſis*, or *Priapiſmus*. Other Convulſions want proper names.

But the immediate cauſes of a Convulſion according to the Opinion of *Hippocrates* and *Galen*, are Repletion and Inanition, or fulneſs and emptineſs as above mentioned. And this Opinion is confirmed by the Example of a Lute or Harp ſtrings, which uſe to be ſtretched; which Inſtance *Galen* doth bring moſt elegantly in his Book of Palpitation, of trembling and ſhaking, chap. 8. and his third Book of Parts affected, chap. 6. and his ſecond Book of the Cauſes of Symptomes, chap. 2. and his Comment upon Aphor. 39. Sect. 6. For ſaith he, while the ſtrings are moiſt and filled with humor, as it falls out when the wind is Southernly, they are ſtretched, and ſo broken; and when they are over dry, as it happens in Northern weather, they are contracted, and alſo broken. So the Reins of a Bridle drying too neer the fire, are contracted when they were before extended with too much moiſture: the ſame befals the Nerves, which being either too full of moiſture, or too dry, are ſtretched and contracted; and the Muſcles into which they are united, are ſo drawn back to their principal or original, from whence all the Body hath a Convulſion.

The Mediate Cauſes of a Convulſion, which make Repletion and Emptineſs, are divers. And firſt the Cauſes of Repletion are recited by *Galen* in his Book of Trembling, chap. laſt, to the increaſe of flegm, and inflamation, a wateriſh Humor flowing to the Nerves, is ſuppoſed to ſtretch them in their breadth, which muſt needs make them ſhorter.

But here is a very great difficulty which is propounded by divers Authors, but is reſolved perfectly and plainly by none: namely, what difference there is between the cauſe of a Palſey, and of a Convulſion, when both come from a water flowing upon the Nerves: why that matter which makes a Palſey (which ſo fills the Nerves that it ſtops all their paſſages or pores, whereby the Animal Spirits are hindred in their motion) doth not alſo ſtretch the Nerves in breadth, and cauſe alſo a Convulſion; and why the matter cauſing a Convulſion, filling the Nerves, doth not alſo ſtop the paſſages, and cauſe a Palſey, when contrarily in a Convulſion the feeling remaineth, and the part affected for the moſt part is very much pained? For the reſolving of this doubt, Authors are much divided; and the moſt ingenious of them all, confeſs that is beyond their capacity. Moſt witty *Averroes* conſidering of this Point, breaks forth in this expreſſion: *I would I knew the reaſon* (ſaith he) *why the Nerves are extended in their breadth, and not in their length.* And preſently after he ſaith: *Know ye that the words of all Phyſitians that write of this Symptome, are more proper to Fidlers and Singers than to Demonſtrators, or ſuch as ſhould make things plain.* And Ingenuous *Argenterius* in his Comment upon the 26. Aphor. Sect. 2. ſpeaks thus: *It is not eaſie to render a reaſon of all things, and eſpecially why Water which is ſaid to be the cauſe of the Palſey, or reſolution of Nerves, and of the Convulſion, ſhould ſomtimes bring one, and ſomtimes another, when it is the ſame matter, and the ſame parts are affected, namely, the Nerves; why ſhould not the ſame Diſeaſe be alwaies produced?* Thus *Argenterius*. The great difficulty of this matter hath diſtracted all Writers into divers Opinions, ſo that ſome have left the Doctrine of *Hippocrates* and *Galen*, among whom are *Averroes*, *Eraſtus*, *Platerus*, *Ceſalpinus*, *Sennertus*, and others, whoſe divers Opinions, and long Diſputations we cannot attend to repeat, for we deſire to be very ſhort, and lay aſide all Controverſies, only adhæring to thoſe things which are moſt neceſſary for Cure. The Opinion of the ſoundeſt Writers, which are unwilling to diſſent from *Galen*, comes to this: That a Convulſion is cauſed of a thick matter, which extendeth the Nerves in their breadth, and contracteth them in their length: and that a Palſey comes of a thin humor which runs through the ſubſtance of the nerve, and ſofteneth it, but doth not open the pores and paſſages. But this doth not ſatisfie a ſoul that is greedy of Truth: For if a thick humor by filling the Nerve, doth ſtretch it broader, why doth it not alſo fill its pores and ſtop the inſenſible paſſages, and hinder the coming in of the Animal Spirit? and ſo bring a Palſey? and why doth not a Convulſion follow a Palſey in proceſs of time, when a thin humor long ſticking upon a part, muſt needs grow thick, even as the ſerous matter which makes the *Arthritis*, or Joynt-gout by long continuance upon the part, cauſeth the matter which makes the ſtone. Others ſay that in a Convulſion, only the external part of the Nerve which is Membranous and tender, is poſſeſſed with the humor; but in a Palſey, the Internal: but this giveth leſs ſatisfaction: For when the Nerves are for the moſt part ſlender, it is not eaſie to conceive how the humor ſhould only poſſeſs the external part, and not the internal; or the internal, and not the external: Or leaſtwiſe (if this could be ſo) a Convulſion would follow a Palſey, and a Palſey a Convulſion, by the increaſe of the matter; and that which at firſt did only poſſeſs the outward or the inward part, in proceſs of time would ſeize upon the whol Nerve.

Therefore we, although we cannot ſatisfie our ſelves in this great Difficulty while better Arguments are propounded, ſuppoſe that thoſe Objections may be taken off thus: A Convulſion and a Palſey differ in this; A Palſey is made of a pure watery humor without mixture, which doth not extend the parts, but ſofteneth them, as we may ſee in the tumor called *œdema*; but a Convulſion is cauſed of the ſame humor, but not pure and ſimple, but mixed with much wind, by which wind the

Nerves are ſtretched, and the Muſcles alſo which are contracted to their Original: For no cauſe can be thought upon more fit to make ſo great a contraction, than wind, which *Galen* acknowledgeth in his ſecond Book, *de ſympt. cauſ.* chap. 2. and Experience teacheth us, that the greateſt diſtentions are made eſpecially by wind, as we may ſee in the dropſie called *Tympanites*, and the Chollick. And in Convulſions, thoſe are the greateſt which are cauſed of wind, which ſtretcheth and diſtendeth the parts. By this Argument, all the aforeſaid Objections are anſwered: For if it be demanded, Why that flegm or water which maketh a Convulſion doth not bring a Palſey by hindering the paſſage of the Spirits? we may anſwer, That it is in ſo ſmal a quantity, that it cannot ſtop the inſenſible paſſages of the Nerves, and that it is ſo extenuated and made thin by much wind, that it cannot produce a ſtoppage or obſtruction. Or we may ſay that wind is the chief cauſe of Convulſions, which *Galen* acknowledgeth in the place mentioned: And in his 6. Book, *de loc. affect. cap. ult.* he makes the only cauſe of a Priapiſm (which is the Convulſion of the Yard) to be wind.

The other Cauſe of a Convulſion coming from Repletion, which *Galen* mentions in the place cited, is the Inflamation of the Nervous parts, eſpecially in the Original of the Nerves, or neer to its original, by which they are ſtretched; and that Inflamation is either from a cauſe only internal, namely, from a flux of blood upon the part; or of an outward cauſe, as of a wound, contuſion, or bruiſe, or a puncture of a Nerve.

The Cauſes of a Convulſion by Emptineſs or Inanition, are all extraordinary or immoderate Evacuations, by bleeding at the Noſe, or any outward part, by vomit, flux of the belly, or ſweat, as alſo all great conſumptions of the Radical moiſture which happen in ſtrong Feavers, immoderate exerciſe, watchings, cares, immoderate Lechery, hunger and thirſt, and the dayly uſe of Food and Medicines which heat and dry.

This kind of Convulſion from Emptineſs is rejected by many; who ſuppoſe that ſo great a drought cannot be brought into a living Body, as may contract the Nerves; but that is uſual in a Hectick Feaver, or a Maraſmus: theſe men are thus anſwered: Every emptineſs or drineſs cannot make a Convulſion, but that which is made ſuddenly and unequally; by which means there is a ſudden Evacuation or emptying of the Radical moiſture, which makes the parts cling and cloſe together for the avoiding of a *Vacuum* or emptineſs which Nature abhorreth: but if the moiſture be equally drawn from al parts, and by degrees, there is no contraction becauſe the parts made empty are filled with Air.

A Convulſive Motion, is of a ſharp pricking matter which provokes the Nerves; and it is for the moſt part, a humor or vapor ful of acrimony or malignancy, this comes often in malignant Feavers: Theſe Convulſive Motions are cauſed for the moſt part from the Brain and Nerves, ſuffering by ſympathy or conſent, and then it is called *Convulſio Sympathica*: And this Sympathy is either by their plain ſuffering together in reſpect of their likeneſs in ſubſtance and office, and their vicinity or neerneſs; or from an evil quality, or poyſonous air ſent to the original of the Nerves. And it is often cauſed by conſent from the mouth of the ſtomach through an æruginous or ruſt like Choller, through worms, poyſon; or other ſharp matter which gripeth: and alſo from conſent with the womb, as it happeneth in Hyſterical paſſions, or the Mother.

The Diagnoſis or knowledg of a Convulsion is eaſily learned from thoſe things which we propounded in the beginning of this Chapter: For in a true Convulsion, the part is contracted, ſtiff, and immovable, that it cannot be bent at the pleaſure of the Patient; but in a Convulsive Motion the part is ſhaken and roſſed hither and thither.

As to the Prognoſtick; A Convulsion which is in many parts, eſpecially thoſe neer the Brain, is dangerous; as alſo that which is in the Muſcles of the Breaſt, which giveth us to fear a ſuffocation, by reaſon of the ſhortneſs of the Patients breathing.

A Convulsion coming of too much bleeding or purging, is deadly, as *Hippocrates* ſaith in his Aphoriſms: for as *Galen* ſheweth in his Comment, that a Convulsion comes of emptineſs; but it may ſo fall out as it may come of irritation or provoking by the motion of ſharp and chollerick humors to the Nervous parts, or of the malign quality of a venemous Medicine, as it happens after the taking of Hellebore.

A Convulsion from a Frenzy is deadly. *Aetius* affirmeth, that he never heard of, or ſaw any ſo taken, that recovered.

It is better that a Feaver follow a Convulsion, than a Convulsion a Feaver, Aphor. 37. Sect. 2. for a Feaver coming upon a Convulsion, takes away its cauſe: but a Convulsion coming upon a Feaver, ſhews a malignant matter which threatneth death.

Whoſoever are taken with the *Tetanus*, or Cramp ſo called, die within four daies; but if they continue longer, they are cured, Aph. 6. Sect. 5. for the great ſtretching of all the Muſcles hinders breathing, ſo that they are ſuffocared. And we muſt obſerve, that a Convulsion is not the cauſe of death in reſpect of what is done to the Nerves: for a Palſey coming of the like cauſe continues many yeers: but in reſpect of the ſuffocation it brings by the Convulsion of the Muſcles ordained for breathing.

The

The Cure of this Diſeaſe is divers, as the Cauſe is divers.

That which comes of Emptineſs is ſeldom and incurable, therefore we ſhall not inſiſt upon the Cure of it. Authors do preſcribe al kind of moiſtening Medicines, and opening Oyntments. That which comes of provoking or irritation, is from other Diſeaſes, and is comprehended under the Cure of them. It remains therefore that we treat of the Cure of a Convulſion by Repletion, which when it comes of flegm and wind, muſt be cured by removing of them. This is done firſt by blood-letting if it abound, and the party be ſtrong; but it is better to take too little than too much; for blond is an Enemy to that principal Cauſe, which is flegm.

After Blood-letting, or it being omitted if need do not require, you muſt purge with pills which are ſtrong (but have an eye to the Patients ſtrength) according to thoſe forms in the firſt Chapter, you muſt ad to them three grains of Caſtor.

If the Patient will not take pills, he may take Potions, Pouders, and other Medicines preſcribed in the firſt Chapter.

After Purging, if you have not let blood before, apply Cupping glaſſes with Scarrification; otherwiſe without: firſt to the remote parts, then to the parts neer the part affected. But if the Thighs, or Legs have a Convulſion, apply them to the Buttocks and Loyns: if the Arms, to the Neck and Shoulders; laboring alwaies to bring the humor back to its original.

You may alſo with profit apply a Veſicatory to the parts oppoſite to that which is affected.

After the firſt purging, the matter is to be prepared with an Apozeme, preſcribed in the Cure of the cold diſtemper. Make it purging, if ſtrength and other things wil permit; otherwiſe leave out the Purgatives.

The Apozeme done, give him Pills again, putting Caſtorium to them, and to all his Purges.

If you uſe only an altering Apozeme, which changeth the Humors, you muſt in that time give ſeveral ſharp Clyſters, ſuch as are preſcribed in the Chapter of ſleeping Diſeaſes.

Alſo anoint the part with this Liniment,

Take *of Oyntment of Marſh-mallows, ſix ounces; Oyl of Turpentine and Chamomel, of each one ounce; Oyl of Spike three drams; and of Foxes half an ounce; Liquid Storax two ounces: Anoint the part and back-bone often therewith.*

Take *of Oyl of Dill, and Chamomel, of each one ounce*; Unguentum Martiatum *half an ounce*; Oleum Petroleum, *and Spike, of each one dram; Spirit of Wine three drams*

Ducks or Gooſe Greaſe prepared as followeth is much commended.

Take *a Gooſe or Duck that is fat, pluck it, and draw it; then fill it with theſe things following:* Take *of Sage, Marjoram, and French Lavender, of each one handful; Gum Ammoniacum and Bdellium, of each one ounce; Calamus Aromaticus, Nutmeg, Mace, and Cloves, of each half an ounce: Beat them in a Mortar, and moiſten them with the Oyl of Earthworms; after, put them into the belly of the Gooſe ſowed well together, and roaſt it upon a Spit. Receive the Dripping into a Veſſel half full of Vinegar, and anoint with it.*

But it is ſtronger thus:

Take *of the dripping aforeſaid ſix ounces; the Chymical Oyls of Wax, Nutmeg, and Sage, of each two drams.*

After you have anointed, you muſt cover the part affected with a hot Sheeps skin; and when it is cold, if you have not a freſh one, make it warm again with the Oyl of Dill, or the like hot Oyl.

We apply ſucceſsfully to the part affected, the hot Lungs of a Sheep, as alſo yong Pidgeons, Whelps, and Chickens ſlit in the middle.

Put the part affected into an Ox or Sheeps Belly, or other great Creatures newly killed, and let it remain there while it is warm.

Baths of Head herbs are good, putting to them a third part of Oyl, or anointing afterwards.

Some commend this Emplaſter:

Take *of Colophony two ounces; Rozin and Pitch, of each one ounce; Frankinſence, Maſtich, Ceruß, of each half an ounce*; Sanguis Draconis, *common Salt, Ammoniacum, and Terepintine, of each two drams; new Wax, two ounces; white Vitriol, two drams; Mother of Pearl, two ounces; Load-ſtone half an ounce; yellow Amber one dram and an half; Oyl of Egs and Roſes, of each two drams: Make a Plaiſter upon Leather.*

Baths coming of Brimſtone are excellent, eſpecially in conſtant Convulſions. Alſo dry Baths of the fume of the Decoction of Sage, Roſemary, Stoechas, Chamepitys, or Ground-pine, Origan, and the like, in white Wine ſprinkled upon ſtones fire hot, or Iron.

It is very good to foment the hinder part of the Head and the Neck with hot *Aqua vitæ.*

Penotus doth wonderfully extol the following Medicine for quite Curing of a Convulſion.

Take *Oyl of Turpentine, half an ounce; Oyl of Cloves ſix drops; of the Mucilage or ſlime of Briony, ſo much as is ſufficient to make a Liniment: Anoint the part affected, and the root of the Nerve which comes unto it.*

Others say they quickly cure a Member with the Oyl of Turpentine, of Wax, Chamomel, and the like, mingled with Spirit of Salt.

The following Liniment is very powerful.

Take *old Butter, and Bacon, of each a quarter of a pound; Bdellium, and Ammoniacum, of each one ounce; Mirrh, and Castor, of each two drams; Stechas and Rosemary flowers, of each one pugil; Nutmeg and Cloves, of each one dram; a Kitten or young Cat, flead, bowelled, and cut in pieces: Stuff a Goose with these, and roast her; cast away the first dripping which is watery, the next which is fatty receive in a Vessel half full of Vinegar: Anoint the parts affected, and the back bone therewith.*

Sometimes the pain is so intollerable that it must first be cured: For which this is good.

Take *of Oyl of Violets, Lillies, and Chamomel, of each an ounce and an half; Oyl of sweet Almonds, Mastich, and Roses, of each one ounce.*

If you wil have stronger, make this Bath:

Take *of Marsh-mallow Roots, and Lillies, of each one pound and an half; of the Leaves of Origan, Violets, Mallows, Sage, and Wormwood, of each two handfuls; Linseeds and Fenugreek, of each one pound: Boyl them for a Bath; in which let the party sit, not long, but come out as soon as he finds ease: It is sufficient if the parts affected be only bathed therewith.*

Others make Baths only of Oyl, and if the Patient be rich, they boyl a Fox or two in it.

While these are doing, purge the Head with neesing, and chewing, described in the first Chapter.

As also you must strengthen with the Cephalick or Capital Opiate, Apoplectick Water, Treacle, and the like.

Rondoletius speaks thus of his Water of Swallows: A Water made of Swallows and Castor, presently cureth a Convulsion coming of Repletion: You may find the description of it in his Chapter of the Epilepsie.

CHAP. VII.

Of the Epilepsie, or Falling-sickness.

THe *Epilepsie*, is a Convulsion of the whol Body, not continually, but by fits, with a hinderance both of the Mind and Sences.

The Word Convulsion, is not here taken properly and strictly for a true Convulsion; but improperly, for a Convulsive Motion: For an Epilepsy is a Convulsive Motion, not a true Convulsion. But we keep the name of Convulsion in imitation of *Galen*, who calls an Epilepsy alwaies a Convulsion.

This Definition is taken out of *Galen*, 3. *de loc. aff. cap.* 7. and *lib. de diff. sympt. cap.* 3. and defines a perfect Epilepsie, in which all the Body is contracted, and all the Sences both internal and external are abolished. Yet there are imperfect Epilepsies, in which only the Head, or Arm, Leg, and Thigh, or half the Body is only contracted. There is also an Epilepsy in which the mind remains sound, and the external sences, and also the voluntary motion of some parts. I saw a Nun, which in her Epileptick fits had divers contractions, sometimes of the Arms, then of the Legs, sometimes of the Head, afterwards of the whol Body; yet she saw those that stood by and spake; nay, she also endeavored a voluntary motion against the Convulsive, so as she did in a manner diminish the involuntary motion: sometimes she was in a smal fit only, and walked about her Chamber, but with a disorderly motion, leaping and using strange antick postures, by which she caused the rest of the Nuns to be very merry, and she at that time laughed with them, and spake when she pleased.

Every convulsive motion (as I said in the former chapter) cometh of provocation, which proceedeth from the quantity or quality of the matter. The quantity of matter which causeth the disease, burdening Nature, stirs her up to expel that which is troublesom to her. Whence the Opinion of *Galen* is confirmed, which is so disputed by late Physitians, That an Epilepsy comes of an imperfect obstruction of the Ventricles of the Brain; for if the humor obstructing or stopping is burdensom to Nature, the Brain will labor to expel it. In the quality there is no difference, for all agree in this, That the expulsive faculty is stirred up by sharpness and acrimony, and by any quality which is offensive to Nature.

The Causes stirring up or provoking, are either contained in the Brain, and make a proper Epilepsy, or come from other parts, and so make an Epilepsy by consent or sympathy.

And that provoking or irritation makes an Epilepsy, when the Brain laboring to expel that which is offensive shakes its self, and by consequence all the Nerves which are adjoyned to it.

There

There is in *Galen*, and almoſt all Authors, a threefold Epilepſy. The firſt is that which hurts the Brain, in which the Diſeaſe is: The ſecond is that which hurts the Brain by conſent from the Stomach: The third is when the diſeaſe is ſent from other parts of the Body to the head: And theſe have their proper names; The firſt, as being chief, is called *Epilepſia*; the ſecond *Analepſia*; the third, *Catalepſia*: But (by *Galens* leave) that diviſion is ſuperfluous, and in vain is that Epilepſy which comes from the Stomach ſeparated from thoſe which comes by ſympathy from other parts; when all ought to be called *Sympathicæ*, or Epilepſies by conſent. Neither is it ſufficient to ſay that an Epilepſy from the Stomach is diſtinct from others, becauſe it is moſt frequent ſince that which comes from the Stomach and Spleen, is as uſual and as frequent, if not more.

Therefore we divide an Epilepſy into a Proper one, and one by Conſent. Again, we ſubdivide that which is by conſent according to the divers parts from whence theſe ſharp and malignant vapors are ſent to the Brain, for there is almoſt no part in the Body from which a malignant vapor cannot be ſent. Two Stories are related by *Galen* in the place quoted; the one of a Boy of thirteen yeers old, who at the firſt had the Epilepſy in his Leg, after that it aſcended into his Thigh and Bowels, and by the ſides into the neck til it came to the head, which at firſt touch made him not able to ſtand. Another is of a Youth who in the beginning of his fit perceived as it were a cold air to aſcend. But it is remarkable and well known, that an Epilepſy comes for the moſt part from the Guts, the matter that breeds worms, from the Matrix and other parts, and it is confirmed by many Authors.

Therefore it is manifeſt from what hath been ſaid, how *Galens* Opinion may be defended, who affirms, That a proper Epilepſy comes of an imperfect obſtruction of the ventricle of the Brain; which we cannot defend to be the conſtant cauſe, as *Galen* ſeems to grant who laies down no other: but we are rather forced to confeſs, that it is leſs uſual than the reſt.

Nor do the Arguments brought againſt *Galen* any way convince, the chief whereof are theſe:

Firſt, As *Fernelius* ſaith, if an Epilepſy comes from plenty of Humors, it would come moſt in the ſleep, at which time there is plenty of Humor. I anſwer, That the humor of which ſleep is begot, is in the ſubſtance, not the Ventricles of the Brain, and therefore doth not ſtir up the expulſive faculty which reſideth moſt in the Ventricles.

Secondly, *Fernelius* ſaith, That becauſe an Epilepſy is quickly diſſolved, it ſhould turn into a Palſey, as an Apoplexy doth when the humor is caſt into the nerves. I anſwer, That in an Apoplexy, by reaſon of the weakneſs of the expulſive faculty which is oppreſſed by many humors, they are caſt into the parts adjoyning; but expulſion being ſtronger, and more free in an Epilepſy, they are ſent to thoſe parts which are ordained by Nature for their diſcharge. And it is falſe which *Fernelius* ſaith, That an Epilepſy never ends in a Palſey; for we have ſeen a Palſey come after it. And ſometimes Apoplexies at their firſt coming are turned into Convulſions before there be a perfect obſtruction of the Ventricles of the Brain; and alſo many Epileptick men die by an Apoplexy when a little obſtruction turns into a total ſtopping.

Thirdly, Againſt *Galen* ſome argue thus: As a compleat Obſtruction of the Ventricles totally takes away the functions of the Brain in an Apoplexy: So an incompleat Obſtruction would only diminiſh, not deprave the Functions, nor produce ſuch convulſive motions as are ſometimes more violent than ſound motions. I anſwer, That Nature being wholly oppreſſed by a total obſtruction doth not labor for expulſion; but ſhe hath ſtrength enough in a half obſtruction to move and ſtir up the Brain to expulſion. This is confirmed by the Example of a defluxion falling upon the Lungs, which if it fill the whol Lungs, it makes great difficulty of breathing without a Cough, as cometh to paſs in an Aſthma, or ſhortneſs of breathing: but if a ſmal quantity only of humor do fall, the Lungs are ſtirred up to expulſion, whence cometh a Cough.

The Signs of an Epilepſy are of three ſorts: Either they are ſuch as ſignifie an approaching Epilepſy, or one that is preſent, or ſuch as ſhew the difference of Epilepſyes.

The Signs of an Epilepſy approaching, are two-fold: Either they ſignifie the firſt coming of the Diſeaſe; or ſome Fit to be at hand. The ſame ſigns ſerve for both, but moſt ſurely in thoſe who are actually poſſeſſed therewith, do they ſhew the condition of it in its return; for in thoſe who never had this diſeaſe formerly, theſe ſigns are doubtful for the moſt part, and may declare many head diſeaſes; but all of them together may give ſome certainty.

Therefore al ſigns of an eminent Epilepſy are to be propounded with this admonition, That al ſigns do not meet in al; but ſome in one, ſome in another, as the cauſes and conſtitutions do differ. But that they may orderly be laid down, we muſt ſearch the originals of theſe ſigns, which flow from Animal, Vital, and Natural actions, from excrements, qualities changed, and proper accidents.

In reſpect of the Animal Functions, and unaccuſtomed diſturbance of the mind and Body, threatneth an Epilepſy, heavineſs of head, head-ach, vertigo or giddineſs, or much ſleep, from whence the Body hath no refreſhment; troubleſom dreams, dulneſs of mind, or perplexity, forgetfulneſs, ſorrow, fear, dread, ſloth, graveneſs of actions, ſnatching and trembling of the parts, dulneſs of the ſences, a down look, clouds and other things flying before the eyes, noiſe in the ears, a ſtink in the noſtrils,

ſtrils, a ſtiff tongue, and its inordinate Motion, yawning, and neezing.

In reſpect of the Vital Function, theſe with others are the ſigns: Anger, Beating or palpitation of the heart, ſtraitneſs of Breaſt, and alteration in Breathing.

In reſpect of Natural Functions, theſe are forerunners of an Epilepſy; diſdain of meat, or immoderate Appetite, Squeamiſhneſs, heart-burning.

In reſpect of Excrements, theſe are ſigns: Much ſpittle, thin and crude Urine, often Nocturnal Pollutions.

In regard of qualities and proper accidents changed; Paleneſs of Face, and ſwelling of the heart.

A preſent Epilepſy is eaſily known, if it be perfect; but it hath many differences which cauſe difficulty, as we ſhall ſhew.

In a compleat fit all the Sences both internal and external are hindred. The party ſuddenly falls, and the whol Body, or at leaſt ſome parts are diverſly moved: Moreover, there is a ſtaring and thruſting forth of the eyes, gnaſhing of Teeth, a difficult breathing, as in thoſe that are hanged; the ſeed, dung, and urine are ſent forth involuntarily, and about the end of the fit, he foameth at the Mouth and Noſe, which happen only in a vehement Epilepſy, and the fit being ended, he forgets all things he then acted.

Some of the Ancients make three kinds of Epilepſies: One which is like a deep ſleep; another which doth ſhake the body after divers motions; a third which is made of both the former. The late Phyſitians deny the firſt kind, ſaying, That it is more like a Coma, or a Carus than an Epilepſy; and theſe two Diſeaſes cannot be otherwiſe diſtinguiſhed, but that in a Coma is a deep ſleep without a Convulſion, and a Convulſion is a certain ſign of an Epilepſie. But *Avicen* ſaith otherwiſe, namely, That an Epilepſy comes many times without an apparant Convulſion. And experience teacheth us, That many men in Epilepſies have fits like Coma: and it's known to be an Epilepſie, not a Coma, or a Carus by this; The ſleep in an Epilepſie cometh and goeth by fits, when in a Coma it comes all at once.

A true Epilepſy is diſtinguiſhed from an Epilepſy by conſent thus: In the true there appears many ſigns of the Brain affected; as heavineſs of mind, and ſlowneſs, decay of memory, troubleſom ſleep with dreams, dulneſs of ſences, ſlowneſs and idleneſs of Body, pain of the head, and other things. Moreover, the ſick man doth not perceive the fit coming, but is ſuddenly taken therewith unawares, at the new Moon for the moſt part. The due proportion of the inferior parts being without blemiſh do confirm this ſign.

But we may know whether it come from the right or left ſide of the head moſt: By this, either the ſight of one eye is more obſcured, or the hearing more thick with the noiſe of the head on that ſide; or if the right or left ſide be more dull.

But we may know from what humor, eſpecially an Epilepſy cometh by thoſe ſigns which declare when flegm, choller, or melancholly abound.

An Epilepſy by conſent, is thus known: There appear no ſigns of a diſtempered Brain; the Patient perceives his Diſeaſe Coming, and a wind riſing from the parts below: or ſome lower part is weakened, or elſe affected ſtrongly in the time of the fit.

Theſe things following do ſhew that the Cauſe of an Epilepſy is in the ſtomach: Diſdain of meat, an inability to faſt, loathing, vomiting, pain of the ſtomach, gnawing, pricking, and diſtention; ſomtimes beating of the heart, which ariſeth from the Stomach.

That the diſeaſe comes from the Liver or Spleen, appears by often belching and breaking of wind, a ſwelling of the belly with rumbling and noiſe, ſowr belchings, ſtraitneſs of the Midrif, and pain ſomtimes reaching to the back, beſides ſome diſtemper in inferior parts.

An Hyſterick fit, or the Mother, mixt with Convulſions, if a retaining of the Courſes or Seed went before, ſhews that it comes from the Womb.

If the Epilepſy comes from an external part, ſome wind is perceived to riſe from that part, and the matter cauſing the Diſeaſe, ſomtimes tickleth and beateth in the part, which is a ſign there is a fit at hand; and if that part be tied hard, the fit is hindred.

Laſtly, The Signs of worms, ſhew that the diſeaſe come from them, as ſtinking ſowr Breath, itching of the Noſe, pain of the Belly, earthy Excrements, grating of the teeth, ſleepineſs, and the like, eſpecially if ſomtimes worms are voided.

But the extraordinary Cauſes, as Impoſthumation, foulneſs of a Bone, ſtopping of urine, and the like, may be taken from their proper ſigns.

As to the Prognoſtick, An Epilepſy is a Diſeaſe of long continuance, and very ſtubborn and deadly in Infants.

An Epilepſy coming hæreditary is incurable; but that which comes from external cauſes, and evil diet, is curable.

An Epilepſy coming before fourteen yeers of age in Boyes, and twelve in Girls, is curable: after twenty five yeers of age it is incurable; out of *Hippocrates*, Aph. 7. Sect. 5. For in the time of ripe-

neſs

neſs of Age, there is great ſtore of Natural heat, which is powerful to diſcuſs Diſeaſes. Moreover at that time women begin to have their terms, by which the uncleanneſs of the Body is purged. Yet although *Hippocrates* ſuppoſed an Epilepſy to be incurable after twenty five yeers of age; yet this is not alwaies true, for we find by experience that many have been cured after, although but ſeldom ſeen; therefore we may ſay that the Aphoriſm is true for the moſt part, A ſtrong Epilepſy often killeth the Patient in the fit, or it turns into an Apoplexy, or by reaſon of the ſtrength of the ſymptomes, and the violent ſhaking of the Brain, the Fabrick of the Body it is overthrown, and ſome parts thereof are broken, and it happens ſomtimes that pieces of the bones called Proceſſus Mammillares, come out of the Noſe.

An Epilepſy coming of Melancholly turns ſomtimes into madneſs, when the humor is ſent from the Ventricles of the Brain into the ſubſtance thereof.

The ſame humor when it is only in the Ventricles of the Brain, ſtopping them and paining them, cauſeth an Epilepſy: But when it offends the ſubſtance of the Brain which is the ſeat of the chief Functions, by defiling its Natural temper, and corrupting the Animal Spirits, and darkening them, it makes a Melancholly doting. Hence *Hippocrates*, 6. *epid.* ſect. 8. *text* 40. ſaith, that Melancholly men turn for the moſt part Epileptick, and Epileptick to Melancholly. But theſe Diſeaſes thus change in a two-fold reſpect; either by the change of the matter cauſing the Diſeaſe from its proper ſeat: and ſo when one comes, another goes, or by the propagation of the matter, and then both remain.

An Epilepſy coming of flegm turns either into an Apoplexy, or a Palſey.

A Quartain Ague coming upon an Epilepſy, and continuing long, cureth it, by reaſon the matter of the Diſeaſe is by degrees conſumed by the heat of the Feaver if it be of flegm; but if it come of Melancholly, it is ſent from the part affected, to the place where the ground of the diſeaſe lieth, that it may ſupply matter to the new fits.

The Cure of the Epilepſy is two-fold; the one in the fit, the other out of it.

Phyſitians are ſeldom called to the Cure of the fit, except it continue over long: in which caſe thoſe Remedies which we laid down in the Cure of ſleepy Diſeaſes, eſpecially the Apopleſtick Water, the Cinnamon Water, *Aqua vitæ*, and other Spirits which are very proper to diſcuſs the fit.

Out of your fit you muſt vary your Cure as the Cauſe requires.

And firſt we ſhal lay down the Cure of a proper Epilepſy, which conſiſts in Evacuation of humors throughout the Body, in the diſcuſſing of the matter of the Diſeaſe, and rectifying its evil qualities; as alſo in ſtrengthning of the Brain. And ſince the matter offending in a true Epilepſy is for the moſt part Flegm, we will direct our general Cure in oppoſition to that; admoniſhing yong beginners that if Choller or Melancholly abound, they would prepare and purge them. But the ſpecifical Remedies are alwaies the ſame, of what cauſe ſoever the Diſeaſe doth come.

For a perfect Cure we muſt thus proceed:

Firſt, Give him a Potion to purge Flegm, or ſome other Medicine to that purpoſe, which the Patient can beſt take, mentioned in the firſt Chapter. Firſt giving a Clyſter, if his body be bound.

After, if there be ſigns of Repletion, or if the party be Sanguine he muſt be let blood; otherwiſe not.

Afterwards the Univerſal Cure, of the cold diſtemper of the Brain is to be followed, with this Caution, That to the Decoctions, Apozemes, Diets, Sweats, Syrups, Chewings, and head Pouders, you ad the Root and Seed of Peony, and Miſſeto of the Oak, which all ancient Authors hold to be moſt proper for the Cure of this diſeaſe.

For his Diet, Guajacum is the beſt Sweater: By the uſe of which *Fachinus* reports that he cured many, but let it be continued thirty or fourty daies.

To every Doſe of the Sudorifick Decoction, put ſome drops of the Spirit of Vitriol, which is thought very proper for the Epilepſy.

You muſt often uſe the common purges, namely, the Pills, or Magiſtral Syrup once or twice a week if the Patients ſtrength will ſuffer them, and continue purging for divers Months: and ſomtimes uſe ſtronger purges, as *Maſſaria* ordains, who ſaith it comes from hence that Epilepſies are not, or ſeldom cured, becauſe the Phyſitians alwaies give weak Medicines.

For this cauſe, the Chymicks uſe Minerals, which draw the Humors from remoteſt parts, but not without much danger, eſpecially if they be not well prepared. But if good ſucceſs may be expected from theſe Chymical Medicines, it is to be found in Mercury or Quick-ſilver, either by its ſelf, or with Gold calcined in a Furnace of Sand, with a long continuance of fire, watching narrowly leſt any crude portion of him remain, which would make the Medicine very violent; otherwiſe it will work gently, if given in the quantity of four or five grains in Cochie Pills, or any Extract that purgeth flegm, or all humors.

A new Epilepſy is ſomtimes cured with Salt of Vitriol; as *Angelus Sala* ſaith, that he hath cured at thrice taking of it, an Epilepſy, giving it every fourth day. And after in his 77. *Curat. Cent.* 2. he

boaſts

boaſts that he cured a Girl of eleven yeers of age, of an hæreditary Epilepſy, with Stibium calcined, given only thrice.

Quercitan's Syrup of Tobacco, is very good for the Cure of the Epilepſy: But it is not to be uſed but by a wiſe Phyſitian, it is ſo vehement.

Inſtead of the Opiate before mentioned, this may be uſed, which is more Specifical.

Take *of the conſerve of Roſemary flowers, Peony, and Bugloſs, of each half an ounce: Citron barks candied, two drams: of the pouder of Miſleto of the Oak, Peony ſeeds, and Elks Claw, of each half a dram: Mans skull that was not buried calcined white one dram and an half: Coral, Pearl, and Harts-horn prepared, of each four ſcruples: right Bezoar ſtone, one ſcruple*: Diamoſcu dulce, Diatrion ſantalon, *of each two ſcruples: old Treacle, and* Confectio de hyacintho, *of each one dram: Spirit of Vitriol fifteen drops: With the Syrup of candied Citron barks, make an Opiate; of which take the quantity of an Acorn, or Filbert, drinking a little Cinnamon water after it.*

But this following is moſt powerful for the rooting out of the Diſeaſe after the Body is well purged.

Take *of Conſerve of Bettony Flowers and Roſemary Flowers, of each two ounces and an half: Eringus Roots candied, and Mithridate, of each one ounce: the pouder of Saſſaphras ſix drams: Caſtoreum three drams: Mans Skull not buried, and Elks hoof, of each two drams: of the roots and ſeeds of Peony, and Gith ſeeds, wild Rue, and Pellitory, of each one dram: Oxymel as much as is ſufficient, make an Opiate, of which take two or three drams.*

The Opiate of *Montagnus* goes beyond all, by which many have been cured: It is made thus:

Take *of the Roots of male Peony, Stœchas, and Pepper-wort, of each ten drams: Agarick five drams: Pellitory, Carua ſeeds, Dill, Aſſafœtida, and Ariſtolochia or round Birthwort two drams and an half: of the juyce of Squils, and Honey, of each one pound and two ounces: Boyl the Squils and Honey gently to a good conſiſtence; then ad the Pouders, and make an Electuary: of which, take two, three, or four drams, as age requires, continuing it twenty or thirty daies.*

After the uſe of the Epiſpaſtick Plaiſter, you muſt apply a Veſicatory to the fore part of the head, and a Cautery to the neck.

But a Seton or Skein of Silk drawn through the neck, draws the Humors more ſtrongly out of the Brain. And *Fabricius Hildanus* reports that he cured a Youth that had the Falling-ſickneſs every day, and had uſed all means he could get, in vain; and a Girl of eighteen yeers of age, born ſo, only by the continuance of a Seton.

If you conjecture that the vapors riſing from the parts below, and flying into the Brain, produce this diſeaſe, and nouriſh it; it is good to apply a Cauſtick to the fore part of the head, avoiding the Sutures: for *Carolus Piſo* reports that he cured two by ſo doing. Alſo if the Diſeaſe come from the inferior parts, the Waters of Germany called *Aquæ Acidulæ* do work wonders, and ſometimes root out the Diſeaſe, if firſt evacuations have been ſufficiently made, and the veins inferior have been opened.

But an Epilepſy coming from the Matrix requires a ſpecial Cure.

The Pouder of Elder Berries deſcribed by *Quercetanus*, given three daies together, the quantity of a dram with ſome Hyſterical Water, is good.

If al means fail, the laſt remedy is, to open the fore part of the Skul with a Trepan, at diſtance from the Sutures, that the evil air may breath out. By this means many times deſperate Epilepſies have been cured, and it may be ſafely done if the Chyrurgeon be skilful.

Let the Patient drink ordinarily Hydromel, or a ſmal Decoction of Guajacum with Peony Roots.

Let him carry a Bag about his Neck made thus:

Take *of Peony Roots and Miſleto of the Oak, of each one ounce: Elks hoof two drams: Nutmegs, Cloves, and Mace, of each two drams: Rue and Hyſop, of each one dram and an half: Pouder them and put them in red Sarſnet to be hung about his neck that he may often ſmel to it.*

After Univerſal Evacuations, among other Medicines you muſt uſe Specifical Medicines, which you may find in many Authors. We ſhal ſet down ſome of the beſt (beſides thoſe Opiates preſcribed) which are of no ſmal Conſideration in the Cure of this Diſeaſe.

Rondeletius commendeth much the Water of Swallows, which *Quercetanus* borrowed of him in his Diſpentatory. Treacle Water is of no leſs value, and *Aqua Cephalica*, and *Syrupus Antepilepticus*, mentioned by *Quercetanus*.

The Root of wild Valerian is much commended by *Fabius Columna*, that (once or twice taken) it cures the Epilepſy. And he reports he gave it to many of his friends, who affirmed that (under God) they were cured by it. The Doſe is half a ſpoonful in Wine, Water, Milk, or any other proper

proper Liquor; but it is given to Children in a leſs quantity in Milk.

The Chymiſts commend the Spiritual mixture, than which no better Medicine can be required (as they ſay.) The Compoſition whereof is as followeth:

Take *of the ſpirit of Vitriol, one part; ſpirit of Tartar, three parts; Treacle Water with Camphire, four parts; Mix them, and let them ſtand in a glaſs well ſtopped three or four weeks.*

The Doſe is one dram in any proper Liquor, or Vehiculum to ſwallow it down with.

Rulandus uſed much the *Oleum ligni Heraclei* (which the Chymiſts affirm to be of Coryline, or the Oyl of the Hazel-nut, or Filbert tree) And in his Centuries he relates ſome paſſages of them, which by the uſe of the Medicine were cured. The Doſe is three or four drops in any proper Liquor for five daies together.

The Oyl of white Amber is inferior to none, if not the beſt, being drawn by a good Artificer, and ſmelling of no fire, but ſending forth a moſt fragrant ſcent. The Doſe is from half a ſcruple, to one ſcruple.

The Oyl of Box-tree taken by four drops at a time, in four ounces of the Water of the Tile-tree flowers with four drops of the Spirit of Sulphur for ſome certain daies together, is very powerful, and is thought by many to be the true Oyl of *Lignum Heraclei.*

Crato calls the Natural Cinnaber the Load-ſtone of the Epilepſy, and makes this Pouder of it.

Take *of Natural Cinnaber, or Vermilion, which is cleer, and finely poudred half an ounce: red Coral, and Pearls prepared, of each two ſcruples: Saffron one ſcruple: the Leaves of Gold five: Grind them all very finely upon a ſtone.* The Doſe is from ſix grains to a ſcruple in the time of the fit, in ſome proper Liquor.

The Cinnaber or Vermilion or Antimony, which is taken after the extraction of *Mercurius vitæ*, is thought by Chymiſts to be of no leſs vertue than the former: for if it be mixed with an equal weight of the Magiſtery of Pearl, Coral, and pouder of a dead Mans Skull, it is a ſpecifical Medicine in an Epilepſy; though it be old, the Doſe is from ten grains to fifteen in a proper Liquor.

The Cure of an Epilepſy by conſent is firſt to begin with the part affected, and that part is to be cleanſed and ſtrengthened by convenient Medicines taken out of thoſe proper Chapters wherein they are mentioned: not omitting Specifical and Antepileptical Medicines, which are alwaies to be uſed in every Medicine. But if the Epilepſy come from any external part, beſides the Univerſal Cure, we muſt have a ſpecial eye to that, and the malignant matter therein contained, is to be evacuated by Cupping-glaſſes with ſcarrification, Veſicatories, and Cauteries. And if the Diſeaſe continue after the Ephar or Scab is fallen off, you muſt apply the Cupping glaſſes again; and at laſt, when neceſſity urgeth, you muſt apply an actual Cautery. If the diſeaſe come from a foulneſs of the Skul, that is to be taken away with the Trepan and burning.

CHAP. VIII.

Of the Falling-ſickneſs in Children.

BEcauſe this Diſeaſe is common among Children, and uſeth to be very dangerous unto them, therefore we ſhal add a peculiar way for their Cure by it ſelf, becauſe it is very much differing from that in elder People.

Firſt therefore make the Belly ſoluble with a Suppoſitory or Clyſter.

After, or about the ſame time, give a purging Medicine proportionable to the ſtrength of the child: We need not fear to give of the Electuary of Diacarthamum two drams to a child of one yeer old, if the Diſeaſe come of corrupt Milk.

Take of *Hiera Picra half a ſcruple, or one ſcruple*: Pulvis de gutteta *half a ſcruple: Give it with a proper Liquor, or with Honey of Roſes.*

Apply Cupping glaſſes to the Shoulders and Loyns, and with Scarrification, if the Child be one or two yeers old.

Apply a Veſicatory to the hinder part of the Neck.

If the Purgation have not done well, or little profited, you muſt vomit with white Vitriol prepared, or with Salt of Vitriol, which may be given twice, thrice, or four times, if the Diſeaſe encreaſe. The Epileptick Pouder commonly called *de gutteta*, may be given often with Milk or Broth, from half a ſcruple to a ſcruple.

That Epileptick Pouder is not found written in our Diſpenſatory; but in the Shops at *Montpelier*. It is uſually compounded thus:

Take of *Peony Roots and Seeds, white Dittamnus, Miſleto of the Oak, of each half an ounce;*

the ſeed of Atriplex or Orage, two drams: the Pouder of Mans Skull three drams: red Coral prepared, Hyacinths prepared, of each one dram and an half: Elks hoof prepared, half an ounce; Musk one ſcruple: Leaf Gold one dram: Mix them into Pouder.

Take it in a ſmal ſpoonful of Water againſt the Epilepſy: or inſtead thereof in Cinnamon Water, or Imperial Water, or with ſome drops of the ſpirital mixture with a proper Liquor.

Apply to the hinder part of the head, a Plaiſter of Ammoniacum, the hair being ſhaven; for it hinders a flux of humors that fals from the Head upon the back bone outwardly.

Uſe this Pouder to the fore part of the head.

Take of *Nutmeg half a dram: Peony ſeeds, one dram and an half: Lavender flowers, one pugil: Amber two ſcruples: Make a Pouder.*

Or apply the ſtrengthening Plaiſter preſcribed in the Cure of the cold diſtemper of the Brain.

Two or three drops of Oyl of Amber with an equal quantity of Spirit of Vitriol given in Bettony Water, do preſently free a child from a fit of the Falling-ſickneſs. The ſame Oyl is good to anoint the Noſtrils. Inſtead of Oyl of Amber, give the Oyl of Box; as alſo the Water of Tile-tree flowers, and Bettony Water.

The ſmoak of Tobacco doth free children from the Epilepſy, if you put in the ſmal end of the Pipe into the childs Mouth, and blow in the ſmoak, or if you blow it from your mouth.

Let the Back bone and the Members contracted be anointed with this Liniment:

Take of *the Oyl of Rue, and of Earth-worms, of each two ounces: Oyl of Caſtor one dram: a little* Aqua vitæ, *make a Liniment.*

Take of *old Treacle, one dram; Confection of Alkermes, and Hyacinths, of each one ſcruple; Bettony, Sage, Marjoram, and Cinnamon Water, of each half an ounce: Mix them, and bath therewith the Noſtrils, Temples, and Ears. You may alſo give a ſpoonful to be drunk.*

But it is better to anoint the Noſtrils, Temples, and Crown of the Head with the Apoplectick Balſom deſcribed for ſleepy Diſeaſes; as alſo the Mouth and Pallat.

Skenkius in his 5. Century of Exotick Experiments, num. 85. hath this Receipt out of *George Kufner*: *This is an approved Medicine in Childrens Epilepſies: Give a little fine Musk in thin Wine, twice or thrice in a day, and it will cure perfectly.*

While theſe things are performing, you muſt give once or twice in a day, a Clyſter, thus made:

Take *of the Roots of round Birthwort, of Polipody of the Oak, of Carthamus ſeeds, of each half an ounce: Peony and Cummin ſeeds, of each three drams: the flowers of Chamomel and and Roſemary, of each one pugil: Boyl them to one pint; take half a pint of it ſtrained; Hiera picra three drams; Honey of Roſemary one ounce; Oyl of Rue and Lillies, of each three drams.*

Two ſpecial things are to be practiced:

The one is the Root of wild Valerian before commended by *Columna*; which he ſaith he hath given poudered in Milk, and thereby cured very many.

Another is the Gall of a ſucking Puppy, which is mentioned in *Untzerus*, thus: *Take a little black ſucking Puppy (but for a Girl take a bitch Whelp) choak it, open it, and take out the Gall, which hath not above three or four drops of pure choller; give it all to the child in the time of the fit with a little Tile-tree-flower Water, and thou ſhalt ſee him cured as it were by a miracle preſently.*

If the Child ſuck, look that the Nurſes Milk be good, let her have meat of good juyce, and light of digeſtion: Let her drink no Wine, but Water, or Water and Honey, and a ſmal drink made of Sarſaparilla.

Some Children are ſo ſubject to this Diſeaſe, that it will return again after it is once cured. Nay, in ſome Families al the Children uſe to die of this Diſeaſe. Therefore you muſt uſe preventing Medicines, not only to thoſe which are newly born, but to thoſe alſo which have recovered.

Firſt therefore give to Children newly born, before they ſuck, give one ſcruple of the Pouder *de gutteta*, mentioned before, in a little milk, and give the ſame quantity thrice in two daies.

It is good both for them which have been cured, and children when they are a few daies old to apply a Cauſtick to their Necks. But an actual Cautery is much better, which our Phyſitians wil not uſe, becauſe they abhor violent and terrible Medicines. *Rondeletius* affirms, that the Actual Cautery is ſo uſed in *Florence*, that the women do uſe to apply it themſelves. And this doth *Aquapendens* witneſs in his Chyrurgery Operations, and teacheth the way of applying them in his proper Chapter of the burning of the hinder part of the head in children.

Let the Child be purged twice in a month, with Manna, Syrup of Roſes, or of Cichory with Rhubarb.

Every new Moon give it a doſe of the Epileptick Pouder *de gutteta* above mentioned.

Make a Bag to ſtrengthen the head, and a Fume for the Head-cloaths, as in the cure of cold Diſeaſes of the head; and alſo pouder its hair with the pouder before mentioned.

For

For the Cure of this Diſeaſe, this is a good Preſervative:
Take of Spirit of Wine, four ounces: Spirit of Caſtor, one ounce: Peony Roots, three ounces: Let them be infuſed and ſtrained. Waſh the whol body of the child with it warmed.

CHAP. IX.

Of Giddineſs, called Vertigo.

A *Vertigo* is a falſe Imagination, in which all objects, and the head it ſelf ſeem to turn round, ſo as the Patient often falls to the ground, unleſs he lay hold on ſome ſtay at hand.

It may be objected, That in a Vertigo, the Imagination is not hurt; for if it were ſo, the Patients would think the objects truly turned round; as men in Madneſs and Phrenzy do think what they imagine to be truly ſo. We anſwer, That in a Vertigo, the Reaſon is not hurt, which perceiveth the error of the Imagination; but in a Phrenzy, or Melancholly, the Reaſon is hurt as wel as the Imagination.

There are two ſorts of Vertigoes; the one ſimple, called in Greek σκότωμα, or σκοτοδινία, a dark Vertigo, in which the Eyes are both darkned as it were with ſmoak, or a cloud.

In both kinds the Sight is ſomwhat hurt, becauſe the Spirits which uſe to go directly to the Eyes, are moved out of order by the vitive Nerve, by reaſon whereof the Eye doth not ſo fitly enjoy them. But in a dark Vertigo there is a more violent Motion of the Spirits, ſo that they come leſs to the Eyes, from whence the ſight is darkned or hindred.

The immediate Cauſe of a Vertigo, is the circumvolution of the Spirits coming of a vaporous matter or wind, which coming into the Ventricles of the Brain, and *Plexus Choroides*, diſturbs the Spirits, and makes them run round; whence the ſpecies of the Objects brought by thoſe ſpirits are moved in like manner; and ſo the objects themſelves ſeem to be moved alſo the ſame way. But here we may doubt, ſince a Vertigo is a ſymptom of a hurt action, and every action hurt depends immediatly upon a Diſeaſe, how the Circumvolution of the Spirits can be the immediate cauſe of a Vertigo, when it can be referred to no kind of Diſeaſe. To which we thus anſwer, A Circumvolution of the Spirits, is a Diſeaſe in reſpect of Scituation; for at that time the Spirits do not keep that place or poſition which they Naturally ought, but move preternaturally, and amiſs. And this Anſwer hath a weighty inſtance: For a Diſeaſe is an affection of a true part, but ſpirits are not true parts. We anſwer, That Axiome is not alwaies, but ſomtimes true; according to *Galen* that which is principal and hinders the action of its ſelf, is the true Diſeaſe: We ſay that the word *Part* ought to be taken in a larger ſenſe, comprehending all thoſe things which go to the making up of the Body, and whatſoever hinders the action of any part, is called a Diſeaſe. So a yellow color in the Eye, hurts the ſight immediately, and therefore it is called a Diſeaſe in number; ſo a bitter ſavor in the tongue, and noiſe in the Ears, are Diſeaſes in number, in regard there is ſomthing in thoſe parts beſides, which offendeth the actions. After the ſame manner is the Circumvolution of the Spirits, a Diſeaſe in Scituation or Poſition, for the Reaſon above mentioned.

But thoſe Vapors are ſent up from evil humors, not continually without intermiſſion, but by compaſs and going about, and at a diſtance, namely, as often as they are raiſed up by an external cauſe; and the humors are ſuch as uſe to produce vapors, namely, Blood, Choller, Flegm, and Melancholly, and the watery Humor; becauſe both a cold as well as a hot vapor, may cauſe a Vertigo; as *Galen*, 3. *de loc. affect.* chap. 8. and Comment. Aphor. 23. Sect. 3.

Theſe evil humors are either contained in the Brain, or in the inferior parts. Hence a two-fold Vertigo ariſeth, one Proper, the other by Conſent.

Wateriſh and flegmy humors heaped up in the Brain, ſend wind and vapors to its ventricles, which ſtirring about there, do cauſe a Vertigo. And ſo a proper Vertigo comes to be a forerunner of an Epilepſy, or Apoplexy.

But Humors contained in the inferior parts, eſpecially the ſtomach and the ſpleen, do eaſily ſend up Vapors to the head, which if they touch the Ventricles, and the Arteries, cauſe a Vertigo.

The external Cauſes are all ſuch things as will quickly diſſolve the Humors, and turn them to Vapors, or make an inordinate motion in thoſe Vapors. Among which are reckoned by *Hippocrates*, Aphor. 17. Sect. 3. a South wind, and ſudden change of Air. To theſe ad the heat of the Sun, windy Meats, Garlick, Muſtard, Radiſh, Peaſe and Beans, Drunkenneſs, Gluttony, immoderate Exerciſe, and unſeaſonable, the ſuppreſſion of a wonted evacuation, Anger, Baths, Hunger, eſpecially in thoſe which are ful of bitter Choller, often turning of the Body round, long looking upon Wheels and

things that run round, and of Waters that run swift, looking down from a high place, a Fall, a stroak upon the Head, a Fracture, or depression of the Skull, compressing and lying upon the Brain.

We shall lay down no Diagnosis, or general signs to know this Disease by, because it is of it self manifest. Yet in particular we shal declare those signs which shew the part affected that containeth the mine or matter of the Disease; as also those which shew the humor offending.

Pain of the Head shews that a Vertigo cometh from a Disease of the Brain, which is a true or proper Vertigo. Also Heavineſs, and the loſs of some Sence; as Dimneſs of sight, noise in the Ears, thickneſs of hearing, decay of smelling and tasting; the beating of the Arteries of the Head when other parts are free.

The signs that shew what the matter is that offendeth, are these: That abundance of flegm offendeth, is signified by a dulneſs of the internal and external Sences, heavineſs of Head, slowneſs of motion, drouzineſs, much spitting, want of Appetite, want of Thirst, white Urine, and crude, with the other signs of abundance of flegm.

But watchings, wrath, nimbleneſs in actions, thirst, bitterneſs of mouth, quickneſs of pulse, a thin and yellow Urine, and the like, shew that the Chollerick matter offendeth.

The signs of a Melancholly matter are, Fear, sorrow, troubleſom thoughts, much watching, fearful dreams, sowr belchings, and the like.

The signs of Blood abounding, are, Stretching of the Veins with fulneſs, redneſs of face, and hear, beating of the Temples, heavineſs and distention in the head, long sleep, dreams of red things, wearineſs, reaching, thick and red Urine, sometimes thin and transparant by the ascention of the blood into the head.

A Vertigo by Consent is known by the want of those Symptomes, which come from the Head, when no disorder is found in the Brain, but rather some part beneath is sensibly hurt.

These things shew that a Vertigo comes from the stomach, want of appetite, loathing, sowr belchings, pain of the stomach, or swelling with wind.

That a Vertigo comes from the Liver, Spleen, or Matrix by Consent, the same signs declare which were laid down in an Epilepsy by Consent coming from the same parts in the Chapter aforegoing.

The Prognostick, or foreknowledg of this Disease, is thus:

A new Vertigo that comes but seldom, and which comes only from external Causes, is more light and easier cured: On the contrary, that which is old, and comes often, turneth for the most part into an Epilepsy, or Apoplexy.

A Vertigo in an old man is most dangerous, because his Brain is colder and weaker, and flegm doth more abound.

A Vertigo in which not only external things, but also the Head and whol Body seem to be turned about, and which happens with hurt to the sight, is more dangerous, for it signifies greater force in the cause of it; and if the sick man falls to the ground, it foretels an Epilepsy, or Apoplexy.

A Vertigo coming of hot Humors, is sooner dissolved than that which comes of cold, because hot Humors are sooner dispersed.

The Cure of the Vertigo is much like that of the Epilepsy, because both Diseases come almost of the same Causes: whence it comes that a Vertigo often turns into an Epilepsy. But because a Vertigo is a lighter Disease, it doth not need so many Medicines as an Epilepsy: but they will serve, which we will here lay down; and also we shal demonstrate in short what is that which this Disease most properly requireth for its Cure.

In the first place, Therefore if blood abound in the whol body, or in the head, you must open a Vein, and let the blood out by degrees, giving before a Clyster that is somwhat sharp.

After that, give the ordinary Purge which is prescribed in the Cure of the cold Distemper of the Brain.

Afterwards we must come to the particular Evacuations of the Brain, by Errhines, Sternutatories, and Gargarisms, or Apophlegmatisms, mentioned in the first Chapter.

Cupping glasses dry, and with Scarrification; Frictions of the extream parts, and opening of the Hemorrhoids are to be used for to cause revulsion.

Apply Vesicatories and Cauteries for derivation, and at last use those things which strengthen the Brain, and disperse Vapors and Humors as well externally as internally, as Opiates, Pouders, and Bags that are described in the first Chapter.

And you must not omit the digestive Pouder, because the weakneſs of the Stomach often causeth this Disease.

And lastly, You must use those Medicines which are esteemed by special quality to cure the Vertigo; such as are those which were prescribed for the Cure of the Epilepsy; namely, Antepileptick Waters, a Balsom to anoint the Nostrils, Temples, and Crown of the head, Oyl of Amber, Pouder of Cinnaber, and many other.

Moreover, *Quercetanus* in the twentieth Chapter of his Dispensatory, commends a Medicine made

made of Peacocks dung, whose Preparation and manner of use, may be seen in the Author.

If the Disease do obstinately resist the propounded Remedies, you must fall to a Diet of the Decoction of Guajacum.

A Cautery in the fore part of the Head, is much commended by *Zacutus Lusitanus* in his first Book of Admirable Practice, Obs. 38. in these words: *A certain man was so troubled with a dark Vertigo, that his Brain did almost continually seem to run round: and when he had tried many Medicines, and there was fear of an Apoplexy to follow; with no other means (besides general and particular Evacuations, and Fontanels or Issues in divers parts, and a Seton in the nape of the Neck) could be be cured, but with a Cautery in the fore part of the head; by which only (beyond the expectation of Physitians) I have cured many of the Falling-sickness, letting them run a long time.*

CHAP. X.

Of Tremor, *or Trembling.*

TRemor is called τρόμος in Greek; it is a voluntary Motion depraved, by which the Member is somtimes elevated, somtimes depressed, through the mutual contention between the faculty, and the part affected.

It is called a depraved motion from *Galen*, 2. *de sympt. caus.* chap. 1. and he saies the same in his Book of the Difference of Symptomes, chap. 3. but he seems to contradict himself, when in his Book of Trembling, chap. 4. he reckons Trembling among the Motions which are diminished. But that contradiction may be reconciled, by saying, that Motion may be considered two waies, Either in respect of it self, or in respect of the faculty: If it be considered in respect of it self, it is depraved, because it is not in that manner it ought to be; if it be considered in respect of the faculty, it is a diminished motion, because it comes from a faculty so weak that it cannot produce motion strong enough. But one may instance, That the action is alwaies diminished when comes from a weak faculty, but never depraved. I answer, That it is true if al the actions depend upon the faculty; but Trembling comes partly from the Faculty, partly from the heavinesse of the part; therefore it is a depraved Motion.

The moving faculty desireth to lift up the Member, and to keep it in that Position; but the weight of the Member presseth it downwards, whence comes a trembling Motion.

The Mediate Cause of Trembling, is weakness of the Motive Faculty, or rather of its neareſt Instrument, that is, the Animal Spirit, which is not able to exercise a voluntary Motion perfectly.

The Spirits are made weak, either by a fault in themselves, or by a defect in the Nerves, which are the Conduit Pipes by which they are carried, and do act.

The fault is in the Spirits, either when they are but few at the first; or when they are afterwards dissipated.

They are few at the first, either by reason of the cold distemper of the Brain, as in old men, or through the want of vital Spirits, which are the matter of which the animal are made.

The Spirits are dissipated from many external Causes, as immoderate Evacuations, much use of Venery and unseasonable, great pain, and constant fasting, sorrow, and long violent Diseases.

The Spirits are hurt by defect in the Nerves, and are weakned either when the Nerves are too cold, or are infected with a malignant quality, or obstructed or compressed.

They grow too cold, either from a cold Air, from use of cold meats, or much drinking of Water, swimming often in cold water, and the like.

They are infected by the use of Opium, Henbane, Poppy, and the vapor of Quick-silver, as it is seen in Gold-smiths, and them which have the French Pox, and have been cured with the fume of Cinnaber. So in malignant Feavers tremblings come also (which are rather to be accounted Convulsive Motions) and also they come from the provocation or irritation of the Nervous parts.

They are stopped not wholly, as in a Palsey, but much less, but by the same cause, namely a watery humor gently sprinkled upon the Nerves, which is produced of gluttony, drunkenness, and other Causes.

Lastly, Trembling may come from compression of the Nerves, when excrementitious humors abounding in the whol Body do compress the Nerves, and hinder the free passage of the Animal Spirits.

Hercules Saxonia, besides the causes mentioned borrowed from *Galen*, acknowledgeth another *Tremor* coming of wind; and *Cardanus* another from pain in nervous parts: But they are deceived, because the Motion produced from those Causes, are to be referred to Palpitation, or Convulsive Motion.

There

There is no need of signs in this disease, because trembling appears of it self: But the Causes that produce it, are to be known by their proper signs; as also we must search for those external Causes which went before.

As for the Prognostick. Trembling of it self is not dangerous, but if it be in old people it continueth with them til they die. But it may be deadly by accident, in as much as it usually goes before a Palsey, or an Apoplexy.

You must Cure Trembling as you cure the Palsey, and therefore we shall not make vain repetitions of Medicines.

CHAP. XI.

Of Phrenitis, *or Phrenzie.*

A Phrenzy is an Inflamation of the Brain, and its Membranes with a continual dotage, and a a sharp constant Feaver.

By the word *Inflamation*, we understand a true Tumor, which is commonly called a contracted Inflamation, coming of Blood out of the Vessels falling upon the substance of the part; for the Blood being hot and Chollerick, and in the Membranes or substance of the Brain, causeth a true *Erysipelas*, or an *Erysipelas Phlegmonodes*, or *Phlegmon Erysipelatodes*.

By *Delirium*, or Doting, we understand the erring of Reason, for we suppose that fault cannot be in the Imagination alone, without a fault be in the Reason, in a Phrenzy; whatsoever others think, we are led by the Authority of *Galen*, who in his Book of the Difference of Symptomes, chap. 3. gives an Example of one *Theophilus* a Physitian, who thought Fidlers sate continually in a corner of his house playing, and beleeved that he saw them sometimes standing, sometimes sitting, and cried continually that they should be cast out of doors. And *Galen* saith, that in him the Imagination was hurt without the Reason. First therefore we may say that *Theophilus* had not a Phenzy; for *Galen* doth not say that he had, but speaking of a Delirium (which *Theophilus* had) therefore it was rather Melancholly, because they sometimes err in one object, and discourse wel concerning other: so saith *Galen* of *Theophilus*, that he had wisdom in other things, both to discourse, and to know his friends. But we say further of *Theophilus*, that not only his Imagination, but also his Reason was hurt, because he really thought the Fidlers were there, and desired they should be put forth: For when the Imagination alone is hurt, the Reason being not hurt, acknowledgeth the error of Imagination, as in a Vertigo, in which the Patient thinks al things run round, but Reason knoweth that it is not so indeed, but that Imagination doth err.

Nor is the Opinion of *Eustachius Rudius* to be received in this case, who saith, That it never comes to pass that the Imagination should be hurt, the Reason being sound, because Reason worketh upon Phantasms received from the Imagination, and therefore if fooliſh Phantasms are offered to the Reason, he thinks it necessary that the Understanding beholding those fooliſh fansies, should also be fooliſh: And hence *Eustachius* gathers, that the Imagination is not depraved, but there is a meer and simple deceit of the sight. We say that the understanding doth run from one thing to another, and is busied about those Species which are retained in the Memory; and though the Fansie presents absurdities to the Mind, yet the Species before received, are still retained in the Memory, and are presented to the Reason, it can know and correct that mistake of the Fansie; namely, if it judg that those absurd fansies which are brought to it by a depraved Imagination do neither agree with time, place, or other circumstances which still remain in the Memory, and are known to be true. So in a Vertigo, Reason being in order judgeth that it is impossible that Roofs, Walls, and Pavements, should turn round, and therefore they are falsly represented to the Imagination. So the Phylosopher that was bit with a mad dog, and his Imagination began to decay, going into a Bath, perceived the false Image of a Dog therein; but Reason being found reproved the error of his Imagination, and made him speak thus; What hath a Dog to do in a Bath? and presently he cast himself into the Bath, by which means he was delivered from the danger of a Disease called *Hydrophobia*, or fear of Water.

There are two kinds of Phrenzie; namely, a true Phrenzy, which is laid down in the Definition above mentioned: Another which is called *Paraphrenitis*, or Bastard Phrenzy.

A true Phrenzy is sometimes in the Dispositon, which is most usual, sometimes in the Habit, which is called Hectical Phrenzy, in which, the Chollerick Humors are strongly fixed in the Brain, and possess many parts thereof, sticking thereto like a tincture or dye.

A *Paraphrenitis*, or bastard Phrenzy is, when a hot distemper is communicated to the Brain, either from the whol Body (as in burning Feavers) or from some part inflamed, as the Stomach, Liver,

Liver, Lungs, and eſpecially the *Diaphragma* or Midriff, which by inflamation doth produce a Diſeaſe very like a Phrenzy; namely, a continual Dotage called *Delirium*; which cometh to paſs by the great conſent which is between the Brain and the *Diaphragma* through the Nerves that come thither, and by the perpetual motion of the *Diaphragma* or Midriff, by reaſon whereof continual vapors are ſent to the Brain.

The Cauſe of a true Phrenzy is Chollerick blood, to which there is joyned alſo Excrementitious Choller, and this produceth a greater or leſs Phrenzy according to its divers degrees; namely in heat and aduſtion. So a Pale Choller produceth the mildeſt Phrenzy, and an Aduſt or burnt Choller ſtirs up a beſtial Phrenzy.

But when the Brain is inflamed, and the Membranes thereof; the Chollerick blood is out of its Veſſels, and ſhed abroad into the ſubſtance of thoſe parts: which is done Two wayes, either when the Brain is principally affected; or when it is affected by Sympathy.

The Brain is primarily affected when it doth immediately grow hot from an external Cauſe, as from the Sun-beams, drinking of Wine, Wrath, and the like; ſo that the blood which is contained in the veins of the Brain is moved and carried out of its Veſſels: and this may come from a wound, or ſtroak, or contuſion of the head: And a Phrenzy ſo coming may be called a primary, or principal Phrenzy.

But a ſecondary Phrenzy is that which follows burning and malignant Feavers, when a part of that humor which cauſeth the Diſeaſe, is carried to the head.

It followeth many times in theſe Feavers, That Nature being diſturbed by the malignity of the Cauſe which maketh the Diſeaſe, ſends ſome portion thereof to ſome fleſh between the skin and the bone; whence we ſee Pluriſies, ſhortneſs of Breathings, Squinſeys, Hipatitides, or Inflamations from the *Vena porta*, and other parts, to follow theſe Feavers: So if theſe humors are ſent to the Brain they make a true Phrenzy, and then the Feaver goes before the *Delirium*, or doting: But in primary Phrenzies a *Delirium* appears with the Feaver from the beginning.

The Signs which declare a Phrenzy to come are theſe, watchings, troubleſome ſleep, much talk, an urin that is firſt thick, and after thin, and perſpicuous; heat of the head: for theſe declare that hot matter is carried to the head: the eyes are altered becauſe (the brain being hurt) they want the animal ſpirit. There is a pain about the hinder part of the head, becauſe the jugular veins are carried to that part and ſend forth the Chollerick blood.

Theſe are the ſigns of a Phrenzy preſent: a continual doting, becauſe the Brain is alwayes affected: troubleſome watchings coming from the hot diſtemper of the Brain; ſeldom and great violent breathing, becauſe men in Phrenzies forget to breath: for when by forgetfulneſs, or great trouble of the mind by many fancies which are preſented to a doting imagination, and with-draw the animal ſpirits: Reſpiration, or breathing is very ſeldom, it is made up with the greatneſs of the blaſt.

Moreover, in a Phrenzy there is no thirſt, or very little; albeit there are ſtrong cauſes of thirſt preſent, becauſe the mind is ſick, and the animal ſpirits (by reaſon the Brain is hurt) do not ſend their beams to the mouth of the ſtomack whereunto thirſt belongeth. The Pulſe is weak becauſe the heart ſuffers with the brain: hard; becauſe the *Membrana* is inflamed: quick and often; by reaſon of the great urging; and ſomthing moiſt; becauſe the brain is affected. Moreover, there is a continual Feaver becauſe the inflamation of the brain muſt of neceſſity cauſe a Feaver. The tongue is rough, black, and yellow, by reaſon of the Chollerick vapors which dry up its moiſture.

An Hectical, or Habitual Phrenzy is known from *Hippocrat.* 1. Prorrhet. text. 33. by ſmal doting, and little perceived; when the ſick do not ſpeak, but lie ſtill and ſeem to ſleep.

But a Phrenzy, or Phrenitis is diſtinguiſhed from a Paraphrenitis in this; The Diſeaſe which produceth that, is ſooner known than a *Delirium* or Doting; and by the encreaſe or diminution of that the *Delirium* is encreaſed or diminiſhed; and ſomtimes it intermits and is not conſtant. But a *Paraphrenitis* ſpringing from the Inflamation of the Midriff, in which there is a conſtant doting, is diſtinguiſhed by other ſigns. Namely, Becauſe in a true Phrenzy there is great and ſeldom breathing: but in the other, little and often. Little; becauſe the *Diaphragma*, or Midriff being inflamed, cannot eaſily be extended and dilated. Often; for neceſſity, that the ſmalneſs might be made good by the frequency. Moreover, in a true Phrenzy the voyce is high, and the Patient cryes out loud; in the other the voice is low, becauſe the inſtrument of Breathing is hindered. And laſtly, In the inflamation of the Midriff, the *Hypocondria* are drawn up (according to *Hippocrates* in *Coacis*) and the reaſon is, becauſe the Midriff is covered beneath with a *Membrana* coming from the *Peritoneum*; and therefore when it is inflamed, it contracts the *Peritoneum*, and with it the *Hypochondria*.

Laſtly, The Signs of the Cauſes may be known from the predominancy of the Humor in the whol Body, and from the manner of the *Delirium*: For a pale Choller makes a more gentle Phrenzy; a yellow Choller make a more violent; an aduſt Choller makes the moſt violent: But Chollerick blood cauſeth the moſt mild of al.

The

The Prognostick of this Disease is for the most part deadly; for few escape in regard a noble part of the body is affected with a great Disease.

The greatest hope of recovery is when there is Dotage with laughter, and a decrease of Symptoms, continuance of strength; as also when after the height of the Disease there happeneth some beneficial evacuation, as sweat, blood, or looseness.

But these shew the Disease to be deadly. The Tongue quavering, and Hand trembling, gnashing of Teeth, Convulsion, a great Chilness or Cold in the beginning of the Disease; as also when the Patient picketh the Wooll or Straws about his bed. You may farther Collect Death to be at hand by a drop of black blood flowing from the Nostrils, by white stools, white and thin urine; For all these signifie a great oppression of the Brain, or a flowing of Choller from the whole body to the part affected.

For the Cure of this Disease, the blood that flows to the Head must be let forth, and revelled, derived, repelled, and intercepted; and that which was there before must be evacuated and discussed. The distemper of that part must be corrected; the strength of it, and of the whole body is to be preserved.

All these things may be done with the following Medicines.

In the beginning of the Disease, at any time of the day you must let blood out of the Head vein, because the Disease is very violent, giving a Clyster before: or if blood do much abound, out of the Liver vein: or first, out of the middle vein; and a little after out of the Head vein.

If the Disease come from stoppage of the Terms or Hemorrhoids upon the vein called *Saphena* in the foot. In the next place you must open the *Chephalick* or Head vein, that you may draw forth what is received into the brain, or what is nigh unto it.

For the most part once bleeding wil not be sufficient in this Disease, but twice or thrice, or oftener in the beginning or encrease of the Disease; you may adventure upon it, according to the condition or plenty of the Humor; the age, temper, and strength of the patient.

If a Phrenzy taketh one that hath a constant Feaver, (as it is often in the encrease of Feavers, or in the state of them, when nature is out of order and disturbed by the malignity of that matter which causeth the Disease, sendeth Chollerick humors to the head) you must again let blood, though you have done it before in respect of the Feaver; but you must do it sparingly, because the strength is abated by the Feaver and former bleeding. Therefore at that time open the Head vein, or if strength wil not bear that, open the *Saphena* in one foot, or both; which is approved in such Diseases: neither is it less beneficial to open the Hemorrhoid veins by Leeches.

But in all Bleedings which are made in time of a *Delirium*, you must observe this that the Orifice be not large, for then it wil quickly heal, and you must bind it up carefully lest the Patient being unruly cause it to bleed again; as also 'tis very good for the sudden Cure of it, to lay a plaister of Alces, white of an Eg, and the hair of a Hare.

After Bleeding provoke sleep. For if after bleeding there comes watchfulness, the Humors wil be again inflamed, and the patient grow worse.

Sleep is caused by repelling Medicines laid to the forehead which are cooling and narcotick, or causing sleep, which we shal mention hereafter.

When you cannot conveniently let blood, apply Cupping Glasses with deep Scarrifications; first, to the lower; than, to the upper parts: and also to the Thighs, and other parts, without Scarrification.

Use Frictions in the same parts; and use Ligatures to the Legs for revulsion.

Apply Vesicatories to the Shoulders and Arms.

Give every day a Clyster, made of cold and moist things: For by these the *Acrimony* of the Humors is qualified, and they are put downwards.

And they are thus made,

Take of *Marsh-mallow Roots one ounce*: *the Leaves of Mallows, Violets, Lettice, Pellitory, Beets, of each one handful*: *the flowers of Water-lillies, and tops of Dill, of each one pugil*: *Prunes six*: *boyl them in Barly water*; *to one pint of the straining ad of Cassia newly drawn, and Diaprunes simple, of each six drams*: *red Sugar one ounce*: *make a Clyster.*

Use no Oyls in these kind of Clysters, because they wil then inflame.

You must not Purge in a primary Phrenzy, such a one as comes not from another Disease, but it is good sometimes to Purge when the Phrenzy comes upon a continual Feaver. For if there be an evil digestion or ill juyce in the Body, and the Phrenzy begun: then the matter is wandering, and is taken for that which is called *Turgent*, or abounding: And therefore by the Counsel of *Hippocrates*, Aphor. 22. Sect. 1. it is to be presently evacuated.

But the Purge must be made of cold things, with gentle, as Senna, Rhubarb, Cassia, Tamarinds, Catholicon, and Syrup of Roses.

Presently

Preſently after blood letting you muſt uſe repelling Medicines, which hinder the aſſent of humors and cool the head, as Vinegar of Roſes made of Oyl of Roſes and Vinegar, in time paſt; but now we uſe diſtilled Waters and Juyces of Herbs with it, and we repel and cool more or leſs, as there is a greater or leſs flux of humors, and inflamation, which we muſt diligently obſerve. Therefore we will lay down many forms that in particular cales we may chuſe thoſe which are moſt fit.

Take of *Oyl of Roſes three ounces*; *Vinegar of Roſes one ounce*; *Roſe and Plantane Water, of each two ounces: lay them on the forehead ſhaven, and with four-folded cloaths.* Or,

Take of *Roſe water four ounces*; *Oyl of Roſes two ounces*; *Vinegar of Roſes half an ounce*; *two whites of Egs*; *mix them together.* Or,

Take of *Oyl of Violets and Water-lillies, of each half an ounce*; *Roſe, Lettice, and Houſleek Water, of each two ounces*; *Vinegar half an ounce.* Or,

Take of *the Juyce of Lettice, Purſlain, Night-ſhade, Penny-graſs, or Venus-navil, of each two ounces*; *Oyl of Roſes three ounces*; *Vinegar of Roſes one ounce.* Or,

Take of *Oyl Olive in which Roſes are infuſed, one ounce and an half*; *new Poplar Oyntment (for the old inflameth) one ounce*; *Vinegar of Roſes half an ounce*; *one white of an Eg: Beat them together, and apply them with Flax.*

The Milk of a Woman which hath brought forth a Girl, with the Juyce of Lettice, and Oyl of Roſes, is very excellent.

Concerning theſe cooling Medicines, you muſt obſerve that they be adminiſtred warily, and with judgment, becauſe the Brain is of its own Nature cold, and a principal Member, therefore it is to be feared leſt the Patient by too much uſe thereof ſhould fall into a contrary Diſeaſe, as a Coma, or the like, eſpecially if he be weak or old; and although they are uſed ſometimes more, ſometimes leſs, yet the extent of the time of their uſage ought not to be above three daies.

Moreover, Thoſe Medicines do ſtick to the face and eyes, therefore you muſt lay about them a cloth, or a little wool: in the fore part of the head you muſt apply them to the middle of the forehead; in the ſides of the head, above the ears; in the hinder part, about the nape of the neck and towards the crown of the head: and theſe are in Winter, to be applied hot; in Summer, cold, as *Galen* ſaith, 2. *de comp. med. cap.* 2. But it is beſt in old and weak people never to apply them actually cold.

If the Inflamation cometh to the Skin, as it ſometimes doth; then we muſt avoid repelling Medicines, eſpecially thoſe that are ſtrong, leſt the matter driven to the Brain ſhould augment the Diſeaſe.

You muſt apply cloths wet in Roſe-water and Vinegar to the neck, to hinder the humors from flying into the head.

Cauſticks applied to the Legs do very well for revulſion or drawing down of the humor to the inferior parts.

While theſe things are doing, you muſt uſe al thoſe things which do cool the whol Body, eſpecially the principal parts both internally and externally.

Inwardly you muſt uſe Juleps, Emulſions, and Electuaries.

Take of *the diſtilled Waters of Lettice, Purſlain, Roſes, and wild Poppies, of each three ounces: Syrup of Violets, and Pomegranates, of each one ounce and an half: Sal Prunellæ three drams: Make a Julep for three Doſes to be taken twice or thrice in a day.* Or,

Take of *Lettice, Purſlain, and Plantane, of each two handfuls: Water Lillies, and Violet flowers, of each a pugil: Boyl them in Barley Water to one pint*; *and being ſtrained, diſſolve in it Syrup of Violets three ounces*; *Sal Prunellæ three drams: Make a Julep for three doſes or draughts.*

It is very good to put to your Juleps, beſides the Sal prunellæ, the ſpirit of Sulphur, or Vitriol, for thoſe do much allay the heat of Choller.

Take of *the four great cold Seeds, ſix drams: white Poppy ſeeds two drams: Barley Water, half a pint: Lettice and Water-lilly Water, of each two ounces*; *Roſe water, one ounce: Make an Emulſion according to art, to two Doſes, putting thereto Syrup of Violets two ounces.*

Take of *Conſerve of Violets and Roſes, of each one ounce: Conſerve of Water-lillies and candied Lettice ſtalks, of each half an ounce: the pouder of Diamargariton frigid. half a dram: With the Syrup of Violets make an Electuary.*

You may alſo make an Electuary of white Poppy Seed, beaten in a ſtone Mortar, and mixt with Sugar; this may be called *Diacodium album*: this temperates ſharp and hot humors, and brings reſt; it is made of one ounce of Poppy ſeeds beaten with ſo much Roſe water; after put two ounces of Sugar to it: Or make it of equal parts of each.

Outwardly you muſt apply cold Epithems to the Heart and Liver.

Take of *Roſe water three ounces: Borrage, Bugloſs, and Sorrel Water, of each two ounces: white Wine Vinegar, half an ounce: the pouder of three Sanders one dram and an half: of burnt*

Ivory half a dram: Wood of Aloes one ſcruple: Saffron eight grains: Camphire ſix grains: Make an Epitheme for the Heart.

Take of *Lettice and Roſe Water, of each three ounces: Endive and Purſlain Water, of each two ounces: Vinegar of Roſes one ounce: white and red Sanders, and burnt Ivory, of each one ſcruple: Camphire and Spicknard, of each ſix grains: the powder of Diarrhodon one dram: Make an Epitheme for the Liver.*

Let the Liver and the Loyns be anointed with this Oyntment.

Take of *the Unguent of Roſes one ounce and an half: the cerate of Sanders one ounce: the Juyce of Lettice and Oyl of Roſes, of each half an ounce: Make a Liniment.*

Let the Breaſt be anointed with ſupling Oyls, as Oyl of Violets, and the like.

Apply cloaths wet in Water and Vinegar to the Stones or Cods, or which is better, let them be wet with Roſe water and Vinegar.

It is good to waſh the feet with an actually hot decoction, made of cold things; for it will ſoften thoſe parts by its hot moiſture, and make the humors deſcend, and its potential coldneſs will be communicated to al the Body, and to the Brain eſpecially by the Nerves, whereby ſleep will be provoked. It is made thus:

Take of *Violets, Mallows, Willow Leaves, Vine Leaves, Water-lillies, of each two handfuls: the flowers of Roſes, and Water-lillies, of each one handful: Poppy heads, ten: Make a Decoction for the uſe aforeſaid.*

Fair Water may ſuffice to waſh the Feet, and if the feet of the ſick man be put therein when it is a little warmed, for three or four hours, it frees him from his Delirium, and makes him ſleep.

The ſame effect is wrought by Houſleek beaten into a Cataplaſm, and laid to the ſoals of the feet: and alſo by Pompions or Guords beaten and ſo applied.

Sweet Scents often applied to the Noſe, cool the Brain: they are prepared after this manner following:

Take of *Violet flowers, and Water-lillies, of each one pugil; of Roſes two pugils: yellow Sanders one ſcruple: Tie them in a clout, and dip it into Roſe water, and let the Patient ſmel to it often.* Or,

Take of *yellow Sanders, Roſes, and Water-lillies, of each one dram: Camphire half a ſcruple: pitt them with Roſe water into a narrow mouth'd Veſſel: Let them boyl over the fire, and after let the Patient receive the vapor at his Noſe.*

But becauſe watchings do chiefly trouble in this Diſeaſe, you muſt uſe all your skill from the beginning of the Diſeaſe to provoke ſleep. For which, the repelling Medicines before mentioned are very good; eſpecially if you anoint the head with Oyl of Violets cold, before you apply Roſe Vinegar, which is good againſt watchings and Convulſions which come in this diſeaſe. But the Medicines following, will do it more powerfully.

Take of *the heads of white Poppies with their ſeeds, in number ſix: the flowers of Water-lillies two pugils: beat them together, and with Roſe and Lettice water make them like a pultiſs, which apply to the forehead between two cloaths.*

Note that in Medicines to provoke ſleep, you muſt uſe but little Vinegar, becauſe it cauſeth watching.

Take of *Lettice flowers one handful and an half: Roſes half a handful: white poppy ſeeds half an ounce: boyl them in water till they grow ſoft; ſtamp them in Barley Meal, and womans Milk, of each half an ounce, and a little Oyl of Violets: Make a Frontal thereof.*

Take of *Oyl of Violets, water-lillies, and new Oyntment of Poplar, of each three drams: Opium and Oyl of Nutmegs, of each three grains: Mix them into a Liniment to anoint the Forehead and Temples.*

Great Houſleek bruiſed with Womans Milk, and laid to the Forehead, appeaſeth a Phrenzy, and provokes ſleep. But as ſoon as the Patient begins to ſleep, you muſt take it away, leſt he fall into a Coma, or ſleeping Diſeaſe.

Guords or Pompions do the ſame thing with leſs danger.

Penotus doth extol this Epitheme:

Take of *Muſk twelve grains; Camphire twenty grains; red Roſe water in which Sanders hath been infuſed, twenty ounces; mix them: Shave the head, and wet double cloaths therein, and apply them warm to all the Sutures of the head. When they are dry wet them again, and continue the application twenty four hours, and ſo doing you ſhall provoke ſleep, ſtrengthen the brain, and wonderfully recover the Patient, except the very ſubſtance of the brain be corrupted.*

Inwardly you may give one ounce of Syrup of Poppies ſometimes in his Juleps and Emulſions.

Or you may give four or five grains of Landanum, which alſo given in a Clyſter, doth provoke ſufficiently to ſleep, and with more ſafety.

The Phyſitian muſt be wary in the uſe of Narcoticks, or Medicines that provoke ſleep; for they muſt

muſt not be given if the Patient be very weak, leſt the Spirits and Natural heat, be thereby extinguiſhed.

Having ſufficiently uſed Evacuations, Revulſions, Derivations, and Interceptions: we muſt come to the bringing forth of the matter. And firſt we muſt open the forehead vein if it appear, and may be taken, not tying a Ligature about the Neck as uſually they do, for ſo the blood will be forced upwards.

But you may with moſt profit open the veins in the noſtrils, and if the Diſeaſe be any waies curable, it will be cured thus: You muſt bleed plentifully, and betimes, in the beginning of the Diſeaſe, after you have made general Evacuations. And they are opened with Briſtles put up into the Noſe, and pricking often therewith.

Or you may draw blood from behind the Ears, from the Noſtrils, Forehead, Hemorrhoids, with Horſ-leeches.

Apply to the Head, things that reſolve, with things that repel, in that proportion, that firſt you uſe a little of the reſolvers, and as the diſeaſe declineth, encreaſe the quantity, ſo that at length you uſe only reſolvers to diſcuſs the reliques of the Diſeaſe. For this end we uſe Oyl of Chamomel, and of Dill mixed with Oyl of Roſes.

But among Reſolving Medicines, the chiefeſt are Creatures newly killed and applied to the head, or pieces of them; as yong Pidgeons, Chickens, Puppies cut along the Back, and Sheeps Lights; for they fortifie the part with their Natural heat, diſcuſs the humor, and qualifie the ſharpneſs thereof.

Which things, if you have tried one or two daies, and have found no benefit, *Mercatus* teacheth to apply a Cupping glaſs to the crown of the head, that the humors may breath through the Sutures into the Skin: and if it appear red, and be ſwelled under the Cupping glaſs to ſcarifie. This Counſel he ſaith (if followed) wil do good when al things beſides fail; eſpecially if you bath preſently after with ſweet Water in which you have boyled ſome diſcuſſing Medicines: But he adviſeth that this be not uſed in Phrenzies that come from other Feavers, but only in that which beginneth of its ſelf.

This Remedy is confirmed by *Zacutus Lucitanus*, who ſaies that he cured a moſt deſperate Phrenzy by applying a Cupping Glaſs to the fore part of the Head with Scarrification.

Some are ſo bold as to apply Veſicatories, or Medicines to raiſe Bliſters to the fore part of the Head, which they ſay hath ſomtimes had ſucceſs: But this requires extraordinary premeditation before it be uſed.

For his Drink, let the Patient uſe Barley Water, or Water made of Sorrel Roots, with Syrup of Pomegranates, Barberries, or Lemmons; or let him drink this following Infuſion.

Take of *Spring Water two pints*; *the Leaves of Sorrel, and wild Poppies, of each half a handful*; *the Flowers of Borrage, Water-lillies, and Violets, of each half a pugil*; *the ſpirit of Vitriol one dram*: *red Sanders raſped two ſcruples*: *Let them be infuſed for ſome hours cold*; *then ſtrain them with a Cap paper, and ad as much Sugar as is ſufficient to make it pleaſant.*

There is in this Diſeaſe for the moſt part a ſtoppage of Urine, becauſe the Patient neglecteth to make it; from whence thoſe parts that contain it are diſtended, and bring ſo great an Inflamation, that it alone is able to bring death to the Patient. Therefore you muſt often call upon the Patient to make water, and you muſt foment the place where the Bladder lieth with warm Water, and drive the Urine forth by the compreſſion of the hand. But if the Symptomes do not yeild to theſe light Medicines, you muſt proceed to ſtronger.

Take of *the Leaves of Pellitory of the wall two handfuls*; *Parſley with its roots, one handful*: *Boyl them, and after they are ſtrained ad three ounces of the Oyl of Scorpions, and foment the hairy place of the Privities therewith.*

Let the remainder of this Decoction after the ſtraining, be fryed in a pan with the Oyl of Scorpions, and applied to the ſame part after the Fomentation.

If you deſire a ſtronger Decoction, ad the Seeds of Smallage, Parſley, Gromwel, Seſelis, or large and broad Cummin, of each two drams.

You may alſo profitably apply this following Oyntment after the Fomentation:

Take of *the Fat of a Rabbit, and of Oyl of Scorpions, of each two ounces*: *Smallage Seeds, Parſley ſeeds, Aſarabacca, and Cummin ſeeds finely pondered, of each half a dram*: *Make an Oyntment.*

Chap. XII. *Of the Imposthume, and* Spacelus, *or Mortification of the Brain.*

THe Imposthume and Mortification of the Brain is described by few Authors, although it was observed by *Hippocrates* in his 3. Book of Diseases, and happeneth sometimes in Practice, and deluding those Physitians who are not well grounded, making them conceive it to be another Disease.

Now a Spacelus, or Mortification of the Brain, is a suppuration, or corruption, or matter of the substance of the Brain, which is called a Gangrene, Syderation, or blasting of the Brain.

The Immediate cause whereof, is an Inflamation of the substance of the Brain, which is distinguished from a Phrenzy, in this: In a Phrenzy the Membranes are chiefly inflamed, and they do communicate an Inflamation to the external part adjoyning; but in this Disease, the inward parts of the Brain are inflamed, and the whol substance thereof is putrified; for so great an inflamation in a most tender part and moist, will quickly produce a Spacelus, or Mortification.

The Cause of this Inflamation is Blood over-heated, or over chollerick, running into the Body and internal parts of the Brain.

The Primary Causes, are, all such things as produce hot and much Blood in the whol Body which is sent to the Brain; as violent Exercise, the heat of the Sun, heat of the head by Fire, Wrath, and the like: But great Wounds do more usually produce this Disease, as also Contusions. But a Spacelus or Imposthume coming from a Wound or Contusion, is different from the former in this: An Imposthume made by a Fall or Contusion, doth no possess so many parts of the Brain, but for the most part adhæreth to one. Hence the Symptomes are higher, especially in the beginning, and the Disease continueth longer.

The Signs of an Imposthume or Spacelus, which cometh without a Wound, or Contusion, are these:

In the beginning there is a great Head-ach, which is communicated by the hinder part of the head to the neck and all the back; after which comes a general decay of all the Sences both internal and external, as in an Apoplexy, from which it is distinguished by the Signs hereafter mentioned.

The Patient is tossed to and fro, and cannot remain in the same place; he layeth hold with his hands upon his head, and desires to tear and scratch his face, plucking his hair: but as the Disease encreaseth, his Body groweth faint, and cannot use such violence.

A most sharp and strong Feaver alwaies accompanyeth this Disease, which comes from the great Inflamation of the Brain.

Lastly, In this Disease, the Patient never takes meat or drink, neither can you take any course to give them any thing, and therefore their strength soon faileth.

An Imposthume by a Wound or Contusion, is known by these signs following:

After the Wound or Contusion is received, there is a kind of numbness and sadness in the Body, the Animal Spirits beginning to be weakened by the matter which is got out of its Vessel. When the Disease encreaseth, there ariseth a kind of Feaver, when the matter begins to putrifie, thence comes head-ach and drouzinesse: after, when putrefaction is encreased, al the symptomes grow stronger, the Feaver sharper; the Patient rising from sleep suddenly roareth out, and then presently lyeth down again; he often brings his hand to his head: Hence it is, that many before they die do send forth filthy green matter out of their mouth and nose.

As to the Prognostick part thus:

This Disease is most dangerous, and commonly deadly, even in three daies space, as *Hippocrates* sheweth in his 51. Aphorism, Sect. 7. saying, *That they who have a mortified and putrified brain, die in three daies; but if they live longer, they recover.* *Galen* in his Comments teacheth that we are not to understand here by a Spacelus, a compleat corruption of the Brain because that is uncurable, but such as is at hand by reason of the great Inflamation.

In those which recover, who are very few, there is no remembrance of things past: they can neither remember their Disease, nor any thing concerning it.

We must make great hast for the Cure of this Disease, for if we do not apply Remedies in the beginning, there is no time for Cure.

Therefore in the first beginning of this Disease we must let blood in great plenty, and very often twice, or thrice, or four times in the same day, as strength will permit: for al the hope of the Cure lyeth in this only Remedy; for when a great quantity of blood possesseth the substance of the Brain, which is large, soft, and moist, we cannot make so great a revulsion from thence, except we draw

draw almoſt all the blood in the veins: and here that common ſaying of *Celſus* is to be obſerved; Many things are done well in time of ſudden danger, which at other times may be omitted.

You muſt alſo give ſharp Clyſters every day, that the humors which tend upwards may be brought down.

At the ſame time apply thoſe Medicines of Roſe Vinegar preſcribed in the Chapter of Phrenzy.

For the greater revulſion and derivation, apply Cupping-glaſſes to the Shoulders and Back, with deep ſcarification; uſe Frictions and Ligatures to the extream parts: firſt open the Ankle Veins, then the Forehead, and the Arteries in the Temples; apply Hori-leeches behind the Ears, and to the Hemorrhoids; Veſicatories to the Neck and Arms, and other Medicines which we preſcribed in the cure of the Phrenzy.

At laſt, if the Diſeaſe decline, you muſt apply to the head things that gently reſolve; among which, the beſt is, the hot Lungs of a Sheep newly ſlain.

CHAP. XIII.

Of Mania, *or* *Madneſs.*

Mania is *Delirium* without a Feaver, with raging and fury.

It is diſtinguiſhed from a Phrenzy, in that there is in a Phrenzy an acute Feaver, coming from the inflamation of the Brain and its Membranes. But a Mania hath no Feaver in reſpect of its Being; but a Feaver may be joyned with a Mania, coming from ſome other cauſe, but not from that which produceth a Mania. And therefore in a Phrenzy a Feaver is ſymptomatical; but in a Mania it is eſſential, and original, coming from ſome other cauſe: And ſo is *Galen* to be underſtood, Book 3. *de loc. affect.* chap. 7. where he ſaith, *The Melancholly Juyce which is made of Choller burnt, begets beaſtial madneſs, ſomtimes without, ſomtimes with a Feaver.*

It is diſtinguiſhed from Melancholly by the ſymptomes which declare the diſeaſe; for Mania is with fury and boldneſs, but Melancholly is with fear and ſorrow.

The immediate cauſes of a Mania according to *Galen*, is a cold and dry diſtemper, coming of black Choller, which is urged with many difficulties.

For if there were ſuch a diſtemper in the Brain that it would diſturb the Mind, it ſhould produce a Feaver, when a leſs heat than will produce a Delirium, can produce a Feaver, as appears in thoſe that are inflamed by the Sun.

To this Doubt, divers Authors anſwer diverſly: the Anſwer of the moſt ſolid is, That the heat which produceth a Feaver muſt be smoaky, that the vapors ſent to the heart may cauſe it, and this vaporing heat ought to be in a moiſt matter, ſuch as is in putrid Feavers: but in a Madneſs the Humors are aduſt and burnt, ſo that no Vapors can ariſe from them. In one word they ſay, That the heat in a Madneſs or Mania, is as heat in a live coal, but heat in a Feaver is as heat in the flame. And this anſwer is urged with a ſtrong inſtance; namely, in a Hectick Feaver, there is more conſumption of moiſture than in a Mania: yet the Feaver continueth to the abſolute conſumption of all moiſture, even Radical alſo, and the death of the Patient.

Platerus being perſwaded by this and other Reaſons, ſuppoſeth that beſides the hot and dry diſtemper, there is a malignant and venemous quality, which is the chief cauſe of a Delirium. A great probability for this Opinion is, That a raging from the Mother, comes from Seed corrupted and poyſoned in that part. Becauſe Hydrophobia or fear of water, which is a kind of Mania coming from the biting of a mad dog, is cauſed in any conſtitution, without the mixture of Melancholly: And the diſeaſe which comes from the bite of a Tarantula, is called a kind of Madneſs: And laſtly, certain poyſons do cauſe madneſs, as is reported of the Brain of a Weeſil, and Nightſhade: Therefore it is probable that ſome certain poyſon bred in the Body may be the chief cauſe of madneſs; ſince malignant Feavers which are very mild, and ſo ſomtimes that the pulſe and Urine is like to thoſe that are in health, uſe to produce Deliriums more than burning Feavers without malignity. And Experience teacheth us that Madneſs happens often, not only in Melancholly men, but alſo in all Natures and Ages, eſpecially if it be hæreditary, or come from Parents: and it is often cured by hot Medicines which have ſpecial vertue againſt it. But we muſt confeſs that this diſeaſe is oftenеſt in Melancholly people, becauſe that humor is more fit to receive ſuch poyſon. And *Galen* ſeems to acknowledg that malignity to come upon Melancholly in his Comment upon Aphor. 56. Sect. 6. where he ſaith, That the cauſe of a Mania is a Melancholly humor, not alwaies, but when it is burnt above meaſure, or when it is putrified, and hath received a malignant ſharpneſs. There remains yet one difficulty, That mad men can endure the coldeſt weather naked without hurt, and to be hot externally, which ſhews an extraordinary heat. But we anſwer, That this is not proper to all mad folks, for ſome cannot

not endure cold, but go as warm as they can. And the other are not disturbed with the external air by reason of Custom, because from custom there is no passion; so we see tender women in Winter go with naked Breasts, which are hot to the touch, albeit according to *Hippocrates* cold is a great enemy to the Breast.

The matter producing this Disease, is contained in the veins and arteries, either of the whol body, or those neerest to the Brain, or in the vessels of the Brain, and in respect of the difference of the place containing, greater or lighter symptomes do arise. Somtimes the matter causing this disease is in the Vessels of the Matrix, as Blood, and Seed corrupted: hence cometh the raging called *Furor Uterinus*.

If the matter offending be in all the Veins, or those neer the Brain, there is a continual madness: but if it be shut up only in one part, the disease hath intermission, and comes by fits.

The signs by which it is known, sometimes shews the disease to be present, sometimes that it is growing.

For the knowledg of Madness to come, first consider the Natural disposition of the Patient, which is chollerick, or melancholly. So in *Hippocrates*, 2. *epid.* 5. *He who hath a Vein beating in his Arm, is like to be mad, and is subject to wrath; but he that hath it moving by degrees, is slow and stupid.* Here *Hippocrates* calleth Arteries by the name of Veins. For he doth not mean a simple, but a violent Pulsation, unto which he opposeth that which is by degrees: So that the meaning of his saying is this; They who have naturally a high strong Pulse, great and swift, are inclinable to anger and fury; but they who have a slow pulse, are dull and blockish.

Secondly, You must regard the Sex, for Men are more often mad than Women: Which is to be understood of the Original Disease of Madness; for Women are often mad by content from the Matrix.

Thirdly, The Age is to be considered; for Madness comes oftener to yong men than to boyes and old men.

Fourthly, Mark the time of the year; It comes often in Spring, oftener in Summer, most often at the fall of the Leaf, according to *Hippocrates* and *Galen*, Aphor. 20, 21, and 22. Sect. 3. In the Spring, the humors bred at other times, and kept al Winter quiet, are moved and stirred, and produce proportionable diseases: In the Summer, much choller, not only yellow, but black is encreased in them that are inclined to it, which causeth madness at that time; or else encreasing till Autumn, the disease comes then.

These Signs are more remote, and shew only in general a disposition to this disease; but these following shew it to be at hand: Constant pain in the head, watchings, short and little sleep, troublesom dreams, cares, and thoughtfulness, frights from smal causes, a rash and often fury from none, or the smallest occasion, eyes not enduring light, noise in the ears, an unaccustomed desire of Venery, Nocturnal pollutions often, laughter unaccustomed and without Reason, much talk not formerly used, and somtimes much silence. These shew that a Mania is begun.

But that the Mania is present you may know by the signs mentioned in the Definition; namely, a Delirium without a Feaver, with fury and boldness; divers are the kinds of Dotage or Delirium in divers sick men, and at divers times they come according as the cause is more or less vehement; for some have a rash madness, and seize upon every man they meet, tear their own cloathes, somtimes lay violent hands to destroy themselves. Others are milder and tamer, and hurt no body, but speak distractedly and ridiculously, somtimes they sing, somtimes they laugh, and have divers whimseys, and symptomes much like those in Melancholly men and fools.

And from the variety of those symptomes you may gather the variety of the cause: For immoderate laughter, mirth, and singing, signifie that the matter offending is dashed with much blood: but wrath, restlesness, howling, striking, pale and yellow color in the face, shew that choller is in fault: but a furious madness that laies hold on all it meets, and somtimes stayeth them, comes from choller burnt, which is called black choller; but if this black choller comes not of yellow choller, but melancholly adust, the Patient looks furiously, somtimes is long silent, and then breaks forth into earnest discourse; they are unruly and untoward, and somtimes cry and lament grievously.

The Prognostick of this Disease is,

A Mania is a strong Disease, and continueth not only months, but years, even to death, especially if it be hæreditary. All Diseases of black choller are hard to be cured, and this especially, because the Patient will not be ruled, and take their Medicines prescribed.

A Mania which comes with laughter, and those light symptoms is easier cured than that which comes with sadness and fury.

That the Disease will shortly be cured, appears by Natural Evacuations, by swear, stool, bleeding at nose, or hemorrhoids or varices, or crooked swelled veins appears: whence *Hippocrates*, Aphor. 21. Sect. 6. if varices or hemorrhoids come to mad men, the disease is cured.

Bloody-flux, Dropsie, Tertian Ague, or Quartan happening to a mad man, takes away his disease,

for

for there is a remove of the humors unto the lower parts from the Head, in which they produce a new Diſeaſe.

For the Cure of this Diſeaſe, the matter offending is to be evacuated, revelled, and repelled, the hot Diſtemper is to be corrected, the Brain and other principal parts are to be ſtrengthened, which may be done by the means following.

Firſt, Let blood, out of the vein of the Arm which appears moſt; but give a Clyſter before: the day after bleed again in the other Arm; and do thus often. For *Platerus* affirms that innumerable mad folks have been cured by Chyrurgions, and others who have ſtudied the Cure, and have let them blood twenty, or twenty ſix times; not only in the Arms, but Feet, Forehead, Noſtrils, Hemorrhoides, if the veins appear there; and alſo in the Hand, or *Salvatella*: This is to be done by degrees, intermitting Clyſters, and purging Medicines here preſcribed. Cupping Glaſſes to the Shoulders and Back with Scarification, are to be applyed after the other veins are opened: as alſo Horſleeches to the Temples, and behind the Ears.

And you muſt intermix Preparations and Purges proper for the matter offending when you let blood ſo often; and they muſt be continued long: for which uſe are all thoſe which we have mentioned for preparing and purging of Choller, to which we may ad theſe following, as being more excellent and choice.

Take of *Lapis Lazuli, one dram and an half: Diagridium half a dram: the beſt Turbith one dram: Senna half an ounce: Epithymum, and Cream of Tartar, of each two drams: Cinnamon, and Citron peeles, of each one ſcruple: Saffron half a ſcruple: make a pouder: the Doſe to be given at once, is one dram, or four ſcruples, with any proper liquor or broth.*

Take of *black Hellebore one ounce: infuſe it for three dayes ſpace in four ounces of rain water: boyl them with a gentle fire to three parts: ad to the ſtraining of the beſt clarified Honey two ounces: and take one ſpoonful in fair broth.* Or,

Take of *the Extract of black Hellebore half a ſcruple: Syrup of Violets one ounce: mix them for one Doſe.*

All Medicines made of Hellebore; as the Wine, Syrup, and Oxmel of it are very good againſt this Diſeaſe.

Hence it is reported that *Melampus* the Son of *Amythaon* the Phyſitian, Cured the Daughters of *Praxus* King of Greece with Hellebor'd wine, when by Madneſs they ſuppoſed themſelves to be Cowes.

Antimony in this Diſeaſe is not only Commended by Chymiſts, but alſo by al *Galeniſts*: both in regard it doth diſcharge Melancholly from the whole Body; and alſo becauſe the Patients will be eaſily perſwaded to take it. The Doſe is divers according to the diverſity of the preparation of it.

Baths of hot Water are to be often uſed, and after every Purge.

The Order of Purging Medicines for this Diſeaſe is as followeth: Firſt give altering Apozems that Purgeth for three or four dayes together after you have let blood in both Arms. After give twice in a week gentler Potions, or Pouders, or a Magiſtral ſyrup: but give ſtrong Purges, only twice in a month; letting blood conſtantly before as is before mentioned.

In the time of Intermiſſion, uſe Baths, preparing Juleps, or altering Broths; as alſo ſtrengthning Opiates.

Beſides the vulgar Juleps, this following made of Juyces is very profitable.

Take of *the juyce of Borage, Bugloſs, and Pairmains, of each three ounces: Fumitory, and Succory water, of each four ounces: white Sugar ſix drams: boyl, clariſie, and aromatize them with yellow Saunders: and take ſix ounces thereof morning and evening.*

You may make Opiats as followeth.

Take of *Conſerve of Roſes, Violets, and Bugloſs, of each one ounce: Conſerve of Tamariſk-flowers, Clove-gilli-flowers, Candied Lettice-ſtalks, and Citron-peels candied, of each half an ounce: one Emblick Myrobalon candied, Confection of Alkermes and Hyacynths, of each three drams: the Pouder of the Electuary called Diamargariton Frigidum, and Lætificans Galeni, of each one dram: Coral and Pearl prepared, of each half a dram: with the ſyrup of ſweet-ſmelling Apples, make an Opiate, of which let him take the quantity of a Cheſnut, drinking after it a little of his Julep, or of ſome other proper liquor.*

Tablets alſo may be made in this manner:

Take of *Conſectio Alkermes two drams: Species de Gemmis, and Diamargariton Frigidum of each half a dram: Sugar diſſolved in the juyce of Apples, four ounces: make Tablets of the weight of two drams, and give one for a Doſe.*

Sometimes we may try Specifical Medicines, and Amulets, or things to be hanged about the Neck; of which ſort *Sennertus* hath many: but we wil mention only one which is in a Noble Family of *Montpelior*, is accounted as an Hereditary Secret: which is this,

Take of *Balm-flowers one handful: chop them ſmall, and infuſe them in four ounces of the ſpirit*

of

of Wine: then ad of prepared Pearl half a dram: mix them, and give two ſpoonfuls at a time: while you uſe theſe things, you muſt with all poſſible art procure ſleep by Medicines both internal and external; ſuch as you have for the Cure of the Phrenzie.

And beſides external ſleeping Medicines, you muſt apply ſuch Remedies outwardly to the head, which may temper and allay the vehement heat and fury thereof. And theſe muſt not only be cooling, but alſo more moiſtning and (in the beginning of the Diſeaſe) repelling.

Therefore in the beginning, Oyl of Roſes, Violets, Dill, and Chamomil are very good: After you muſt leave out the Oyl of Roſes: but when you wil Cool more, you muſt ad the Oyl of the Cold Seeds and Poppyes. And laſtly, that they may be brought into the form of a Liniment, you may ad Butter, or the Mucilage of Linſeed, or Fenugreek.

An Epithem thus made, is very good.

Take of *the water of Water-Lillies, one pint: Sal. Prunella one ounce: Camphire one ſcruple, mix them, and apply double cloaths dipped therein, to the fore-part of the Head.*

And Epithem of Sal. Saturni, or Sak of Lead with Roſe-water, is very profitable.

As alſo that which is formerly mentioned, made of Roſe-water, red Saunders being infuſed therein, with Musk and Camphire.

The Chymiſts preſer the Balſom of Lead, and anoint the Head therewith, as with a Liniment.

But in the height of the Diſeaſe, it is very neceſſary to apply ſome Creature newly killed, or ſome part of it; and eſpecially a ſheeps Lungs; which muſt be warmed again in hot water after it is grown cold.

Some uſe ſtronger Diſcuſſients in the declination of the Diſeaſe, and alſo in the vigor of it after ſufficient evacuation; this following Fomentation is of wonderful Vertue.

Take of *the Head Herbs with their flowers, as many as you think fit, boyl them in Spring water: then take of Bay-berries, and the Roots of black Hellebore, of each as much as will ſuffice: beat them groſly, and ſew them into a long Bag, and then let it boyl in the Decoction before mentioned.*

Afterwards for Nine dayes together, *Take* Two Pints of the Decoction, and Foment the Head being ſhaved, with double Cloaths for the ſpace of an hour: after apply the Bag to the *Coronal Suture*, binding it about with linnen Cloaths. Let the Patient lie down, and reſt if he can: then wil he Purge by al the Emunctuaries of the Brain, and alſo ſomwhat by ſtool; ſo wil the filth ſticking to his Skul and Brain be wonderfully diſſolved, which few other Medicines can perform.

Laſtly, Apply a Cautery to the *Coronal Suture*, which is much approved by *Gordonius*, who confirms the benefit of it by the Hiſtory of a certain Mad-man; who had a wound in his Head, with a Fracture of the Scull; and was very wel as long as it was Open, but ſtill when it was Healed, grew mad again.

Although the Brain be principally affected in this Diſeaſe, yet other parts are to be altered, eſpecially the Heart and Liver, with Epithems and Liniments preſcribed in the Cure of the Phrenzy.

CHAP. XIV.

Of Melancholly:

Melancholly is a Doting or *Delirium* without a Feaver with fear and ſadneſs.

It is diſtinguiſhed from a Phrenzy by want of Feaver; and from Madneſs, by Fear and Sadneſs, becauſe that comes with Fury and Boldneſs.

We ſay this Diſeaſe hath no Feaver: namely, of its own nature of it ſelf: but a Feaver may Accidentally be joyned with it: For nothing hindereth, but a continual or intermitting Feaver may happen to one in this Diſeaſe; but this Feaver wil not be eſſentially in it, as in a Phrenzy, where a Feaver is eſſential to the Diſeaſe.

But we may doubt how Fear and Sadneſs may be ſaid to be of the eſſence of Melancholly: when we perceive that in many Melancholick people there is much laughter and appearance of joy. For ſome laugh, ſome ſing, ſome think themſelves to be very rich Kings and Monarchs. We Anſwer, That there are divers degrees of Melancholly, and divers mixtures of Melancholick humors with others; from whence come varieties of Paſſions, ſo that they who have much blood or flegm mixed with Melancholly, may have joy and Cheerfulneſs: but that Diſeaſe is not at that time a true Melancholly, but is more like fooliſhneſs.

Alſo great variety of Doting ariſeth from the various diſpoſition of the Melancholick humor: Hence it is that ſome think themſelves to be Kings, Princes, Prophets: Others, that they are made of Glaſs, or Potters-Clay; or that they are barely Corns ready to be devoured by the Hens: Some think they are melting Wax, and dare not approach the Fire: Others, That they are Dogs,

Cats,

Cats, Wolves, Cuckows, Nightingales, or Cocks, whose voyces they imitate. Others fancy themselves dead, and will neither eat nor drink. Others dare not piss least they should drown the World by a second Deluge. Some think they have loft their heads, or some other Member, or that they carry the world upon their fingers end, or that they have Sparrows in their heads, or Serpents, Frogs, Mice, and other Creatures in their Bellies.

The immediate Cause of Melancholly (that I may use the words of *Galen*) is a dark spirit or vapor very black; for when the Animal Spirits ought in their own Nature to be pure, thin, and transparant for the cheerful performing of the actions of the Brain, and to cause cheerfulness, if they change their constitution, and become dark and obscure, they produce sorrow and fear. *Galen* in his 2. *de sympt. caus.* chap. 6. by an Example borrowed from external darkness, doth explain the matter: *Of those things* (saith he) *which are without the Body, we see nothing that doth more terrifie us than darkness; therefore when darkneß doth encompaß the rational part of man, it is necessary that that man should exceedingly fear who doth alwaies carry about with him, another cause of fear, besides that which is external.*

The cause of this evil disposition of the Spirits, is a Melancholick humor, which being possessed with thickness, darkness, and blackness, doth infect the Spirits, and makes them cloudy and dark.

And this Melancholick humor is cold and dry, and therefore proper for fixing and condensing of the Spirits, which fixing and condensing or thickening of the Spirits must needs cause sorrow and heaviness. For if the humor be thin and hot, as is black choller (from which comes madness) it doth rather produce fury and boldness than fear and sorrow. Therfore the immediate cause of Melancholly is thickness and darkness of the Spirits Animal; but the necessary condition, and without which it cannot be, is a cold and dry distemper. But if any shal instance of an Hypochondriack Melancholly from *Galens* third Book *de locis affectis*, chap. 7. that it is an inflamation in the Hypochondria, and therefore the hot distemper doth prevail. We answer, That that Inflamation or burning of the Hypochondria, comes from the heat of blood long retained in the spleen and Meseraick Veins by reason of obstructions, from whence many vapors are sent up into the Brain, which though they be hot, yet are overcome by the coldness of the Brain, and are easily brought to a cold and dry temper which is proper to Melancholly. But if the heat of those vapors be such, that they spoil the temper of the Brain, and make it hot and dry, then comes Madness and not Melancholly. So that in Madness or Mania, and Melancholly, there is this difference; That in the first, namely, Mania, there is a hot and dry distemper; In the other, called Melancholly, a cold and dry distemper.

The former mentioned darkness of the Spirits confirmed by *Galen*, is rejected of *Averroes*, in this respect, Because darkness brought upon the Animal Spirits, and the black color of a Melancholick humor cannot infect the internal Sences; according to that vulgar Axiom, There is nothing in the Understanding which was not first in the Sence; therefore since that black color, or internal darkness was not first represented to the eyes, it cannot be perceived by the internal Sences. We answer, That the blackness of a Melancholick humor, or the darknes of the spirits doth not affect the internal Sences under the notion of color; but as they are somwhat besides Nature in the brain hindering its actions. For the Animal Spirits for the perfect performance of the Actions of the brain, ought to be pure thin, and clear: But if (on the other side) they be impure, thick, and dark, they hinder the actions of the brain by infecting the species which are sent thither, even as a colored glass doth represent the species of the object to the eye with its own Tincture.

A cold and dry distemper, which is propounded for a necessary condition to this disease of Melancholly, may be opposed by this Argument taken from *Avicen* in *Fen.* 1. *Lib.* 3. *Tract.* 4. Chap. 18. he saith, *That Stammerers are for the most part Melancholick.* But these Stutterers are very moist in temper according to *Galen*, Comment. Aphor. 32. Sect. 6. where *Hippocrates* saith, That Stammerers are most subject to loosness: And *Galen* thereupon saith, That Stammerers have the moistest temper, as appears in children who are most subject to looseness. We answer, That *Avicens* Text is not to be understood of those which are true Stammerers, which cannot pronounce the letter R. of which *Hippocrates* and *Galen* spake in the Aphorism aforesaid, who are of a moister temper: But of those which are called Trauly and Stutterers, which repeat the same syllable very often before they can pronounce a whol word: Which comes from their headlong phancy, when they strive to speak very quickly, for then the tongue foldeth its self, and is constrained to stop and stay in the production of Words. And these Stutterers are of a melancholick temper.

Lastly, It may be doubted, how darkness of the Spirits should be an immediate cause of a melancholly Delirium, when every hurt action depends immediately upon some disease; but this tenebrosity or darkness can be referred to no kind of Disease. We answer, That tenebrosity or darkness, is a Disease in number, by reason that the coming thereof doth encrease the number of those things which are necessary in the Brain for the performance of animal Functions. And the instance which may be brought against this Argument, namely, That a disease is an affect of a true part, is answered in the Treatise of *Vertigo*.

The Proper ſigns of Melancholly, are propounded in the definition, namely, Fear, and Sorrow, without any manifeſt Cauſe, which are found in every kind of melancholly. But the ſeveral ſorts of melancholly are known by their proper ſigns. So theſe following ſigns do ſhew that melancholly doth only reſide in the head, namely, an evil habit of the Brain, or hot Diſeaſes going before, by which the blood contained in its Veins, is torrefied and burned, and at laſt brought into a melancholick humor. Short and interrupted ſleep, troubleſom dreams, giddineſs, noiſe in the Ears, and no ſymptomes from other parts, and eſpecially from the belly.

That this Diſeaſe cometh from the whol Body, appears by a melancholly habit of the whol body; either Natural, known by a black color, roughneſs, and leanneſs; or acquiſite, coming by cares, labors, watchings, courſe diet, and the like.

That it comes from the Hypochondria, theſe ſigns declare; Heart-burning with no thirſt, often ſpitting, ſowr belchings, and windy, eruptions upwards and downwards, rumbling of the guts, pain and heavineſs of the midriff, perplexity, nauſeouſneſs, ſomtimes inſatiable appetite, heart-beating, ſomtimes a ſwelling in the Hypochondria: And other ſigns which ſhall be ſhewn more at large in the Diſcourſe of Hypochondriack Melancholly.

That this Diſeaſe comes from the womb, may be known by thoſe which are ſet down in their order for the declaring of Hyſterical Diſeaſes.

The Prognoſtick of this Diſeaſe is thus:

The Diſeaſe is dangerous, if Chronical, of long continuance, and very fixed: For a melancholick humor, eſpecially that which comes by aduſtion, and inclineth to black choller, contemns the force of Medicines, if weak, and oppoſeth the ſtrongeſt: whence a melancholick humor is ſaid to be the ſcourge and diſgrace of Phyſitians.

But a new ſprung melancholly coming of immediate Cauſes, is eaſily cured: For *Galen* reports in his third Book, *de loc. affect.* chap. 7. That he hath often cured a melancholly in the beginning with only Baths of ſweet Waters.

The Hemorrhoids, or Piles coming upon melancholly men, ſomtimes bring cure, if the humors be caſt down thither critically by Nature: For ſomtimes they come ſymptomatically, and multiply the matter of the Diſeaſe in many parts.

Somtimes it is cured by flux of the Hemorrhoids, by Scabs, Itch, or other diſeaſes breaking forth of the Skin.

As to the Cure of it, from whenceſoever the Diſeaſe took its original, we muſt obſerve alwaies two things:

Firſt, That the whol Body be freed from a melancholick humor, and the filth of other humors; for it ſeldom happens that one part alone is troubled with it.

Secondly, That the main Cure be directed to the Hypochondria, becauſe that in the ſpleen and liver there is the firſt generation of Melancholly, and the gathering of it is in the parts thereabout; therefore the Cure of Hypochondriack Melancholly ſet down by us, will ſerve for the Cure of other diſeaſes of Melancholly: for you can ſcarce cure the Hypochondria from the abundance of any humor, and the generation of any new, but by conſequence the whol body muſt be cured of the ſame. Therefore for all diſeaſes of Melancholly thoſe Remedies will ſuffice which are propounded in the Cure of Hypochondriack Melancholly.

CHAP. XV.

Of a Catarrh, or Defluxion.

A Catarrh is a preternatural Defluxion of an Excrementitious humor, from the head into the inferior parts. It is therefore a Symptome of the third kind, namely, a fault in the Excrements.

The ſubſtance of the Brain being large, needs much nouriſhment; of whence comes neceſſarily abundance of Excrements, eſpecially by reaſon of the cold and moiſt diſtemper of the part: which excrements if they have only their moderate and natural quantity are received into the fore Ventricles of the Brain, and are ſent by the *Choana*, as by a funnel to the moiſt Glandels, and ſo are ſpit forth every day from the pallat; but if they grow more plentiful, and yet conſiſt in their Natural condition, they are diſperſed about the Brain and the *Meninges*, and ſo are ſent forth, not only by the pallat, but alſo by the noſtrils.

But when the Brain is affected with diſtemper and weakneſs, or is conſtrained to receive too much and diſproportionable nouriſhment, which it cannot ſufficiently concoct, there is a great encreaſe of excrements. Add further (as *Hippocrates* ſaith) that the Brain like Cupping-glaſſes applied to the Body, never ceaſe to attract humors and vapors from the inferior parts; hence the excrements are encreaſed,

creaſed, which by their quantity and quality provoking the expulſive, and overcoming the retentive faculty, run immoderately by unuſual and improper waies which they find out, to the great diſturbance of the Body.

Since then a fluxion is the motion of matter from one part to another, we muſt conſider in that as in all motions, five things. The Terminus, or place from whence; the place to which it moves; the Mover; the Moved; and the waies by which it is moved. The place from whence, is the Brain; the place to which, is ſome part beneath the Brain; the Mover, is the expulſive faculty ſtirred up, or the retentive weakned; the thing moved, is an excrementitious humor; the way by which is the Pallat, Noſtrils, Eyes, Ears, and inſenſible Paſſages, as alſo the Veins, Arteries, and Nerves.

In the place from which, or the part which ſendeth forth, we may obſerve two kinds of Cauſes: One is that which begetteth much moiſture in the Body; the other is that which make the humors flow: That is called the generating; this the expelling Cauſe.

The generating Cauſes conſiſt in the hindering of Concoction, which comes either from the fault in the nouriſhment, or in the faculty.

The Concoction of the Brain is hindered chiefly from diſtemper, either cold or hot.

A cold diſtemper cauſeth that the Nouriſhment brought to the Brain, is ill concocted and turned into flegm; as alſo that the vapors brought from the inferior parts, are not ſufficiently diſcuſſed, but are turned and condenſed into Water.

But a hot diſtemper doth attract more plentiful nouriſhment and vapors, ſo that Nature cannot ſufficiently diſcuſs them.

The Concoction of the brain is hindred through the Nouriſhment, either when there is too much; or when it hath evil qualities; ſo cold, groſs, and ſlimy meats and drinks immoderately taken, cannot be perfectly concocted, and make the Brain crude and moiſt. So ſharp and windy nouriſhment ſend many vapors to the head.

To theſe you may ad external Cauſes, which uſe to fill the head with ſuperfluous humidity; as Southernly Air, long ſleep, eſpecially at noon, an idle life, and the like.

Although the Brain be called the chief ſending part, yet it is not alwaies the chief cauſe of defluxion; but for the moſt part, the matter is ſent from other parts to the Brain: for after evil humors are collected, either in the Veins, or any peculiar part, as the Liver, Spleen, Meſentery, Womb, not only many Vapors are ſent from them to the head, but alſo the humors themſelves are carried to the head, and deſcend again to the inferior parts; and the fault lieth moſt in the inferior parts in the breeding of a defluxion, whoſe diſtemper is divers, and the Obſtruction alſo divers.

For a hot diſtemper of the Bowels, makes abundance of vapors, from which comes defluxions, as in a Stil or Alembick: But a cold diſtemper by weak concoction begets crude humors, which upon the leaſt occaſion fly to the brain.

But the Obſtructions of the parts of the lower belly, hinder the voiding of Excrements, whence it comes, that they being encreaſed by degrees, when they cannot find their free and ordinary courſe fly up to the brain. And to this doth alſo concur the weakneſs of the brain, fit to receive theſe Excrements, for (as we ſaid) the ſtronger parts to diſburden themſelves upon the weaker, and it often happens that the brain by reaſon of its ſoft and looſe ſubſtance is weakeſt, and can leſs reſiſt than ſolid and compact ſubſtances.

The impulſive cauſes are, too much heat of the brain, or coolneſs, or ſome concoction of humors: Too much heat doth extenuate and diffuſe the humors contained in the brain, and opens the pores by which they uſe to flow: ſuch is the heat of the head with the Sun or fire, or too much covering; ſmelling of hot Spices, and other paſſions.

Coldneſs doth compreſs the brain, and ſtrains forth the humors therein contained, as a Spunge is ſqueezed in the hand: Such change is often in Winter, and eſpecially in ſudden alteration of Air; as when a Southern wind hot and moiſt, is turned into a North wind cold and dry; or when one going out of a hot place, comes ſpeedily into a cold. To theſe Cauſes you may ad coldneſs of the feet, which by ſympathy is communicated to the Brain.

Many there are who deny the aforeſaid compreſſion of the brain by cold, becauſe cold doth incraſſat and condenſe the humors, and makes them leſs apt to flow; neither doth the example of a Spunge prove any thing, which will not empty its ſelf in the Air. But this Opinion delivered by *Hippocrates* in *lib. de loc. in homine*, ſeems to be true; *Fluxions* (ſaith he) *come of cold, when the fleſh and veins of the head, are extended: for thoſe when the head is cold and contracted, bound together, and excluding, do ſtrain forth moiſture. And alſo the fleſh doth aſſiſt them, and the hairs are on end, as being every where ſtrongly preſſed, and therefore whatſoever is ſtrained from thence, falls where it is occaſioned.* From whence is manifeſt, That a Coarctation and compreſſion of the Parts may be made by cold, and from thence a humor may be expreſſed. Neither doth it hinder that denſation or thickening of humors which is made by cold, as was ſaid; for it may be ſo when the whol body is equally cold. But when the external parts are offended by ſudden cold, they are preſently

ſently ſtraitened, and ſtrain the humor contained. Of leſs force is that Argument againſt the Spunge, that it is not expreſſed by the cold Air; for there is another Reaſon to be given of living parts, whoſe heat and ſpirits fly from the ſence of cold, and cauſe the parts wherin they are to be contracted; which cannot be in a Spunge ful of Water. Yet we muſt confeſs, that this is not the only way by which a Defluxion comes through cold; for cold of the feet will produce a Catarrh by communicating a cold diſtemper to the brain by the chiefeſt Nerves that come through the marrow of the back bone; and this coolneſs goes into the innermoſt parts of the brain, not the external, as cold air, which affects the head immediately: therefore we may rather think in this caſe, that the retentive faculty of the brain is weakened by cold of the head, ſo that it cannot contain the ſuperfluous humors which are many, but lets them flow forth.

There is alſo another way very uſual, by which a Catarrh of a cold cauſe cometh, namely, The ſtoppage of the external pores, eſpecially in the time wherein the body requireth moſt ſweat: Hence it comes that men very much inflamed, running ſuddenly into the cold air, are troubled with Catarrhs. So Catarrhs comes to be moſt frequent in Autumn, becauſe the Body being made thin, and the pores opened in the Summer, caſting forth many excrements by inſenſible tranſpiration, if they be preſently ſtopped by contraction of the body with cold, do cauſe humors and vapors to fly into the head, and center of the brain, So about the beginning of Autumn there are not only Catarrhs, but alſo abundance of watery humors are ſent forth by moſt men in their urine, and by ſtool, which cauſe fluxes of the Belly at that time. But if any ask why defluxions do not laſt al Winter when by reaſon of cold the pores are alwaies ſtopped? We anſwer, That Nature doth in Winter diſcharge her ſelf by other waies rather than by ſweat, namely, by ſtool, urine, and ſpittle. How great that Evacuation is which is uſually by inſenſible tranſpiration or ſweat, is pleaſantly taught by *Sanctorius* in his Book *de Statica Medicina*, where he ſaith, That it is larger than all the ſenſible Evacuations put together: ſo that if the meat and drink of one day be eight pound in weight, the inſenſible tranſpiration will be five pound: he is very curious in this matter. What light he hath left to the finding out of Cauſes, and Curing Diſeaſes, I leave to be judged by the Learned.

In the part receiving, you muſt conſider the imbecillity, or other diſpoſition to receive and attract defluxion. In regard of weakneſs, it is an uſual ſaying among Phyſitians, That the ſtronger parts do alwaies lay their ſuperfluous burden upon the weaker; as in Common-wealths, the Great Ones lay the chiefeſt burden upon the poor Commons.

Now the weakneſs of the parts is either Natural, or Adventitious. A Natural weakneſs comes from the ſoftneſs and looſneſs of the parts from the Glandles and Lungs, do eaſily entertain defluxions: But an Adventitious weakneſs, is from a diſtemper, or from ſolution of continuity. A cold diſtemper by weakening the Native heat cauſeth the part to have leſs power to reſiſt the humor flowing unto it. And alſo a Solution of continuity or wound, makes the part more fit to receive defluxions by its weakneſs; hence aroſe the uſe of Cauteries or Iſſues, becauſe the part being thereby weakened, the humors do flow from other parts unto it. And ſo the Lungs being ulcerated receive the humors from the head, and from al other parts.

Among other diſpoſitions for the attracting of a defluxion, heat is chiefly to be reckoned; for we may obſerve, that parts inflamed do plentifully attract humors. So in a Conſumption, many humors are drawn from the head to the lungs, not only by reaſon of the ulcer, but alſo by reaſon of the inflamation. Whence *Hippocrates* ſpeaking of a Phthiſis or Conſumption in his firſt Book of Diſeaſes, ſaith thus: *The Lungs being inflamed draw humors from the whol Body, and eſpecially from the Head; and the Head being made hot from the Body, ſpits forth that thick matter.*

There are two waies by which the humors are carried from the head into the inferior parts, either internal or external: The internal way is when the humor flows from the parts under the Skull, chiefly from the Ventricles of the Brain, and makes divers diſeaſes and ſymptomes according to the diverſity of the parts receiving, of which ſome have peculiar names, according to thoſe vulgar Verſes in *Schola Salerni*:

That Rheum is call'd Catarrhus *which doth fall*
Upon the Breaſt; upon the Jaws we call
It Branchus; Coryza *through the Noſe doth fall.*

When the Humor flows upon the Breaſt, the Diſeaſe keeps the general name of a *Catarrh*, or Defluxion; when it falls upon the Jaws, and *Aſpera Arteria*, or rough Arteries, it is called *Branchus*, *Raucedo*, or Hoarſneſs; when it flows into the Noſtrils, it cauſeth not only a *Coryza* or Murth, but *Ozæna* and *Polypus*. But in other parts it produceth various effects; if it fall upon the Nerves it produceth a Torpor or Numbneſs, a Palſey, Convulſion, Trembling: if in the Ears, Deafneſs, Swelling; if in the Eyes, Ophalmy, or Inflamation, Tears, Blindneſs; if upon the Uvula or Pallat, Swelling, Looſneſs or Laxity, or Ulcer; if in the Throat, the Squinzy; if on the Lungs, the Pleuriſie, Inflamation or Impoſthumation, Cough, ſhortneſs of Breath, ſpitting of Blood, Conſumption; if into the Stomach, Vomiting, want of Appetite; if into the Bowels, it cauſeth Diarrhœa, and Dyſentery:

ſentery: therefore it is rightly conceived that the greateſt part of Diſeaſes that trouble mans Body, have their original from the Head.

Moreover, Somtimes the humor flows from the Brain with the blood into the veins, whence comes the Diſeaſe called *Febris Catarrhalis*, when Nature is ſtrongly moved to expel the ſuperfluous humor, and the Spirits being thereby much diſturbed, are inflamed, and cauſe a Quotidian Feaver: hence it is that a defluxion is reckoned among the cauſes of a Quotidian Feaver. And alwaies before the coming of the Joynt-gout or Inflamation called Eryſipelas, ſuch a Feaver doth proceed.

The external waies by which the humor flows from the head, are thoſe which are without the skul under the skin; and *Fernelius* ſuppoſed that the humors which chiefly carried between the fleſh and the skin, although by the continuity of the Muſcles, Membranes, and Nerves, as alſo the Veins and Arteries, the humors uſe to flow into the Eyes, Teeth, Jaws, Neck, Shoulders, Joynts, and other external parts.

Some Authors make difference of Catarrhs, which are theſe: Some are called Ferini, or wild; ſome Suffocating; ſome Epidemical, or common.

A wild violent Catarrh is that which by its ſharpneſs ulcerateth the Lungs, and brings a Conſumption, and it comes of a ſharp and ſalt humor riſing from a hot Liver, and ſent into the brain, and from thence into the Lungs.

A Suffocating Catarrh, is when the humor flows violently into the hollow of the Lungs, and is ſtill renewed to the danger of ſtrangling.

Laſtly, An Epidemical Catarrh hath a malign quality, and is common among the people, and comes from the corruption of the Air.

The Knowledg of this Diſeaſe, is from three ſigns: of the Subject, of the Diſeaſe, and of the Cauſe.

The Subject, or Body apt to fall into a Catarrh, is known by the ſlender Fabrick of it, eaſily pierced with either hot or cold air; as alſo by the too compact Fabrick of it, which hindereth a free tranſpiration: as alſo a weak and cold brain, which cannot diſcuſs the vapors which are ſent unto it, or ſufficiently concoct its own nouriſhment: alſo a hot brain that attracts too many vapors: alſo the contrary actions of the Stomach and Liver, when one is hot and the other cold.

The Signs which ſhew the Diſeaſe, either declare it to be coming, or preſent.

The aforeſaid Cauſes ſhew it to be coming; but eſpecially, heavineſs in the head, dulneſs and numbneſs of the Senſes, long ſleep, much ſnorting, a ſnotty noſe, and more ſpitting than uſual, coſtiveneſs of Body, and abundance of wind.

The ſigns of a Catarrh preſent are manifeſt, for either the humor flowing from the brain, is plainly ſeen, or the ſwellings and pains which it produceth in divers parts.

The ſigns of the Cauſes are alſo evident; for if a Catarrh come of a cold humor, there will be ſence of cold, paleneſs of face, ſweet ſpittle, ſowr belchings, ſlimy matter, or watery, and a general flegmatick habit of Body.

But that the humor diſtilling is hot, appears by redneſs of the face, thirſt, ſaltneſs and ſharpneſs in the mouth, inflamation, pain, and ulcers in the parts affected, and a chollerick habit of the whol Body.

An external Defluxion is known from an internal, in regard the pain is more external in the former, eſpecially under the skin of the crown of the head, where ſomtimes you may perceive a ſoft tumor; often a painful combing back of the hair: and many times the humor is felt to fall down upon the outward parts with great pain, heat or cold.

The Prognoſtick of this Diſeaſe is elegantly laid down by *Cornelius Celſus*, in theſe words: *If the humor flow from the head into the noſe, it is ſmal; if into the jaws, it is worſe; but if upon the Lungs it is worſt of all.* But *Hippocrates* ſaith, That a Catarrh is very hard to be concocted in thoſe that are very old.

Where there is a great plenty of humors, either from repletion, or from evil Concoction: there is a dangerous Catarrh, for it is to be feared leſt the humor flow ſuddenly, and cauſe Suffocation, or ſome other grievous accident.

The Cure of this Diſeaſe is two-fold; The one is of the Cold, the other of the Hot Catarrh.

The whol Cure of a cold Catarrh conſiſts in the preparing and evacuating of the humor offending, and in the revelling of it if it flow to the breaſt, or other part, and the ſtopping of its motion; and after let the diſtemper of the brain be amended.

Firſt then, If the matter be much, and flow very violently, and we fear leaſt it flow alſo from other parts, eſpecially if the Liver be hot (for it is often ſeen, that men ſubject to Catarrhs, have a hot Liver, and a cold brain) we muſt breath a Vein; but if the matter be but little, and move gently, and the party be aged, and the temper of the Liver not hot, ſo that there is no ſuſpicion for humors to be ſent to the brain from any other parts, you may omit Phleboromy.

The

The matter offending is first to be diminished with a Potion or Pills, or other Purging Medicine, mentioned in the chapter of the cold distemper of the Brain.

Afterwards the remainder of the humor is to be prepared with an Apozeme, there also mentioned; or if you fear not to disturb the humor too much, you may give a purging Apozeme, and at last make a compleat Evacuation with stronger Pills, or other Purges.

If the Catarrh be very strong, you may give that which will powerfully root out the Matter.

Coloquintida is very excellent for to purge the Brain strongly; but it worketh very violently, and is offensive with its bitterness: both which faults are corrected by steeping it in Urine; for so it laies aside its bitterness, and becomes almost without taste, and also is so gentle that it may be given to the quantity of a dram safely, and it is a most gallant Remedy for all cold Diseases in the head.

It sometimes happens that Excrementitious Humors sent from the parts beneath into the brain, produce a Catarrh: and they find a preternatural course that way, by reason the natural course by which those humors use to be evacuated is stopped; and then the Catarrh is best cured by opening those waies with gentle, mild, and constant purging, that the humors flowing upwards, are so sent downwards, and by degrees brought to their proper motion. And these gentle Purges may be made of Decoctions or broths long continued; but in the mean while you must not neglect strengthening Medicines.

For Revulsion, apply Cupping-glasses and Vesicatories, or things to cause blisters, to the neck and shoulders, and make issues in the hinder part of the head and arms. *Zacutus Lusitanus* in *lib.* 2. *Praxis admirande, observat.* 160. commends Issues behind the Ears for the best remedy against all distillations from the head: And we have seen good success by them, especially in defluxion upon the Eyes. You may use Errhines, Neesings, Gargarisms, and Masticatories; but with this Caution, That you use Errhines and Neesings only when the Catarrh falls upon the Jaws, Lungs, and Stomach; but when it falls into the Eyes or Nose, use Masticatories and Gargarisms.

The forms of all these Medicines were set down in the Chapter aforegoing. But observe in the use of them, that when the matter is somwhat thin, you use not strong discussients and dissolvers, for by these you shall cause the humors to flow more violently upon the Breast, Lungs, or other parts; but you must mix some thickning things that may constrain the humor, as red Roses, Mastich, Coriander, Nutmeg, and other things which we shall declare more at large in the hot Catarrh. You may make an Errhine for this purpose as followeth:

Take of *Marjoram Water four ounces*: *the Juyce of Bettony one ounce*: *Nigella or Gith seeds poudered, half a dram*: *Nutmeg one scruple. For rich people you may ad two grains of Musk and Amber-greece.* Or,

Take of *Lignum vitæ one ounce*: *Spring Water one pint*: *Infuse it all night upon warm embers; then boyl it to the consumption of half, adding in the conclusion, sweet Marjoram, and red Rose leaves, of each two pugils.*

So when the matter is but thin, you may make a Masticatory, either of Mastich alone, or after this manner:

Take of *Nutmeg one dram*: *Mastich, and Gum Arabick, of each half a dram*: *Pouder them, with Rose water make Troches to chew.*

The best Neesing is made of black Hellebore, and Sugar, equal parts.

The Extract of Tobacco made in *Aqua vitæ*, and held under the tongue in the bigness of a Pease, brings forth abundance of Water; but if you take too much, or swallow it down, it will cause violent vomiting. We have shewed that Cauteries to the Arms, hinder part of the Head, and behind the Ears, are very good, as also to the nape of the Neck, and Shoulders, which are now adaies in great request. But there is a new place found out by some, namely, in the Neck, neer the Jugular veins, between the Muscles: And by this means two men have been cured of old Catarrhs which caused hoarsness.

Finally, After convenient Evacuations, things that strengthen the Brain and dry it, are to be used both internally and externally, as Opiates, Pouders, Bags, Fumes, described in the Cure of the cold distemper of the Head. But you must remember to put unto them some Conserve of Roses, Nutmeg, or white Frankinsence, when you cure a Catarrh.

The Decoction of Mastich Wood used as a Sudorifick, dries the Brain, and stops Defluxions. For which, the following things are good.

Take of *Coriander seed prepared half an ounce*; *Nutmeg and Frankinsence, of each three drams*; *Liquoris and Mastich, of each two drams*; *Cubebs one dram*; *Conserve of red Roses one ounce*; *white Sugar dissolved in Rose water ten ounces*: *Make a Confection in little rolls, weighing three drams. Let him take one morning and evening.*

These following Troches are much commended by *Solenander*, Cons. 10. Sect. 4. which he borrowed

which he borrowed from both the Ancient Greeks and Arabians.

Take of *the beſt Frankinſence and Juyce of Liquoris, of each one dram: Opium, Saffron, and Mirrh, of each one ſcruple: With Syrup of Poppies make Troches, or Pills to be taken now and then, two ſcruples, or half a dram at a time.*

Theſe Tablets following are very good:

Take of *Diambra, and Diamoſchi dulcis, of each one dram: white Amber one ſcruple: Oyl of Annis ſeeds, three drops: Sugar diſſolved in Lavender Water, four ounces: Make Tablets of two drams in weight; take one morning and evening.*

The Baſſom for the Head preſcribed in the Chapter for the cold diſtemper, after the Opiate is excellent taken inwardly, and into the noſtrils.

Lac Sulphuris, and the flower of Brimſtone are commended by Chymiſts for the Cure of a Catarrh: and the Galeniſts uſe it much in Tablets.

In a new Catarrh, Water of Nuts, with Hydromel, given three nights together doth much hinder it.

Shave the fore part of the head, and apply a Cataplaſm, of two ounces of Leaven, and two drams of Amber: But if the Patient will not permit his head to be ſhaved, let it be cut, and lay a bag of Chamepits or Groundpine, mixt with Amber.

Beſides the afore mentioned Fumes, one made of Tacamahaca is excellent; for it dries a Catarrh, and hinders his Motion; neither is the ſcent too ſtrong, but the Patient may ſhut it into his chamber without offence.

It is profitable to dry the Head with bags of Bran, Gromwel, and Salt, Leaves of Sage, Bettony, French Lavender, Annis ſeeds, Fennel ſeeds, and the like.

Laſtly, If the Diſeaſe be ſtubborn, all thoſe Medicines which are mentioned in the cold diſtemper of the head, are to be uſed.

A hot Catarrh is Cured by Medicines which diſcharge the matter offending, and which do thicken it, and revel it; as alſo by correcting the diſtemper of the parts, ſending and receiving it.

For this end, firſt let blood, if nothing hinder, by which the humor flowing is revelled, and the ſharpneſs abated.

Then carry away part of the humor by a gentle Purge, which may no waies ſtir violently the humors, as followeth:

Take of *the beſt Rhubarb, four ſcruples: Citrine Myrobalans rubbed with the Oyl of ſweet Almonds, half a dram: yellow Sanders half a ſcruple: Infuſe them in Lettice and Purſlain Water, and ſtrain it, adding of Manna and Syrup of Roſes Solutive, of each one ounce: Make a Potion.*

Or inſtead of the Waters afore mentioned, you may make a Decoction of cold Herbs, and Tamarinds; to which you may put your Purgatives.

Then you muſt alter and thicken the humor with convenient Juleps.

Take of *Lettuce, Purſlain, and Plantane, of each one handful: the four great cold Seeds, white Poppy ſeeds, of each two drams: Violets, Water-lillies, and red Poppies, of each one pugil; boyl them to a pint: Diſſolve in the ſtraining, the Syrup of Violets and dried Roſes, of each one ounce and an half. Make a Julep for three draughts, to be taken twice in a day.*

Or inſtead of this Decoction, uſe the diſtilled Waters of thoſe Herbs, or Emulſions of the four great cold Seeds.

After uſe a little ſtronger Purge, putting to the former, Senna, or Catholicon, or Diaprunes, or the like.

A light ſweet Medicine, thickening and ſweetening the humor, is made of the Yolks of two new laid Egs, diſſolved in five or ſix ounces of ſpring Water with one ounce of Sugar; heat them well, and ſtir them upon the fire, and take it as hot as you can morning and evening for three daies together.

And at laſt you muſt labor for a ſtronger reſtraning of the flux, and thickning of the humor with this Syrup.

Take of *Syrup of Violets and dried Roſes, of each one ounce: Syrup of Poppies half an ounce: Give an ounce at a time in a ſpoon at Bed time.*

The following Opiate is good for the ſame purpoſe.

Take of *old Conſerve of Roſes ſix drams: the ſpecies of Diatragaganth frigid. two drams: Bole-armenick waſht in Roſe water, two ſcruples: With the Syrup of dried Roſes make an Opiate. Take the quantity of a ſmal nut at night.*

This Barley Cream is very profitable.

Take of *cleanſed Barley as much as is ſufficient, ſteep it ſix hours, and then boyl it well, and ſtrain it; then take three ounces of blanched ſweet Almonds; Pompion ſeeds husked, one ounce and an half; Melone ſeeds one ounce; white Poppy and Lettice, of each half an ounce: Beat them together,*

gether, and with Barley Water take out the Milk, which with two pound of the Pulp of Barley boyl a little and mix it with Sugar: Let him drink ten ounces at a time, some mornings in his bed, and sleep after it, and sometimes in the evening. Hold the Troches in the mouth.

Take of *Gum Traganth, and Arabick, of each two drams: Bole-armenick, and Terra Sigillata* washed in Rose water, of each one dram: white Poppy seeds, and juyce of Liquoris, of each half a dram: Sugar Penids one ounce: With the Mucilage of Quince seeds, extracted with Rose water, make little Cakes to be held in the mouth day and night.

The Spirit of Sulphur and Vitriol, three or four drops given morning and evening in convenient Liquor, hath great force against all Catarrhs, especially against those which come from Inflamation of the Bowels: It may be given in drink in a smaller quantity, for it goes with the drink through all the veins, and hinders the motion of the humors.

The Crystal Mineral is for the same use given with Juleps and other Medicines.

When these do not avail, we must be constrained to use Narcoticks or Stupefactives: Among which Laudanum is the best, given to four or five grains at bed time; or one ounce or half an ounce of Syrup of Poppies: These do wonders being used in the beginning of the Disease. New Treacle given at night from a scruple to half a dram, hath the same force.

Benedictus Faventius useth the following Pills in a Salt Catarrh with good success.

Take of *the Juyce of Liquoris two drams: washt Aloes one dram*: Pilulæ de Cynoglosso, *half a dram: With Syrup of Violets make a Mass, of which take a scruple at bed time.*

The Troches of *Solenander* before mentioned, are excellent.

Diacodium album prescribed in the Cure of the Phrenzy is good for this.

In the mean while the matter flowing must be revelled by Clysters, Cupping Glasses, Frictions, and binding of the external parts, and chiefly by Vesicatories in the Neck, and finally with Issues in the hinder part of the Head and Arms, if the Catarrh be old.

But for the strengthening of the Head, and stopping of the fluxion, and consuming the remainder; Pouders, Bags, and Emplasters, are good.

Take of *white Amber, Sandarach, Mastich, Benjamin, Nutmeg, of each one ounce: Frankinsence, Grains of Kermes, and red Roses, of each half an ounce: all the Sanders, Mirtles, and Pomegranate flowers, of each two drams; make a Pouder. Use it to the Head at night, and comb it off in the morning.*

Take of *the Gum of Juniper two scruples: red Roses two pugils: Mirtles one dram: Mace and Nutmeg, of each one scruple: Frankinsence, and Peony seeds, and Poppy heads, of each two scruples: Cyprus nuts half a scruple: Pouder them, and take them up with red wool; and with a red cloth make a lining for a Cap to wear constantly.*

Take of *Mastick and Frankinsence, of each half a dram: Sandrach, red Coral, red Roses, Mirtles, Pomegranate flowers and Peels, of each one dram: Labdanum two drams: Wax and Oyl of Roses, as much as is sufficient. Make an Emplaster for the Coronal Suture.*

But because this Catarrh for the most part comes from a hot distemper of the Liver, therefore you must use Medicines to that.

Finally, This is most remarkable, which is also mentioned in the Cure of a cold Catarrh; That Excrements use to cause Catarrhs by flowing to the Head when their usual natural passages are stopped: And then a Catarrh is best cured by opening those passages with a gentle and constant purging in Broths, or the like.

CHAP. XVI.
Of the Head-ach.

THe word *Cephalalgia* is used generally for every pain of the Head: but more especially it signifieth a new Head-ach: But the word *Cephalæa* signifieth an old Head-ach; and *Hemicranea* signifieth that pain which only is in one side of the Head.

There are other differences of Head-aches: they are divided into Internal, and External; Pains by content, and by propriety: and of these, one is called a pricking pain; another a stretching, or extending pain; another a heavy; another a beating or shooting pain.

The internal pain of the head is in the Meninges or Membranes, that is very deep, and reacheth to the roots of the Eyes: But an external pain is in the Pericranium or Membrane without the Skull, and will not endure the roots of the hairs to be combed back, and is made greater by the least compression of the Head. This is the Doctrine of *Galen*, which he teacheth 3. *de loc. aff. cap.* 1. and *lib.* 2. *de comp. med. secundum loc. cap.* 3. saying very solidly, That the internal Head-ach is distinguished from the external by this peculiar sign, That in the internal the pain comes to the roots of the

the eyes, not in an external, and he gives this Reaſon, Becauſe the coats of the Eyes come from the *Meninges* of the Brain, whence it comes that the grief is conveighed to the Eyes. But *Fernelius* contradicts this Doctrine, *lib.* 5. *Pathologiæ cap.* 1. and affirmeth, that external pains do reach to the roots of the Eyes, becauſe the *Pericranium* or Skin of the Skul wherein thoſe pains are, doth reach to the cavity of the Eyes: to whom *Rondoletius* anſwers, *lib.* 1. *meth. med. cap.* 5. that the Cavity of the Eye doth not ſuffer with the Pericranium, although it reach to it, by reaſon that the pain of the Pericranium comes for the moſt part of external cold; for a cold part will eaſily ſuffer from the like quality. But that cold cannot reach to the hollow of the Eye, becauſe it is preſerved by the heat, blood, and ſpirits of the Eyes; but if at any time a headach cometh of external heat, or the like, the Skin of the head is only affected, not the Pericranium which lieth deep. But this Doctrine of *Rondeletius* doth not altogether take away all difficulty; for although all things which he alledgeth ſhould be granted, yet if a pain ariſe from a tumor gathered upon the Pericranium, or of ſome other cauſe that diſſolveth continuity, and divideth, there is no reaſon why the grief ſhould not reach to the hollow of the Eye. We can ſay this in defence of *Galen*, that this ſign was given by him for two Reaſons: Firſt, Becauſe the Membrane which reacheth to the hollow of the Eye from the Pericranium, is not ſo ſenſible, and therefore cannot ſuffer but obtuſely: but the coats of the Eyes which come from the *Meninges* are very ſenſible, and therefore have great pain: Moreover, that Membrane which cometh from the Pericranium doth not touch the Eye ſo inwardly and deeply towards the optick Nerves, as the coats which come from the *Meninges*, whence it is that the external pain cannot extend it ſelf to the roots of the Eyes as *Galen* ſaith.

A pain by propriety is conſtant and permanent, nor doth it follow the diſeaſe of other parts: But a pain by conſent or ſympathy, depends upon the infirmity of another part, ſo that as that encreaſeth or diminiſheth, the Headach encreaſeth or diminiſheth. Now this pain by ſympathy, is either by conſent from the whol Body, as in Feavers; or from ſome peculiar part as the Stomach, Liver, Spleen, or Mother.

But we may know what part is affected when a pain is communicated to the head by its proper ſigns.

A pricking pain comes from a ſharp chollerick humor or vapor which toucheth the Membranes of the Brain. A heavy pain comes from much thick, and cold matter, namely, flegm or melancholly compreſſing the ſenſible parts. An extending pain comes from wind or mild humors which work themſelves into the Membranes and diſtend them. A beating or pulſative pain, comes of thin chollerick blood or ſpirits abounding, by which the Arteries being ſtretched and ſwoln, do beat more vehemently, and ſhake the Membranes, and ſo ſtriking the adjoyning parts, cauſe in them a ſence of Pulſation, as *Galen* teacheth more at large, 2. *de loc. aff. c.* 3.

From what is ſaid, the chief cauſes of a Headach are ſufficiently declared, which in general are referred to the ſolution of continuity, as to the immediate cauſe: For whatſoever doth bring a manifeſt or hidden ſolution of continuity, is like to bring a headach.

The ſigns of the kinds of Head-ach, and of the cauſes that produce them, may be learned from what is ſaid, and therefore we come to the Prognoſticks.

An external headach is alwaies leſs dangerous and eaſier cured than an internal.

A Headach in a ſharp Feaver with thin and white urine is dangerous, for it ſignifies the chollerick matter is ſent into the Brain, whence there is fear of a Phrenzy.

A ſtrong pain of the Head ſuddenly ſeizing without evacuation following, or mitigation of the diſeaſe, is deadly: for it ſignifies the deſtruction of the animal faculty, which no more feeleth that object which cauſed the grief.

In a great Headach it is evil to have the outward parts cold; for by the vehemency of the pain there is a ſtrong attraction of heat to the part affected, which wil cauſe inflamation.

They that recover of a diſeaſe in the inferior parts, and have after a vehement Headach, if a manifeſt evacuation went not before, will have an impoſthume in their Brain, for it ſignifies a tranſlation of the matter which cauſed the diſeaſe into the Brain.

They who vomit green in a headach, and are deaf being awake, are ſuddenly very mad, 1. *Porrh.* for it ſignifieth a collection of choller into the Brain, which maketh the Stomach conſent therewith and ſuffer.

Headach and noiſe in the Ears without a Feaver, or a giddineſs, or deafneſs, or numbneſs of the hands, ſignifieth an Apoplexy or Epilepſie to be at hand, *Hipp.* in *Coacis*: For thoſe ſymptomes come from abundance of thick flegm in the Brain.

To women with child ſleepy and heavy headaches are evil, 1. *Porrh.* for they ſignifie the flux of humors to the head, which when they are many in women with child by reaſon they have not their courſes, do threaten danger.

A Headach which was not from the beginning of the Diſeaſe, but roſe from the diſturbance of the body, ſhews that there will be a criſis by bleeding at the noſe, or by vomit.

Since then the pain of the head cometh either of a cold or hot cauſe, we muſt direct the Cure for the taking away of both.

For the Cure of a cold Head-ach the flegmy matter is firſt to be evacuated being prepared, as is ſhewed in the Chapter afore going. Then we muſt correct the cold diſtemper of the Brain, and the reliques of the humor are to be diſcuſſed with Bags, mentioned in the former Chapter, or in the Chapter of the cold diſtemper of the Brain: With which being warmed, let the head, being ſhaven, be rubbed for an hour and an half every morning till the cauſe of the pain be ſpent and exhauſted.

After the head is well rubbed, ſprinkle upon it this following Pouder, having upon it Cotton or Wool.

Take of *Nutmegs, Cloves, Pepper, Pellitory, of each half an ounce: the Leaves of Sage, Bayberries, of each two drams: Muſtard ſeed, and Water-creſs ſeeds bruiſed, of each ſix drams: Make a pouder of theſe, ſprinkle it upon the Head as aforeſaid; and comb it in the morning before the uſe of the little Bags, that the pouder laid on the day before may be taken off.*

Errhines are alſo profitable, Neeſings, and Apophlegmatiſms or things to chew, which were deſcribed formerly.

A Magiſtral Syrup alſo made as followeth is very profitable.

Take of *Guajacum wood, and Roots of* China *ſliced, of each one ounce and an half: Infuſe them twelve hours in four pints of ſpring Water: Boyl them till half be conſumed, adding in the end, the Leaves of Vervain one handful; the flowers of French Lavender and Marjoram, of each a ſmal handful: diſſolve in it being ſtrained half a pound of white Sugar. Boyl it up to a Syrup; but before it be perfectly boyled caſt in two ounces of Senna tyed in a clout; the beſt Agrick two ounces; Rhubarb three ounces: let him take two or three ounces, once a week.*

Theſe Pills alſo following are very good which in times paſt were of great eſteem in *Italy* in the daies of *Euſtachius Rudius* chief Profeſſor in the Univerſity of *Padua*, who was reported to be the Inventor of them, and accounted them a great Secret; and therefore gave them to one Apothecary only to be made by him, leſt others ſhould know the Receipt which indeed he borrowed out of *Wickerus*, who propoundeth it from *Andernacus*: and it is thus:

Take of *Coloquintida ſix drams: Agarick trochiſcated, Diagridium, black Hellebore, and Turbith, of each half an ounce: Aloes one ounce*: Diarrhodon Abbatis *half an ounce: Let the purging things be bruiſed and beaten together, and put in a glaſs with the ſpirit of Wine, ſo much as is ſufficient, and let them be digeſted for eight daies in a warm place, and then ad the pouder of Diarrhodon, and infuſe them four daies longer, then ſtrain them and preſs them, and let the Liquor ſo preſſed forth be diſtilled in* Balneo, *ſo long till the extract in the bottom of the Alembick grow ſo thick that it may make Pills, the doſe whereof is one ſcruple.*

But the following Pills are aſcribed to *Fernelius*, of which he affirmed he found by experience ſuch excellency, that he never met with a *Cephalalgia*, or *Hemicrania*, that is, half Headach, but he cured it.

Take of *the beſt Aloes half an ounce: the Pouder of the Electuary of Pearls, the three Sanders, and red Roſes, of each three grains: With Syrup of Wormwood, and Violets, make a Maſs. Give a dram thereof twice in a week one hour or two before Supper.*

And finally, in a ſtubborn pain that is old, all thoſe Medicines are convenient, which were before mentioned in the Cure of the cold diſtemper of the Brain; among which, Epiſpaſticks, or bliſter-drawing Plaiſters are not the meaneſt. Which alſo not prevailing ſome are ſo bold as to apply *Vigo*'s Emplaiſter with Mercury, which they ſay hath cured old headaches ſometimes, by cauſing them to ſpit much.

Baths of Brimſtone and Bitumen are very efficacious in this caſe, uſed both to the Head, and the whol Body.

Alſo in an old Headach, ſweating Decoctions are very good, and famous Authors declare that many have been cured thereby,

Which not prevailing, *Mercatus* is bold to fly to the uſe of Stibium, and commends it highly in his firſt Book of the Cure of internal Diſeaſes, and the eighth Chapter. But in an old grief, it is better to ſtrengthen the head often, than to uſe too many Evacuations: Therefore Pouders and Caps, and other topick or external Medicines are very neceſſary before mentioned in the Cure of the cold Diſtemper of the Brain.

But Pouders are more commendible, becauſe the vertue of a Cap is not ſo much communicated to the Brain, and the pain may be encreaſed by the filth which is contracted by the long wearing of them.

Moreover, An Oyntment may be applied of the Oyl of Almonds, in which wild Bettony, Bay leaves, Maſtich, Lavender, Mints, Marjoram, Thyme, Penyroyal, Nutmeg, Cloves, and Cinnamon, or ſome of theſe have been boyled, adding in the time of the boyling a little red Wine.

Or this following Chymical Oyl.

Take

Take of *Turpentine one pound*: *Maſtich, Nutmeg, Cinnamon, of each one dram*: *Cloves, Zedoary, Galangal, Ladanum, of each one ounce and an half*: *the juyce of Ebulus or Dwarf-Elder, and of the wild Cocucumber, of each one dram*: *the Oyl of Chamomel and Lillies, of each half a pint*: *red Wine one pint and an half*: *wild Marjoram green one handful*: *Pouder thoſe that are to be poudered, and put them into a Glaſs Retort, and extract an Oyl*; *with which anoint the head after it is ſhaved.*

Oyl of Amber is very good, and it will be ſufficient only to anoint the Head therewith.

While you uſe the afore mentioned Remedies, you may alſo uſe from the beginning of the Cure ſpecifical Medicines, ſuch as this Epitheme.

Take of *the pouder of Zedoary one dram*: *the Water of Bettony, Vervain, and Elder, of each one ounce*: *Mix them and apply them hot to the part grieved with Scarlet cloth.*

Among the proper Medicines for the Head-ach, from what cauſe ſoever it ariſeth, Vervain is the chief; whoſe Water diſtilled, you may both apply externally, and give of it internally to the quantity of ounces, with three drops of the ſpirit of Salt. Green Vervain alone only hung about the Neck, hath cured two Patients when many other Medicines failed, as *Foreſtus* reports.

Zacutus Lucitanus in *Lib.* 1. *Praxis Med. mirab. obſervat.* 7. 8. 9. & 10. propounds four Remedies, confirmed by Experience; namely, An Iſſue in the back of the hand, Horſ-leeches to the Temples, opening of the Vein in the Forehead and the corner of the Eye, which you may read in the place cited.

Theſe things are to be noted concerning thoſe Obſervations:

Firſt, That the Iſſue between the Thumb and fore Finger is approved by other Experiments, and hath cured great Headaches.

Secondly, In the Cure by Horſ-leeches, *Zacutus* is not content to apply two or three as ordinarily is done, but ten or twelve round about the Temples; whence comes a great attraction of Blood, which may draw forth the whol matter of the Diſeaſe.

Thirdly, In the Curing by opening the Veins in the Forehead, we muſt obſerve, That that Vein was twice opened, whence it appears that the firſt was not ſufficient; when ordinarily our Practitioners do ſeldom open it the ſecond time, if the firſt hath been to little benefit.

The hot Cauſe of a Primary and Eſſential Headach, is Blood or Choller. And the like Remedies are proper for both, though they muſt be made ſtronger or weaker according to the ſtrength of the Diſeaſe.

Firſt then (after a Clyſter is adminiſtred) begin with Blood-letting, drawing forth more when the grief proceeds of blood, than when it proceeds of choller.

Then give a Medicine to purge Choller, not only when Choller is the Principal Cauſe, but when blood aboundeth whoſe thinner part is eaſily turned into Choller.

If the matter offending is not ſufficiently taken away by one purge, you muſt purge again at a due diſtance.

After apply Repelling Medicines to the Head, and Vinegar of Roſes, ſuch as were propounded in the Cure of the Phrenzy, making choice of the mildeſt.

And after it will be very profitable to apply Creatures newly killed, or parts of them, to diſcuſs the reliques of the Diſeaſe, and to aſſwage the pain.

In an Headach which goeth with a continual Feaver, a Sheeps Lungs applied hot do much aſſwage the pain.

Alſo a Cataplaſm of bruiſed Guords, and Houſleek to the feet.

The opening of the Saphena after ſufficient bleeding in the Arm, cures often times a Headach with a Feaver very ſuddenly.

You muſt uſe Cupping-glaſſes with, and without Scarification and Frictions of the extream Parts.

And in the whol time of the Diſeaſe, if the Belly be not looſe, you muſt every day give an Emollient and cooling Clyſter, and which do gently purge.

After general Evacuations and Revulſions, you may rightly, and with profit derive the matter by opening the Head Vein, or with Horſ-Leeches to the Forehead, or with Veſicatories to the Neck.

In the mean while let the whol maſs of Humors be qualified with Juleps, Emulſions, and Broths, as was mentioned in the Cure of the Phrenzy.

Laſtly, If the pain be very violent you muſt apply Narcoticks both externally and internally, as they are ſet down in the ſaid Cure of the Phrenzy.

Here alſo may avail the opening of the Forehead Veins, and Leeches to the Temples, commended from *Zacutus Luſitanus*.

Paræus lib. 16. *cap.* 4. reports that a deſperate half Headach was cured by opening the Arteries

in the Temples, and saies there is no danger in doing it. The Artery is opened as a Vein, and six ounces of blood forcibly leaping forth are to be taken: After apply a convenient Ligature, and open it not in four daies.

Botallus also saies, That it doth miraculously cure old Head-aches; and we also have cured desperate ones the same way, and never found any danger in the opening of the Artery.

You must apply a Plaister to the Orifice, of Frankinsence, Mastich, Bole armenick, and Hares Hair, with the white of an Eg, and then make your Ligature as you use to do in Wounds of the Head.

In all pains of the Head, of what cause soever, if other means fail, and the greatness of the pain, make thee run to extremities; a Vesicatory applied over all the Head, after it is shaven, will cure it.

A Cautery upon the Coronal Suture somtimes hath perfectly cured a violent Head-ach.

But it is more powerful if it be applied to the Temples, of which see *Poterius, observat. centur. 3. cap. 8.* and our Observations thereon.

The End of the first Book.

THE

THE SECOND BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Eyes.

The PREFACE.

THE *Diſeaſes of the Eyes are ſo divers, that it is very hard to lay them down cleerly and plainly, and ſo diſtinguiſh one from the other: which that we may endeavor as much as may be, and cleer up our Treatiſe for Practice, we will ſo divide them, the Diſeaſes by which the ſight is immediately hurt, may firſt be expounded, and afterwards the reſt which happen to the Parts of which the Eyes are Compounded, or which are neer unto them, without any, or very little hurt to the ſight. The ſight is hurt when it is diminiſhed, aboliſhed, or depraved. Sight aboliſhed is called* τυφλότης *in Greek: in Latine* Cæcitas. *But ſight dimiſhed hath divers Names according to the degree and manner of the diminution: of which the chief are* Amblyopia, Myopia, Nyctalopia, *and* Acies Veſpertina.

Cæcitas *blindneß, comes either from an abſotute Obſtruction of the Optick Nerves (and then it is called* Amaurosis*) or from a total Suffuſion, or from ſome great fauls in the Tunicles and Humors.*

Amblyopia, *in Latin* Obſcuritas, Hebetudo, *or* Caligo, *dark or dim ſight, when the Object is not cleerly ſeen at what diſtance ſoever placed; comes from the ſame Cauſes, but more light and imperfect, as an imperfect Obſtruction of the Optick Nerves, a light ſuffuſion, want of ſpirits or groſſneß of the ſame, and the like.*

Myopia, *in Latin* Luſcioſitas, *or Pur-blindneß in which the Objects are not perceived, except they be very nigh, and cloſe to the Eyes, but not at all a far off, or very little; and imperfectly: ſo that they perceive not their known Friends paſſing by: And according to the Opinion of* Galen, *and all Modern Phyſitians, from the thinneß and ſmalneß of the viſour ſpirits which ſtand not in need of a* medium, *much enlightned to make a perfect ſight, but is thereby diſſipated. On the contrary, they which have groß and thick ſpirits, ſee things beſt at a diſtance, becauſe that groß ſpirits needs more enlightning which is brought by the larger illumination of the* medium: *But this Doctrine is demonſtrated to be falſe, and to ſpring from ignorance in Opticks whoſe Principles declare, that theſe diverſities of ſight proceed from the diverſity of the ſcituation of the Cryſtalline humor. For when the ſpecies of the Objects are received into the Cryſtalline humor by a Pyramis or ſharp Point thereof called* Conus; *if the Cryſtalline humor be too much inward towards the pupil*

of

of the Eye, the remote Objects are better seen, because it is necessary that the Objects should be at a farther distance, that the Conus, *or point of the Pyramis may come to the Crystalline humor, and there be terminated: But if the Objects come neerer the Eye, the* Conus *goeth by the Crystalline, and they are seen more obscurely: Again, If the Crystalline lie too low and too far from the Tunicle called* Uuea, *the Objects must be neerer to the Eyes, that the* Conus *or point of the Pyramid may come to it: whence it appears that* Myopia *comes no other wayes then from the Crystalline lying too low; and so this Disease becometh connatural, and not to be cured. But the affect of* Myopia *is contrary in which the Object is better seen at a distance; and this happens for the most part in Old Men, in whom some of the portion of the watery Humor is spent, so that the Crystalline goes to the Pupil of the Eye: Farther, By long holding down of the Head either with Reading, Writing, or otherwise, the Crystalline Humor comes by degrees forward: This is demonstrated by the use of Spectacles; because that they who have* Myopia, *or are Pur-blind, see best with hollow or concave spectacles, by which the rayes or beams of the visible species are dispersed, whereby it comes to pass, that the* Conus *of the Pyramis is more long, and so that thing which by reason of the great distance could not be seen, is now plainly perceived; because the* Conus *of the Pyramis is extended as far as the Crystalline, which before ended in the Pupilla, or in the watery Humor, or in the white Humor: On the contrary, Old Men are helped with Convex Spectacles, by which the beams are united, and the* Conus *of the Pyramis is made shorter, and so things are better perceived whose* Conus *before passed by the Crystalline, which was too neer to the Pupilla.*

Nyctalopia, *or* Nocturna Cæcitas, *is when men see well enough at day time; at Sun-set worse; and at Night not at all: and it comes from the over thickness of the Spirits, or Humors, or Tunicles; or the straightness of the Pupilla. For in these Cases a greater light is necessary for true sight, which being wanting, at Sun-setting, or at Night by a Candle, they see little, or not at all.*

Vespertina Acies, *is when men see worse by day, and better by night; and this sometimes is called* Nyctalopia, *as we see in* Hippocrates, 2. Prorrhet. *but the Modern Greeks have from long Custom used the word* Nyctalopia *only for Night blindness: it comes from the thinness of the Spirits which are spread abroad by too much light: or from the enlarging of the* Pupilla, *by which too much light goes into the Eye, and hurts the sight, for a little light at night doth more illustrate and shine to them, than to those who have the* Pupilla *enlarged.*

After what manner the sight is hurt by diminishing, abolishing, and depraving, we shall lay down more plain when we explain the Diseases of all parts of the Eyes by themselves. For when all the parts of the Eye do conduce to the action of it, namely Sight, when any part is distempered, the sight must also suffer.

The Eye is compounded of Tunicles, Humors, and the Optick Nerve, for the action of which parts, the Animal Spirit doth concur as a principal and universal Agent.

And therefore that we may run through the Diseases of those parts, we will begin from the distemper of the constitution of the optick Nerve; next we will proceed to the Disease of the Humors and Tunicles. But the faults of the Spirits either depend upon the distemper of the Brain, and then other Sences are also hurt; or from the distemper of the Eye it self, which being cured the spirits receive their ancient and due constitution, so that we need not make a particular tractate of them. But in curing Diseases of the Eyes, when sight is hurt, we must alwaies mingle those things which comfort the visive spirits with other Medicines.

CHAP. I.

Of Gutta Serena, *or* Amaurosis,

When the sight is gone, and no fault appears in the Eyes, it is called *Gutta serena*, or *Amaurosis*. And it comes to pass, when the Animal Spirits cannot pass from the Brain to the Eyes; for when the Animal Spirits come into the Eyes from the Brain by the Optick Nerves, we must find out the stoppage of their influx in the Optick Nerves. The Optick Nerves are many waies affected, but chiefly by obstruction or stoppage, attriction or binding, and by solution of continuity.

Obstruction is the most common and most ordinary cause of *Gutta serena*, which comes of a watery humor flowing down from the Brain upon the Nerves, even as other Nerves are obstructed in a Palsey by the same humor; so that the Diseases may be said to be alike by reason of that Obstruction.

But

But it is moſt certain that this Diſeaſe is alſo begot by adſtriction and compreſſion of the Optick Nerves; which compreſſion may come both of a moiſt humor gathered about the optick Nerves, and preſſing upon them: as alſo of blood, filch, or matter: Whence ſomtimes certain tumors riſing in thoſe parts, produce the like Diſeaſe. For Experience teacheth, That ſomtimes blindneſs in one Eye, ſomtimes in both, comes upon inflamation of the Brain, and from Phrenzy in malignant Feavers. And *Platerus* reports *lib.* 1. Obſervation, That he ſaw a blindneſs which came from a round tumor growing in the Brain, and compreſſing the optick Nerves, which appeared by opening of the Head after the Patient was deceaſed.

Finally, Wounds in the Head, in which the Optick Nerves are divided, without controverſie do cauſe that the Animal Spirits can no more come to the Eyes.

This Diſeaſe is known, in that the Eyes ſeem to be in their natural condition, and there is no fault apparent in them, only the *Pupilla* ſeems blacker and larger. But in diſtinguiſhing the differences of Cauſes, there is great difficulty; for although the Diſeaſe coming of blood or matter is known by inflamation, apoſthume, or wound going before, yet no certain ſign can be given by which we can diſtinguiſh a compreſſion made with flegm from an obſtruction: but we may in ſome part conjecture, for in the obſtruction only of the optick Nerve, the Eye is only affected; but if a compreſſion be made of the ſame Nerve by flegm gathered about the roots of the Eyes and Mamillar Paſſages, that matter poſſeſſeth other parts of the Brain, and then all or ſome of the other Senſes are hurt; but if it ſeize only upon the Optick Nerves, there is more plenty of humor ſent forth at the Noſtrils, and the Patient perceives a heavineſs in the fore part of the Head, eſpecially about the Eye-brows.

As to the Prognoſtick part; If this Diſeaſe be abſolute, that is, if there be a total loſs of ſight, eſpecially if it come from obſtruction of the optick Nerves, it is for the moſt part incurable; as we ſee in Palſeys alſo, that they are ſcarce or never cured which come from the obſtruction of the Nerves, eſpecially if the Patient be old. But if the obſtruction be imperfect, which only cauſeth a diminution of ſight, but not blindneſs, there is more hope of recovery, although it cannot be brought about without much pains, and long uſe of Medicines.

But if this Diſeaſe come of humors gathered in the fore part of the head, which compreſs the Nerves, it may be more eaſily cured. So ſaith *Fabricius Hildanus*, *obſerv.* 19. *cent.* 5. That a certain man after a ſtrong vomit loſt his ſight, and that he cured him with giving him the ſame Medicine again; for as the humors being too much ſtirred by a violent vomit, and caſt upon the Optick Nerves, compreſſing them, did hinder the paſſage of the Spirits to the Eyes: ſo the ſame humors being carried away by the ſame Medicine, the diſeaſe became cured. Almoſt the like ſtory is mentioned by *Sennertus* of a certain Student, who taking too ſtrong a Purge became ſuddenly blind. He alſo affirmeth, That certain women after they had conceived with child, became blind through the ſtraightneſs of the optick Nerves, and that this Diſeaſe went away after four or five months, or in the time of their Delivery.

We alſo have ſeen ſome which fell ſuddenly into extream diminution of ſight, who within fifteen daies, were cured by univerſal Evacuations, and ſome revulſions, and by the eaſineſs of the Cure we ſuppoſed that the humor was not faſtened within the ſubſtance of the nerve, but only gathered together in the Brain about the original of thoſe Nerves.

For the Cure of this Diſeaſe, The matter faſtened upon the Nerves, or cleaving thereto, and maketh the obſtruction or adſtriction, is to be evacuated; which cannot be done, except firſt the whol body be cleanſed, as *Galen* ſaith 4. *meth.* The Eye is not to be cured before the whol Head, nor the Head before the whol Body.

And that Remedies may be ſet down in a convenient Method, we will firſt ſet down a Courſe of Diet, which muſt be attenuating and moderately drying.

And firſt, The Air muſt incline to hot and dry, and a thick, cold, cloudy, and moiſt Air, muſt be altogether avoided. Let him eat meats of good and laudable Juyce, avoiding them which beget groſs Juyce, as Pork, and all Swines fleſh, Geeſe, Fiſh, Pulſe, Cheeſe, and the like; as thoſe which are windy, and fill the head, as Milk-meats, and hot Spices, *viz.* Pepper and Ginger, &c. Let his Bread be made with Fennel Water, or with the Seeds thereof; being careful that the Wheat of which it is made, be not mixt with Darnel, which all the Ancients beleeved to be very naught for the Sight: hence in the Comedy, he that derideth another for defect in his ſight; I think (ſaith he) thou haſt fed upon Darnel. In the ſawce to his Meat, and in his Broths, let him uſe things extenuating, as Hyſop, Fennel, Marjoram, Bettony, Sage, Eye-bright, and eſpecially Nutmeg, which ſtrengtheneth the Brain, and clears the Sight. He muſt eat Turneps often, which are thought to quicken the Sight: So do Sparrows, Pidgeons, often eaten. Cold Herbs muſt be forborn, and eſpecially Lettice, which hurts the Eyes.

Let him take but a ſmal quantity of Meat at a time, and let the ſick man never fill himſelf immoderately: Let his Supper be leſs than his Dinner: and to abſtain from a Supper twice or thrice in a week is very good. At his Meat, inſtead of Salt let him uſe this Pouder following:

Take

Take of *common Salt two ounces*: *Eyebright dried two drams*: *Nutmeg one dram*: *Cinnamon two ſcruples*: *Mix them into a Pouder.*

After every Meal, let him take one ſpoonful of the Pouder following:

Take of *Coriander ſeed prepared half an ounce*: *Annis ſeeds, and Fennel ſeeds, of each two drams*: *Cinnamon and Nutmeg, of each one dram*: *Eyebright dried three drams*: *Sugar of Roſes, a double weight to all the reſt. Make a Pouder.*

Wine in this Diſeaſe is not good, becauſe it is too full of vapors, and fills the Head, and is apt to cauſe deſluxions: therefore a Deoction of Sarſaparilla, ſweetened with Liquoris, and aromatized with Coriander, will be very profitable. But becauſe the Diſeaſe is of a long continuance, and all cannot abſtain ſo long from Wine; if we muſt permit Wine, let that be choſen that is weakeſt, and leſs vaporing; and it would be more beneficial if Eye-bright dried were firſt ſteeped therein: and that he may make Eyebright Wine for a long time, in the Vintage let him put Eyebright into a veſſel filled with new Wine, and let the Patient uſe that for his ordinary Drink.

Let his ſleep be leſs and ſhorter than uſual, and let him lie upon his back with his face upwards as much as may be: Let him avoid ſleeping at noon, becauſe it is very hurtful. Let his Exercite be moderate, and inſtead of exercite let him uſe frictions or rubbing of the inferior parts. Let his Belly be alwaies kept looſe, and let him avoid diſturbance of mind.

The courſe of Diet being thus ordered, you muſt begin your Cure from Univerſal Evacuation And firſt you muſt purge with the following Medicine:

Take of *clean Senna half an ounce*: *Fennel ſeeds one dram*: *the Leaves of Bettony, Eyebright and Vervain, of each half a handful*: *Liquoris three drams*: *Boyl them to three ounces. Diſſolve in the ſtraining three drams of Diaphanicon*; *Syrup of Roſes one ounce. Make a Potion and give it in the morning with orderly Government.*

After this firſt Purge, let the Phyſitian conſider ſeriouſly with himſelf, whether he may bleed or not. For it is diſallowed in this cate by almoſt all Practitioners, becauſe it is a Chronical Diſeaſe of long continuance, coming of a cold diſtemper and of a flegmy humor. Hence they fear leaſt by blood-letting, the Brain ſhould be made more cold, and ſo beget more flegm, and leaſt the conjunct cauſe of the Diſeaſe ſhould be more increſſated or thickened, and ſo become more difficult to be diſcuſſed and diſſipated. But although their Opinion may take place as to old men, and ſuch as are of a Phlegmatick Conſtitution, yet it is not to be admitted to them that are yong, or of a hot Conſtitution, eſpecially if there be manifeſt ſigns that blood doth predominate; for then there is no doubt but ſeaſonable blood-letting may much profit. Nay, where the aforeſaid ſigns of blood do appear, it is profitable in the judgment of *Paulus* and *Ætius* after the Vein in the Arm is opened, to open the particular Veins of the Head, and thoſe which are neereſt the Eyes, namely, the Frontal and Temple Veins, and thoſe which are in the corners of the Eyes neer the root of the Noſe. But you may better apply Horſ-leeches to the Forehead, as alſo behind the Ears. Some Practitioners do relate, that ſome by a wound in the Forehead have been cured of blindneſs. In which it is moſt probable that the cauſe of their blindneſs was the compreſſion of the optick Nerves by the Veins and Arteries adjoyning, and ſwelling with too much blood, which the Wounds aforeſaid emptied forth. Whence *Spigelius* (as *Plempius* reports in his Book of the Eyes) was wont in *Gutta ſerena* with good ſucceſs to open the middle Vein in the Forehead, and let it bleed while it ſtop of it ſelf.

But if the ſuppreſſion of the terms went before this Diſeaſe, you muſt draw blood from the lower veins, or apply Leeches to the Hemorrhoids: if the Patient had formerly a flux thereof, which then is ſtopped, or if he have a very hot Liver, or be of a melancholly temper.

Afterwards the whole body is to be more exactly purged by this following Apozeme.

Take of *Fennel Roots, and Sarſaparilla, and Flower-de-luce-roots, and Elicampane roots, of each one ounce*: *the Leaves of Bettony, Marjoram, Balm, Eyebright, Fennel, Vervain and Celendine the great, of each one handful*: *Liquoris ſliced, and Raiſons of the Sun ſtoned, of each one ounce*: *Annis-ſeed, and Fennel-ſeed of each three drams*: *clenſed Senna two ounces*: *Gummy Turbith and Agerick newly made into Troches, of each two drams*: *Ginger and Cloves of each one ſcruple*: *flowers of Stœchas, Roſemary, and Lavender, of each one ſmall handful*: *Boyl them in five quarters*; *that is a pint and a quarter of water*; *diſſolve in the ſtraigning four ounces of white ſugar*: *make an Apozeme, clarifie it and perfume it with two drams of the beſt cinnamon, for four mornings draughts*: *After the Apozeme is done, let him take theſe Pills.*

Take of *the maſs of Pill, Lucis major, and Cochia the leſs, of each half a dram*: *malax them with Bettony water, make ſix guilded Pills thereof, which let him take early in the morning.*

After this general Evacuation the antecedent Cauſe is to be revelled; and the conjunct Cauſe is to be derived and diſcuſſed. For this Frictions of the extream parts, eſpecially beneath, are to be uſed every morning.

Cupping-Glaſſes muſt be applied to the ſhoulders and back without ſcarification; eſpecially to the

the hinder part of the Head with ſcarification; for they do ſo powerfully draw the humors from the fore-parts and the principle of the Nerves, that ſome preſently after the application thereof have recovered their ſight: At the ſame time apply a Veſicatory to the hinder part of the neck, and let the Blyſters that are raiſed be kept long open, with Beet or Colewort Leaves often applied.

When the Veſicatory is dried up, apply a Cauſtick to the hinder part of the head or neck between the ſecond or third Vertebra; or (as it is now moſt uſual) apply two Cauſticks to the Neck behind upon the fourth and fifth Vertebra; ſo that the back bone may lie untouched between them, and both may be Cured with one Playſter.

Inſtead of Cauteries a Seton applied to the ſame part is moſt efficacious; but the tenderneſs of our Country men hath almoſt aboliſhed the uſe thereof.

If the aforeſaid Cauteries avail not, you may lay a potential Cautery to the Coronal Suture, which ſometimes hath done the work when other Remedies have failed.

When theſe things are doing, preſently after univerſal Evacuation by ſeege, you muſt order a ſweating Diet of the Decoction of Guajacum Saſſaphras, and the Roots of Sarſa, according to the method preſcribed by us in the Cure of the Cold diſtemper of the Brain. Obſerving this; That towards the end of the Sudorifick Decoction, you ad thoſe things which peculiarly reſpect the Eyes; as Vervain, Fennel, Eyebright, and Celondine the greater.

And for the better drying of the Brain; let the Bags preſcribed in the Chapter above mentioned be applied to the Temples if you fear not an inflamation.

Alſo after the Sudorifick Diet it is very convenient to uſe Sulpherous and Bituminous Baths and waſhings of the head; becauſe they are very proper for the correcting of a Cold and Moiſt Diſtemper, for the conſuming of Flegm, and ſtrengthening the brain.

Beſides the univerſal Evacuation of the Body and Head, particular may be ordered; as Medicines that cauſe ſpitting; called Apophlegmatiſm; by which the Rhewm is brought out of the Brain by the Pallate; which may be made either in the form of a Gargariſm or Maſticatory; according to the forms preſcribed in the Cure of the cold diſtemper of the brain.

Errhins and Sternutatories or Neeſings are condemned by almoſt al Practitioners in this Diſeaſe; becauſe they draw humors to the eyes: but yet if ſome of the milder and gentler ſort be uſed (after an exact purging of the whole body and head) for ſome few dayes they may be profitable in regard they may by degrees draw forth and derive the humor which cauſeth the Diſeaſe, and is faſtned in the Optick Nerves; nor can they fetch any thing from the profound part of the brain to the fore-parts: Otherwiſe in every derivation which is an evacuation by the part affected, or that which is neer unto it; we ſhould alwayes fear leſt there ſhould be an attraction to the part affected, which is eaſily hindered by univerſal Evacuations which ought to precede; and thoſe Errhins may be made of the juyce of Beets and Marjoram with white Wine in which Manna hath been diſſolved.

But a ſtronger and yet ſafe Errhine may be made of the powder of Tobacco corrected with Cephalicks, and Oxydorcicks; or Medicines that help the ſight; for by that the Rhewm is drawn forth rather by the Palate than the Noſtrils; and the brain is ſo fortified, that it wil not ſo eaſily receive the defluxion of humors from other parts. The Compoſition whereof is as followeth.

Take of *dryed Tobacco one ounce: the leaves of Sage, Marjoram, Bettony, Eyebright, the Flowers of Clove-gilli-flowers, and Red Roſes, of each one dram: make a pouder to be ſnuffed into the Noſtrils for ſome few dayes.*

Neither is it ſufficient once to cleanſe the Body of Excrementitious Humors with univerſal Purging; but you muſt keep it in that condition all the time of the Cure; therefore with Purges intermixed, the Excrements which daily encreaſe muſt be brought forth; which may be done with uſual Pills made after this manner;

Take of *the beſt Aloes half an ounce: clean Senna, Turbith, Hermodactls, and Agarick newly trochiſcated, of each two drams: Diagridium, one dram: Mace, Cloves, and Eaſtern-Saffron, of each ſeven grains: ſprinkle them with the juyces of Marjoram and the greater Celondine: then dry them again in the ſhade. And with the Oxymel of Squills make a maſs of Pills of which let him take half a dram or two ſcruples twice or thrice in a month.*

While theſe things are uſed, you muſt continually labor to ſtrengthen the brain and the eyes: and the Patient muſt take diverſity of Medicines, leſt by taking the ſame a long time, it prove Nauſeous unto him; and leſt Nature be too much enured to a Medicine, and ſo it looſe its Operation. Old Phyſitians ſay, Treacle is reputed to be of excellent vertue to this purpoſe, which may be taken by a dram every night with Fennel, Eyebright, or Celondine water twice or thrice in a week. Nutmeg eaten every morning faſting, is much commended if it be long chewed that the vapor may be carried to the Eyes; if you fear that the ſwallowing down thereof ſhould offend by reaſon of the heat: it may be ſpit forth after it is chewed. Candid Myrabolans taken in the morning are thought to cleer the ſight exceedingly.

The uſual Opiate is thus made:

Take of *Conserve of Bettony, and Rosemary flowers, of each two ounces: Candied Myrobalans two: old Treacle two drams: the Leaves of Eyebright poudered, three drams: Fennel seed two drams: Nutmeg, Cinnamon, and Cloves, of each one scruple: With the Syrup of the Juyce of Fennel, Rue, and Celondine made up with Honey, make an Opiate.*

Let him take thereof the bigness of a Chesnut, drinking after it a little Wine mixed with Fennel Water.

Nor must you omit external Medicines which strengthen, warm, and dry the Head; of which sort is the Cephalick Pouder for the Hair, a Cap and Fumigation, mentioned by us in the Cure of the cold distemper of the Brain.

Finally, You may apply Topical Medicines to the Eyes to strengthen them: these are usual in Authors; but they are of little force which cannot reach to the optick Nerves; but if any desire to try some of them, they may find enough of them in my Treatise of the Cure of a Suffusion.

In a desperate case when all other Medicines have been used in vain, a Vesicatory applied over the whol Head (being shaven) in form of a Cap, hath many times been very successful: if it be twice or thrice used after the drying up of the former Blisters, it is more advantagious.

CHAP. II.

Of the Disease of the Vitrous, or Glassy Humor.

The Vitrous Humor is next under the Crystalline, and therefore it is made by Nature transparent, that the Species carried to the optick Nerve may be pure and clean. If therefore the cleerness of that humor be hindered by the mixture of another, and so made dusky; according to the degree of that duskiness or foulness, the sight is either diminished or abolished.

Moreover, This humor may be out of order in respect of its scituation; namely, when any part of it by a blow or contusion shall be brought before the Crystalline; for then the sight will be darkened, in regard the vitrous Humor is more thick than the watery, and therefore the species of the objects cannot be carried pure and cleer unto the Crystalline.

The first affect, namely the Mixion of a Humor with it, cannot be perceived by any signs, but only it is judged probable by reason, for the vitrous Humor cannot be seen, or its condition known; and therefore Practitioners are constrained to confound it, and to make it one with *Gutta serena*, because no fault appears in the Eye, and this they do without offence to the Patient, in regard any humors that are mixed with the vitrous, are to be discussed with the same Remedies that a *Gutta serena* is cured.

But you may know that this vitrous humor is disordered in respect of its Scituation, when it appeareth white under the *Pupilla*, yet it is not easily distinguished from Suffusion, except the antecedent and first cause be diligently observed. For a Suffusion is caused by a simple defluxion of an humor; but this transposition or displacing of the vitrous humor useth to come of a Wound or Contusion.

This last Disease is incurable, for the vitrous humor being displaced can by no art be reduced to its former condition. But this by Nature hath sometimes been done, and therefore the whol business is to be committed unto her.

CHAP. III.

Of the Diseases in the Crystalline Humor.

The Crystalline Humor is the chief instrument of Sight, and therefore ought to be kept more pure and perspicuous than the rest, that that Sence may more freely be exercised. And if it be soiled in the least measure, the sence of Seeing is much hindered.

The chief Disease whereby the purity thereof is infected, is called *Glaucoma* (or the changing of the Crystalline Humor into a fiery redness) and this happens when the Crystalline Humor is made thick by dryness, as in old people, from some drying and condensing cause it is often seen.

This Disease is known, by a plain appearance of a thick white about the *Pupilla*, and when all objects are apprehended by the Patient as through a cloud or smoak. But it is hard to distinguish this Disease from a Suffusion which representeth such a whiteness about the *Pupilla*: hence it is that many Authors do not distinguish between a *Glaucoma* and a Suffusion. But they which diligently observe may distinguish them thus: In a Suffusion there is a white in the very Pupilla, and very neer the Membrane called *Cornea*; but in a *Glaucoma* it lieth deeper.

This

This Diſeaſe is incurable; eſpecially in old folk in whom the drineſs of the part cannot be amended; but if it be not manifeſt that the fault is in the Cryſtalline, and there is a ſuſpition of a ſuffuſion; you may uſe the remedies preſcribed for it.

Moreover, the Cryſtalline may be out of place, namely when the broader part of it which is flat like a Fetch or Lentil is not directly againſt the hole of the *Pupilla*, but either is too high or too low, and then objects appear double when one Eye only ſuffereth; becauſe the parralel or ſtreight line is loſt which ought to be one and the ſame in both Eyes, that whatſoever thing is ſeen by both Eyes may appear but one and the ſame. And if they be not in that order, things are ſeen double; which you may prove by depreſſing or lifting up one of your Eyes with your finger: for then the parallel is loſt, and things appear double: But this Depravation of ſight by which Objects appear double, comes not only of the Cauſe now mentioned, but alſo from vapors, or water which hurt the Cryſtalline; by which the viſive Spirits are divided, whence it comes to paſs that the ſpecies of the ſame thing is received into two places, which Drunkards uſually perceive when they ſee double.

Secondly, The ſcituation of the Cryſtalline is altered, when it declineth backward or cometh forward, if it comes forward to the Pupilla, then things neer at hand are not ſo rightly perceived as thoſe which are more remote, as in old men often. But if it decline backward towards the Optick Nerve, things neer are truly ſeen, but not afar off, and then is the Diſeaſe called *Myopia*, which was mentioned in the Preface; where we ſhewed, That theſe Diſeaſes are only Cured by Spectacles.

Thirdly, The Cryſtalline is out of its place when it tendeth either to the right or left ſide, which is called *Strabiſmus*, or Squinting; when the *Pupilla* is not directly but oblique upon the Object, and appeareth not in the middle of the Eye, but in one ſide: ſo that there appeareth more white in one part of the Eye, than in the other.

This Diſeaſe comes not only from the diſplacing of the Cryſtalline, but alſo from the Evil Diſpoſition of the Muſcles which move the Eyes: which is either natural, or elſe proceeds from a Palſey or Convulſion of the ſaid Muſcles.

Of what Cauſe ſoever it cometh, if it be connatural, it is incurable: but, if it come from Palſey or Convulſion of the aforelaid Muſcles, you may find out a way of Cure, in my Treatiſe of head Diſeaſes.

Finally, Other Depravations of ſight may come from the inverſion of the Cryſtalline be it greater or leſs; as when ſtreight things appear crooked, or when the Objects ſeem to be foulded: which happened to a certain Phyſitian (as *Sennertus* reports) who going up a Ladder to take a Book from a ſhelf, and turning his Eyes violently upwards, ſaw al things afterwards turned upwards as though men walked upon their Heads, which came by the attraction and diſplacing of the Cryſtalline. For a quarter of a yeer after when again he turned up his Eyes violently, his natural ſight returned, and al things appeared in right order.

Hence it appears that by a violent motion of the Eye that the Cryſtalline may be diſplaced, and again by the ſame motion be ſet right. I ſuppoſe that the diſplacing of the Cryſtalline was thus, It was ſo inverted that the fore-part of it (which is more depreſſed than the other) was not right againſt the *Pupilla*; but rather its ſide which being more round and convex might repreſent the ſpecies of the Objects inverted, as we may obſerve in round Glaſſes, which diſcover the Object inverted; and this is true from the principles of the Optick art: for in a Medium that is Convex and thick, the ſpecies are ſo broken, and as it were croſs-cut, That they which come from the upper part of the Object, do repreſent the lower part; and ſo contrarily, but if the inverſion of the Cryſtalline be leſs, ſo as both the depreſſed part of the Cryſtalline and alſo the Convex part thereof, be right againſt the *Pupilla*, the Objects may ſeem crooked. Although that Depravation of ſight whereby Objects ſeem crooked, may come by other means: namely when any part of the Cryſtalline is mixed with the watery humor then by reaſon of inequality of the Cryſtalline in regard of thickneſs, the refractions are divers, which are the Cauſe of Depravation of ſight whereby things appear crooked. This may be demonſtrated by a clear Example: A ſtaffe put half into the water, appears crooked for this Cauſe, namely, The ſpecies of that part in the water, when it is carried out of the water into the air, from a thicker to a thinner Medium, is broken by the perpendicular; but that part which is in the air is not broken, becauſe it doth not paſs through divers Mediums as that which is in the water: Hence it comes that the ſtick ſeems crooked. After the ſame manner the ſpecies of the object which is carried into the thicker part of the Cryſtalline is more broken, than that which is carried to the thinner, which is in its natural ſtate, and not mixed underneath with the watery humor; and ſo by reaſon of the divers refractions the objects appear crooked.

But ſince Medicines are to no purpoſe, we ſhal preſcribe none for theſe Diſeaſes.

CHAP. IV.

Of the Diseases of the Watery Humor, and especially of a Suffusion.

THe Watery Humor is out of its Natural Condition, when it is distempered in quantity or quality. When the Distemper is in quantity; it is enlarged or diminished, and makes the *Pupilla* be dilated or contracted, which Diseases shall be mentioned in their places. When the distemper is in quality, it becomes thicker, and that comes from another Humor mixed with it, and that is called Suffusion, which we here speak of. For although *Galen* 1. *de Symp. caus. cap.* 2. sheweth that a Suffusion may come from the condensation of the watery humor without the access of an excrementitious Humor: yet because it happens seldom, and is known rather by imagination than art, and is altogether incurable: omitting that, we shall speak of that Suffusion only which cometh from the afflux of another excrement or humor. This is called in Greek ὑπόχυμα, in Latin *Suffusio*, by the Arabians, Water, vulgarly a *Cataract*. Some Authors would distinguish these names, and make them signifie divers sorts of this Disease: They call it in the beginning (when the sight is only a little darkened) a Suffusion; but when it is grown older, and something gathered into the Pupil appears like water, then they call it only *Aqua*, Water: but when the matter is grown thick in the Pupilla, and the sight almost gone, then they call it a Cataract. A Suffusion comes from a serous Watery Humor spread in the space between the Cornea and the Crystalline: and since a Watery Humor is contained in that space, it may well be reckoned among the Diseases of the Watery Humor.

This is the Cause of a true Suffusion: There is another Bastard Suffusion which comes from vapors sent from the Stomach and other parts into the Eyes. *Galen* 4. *de loc. aff. cap.* 2. taught that vapors may be sent from the Head to the Eyes, and make a bastard Suffusion; but although Authors speak of two sorts of Suffusions, yet they are for the most part united, and a spurious or false pleurisie is complicated or joyned with a true one; because vapors sent from the lower parts to the Brain, are easily carried to those parts of the Head which are weakened with any Disease, and this appears in that all troubled with Suffusions are less troubled, and see better in the morning than at noon or night, because after dinner or supper many vapors are sent up from the Stomach to the Eyes which disturb the sight. And Experience teacheth, That men so diseased have their sight more dull and dark presently after meat, than a few hours after. Moreover, all that have a Suffusion relate that they see in the Air little bodies, as Gnats, Flyes, Hairs, Cobwebs, and the like; which could not be but by the gross vapors which are sent to the Eye, and there move: for although Authors suppose that these representations depend upon some thick Humors contained in the Eye, which make a Suffusion: yet this is not credible, Because then it should alwaies move in the Eye, to represent those little Bodies which fly in the ayr, which is contrary to reason. But rather without question, the vapors are in perpetual motion, and so can represent those flying fancies.

A Watery Humor is the chief and most ordinary cause of a Suffusion, yet other Humors at least in a final quantity may be mixed therewith: and if Choller be mixed, then it is citrine or yellowish; if Melancholly, then it is a black Suffusion.

And those Humors use to flow to the Eyes when they are weak, either Naturally, or by Accident.

From a Natural debility comes a thrusting forth of the Eyes, for they who have such Eyes, are very subject to a Suffusion; for such Eyes use to be great, and therefore the vertue spread abroad is less in them: as also by reason of their largeness they do more easily receive humors and vapors. External causes make an accidental or adventitious debility, as a stroak, contusion, baths, a Southern and rainy habitation or season, heat of the Sun, smoak, continual reading, especially by candle light, and the like: All which may also cause a flux of humors to the Eyes.

Now the Humors flow from the Brain to the Eyes by the Veins, by the Tunicle called *Uvea*, and by the Optick Nerve. The Veins by which they flow are divers: either those which come from the *Pericranium* to the *Conjunctiva*, thence to the *Cornea* and *Uvea*: or those which come from the *Meninges*, from which some branches come to the Membranes of the Eye, from which Membranes, especially from the *Uvea*, the excrementitious humors may easily fall into the watery humor being so neer.

Finally, Humors may easily be carried by the Optick from the Brain; by the *Tunica Retiformis* and *Aranea*, to the Crystalline; and then the matter of the Suffusion sticks upon the superficies of the Crystalline. Although a Suffusion for the most part comes by a defluxion, yet sometimes

it

it may come by congeſtion or gathering, when that nouriſhment of the Eye is not well changed, and the expulſive Faculty is ſo weak that it cannot expel ſufficiently the remaining excrements, ſo that they are by degrees gathered together about the *Pupilla*, and ſo make a Suffuſion, in which caſe other humors are ordinarily diſturbed, and difficult diſeaſes are produced.

The Differences of a Suffuſion are taken from the thickneſs and quantity of the humor cauſing it, and from the place in which the humor reſideth.

In regard of thickneſs more or leſs, the ſight is more or leſs offended, for if the humor be thin and ſerous, of which the Suffuſion is made, which is cured by pricking, as *Galen* taught 14. *Meth. cap. ult.* The ſight is little worſe, and it is called a Suffuſion only begun, if it be ſomwhat thicker the ſight is darker; if very thick blindneſs followeth.

In reſpect of the quantity and the place, Either the humor poſſeſſeth the whol Eye, and the ſight is equally hindered which way ſoever it be directed; or it poſſeſſeth one part of the Pupil more than another, and ſo the objects are not ſeen wholly at one direct view, nor can many objects be ſeen at one time: but if the humor be very little, and poſſeſs the middle of the Pupilla, the objects appear with holes through them. But if the matter be divided into divers parts, poſſeſſing divers parts of the Pupilla, the forms of Gnats ſhall ſeem to be before the eyes: All theſe differences are exactly diſtinguiſhed by *Galen*, 1. *de ſymp. cauſis*, *c.* 2.

Moreover, In reſpect of the place or Scituation of the matter, other differences may be made, as ſomtimes the matter is in the very hole or cavity of the *Uvea* about the *Cornea*; ſomtimes about the *Uvea*, and between that and the watery humor; ſometimes it is mixed with the Watery Humor; and finally, ſomtimes it is between the Cryſtalline and Watery Humor..

Some Differences may be taken from the figure or ſhape of the matter, which *Galen* relates 1. *de ſympt. cauſis cap.* 2. and 4. *de loc. affect. cap.* 2. for as the figure of the humor adjacent to the Pupilla is various, ſo divers objects are preſent thereunto, as Gnats, Hairs, Cobwebs, Circles about Candles, and other things.

The knowledg of this Diſeaſe, is firſt in diſtinguiſhing a true from a baſtard Suffuſion, and then in the diſcovery of the differences of true and right Suffuſions.

A true Suffuſion doth for the moſt part affect only one Eye; but if both be affected, they are not at one time, or alike affected, as in a ſpurious Suffuſion.

Secondly, In a true Suffuſion, ſome dark matter appeareth in the Pupilla, which doth not in a Spurious or Baſtard Suffuſion. But this is not alwaies a true ſign; for if the Suffuſion cometh of a thin and ſerous humor, becauſe it is no thicker than the Watery humor, there appeareth no change in the Eye, by which Phyſitians are ſomtimes deceived, not knowing that kind of Suffuſion, take it for *Gutta ſerena*, perceiving no change in the Pupilla: but this kind is eaſily diſtinguiſhed from *Gutta ſerena*. Firſt, in *Gutta ſerena* the ſight is quite gone, or much diminiſhed, no hurt appearing in the Eye: On the contrary, In a Suffuſion which we cannot ſee, there is only a ſmal decay of ſight, becauſe the ſerous humor from whence it proceeds, is thin, and tranſparent, ſo that it may be pierced by the ſpecies of objects like Glaſs. Secondly, They differ in this, For the moſt part in a Suffuſion, the Sight is not equally hindered in all parts of the Pupilla; but the objects ſomtimes are ſeen better when they are direct before the Eye, ſomtimes when they are oppoſite to the corner of the Eye, becauſe the humor is thicker or thinner in one part of the Pupilla than the orher.

Thirdly, In a true Suffuſion the Symptomes are continual, and have no intermiſſion: in a baſtard Suffuſion, they are ſomtimes encreaſed and remitted, as the vapors are more or leſs which are ſent unto the Brain. So they are fewer when the Stomach is empty, than when it is full, eſpecially preſently after meat, for then a greater company of vapors do aſcend, which ſent to the Eyes, repreſent to the ſight, Flies, Gnats, Cobwebs, and ſuch like ſmal bodies, not alwaies, but at ſome times only. Which little bodies repreſented in the Air, depend upon the Vapors as aforeſaid: but in regard the Eyes are weakned by a true Suffuſion there is almoſt a continual ſending up of vapors unto them, and therfore there is a continual appearance of theſe little bodies flying in the Air. Moreover, there is a conſtant darkneſs of ſight in a true Suffuſion, being alwaies after the ſame manner, as if all the objects were ſeen through a cloud or thick glaſs, which is the proper ſign of this Diſeaſe: but in a baſtard Suffuſion, there is ſomtimes a greater, ſomtimes a leſs, and ſomtimes almoſt no dimneſs at al of the Sight, even as the vapors are many, or few, or none that are ſent to the Eyes.

Laſtly, A true Suffuſion grows in a ſhort time, and is confirmed for the moſt part in ſix Months, and ſomtimes it encreaſeth in a few daies: and *Fernelius* ſaith, 5. *Pathol. cap.* 5. that a Suffuſion was perfect in one day, which we alſo have often ſeen: but a baſtard Suffuſion continueth many yeers without encreaſe.

The Differences among true Suffuſions are theſe:

In a Suffuſion beginning certain ſmal Bodies, as Hairs, Gnats, Flyes, pieces of Wool and Cobwebs, fly before the Eyes.

But when it is far gone, the Air appears cloudy, and the objects are ſeen thicker, as through a glaſs;

glaſs; the colour of the Pupilla is changed, and it appears either troubled or cloudy, or like filthy Glaſs, or of a sky colour when a ſuffuſion is perfect, the ſight totally periſheth: the Pupilla is either white, or of ſome other colour is mixed with white.

Some ſignes are taken from the Colour: for when it is like a Pearl in colour, it ſignifies that the flegm is ſtill fluid and tranſparent: when it is white as Chalk, then it ſignifies a thick and compacted matter: when yellow, then flegm and choller are mixed: when black, it ſhews Melancholly.

The Place in which the Suffuſion grows, is thus known; For if the matter be placed between the Uuea and Cornea, the Pupil appeareth more dark, becauſe the matter is neerer to the beholder: Moreover the Pupilla is dilated by the Humor contained therein; and when the Diſeaſe is confirmed, white or red veins, or ſwellings are perceived to be about the Iris, or circle of the Eye; or certain white ſpots appear about the Pupilla.

If the Matter be contained between the Cryſtalline and the Uuea, contrary ſymptoms wil appear: as alſo the Pupilla wil be contracted if the matter lie deep, and enlarged if the matter lie higher.

The Prognoſtick of this Diſeaſe, is to be diverſly made, according to divers ſeaſons: For when a Suffuſion is only begun, when the Patient can perceive an object as through a cloud, it is curable as *Galen* ſaith, 14. Meth. Cap. ult. and *Celſus* lib. 6 cap. 6. which Opinion wants a reſtriction: Namely, if the Patient be yong, but in old it is incurable: and if the eyes be not naturally of a weak conſtitution. We alſo have ſeen ſome that have been cured in fifteen dayes ſpace, of a Suffuſion newly begun; who have been above fifty years of age, only by univerſal Purging, ſweating Diet, and a Veſicatory, without any other application of Topicks.

This Cure is better wrought in a warm air and in ſummer time, becauſe the Pores are then open, the matter of the Diſeaſe is more moveable and obedient; ſo that oftentimes it diſchargeth it ſelf by ſeege; which, is very much to the Cure of this Diſeaſe: as *Hippocrates* ſheweth, Aph. 16. Sect. 6. in theſe words, *It is a good ſign, when men with ſore Eyes, have a looſe belly.*

If a Suffuſion come from an acute Feaver, a Peripneumonia, a Phrenzy, or from a violent pain of the Head, it is hard to be Cured.

A Cataract or Suffuſion confirmed when the matter is grown thick, cannot be diſcuſſed with Medicines, but muſt be couched with a Needle.

This Operation is not ſafe; and often hath ill ſucceſs: For either the Tunicle Uuea is torn, or by the pain and inflamation, a new flux of Humors is brought to the Eye, which hath been long before weak: and many other inconveniences by which the ſight is for ever loſt. But ſince this Operation hath been ſometime ſucceſful, it may be tryed by thoſe who have no other hopes of Cure; For it is better, as *Celſus* ſaith, to try a Doubtful Medicine, or Remedy, than None at all.

In a confirmed Cataract, if when the other Eye is ſhut the Pupilla appeareth larger in the Eye affected, there is hope of Cure by Couching; but if it be no larger, it is uncurable; as *Galen* teacheth, 1. *de ſymp. cauſ. cap.* 2. becauſe the optick Nerve is obſtructed, and the ſpirits cannot come to the Pupilla, though it be open.

But if the Patient perceive no light when the Pupilla is enlarged by the ſhutting of the other Eye, he cannot be recovered by the Needle, becauſe the viſive ſpirit is troubled and obſcure, and therefore unfit for ſight.

A black Cataract, free from al brightneſs, can neither be Cured by Phyſick, nor Chirurgery; becauſe the Viſive Spirits are deſtroyed; but a cleer Cataract that hath ſome ſplendor, is Cureable.

Theſe alſo are uncurable for the moſt part, a green, dark, very yellow, and hard Cataract; and that which moveth and is colored like quickſilver.

A Cataract which repreſenteth objects ful of holes, is not to be tampered with: For ſince the matter is in the Center of the Pupilla, it is to be feared, leſt when the Needle is thruſt in, the whol Pupilla be filled with the matter, and ſo the ſight be utterly loſt.

The Operation of the Needle, is more ſucceſful, in a ful Eye; and that which keeps its natural greatneſs: But if the Eye be ſmal and decayed, it is leſs ſucceſful.

In Old men, this Operation is not to be tryed; nor in Children, in them the Diſeaſe is incurable; in theſe the Humor is too ſoft being not ripe; there is moſt hope of ſucceſs in yong perſons.

If this Operation be, when ſome part of the Suffuſion floweth down (if the eye be compreſſed) and appeareth more large, and after returneth to its former ſtation and figure, it is not ſucceſful; becauſe the Cataract is not yet ripe, but thin and crude: But if by a compreſſing with the finger there is no change of the ſhape and figure of it; it is then ripe, and may be couched with a Needle. But we muſt take notice, That the ripeneſs or thickneſs of the Cataract ought to be moderate and not too much compacted, that it may be eaſily couched: for it ought to be like a thin skin which may be rowled about the Needle and ſo couched down; for if it be too thick and ſolid, it cannot be couched, which

which you may perceive when it is like Chalk or Hail. Contrarily that which is fit for couching uſeth to be Sky-colored, and Sea-green, of the color of Iron or Lead not black.

The Cure of a Cataract muſt be directed not only to the Conjunct, but to the Antecedent cauſe. And therefore you muſt purge the whol Body, and eſpecially the Brain very exactly. After you muſt diſcuſs that humor which obſtructeth the Pupilla, and ſome way ſoften it.

Which intentions, when they are almoſt the ſame which were propounded in the Cure of *Gutta ſerena*, we may uſe the ſame Remedies for Diet, evacuation or purging of the whol Body, for revulſion of the humor offending, and for the ſtrengthening of the the Head and the Eyes, ſo we ſhall not in vain repeat them.

Having therefore firſt uſed all that Method which was laid down for the Cure of *Gutta ſerena*, we will declare unto you thoſe Medicines, which belong properly to the taking away of the matter about the Pupilla. And though Topical Medicines are counted little worth according to *Galens* Opinion, 2. κατα τοπους, who ſaith that they promiſe more than they can perform: yet their Lawful uſe is not to be rejected: and Experience hath taught, by very good Authors confirmed, that Cataracts in their beginning, after univerſal Medicines uſed, have been cured with Topicks, that is, Medicines applied to the Eye.

Firſt therefore begin with mild diſſolvers, and ſuch as dry not overmuch leſt the matter grow hard, and be made unfit to be diſſolved: then uſe mollifiers with your diſſolvers, that induration may be hindered, and it may more eaſily be diſſolved. For this purpoſe the following Fomentation may be firſt uſed.

Take of *the Leaves of Rue, Fennel, Eyebright, the greater Celondine, of each one handful: Fœnugreek ſeeds one ounce: Chamomel and Melilot flowers, of each one pugil: Boyl them in three parts of ſpring Water, and one part of white Wine added towards the end of the Decoction. Foment the Eyes with a ſoft ſponge dipt in the ſtrained Liquor, morning and evening.*

Of the ſame Decoction you may make a Fumigation, covering the head that it may be received into the Eyes.

In the beginning of the Diſeaſe, while the defluxion is new, and that revelling Medicines are uſed, it is good to waſh the Eyes with only red Wine, which by its aſtriction hinders the defluxion, and by its ſpirits diſcuſſeth and diſſolveth it.

In the progreſs of the Diſeaſe, a Fomentation of white Wine, in which *Crocus Metallorum* hath been infuſed, is moſt profitable.

It is no leſs profitable to let a child eat ſweet Fennel Seeds in a morning, and afterwards breath into the Eyes.

As alſo to let him lick them, or to let a Dog lick them.

Alſo Bread hot from the Oven, in which is ſweet Fennel ſeed cut in the middle, may be ſo placed to the Eyes that they may behold it when they are wet with the vapor.

Theſe Medicines are to be uſed in the morning.

At night you may apply this Cataplaſm:

Take of *Fenugreek ſeed beaten one ounce: Aloes half an ounce: Saffron one dram: Make them into fine pouder, put it into white Wine wherein* Crocus Metallorum *hath been infuſed, and make a Cataplaſm to be applied to the Eyes at night.*

Many commend Pidgeons blood, put hot into the Eyes, for with the Natural heat of that Creature the part will be much ſtrengthened, and the excrementitious matter diſſolved: but becauſe the heat will quickly depart from the blood, it is better to take a yong callow Pidgeon, and ſlit it in the back, and apply it to the Eye.

With theſe Medicines you may diſcuſs the matter if it be poſſible.

Topical Medicines called *Collyria*, which are dropped into the Eyes, are of little force, and thoſe are they which *Galen* ſaid did promiſe more than they perform; for all their vertue is ſpent in the *Cornea*; neither can they reach to the internal parts, except they be made very ſharp, by which, pain would be cauſed, and a greater defluxion: hence many that have uſed them immoderately, have from a light infirmity become ſtark blind. But becauſe many of thoſe *Collyriaes* are found in Authors which have good report by them, leſt we ſhould ſeem defective, we will ſhew ſome of the choyceſt, that they who pleaſe may try them.

Take of *the beſt Honey two pints: Fennel Roots, and the Roots of long and round Birthwort, of each one pound: the leaves of Rue, Eyebright, Celondine the greater, and the tops of Fennel, of each ſix handfuls: Centaury the leſs three handfuls: Roſes four pugils: the Urine of a Boy two pints. Mix them all in a glaſs Veſſel and diſtill them in* Balneo Mariæ. *Drop this Water often into the Eyes.*

Or you may make Bread with the Bran in it, with the Pouder of Rue, Celondine, Eyebright, Bettony, and Fennel with a little Honey, which as ſoon as it is drawn and cut in pieces, muſt be put between two Pewter or Silver Diſhes; from whence will come a Water, which *Zechius* affirmeth, dropped

into

into the Eyes, doth wonders. Alſo this following is highly commended.

Take of *white Violet Leaves, one handful: Radiſh ſeed, one dram: Amoniacum, half a dram: mix them, and pouder them; then ſteep them twenty four hours in one pint of Fennel water: then let them boyl a little ſpace: add to the ſtraining one ounce of the clarified juyce of Fennel: the Balſom of Peru, two drams: make a Collyrium: which* Zechius *ſaith, Dropt into the Eyes morning and evening, after the Body is ſufficiently Purged, doth ſo cleanſe the Eyes, that it takes away a Cataract wonderfully without Couching.*

Hollerius Deſcribes a Water, that he ſaith, Cured one that was Nine yeers blind: Which is this.

Take of *the juyce of Smallage, Vervain, Germander, Burnet, Avens, Sage, Celondine, Rue, Knot-graſs, Chickweed, the pouder of Cloves, of each one ounce: groſs Pepper, Nutmeg, Lignum Aloes, of each three drams: ſteep them all in the Urin of a Boy, and the ſixth part of Sack: Let them boyl a little, then ſtrain them, and preſs them, put it in a Glaſs cloſe ſtopt; drop every night ſome of it into each Eye.*

The juyce of Brooklime only, being often dropt into the eyes, hath ſomtimes Cured a yong Suffuſion, when a Cautery alſo hath been applied to the Coronal Suture.

The Juyce of Celondine and Calcitrap mixed together, are as good.

Quercetan, in his Diſpenſatory doth much commend Water in which *Crocus Metallorum* hath been infuſed, which is thus made.

Take of *the Water of the greater Celondine, ſix ounces: Crocus Metallorum, one dram: infuſe them, and drop three or four drops of this Water warmed into the Eyes for three or four times a day for a long continuance.*

Fonſeca ſaith, That he knew one Cured by this Water, who was very dim ſighted many months: This is the excellency of it, which few other Medicines have; It cleanſeth very powerfully without any ſharpneſs.

The ſame *Fonſeca* ſayes the Water following is admirable.

Take *many Swallows, beat them with their feathers in a Morter: put to every pound of them four ounces of bread crums: of white wine, four pints: infuſe them ſix dayes, and diſtil them in Balneo till they are dry: then ſet that Water in a Glaſs in the Sun for twenty dayes, and drop it into the eyes morning and evening.*

There is a Water made of Roſemary flowers, which diſcuſſeth Films in the Eyes after this manner.

Take of *Roſemary-flowers as many as are ſufficient to fill a Glaſs which muſt be well ſtopt, and ſet it in the Wall againſt the South Sun, thence will an Oyl come, which with a feather anoint the Eyes with.*

Some Authors commend the Galls of Beaſts becauſe they cleanſe and diſcuſs ſtrongly, but they cauſe pain with their ſharpneſs, and therefore are ſeldom uſed.

Forreſtus, Obſ. 35. Lib. 11. commends a certain Fiſh in his Country, out of whoſe Liver there comes a moiſture, by which he ſaith Cataracts are preſently, as by a miracle, Cured. See in the place cited the uſe of it. *William Lozellus* ſaith, That he hath Cured many ſtark blind, after univerſal Medicines have been uſed, with this Water.

Take of *the Liver of a ſound Goat, two pound: Calamus Aromaticus, and Honey, of each half an ounce: the juyce of Rue, three drams: the Waters of Celondine, Vervain, Fennel, Eyebright, of each three ounces: Long Pepper, Nutmeg, and Cloves, of each two drams: Saffron, one ſcruple: Roſemary-flowers bruiſed, half an handful: Sarcocol, and Aloes, of each three drams: the Gall of Ravenous Birds, Capons, or Partridges, one ounce: let thoſe that are to be ſliced be ſliced, and that are to be bruiſed be bruiſed; then mixed altogether, with two ounces of white Sugar and ſix drams of Honey of Roſes, caſt them into an Alembick of Glaſs, and diſtil them in Balneo Mariæ with a gentle fire, keep this Water in a Glaſs cloſe ſtopt, for precious; which you may drop twice or thrice in a day into the eye affected.*

Zacutus Luſitanus commends the Water following, in theſe words, *For an old Diſeaſe in the Eyes, called* Ophtalmia, *or any other which cometh of overmuch moiſture, and groſs humors and miſts; as in thickneſs, whiteneſs, the Haw, and Suffuſion; this Water is the beſt in his Experience; if after ſufficient Purging, you drop ſix drops cold every night three hours after meat into the Eyes, then about two hours after you ſhall have Water flow out of them in abundance.*

Take of *Aloes, three drams: Rue, Fennel, and Bettony, of each two handfuls: Vervain and Tormentil, of each one handful: Sarcocol, three drams: the froth of Nitre, two drams and a half: Sugar Candy, three ounces: ſyrup of Roſes, four ounces: the Urin of a yong Boy, half a pint: Lizzards dung, three drams: Horehound, three handfuls: Eyebright, one handful and a half: Ginger, Spicknard, long Pepper, Cloves, and Tutty, of each two drams: Balſom, three drams;*

drams: Honey of Roſes, two ounces: Verdegreeſe, one dram: Licium, two ſcruples: Radiſh leaves, one handful: powder thoſe which are to be powdered, mix them, and infuſe them in the beſt white wine, in a Still, putting to a fourth part of the beſt Honey, for ten dayes, and ſtir them daily, then Diſtill them, and keep the Water.

The ſame *Zacutus* commends the Oyntment following, in theſe words: *For the drying up of moiſture flowing from the Head into the Eyes, and for Purging them by the Corners very ſtrongly; this Magiſtral Oyntment is excellent; being applied after univerſal Evacuations from the Head and the whol Body; let the upper Eye-brows be anointed lightly therewith morning and evening twice in a day three hours after meat: one hour after there will flow plentiful Water from the corners of the Eye, eſpecially from the great corner.*

Take of *the Oyl of Roſes, three ounces: Roſe-water, nine ounces: Camphire, one dram: Tutty, one ſcruple: Honey, two ounces: the Gall of a Goat, half an ounce: Lupin meal, half a dram: Aloes, Succotrine, one dram: Sugar candy, half a dram: the juyce of Horehound, Fennel, and Rue, of each half an ounce: Mirrh, one ſcruple: Ammoniacum, half a dram: Sarcocol one dram and a half: Pouder them that may, mix them, and boyl them a little with a gentle fire. and the greaſe of a Goat or Sheep, and a little wax: make an Oyntment according to art.*

Finally, when al Medicines fail, when the Diſeaſe is almoſt deſperate, it were good to try an experience with the Oyntment of Quickſilver; which *Fonſeca* ſaith was his invention, yet ſeldom uſed; for in his 19. *Conſultat. lib.* 1. he thus ſaith: *I have thought ſometimes that the Unction uſed for the Cure of the French Pox, hath power to take away Cataracts in their beginning and increaſe; by the ſame reaſon that it takes away the Humors remaining in the Eyes from the French Pox; for by it the Head may be ſo Purged, that a Cataract may be Cured; and I have determined to make tryal of it.* *Fonſeca* had much commended his Judgment if he had ſeen *Skenkius* his Obſervation, 309. Lib. 1. which is taken out of the 5. Book of *Alexander Trajanus Petronus*, of the French Pox, *Cap.* 1. *One* (ſaith he) *before he had the French Pox was blind of one Eye with a Cataract or thick Suffuſion; by the Unction with Quick-ſilver was freed wonderfully from his Pox and Cataract both at once: Neither is it without reaſon that Cataracts may be diſſolved with that Unction, when we ſee by Experience that very hard Tumors of thick and groſs Flegm are powerfully diſſolved by the Unction of Quick-ſilver.*

When a Cataract can be diſſolved with no other Medicines, the laſt Remedy is the Chirurgical Operation, which with a Needle put into the Eye, after the matter of the Cataract being thick, and turned to a little skin, thruſteth it to the lower part of the Eye, ſo that the ſight is reſtored as if a window were opened. This Operation is ſucceſsful ſometimes; but often not: But when the caſe is ſo that no hope remains of other wayes, it is better according to the Opinion of *Celſus*, formerly Commended, to try an uncertain Medicine than none: But it uſeth not to be tryed by reaſon of its uncertainty by ordinary Chirurgions; but of Quackſalvers, who go to and fro practiſing, and therefore the time and manner of the Operation is to be left only to them.

But becauſe thoſe things ought not to be hid from a Phyſitian, you may find them exactly treated on in divers Practical Authors, when the Cataract is Cured.

Whether it be with diſſolving Medicines or manual Operation you muſt uſe a courſe of Phyſick long after, becauſe there is a great fear of a Relapſe: For the Eyes having been much weakned by a long Diſeaſe, are very ready to receive any Defluxion again from the brain. Therefore you muſt follow the uſual Purging; you muſt have Iſſues continually for diverſion; and uſe often ſtrengtheners of the Eyes, ſuch as are preſcribed in *Gutta ſerena*: to which you may ad a waſhing of the Eyes, which muſt be done every day thus:

In the morning firſt chew ſweet Fennel ſeeds ſome ſpace of time, then fill the mouth with Wine, and after it is warm in the mouth, waſh the Eyes therewith till they begin to ſmart, which wil ceaſe when you leave waſhing.

Moreover Spectacles are very good to preſerve ſight which do make the Objects neither bigger nor leſs than they naturally are. And it is profitable to refreſh the ſight with green or sky coloured Spectales.

And Laſtly, You muſt avoid al things which hurt the ſight, and uſe thoſe things which help it, as is declared in the Diet for the Cure of *Gutta ſerena*.

CHAP. V.

Of the Enlarging, or Dilatation of the Pupilla.

THe Tunicle called *Uvea*, out of *Galen*, 1. *de sympt. caus. cap.* 2. is obnoxious to divers diseases, and especially to Ruption, Distortion, Dilatation, and Constriction.

A Ruption may come both of an external Cause, as stroak or contusion; and of an inward, when much humor distendeth and breaketh the Tunicle: But this being incurable concerneth not us.

A Distortion of the *Uvea* cannot be but in the first constitution of it, because it adhæreth to the *Cornea*. Therefore *Galen* in the place quoted doth only reckon it among the different symptomes of the *Uvea*: and doth not stand to explain it, because it is of no concernment in the practice of Physick. We therefore omitting the first two differences, wil only insist upon the explaining of the Dilatation, and constriction of the Pupilla.

The Dilatation of the Pupilla, which is a hole in the Uvea Tunicle, by which the Species of Objects pass into the Eye, is called in Greek *Mydryasis*; this hurts the sight because too much light goeth into the Eye; hence it is that they which have this disease, see better in a darkish place than in a light. Which appears by Natural and ordinary change in the Pupilla in bright and obscure places; for when the Sight is exercised in a cleer light place, the Pupilla is contracted that the light may go less into the Eye, and not hurt it with too much, by dissipating and dispersing the Spirits; and hence it is that they which go out of a very light place into a dark, see almost nothing at their first entry: because the Pupilla being formerly contracted, doth not in an obscure place receive light enough to make a perfect Sight. After, when they have continued a while in an obscure place, the Pupilla is by degrees dilated, to receive more light, for the cleering of Sight, and then those things which at first entrance were not seen, are cleerly perceived. On the contrary, they which go out of a dark, into a very light place, cannot at first endure the light, and their Eyes are much dazled, because the Pupilla being much dilated before in the dark place for to get light enough into the Eye, when it comes suddenly thus enlarged into a great light, too much light gets into the Eye, and so makes it dazle and disturbs the Sight. Whence it appears, that light necessary to sight ought to pass into the Eye in a moderate quantity, and for the receiving thereof, it is necessary that the Pupilla be moderately large.

Now the Preternatural Dilation of the Pupilla is either in the first original, which is not to be tampered with; or comes of Preternatural causes which are internal or external.

The neareſt and immediate of the internal causes, is the stretching of the *Uvea*, which comes either of drineſs or repletion.

Drineſs doth stretch the *Uvea*, and makes the form of the Pupilla larger, as when leather pierced through, when it is dried hath the hole larger: And this dry distemper comes from long watching, Feavers, and other drying causes.

The repletion of the *Uvea* when it distendeth it on every side, makes the Pupilla larger, and this is produced either of vapors, and wind sent into the Eye, or of humors flowing thither, or from the extraordinary encrease of the watery humor of the Eye, or lastly from the swelling of the Tunicle Uvea it self. To these Causes we may ad, the Convulsion of the Uvea, which appeareth chiefly in Epileptical fits; for then all the Nervous and Membranous parts are distended, and so is also the Uvea; and this appears chiefly most manifest in Epileptick Children, in whom the dilation of the Pupilla is so great, that it is over all the Circle called *Iris*, and therefore the sight is abolished.

The internal Causes are, a stroak, or a fall, or a retention of the Spirits, as in Women in Childbirth, and Trumpeters. A stroak or fall make a defluxion to the Eyes, hence comes extending of the Pupilla: retention of Spirits makes wind and humors, from whence comes distention.

The knowledg of this Disease is not difficult, because it may be seen with your Eyes, especially if the Physitian knew before it became infirm how large naturally the Pupilla was; as also if there be a hinderance of the sight by reason of the over largeness of it.

Moreover, The natural largeness of the Pupilla is known by this, If when you shut one Eye, the Pupilla of the other is larger, which will not be in a Preternatural dilatation, because then the Uvea cannot be further extended.

Lastly, If this dilatation of the Pupilla be only in one Eye, it is Preternatural, and signifieth one Eye only is affected.

As to the Prognostick, The Dilatation of the Pupilla from the original so, is incurable; but that which cometh after is hardly cured, especially that which comes of drineſs, but that which comes of other

tinuance, is curable; becauſe yong diſeaſes of the Eyes, according to *Galens* Doctrine may be cured, but old may not but with very much difficulty be cured.

The Cure is to be varied according to the variety of the Cauſe; and if it come from drineſs, which can ſcarce come from an internal cauſe, but alſo the whol Body muſt be ſo afflicted; therfore we muſt refreſh the whol body with moiſt Remedies, and nouriſhments, and ſuch as are reſtaurative, ſuch we uſe in Hectick Feavers: but more peculiarly the body is to be moiſtened with a bath of warm water, and new milk, which alſo muſt be often put into the Eyes, eſpecially womans Milk.

If it comes from a humor which filleth the Eye, becauſe it flowerh from the Head you muſt purge the Head and the whol Body alſo, and then you muſt diſcuſs the humor that is fixed in the Eye. Which when they may be ſufficiently performed by the Remedies propounded for the cure of a Cataract or Suffuſion, we ſhall not in vain repeat them here, but ſend you to the aforeſaid Treatiſe for them, where you ſhall find all things neceſſary for the diſcuſſing and diſſipating humors contained in the Eyes. Yet you may after uſe ſome aſtringents which may make the Pupilla which is too much enlarged more narrow: for this end you may make uſe of this following Collyrium, or Water for the Eyes.

Take of *red Roſes dried two ſcruples*: *Saffron, Spicknard, the Bark of the Frankinſence Tree, of each half a ſcruple*: *Tutty prepared, burnt Ivory, and Acacia, of each one ſcruple*: *Bring them into a Pouder, and put them in a thin linnen cloth, and tie it; then hang it in three ounces of Roſe Water, and waſh the Eyes often with the Water, dropping into them, ſqueezing the cloth as often as you uſe the Water.*

If it comes from wind (after univerſal Evacuations) thoſe Medicines are to be uſed which diſcuſs wind in the whol Body, and eſpecially in the Eyes, and ſo they may be fomented with the Decoction of Fennel, Rue, Dill, red Roſes, Myrtles, made in Roſe Water with the fourth part of white Wine.

Finally, If it come with a ſtroak, you muſt alter the manner of Cure, according to the greatneſs of the Contuſion; and if there be an Inflamation, you muſt cure it as an Ophthalmy: But if there be no Inflamation, you ſhall at the firſt apply a Cataplaſm of Bean flower, Plantane Leaves, and red Roſes made up with Roſe Water. After that, you ſhall often drop therein the blood of a Pidgeon, which is a moſt excellent Remedy in all Wounds and Contuſions of the Eyes.

CHAP. VI.

Of the ſtraitneſs, or Contraction of the Pupilla.

THe Pupilla being too ſtraight, hindereth the ſight, as the being of it too large, as was ſhewed in the former Chapter, becauſe a moderate largeneſs of the Pupilla is neceſſary for receiving perfectly the viſible Species. So when the Eye is in its Natural condition, and is in a light place, the Pupilla is contracted leſt it ſhould take in too much light, if ſuddenly it be in a dark room, the things therein contained are little or ſcarcely ſeen at the firſt entrance, by reaſon of the aforeſaid contraction. Afterwards when the Pupil is dilated, al things are ſeen rightly, therefore in a place moderately light, the breadth of the Pupilla ought to be moderate, that it may receive moderate light, nor too much, nor too little, for making a perfect ſight. But if the Pupilla be too narrow, it receiveth not light enough, therefore they who are ſo affected, the ſight is diminiſhed, yet they ſee well in a very light place, becauſe at that time light ſufficient will paſs through a narrow hole, if no other Diſeaſe of the Eyes be joyned with it.

Now the narrowneſs of the Pupilla, cometh either from the original, or firſt conſtitution, and then it little hindereth; for if they who are ſo affected ſee leſs in a dark or dusky place than they who have a Pupilla of its moderate natural breath, yet in a clear light place they ſee better. Hence *Galen* ſaid in 1. *de ſymp. cauſ. cap.* 2. that they who are born with ſmal Pupilla's ſee beſt.

Or the ſtraightneſs of the Pupilla comes from preternatural cauſes, namely, overmuch moiſture, drineſs, or defect of the Watery Humor, and want of Spirits.

The Pupil is contracted by humidity, when the Uvea is relaxed, and ſo makes the hole leſs or narrower: For although the dilatation of the Pupilla come of the ſame humidity, yet contrary effects come not of the ſame cauſe, becauſe if the cauſe may be called the ſame, it ought to have the ſame relation to its effects, but humidity is not in the ſame manner when it makes a Dilatation, for it makes that by filling and diſtending the Membrane, but it makes the anguſtia or narrowneſs by relaxing it: it relaxeth when it is united to its ſubſtance.

Concerning dryneſs there is the ſame difficulty, ſince it is mentioned among the cauſes of dilating the Pupilla. But this is the difference: When the Uvea is dryed, and the humors of the Eye remain

main in their due quantity, then it makes a dilatation of the Pupilla, becauſe it looſeth not the extention which it formerly had, as was ſaid in the precedent Chapter, concerning Skins extended when dryed, make their holes larger; but if the Tunicle Uvea when it is dryed, wrinckled, falls together, and looſe its former extenſion, from the defect or diminiſhing of the humors of the eye, then is the hole of the Pupilla made ſtraighter.

And ſo the conſtriction of the Pupilla by drineſs will be almoſt the ſame with that which happeneth from a defect of the watery humor in the eye; although it may come without drineſs, when by the powring forth of the watery humor the Uvea falls down.

Laſtly, The narrowneſs of the Pupilla comes from the defect of Spirits, or from the fewneſs of them, when by reaſon of the obſtruction of the optick Nerve or ſome other cauſe, the vitive ſpirit cannot come to the eyes, which when it is filled with ſpirit keeps its Tunicles extended; but when it wanteth ſpirits they grow lax and fal together: Hence the conſtriction of the Pupilla uſually cometh. This appeareth in very Old men, in whom the Pupilla is made narrow by reaſon of the want of ſpirits.

This Diſeaſe is known eaſily being open to the ſenſe, for if one eye alone ſuffer, by comparing it with the other you may perceive the ſtraightneſs of the Pupilla; but if both ſuffer, by looking upon the eyes of another man who is found ſighted, you find it out.

As to the Prognoſtick, a ſtraightneſs in the Pupilla which cometh from the loſs of the watery humor in the eye, is incurable, becauſe when that is once loſt it cannot be recruited; eſpecially in old folk: in yong people ſomtimes the watery humor of the eye hath been let forth by a wound, and hath been repaired again: A Conſtriction of the Pupilla from drineſs, can ſcarſe, and very hardly be cured: But that which comes from moiſture, in the beginning, and being yong, may be eaſily Cured: but an old one very hardly.

The Cure of this Diſeaſe differeth not from the former, for they come both from the ſame Cauſes, namely, Drineſs, or Moiſture; which diſtempers, although they produce contrary effects, after the manner before Explained; yet are they to be Cured by the ſame Remedies.

CHAP. VII.

Of Albugo, *or the white Spot called Pin and Web, and of other Colours of the Cornea changed.*

THe Natural Conſtitution of the Cornea Tunicle is deſtroyed when it looſeth its brightneſs and tranſparentneſs; or when its infected with another colour.

It looſeth brightneſs when it is grown thicker; now the Cornea doth grow thick by drineſs, as in old men, which is incurable; or by groſs humors faſtened upon it, which happeneth often in an Ophthalmy; when either by too much uſe of Reſolving Medicines the thinner parts of the humor are diſſolved, and the thick remain: Or when by an extraordinary uſe of cold Medicines the humors are thickned: and the Cornea doth not only become thicker in that part unto which the humor is faſtened, but it alſo contracteth a white Colour, which is called Leucoma, or Albugo; ſomtimes this alſo comes from a ſcar after an Ulcer, whereby the Cornea is made thicker in that part, and looſeth its tranſparentneſs.

The Differences are divers, as they are more or leſs thick; one doth poſſeſs only the ſuperficies of the Cornea: another lies more deep, and pierceth the whol Cornea: another is greater, and poſſeſſeth the whol Pupilla, or the greateſt part thereof: another is leſs, and comprehendeth but a little ſpace of the Pupilla, and then it is properly called Macula, or Pin and Web.

The Cornea is altered in Colour when it is blood-ſhot, which Diſeaſe is called Sugillatio, and then al Objects appear red: Or when Choller is got into it, as in thoſe who have the yellow Jaundice; and then the Objects uſe to appear yellow according to *Galens* Doctrine, which is to be underſtood of a great effuſion of Choller upon the Cornea, for if it be only lightly died therewith, which often happeneth (for the Tunicle Adnata receiveth more Choller than the Cornea) then the Objects wil not ſeem yellow, but as they naturally are.

Theſe Diſeaſes need their peculiar Diagnoſis for the knowledge of them; becauſe they are apparent to the Senſes, but eſpecially Albugo, which is thicker and more white; and more hindereth the ſight: So alſo that which is more ſuperficial is more white; but that which is deeper declineth unto black becauſe it is neerer to the Uvea, which being its ſelf black, communicates its Colour unto that.

The Cauſes which produce theſe, are eaſily known by what hath been ſaid; namely, if an Ophthalmy,

thalmy, or Wound, or Ulcer went before.

As to the Prognoſtick: An Albugo which comes of Flegm, or a thick humor remaining after an Ophthalmy, it is eaſily Cured, eſpecially if it be not inveterate: but that which cometh after a Wound or Ulcer, and is a ſcar, is very hardly cured; becauſe in a part which hath exquiſite ſenſe, ſharp Medicines, ſuch as are proper to wear away a Cicatrize or Scar, cannot be endured.

The Cure of an *Albugo* congealed or gathered in the Cornea from Flegm, is done by Emolients attenuating and diſcuſſing Medicines, but by alwayes uſing univerſal Medicines firſt, which may take away the antecedent Cauſe, and hinder a new defluxion from the eyes, which would be cauſed by Medicines to the place; eſpecially if they be ſharp, or hot, except the matter be firſt removed.

Therefore firſt make univerſal Evacuations, then revulſions, then Derivations, as it is ſet down in the Cure of *Gutta ſerena*, and *Cataract*.

Afterwards apply a Fomentation to ſoften the hard matter (with ſoft ſpunges) made of the Decoction of Fœnugreek, Melilot, Celondine, and Fennel.

Or, Let the Vapor of it be taken into the eyes; and to this purpoſe you may make this that followeth.

Take of *Marſh-mallow Roots one ounce*: *the Leaves of Mallows, Eyebright, Celondine the great, of each one handful*: *Linſeed and Fœnugreek of each three drams*: *Melilot flowers one pugil*: *make a Decoction of theſe in ſpring water, and let the ſteem or vapor of it be taken into the Eyes, morning and evening.*

Afterwards uſe Diſcuſſives, ſuch as are preſcribed in the Cure of a Cataract or Suffuſion; for they alſo wil do wel here. And ſo *Collyria* Eye waters which do attenuate and reſolve the Humor faſtened in the eye, may be taken from thence, and eſpecially thoſe which are made of Honey and things that quicken the ſight. For the Water of Honey diſtilled uſed alone, is very good to take away all blemiſhes in the Eye if you continue the uſe of it any time.

Sugar Candy is good for the ſame, Diſſolved in the Water of Eyebright, Celondine, or Fennel.

As alſo it would be very good to let a Child that hath chewed Fennel-Seed to lick the Eye often.

Amatus Luſitanus reports that he Cured thick clouds in the Eye of a Girle of twelve yeers of age after he had given the Decoction of Sarſa twenty dayes, with this Medicine.

Take of *Honey from the Hive two pints*: *the tops of Fennel, the flowers of Elder and Eyebright, of each two pugils*: *Sugar Candy four ounces*: *diſtil them in Balneo Mariæ*; *and let the water be dropped into the Eyes.*

The Seed of Clary put into the Eye at bed time, purgeth the Eye from Filth, and ſo cleanſeth it, that it conduceth to the Cure of *Albugo*.

The juyce of Fennel doth potently diſcuſs an *Albugo* if newly made, and mixed with a drop of the Ballom of Peru.

The ſame doth an Oyl made of burnt Rags mixed with the ſpittle of a Child, and laid on with a Feather: It is made by burning of a Linnen Rag, and quenching it betwen two diſhes; when it is cold you ſhal find the Oyl in drops upon the diſh.

But *Albugo* coming of a Scar, is cured with Remedies that are good to mollifie, attenuate, and diſſolve Scars; but ſince ſuch are alwaies ſharp, you muſt be more careful in applying, firſt univerſal Medicines, and revulſives, leſt a flux of humors be brought to the part. Having therfore uſed them as aforeſaid, firſt it is good to apply emollient Fomentations or Fumigations above preſcribed. Then uſe abſtergent & diſcuſſing Remedies: Firſt thoſe that are gentle, ſuch as are above mentioned, eſpecially the compound Water of Honey: After you may come to ſtronger, ſuch as are the Galls of Fiſhes, of the Uranoſcopus, or one-eyed Fiſh; of the Paſtinaca, or fiſh like the Ray; or of the Pike; as alſo of other Creatures, as of a Partridg, Cock, Gooſe, Ox, and others. After the ſame manner may be uſed the juyce of great Celondine, of the leſſer Centaury, of Brooklime, and the like, which muſt be mixed with Honey both becauſe Honey hath a cleanſing and diſcuſſing quality, as alſo becauſe Liquors that are put into the Eye, flow to the corners, and ſtay not in the Pupilla in which their operation is required; but being thickened with Honey, they cleave wel to the Eye: But if their ſharpneſs cannot be endured, the ſaid Juyces or Galls may be thickened, with that Mucilage or ſlime of Gum Traganth, of Fleabane, or of Quinces, being drawn with the Water of Fennel, Eye-bright, or other proper to the Eyes.

The form of a Collyrium made of Juyces, is thus:

Take of *the Juyce of Fennel, Celondine, and Brooklime, of each three drams*: *the Juyce of the leſſer Centaury, half an ounce*: *white Honey one ounce*: *Mix them like a Liniment. If with the Albugo there be redneſs of the Eyes, the Collyrium made of Salt, white Wine, and Wheat preſcribed*

in

in the Ophthalmia, is very good. Or this,

Take of *Aloes and Agarick, of each one ſcruple: Pouder them, and tie them in a clout; which ſteep in the Water of Eyebright or Fennel, and wipe the Eyes therewith morning and evening. Aloes doth clenſe, ſtrengthen, and ſtop the defluxion; Agarick doth powerfully clenſe.*

Sugillatio or blood-ſhot, or that red color in the Eye which cometh of blood ſent thither, if it be yong, is eaſily cured with Pidgeons blood dropped in: but in the want thereof you may uſe Womens Milk with a little Frankinſence and Saffron. Or you may apply the Yolk of an Egg with Wine; which is commended of *Galen*, 4. *de comp. Med. ſec. loc. cap.* 8. But if the diſeaſe be ſtubborn, you muſt foment the Eye with the Decoction of Fœnugreek, Marſh-mallows, Fennel, Rue, Celondine; or let the fume of the ſame be received into it. And finally, all Medicines preſcribed in the Cure of a Cataract may be very proper for the cure of this. But more eſpecially, when the diſeaſe is old, and the redneſs turneth black, *Galen* commends dried Hyſop tied in a rag, and put into hot water, and applied to the Eye: and Experience teacheth that this Medicine is of ſuch force that the blood is drawn away by it ſticking to the clout.

And laſtly, The yellow color of the Jaundice, which moſt appears in the Eyes, when the Jaundice is cured is eaſily diſcuſſed: if you would haſten the Cure, take the fume of Vinegar into the Eyes.

CHAP. VIII.

Of Ophthalmia, *or Inflamation of the Eyes.*

THe Tunicle called *Adnata* is ſo joyn'd to the *Cornea*, that many diſeaſes are in both; as the Inflamation of the Eyes, though it is proper to the *Adnata*, yet it is often extended to the *Cornea*, and produceth divers Diſeaſes in it, namely, Ulcers, *Hypopyon*, when matter is underneath, *Albugo* or Pin and Web, and others. So alſo Puſtals, and other Tumors, Wounds, and Ulcers are common to both Tunicles. Therefore becauſe all the Diſeaſes of theſe Tunicles cannot be ſpoken of ſeverally, we will only ſpeak of the Diſeaſes of the *Adnata* before we ſpeak more of the *Cornea*.

Beginning with an Ophthalmy; We ſay that it is, as the word in Greek ſheweth, only an Inflamation of the Eye, and by all Authors it is uſed for the inflamation of the Adnata, or Conjunctiva. It is called by the Latines *Lippitudo* or blood-ſhotneſs ſince *Cornelius Celſus*.

This Inflamation, as it is greater or leſs, hath a three-fold difference. The firſt is called in Greek *Taraxis*, in Latin *Conturbatio*, which according to *Paulus* cometh from an external cauſe, namely, the Sun, ſmoak, duſt, oyl, and the like: but it may alſo come of an internal, namely, by fault of the ſtomach after drinking of Wine, or other Diſtempers; and this is a light Inflamation called *Phlogoſis*, with a ſmal pain and redneſs, yet it ſometimes turneth into a true Ophthalmy, and is the original of it.

But a true Ophthalmy comes alwaies from an internal cauſe, and it is a true inflamation with which tumor, redneſs, and pain, it is called by *Celſus*, *Lippitudo* or blood-ſhotneſs, becauſe there cleaveth a thick excrement, which the Latins call *Lippa*.

The third is called *Chemoſis* in Greek; in Latin *Chemoſis* alſo, and it is when an inflamation groweth ſo high that it is very great with vehement pain, and both the Eyebrows are inverted ſo, that the Eyes can ſcarce be covered therewith; and the white of the Eye ſtands higher, and the red doth cover moſt part of the Iris or Circle. In Children, and ſuch as have great Eyes, this hath often happened, and it comes from a great repletion, and from flegmy humors.

There is another Difference of the Ophthalmy taken out of *Hippocrates*, *Aph.* 14. *Sect.* 3. by which it is divided unto a moiſt and a dry Ophthalmy: The moiſt Ophthalmy is that which is already deſcribed, and hath a weeping. But the dry Ophthalmy called by *Hippocrates*, *Xerophthalmia*, which cometh in dry weather, is made of Choller, or burnt or aduſt Melancholly, and is ſuch as wanteth humidity in part, and therefore there is no weeping. There are other ſubdiviſions from the adjuncts; for if there be an itching joyned with it, it is called *Pſorophthalmia*; but if it come with hardneſs of the Eye-lids, it is called *Sclerophthalmia*.

There is alſo another Difference of Ophthalmies, taken out of *Galen*, 2. *de diff. febrium*, *cap.* 11. where he ſaith That ſome are Periodical, or ſuch as cometh by fits, to thoſe which have a very hot and moiſt head, and weak Eyes, fit to receive a defluxion. Theſe after many yeers have a conſumption of their Eyes, and loſe their ſight; hence it is called *Tabida Ophthalmia*, or a conſuming Ophthalmy, or an Ophthalmy which ends in a conſumption of the Eye.

There is alſo another difference taken from the immediate cauſe, which is defluxion or congeſti-

on,

on, that is, gathering of humors. It comes for the moſt part by defluxion; but by congeſtion only, when there is either a diſtemper or weakneſs of the Conjunctiva, by which there is no equality, or *Omoioſis* in the part, but many excrements are gathered together, from whence through the weakneſs of the part cometh an inflamation.

The Conjunct cauſe of an Odhthalmy is Chollerick, or Wateriſh, or Melancholick Blood flowing into the Eyes, or gathered into them. The Cauſes of defluxion are manifold, both external and internal ordinarily known. But the cauſes of Congeſtion or Cumulation are all ſuch as diſtemper or weaken the Eyes; ſo that an Ophthalmy which at the firſt came only by defluxion, in time by weakening of the part may ſpoil its concoction, and ſo it may be ſaid to be an Ophthalmy partly from defluxion, and partly from Congeſtion, which is often ſeen in old Ophthalmies.

But when an Ophthalmy comes only by way of defluxion, it is certain that it comes for the moſt part from the head, and almoſt all Authors acknowledg this. Notwithſtanding Experience teacheth that many violent Ophthalmies come from the Liver, and the humors that come from thence to the Eyes; inſomuch that Cauteries applied to the hinder part of the head, encreaſe the Diſeaſe, which otherwiſe are good Remedies when the defluxion is from the head, for they draw up the humors: and we have often ſeen that old Ophthalmies which were accounted incurable, have ſuddenly gone away of their own accord, by ſtopping of an iſſue which hath long been kept open, namely, when the motion of the humors from the inferior to the ſuperior parts hath ceaſed, which before was cauſed by the Cautery or Iſſue in the Neck, by Nature ſending part of the humors to the weakened Eyes, not far diſtant from the Iſſue.

That defluxion which cometh from the head, either is carried by internal Veins, which are under the Skull, into the Eyes; or by the external Veſſels, which is moſt frequent, namely, by the Veins, and Arteries which come from the Pericranium by the Forehead and Temples, to the Conjunctiva.

An Ophthalmy is eaſily known, becauſe the blood diffuſed upon the Conjunctiva may be eaſily ſeen, and if redneſs appear without a tumor coming of an external, it is called *Taraxis*, or Conturbation. But if beſides the redneſs there be ſwelling and heat with weeping, it is a true Ophthalmy, and at length if it ſo encreaſe that it cover the black of the Eye, and the Eyelids be inverted, then is it called *Chemoſis*.

Hence we fetch the ſigns of the Cauſes: for if it comes from repletion, and of blood alone, not only the Tunicle Adnata, but alſo the whol face will be red; as alſo there will be a ſwelling of the Veins, drouzineſs of the Sences and whol Body, and a manifeſt ſwelling.

If it come from Chollerick Blood, there will be ſharpneſs of tears, and not only the corners of the Eyes, but alſo the very cheeks will be corroded, there will be a pricking and intollerable pain, a little ſwelling with redneſs inclined to yellow; and the patient hath formerly uſed immoderate exerciſe been inflamed by the Sun, ſubject to anger, and eating of ſharp things, his complexion is Chollerick, or he is yong, and the diſeaſe cometh in hot weather.

If it come from flegm, there will be a heavy pain, little heat, not much redneſs, little ſhooring, no ſharp tears, but many, and ſlimy and glutinatious.

If it come of Melancholly, the Tumor will be ſmal, the redneſs will be dusky, few tears, little clammineſs, but very thick, a Melancholick conſtitution, and the like ſigns of Melancholly.

If the defluxion come from the inner parts of the Head, there will be a pain in the Head internally coming to the Roots of the Eyes. But if the defluxion come into the Eyes by the exterior Veſſels, the pain of the Head will be more external, the Veins of the Forehead will be diſtended, and alſo there will be perceived a great beating in the Temples.

The Prognoſtick is either in reſpect of an Ophthalmy coming, or already begun.

An imminent *Lippitudo* is known by an itching and pricking in the Eyes, with heat alſo, and the diſpoſition of the Eyes to receive defluxions, doth give advantage to the prognoſtick of it; wherefore they who have great Eyes are more ſubject to this diſeaſe: Moreover, the ſeaſon doth much conduce to the breeding of it, as *Hippocrates* teacheth, Aph. 11. Sect. 3. If the Winter be dry and full of North winds, and the Spring rainy, and with South winds, in Summer you ſhall have ſore Eyes very common, eſpecially in women, and men of moſt conſtitutions.

A flux of the Belly coming upon an Ophthalmy is good, according to *Hippocrates*, Aph. 17. Sect. 6. becauſe the ſuperfluity of humors is diſcharged, and carried downwards.

An old pain in the Eyes is very dangerous, for it ſignifies the cauſe to be violent, and it is to be feared leſt Impoſthume, Suppuration, or Ulcer do follow.

An Ophthalmy beginning in one Eye uſeth ordinarily to paſs to the other.

For the Cure of an Ophthalmy, the external cauſes muſt be firſt removed, as alſo the antecedent cauſes are to be evacuated, revelled, and repelled; the conjunct cauſe is to be derived and diſcuſſed, and the part affected ſtrengthened. For the performing of which Indications there are theſe uſual means to be applied.

Firſt, Let his Diet be cooling and moiſtening, of Meats that breed good nouriſhment, boyled rather

ther than roasted; of suppings rather than solid things; because the Eyes are moved in chewing: let him avoid sharp things, Salt and Pepper. As also things that Fume, and wil fill the Head with vapors: As also such as quickly turn into Choller, as Milk, Sugar, Honey, and al sweet things; Wine especially is not good; but instead thereof use Barly water, with Liquoris and cooling things.

Sleep is very profitable, because then the Eyes rest from motion which is apt to stir up pain and defluxion; besides pain is asswaged by sleep, and the matter causing the Disease is concocted: Let the Patient sleep with his Head high, and more inclined to that side which is least affected.

Let him avoid al motion of his Body, for rest is so profitable that *Celsus* commands that the first day of Cure they speak not, lest by that motion matter be carried to the head.

The Belly must be kept Solluble, for *Hippocrates* saith it is good for him that hath sore eyes to fal into a loosenes.

Let him avoid Passions, especially Anger.

Let the Air be temperate and pure, without Smoak, Dust, and Winds, and somwhat dark; of the light by moving the Spirits causeth defluxion: Let him have a black, green, or sky colored cloth before his eyes; and keep not only his sore but his sound eye shut or covered; for while the sound eye is moved towards the Objects the sore is moved also, whence the pain encreaseth; and this is the reason why men have greater pain when one eye is affected, than when both.

The Diet being thus ordered, let us lay down the Cure of the Disease; and since it comes for the most part of external Causes: first let them be removed lest they nourish it: next make a *Collyrium*, or Eye-water, or Rose and Plantane Water, with the white of an egg, and Womans milk, and let that be instilled into the Eye often in a day; as also let a linnen clout be dipped therein and applied.

At the same time let him sleep as much as he can; for sleep is very profitable to concoct and discuss the matter causing the Disease. If it yeild not to these, you must use the Remedies proper for a true *Ophthalmy*, in this Order.

First open a Vein (having given a Clyster) on the contrary Arm, and do it often, till you have made sufficient Evacuation and Revulsion: For *Avicen* teacheth, That in a true *Ophthalmy* you may let blood till they faint. But *Galen, lib. de curat. per sangu. miss. cap.* 17. tells a story of a Steward which was freed of a great *Ophthalmy* by blood letting: first three pound; and four hours after one pound: And in his 16.*cap.* of the same Book he affirmeth, That *Ophthalmies* are often cured in an hours space only by Phlebotomy: which could not be but by loosing of a great quantity, as they did in those times in that case.

Phlebotomy must be regulated and moderated according to the temper, age, sex, strength, and kind of the Disease; for in a Plethorick body, and when it comes from blood, you must take a greater quantity: but in a Chollerick body, or Melancholly, or Flegmatick, and other Circumstances which prohibit blood-letting, you must take less.

If the whol body be ful of blood, first open the Liver or *Median* vein, after the Head vein; but if you intend to loose but little blood, begin with the Head vein.

But in them who have a stoppage of any ordinary accustomed Evacuation by the Terms or Hemorrhoids, you must open the veins beneath, or apply Leeches to the Hemorrhoid veins.

After you have bled enough, you must labor to make Revulsion by applying of Cupping glasses to the shoulders and the back, both dry and with scarrification.

Frictions also are good for the same; and Ligatures in the lower parts.

To the aforesaid Revulsions you must ad means to derive, which are by the opening of the veins of the Forehead and Temples; to which some ad the opening of the veins in the corners of the Eyes: others apply Horsleeches to the Temples, others behind the Ears; al which derivations are very profitable after sufficient Evacuation.

Galen 13. Meth. Cap. 22. Commended the opening of an Artery in the Temples, when the Disease comes of very hot blood: And though this way of Practice is not used in our times, yet it is very excellent and profitable, without any danger; for in those lesser Arteries the blood is stanched by good Ligature and bondage only; nor is the Plaister mentioned by *Galen* in the same place necessary, which is made of Bole, Frankinsence, Mastick, and the Hair of an Hare, with the white of an Egg: yet for the better security, they who are afraid of the opening of an Artery, may make use of it; you may see what we have said concerning the opening of Arteries in the Cure of the Headach.

Vesicatories also are very profitable in this Disease, both applied to the Neck and behind the Ears.

When you have bled sufficiently you must purge, that the Chollerick Humors, especially such as make the blood hot, may be evacuated: And *Hippocrates* saith it is very requisite, *Aphor.* 17.

Sect. 6.

Sect.6. For it is good for him that hath an Ophthalmy to fall into a flux. And *Galen*, 13. *Meth. Cap.* 11. ſaith, *That he hath ſeen ſome who began to have ſore Eyes to be cured in one day only by a Purge.* But it muſt be made of gentle ingredients, and ſuch as do aſſay the heat of the blood, taking heed of al Medicines that have Scammony in them, and they be made thus.

Take of *Tamarinds half an ounce*: *clean Senna three drams*: *Annisſeeds half a dram*: *Endive, Succory, and Fumatory, of each half a handful*: *boyl them to four ounces*; *and when it is ſtrained infuſe in the liquor of the beſt Rhubarb and yellow Myrobalans rubbed with the Oyl of ſweet Almonds, of each one dram*: *yellow Saunders half a ſcruple*: *after ſtrain it again, and diſſolve of Manna and ſyrup of Roſes of each one ounce. Make a Potion.*

Or in Form of *Bolus*, thus.

Take of *Caſſia newly drawn ſix drams*: *Diacatholicon three drams*: *Pouder of Rhubarb one dram*: *make a* Bolus *with Sugar.*

So many times we preſcribe Pills in an Ophthalmy which comes of Flegm, namely, Lucis majoris, of Agarick, and the like: which though they are very good in the ſtate of the Diſeaſe, yet it is better to abſtain from in the beginning, leſt the Humors moved with too violent a Medicine ſhould fal more upon the part.

Nor is one Purge ſufficient, but you muſt repel it a diſtance, if the Diſeaſe be old; firſt giving good preparatives by Apozemes or Juleps proper for the Humor offending: therefore in the beginning allay the heat of the Humors with cooling Juleps, and ſuch as thicken; or with Emulſions made of the greater Cold Seeds, Lettice and white Poppy ſeeds, in ſome cooling Decoction, with a little Roſe water.

After univerſal Revulſions and Evacuations come to Topical Medicines with that part, which from the beginning muſt be repelling; yet the ſoundeſt Practicioners do warn us not to uſe repelling Medicines to the Eyes at firſt, becauſe for the moſt part they ſtop the Humor and retain it in the Eye, and ſo increaſe the grief and inflamation: For *Galen* Comment. Aphor. 31. Sect.6. reproves a certain Oculiſt which uſed theſe kind of Medicines in the beginning of the inflamation; for they may be ſuſpected in the beginning not to ſtay violent defluxions, but rather to keep them from coming forth: Hence it cometh to paſs that when the humors are ſharp the Cornea is ſomtimes ulcerated, but when they are many it is ſtreaked and ſomtimes broken: But *Avicenna, fen.3. lib.3. tract.1. cap.9.* ſaith, That it is fit, that if poſſible, we abſtain from *Collyriums* the firſt three dayes. And a little after, he ſaith, That we ought not in the beginning to apply ſtrong Aſtringents and thickners: becauſe they thicken the Tunicles or coats, and hinder reſolution and increaſe pain.

Yet we need be ſo exact in the time and number of dayes, becauſe the Diſeaſe is in ſome older, and in ſome yonger: But we may with profit apply Aſtringents at the beginning to the Forehead and Temples; for by thoſe, the veins by which the humors flow to the Eyes are ſtopt, and they driven back.

The Form of this is as followeth.

Take of *Bole-Armonick, ſanguis Draconis, Frankinſence, Maſtich, of each one dram: red Roſes, Balaſtis, or Pomegranat flowers, & the pouder of Lentils, of each two ſcruples: mix them with the white of an Egg and Vinegar of Roſes, and make a Cataplaſm for the Forehead, and Temples.*

Moreover, A Cataplaſm made of the Juyce of Nettles and Wheat flower, applied to the Forehead and Temples, is excellent to ſtay a defluxion by reaſon the Juyce of Nettles hath a ſpecial Vertue for the ſtopping of al ſorts of Bleedings, as it doth the bleeding at the Noſe or Mouth.

But if the pain be very great, which uſeth to encreaſe the defluxion upon the Eyes, you muſt apply Anodines or Medicines aſſwaging pains upon them. Among which new milk, eſpecially if it be that which a ſound woman giveth is beſt, if it be often milked freſh into the Eyes from the breaſt, and not be uſed ſtale, for then it wil grow ſowr and be offenſive to them: inſtead thereof you may uſe freſh Cheeſe made of Sheeps milk, which you muſt often change, leſt it turn like Butter, and ſo inflame the Eye.

The white of an Egg wel beaten til it turn to water, is commended of *Galen*, for it aſſwageth pain, and gently ſtayes the Flux.

Alſo an Apple roaſted in the Embers doth much aſſwage the pain of the Eyes.

The Mucilages, or ſlime of the ſeeds of Fleabane, Quinces, Fœnugreek, drawn with Roſe-water, do take away pain; but they muſt be renewed every day or they wil grow ſowr.

Of theſe things you may make divers kinds of Medicines. As for Example.

Take of *the pap of a ſweet Apple roaſted in the embers, an ounce*: *the Mucilage of the ſeeds of Fleabane and Quinces drawn with Roſe Water, of each ſix drams*: *the white of a new laid Eg beaten into water, and womans Milk, of each one dram*: *Make a Cataplaſm and apply it to the Eyes.* Or,

Take of *the pap of a roaſted Apple one ounce*: *Crums of white Bread half an ounce*: *one Egg mixed with Breaſt milk*: *Make of theſe a Cataplaſm.*

Thin ſlices of Goats Fleſh, Veal, or Mutton, often applied to the Eyes, do very much aſſwage pain.

A Cataplaſm may be made more eaſily with crums of white Bread, and Womans Milk mixed with Roſe Water.

If the pain be intollerable, you muſt fly to Narcotick or ſtupifying Medicines, which you muſt uſe ſparingly, and with good advice, becauſe they do thicken the vitive Spirits, and make the Humors and Tunicles groſs, by which the Sight will become dim.

Among Narcoticks for the Eyes, the white Troches of *Rhaſis* are principal; made with Opium thus:

Take of *Roſe water two ounces*: *the Water of an Eg well beaten one ounce*: *the white Troches of* Rhaſis *with Opium, one dram*: *Make a Collyrium, or Water for the Eyes.*

When the pain is aſſwaged, you muſt come to repelling Medicines, which muſt be gentle and mixed with Anodines continually: for this end make this Collyrium following:

Take of *Plantane and Roſe water, of each one ounce and an half*: *the Water of the white of an Egg beaten, one ounce*: *the white Troches of Rhaſis with Opium, one dram*: *Make a Collyrium, and drop it often into the Eyes.*

If the pain be very great, you may put to it Womans Milk, and the Mucilages aforeſaid.

This following Medicine doth powerfully reniſt inflamation, and ſtay the flux.

Take of *the white of an Eg, beat it in a pewter diſh with a piece of Allum very well, till it come to the conſiſtence of an Oyntment, which you muſt ſpread upon a linnen cloth, and apply it warm to the Eyes*: *After two or three hours take it away, leſt by its long continuance having an extraordinary aſtringent quality from the Allum, it retain the humors in the Eyes.*

Alſo the Water of Allum diſtilled in an Alembick, laid to the Eye with a linnen clout, doth allay the inflamation thereof.

The Salt of Lead diſſolved in Roſe Water, or Wine Vinegar, or mixed with Pomatum, doth powerfully cool the inflamation.

In the encreaſe of the Diſeaſe you muſt mix digeſtives with Repelling Medicines, and therfore you muſt put the Water of Eyebright, Fennel, Celondine, and the Mucilage of Linſeeds, *Althææ*, or Marſh-mallows, and Fœnugreek, *Gal.* 13. *Meth.* commends eſpecially the Decoction of Fenugreek, becauſe it digeſteth, concocteth, and moderately repelleth: but you muſt ſift the Fenugreek to take out the duſt, and after waſh it often in warm Water, before you boyl it, or make the Mucilage of it. You may thus make a Collyrium.

Take of *the Mucilage of the ſeed of Fœnugreek, and Quinces drawn with Roſe, and Eyebright Water, of each one ounce and an half*: *the white Troches of* Rhaſis *with Opium, one dram*: *Tutty prepared half a dram*: *Make a Collyrium.*

When the Diſeaſe is at the height, you may put Sarcocol to it, which is of a more digeſtive quality; but ſince it is apt to hurt the Eyes by its over dryneſs and ſharpneſs, it muſt firſt be ſteeped ſome few daies in Milk, often changed, and you muſt prepare but a little at one time, for if it be long kept it wil grow ſowr, and hurt the Eyes. You may uſe it thus:

Take of *the flowers of Chamomel, Melilot, and red Roſes, of each one pugil*: *the ſeeds of Fœnugreek cleanſed one dram*: *boyl them in Plantane Water. Diſſolve in four ounces of the ſtraining, Sarcocol one dram*: *Tutty prepared, and of the white Troches of* Rhaſis *without Opium, of each half a dram*: *Make a Collyrium.*

Authors do commend ſome Waters to be very powerful.

Quercetan commends the infuſion of *Crocus Metallorum* made in Eyebright and Fennel Water, which is ſtrong enough, and is no waies too ſharp for the Eyes as others are.

Crollius and the reſt of the Chymicks, do highly commend the Salt of Lead diſſolved in Roſe Water, to which they put a few grains of Sal Armonick. The manner is thus:

Take of *the Salt of Lead twelve grains*: *Sal Armonick three grains*: *Roſe Water three ounces*: *Mix them, and drop ſome into the Eye morning and evening.*

There is alſo a Water made of calcined or burnt Lead, or Litharge, or Menium infuſed in Vinegar, which laid to the Eye with a linnen clout preſently cureth their inflamation.

The Water of white Vitriol is moſt common, being diſſolved in Roſe or Plantane Water; this mitigateth inflamations, diſcuſſeth, and hindereth defluxions. Thus they are proportioned:

Take of *white Vitriol one ſcruple*: *Roſe or Plantane Water four ounces*: *Diſſolve the Vitriol in it at the fire*: *Strain the Water and drop it into the Eyes. If it be too ſharp, you may qualifie it as you pleaſe with more Roſe or Plantane Water.*

This following Medicine is not ſo ſharp, and more diſſolving.

Take of *Flower-de-luce Roots, and red Roſes, of each one ſcruple*; *Roſe and Plantane Water,*

of

of each three ounces: Boyl them to the third part with a gentle fire. Ad to the ſtraining white Vitriol poudered eight grains: Make a Collyrium.

Many Oyntments alſo are uſed for the Eyes, of which, theſe three following are the beſt, and ſometimes do wonders. The firſt is in *Renodæus* his Diſpenſatory, called *Unguentum Ophthalmium*, made thus:

Take of *Bole-Armenick waſhed in Roſe Water, one ounce: Lapis Calaminaris waſh'd in Eyebright Water, and Tutty prepared, of each two drams: Pearl finely poudered half a dram: Camphire half a ſcruple: Opium five grains: Butter as much as will be ſufficient to make an Oyntment according to art, for to be applied to the corners of the Eyes, and the Eye-lids.*

The ſecond is *John Cratoes*, which is ſet down in his Phyſical Counſels gathered by *Laurence Scholzius, Conſ. 6.* thus:

Take *Butter made in* May, *if you can get it, or other that is freſh and well worked, or the marrow of an Ox or Deers Shank, and mix therewith as much of the fine pouder of Lapis Calaminaris as it will receive, make an Oyntment.*

The third is from *Fœnotus in denario*, thus made:

Take of *Tutty prepared one ounce and an half: Camphire one dram: Verdegreece twelve grains: Beat the Tutty with the Camphire together in a Mortar, the Verdegreece by its ſelf, all very fine: Then take of freſh Butter one ounce: Roſe water, one dram: boyl them gently together, and then take them from the fire, and firſt put in your Camphire with your Tutty, then your Verdegreece by degrees; ſtir them very well, and reſerve them in a glaſs. Make an Oyntment and ſtrain it through a Sarſenet; anoint the inſide of the Eye-lids, eſpecially about the corners, and the Patient will ſoon recover. This is a moſt approved Medicine againſt Inflamations both with matter and dry, againſt itching of the Eyelids, and weeping.*

There is another very good, though ſharp, and therefore muſt be only applied to the Eye-lids; it is thus made: (And when al have failed, this hath cured the moſt deſperate Ophthalmy) namely, *Of May Butter, and Juyce of Tobacco boyled to an Oyntment, which muſt be applied, the Eyelids being cloſed, and in a dark room; as ſoon as the Patient opens his Eyes, it will begin to bite, and will certainly cure.*

In the height of the diſeaſe, you muſt apply more reſolving than repelling Medicines, therefore they which were preſcribed in the encreaſe of it are good in the height or ſtate of it, if you encreaſe the quantity of the Reſolvers, and diminiſh the Repellers. But eſpecially theſe two following Oyntments may be uſed not only in the ſtate and height, but in the declination, to the perfect cure of the Diſeaſe.

Firſt Fomentations to diſcuſs the matter, are good in the height of the Diſeaſe, made thus:

Take of *the flowers of Chamomel, Melilot, and Roſes, of each one pugil: Fœnugreek ſeeds prepared as before ſhewed, two drams: Make a Decoction, with which foment the Eyes with four double clouts. This is good in the end, of the encreaſe, and the beginning of the ſtate of the Diſeaſe; and in Winter you muſt uſe it hot, in Summer only warm.*

In the end of the ſtate and declination, you muſt make a more reſolving Fomentation, which is done by adding to the former Ingredients, the Leaves of Eyebright, Marjoram, Bettony, and a little white Wine.

The beſt and rareſt Secret for the Cure of an Ophthalmy, is made of the Oyl which cometh from Linnen burnt between two cloſe diſhes; one drop of which mixed with the ſpittle of a Child muſt be dropped into the Eye with a Feather.

In the declination, not only the Remedies afore mentioned, but alſo Waters more reſolving are to be uſed, as thus:

Take of *Frankinſence and Aloes, of each half a dram: Sarcocol waſhed with Breaſt-milk, one dram and an half: Saffron half a ſcruple: the Mucilage of Fœnugreek half an ounce: Fennel and Eyebright Water, of each one ounce and an half. Make a Collyrium.*

But if you wil, dry more, and alſo digeſt.

Take of *Sarcocol one dram and an half: Tutty prepared one dram: Aloes one ſcruple: Mirrh half a ſcruple: the Mucilage of Fœnugreek half an ounce: Vervain and Celondine Water, of each one ounce. Make a Collyrium.*

In a defluxion which comes of flegm, you may uſe ſtrong Reſolvers, not only in the declination, but alſo in the ſtate and encreaſe of the Diſeaſe very confidently.

Moreover, In the declination Authors do ſet down two ſpecial Remedies, namely, The uſe of Wine, and Baths: which firſt were delivered by *Hippocrates*, Aph. 31. Sect. 6. in theſe words; Drinking of Wine, or Baths, or a Fomentation, or Blood-letting, or a Potion, do take away pains in the Eyes.

Galen in his Commentary thereon, diſtinguiſheth the Caſe and the Time in which theſe Remedies are good, which we have explained as to Blood-letting, Fomentations, and Purging: But *Galen*

in the place cited, *cap.* 22. *lib.* 13. *meth.* teacheth that Baths are then good, when an Ophthalmy comes of ſharp humors, and when the body is ſufficiently cleanſed by purging and bleeding: becauſe they qualifie the ſharpneſs of humors, and ſtayes their motion and defluxion; the chiefeſt part of them being ſent forth by inſenſible tranſpiration, and that which remaineth of the Chollerick humor is eaſilier overcome by nature.

Galen alſo commends a Bath in a Flegmatick Ophthalmy, alwayes uſing before Evacuations neceſſary, becauſe the thick humors faſtened in the Eyes are extenuated by Baths, and ſo are eaſily diſcuſſed.

So *Galen* in the ſame place ſaith, That the drinking of pure Wine is good for thoſe who have thick blood in the veins of their eyes, and have not groſs or phlegmatick bodies; becauſe Wine doth diſſolve, diffuſe, and diſcuſs the thick blood, and alſo openeth obſtructions.

For the taking away of the remainder of Redneſs and Inflamation, make this Fomentation following.

Take of *the Leaves of Eyebright and Pennyroyal of each one handful: the Flowers of Chamomel, Melilot, and red Roſes; and of Oaten chaff, of each one pugil: Fœnugreek-ſeed three drams: Fennel-ſeed one dram: make a Decoction, adding in the end a little white Wine, foment the Eye with this, dipping therein linnen Cloaths, or with bags being half filled with the aforeſaid ingredients.*

Fennel watter alone mixed with aſtringent wine is a good Fomentation to diſcuſs the reliques, and to ſtrengthen the eyes.

An Egg boyled hard, and the ſhel taken off, and cut in the middle, laid hot to the eye, takes away the remainder of redneſs.

So doth a Fomentation made only of the Decoction of Hyſop.

An old Ophthalmy requires another aud longer way of Cure, and is ſometimes very troubleſom to a Phyſitian; becauſe he can hardly hinder a delicate and noble part from receiving a defluxion by wh ch it hath been long weakned.

Moreover, This Diſeaſe is not only nouriſhed by defluxion, but by congeſtion whereby there is deſtemper brought into the part, which alſo is hard to cure.

But for the Cure of it you muſt firſt obſerve whether the Diſeaſe come not from a hot Diſtemper of the Liver, as often it doth: and then you muſt firſt adminiſter ſuch things as amend that. And chiefly after convenient Purging and Bleeding, Baths are good, Whey, and Mineral waters of Vitriol, as alſo Horſleeches applyed to the Hemorrhoids.

But if the matter of the Diſeaſe come only from the diſtemper of the Brain through which watery Humors flow to the eyes being mixed with ſome blood: then you muſt fal to purging the head with ordinary Pills, twice, thrice, or four times in a month, after you have given univerſal Medicines, as Apozemes or the like; which you may make according to our deſcription in the cure of cold Diſeaſes of the Head.

If the aforeſaid Purges with other Medicines now preſcribed do not prevail, you muſt uſe Mercurial Purges as the moſt excellent, by way of intermillion.

Moreover a Cautery applied to the hinder part of the head is very profitable, to divert the humor flowing.

Inſtead whereof you may apply a Seton to the Neck behind, with better ſucceſs, to them who can endure it.

A Veſicatory applied to the fore-part of the Head, as *Foreſtus* reports, *Obſ.* 11. *lib.* 11. did a wonderful cure upon an Old Woman with ſore eyes.

But *Rondoletius* ſayes, That a Cautery applied to the Coronal Suture, is better than to any other part.

Maſticatories are profitable for the deriving of the Defluxion, but not Errhins becauſe they are applied ſo neer the part affected that they may draw humors to it.

But if the Brain doth ſeem to want drying, you muſt have recourſe to your ſweating diet drink of China, Sarſa, and the like.

To theſe you may ad Topicks, which reſolve and ſtrengthen the eyes; ſuch as are Fomentations and Unguents before mentioned for the ſtate and declination of the Diſeaſe, which alſo are excellent for old Ophthalmies: nor muſt you forget the waſhing of the eyes as above mentioned with Fennel-water and red Wine, to take away the remainder of the redneſs, and to ſtrengthen the eyes every morning.

For which purpoſe alſo,

Take of *the beſt Aloes, and of Tutty prepared, of each ſix drams: white Sugar one ounce: Roſe-water, and mild white wine, of each ſix ounces: ſet them in the Sun fourty dayes in a glaſs well ſtopt: put ſome drops of this water not ſtrained, into the Eyes.* Or,

Take of *white Wine three pints: Roſe-water half a pint: Tutty prepared three drams: pou-*

dered

dered Cloves one dram: Camphire half a dram: mix them in a glaſs cloſe ſtopt, and ſhake them for two hours, and ſet in the Sun one whole month; remembering every day a little before Sunſetting to take it out of the air, and never bring it forth till the Sun is riſen: two or three drops of this water ſtrained by filtration, muſt be put into the Eye before he go to ſleep, or in the morning one or two hours before he riſe.

This takes away the oldeſt redneſs; it dryes up weeping, and Fiſtulaes; it conſumes al ſuperfluous moiſtures upon the outward membranes and quickens the ſight. This alſo following is excellent.

Take of *Wheat two handful: poudered Salt one handful: put them in a Copper Veſſel, and put white Wine to them two fingers breadth above them; cover the Veſſel, and let them ſtand in the ſhade ſix or ſeven dayes till the liquor turneth green, ſtirring them often with a wooden Spatula, after pour off the liquor by inclination without the dregs, and if need be, filter it. One drop into the Eye, takes away redneſs, and defluxion, and all ſpots or blemiſhes thereon, and quickeneth the ſight.*

Solenander, commends highly the Decoction of Quince Leaves, which are to be gathered without breaking in the beginning of the ſpring, and kept diligently that they neither be duſty, nor muſty; nor otherwiſe defiled: and when you uſe them, boyl one handful of them in pure water, and let the Eyes be often waſhed therewith: It is a wonder (ſaith he) to ſee how it doth preſerve, cleanſe, and ſtop Rhewms in the Eyes.

Sometimes in an inveterate Ophthalmy much filth like matter is gathered in the eyes, which can ſcarcely be cured with Collyriums, or other remedies: but in this caſe fine Cotton dried at the fire and laid like a ſmal pillow upon the eye and rowled down, is very good; for the next morning you may take much filth away with it. And with this Remedy uſed many nights together many eyes have been cured which could not otherwiſe; and this kind of Medicine prevailes chiefly among Children that have ſore eyes.

For a Concluſion of this Chapter, it wil not be amiſs to ſet down the experimental Medicines of *Sacutus Luſitanus* who cured an old Ophthalmy wch would no otherwiſe be removed in a whol yeer with a Mercurial Unguent, although there was no ſign of the French Pox: being perſwaded by *Mercurialis*, who in his Book of the French Pox ſaith, *When you ſee any Diſeaſe that will not be Cured by ordinary means, imagine it to be the French Pox.* He asked the Patient if ever he had the French Diſeaſe, or ever lay with a foul bodied Woman? He denied al but only confeſſed that he lay with one Man once in the bed, whom he ſuſpected to be Frenchified: Upon this conjecture, the Phyſitian preſcribed a ſudorifick diet of Sarſa for twenty dayes, but to no end. And though the Diſeaſe was chiefly in the upper parts, ſo that it was to be feared, leaſt if he fluxed him at the mouth with Mercury that the humors ſhould fal more into the eyes, but in regard it was old, and the force of the defluxion was attained, he preſcribed the Unguent of Mercury after his body was wel Purged, and by it in ſeven dayes ſpace after plentiful Salivation or Spitting, his pains ceaſed, that inflamation was gone, the itching abated which was before in his eye-lids, with much acrimony: And ſo leaving him only an iſſue in his Arm to breath the Brain; and preſcribing a good diet, which he kept; the Patient returned to his former health.

The ſame *Zacutus Luſitanus* in his *Praxis ad Hiſt.* commends that Water and Oyntment which we mentioned in the Cure of Suffuſion, for an old Ophthalmy.

Chap. 9. *Of* Hypopyo, *or Matter under the* CORNEA.

WHen the Inflamations of the Eyes are great, and ſwelling; ſomtimes they cannot be reſolved, but they wil be ſuppurated; which is much to be feared, and to be prevented by al means: For from thence Ulcers wil come; and ſomtimes Matter is gathered under the Cornea, which Diſeaſe is called *Upopuon*; and this comes often from a ſtroak or contuſion, & blood-ſhotneſs: ſomtimes it covereth al the *Pupilla*, and hinders the ſight: ſomtimes it compaſſeth the circle of the Iris, and is like the pairing of a nail, and thence it is called *Onux*, or *Unguis*.

This Diſeaſe is known not only by the whiteneſs which is like Matter, but alſo from the Inflamation and Blood-ſhot that went before; for when the Eye is moved, there appears a motion of the Pus or Matter urder the Cornea. There is a redneſs in the Eye, and Pulſation; or at leaſt went before it.

For

For the Cure, firſt uſing univerſal Medicines, if there remain any reliques of Inflamation, you muſt take them away by the Remedies preſcribed in the Ophthalmy: then you muſt apply gently Diſcutients mixed with Emollients, leſt when the thin part is reſolved, the matter become thicker, and leſs fit to be diſſolved. Therefore make your Fomentations of the Decoction of the flowers of Chamomel, Melilot, the ſeeds of Fleabane and Fenugreek, to be uſed with Linnen, or Bags. You may ad the Leaves of Eye-bright, Celandine, and Fennel ſeed: or uſe this following Collyrium.

Take of the Water of Vervain, Rue, Celandine, Roſes, and Fennel, of each half an ounce: the beſt Aloes and Tutty prepared, of each half a dram: Sugar-candy one dram. Pouder and mix them; with a little Breaſt-milk make a Collyrium, of which drop ſome into the Eyes twice or thrice in the day.

This following is excellent:

Take of *Saffron, Aloes, and Mirrh, of each one dram: Wine three drams: Honey ſix drams: Diſſolve the Saffron in the Wine; then mix them with the Aloes and Mirrh, then put them to the Honey, and anoint the Eyes.*

Laſtly, Thoſe Medicines which were preſcribed in the declination of an Ophthalmy, in the ſpots or Maculæ of the Eyes, and in Suffuſion, or Cataract are good here.

If the Matter cannot be diſcuſſed with Reſolving Medicines, you muſt ſeek others. *Gal.* in 14. *Meth.* reports, That there was one *Juſtus* an Oculiſt in his time, that cured many of this Diſeaſe by ſhaking their heads; for ſetting them ſtraight upon a ſeat, and taking hold on both ſides of their head, he ſhaked them till he perceived the matter to deſcend.

But if the matter which hindereth the ſight cannot be thus cured neither, *Galen* in the place cited flies to Manual Operation, or Chyrurgery; whom *Ætius* and others do follow, which is done by pricking of the Eye, which is uſed alſo in a Cataract. Which operation, as it is little uſed in our times, ſo it requireth the hand of a moſt skilful Chyrurgion; and it is much to be feared, leſt when the Cornea is opened, the Watery Humor come forth with the matter.

Chap. 10. *Of* Phlyctænæ, *or Bliſters in the Eyes.*

IN the *Cornea* and the *Adnata Tunica*, as in other parts of the Body, there breed ſometimes little bliſters full with water, like bubbles, or bladders, which come from the heat of the Humor *Phlyctainai* in Greek, and called in Arabick *Bothor*: and they are little tumors like Gromwel ſeeds, coming from a ſharp watery humor.

They are eaſily known. They in the Adnata are red: in the Cornea, blackiſh, if they be outward; but white if they be in the inner part of it.

As to the Prognoſtick: *Phlyctænæ* which grow in the Adnata, are leſs dangerous than they in the Cornea. The more ſuperficial theſe Puſtles are, the leſs dangerous they are; the more inward, the more danger; for it is to be feared leſt the whol thickneſs of the Cornea be eroded, and ſo either the watery humor wil flow forth, or elſe the Uvea wil ſtart out.

The Cure conſiſteth wholly in the reſolving of the matter conjoyned, and the averting of the antecedent cauſe. And we muſt take heed leſt we bring theſe Puſtles to ſuppuration, leſt they turn into Ulcers.

Therefore thoſe Univerſal Evacuations, Revulſions, and Derivations, which were declared in the Cure of the Ophthalmy, muſt here be uſed.

Afterwards we muſt apply Topicks, or Medicines to the part, which at the firſt muſt gently repel, and diſcuſs; ſuch as were laid down for them in the treaty of the encreaſe of Ophthalmy, which are moſt proper when there is an Inflamation alſo, as it often falleth out.

Afterwards you may uſe more drying and diſſolving Medicines, ſuch as are deſcribed for the ſtate and declination of Ophthalmy; and eſpecially the Oyntments there ſet down, which are very proper to diſcuſs and dry up Puſtles.

Chap. 11. *Of the Ulcers in the* Cornea *and* Adnata.

AFter an Ophthalmy, there followeth often Ulcers in the Tunicles called *Cornea* and *Adnata*, when it comes to ſuppuration. They follow alſo the *Phlyctænæ* or Puſtles, which bred in the *Cornea*, but not till they break. They alſo uſe to come from ſharp corroding humors flowing into the Eyes.

There are divers ſorts of theſe Ulcers mentioned in Authors, taken from their divers circumſtances, as they are ſuperficial or profound, broad or narrow, and according as they differ in ſhape and figure, and the like. So a hollow, narrow, and hard Ulcer is called *Bothrion*, or *Foſſula* like a little trench,

trench: A broad and not ſo deep an Ulcer, is called *Coiloma*: That which cometh in the Circle Iris, is called *Argemon*, or *Ulcus Coronale*: Finally, that which is deep and hard, is called *Epicayma*, and *Egcayma*.

The knowledg of Ulcers is eaſie, for they may be ſeen: If the Ulcer be in the Cornea, there will be a ſmal white blemiſh in the black of the Eye; if in the Adnata, there wil be a ſmal white blemiſh in the white of the Eye, becauſe the Veins of the Tunicle Adnata are ful of blood.

The Ulcer of the Eyes are dangerous, and hard to be cured; but more in the Cornea than in the Adnata. An Ulcer in the Pupilla is more dangerous, becauſe after it is cured, it wil leave a Scar, which wil hinder the perſpicuity of the Cornea, and ſo the ſight wil be hurt; and if the whol Tunicle be corroded, the Watery Humor wil flow out, and the Uvea ſtart forth.

The Cure of this Diſeaſe, as of other Ulcers, is, By clenſing and drying means; but they muſt be very gentle by reaſon of the tenderneſs of the part, and exquiſitneſs of the ſence. But you muſt firſt uſe ſuch things as revel and hinder the flux of humors from the Eyes; as in Ophthalmy either old or new, were declared. And if there be an Inflamation with it, you mix muſt things that are proper for that. With which alſo you may uſe things that aſſwage pain, if there be any.

Theſe things do moderately dry and clenſe: Sugar, Honey, Saffron, Mirrh, Frankinſence, Aloes, Sarcocol, Tutty, and Ceruſs; of which you may make theſe following Medicines:

Take of *Barley and Fœnugreek Water boyled, four ounces: the beſt Honey half an ounce: or of the Syrup of dried Roſes, one ounce: Make a Collyrium to waſh the Eyes often.*

Take of *Vervain and Plantane Water, of each two ounces: Sugar candy half an ounce. Mix them for a Collyrium.*

Take of *the Water of Honey diſtilled in* Balneo, *and of Roſe water, of each equal parts.* Or,

Take *a hard Egg peel'd, cut it in two pieces, and taking out the Yolk fill the hollow with the pouder of Sugar candy; tie it faſt, and hang it in a Wine Celler, and you ſhall have a Water drop from it, which is excellent to clenſe the Eyes without pain.*

But if you wil have it ſtronger mix the Pouder of Mirrh with your Sugar candy.

Montanus highly commends this Pouder following:

Take *twenty Whites of new laid Eggs, put them in a pewter diſh in the Sun till they are dry: then pouder them finely with as much Sugar; and this pouder put into the Eyes, doth much good without cauſing pain.*

In the Progreſs of this Diſeaſe, if you will clenſe and dry more, put to the former Medicines the white Troches of *Rhaſis*, Frankinſence, Aloes, Mirrh, Sarcocol, or the like, but in a ſmal quantity leſt it be too ſharp, and alſo mix them with Milk, white of an Eg, ſome Mucilages, and other Anodines, or things that mitigate and aſſwage pain.

Tutty is the beſt, for it cauſeth no pain, and dryeth and healeth; therefore Collyriums, or Unguents are good that are made thereof. And chiefly the Oyntment preſcribed in the cure of Ophthalmy, which hath in it a great quantity of Tutty.

This following is very clenſing, drying, and healing.

Take of *Sarcocol ſteep'd in Roſe Water, Ceruſs and waſhed Aloes, Mirrh, and Tutty prepared, of each half a dram: Sugar candy one dram: With the Mucilage of Gum Traganth drawn with Roſe Water, make a Collyrium, with which anoint the Eye-lids.*

Chap. 12. *Of a Cancer in the* Cornea.

AS a Cancer may come in other parts, ſo ſomtimes it breeds in the Eyes. And though the knowledg and Cure of a Cancer is in the Treatiſe of external Diſeaſes, yet we wil ſpeak briefly here of thoſe things which properly belong to a Cancer in the Eye.

A Cancer is either occult, or hidden, or ulcerated. The occult is reckoned among Tumors, and it is called a Cancerous Tumor, or Cancer of the Eye: But the ulcerated is called a Cancerous Ulcer in the Eye.

But in both there is an unequal hardneſs, a blew Lead color, a ſtrong pricking pain, eſpecially about the Head and Temples: the Veins adjoyning are blew, and very full. Somtimes aduſt and ſharp blood floweth from the part affected, when the Cancer is ulcerated. And this pain is encreaſed by any warm Medicines.

This Diſeaſe is incurable, as wel in the Eye as in any other part, when it is fixed; except it be taken away by manual operation.

Authors propound two waies of Cure, namely a True, and a Palliative. A true Cure (as was ſaid) cannot be wrought but by Chyrurgery when the Cancer is fixed: but when it is new in the beginning, it may be cured by often evacuation of the Chollerick humor, firſt having let blood; as *Galen* teacheth 2. *ad Glauconem, cap.* 10. where he boaſteth that he hath often cured this diſeaſe, adjoyning a convenient Diet with the aforeſaid Phyſick.

A Pal-

A Palliative Cure, which tends only to the mitigation of Symptoms, is done not only by the aforesaid Evacuations but also by convenient Topicks.

First then you must appoint a convenient Diet, such as is good against burnt Choller; and it must be cooling and moistning.

Then draw Blood on the same side, and apply Horsleeches behind the Ears, and also to the Hemorrhoids if they do appear, applying Cupping Glasses to the Shoulders, and use other kinds of Revulsions.

You must also prepare and Purge Melancholly by Potions, Apozemes, opening Broaths, by Magistral Syrups, and the like: But above al for the purging of Melancholly black Hellebor wel prepared is the best; and by giving the Extract thereof twice or thrice, we have somtimes cured a Cancer in the beginning.

These Remedies do exceedingly diminish the Humors that flow to the Eyes, and take away pains and other Symptoms: for which purpose also Topicks are good, such as are prescribed in Ophthalmy, for asswaging of pain: especially the Collyria made of Mucilages, the white Troches of Rhasis, and prepared Tutty, with the water of Roses, Nightshade, and Plantane.

This following Water is a good Collyrium to wash the Eye with.

Take of *the Roots of Pilewort, and herb Robert, of each two handfuls: Ribwort, Nightshade, Borrage, Bugloss, Purslain, Eyebright, and Bettony, of each one handful: green Frogs, and whites of Eggs, of each twelve in number: the seeds of Fœnugreek and Quinces, of each one ounce: let the Roots and Seeds be bruised, and the Leaves Cut: then pour upon them of Eyebright and Rosewater of each one pint: mix them and Distil them in a pewter Still.*

The flesh of Chickins is very powerful to asswage pain: and some say that the Disease it self hath been Cured by it alone. So *Maritius Cordæus*, Comment. 7. in lib. 1. *Hipp.* of Womens Diseases, relates a history of a noble Woman, who had the right side of her face a long time infected with a Cancer ulcerated, and having tryed al means she could from Italian, French, German, and Spanish Physitians, was at length Cured with this vulgar Medicine by a Barber: He took Chickins and cut them in thin broad pieces, which he often applied to the Cancer: Others apply the flesh of yong Pigeons so cut, while it is warm.

Finally, The true Cure of a fixed Cancer is only by taking it out by the roots, and is by a taking out of the Eye; which *Fabricius Hildanus* saith may be done very safely; and he sheweth the manner and Circumstances thereof at large, *Observ.* 1. *Cent.* 1. so that we shal not here Repeat them.

Chap. 13. *Of the Rupture of the Cornea.*

SOmtimes the *Cornea* Tunicle is so divided, that the watery Humor, and somtimes the *Uvea* also cometh forth; and this is called the Rupture of the *Cornea.*

The Cause of this is an Ulcer, or Wound in the Membrane, or a great afflux of Humors, by which the said Membrane is so distended, that it cracks in the middle, and the Humors conteined are let out: As *Paræus* reports it happened to a certain Woman in Paris, *lib.* 16. *cap.* 13.

This Disease is for the most part incurable, and takes away sight, because the Humors of the eye cast forth cannot be repaired: but if the Wound be smal, so that only a portion of the watery Humor is only lost, it may be Cured; for the watery humor may somtimes be renewed: as *Galen* taught 4. *de symp. caus. cap.* 2.

You must use Astringent and Glutinating Medicines; having first Bled and Purged if necessary, as the white of an Egg, with the white Troches of Rhasis dropt into the Eye.

Let the part be Fomented with a Decoction of red Roses of *Solomons* Seal, Bramble buds, shepheards-purse, and Plantane boyled in red Wine if there be no inflamation; but if there be, in spring water.

Take of *Quinces half a pound: red Roses three pugils: Acacia two drams: Saffron one scruple: boyl these in red Wine, and make a Cataplasm to be applied to the part.*

For the perfect Consolidation and Cure, use this Collyrium.

Take of *washed Aloes, Tutty prepared, and Sarcocol steept in breast Milk, of each half a scruple: Saffron five grains: with the Mucilage of Gum Traganth, make a Collyrium.*

CHAP.

Chap. 14. *Of the Coming forth of the* Uvea.

UPon the Rupture of the *Cornea*, often comes the ſhooting forth of the *Uvea*, which is called in Greek, *Propto ſis Ragoidous*: there are four kinds mentioned by Authors, eſpecially by *Paulus*; of which the firſt is called *Mucocephalon*, becauſe it is like the head of a Fly: and this is when a ſmal portion of the *Uvea* comes forth. The ſecond is called *Staphuloma*, and this is when a great part of the *Uvea* comes forth ſo that it is like the ſtone of a Raiſon. The third is called *Melos*, when there is ſo great eruption of the *Uvea*, that it ſeems like an Apple. The fourth is called *Elos*, or Clavus, when the *Uvea* being come forth groweth hard.

The Cure of this Diſeaſe is Difficult, and the more when the *Uvea* comes moſt forth: but when it is ſmal, as in *Muocephalon* it is Curable by moderate aſtringents, ſuch as we preſcribed in the Rupture of the *Cornea*.

The Antients as *Paulus Aetius*, and *Celſus*, do labor to Cure them when old and not moveable by Medicines, with Chirurgery; but this is now out of faſhion, by reaſon of its great difficulty and doubtful ſucceſs: but if any wil try it, he ſhal find the way exactly ſet down in *Jerom. Fabricius, ab Aquapendente, cap. de ſtaphylomate.*

Chap. 15. *Of* Ægylops, *and Fiſtula Lacrymalis.*

HItherto we have ſpoken of the Diſeaſes of the Eyes which happen in the humors and upon the Tunicles; it remaineth that we ſpeak of the Diſeaſes of the Corners of the Eyes and Eye-lids.

And firſt of the Tumor in the great Corner of the Eye, by the Root of the Noſe, called *Ægylops*, and *Anchylops* if not broken.

This little Tumor, is either with, or without Inflamation.

When it is inflamed, it is like a ſmal Phlegmon: or Bile, red about, with a ſhooting pain. And it comes of thin and chollerick blood that flows into the part by the veins of the Temples, Fore-head, and Face, and ſo impoſtumateth; which being open produceth an Ulcer, which ſpeedily turns hol-low, and then it is called *Fiſtula Lachrymalis*. And if this continueth one yeer, there is a Caries or foulneſs of the Bone, as *Hippocrates* ſaith, 45. *Sect.* 6. In Ulcers of a yeer old, the Bone is foul: And this Caries is known by the Cavity, which is known by the finger: and by the ſtinking Matter flowing from it.

Somtimes it comes without Inflamation, and then it is bred of a thick ſlimy Humor, like Pulſe or Hony: As the Tumors called *Atheromata*, *Steatomata*, *Meliceris*, which are without pain.

The Cure of an *Ægylops* is very hard, both in regard Medicines are ill to be applied to it, by reaſon the ſight is ſo nigh; and becauſe an Impoſtume wil quickly Ulcerate in ſuch a tender part (as aforeſaid) But it is moſt difficult when the Impoſtume breaks out at the Noſe, and the Matter flows through the Noſtrils; becauſe thereby the Bones wil be putrified.

Somtimes *Ægylops* turns to a Cancer, which comes with a prieking pain; extenſion of the veins, hardneſs and blewneſs of the skin, and then it is better to let it alone, becauſe Medicines wil enlarge it, and encreaſe pain.

A *Lachrymal Fiſtula* that is newly begun, and which hath an external orifice to be ſeen, is cureable by Medicines; but that which is deep and old, and hath fouled the Bone, is ſcarcely Cured without burning.

The divers times of theſe Diſeaſes require divers Medicines.

And Firſt in the beginning of an *Ægylops* you muſt revel the defluxion from the part by bleeding and purging; and uſe repelling Medicines to the Forehead, by which ſomtimes the Progreſs is ſtopt before it come to ſuppuration.

For this end, uſe the following *Ceratum*.

Take of *Pomegranate-peels, Acacia, Pomegranate flowers, Galls, Cypreſs-nuts, Roch-Alum, Bole-Armenick, of each one dram: white Wax four ounces: Turpentine three drams: Make a Cerate.*

After the uſe of Repercuſſives, you muſt apply Reſolvers to the part affected, as this Decoction.

Take of *pure Honey and Aloes, of each two ounces: Mirrh one ounce: Saffron one dram*

and an half: Water two pints: Boyl them gently to the consumption of half: dip a piece of soft Spunge therein, squeeze it a little, and apply it hot to the part, bind it on; and do thus often.

Amatus Lucitanus, Curatione 68. *Cent.* 5. prescribes a Cerat against Ægylops, which he highly commends, which is this:

Take of *the Powder of Cockle shels, two drams: Mirrh, washed Aloes, and Frankinsence, of each half an ounce: Sarcocol, Dragons blood, and Ceruss, of each three drams: Opopanax dissolved in Wine, Vinegar and Blood-stone, of each one dram and an half: Saffron two scruples: Wax and Rozin, of each three ounces: Mix them according to art at the fire, and make a Cerate to be applied to the corner of the Eye.*

If the Tumor wil not be resolved with the former Medicines, but wil come to suppuration, you must help it forward with a Plaister of Simple Diachylon; or if there be pain or inflamation, you may apply a Cataplasm of Crums of Bread. If it wil not break, open it with a Lancet, and delay not least the matter contained do corrode the parts, and make an incurable Fistula. Many open it with a hot Iron, but the cold is best.

After the imposthume is opened, you must clense the Ulcer, and heal it as others. But if it fistulate, cure it thus:

First make a general Evacuation by bleeding and purging. You must divert the defluxion from the Head by Cupping-glasses, Vesicatories, and Caustick applied to their proper places; and then use the decoction of China, or Sarsaparilla, for many daies. And at the same time dry the Brain with Fumes and Head Pouders, as in a Catarrh.

Instead of a Cautery you may apply a Seton to the Neck; for *Fabricius Hildanus* reports Obs. 41. Cent. 1. that it hath done it alone without other means.

If the distemper of the Liver be the Cause of the defluxion (as it often is) you must have a special care to administer Medicines proper for that.

When you use Topicks, open the orifice of the Ulcer, and dilate it by degrees, with a Tent made of an Elder pith, a spunge made fit, or a Gentian Root. When it is large enough, apply this following Medicine, commended by *Foreſtus, Obs.* 17. *Lib.* 11.

Take of *Honey two ounces: Verdegreece one dram: Water of Rue four ounces: Pouder the Verdegreece very fine, and boyl it with the rest at a gentle fire till the third part be consumed, and make a warm injection of the strained Liquor with a Syringe: if this be too sharp, wash the Ulcer every day with the Water of Rue, and after apply a little* Unguentum Apostolorum. *Continue this course for three weeks, laying on some convenient Plaister, and defending the Eye with Rose Water.*

When the Ulcer is sufficiently purged, use this following Collyrium to incarnate and cicatrize:

Take of *Frankinsence, Aloes, Dragons blood, Pomegranate flowers, Allum, and Antimony, of each one dram: Verdegreece five grains: Pouder them fine, and with Rue Water make a Collyrium to be dropt in with a stalk of Rue, thrice in a day, and put in a tent wet therewith, laying upon it a Diapalma Plaister: Lessen your Tent by degrees, and at length take it quite out, only washing the part with the aforesaid Collyrium, and laying on Diapalma.*

Foreſtus in the place cited saith, that new fistulaes have been cured thus by a famous Chyrurgeon of his time.

If it appear that the bone be foul, it must only be cured by an actual Cautery; the manner of which is exactly described in *Paræus, Fallopius*, and *Aquapendente* in their Works: But *Fabricus Hildanus* Obs. 22. Cent. 5. boasteth that he cured a Fistula lachrymalis with foulness at the Bone, that was four yeers old, and counted desperate, in a child of thirteen yeers of age, with Medicines alone, dilating of it with prepared Spunges, and after sprinkling Euphorbium into it, and that very much and often; and after applying only an Emplaister of Gum Elemi. Having used these things diligently for the space of divers weeks, he perceived a scale of the Bone, which he drew forth; and then with half a drop of Tolutan Balsom upon a little Lint, once in a day conveyed into the Ulcer, he perfectly consolidated the Fistula in a short time.

Chap. 16. *Of Rhyas and Encanthis.*

ANother Disease often followeth the Fistula *Lachrymalis* called *Rhyas*; and this is the consuming or diminishing of the smal flesh in the great corner of the Eye, from whence it is enlarged: This comes also of other Causes, as sharp humors falling upon the part, or from clensing Medicines formerly misapplyed.

Encanthis is contrary to *Rhyas*, which is the immoderate encrease and swelling of the Caruncle,

or

or little fleſh in the great corner of the Eye; and this comes from much blood flowing to the part, and the not orderly curing and drying up of the Ulcer.

The Cure of *Rhyas* is by Incarnatives, ſuch as follow:

Take of *red Roſes, one pugil: Cypreſs Nuts, and Myrtles, of each two drams: Aloes one dram and an half: old Wine one pint: Boyl them till the fourth part be conſumed: waſh the part often with this Decoction.* Or,

Take of *Aloes and Frankinſence, of each one dram: Dragons blood half a dram: red Roſes and ſeeds of Sumach, of each one ſcruple: Roſe Water one pint: boyl them to the conſumption of the fourth part. Make a Collyrium.*

Encanthis is cured by taking away of the ſuperfluous fleſh growing in the corner of the Eye; this is done with eating Medicines, beginning with the mildeſt firſt, therfore firſt uſe burnt Allum; after proceed to *Apoſtolorum Ægyptiacum*, or burnt Vitriol. But if theſe will not do, cut it out, or burn it with an Iron. But before you do theſe things you muſt prepare the Body with convenient Evacuations leaſt you cauſe a new defluxion: but in the cutting, burning, or conſuming of this Caruncle with Medicines, you muſt take heed that you take it not wholly away, but only that which is ſuperfluous, otherwiſe it wil turn to *Rhyas*.

Chap: 17: *Of Epiphora.*

THe word *Epiphora* ſignifieth any Defluxion into any part. But through cuſtom it is uſed eſpecially for the defluxion of a thin Rhewm from the Eyes; hence it is called involuntary weeping, which flows dayly from the corners of the Eyes.

For the producing of which Humor flowing preternaturally there is an evil diſpoſition in the part from whence it cometh, and in the part receiving it: the part that ſends this humor is the Brain, which when it is too hot, or too cold gathereth a watery Humor, and ſo ſends it to the inferior parts, which are fit to receive it: The part receiving is the Glandle or Kernel by the great corner of the Eye, and the Caruncle upon the corner; the thinneſs, or thickneſs, or other weakneſs of which parts cauſeth that they eaſily entertain the humors that flow thither. Therefore an Epiphora happeneth often in an Egylops, a Lachrymal Fiſtula, a Rhyas, and Encanthis, becauſe the ſuperfluous humors uſe to be eaſily received into the parts affected.

This humor is carried from the Brain into the corners of the Eyes, ſomtimes by the internal Veins, ſomtimes by the external, as we ſhal ſhew you hereafter by their proper ſigns.

But the Humor which maketh an Epiphora, is ſomtimes cold, and brings no other inconvenience, but only defluxion, ſomtimes it is ſalt and ſharp, and cauſeth pain, heat, and redneſs, and exulceration of the Eyebrows.

There need no ſigns to be given of Tears, they are viſible. It wil appear by what hath been ſaid whether they are cold or hot, and ſharp. But we muſt diſtinguiſh whether they come by the internal or external Veſſels. When by the internal, there is pain in the inſide of the head, and ſomtimes violent neeſing. But if they come by the external without the Skul. The Veſſels of the Forehead and Temples are ſtretched, and the head ſeems to be bound about and aſtringent means, outwardly applyed do help.

As to the Prognoſtick; New Epiphora's coming from outward cauſes are eaſily cured, eſpecially in youth: but old, and in old men very hardly. They which proceed from other diſeaſes, as Ægylops, Fiſtula Lachrymalis and the like, have their Cure with the diſeaſes whence they came.

The Cure of this Diſeaſe conſiſts in taking away the defluxion, and ſtrengthening the part receiving.

You muſt take away the defluxion with Evacuation of the humor offending, revulſion, derivation, and ſtrengthening the part from whence it cometh.

The Peccant humor which is a Water ſuperfluous in the Brain, muſt be evacuated with bleeding and purging.

Blood-letting is not good in a cold diſtemper of the Brain, except there be manifeſt ſigns of plethory or fulneſs; but in a hot diſtemper, when the humors are very ſharp, it is very good, and you may uſe it twice or thrice if need be.

You may purge by Potions, Apozemes, Pills, and the like, which you may proportion to the condition of the Patient.

Make a revulſion of the humors flowing by Cupping-glaſſes often applied to the ſhoulders, by Veſicatories to raiſe bliſters behind in the Neck, or with Cauteries to the hinder part of the Head, and Iſſues in the Arms.

In a ſtubborn *Epiphora*, a Veſicatory applyed to the fore-part of the Head doth wonders; as *Foreſtus* ſheweth, *Obſ.* 11. *lib.* 11. concerning an Old Woman who had ſore Eyes, weeping and mat-

very, with great pain and itching, and could by no means be Cured, that with applying a Plaister of *Cantharides* with Honey and Leaven to her head being shaven, he perfectly Cured her.

Rondeletius saith, That a Cautery applyed to the *Commissura*, doth more good than when it is used to any other part.

For Derivation, use Leeches behind the Ears; and Masticatories every morning.

But least the Humors once evacuated should breed again, the Brain must be strenghened and dried; and if it be too cold, you may use all our Remedies prescribed in the Cure of the cold Distemper of the Brain. But if it be too hot, those things which we prescribed in the Cure of a hot Catarrh; especially such as respect the Brain most, are here to be used.

While the former Medicines are used, you must apply Topicks to the part receiving; and first if the Humor comes through the external veins, apply Astringents to the Forehead and Temples: and if the Defluxion come from a sharp hot Humor, use the following Cataplasm.

Take *Bole-Armenick, Dragons Blood, Pomegranat Flowers, and Mirtles, of each one dram and an half: Accacia and Hipocistis of each one dram: Frankincence and Mastich of each two scruples: Red Roses one pugil: Pouder them and mix them with the white of an Egg and a little Vinegar, make a Cataplasm, which spread upon a Cloth and apply to the Fore-head and Temples, and renew it as just as it groweth dry.*

If it come of a Cold Humor, apply this following Ctrat.

Take of *Frankinsence and Mastich of each one dram and an half: Gum Anime, Tacamahacca, and Blood-stone, of each one dram: Grain of Juniper two scruples: Turpentine and Wax as much as will serve turn: make a Cerat.*

But you must apply Astringent and Drying Medicines to the part affected: which are thus made.

Take of *Tutty prepared one dram: Sarcocol half a dram: Frankinsence and Mastich of each a scruple: Spicknard six grains: make Troches, which being mixed with the white of an Egg, or the juyce of Quinces may be applyed to the corner of the Eye.* Or,

Take *Tutty prepared in a fine Rag, and tye it with a string, and put it in sharp Wine, and with this often wash the Eyes.* Or,

Take *Tutty prepared, Egg shells poudered, the best Aloes, of each one dram: tye them in a Rag and make a little Ball which steep in Fennel-water, and squeez the Ball often into the Eyes.*

Only Aloes poudered and made into a Ball (as above) and put into Rose-water, is very good. Or,

Take *Aloes, Cypress Nuts, Frankinsence, Mastich, Myrrh, of each two drams: Tutty prepared, and Sarcocol, of each one dram and an half: Sanguis Dragonis, Barberries, Sumach, red Roses, of each one scruple: Pouder them finely, and with Fennel-water make a Collyrium.*

In a Hot Defluxion this is excellent.

Take of *white Troches of Rhasis without Opium, Sarcocol, Lycium or Box-thorn, Acacia, Olibanum, of each one dram: the stones of Myrobalans calcined, of white and red Coral, of each half a dram: Pearl half a scruple: as much of the juyce of Pomegranats boyled to half, as will make a Collyrium.*

If Redness be joyned with it, this following is profitable.

Take of *the seeds of Sumach bruised one scruple: hot Plantane Water one ounce: macerate them a while, then press them strongly, and put of Rose, Eyebright, and the Waters of the white of an Egg well beaten, of each half an ounce: Sugar Candy finely poudered and strained with a little water, one scruple: Make a Collyrium.*

Lastly, Those Medicines which were prescribed for an Old Ophthalmy, are good in this Disease.

CHAP.

CHAP. XVIII.

Of Pterygium, *or Haw in the Eyes, called* Unguis.

THis is a Hard and Nervous little Membrane, which coming out of the great Corner of the Eye, firſt covereth the white, and after by continuance, the black; and covering the *Pupilla*, hindereth the ſight.

Sometimes it is thin and white; ſometimes it is fleſhly with many red veins, and it is called a *Pannicle*, and *Sebel*, by *Avicen*; although ſome diſtinguiſh a *Pannicle* from a *Haw*, or *Ungula*; becauſe *Ungula* is a Nervous Tunicle without repletion of veins, and is only in the *Adnata*: But *Sebel*, or *Pannicle*, Covereth the whole Eye, and is very Red, and full of Veins.

This Diſeaſe comes from Ulceration of the fleſh in the Corner of the Eye; or, of the *Adnata*, whence there comes a roughneſs or inequality in the part, which while the Nouriſhing Faculty labors to make equal, it fills with blood, and begets a preternatural encreaſe, or covereth it with a Skin.

And becauſe many Excrements do uſe to flow to an Eye diſordered, therefore the *Haw* is not bred of pure Blood, but of many Excrements alſo, whence ariſe many ſorts of *Haws*: Becauſe,

Some are Hard, others Soft, ſome White, ſome Red, ſome Yellow, ſome Brown, others are eaſily ſeparated from the *Adnata* and *Cornea*, others ſtick faſt; ſome are ſimple and without Malignity, others are Cancerous and filthy.

The Diagnoſis, or Knowledge of this Diſeaſe, is known by what is ſaid; alſo the Cauſes, namely, The Humors of which it is made, may be known by their Colour; for a Red *Haw* comes of pure Blood: a Yellow, of Choller: a White, of Flegm: a Dark and Black one, of Melancholly.

As to the Prognoſtick, This Diſeaſe is ſcarcely to be Cured, and that in a long time; becauſe ſharp Medicines which are proper for to eate it away, cannot be uſed but by degrees, by reaſon of the exquiſite ſenſe of the Eyes.

If the Eye Affected grow ſmaller, it is an evil ſign; for it argueth the Debility of the part.

A new *Haw* and ſmal, may be Cured with Medicines; but an over-grown, old, and one covering the black of the Eye, cannot, but by Chirurgery.

A *Haw* which is thick, turn'd out, ſtreteht forth, hard and black, cannot be Cured; for it is of a Cancerous nature.

The Cure is to be by the Antecedent and Conjunct Cauſe.

In reſpect of the Antecedent, firſt good Diet is to be enjoyned, ſuch as is mentioned in other Diſeaſes of the Eyes from Fluxes.

Alſo the afore-mentioned Evacuations and Revulſions may here be uſed, namely, Purgations, Bleeding, Cupping, Veſicatories, and the like.

And when the Body is ſufficiently Purged, we muſt come to Topicks, which may Conſume the *Haw*.

Beginning firſt with Mild, ſuch as were they which we ſpake of in Curing of the Spots in the Eye, ealled *Phlyctænæ*: which not prevailing, we muſt uſe ſtronger, which are frequent in Authors.

Foreſtus commends this following.

Take of *the juyce of Fennel four ounces*: *the juyce of Celandine three ounces*: *the juyce of Rue two ounces*: *the juyce of Mallows two ounces and an half*: *Aloes one dram*: *Vitriol two ſcruples*: *Verdugreeſe one ſcruple*: *Ginger and Cinamon, of each half a ſcruple*: *the Gall of an Eel half an ounce*: *the Gall of an Ox, or Hog two drams*: *Sugar Candy two ſcruples*: *Let the juyces boyl with the reſt, and then clariſie it and make a Collyrium.*

This alſo is by him Commended.

Take of *Blood-ſtone two drams*: *white Vitriol and Verdegreece calcined, of each three drams*: *Myrrh and Saffron, of each one dram*: *Long Pepper half a dram*: *Sugar Candy half an ounce*: *Pouder them very fine, and mix with one dram of this Pouder two drams of Radiſh-water, and apply twice or thrice in a day, as the Patient can endure it.*

Before you uſe theſe Remedies, you muſt Foment the part with an Emollient Decoction, which you muſt do alſo afterwards to aſſwage the pain.

Among

Among the Mildeſt, this following is beſt.

Take of *Cuttle Bone*, *one ſcruple*: *Sugar Candy*, *one dram*: *Vitriol*, *half a ſcruple*: *Tutty Prepared*, *half a Dram*: *Mix them*, *and make a fine Pouder*, *to lay upon the Haw.*

If it cannot be taken off with theſe Topicks, you muſt fall to Chirurgery, and taking up the *Ungula* with a Hook at the bottom or root; draw a double Thred through it with a Needle, then laying it down cloſe on both ſides beneath, cut it off with your Ciſſours; as is more at large ſhewed by *Celſus*, *Paulus*, *Aetius*, *Jerom ab Aquapendente*, in their Chirurgery, and by others.

Having made Inciſion, lay on a little Lint dipped in Roſe-water and the white of an Egg, to aſſwage pain, and hinder Inflamation.

And Laſtly, you may Heal it up with drying Medicines, as Collyriums of Tutty, Frankinſence, Aloes, the white Troches of Rhaſis, and the like.

The End of the Second Book.

THE

THE THIRD BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Ears.

The PREFACE.

THe *Ears as* Galen *ſheweth in* 1. de ſymp. cauſ. cap. 2. *have divers Diſeaſes ſimilary, organick, and common; which becauſe they are not to be known, but by their Symptomes, I determine to reduce them into a Series of Symptomes. The ſymptoms in the Ears either are ſuch as come from the Action hurt, or the fault of the Excrements. The Action is hurt either in the Ear alone, or in all inſtruments of Sence. The Action proper to the Ear, namely, Hearing, is hurt by being aboliſhed or diminiſhed and depraved. It is aboliſhed by Deafneß, diminiſhed by thickneß of Hearing, depraved by a noiſe in the Ears. The Action common to all the Inſtruments of Sence, is Feeling, by which they are ſubject to pain. The fault in the Excrement is ſeen by all thoſe things which come preternaturally out of the Ear. So this whol Book hath four Chapters. The firſt is of Deafneß and thick Hearing. The ſecond of noiſe in the Ears. The third of pain in the Ears. The fourth of thoſe things which preternaturally come forth of the Ears.*

Chap. 1. *Of Deafneß, and thick or dull Hearing.*

WEE comprehend Deafneſs and thick Hearing in one Chapter, becauſe they come of the ſame Cauſes, differing only in Degrees, ſo that when they are great they take the Hearing quite away; when leſs, they diminiſh it: And both theſe are called vulgarly Deafneſs; for they who cannot hear any but ſuch as ſpeak very loud, are called deaf folk.

But *Surditas* properly, or Deafneſs, is called in Greek *Cophoſis*, when the Hearing is totally gone; ſo that the Patient either heareth no noiſe, or if he do, he cannot diſtinguiſh it. Theſe are often dumb if they are born ſo; not only becauſe men learn to ſpeak by Hearing; but by reaſon of the great conſent that is between the Inſtruments of Hearing and Speaking by the Nerve of the fifth Conjugation, whoſe chief Branches are brought to the Ears, but ſome of them reach to the Tongue and

and Throat; whence it is, that when the inner Ear is pulled, there is a cough raiſed; and the reaſon is plain, for they who are born deaf, if they had their Inſtruments of Speech corrupted, would by a Natural inſtinct ſend forth ſome Articulate voyce; as other Creatures, although they are kept from their birth, from other Creatures of the ſame kind, ſo that they never hear them, yet they produce their connatural voyce; but men born deaf never ſent forth an articulate voyce, but only a confuſed ſound, which argueth a manifeſt hurt of thoſe parts which ſerve for Speech. Now the hurt of thoſe parts is chiefly from humidity, which affecting that Nerve which goeth to the Ears, Tongue, and Throat, muſt needs hinder both Speech, and Hearing.

Thick Hearing is called in Greek *Barueeoia*; and they who are ſo hear difficultly, and underſtand not what men ſay, except they ſpeak very loud: Others cannot hear ſo wel, and not except the ſpeakers whoop and hallow in their Ears.

Both theſe Diſeaſes come from the diſtemper of the Brain or Ears.

A cold diſtemper of the Brain, or repletion, or weakneſs, or ſome other hurt in that part, eſpecially in which is the riſe and progreſs of the Hearing Nerve, may cauſe Deafneſs or thick Hearing.

The Diſeaſes of the Ears are either in the inſide or the outſide thereof.

In the exterior Cavity, a perfect or an imperfect ſtoppage from a Tumor, Impoſthume, or Blood, Matter, Flegm, and other things coming either from within or without, may cauſe a defect in the hearing. But you muſt obſerve, that the ſtoppage of the external paſſage cannot make a perfect and abſolute Deafneſs, but only thick hearing, becauſe ſounds may be carried by the mouth alſo, to the Ears. For there is an open way from the internal Cavity of the Ear to the Pallat, by which ſounds do eaſily paſs, and inſinuate themſelves into the Ears; and this paſſage is made for the purging of the Ears. And many Experiments do ſhew that a ſound may paſs through the open mouth to the Ears. We may obſerve that they who are very thick of hearing, wil open their mouths that they may better hear thoſe that ſpeak unto them. And if you ſtop both Ears cloſe, and ſtrike a Muſick Inſtrument with a ſtick held in your Teeth, you wil hear the ſound better. And when you travel in the night, you wil better hear any man coming afar off, if you put one end of your Sword or Staff between your Teeth, and faſten the other end upon the ground.

The Humors which are gathered into the internal Cavity of the Ear, and eſpecially ſuch as flow from the Head do cauſe deafneſs or thick hearing in the inner part of the Ear, and theſe are for the moſt part flegmy, and ſometimes chollerick; as appears Aph. 28. Sect. 4. where *Hippocrates* ſaith, that chollerick Evacuations are good for deaf men; ſometimes bloody are good, for it is manifeſt, that the deafneſs accompanied with the Criſis, comes from the flux of blood to the Ears. Now the Humors are ſometimes ſent from the whol Body to the Ears, as in continual Feavers and eſpecially thoſe that are malignant. The ill compoſition of the Inſtruments of Hearing produceth the ſame effect; as when the Tympany or Drum groweth too looſe by a violent noiſe or over moiſtneſs; and for this reaſon deaf people are more thick of hearing in Southernly weather, becauſe the Membrane is relaxed by the moiſtneſs of the Air; or when the Tympany is over ſtretched or dried after a violent diſeaſe, long watching, or faſting; or when it is broken by violent motions, or eaten by a corroding humor: Sometimes blood cometh forth after a great hurt, and matter without hinderance to the Hearing, becauſe the paſſage is between the bone and the Membrane. Or when any parts of the Ear, either originally; or by ſome outward cauſe, as ſtroak, fall, or the like, are put out of their Natural order. Moreover, a cold diſtemper uſeth to produce this diſeaſe, coming either from the cold Air, or very cold Water powred in, or over much uſe of ſtupefactive Medicines called Narcoticks.

'Tis very hard to diſtinguiſh al theſe cauſes by their proper Signs, but by Art, and conjecture thus:

If Deafneſs come from the diſtemper of the Brain, either other Sences ſuffer, or there appeared ſome peculiar Diſeaſes in the Head, as head-ach, drouzineſs, Apoplexy, Lethargy, and the like.

The ſtoppage of the External Cavity of the Ears is diſcernable by the Eyes, if you look upon them in the Sun, for then it wil appear whether it be a tumor, or thick matter, or any other heterogeneal ſubſtance of another Nature which filleth the Cavity. As alſo the Patient will tell you if any thing fell into his Ears.

But if the internal Cavity be filled with a humor, we may conceive it to be flegm, if the Patient were formerly ſubject unto defluxions of that ſort.

But that this comes from Choller, is known by ſome Chollerick Feaver that went before, or now poſſeſſeth him, or by ſome violent pain. But when it comes from blood, there is a heavy pain, and abundance of blood in the whol Body, and this happeneth often in critical diſturbances.

The looſneſs and moiſtneſs of the Tympane is known by the cauſes preceding, which were moiſt, and diſtempered ſome other part: for it can ſcarce be, that moiſt cauſes ſhould only affect that part, and no other.

You may alſo know the diſtention and drineſs of the Tympane by the drineſs of the whol Body, and by the drying cauſes aforegoing.

And

And for the breaking or corroding of the Tympane, you may know that if there were formerly any vehement Cauſes that could break or gnaw the ſame.

You muſt make your Prognoſtick thus:

Deafneſs by Birth, and of long continuance, if it be abſolute and total, is incurable; and that which is not abſolute if it be old, is never or hardly cured.

A Deafneſs from Choller or Blood which hapneth only in ſharp continuing Feavers, uſeth to be cured with theſe Feavers.

Thick Hearing, if it be not ſpeedily cured, endeth in perfect Deafneſs; witneſs *Galen*, 3. *de comp. med. ſec. loc. cap.* 3.

The Membrane of the Tympane being broken, or a ſcar left thereon, makes an incurable Deafneſs.

A Deafneſs encreaſing and decreaſing by degrees, is curable, for it ſignifieth that it comes from a movable humor, which ſomtimes is more, ſomtime leſs in quantity.

A Deafneſs coming from diſtemper of the Brain, is more eaſily cured than that which comes from a proper diſeaſe of the Ear.

As to the Cure: That Deafneſs which depends upon any Diſeaſe of the Brain, requireth no other Cure, than that which belongs to ſuch diſeaſes, which you may find in their ſeveral Chapters. That which comes from a Tumor, if it be hard and old, admitteth no Cure; but if it be hot, you may find the Cure for it in the Chapter of pain in the Ears. But if it come from matter gathered in the Ear, you may find the Cure in the laſt Chapter of this Treatiſe, where we ſhal ſpeak of thoſe things which preternaturally come forth of the Ear.

If this Diſeaſe comes of Drineſs, it muſt be cured by the way of *Rhaſis*, that is by moiſtning things, long ſleep, and waſhing of the Head with warm water; as alſo putting of moiſt things into the Ear, as Oyl of ſweet Almonds, and the like. If Deafneſs or thick Hearing come from any thing that is fallen into the Ear, that muſt be taken away with waſhing, ſhaking, or extraction: or if any Vermine are got into the Cavity of the Ear, they muſt either be taken forth, or killed there: they are waſhed forth by making the part moiſt and ſlippery, and enlarging it, with either Milk, the Oyl of ſweet Almonds, or ſome mollifying or relaxing Decoction: they are ſhaken forth by neeſing, for ſo by the force of the air the parts being moved, that which lieth in the paſſage of the Ear is excluded, and the ſooner if the way be firſt made ſlippery and enlarged with Medicines (as we ſaid.) It is good alſo to hang down that ſide of the head, and to hop upon the leg on that ſide; by which way the Boyes after ſwimming get the Water out of their Ears. If theſe wil not do, you muſt endeavor to draw it forth with an Ear-picker, taking heed, leſt when you put it in, you thruſt that which you would draw forth, further in; therefore let the ſpoon of the Ear-picker be very thin that it may eaſier paſs by the thing in the Ear. Or you may lay hold of it, and take it out with a pair of Forcepts made on purpoſe, rough on both ſides within. And if this avail not, when the body is hard, as a nut or ſtone, it muſt be laid hold on with an Inſtrument and broken, and then the Ear muſt be waſhed as aforeſaid. If the Ear-picker will not enter, arm your probe with a little Cotton all over, and then dip it in Turpentine, or in ſome other clammy ſubſtance, and put it in the Ear that it may ſtick to that which is there, and ſtoppeth the Ear. The ſame may be done with a Wax Candle touched with Bird-lime; and if any of the Bird-lime ſtick in the Ear, you may afterwards take it out with the Ear-picker. There are ſome which put a hollow quil into the Ear, and draw out things with ſucking.

The worms in the Ears are enticed forth by laying to ſuch things as they love, as Milk with Sugar laid to the Ear in a ſponge, or eaſily put in; or a Fig turned inſide out; or the pap of a ſweet Apple, or Bacon, and turning the Ear to the Sun at that time; and eſpecially if Horſleeches get in, they are drawn forth by an Injection of blood. Fleas are drawn forth with Dogs hair; but if they be living they muſt be killed, and then they wil leſs hinder the hearing, and wil be drawn forth more eaſily: And they are killed with faſting ſpittle, or your own Urine dropt into the Ear.

Bitter things do ſooner kil thoſe Vermine, as the juyce of Wormwood, Centaury, or the Decoction of Aloes, or Beaſts Gall. Alſo ſharp things, as Vinegar, juyce of Onions, and the like.

And becauſe the uſual cauſe of Deafneſs is a cold diſtemper and a defluxion of moiſture to that part, you muſt labor moſt to oppoſe that.

But becauſe this defluxion comes originally from the Brain, therefore we muſt begin the Cure there, as in the cure of the cold diſtemper of the Brain; which a Prudent Phyſitian wil moderate according to the degrees and violence of the diſtemper.

The brief way of Cure is, firſt an attenuating Diet, moderately warm and drying, ſuch as is preſcribed in *Gutta ſerena*: and then avoiding of Southernly winds, by ſtopping the Ears; and vaporing nouriſhment, as Garlick and Onions; as alſo of things that beget thick and flegmy Humors, Firſt, Let a general Evacuation be made by Pills *Cephalick*, Purging Apozemes; then by Phlebotomy if need be; to which ad if the Diſeaſe be ſtubborn, a ſweating Diet; and then uſe particular Remedies that revel the defluxion, as Cauteries, Veſicatories, Neeſings, Maſticatories, Gargariſms: but

Masticatories, or Chewings, are peculiarly necessary in this Disease, by reason of the passage which comes from the internal Ear to the Pallat, and throws out the excrements of the Ears.

And finally, When the Disease grows old, you must use ordinary Pills, Magistral Syrups, Cephalick Opiats, Pouders and Caps to strengthen the head, and the like. Al which are laid down in the Treatise of the Cold Distemper of the Brain.

In time of Diet, if the Disease be stubborn, Bags are good applyed to the Head after the sweating Potion is administred, as in the said Treatise is prescribed, not only to the fore part of the Head, but to the Ears also.

Brimstone and Bituminous Baths are very proper in this Disease, with washing of the Head, for by them sweat is provoked, and the matter of defluxion is drawn out. But by washing of the Head, the Brain is strengthened and dried, and the humors fixed in the Ears are discussed. The way of using them is described by *Penotus*, and much commended, in these words: *There is nothing in the Cure of Deafneſs more prevalent after the use of an hundred Medicines, than that the Patient after his Body is first well purged, and then his Head. Waſh his Head well in Brimſtone Baths, thus: Let him wear a great cap reaching to his Eye-lids, and beneath his Ears, made of Spunges sewed together; let him sit under the cock or spout in the Bath, and let it run upon his Head; which Water the Spunges will suck up, and so keep the head in a continual heat; and so opening all the Sutures of the Head, and Commiſſures, it will take away all the vapors: or it will breath away the matter compacted in the Nerves, and the passages for Hearing, or so change it, that it will quickly be gone: It is good for him to sit so twice in a day for two hours, and presently after to sweat in his bed, and use a slender Diet of Juyces and Broth, and to beware of Wine except it be very weak.*

Then you must use Topicks, to discuss the matter fastened in the Ear, which may be thus applyed:

Take of *the Leaves of Organ, Wormwood, Penyroyal, wild Marjoram, Sage, Mints, Centaury the leſs, Mallows, and Marſh-mallows, of each one handful: the flowers of Chamomel, Melilot, Stœchas, and Roſemary, of each one pugil: Cinnamon and Cloves, of each half an ounce: Boyl these in equal parts of white Wine and Water: Foment the Ear with the straining hot in a spunge morning and evening.*

Of the same Decoction you may make a Fumigation into the Ear by a Funnel which must needs be excellent because the vapor ariling from the hot Decoction must needs reach into the innermost parts of the Ears.

Instead of a Fomentation you may apply a hot loaf made with Caraway seeds, and cut in the middle.

Or take ordinary Bread from the Oven, and break off the lower crust, and dip it in Spirit of Wine, and let the Patient endure it at his Ears as hot as may be, that the vapor may be received in.

Bread made of Bran is better with Caraway seeds, Bay-berries, Juniper berries, and Nutmegs mixed before it be baked: then after it is a little baked, break it and apply it hot to the Ears.

If you desire a stronger Decoction for Fomentation and Fume, you may ad one or two drams of the Pulp of Coloquintida, and the root of white Hellebore. You may make this Decoction in white Wine alone, or with Vinegar, that it may pierce more, and discuss.

The Fume of Cloves may be taken with much profit to the Patient by a Funnel into the passage of the Ear when the Head is covered with a warm cloth.

After Fomentations and Fumes, you must put some liquor into the Ears, and then stop them with Muskified Cotton.

Take of *the Oyl of bitter Almonds, and Rue, of each one ounce: Mix them and put them hot into the Ears.* Or,

Take of *the Oyl of white Lillies, and Caſtor, of each one ounce: the Oyl of Dill, half an ounce: white Hellebore half a dram: Aqua vitæ one ounce. Boyl them in* Balneo Mariæ *till the Aqua vitæ be conſumed; ſtrain them for the use aforesaid.* Or,

Take of *Cypreſs Roots, Bay-berries, Annis and Cummin seed poudered, of each one dram: Pouder of Caſtor half a dram: Oyl of Rue as much as will be ſufficient: Mix them and put them into a great hollow Onion; roast it, and strain out the Liquor to be dropped into the Ears.*

Chymical Oyls work most powerfully; as Oyl of Rosemary, Marjoram, Sage, Fennel, Spike, Cloves, which are too strong to be used alone, therefore you must mix a very smal quantity of any of them with the Medicines mentioned; thus:

Take of *the Oyls aforeſaid two ounces: Oyl of Spike, Fennel, Cloves, or the like, half a dram, or a dram: Mix them.*

There are also some Waters, which if dropped into the Ears do much good. Some Authors commend the Water of an Ash, which is made by putting one end of a green Ash into the fire, and taking the water out of the other end: this is best when deafness cometh of a hot cause, and you fear to use hot Medicines. But if not, then you may mix as much *Aqua vitæ* therewith. *Mathiolus* mixeth this

this Water with Juyces, and commends it highly, in theſe words: *We know that the Water which comes out of Aſh, when it is burnt, mixed with the Juyce of Sowbread, Squils, and Rue, in equal parts warmed together, to be excellent againſt Deafneſs, if it be dropped into the ſound Ear when the Patient goeth to bed, and lieth upon that Ear which is Deaf: but when both Ears are deaf, then into that which is leaſt affected.*

The Spirit of Wine wherein white Hellebore hath been infuſed, being dropped into the deaf Ear, is very efficacious.

Others commend the clarified juyce of Ivy mixed with ſtrong white Wine.

The Galls of Beaſts, as of Hairs, Goats, Partridges, are much commended if they be uſed freſh, with an equal portion of Honey, and warmed in the ſhell of an Onion.

The fat dripping of an Eel is much uſed; Put a great Eel upon a Spit, and take the dripping upon Bay Leaves, and drop it warm into the Ears.

Zechius commends Ants Egs, in theſe words: *Ants Egs mixed with the Juyce of an Onion, and dropped into the Ear, do cure the oldeſt Deafneſs.*

The Blood of a yong Wolf, dropped hot into the Ears doth the ſame.

Laſtly, If the Diſeaſe be ſo ſtubborn that it will not yield to the Medicines preſcribed, it will not be amiſs to uſe the laſt Remedy which is preſcribed by *Fonſeca, conſult. 58. tom.* 2. namely, an Unction with Quick-ſilver, becauſe when Deafneſs cometh of the French Pox, it is ſo cured, and it may be when it comes otherwiſe; and the reaſon is, becauſe Quick-ſilver doth diſſolve and diſcuts hard tumors, when they are gathered upon any part, and therefore when flegm is gathered in the Ears, which no other means can diſſolve, Quick-ſilver may diſſolve it. But this Remedy muſt not be tried but in a deſperate condition; for it is doubtful what the event will be, and the Unction with Quick-ſilver doth much weaken the Brain, and cauſe defluxions. So that ſome who have been cured of the Pox by Quick-ſilver, have after fallen deaf by defluxions; although ſometimes (as I ſaid) deafneſs coming of the French Pox is cured thereby, and Quick-ſilver rightly uſed after due Purgation doth no hurt to the Brain.

This you muſt alwaies obſerve in the uſe of Topicks, That you never put cold things, but warm, into the Ears, and you muſt not dreſs them till the old Medicine be taken out. And after dreſſing you muſt ſtop the Ear with Cotton Muskified, for that only conduceth much to the Cure: as *Foreſtus* ſaith, *Obſ.* 15. *lib.* 12. in theſe words: *A woman of* Delft *after a long diſeaſe fell deaf, which after ſufficient purging abſtained from Phyſick: at length ſhe was perſwaded by an old woman to put a grain or two of Muſk into her Ears with a little Cotton, and ſo doing ſhe was wonderfully cured. I have cured many the ſame way whoſe Ears have run.*

Chap. 2. *Of Noiſe in the Ears.*

THe ſence of Hearing is hindered by noiſe in the Ears; for as the Eyes muſt be void of all colors that they may truly perceive the colors of all Objects, and when they have a preternatural color, as in the Jaundice, the ſight is depraved; ſo the Ears muſt have no ſound in themſelves, that they may more diſtinctly receive al other ſounds; and if there be any noiſe in them, the Hearing is depraved. This is called in Greek *Paracouſis*, in Latin *Obauditio*, vulgarly a noiſe in the Ears.

This comes from a preternatural motion of the Air which is naturally contained in the Ears; for as *Ariſtotle* ſaith, Though the natural Air in the Ear do move, yet the noiſe is not heard except you ſtop the Ears with the hollow of your hand, or the like, for then the hearing is more inward when the outward air is kept out. This is ſeen by Experience, when one ſtoppeth his Ears, and holds the handle of an Inſtrument in his teeth, the ſound wil be four times greater than when his Ears are open, for it paſſeth through the mouth, there is a Natural Motion of air in the Ear by the Spiritus *Acouſtico*, continually working. But if it be too violently moved, then there is a preternatural noiſe in the Ear which hindereth the hearing.

The Cauſes are many of this preternatural Motion, but chiefly a vapor or wind ſent from other parts into the Ear, or bred there; either coming from the whol body, or from ſome peculiar part.

In Feavers it comes from the whol body; whence *Hippocrates* ſaith in *Coacis*; A noiſe in the head coming in an acute Diſeaſe is deadly, for it cometh of wind ſent by the Arteries from the whol Body into the Ears; it uſeth to come chiefly in the beginning of a fit, and before bleeding. Wind is alſo ſent to the Ear from a peculiar part, namely, the Stomach, Liver, Spleen, Midriff, Womb, and the like; whence it comes to paſs, that in great Vomitings, in Hypochondriack Melancholly, and fits of the Mother, there is for the moſt part a noiſe in the Ears. Often there is a wind ſent from the head coming of a cold flegm, through want of heat to the Ears by the Veins and Arteries, and the Nerves of the fifth Conjugation, by which paſſages alſo vapors come from the inferior parts. Wind

Wind is bred in the Ear alſo, of flegm contained therein; whence it comes to paſs that thick Hearing is alwaies accompanied with a noiſe in the head. For by the humor there is a ſtoppage, from whence comes deafneſs, and from the wind that proceeds from that humor, comes the noiſe.

There are other cauſes of this noiſe, as a great ſtroak upon the head, a great ſound, Ulcers in the Ears, a hot diſtemper, weakneſs, and exquiſite ſence.

A ſtroak, by moving the Spirits in the Head too violently, cauſeth a noiſe.

A great ſound doth violently move the natural Air.

And Ulcers by the heat of the matter boyling and working, make a noiſe; and by the Spirits gathered thither, and moving the Natural Air.

A hot diſtemper fills the inward Arteries of the Ear with much Spirit, whence a great beating noiſe proceedeth. Sometimes too much Spirit is ſent by thoſe Arteries into the Ears, and the Natural Air is thereby moved, from whence cometh a noiſe. And from this cauſe may come a continual noiſe for ſome months or yeers.

Weakneſs of hearing uſeth to make a noiſe in the Ears, as in ſick people, becauſe every ſence debilitated is hurt by every violent or moderate object: ſo they who have weak ſight, are offended by a ſmall light.

And laſtly, When the ſence is moſt exquiſite, as *Galen*, *lib.* 3. *de comp. med. ſec. loc. cap.* 1. there will be a noiſe in the Ears, becauſe even moderate objects are too vehement for it. Now this exquiſite ſence muſt be preternatural, for the exquiſiteneſs of ſence cannot of its ſelf produce a depraved action, but rather the more exquiſite it is the leſs will it Err. This preternatural exquiſiteneſs of ſence, comes from a hot diſtemper, ulcer, or the like: as parts inflamed do depravedly, that is painfully, feel moderate touchings. Or if the exquiſiteneſs of ſence be Natural, you muſt ſuppoſe that the cauſe of the noiſe is Preternatural; for the vapor which is ſo little that it cannot be felt of dull ſence, and ſo the action not be hurt, will be felt of him that hath exquiſite ſenſe, and will cauſe a noiſe; ſo that in one it is Preternatural, in another Natural.

There are divers ſorts of ſounds in the Ears, which proceed either from the quantity of the vapors as they are more or few, thinner or thicker, ſwift or ſlow in motion; for if the vapor be much, thick, and of quick motion, it will make a noiſe like ſwift running water, or like a drum, or like ſome ſuch Mufical Inſtrument, or a ruſhing wind, or the like; but if it be little, thick, and move quick, the noiſe is like the falling of a Tree or Houſe.

If it be much, thin, and ſwift in motion, it cauſeth a hiſſing, or is like falling of a gentle Water. If it be little, thin, and quick in motion, it cauſeth a tickling. If it be much, thick, and of ſlow motion, it makes a murmuring noiſe. If the matter be little, thick, and ſlow in motion, it makes a kind of whiſpering noiſe. If it be much, thin, and of ſlow motion, it cauſeth a hiſſing. And laſtly, becauſe the degrees of thickneſs and thinneſs, of greatneſs and ſmalneſs, of ſwiftneſs and ſlowneſs, are infinite, therefore there are innumerable ſorts of ſounds in the Ears.

There is no certain knowledg of the cauſes aforeſaid, as *Galen* teacheth 3. *de comp. med. ſec. loc. c.* 1. but we may make conjecture from the precedent Cauſes and Circumſtances.

We conjecture that the noiſe comes from wind, becauſe ſometimes it ceaſeth, and returneth again; as alſo when the Patient hath formerly uſed to eat windy meat.

It cometh by content from other parts, when there is ſome peculiar diſeaſe in them.

It appears to come from the brain when pain and heavineſs of the Head went before, and when other ſences alſo are hurt.

That the fault is in the Ears, appears by a continual noiſe without any intermiſſion.

We know that that Diſeaſe comes from a cold matter; if the Patient be better for the uſe of hot things, and if in time of health great noiſe be not much diſturbance.

The difference of ſounds above mentioned, do ſhew whether the diſeaſe comes of thick or thin, many or few vapors, it will eaſily appear by what hath been ſaid.

When it comes from the weakneſs of the faculty of hearing; as from ſome Diſeaſes aforegoing, of which the Patient is ſcarce recovered.

We conjecture that it comes from a hot diſtemper, and from an exquiſite ſence coming thereupon, when the Patient perceiveth a heat in his head about his Ears; when ſome hot Cauſes went before, and Medicines that diſcuſs wind do encreaſe the diſeaſe: as alſo when the Patient in time of his health could not endure any great noiſe by reaſon of the exquiſiteneſs of ſence.

As to the Prognoſtick: A new begun noiſe in the head is eaſily cured, but an old, hardly, and the more if it come from the French Pox. That which proceeds of a hot cauſe, is more eaſily cured than that which comes of a cold.

An old noiſe coming of flegm contained in the Ear, turneth to deafneſs; for when the matter is encreaſed, the paſſage of Hearing is ſtopped.

The Cure of this Diſeaſe is divers in reſpect of the diverſity of Cauſes.

And

And firſt the Cure of Noyſe in the Head coming from conſent with other parts, depends upon the Cure of the Diſeaſes of thoſe parts, and muſt be taken from their proper Chapters.

But that which comes principally from the Ear Diſtempered, muſt have its proper Cure: And if it come of a cold Diſtemper, and thick Vapour, it wil be Cured as in the Treatne of thickneſs of Hearing; for they are alike, and one is ſometimes changed into the other, and ſometimes they are complicated and joyned together; For Noyſe in the Ears is the fore-runner of thick Hearing, and Deafneſs.

Therefore all Remedies both Univerſal and Particular, may be uſed here which we preſcribed in the former Chapter of Deafneſs and thick Hearing.

If the Noyſe come from an Ulcer in the Ear, it requireth no other Cure, than that which is proper for the Ulcer. And that ſhal be laid down in the following Chapter.

If it cometh from weakneſs of Senſe as in them who are lately Recovered of ſome great Diſeaſe, it wil vaniſh of its ſelf as the Body gathereth ſtrength: yet you may drop ſome proper temperate Oyls ſometimes into the Ears to mitigate, as Oyl of Chamomel, Dill, Sweet Almonds, and the like.

And Finally, If it come from a hot diſtemper and exquiſite Senſe, you muſt preſcribe a Cooling and Moiſtning Diet; as alſo drop Cool things into the Ears, begmning with mild firſt, and after proceeding to ſtronger.

And firſt, Uſe the Decoction of Barley, Violets, Lettice, Water-Lillies, to which you may put a little Balm or Chamomel to make it pierce: which not prevailing, you muſt uſe the juyce of Lettice, Purſlain, Henbane: *Galen* alloweth the Juyce of Poppy and Opium its ſelf, but theſe muſt be uſed ſparingly and with much Caution, leſt by weakning the natural heat of the part, the Hearing grow more dull.

Chap. 3. *Of Pain in the Ears.*

PAin of the Ears called *Otalgia* in Greek, is a violent Diſeaſe, both in reſpect of the part affected, namely, the inward Membrane which goeth about the Cavity of the Ear; as alſo by reaſon of the neerneſs of the Brain which often ſuffereth at the ſame time.

But ſince al pain comes from the ſolution of Continuity, al thoſe things do cauſe pain in the Ears, which do diſſolve the Continuity of thoſe ſenſible parts which compaſs the Cavity of the Ear. the chief whereof are Diſtempers both without, and with, Matter, Wounds, Ulcers, or things fallen, or put into the Ears Externally.

A Cold Diſtemper doth ſometimes cauſe pain in the Ears, and it comes from cold Winds, cold Baths, and other very cold Cauſes.

A Hot Diſtemper without Matter, ſeldom or never produceth a pain in the Ears, as a cold doth: For Cold is an Enemy to theſe Nervous and Membranous parts, but Heat is a Friend to them. Nor can it cauſe any pain but that which is exceſſive, and wil cauſe a defluxion of Humors to the parts, and then it is not without Matter. For this Cauſe neither *Galen*, nor any of the ancient Greeks made mention of a Hot Diſtemper, although *Avicen* of al the Arabians have mentioned it.

Now the Cold Matter which cauſeth pain in the Ears is either flegm or water which comes from the Brain into them, or elſe wind coming from the Brain or the interior parts.

But the Hot Matter, is either Choller that fals from the Veins and Arteries into thoſe parts, or Blood, from whence cometh Inflamation.

The aforeſaid Cauſe produceth an occult Solution of Continuity from whence cometh Pain. But manifeſt Solutions of Continuity, as Wounds and Ulcers, are more evident Cauſes of pain. Wounds come from external Punctures, Cuts, and Contuſions. But Ulcers come either after Inflamation and breaking of an Impoſtume, or from ſharp Humors that corrode the parts,

Finally, Things that get into the Ear outwardly, if they be hard, ſharp, or any wayes piercing or biting, wil cauſe pain.

You may know al theſe Cauſes thus, If the Diſtemper be without Matter, there wil be no heavineſs, diſtention, or tumor: And you may know that the Diſtemper is Cold, when cold Cauſes have preceded, as travel in Winter, when the pain increaſeth in cold weather, or with cold Medicines and decreaſeth with hot: but you may know a hot diſtemper by hot cauſes preceding, as being long in the Sun, or heat, and when hot Medicines hurt, and cold do profit.

If the Pain come from flegm, there wil be a heavineſs in the Ear, and the Head; as alſo a Rheum wil fal upon ſome other part, beſides cold Cauſes did precede, as cold and Northerly weather, cold meats; or it is winter and the Patient is old, and the like.

If

If it come from Wind there wil be a great pain without weight or heavineſs, not conſtant, but intermitting and with noyſe.

That it comes from Water, the Patient wil have other Diſeaſes from the ſame, as ſharp and thin defluctions upon the Teeth, Eyes, Ears, Breaſt, and other parts; and Evacuation of ſerous Matter by Vomit, Stool, Urine, or Sweat.

If it come from a Chollerick Humor the pain wil be ſharp and pricking, and there wil be ſenſible heat; it wil be mitigated with cold things, and Choller wil ſometimes come forth of the heat; the Body is of a Chollerick temper, the Party yong, the Weather hot, and Diet alſo with the like, by which the Patient is often diſtempered.

An Inflamation is known by a great beating pain, with great heat and redneſs about the Cheeks and Temples, to which there is joyned a continual violent Feaver; ſometimes Doting, Swooning, Convulſion, and coldneſs of the extream parts.

A Wound is known by the blood which wil come forth of the Ear, but an Ulcer by the filth, or matter; but becauſe ſometimes there is a defluxion of filth from the Brain by the Ears, we muſt diſtinguiſh, for it if comes from the Brain; there went before it a Head-ach and other ſigns of an Impoſtume in the Brain: And firſt the matter is ſent forth in great abundance, and after by degrees while it is all ſpent. From an Impoſthume in the Ear may come plenty of Matter, but then there went ſigns before of an Inflamation there, and afterward followed an Ulcer, which you may know whether it came from an Impoſthume or a Defluxion of ſharp Humors by theſe ſigns following; There is a conſtant Flux of a little filth or matter by degrees; there is felt a pain burning and ſhooting in the Ear, eſpecially if it be picked. Moreover, We may conjecture of the Difference of the Ulcers, For if it be in the Bone, it is known by the thin Matter yellowiſh, and by the long continuance of the Diſeaſe: If it be deep, you ſhal know it by much Matter: If it be clean, by the laudible Matter: If it be foul, by the thickneſs and plenty: If it be virulent, by the thinneſs: If putrid, by the ſtink of it: If it be corroding, by blood following: If fiſtulous, from the oldneſs of the Ulcer, the virulency of the Matter, the callosity and hardneſs of the fleſh.

Finally, If there be any thing fallen into the Ear, either it may be ſeen, or related by the Patient.

The Prognoſtick of pain in the Ears is divers, according to the diverſity of the Cauſes. That which comes from a bare diſtemper is eaſily cured. That which comes from a cold flegmy ſerous, or windy matter, is not very dangerous, but uſeth to continue long. But that which cometh from hot humors, and eſpecially ſuch as cauſe inflamation, is very dangerous, for the Brain being nigh muſt need conſent, and be alſo affected; from whence Deliriums, and Convulſions uſe to proceed. In this Diſeaſe yong men are in moſt danger: for they being of a hot temper, and their blood hot, the inflamation is greater; and this diſſolveth the natural heat of the Brain, and killeth the Patient: Hence it is that they die for the moſt part within ſeven daies. But old men who are colder, have leſs inflamation, and ſo are in leſs danger.

Ulcers in the Ears are hard to be cured, becauſe the Brain being nigh, doth ſend its excrements to thoſe parts: But thoſe which follow an Impoſthume are eaſier cured, eſpecially if the matter be laudible. But where the matter is virulent, ſtinking, or the like, it is difficult, eſpecially if the Ulcer be cavous, and the bone foul.

The Cure, as the Diagnoſtick and Prognoſtick, is to be varied according to the Cauſe.

For if it comes from a bare cold diſtemper, hot Medicines applied to the Ears are ſufficient, ſuch as are in the cure of Deafneſs, eſpecially Fomentations and Fumes, as alſo the warm Oyls there deſcribed. But when a hot diſtemper comes without matter, it may be cured with Topicks, which are cooling, which we will ſhew afterwards, and eſpecially with the white of an Egg beaten with Breaſt milk, and put into the Ear.

If it come from a cold diſtemper with matter, as flegm, water, or wind, you muſt uſe the Medicines preſcribed in the cure of Deafneſs. Firſt, Purge the whol Body, then correct the diſtemper of the Brain, and apply warm Topicks that diſcuſs unto the Ears.

If it come from a hot diſtemper with Choller, which is of long continuance, or comes by fits. Firſt revel th humor that floweth to the part by Phlebotomy, by which the hot diſtemper of the whol Body with the Liver, in which Choller is made, is amended. Then purge the Humor with proper Medicines. You may amend the hot diſtemper of the Liver with Juleps or cooling Broths, with Whey of Goats milk, with ſharp Vitriolat, Mineral Waters, with hot Baths, and the like. And laſtly, All things are proper for it which are preſcribed in the Cure of the Head from a hot cauſe. But you may uſe cooling Topicks and Anodines that take away pain, which we ſhall ſhew afterwards concerning the Inflamation.

Inflamation of the Ear is cured firſt by blood-letting, according to the quantity of the humor, for revulſion of it from the Ears, firſt having given an emollient and cooling Clyſter: This muſt be done in great quantity, at divers times, for the greatneſs and violence of the Diſeaſe requires it. You muſt

open

open the Head Vein on that ſide the Ear is that is pained. If you think it comes from ſtoppage of Terms or Hemorrhoids, open the lower Veins, firſt having let blood in the Arm. When the cauſe is not from thence, it will do good for revulſion to apply Leeches.

Alſo you make good Revulſions by Frictions and Ligatures of the Arms and Thighs, by cupping the Shoulders and Back with Scarrification, or without.

Sometimes for Derivation it is good to apply Cupping glaſſes behind the Ears, with Scarrification; as *Zacutus Lucitanus* teacheth, *Obſer. 64. lib. 1. Praxis Admirande*, in theſe words. The Divine old man in his ſecond Book, Epid. Sect. 6. towards the end, ſaith thus: For pain in the Ear, clap on a Cupping glaſs. This worthy ſaying gave much help to a poor man which was in pain; and when all things failed, and he grew weak with watching, and mad with a continual Fever, being ready to depart; having opened a Vein, and applied Cupping glaſſes to the Shoulders and Neck, and taken revelling Clyſters, and purging, and the like; as alſo Anodines into his Ear without any profit, he was cured only with a Cupping glaſs with Scarification applied by the Glandles of the Ears, which drew much blood, and took away the inflamation.

The ſame *Zacutus Lucitanus* in *Praxi ad Hiſtorias*, commends four Horſ-leeches applied behind the Ears, which he ſaith gave much eaſe to a yong man which had a violent inflamation in his Ears.

The cutting of the Arteries in the Temples of the Forehead, doth produce rare effects for the appeaſing of the greateſt pain in the Ears, by taking away the hot and windy blood which produced that grievous ſymptome. The way of doing it, is ſet down by us, in the Cure of the hot Head-ach.

A Purge againſt Choller is good, for ſo the Choller mixed with Blood, which by it is made ſo fluid, is drawn down, and ſent forth.

Afterwards the whol maſs of humors is to be tempered with cooling Juleps, made of the Decoction of Lettice, Purſlain, Plantane, Sorrel, and the like, with Syrup of Lemmons, Pomegranats, or wild Poppies.

In the mean while, theſe Medicines are given; you muſt alwaies apply Topicks, which muſt alwaies be Anodine, by reaſon of the vehemency of the pain, the mitigation whereof muſt be your chief intent; and this will be more rationally done, if in the beginning and the encreaſe of the Diſeaſe, you mix things that do gently repel; but in the ſtate and declination, things that reſolve, ſuch as theſe following:

Take of *new Breaſt-milk two ounces: the white of an Egg beaten to Water half an ounce: drop theſe mixed together, warm into the Ear.*

Or Milk alone ſquirted into the Ear from the Breaſt; this doth much aſſwage.

Take *Plantane and Nightſhade, of each one handful: the flowers of Chamomel and Melilot, of each one pugil: Make a Decoction, and let the Patient receive the fume thereof into his Ear by a Funnel.*

Take of *the Oyl of Water-lillies and Roſes, of each one ounce: Mix them, and drop thereof into the Ear; after the fume.*

* Sows infuſed in the aforeſaid Oyls and ſtrained, are the beſt Anodines; for theſe Creatures have eſpecial force to appeaſe pain, and therefore are uſed in the toothach, hemorrhoids, and the like; or take them alive, and boyl them with Water in the Oyls til the Water be conſumed.

If the burning be very violently, you may mix cooling Juyces with the aforeſaid Oyls, thus:

Take of *the Oyl of Water-lillies, and Roſes, of each one ounce: the Juyce of Nightſhade and Plantane, of each half an ounce: Mix them, and drop thereof into the Ear.*

Roſe Vinegar is uſed of ſome Practitioners made of two parts of Oyl of Roſes, and one part of Vinegar, which ought to be ſuſpected, as al ſtrong repelling Medicines; for there wil be danger, leſt the humor flowing thither ſhould return to the Brain; and it is a general Precept alwaies to be obſerved. That you never lay repelling Medicines to inflamations which are near unto noble parts: but you may mix gentle Repellers with Anodines and Relaxers; for ſo they wil moderately repreſs the Defluxion, nor will they drive it far back: Such are the afore mentioned, to which you may ad this following:

Take of *the Oyl of Roſes, and Water-lillies, of each one ounce and an half: Roſe and Plantane Water, of each half an ounce: Breaſt-milk one ounce: the Mucilage of the Seeds of Fleabane and Quinces drawn with Roſe water, of each ſix drams: mix them. Put ſome drops thereof warm into the Ears, and bind clouts dipped in the ſame Liquor about the Ears.*

In vehement pain we are conſtrained to fly to Narcoticks, or Stupifactives; but you muſt uſe them ſeldom, and with much care, becauſe they offend the Brain. *Galen* ſaith, 3. de comp. med. ſec. loc. *I knew one, who only with the uſe of Opium, took away both ſpeech and ſence from his Patient, that he could be cured neither with Opobalſam, nor any other hot Medicine injected.* Therefore if neceſſity conſtrain, thus they are to be preſcribed:

Take of *Oyl of Poppy-ſeeds one ounce and an half: Camphire and Opium of each two grains: mix them, and drop them into the Ear.*

Take

* *Called Cheſlips, Kitchin bob, &c. many ſorts which being tou ed gath eth it ſelf round a ball.*

Take of *the Oyl of ſweet Almonds two ounces: the Juyce of Mallows half an ounce: Myrrh half a dram: Saffron half a ſcruple: Opium three or four grains: mix them for the uſe aforementioned.*

In applying of Topicks, the Rule of *Galen* is diligently to be obſerved, which is in *lib. 3. comp. medic. ſec. loc. cap.* 1. that an inflamed Ear be not touched, but let the Medicines be injected by an inſtrument for to ſee into the Ear, or a Probe armed with lint and dipt in the Medicines. Then that you ask the Patient if he feel it warm, and if he can endure it hotter? and let it be uſed ſo hot as he can ſuffer: You muſt put the Probe ſo armed gently into the Hole of the ear that the Medicine may ſoak from it into the ear, you muſt do thus till the paſſage of the ear be filled with the Medicine, then you muſt dip lint in the ſame Medicine, and lay it to the Hole of the ear, and round about.

In the ſtate of the Diſeaſe you muſt mix gently reſolving Oyls with Anodines, thus.

Take of *Oyl of Chamomel, ſweet Almonds and Violets, of each one ounce: the Oyl of Lillies half an ounce: Mix them.*

But theſe Fomentations and Fumigations which are made of the following Decoction, do reſolve more powerfully.

Take of *Marſh-Mallow-Roots one ounce: Mallows, Nightſhade, St. Johns-Wort, of each one handful: Linſeed half an ounce: the ſeeds of Mallows, Marſh Mallows, and white Poppies, of each two drams: the Flowers of Chamomel, Dill, and Roſes, of each one pugil: make a Decoction in Water and Milk for a Fomentation and Fumigation: Water taken out of Aſhen ſticks, being dropt into the Ears eaſeth pain and diſſolveth the cauſe of it. You muſt put green Aſhen ſticks in to the fire, and take the Water that comes from both ends.*

If the Tumor cannot be diſſolved but it ſeems to tend to ſuppuration, which you may perceive by the encreaſe of pain, by greater Pulſation, and a ſtronger Feaver.

You muſt help the motion of Nature, and apply this following Cataplaſm.

Take the *fæces of the former Decoction made for a Fomentation and Fumigation: and put to them of Ducks and Hens-greaſe, Marrow of Veal, and the Mucilage of Fleabane and Fœnugreek-ſeeds, of each one ounce: the Oyl of Chamomel and Violets, of each one ounce: Freſh Butter one ounce and an half: Saffron half a dram: Make a Cataplaſm.*

A Cataplaſm of Crums of Bread is alſo very good; for it aſſwageth pains and furthers ſuppuration gently without inflamation: and therefore it is very proper in al Phlegmous or hot Tumors: you muſt make it thus.

Take of *the Crums of white Bread one pound: boyl it in Goats Milk to a Pultis, then ad of the two Yolks of Eggs, the Oyl of Roſes two ounces: Saffron one ſcruple: Make a Cataplaſm.*

The Cataplaſm made of an Onyon, is much commended of *Victorius Faventinus.* Made thus.

Take *one Onyon: Freſh Butter two ounces: Oyl of Chamomel and Roſes, of each one ounce: Saffron one ſcruple: Make a Cataplaſm, apply it warm.*

The Suppuration being made, the Impoſthume breaketh, and the Matter comes forth either by the Membrane of the Ear made thin, or elſe corroded, and then the Patient muſt lie upon the Ear that is pained, that the quittour may come forth; and you muſt drop ſuch things into it as may cleanſe.

Take of *the Decoction of Barley four ounces: Honey of Roſes one ounce: drop this warm into the Ears at ſeveral times.*

If an Ulcer come from ſharpneſs of Matter, you muſt have a peculiar way of Cure; ſuch as is uſed to an Ulcer cauſed from a Deſluxion of Humors.

And firſt, becauſe according to the opinion of *Galen, 4. de comp. Med. ſec. loc.* we may not apply Topicks to any part, except the whol Body be firſt often purged: we muſt uſe ordinary Evacuations by Bleeding and Purging according to the nature and temper of the Patient; and theſe muſt be repeated through the whol time of Cure, as often as need requireth.

Then we muſt apply Drying and Cleanſing Topicks or Medicines to the place affected, beginning with the mildeſt firſt.

The Examples of which are theſe.

Take of *the beſt Honey and old white Wine of each three ounces: boyl them, and ſkim them: drop of this into the Ear, and ſtop it with Cotton dipt in the ſame.*

After that it may be ſtronger; mix the juyce of Horehound, Smallage, Wormwood, and the leſſer Centaury, or of Sowbread with Honey: boyl them gently, and drop thereof into the Ear.

Or,

Take of *the Juyce of Beets one ounce: Horehound half an ounce: the beſt Honey ſix drams: boyl theſe a little, then ad of the Syrup of Wormwood two drams: Mix them.*

You

You may make a ſtronger Medicine thus.

Take of *the Juyce of Sowbread one ounce*: *Myrrh one dram*: *Saffron half a ſcruple*: *Frankinſence one ſcruple*: *Verdegreece half a ſcruple*: *old Wine one ounce and an half*: *boyl them gently till the Wine be conſumed*: *drop of this twice or thrice in a day into the Ear.*

Obſerve, Before you drop any liquor into the Ear, you waſh the ear in warm Hydromel, or water and Honey, and wipe it wel with lint upon a Probe armed.

When the Ulcer is ſufficiently Clenſed, you muſt come to Cicatrizing. Thus.

Take of *Round Birthwort, Pomegranate peels, and Galls, of each half an ounce*: *boyl them in equal parts of Wine and Smiths-forge-water, to half a pint, when it is ſtrained, ad to it of the juyce of Plantane and Poligonum, of each one ounce*: *Honey of Roſes two drams*: *mix them, and drop of this into the Ear.* Or,

Take of *Frankinſence and Myrrh of each one dram*: *Gum of Juniper half a dram*: *Sarcocol, and Labdanum, of each one ſcruple*: *Make a Pouder of them and mix it with Turpentine into Balls, which you muſt lay upon the Coals ſo that the Patient may take the Fume into his Ear by a funnel.*

Or, You may mix that Pouder with ſome of the aforeſaid Juyces, and drop thereof into the Ear.

Or, You may mix burnt Allum with white Wine, for this hath a very great Drying quality.

If the Ulcer be ſtubborn and old, it is nouriſhed by a Defluxion, which you muſt labor to remove by uſual Purges, Diets of Lignum vitæ and Sarſa, by Errhins, Maſticatories, Cauteries, and other Remedies that wil divert.

Then muſt you uſe ſtronger Medicines to dry the Ulcer; ſuch as we preſcribed of juyce of Sowbread, Myrrh, and Verdegreece.

Or this following Medicine of *Valeſcus*, with which he ſaith that he Cured a Prieſt that had an Ulcer in his Ear from the eighth yeer of his age.

Take of *Honey ten drams*: *Vinegar eight drams*: *boyl them*: *take off the ſcum, and put to one dram of Verdegreece*: *Mix them.*

Theſe muſt be dropt morning and evening into the Ear, after it is waſhed with this Decoction.

Take of *Wormwood, Marſh Mallows and Agrimony, of each one handful*: *boyl them in equal parts of water and white Wine put to it towards the concluſion, to half a pint*: *Diſſolve in the ſtrained Liquor Oximel ſimple one ounce and an half*: *Allum poudered one dram*: *waſh the ear with this warmed, and after dry it with an armed Probe.*

If the pain come from ſharp Medicines, drop in the Oyl of ſweet or bitter Almonds with Myrrh, Aloes, and Saffron: and if it be violent, mix a little Opium, or drop in the Oyl made of yolks of Eggs in a leaden Mortar.

If the Ulcer be very foul, you muſt uſe *Ægyptiacum*, Diſſolved in the aforeſaid Juyces.

Laſtly, *Galen*, *Ærius*, and Others, both Greeks and Arabians do much Commend the Ruſt of Iron for the drying of Ulcers in the Ear.

Galen, 3. *de comp. med. ſec. loc.* uſeth Scales of Iron ground or boyled with the ſharpeſt Vinegar.

Hollerius in his Comment upon that Chapter doth prefer the Arrabian Preparation, for they firſt grind the Iron with Vinegar, then they dry it; thus they do ſeven times, then they make it very fine, and boyl it long with the beſt Vinegar, while it is as thick as Honey, and then they dry it, and uſe it with Honey or other liquors.

If the Pain of the Ear come from any thing fallen into it, as a little ſtone, Cherry-ſtone, or the like; which wil be very grievous, and ſomtimes cauſe Convulſions, Inflamations, and Death; as *Matthæus de Gradi* ſaith of a Boy of ten yeers had a Cherry-ſtone in his ear, and through the ignorance of the Chirurgeon, he endured great pain, and after died.

You muſt draw out theſe things thus.

Firſt, You may try with an Ear-picker which you muſt carefully attempt, leſt your inſtrument force it further, which often hapeneth.

Therefore if that which is fallen into the ear do fill the hole. it is better to abſtain from the uſe of the Ear-picker, and try theſe Remedies.

Paulus uſeth to dip his armed Ear-picker in Rozin, Turpentine, Gum, or the like; and to put it into the Ear, turning of it till you get it out by degrees.

If thus you cannot, put hot Oyl continually into the Ear to relax the part, and make the thing contained ſlippery, ſo it will eaſier come forth.

Uſe Neeſings with the mouth and noſtrils ſhut, for ſo it will be forced out of the Ears.

Theſe are to be followed till the party be freed; for if it continue long in the Ear, it will be inflamed, and then the thing will be more difficult and dangerous to be drawn forth.

Arculanus upon *Rhaſis*, affirmeth that the Head of a Lizard applied to the Ear, will draw out any thing; and confirmeth it by his own Experience, in theſe words: *In my Experiences for drawing things out of the Ear, this is one; Tie a live Lizard, or one lately dead, with his head to the Ear, for the ſpace of three hours, and when you take it away, you ſhall find the thing ſticking to the head of the Lizard: and this is good for the extraction of any thing wherefoever it is faſtened.*

Laſtly, If the former Medicines do not prevail, you muſt come to the uſe of a Chyrurgical Inſtrument, which is at large elegantly declared by *Fabricius Hildanus*, Cent. 1. Obſerv. 4, 5, 6. and by *Aquapendent*, in his Chyrurgical Operations, in his Chapter of the Chyrurgery for the Ears.

Sometimes Fleas get into the Ears, and moving themſelves in the Cavity, bring much diſturbance. For the taking out of them, make a little ball of dogs hair, and put it into the Ear, ſo will the Flea by reaſon of its affection to dogs come into it. Or make a tent, and put it often into the Ear, with a little Turpentine.

Oftentimes through ſwimming, or waſhing of the Head, water getteth into the Ears, which is very troubleſom: this is ſhaken forth by hopping on the contrary foot, and holding the Ear down. If this will not do, you muſt ſuck it out with a reed, or a pair of bellows. If you arm the pipe with tow to make it ſtick cloſe, and keep the air out of the Ear, it will be better.

Galen and *Aetius* continue in powring in of Oyl, ſuppling the Ear, and then wiping it with wool; and after uſing Oyl for divers times.

And laſtly, Put ſoft and dry Spunge into the Ear often, till it come out dry.

CHAP. IV.

Of thoſe things which come forth of the Cavities of the Ears preternaturally.

MAny Preternatural things come out of the Ears, which we will ſet down particularly with their Remedies.

Firſt, After an Impoſthume is broken which came after an Inflamation, or from an Ulcer coming from ſharp Humors, filth, or matter, uſeth to come forth; whoſe Cure is laid down in the former Chapter.

Sometimes blood comes out of the Ears; as in wounds of the head, or blows by which the Veins of the Ears are broken or rent. If this flux be ſmal, it is not to be ſtopt, becauſe then being retained, it would cauſe Inflamation; but if it be great, or of long continuance, it muſt be ſtopt by bleeding in the Arm, and Cupping glaſſes applied to the Shoulders with Scarification. Then you muſt drop cooling and binding things in, as juyce of Plantane, Polygonum, or the Decoction of Madder, red Roſes, Maſtich, Acacia, Hypocciſtis, Pomegranate flowers, Sumach, and the like, made in Wine and Vinegar, or Smiths Forge-water.

Sometimes Water comes out of the Brain into the Ears, as in children, which muſt not be ſtopt, for if it be ſuddenly ſtopt, it cauſeth the Falling-ſickneſs, or ſome grievous Diſeaſe of the Brain; for Nature caſts forth Excrements by that way, though not proper; and the great moiſtneſs in childrens heads is not only purged by the ordinary waies ordained by Nature, as the Noſtrils and Pallat, but alſo by the Ears, Eyes, and the whol Head, from whence it becomes ſore. But when this Evacuation is ſympromatical, and the humor begins to ulcerate the Ears, and hurt the hearing, we will lay down a convenient Method for the Cure.

And firſt, The abounding humors in the Head are to be purged with gentle Medicines often repeated, and to be derived by Veſicatories to the Neck, and by a Cauſtick.

Then you muſt cleanſe the Ears, and dry them with this Medicine:

Take of *the Juyce of Agrimony, and Wormwood, of each four ounces: white Wine, and Honey of Roſes, of each one ounce: Boyl them a little, and drop into the Ear after it is wiped; then ſtop it with Cotton dipped in the ſame.*

Take of *white Wine four ounces: the Juyce of Agrimony, Wormwood, and Centaury the leſs, of each one ounce: Boyl them, and drop into the Ear.*

In elder people, if water floweth out of the Ears long, you muſt purge the whol Body and the Brain with a Cephalick Apozeme that is purging; then you muſt conſume the ſuperfluous Humidity

dity with a Sudorifick Diet; derive it with Veſicatories, Cauteries, and Cupping glaſſes; and uſe other Remedies which are ſet down in the Cure of the Cold Diſtemper of the Brain.

Laſtly, There are Worms ſomtimes in the Ears coming out of filthy Ulcers, which are cured with the Ulcer; but becauſe the Ulcer cannot be ſpeedily cured, you muſt therefore endeavor the Cure of the Worms.

Take this one Medicine as an Example:

Take of *the Oyl of bitter Almonds: the Juyce of Smallage, and the leſs Centaury, of each two ounces: Vinegar two drams. Boyl them a little; then ad of Mirrh, and Aloes, of each one ſcruple. Mix them, and drop into the Ear.*

If you will make it ſtronger, put half a ſcruple of Coloquintida thereunto.

The End of the Third Book.

THE FOURTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Noſtrils.

The PREFACE.

THe *Noſtrils uſe to have many Affects which are referred either to the Series, or Method of Diſeaſes, or of Symptoms. Theſe are Diſeaſes, An* Ulcer, Ozæna, Sarcoma, *and* Polypus. *Theſe are Symptoms, The loſs of* Smelling, Stinking *in the* Noſe, *the* Coryza *or* Poſe, Sneezing, Bleeding. *Therefore this* Fourth Book *ſhall be referred to Seven Heads: The Firſt Chapter is concerning the* Ulcer *of the Noſtrils, and* Ozæna. *The Second of* Sarcoma *and* Polypus. *The Third of the loſs of* Smelling. *The Fourth of the* Stink *of the* Noſe. *The Fifth of* Coryza. *The Sixth of* Neezing. *The Seventh of* Bleeding *at the* Noſe.

Chap. 1. *Of the Ulcer of the Noſtrils, and* Ozæna.

THe Ulcer of the Noſtrils is either New and Simple, or Old and Stinking; This laſt is called *Ozæna.*

The New Ulcer which is Simple, either comes of External Cauſe, as a Wound, or Contuſion: Or, from an Internal Cauſe, as the ſharpneſs of Humors, flowing to the part; & eſpecially ſalt Flegm coming from the Brain.

Ozæna cometh from a ſimple Ulcer neglected, or from the Malignity and Acrimony of the Cauſe by which it becometh putrid and filthy.

The Diagnoſis of both is this; a Simple Ulcer Cauſeth little or no pain, but only ſends forth blood often, eſpecially when it is meddled or tampered withal; otherwiſe is is covered with a dry black Scab which ſomtimes is caſt forth. But *Ozæna* Cauſeth great pain, the Scab is fouler; as alſo Stinking Matter cometh from it. The Patient is not only annoyed therewith, but noyſom unto others: and the Greeks cal it *Ozæna* from the ſtink. Often this Ulcer creepeth, or either eareth the Griſtle of the Noſe, or the parts between, or the tender Bones thereof, and putrifieth them, and ſome-

ſomtimes deſtroyeth the Pallat, eſpecially if it turn to a Cancer, or if it come from the French Pox as it often doth, or from an *Elephantiaſis*.

As for the Prognoſtick, Ulcers that are New, and come from a gentle Humor that hath little Malignity are eaſily Cured: but Old Ulcers that are ſordid and putrid are hardly Cured, and if they turn into a Cancer, never. If they come of the French Pox, or Elephantiaſis, they cannot be Cured except thoſe Diſeaſes be firſt Cured.

For the Cure: Firſt you muſt appoint a good Diet, which may aſſwage the ſharpneſs of the Humors, and hinder the breeding of them; then you muſt Evacuate the whole Body by Bleeding, convenient Purging, and by Cupping Glaſſes with Scarrification: And if the Defluxion of Humors into the Noſtrils be very ſtubborn, it muſt be derived by Veſicatories and Caufticks applied to the hinder parts, and then you muſt give things to ſtrengthen the head.

After Univerſal Remedies you muſt come to Topicks. And firſt take notice if the Ulcers be Cruſty and Hard. and before you proceed, take away that with a little warm water and freſh Butter, or Gooſe greaſe, or Hens greaſe, Oyl of ſweet Almonds, or the like.

The Scabs being mollified, muſt not preſently be taken off by force, leſt the Ulcer be exaſperated with a Defluxion; but you muſt expect til they fal off of their own accord by blowing the noſtrils; or at laſt you may take them gently off with a little Oyl of ſweet Almonds upon the tip of your finger.

After the Scab is off you muſt uſe aſtringent and drying Remedies.

In a Simple Ulcer it is ſufficient to waſh it with Barley water, and Honey of Roſes, and then to anoint it with Ointment of Tutty, or with the white Ointment of Rhaſis, or the Oyl of yolks of Egs which wil be of more force if it be made in a Leaden Mortar.

But for the Cure of *Ozæna*, you muſt prepare theſe following Medicines.

Take of *Barley one pugil: Agrimony, Plantane, Wormwood, and the leſſer Centaury, of each one handful: Red Roſes half a pugil: boyl them in Forge-water: in the ſtraining diſſolve of Honey of Roſes four ounces: Make an Errhine to be often ſnuffed into the Noſtrils.*

After it is ſomwhat clean, you muſt uſe this following Decoction.

Take of *the Flowers and Rinds of Pomegranates of each two ounces: Plantane, Horſtaile, Fleabane, and Rupture-wort, of each one handful: the Roots of Biſtort, or Snakeweed, one ounce: Crude Allum, one ounce and an half: Make a Decoction.*

Allum Water is alſo good; as alſo thoſe Remedies which ſhal after be preſcribed for the Cure of *Polypus*, in the following Chapter.

Ægyptiacum Diſſolved in Barley Water is good for the ſame.

After this make Ointments which may Aſtring or Bind, Cleanſe, and Dry exceedingly, as of *Pompholygos*, with Allum *Chalcitis*, and the Pomegranate Peels.

Or, This following.

Take of *Oyl Olive, half an ounce: Pomegranate Peels, and Flowers, of each three drams: Mirrh, Allum, Labdanum, of each two drams. Chalcitis, Aloes, Frankinſence, of each one dram: Oyl of Roſes and Myrtles, of each two ounces: Red Wax as much as is ſufficient: Make an Ointment, which apply to the Ulcer; or diſſolve it in Wine, Plantane, Roſe or Myrtle-water, which often ſnuff into the Noſe, the mouth being filled with Water.*

If theſe things prevail not, waſh the Ulcer with ſublimate Water, twice, thrice, or four times in a day, for it dryeth very much, and cleanſeth without any pain or biting: You muſt make it thus.

Take of *Plantane water four ounces: Crude, Sublimate Poudered, twelve grains: boyl them in a Glaſs to the Conſumption of half, you may encreaſe or diminiſh the quantity of the Sublimate as you deſire to have it ſtronger or weaker.*

When the Ulcer is wel Cleanſed, you muſt proceed to the Drying of it up: for which purpoſe the Pouder of Red Roſes blown into it, is very good.

Rondeletius witneſſeth that there is nothing more efficacious for the drying of Ulcers after ſufficient cleanſing than a Fumigation, becauſet it entreth deep into the parts, and drieth, and he ſaith it muſt be made of powerful dryers, as of Orpiment, and Cinnaber, to which you muſt ad ſome ſweet things, from whence there will ariſe a fume or ſmoak to dry the Ulcer; as Mirrh, Frankinſence, Maſtich, Benjamin, and the like, which may be brought into this form:

Take of *the beſt Labdanum, Hypociſtis, Maſtich, and Mirrh, of each three drams: red Storax, and Styrax calamita, Frankinſence bark, Sandarach, & Orpine, of each two drams. Make them up with Turpentine into Troches, with which let the Patient be fumed morning and evening in his Chamber.*

It is excellent alſo to burn Candles of red Wax; for the ſmoak of them will powerfully dry the

Ulcers

Ulcers in the Noſe, eſpecially if the Patient be kept in a cloſe room. And *Rondeletius* ſaith, That we may perceive that the ſmoak of a Candle doth affect us by receiving it: for if at any time we ſit long in a little Study by Candle light, our ſpittle and ſnot will appear afterwards black: And by this means he ſaith he cured an Ulcer, which neither Italian nor French Chyrurgeons could Cure.

Chap. 2. *Of Sarcoma, and Polypus.*

SOmetimes there is not only an Ulcer, but an excreſcency of fleſh in the Noſe, which maketh preternatural Humors called *Polypus* and *Sarcoma*.

Sarcoma is fleſh growing in the Noſtrils without any certain ſhape, but like the proud fleſh of an Ulcer.

But *Polypus* is an Excreſcency of fleſh growing with ſmal roots, and ſpreading and hanging down to the lower part of the Noſe, like the fiſh called *Polypus*, from whence it hath the name. *Rhaſis* calleth it the Hemorrhoids of the Noſe, becauſe like thoſe of the Fundament. This fleſh is ſoft, ſometimes white, ſometimes red and blew, and if it grow big, it hangeth out of the Noſe: but if it grow in the higheſt part of the Noſe, it ſometimes hangeth down to the Pallat, and ſtops the common paſſages, and may eaſily be ſeen behind the Uvula. In Southernly weather, and at the full Moon, it is much ſwelled. But in a Northernly dry time, and at new Moon, it is leſs. It differs from Sarcoma in this: Sarcoma groweth chiefly in the loweſt part of the Noſe, where it is fleſhy; but Polypus grows in the higheſt part by the Root of the Noſe.

The Cauſe of both, is a groſs ſlimy humor coming from the Brain mixed with blood; ſometimes with melancholly, and then you may fear a Cancer. Sarcoma often cometh from the ſuperfluous nouriſhment of the Noſe turned into proud fleſh, and therefore is more eaſily cured.

The knowledg of theſe Diſeaſes is eaſie by what hath been ſaid, they being apparent to the Eyes.

The Prognoſtick is thus made:

A Sarcoma is eaſily cured for the moſt part; but Polypus hardly. But that which is ſoft, white, or red, or white and red, is more eaſily cured; but that which is hard and livid or blew, is difficultly cured, and is like to be a Cancer. Alſo that Polipus which groweth low, or in the middle of the noſtril, is more curable than that which is rooted high, becauſe Remedies will not ſo well reach it.

Both are cured with the ſame Medicines, which are to be ſo ordered that the ſuperfluous fleſh may be taken away; but firſt you muſt remove the antecedent Cauſe, that is, the ſlimy humor which cometh from the Head, which you muſt do by a drying and attenuating Diet, general purging, by Revulſion, derivation and drying of the head; all which may be done by thoſe Remedies which are preſcribed in the cure of the cold diſtemper of the Brain, being diſcreetly uſed; and although many Authors commend the Decoction of Guajacum with a drying diet, you muſt take heed leſt by ſo doing you mix the flegm with hot humors, and ſo it turn into a Cancer.

After this, you muſt take off the ſuperfluous fleſh with Cauſticks, or with Ciſſers made purpoſely, and then cicatrize. But in the beginning of this diſeaſe, it may be cured with only ſtrong dryers and aſtringents; and conſtantly you muſt apply ſuch kind of Medicines firſt, before you come to ſtronger.

Firſt of all, try the Medicine made of the three ſorts of Pomegranates preſcribed by *Galen*, lib. 3. de comp. med. ſec. loc. cap. 3. thus: *Take three Pomegranates, one ſowr, another ſweet, and the other of the middle ſort: let them be ripe, bruiſe them in a Mortar; then take the Juyce, and boyl it to a Liniment; dip a tent therein, and often put it into the Noſe.* This dryeth and aſtringeth without ſharpneſs, and conſumeth the Excrement.

This following Water doth it more powerfully:

Take of *unripe Grapes three pound: Pomegranate peels and flowers, and Sumach, of each two pound: macerate them in Vineger, and diſtil them: then put to it Allum one pound: Vitriol three ounces: then diſtil them all together again, and touch the part affected often with that Water.*

If theſe things will not do, you muſt uſe ſtronger, by putting Sandarach and Orpiment to the aforeſaid Water.

Or you may mix the Spirit of Vitriol, or the Water for ſeparating Gold, commonly called the ſecond Water, with Plantane Water, and touch the Polypus often therewith.

Or with the Mercury Water preſcribed in the Cure of the Ulcer in the Noſe.

Or you may put in a tent dipped in the juyce of Cuckoo-pintle roots, and if it be too ſharp, mix it with Plantane Water.

Mercury Precipitate, which is red, is accounted the beſt Medicine to conſume proud fleſh without pain, if it be often waſhed. This Pouder is to be mixed with Honey of Roſes, and applied with a tent.

There

There are alſo Plaiſters of the ſame vertue to conſume a Polypus, without pain, as this:

Take *the Emplaiſter* de Mucilaginibus *half an ounce*: *the pouder of Savin two drams*: *Incorporate them, and put thereof into the Noſtrils.* Or,

Take of *Verdegreece, Orpiment, Vitriol, and Allum, of each one ounce and an half*: *Antimony ſix drams*: *Steep them in Vinegar, then beat them fine, then dry them*: *thus beaten and ſteeped eight times, let them be ſteeped in Plantane Water, and then dried. Then take of Oyl of Roſes four ounces*: *Litharge two ounces*: *Boyl them, and about the concluſion ad two drams of the ſaid pouder*: *Make a ſtiff Plaiſter thereof, of which make tents.*

In the uſe of Cauſticks, firſt you muſt obſerve that before they be applied, you defend the Noſtrils with the cooling Oyntment of *Galen*, or with Nutritum, or Populeon, or white of an Eg beaten with Oyl of Roſes, and the like.

Secondly, leſt the Cauſticks ſhould hurt the Noſtrils, they muſt be applyed through a ſilver pipe, ſo that it may compaſs the Polipus, and the Medicines may be conveyed to it without touching the Noſtrils.

Thirdly, You muſt obſerve that theſe Medicines are to be uſed in the decreaſe of the Moon, for the rumor then is leſs, and therefore Medicines may eaſily be conveyed to the root.

Laſtly, If Polypus cannot be taken off with Medicines, you muſt come to Chyrurgery, or Manual operation; which is deſcribed in *Paulus Ægineta, Cornelius Celſus, Jerom, Fabricius de Aquapendente*, and other Modern Writers.

Chap. 3. *Of the loſs of Smelling.*

THe Sence of Smelling is hindered and hurt three waies, as other Actions are, that is, by diminiſhing, aboliſhing, and depraving.

The Cauſes are the ſame that diminiſh, and aboliſh the Smelling, only they differ in degrees, namely, diſtemper, obſtruction, and aſtriction.

A cold and moiſt diſtemper joyned with flegm, as it can eaſily make any ſence dull, ſo doth it eſpecially hinder the Smelling, or aboliſh it; hence it is that the Smelling is often hurt when there is a Catarrh, or a Coryza, for cold doth either diminiſh or aboliſh the ſence, becauſe it doth dull and weaken the Natural heat, which is the producer of every action.

Obſtruction comes alſo from flegm which fills the ſenſible Paſſages, as the Noſtrils; and alſo the inſenſible; as the pores of the Brain, and the proceſſus of the Temples, called *Mamillares*, ſo that the ſcents and ſmels cannot come to the parts: it may alſo come of a Sarcoma, Polypus, or other cauſe filling and ſtopping the Noſtrils.

Aſtriction ſometimes may come from flegm gathered in the fore part of the Brain, and compreſſing the *Proceſſus Mamillares*, as we ſaid of the diminiſhing of ſight, from the aſtriction of the Optick Nerves. This aſtriction may alſo come from the Natural ſhape of the Noſtrils, when they are ſo ſtraight that there is no free paſſage for the Scents.

The Cauſe of Smelling depraved, is a ſtink alwaies coming to the Noſtrils, either from an Ulcer there, or from ſtinking flegm in the Noſtrils, and *Os Ethmoides*: for thoſe things which putrifie either in the very ſence of Smelling, or neer it in the Meninges, are not ſmelt by the Patient, but by them that ſtand by; for it is fit that whatſoever toucheth the ſence of Smelling, ſhould be brought from other parts. Moreover, a foul ſtinking vapor ariſing from other parts, as the Stomach, Jaws, and Brain be carried to the *Proceſſus Mamillares*, and ſo infect them, that all the ſcents that are brought thither ſhall ſmel thereof; as when the Tongue is foul with Choller, all things which you taſt ſeem bitter.

The Cauſes are eaſily known. A cold and moiſt diſtemper of the Brain, and ſlimy flegm coming from the Brain, ſhew an abundance of flegm.

An obſtruction if it come from flegm ſhall be known by the ſame ſigns. If it come from Sarcoma or Polypus, you may learn the knowledg thereof from their Chapters.

Now the place in which the matter cauſing obſtruction is contained, is known thus: If it be in the paſſage of the Noſtrils, the voyce is hindered, becauſe the Noſtrils conduce to Speech: but the voyce is perfect if the matter be in the *Proceſſus Mamillares*, or the fore part of the brain.

You may know by the default of the parts, from whence comes the ſcent which hurts the inſtrument of Smelling.

As to the Prognoſtick: When the Smelling is newly hurt, and coming of a ſimple Coryza or defluxion, is eaſily cured; but when it is of long continuance, and from a ſeeled diſtemper, hardly: that which comes from the ill ſhape of the Noſtrils, is incurable.

You muſt order the Cure diverſly according to the diverſity of the Cauſes: If it come from a cold diſtemper

Distemper, you must use those Medicines which were prescribed for a Cold Catarrh.

For the taking away of the Obstruction or stopping of the Nostrils and Processus Mamillares by flegm fastened there; You must use Medicines that Purge those parts, as Errhins, Neezings, and Gargarisms; which were propounded by us in the Cure of the Cold Distemper of the Brain.

If the Nostrils be stopt by a Sarcoma or Polypus; you must fetch the Cure from the Precedent Chapter.

Chap. 4. *Of the Stink of the Nostrils.*

THe Stink of the Nostrils, and of the Breath, do much differ; for that comes only from the Nostrils, and this from divers parts, as from the Stomach, Lungs, Gums, Jaws, or being Ulcerated, which you may know by sense, or by their proper signs.

But the stink in the Nostrils comes of stinking Vapors either bred in the Nostrils, as in *Ozæna*, *Sarcoma*, or *Polypus*: or sent thither from putrid Humors contained in the fore-part of the Brain; or about the *Processus Mamillares*, or *Os Cribrosum*. Now the Humors do putrifie in the said parts when they are too long retained in them, especially if the Brain be hot and moist; and they are retained either by the stoppage or attriction of the parts, and in flat Noses.

The Diseases of the Nostrils which produce this stink, are known by their proper signs above mentioned; but if you find none, you must conjecture that the stink comes from a putrid Humor in the Brain, *Processus Mamillares*, or *Os Cribrosum*.

The Prognostick of the stink in the Nose coming of an Ulcer, *Polypus*, or *Sarcoma*, depends upon their Prognostick: but that which comes from corrupt Humors contained in the fore-part of the Brain, if it be New, is easily Cured; if Old, uncurable: especially if it come from a depression and flatness of the Nose.

The Cure is performed by removing the Causes, and appeasing the Symptoms.

The Cure of an Ulcer, Sarcoma, and Polypus is above mentioned: but you must take away the putrid Humor in the Brain, *Processus Mamillares*, or *Os Ethmoides*, by emptying and Clensing means.

And first, You must use Universal Evacuations for Clensing the whol body and the brain from flegmy Excrements, by Pills, Apozems, and the like; to which you may ad, if there be great plenty of Humors, a Sweating Diet: afterwards administer Errhins that clense and bring forth the Matter conjoined.

And first of al, Let him morning and evening snuff up white Wine from the palm of his hand in which the Lesser Centaury and Calamints have been boyled.

Then let the juyce of Beets extracted with the Water of Marjoram be used in like manner.

Or,

Take of *Cyprus Roots, and Calamus Aromaticus, of each half an ounce*: *Red Roses one pugil*: *Myrrh two drams*: *boyl them in white Wine for an Errhine.*

That you may draw down the flegm more violently, make this.

Take of *Flower-de-luce-Roots half a dram*: *white Hellebore and long Pepper of each half a scruple*: *Annis-seeds and dryed Marjoram poudered of each one scruple*: *Euphorbium one grain*: *Oyl of Spike Chiry, and Violets, of each as much as is sufficient*: *make a soft Oyntment, in which dip the top of your little finger, and anoint the Nostrils within*; *or put it with a Tent or Pledget as big as a Pease into the Nostrils.*

Lastly, To oppose the stink, you must snuff up sweet things, as *Galla Moschata* dissolved in sweet Wine, Angelica-water, or the like.

Chap. 5. *Of Coryza, or Pose.*

CO*ryza*, called in Latin, *Gravedo*, is a Catarrh falling from the Brain into the Nose; which Defluxion is of a crude Humor contained in the fore Ventricles of the Brain, and comes for the most or an External Cause, as from the heat of the Sun, drinking of much Wine, hot Baths, and the like, which do melt and dissolve the thick flegm gathered in the Brain: It comes also of External Causes which Cool the Brain, for then it is squeezed like a spunge, and so it sends down the Humor into the inferior parts: as also by over-cooling the Brain there is an encrease of flegm, for through want

want of heat the Excrements are not concocted; therefore are they ſent forth through the open paſſages by the Expulſive Faculty.

This Diſeaſe appears of its ſelf, for the Humor is ſent in abundance out of the Noſe.

Among al kinds of Catarrhs that which is through the Noſe is moſt ſafe and gentle, eaſily Cured if it be New, and come of an External Cauſe; but that which is Old, and comes from a ſtubborn Diſtemper of the Brain, is difficult.

As alſo, when it proceeds of a hot Diſtemper of the Liver, which ſomtimes cauſeth ſharp and hot Catarrhs; by which the Noſe is often Ulcerated and ill affected otherwaies.

The Cure of this Diſeaſe is by Curing the Catarrh; for it requires the ſame Evacuations, Revulſions, and Derivations; except that here you muſt not uſe Errhins, leſt they ſhould draw the Humors to the part affected; but Gargariſms and Maſticatories after Univerſals are very good.

And beſides theſe, Authors do commend thoſe things which properly belong to the ſtopping of a Cataarh; as the vapor of boyled Marjoram; or of Marjoram water taken into the Noſe. The fume of Vinegar ſprinkled upon a red hot Iron is good for the ſame; and the better if red Roſes have formerly been infuſed therein: If the Defluxion be very Cold, dry Fumigations of Nigella, Frankinſence, and the like, thrown upon Embers are very good; for by theſe the cold Diſtemper of the Brain is amended, and the ſuperfluous moiſture conſumed.

Chap. 6. *Of Sternutation, or Neezing.*

ALthough Neezing come often to found men, and uſeth to be ſo light an Affect that it deſerveth not the name of a Symptom; yet ſomtimes it is troubleſom, that it requireth a Phyſitian: As we may reade in *Foreſtus, Obſ.* 127. *Lib.* 10. in his Hiſtory of a certain Maid which had ſo grievous a fit of Neezing from a ſharp ſalt Catarrh, that ſhe had the advice of many Phyſitians. This is confirmed by the Old Cuſtom of ſaying *God bleſs you* to him that Neezeth; which ſome ſay came from hence, In the time of *Gregory* the Great there was an ordinary Diſeaſe of Neezing by which the Patients died; albeit ſome ſay that Cuſtom is more antient.

Sternutation is a ſwift motion of the Brain, with which the breath is forced out of the Noſe for the throwing forth of things that offend: By the Brain we underſtand not only the ſubſtance thereof, but the whole Body with its Membranes; eſpecially the fore-membranes, which are eſpecially contracted in this Diſeaſe, which we may gather from hence, becauſe when we hold up the head we Neez more eaſily; for then the matter provoking which for the moſt part is windy and tends naturally upwards, is more eaſily carried to that part.

But the motion which happens in Neezing belongs to the natural Expulſive Faculty of the Brain and its Membranes, according to *Galen*, 2. *de ſymp. cauſ. cap.* 1. where diſtinguiſhing Neezing from Trembling and Palpitation, ſaith, That Palpitation comes only from a Diſeaſe: Trembling from Nature and a Diſeaſe: but Neezing from Nature only.

But *Galen* at the firſt ſight ſeems to contradict himſelf; who in *Cap.* 4. of the ſame Book, ſaith, That a Cough and Neezing are Symptoms of the Voluntary Faculty; but it is no contradiction: and *Galen* cleers himſelf wiſely; ſaying, That in Neezing the Animal Faculty doth concur only ſecondarily; becauſe in Neezing breath is ſent from the Head and from the Lungs; yet the Head gives the original of the motion to the Breaſt; for when it haſtneth to ſend forth thoſe things that offend in the Noſe, it uſeth both wayes at once to ſend forth breath: One way which it maketh by it ſelf, Another way which it maketh by the Nerves, deſcending like long arms into the breaſt; whence *Galen, Com. Aph.* 51. *Sect.* 7. teacheth, That Neezing comes with antecedent inſpiration or taking in of breath when Nature gathers it together to make Sternutation, then the air which goes forth of the breaſt, joyned with that which is drawn by the Noſe into the Brain, doth expel with Noiſe and violence whatſoever offendeth the Membranes of the Noſtrils which have moſt Exquiſite Senſe.

From this place of *Galen*, we may gather, That the irritation which cauſeth Sternutation is made chiefly in the Noſe; which is confirmed, *Aph.* 51. *lib.* 7. where he ſaith, *They only Neez of thoſe thus affected which have a ſharp moiſture flowing from the head, as when you put ſharp things into the Noſe: For as a Cough is a certain natural motion to purge the Arteries which are in the Lungs; ſo doth Neezing the paſſages of the Noſe.*

But it may be objected, That many ſtanding bare-headed, or otherwiſe in the cold Air, do preſently Neez, that one would think the Brain was provoked immediatly at that time. We *Anſwer*, That cold Air is the Cauſe of Sternutation not while it doth immediately act upon the brain: but becauſe through compreſſion of the brain and its Membranes, it cauſeth a ſharp Matter to deſcend to the Noſtrils; although therefore in this Symptom the Membranes of the brain may be provoked: yet

Neezing is not produced before a ſharpneſs or tickling come to the Membranes of the Noſe which are exquiſitely ſenſible.

The Cauſes of Neezings are known by what hath been ſaid, namely, What things ſoever can provoke the internal coat of the Noſtrils, ſuch as are ſharp humors or vapors, either coming from the Brain, or ſent from the inferior parts; hence men neez in feavers, ſaith *Avicen*, becauſe ſharp vapors are ſent from the whol body into the head; or it is cauſed when ſharp things are externally put into the Noſe, as ſharp Medicines called *Pharmica* Neeſings. Theſe are the external Cauſes which provoke neezing immediately. There are many other mediate Cauſes which make internal Cauſes, or move them, as all alterations of the Air, as above ſaid of cold Air. *Galen* in his Book *de inſtrum. odoratus, cap.* 6. ſaith, That neezing is provoked by beholding the Sun, becauſe the Spirits of the Brain, like to a vapor, are diſcuſſed by the Sun.

The knowledg of this Diſeaſe is manifeſt. The outward Cauſes appear by the relation of the Patient; but the internal from the ſigns of the parts affected, by which the matter provoking is ſent to the Noſtrils, and fore part of the Brain.

As to the Prognoſtick; This Diſeaſe is of it ſelf without danger. But in the beginning of a Catarrh or Coryza it is very hurtful, becauſe it keeps the humor from concoction by its motion. Sometimes in Feavers it is ſo ſtrong that it takes away all ſtrength, and cauſeth bleeding at the Noſe; ſometimes it is no waies hurtful, and in ſound men it expelleth the ſuperfluities of the Brain: In ſick men it is held a good ſign. It promiſeth help in Feavers, eſpecially in malignant Feavers when all things are deſperate. If neezing happen to a woman in fits of the Mother, or that hath hard travel, it is good, Aph. 35. Sect. 5. Neezing provoked with Medicines is good againſt Apoplexies, and other great Diſeaſes of the Brain. And it being provoked they do not neez, it is a ſign of death, for it ſignifieth that Nature leaves to act.

In Diſeaſes of the Lungs, eſpecially in a Pleuriſie, and *Peripneumonia*, or inflamation of the Lungs, neezing is evil, *Hipp.* 2. *Progn.* becauſe from the ſhaking of the Brain in neezing, the parts of the Breaſt are violently pulled and torn; from whence the inflamation is encreaſed, and there is no other evacuation of the matter cauſing the diſeaſe; but for the expelling of flegm contained in the Griſtles of the Lungs, which could not be caſt out by a Cough: *Galen* ſheweth that neezing is good, *Gal.* 2. *de ſymp. cauſ. cap.* 5, & 6.

The Cure when it is neceſſary, or when neezing bringeth inconveniencies, is made firſt by removing of the External Cauſes, if it come from them. If it come of an internal Cauſe, you muſt remove that alſo, by Evacuations, Revellers, Derivers, and Diſcuſſers.

If a hot diſtemper of the Brain or any other part ſend ſharp vapors to the Noſtrils and inward Meninges. Then you muſt open a Vein, and then purge, then revel the vapors with Fricions, and Ligatures, with Cupping Glaſſes to the Shoulders; alſo uſe other Revelling, Deriving, and Diſcuſſing Medicines, comb the Head, pull the Ears, rub the Eyes, blow the Noſe, and hold the Breath.

Laſtly, To take away ſharpneſs, and hinder the Noſtrils from being provoked, it is good to take the vapor of hot water into the Noſe; or to anoint the Noſtrils with Oyl of Roſes, ſweet Almonds, Violets, or with freſh Butter; or to ſnuff up warm Milk into the Noſe; by which only Remedy *Foreſtus* preſently cured the Maid mentioned formerly.

Chap. 7. *Of Bleeding at the* Noſe, *called* Hæmorrhagia.

THe word *Hæmorrhagia*, vulgarly ſignifieth any flux of blood coming from any part. But peculiarly, when it is named ſimply of *Hippocrates*, it ſignifieth only that flux which cometh from the Noſe, as the firſt and moſt evident kind, as *Galen* obſerved, *Com.* 1. *in* 1. *Epid.*

An *Hæmorrhagia* of the Noſe, is a Symptome in the excrements of thoſe things which are wholly againſt Nature. For Blood coming through the Noſe, either comes from the Veins and Arteries in the Brain, or from the Veſſels coming from the Pallat to the Noſtrils, which are like the Hemorrhoid Veins in the Womb and Fundament.

But ſince every Symptome depends upon a Diſeaſe as its immediate Cauſe, the cauſe of this will be either an Organical, or a Common Diſeaſe.

The Organical is two-fold: The opening of the Veſſels, which is called in Greek *Anaſtomoſis*; and the thinning, or rarefaction of them, called *Diapedeſis*.

The Common Diſeaſe is two-fold: The breaking of the Veſſels, called *Rexis*; and the Eroſion called *Diabroſis*.

The Cauſes immediately producing thoſe Diſeaſes, are either exceeding in quantity or quality of Blood.

Blood

Blood offending in quantity can either break the Veins, or open the Orifices of them.

In quality, if it be too hot, or too thin, it will flow out by *Anaſtomoſis*, becauſe heat doth dilate the Orifice, and thinneſs maketh it flow more eaſily. Alſo the ſame qualities make a *Diapedeſis*: for heat maketh the coats of the Veſſels thin, and the thinneſs of the blood makes it eaſie to paſs through the pores of thoſe coats.

Laſtly, The ſharpneſs of the Blood gnaweth the Tunicles of the Veins, and ulcerateth them, from whence cometh a *Diabroſis*.

The external Cauſes alſo do concur to produce this Diſeaſe, either mediately, or immediately.

Immediately, as falls, ſtroaks, wounds, and the like, which break and divide the Veins.

They work mediately which do encreaſe, warm, and make thin the blood, as plentiful Diet, Drunkenneſs, Idleneſs, too much Exerciſe, great Noiſe, Heat, long ſtaying in the Sun, and the like.

The Differences of *Hemorrhagia* are theſe: Some are Critical, ſome Symptomatical.

Critical *Hemorrhagia's* are in acute Feavers, by the force of Nature endeavor to expel the cauſe of the Diſeaſe this way, as eſpecially in thoſe Diſeaſes which are joyned with the Inflamation of ſome Entral, eſpecially of the Liver, or the Spleen, which are many times diſcharged by theſe waies; ſomtimes it comes without a Feaver, when Nature diſchargeth her ſelf of the ſuperfluous blood, whence we ſee many in their youth have an Hemorrhagy by fits, and others bleed other waies.

A Symptomatical Hæmorrhagy happeneth chiefly in Chronical Diſeaſes, in which filthy blood is produced by reaſon of the debility of the Liver, or ſome other great Diſtemper, which either flows through thoſe Veins by the weakneſs of the retentive faculty, or is ſent forth by the expulſive, as an unprofitable burden, becauſe impure blood is not fit to nouriſh the Body.

Hæmorrhagia is known of its ſelf. But its Cauſes are thus diſtinguiſhed: That which cometh by *Anaſtomoſis*, hath this common with that which comes by *Rexin*, or rupture, in that in both the blood floweth plentifully; but in this they are diſtinguiſhed, If a blow or a fall went before, we ſhould ſuppoſe it to be *Rexin*: But when Ruption cometh from *Plethora*, or much Blood; as alſo apertion of the Veins; thus they may be diſtinguiſhed: When the Veſſel is broken, the Blood floweth conſtantly; when it is opened, at a diſtance, and by fits only; becauſe the Orifices of the Veſſels uſe to be knit and cloſed when there is leſs plenty of the Humor which dilateth flowing thereto; but broken Veſſels ſtand alwaies open, and therefore blood continually floweth till the ſolution of continuity be united. Moreover the opening of a Vein, is diſtinguiſhed from the breaking, by the ſubſtance of the blood: For if it be thin, it comes from a Veſſel opened; if thick, it comes from a broken. Hence it is that Hemorrhagy comes in yong men for the moſt part by the opening of the Veſſels, becauſe their blood is thin; but in old men from Ruption, becauſe theirs is thick.

If it comes from Erotion of the Veins, there will be ſigns of *Cacochymia*, or ill juyce in the body of an Ulcer, and matter ſomtimes comes forth: or at leaſt a ſalt Catarrh hath gone before. If it comes by *Diapedeſis*, or Rarefaction, the blood is thin and little.

The Cauſes antecedent and external, are eaſily diſtinguiſhed: For if it come from plenty of blood, there is a red face and large veins: as alſo the Diet hath been large and hot, or there hath been ſome external cauſe which hath melted and made thin the blood, and theſe eſpecially befal them who have very hot Livers.

If it come from evil Juyce, it is known by its proper ſigns, which declare whether Choller or Melancholly doth abound: Moreover, the Blood will appear corrupt either from the Noſe, or taken from the Arm.

If it come from the weakneſs of the retentive faculty, the face wil be pale, and the whol body weak; as alſo ſome Diſeaſe hath gone before, by which the Liver was firſt weakened, and then very little blood comes forth, and by degrees.

If the blood comes immediately from the Veins of the Noſtrils, it is eaſily ſtopt with aſtringent Medicines applied thereto, and there will be no pain in the Head. Contrarywiſe, if it come from the Brain, there is ſome pain in ſome part of the Head, the flux is hardly ſtopped, and things put up into the Noſe do no good. Somtimes blood comes from other parts, as the Liver, Spleen, Womb, whoſe ſigns are the pains and extenſions in thoſe parts.

If the blood flows from an Artery, it comes with force, it is hot, pure, freſh, and clear; but when it comes from a Vein, it is dark, red, thick, ſomtimes foul, and comes forth with ſmal force.

The Prognoſtick of Hemorrhagy coming, eſpecially if it be Critical, is taken from the hurt actions, when the Excrements and qualities are changed: as watchings, and dreams of red things, a great pain of the Head and Neck, heavineſs in the Temples, and great beating of thoſe Arteries, ringing and noiſe in the Ears, dulneſs of the Eyes, with redneſs thereof, and of the whol face, hating of light, involuntary tears, itching of the Noſe, a drop of Blood upon the day that declares the Criſis, difficulty of breathing, an extenſion of the Hypochondria without pain.

The Reaſon of which ſigns is: When the Blood begins to be carried to the Head, it begets in the Head Phantaſms of red things, both waking and ſleeping: as it happened to a yong Roman which

Galen mentioneth, *lib. de præſag. ad Poſthumum, cap.* 13. he had an acute Diſeaſe, and thought he ſaw a red Serpent about the Chamber Seiling, at which being frighted, he leaped out of his bed: Hence *Galen* foretold a Hæmorrhagy at hand, and hindered the letting of blood which other Phyſitians had preſcribed.

The pain of the Head and Neck comes from the tranſlation of the blood into the ſuperior parts, which by diſtending and pulling the Membranes cauſeth pain.

The Arteries in the Temples beat by reaſon of their compreſſion which is cauſed by the fulneſs of the Veins.

The noiſe in the Ears comes from vapors flying in abundance into the head.

The ſight is dim becauſe many thick vapors ſent up do ſtop the paſſages. Hence it is that when paſſage is denied to the Animal Spirits, the ſight is dim.

The things flying before the Eyes called *Marmaryges*, are nothing but thin bodies divided and of divers colours contained between the *Cornea* and the *Cryſtalline*, coming from vapors aſcending: which though they be inward, yet through deception of the ſight they ſeem to be outward; becauſe the Eye being uſed to ſee External things, ſuppoſeth whatſoever is within, to be without.

The Redneſs of the Face and Eyes comes from blood in thoſe parts increaſed: there is a deteſtation of light, becauſe the Eyes being diſtended with plenty of humors, wil be more diſtended with light, becauſe it diſperſeth the Spirits: Hence the Eye is dilated, which cauſeth pain, which that the Patient may avoid, he avoideth the light.

The involuntary Tears come from the repletion of the Eyes, and the parts adjacent, which being too much Diſtended to preſs the Glandles that contain the moiſture of which tears are made.

The Itching of the Noſtrils comes from vapors aſcending upwards.

Drops of blood upon the day of demonſtration, namely, the fourth or eleventh, ſheweth that there wil be an *Hæmorrhagy* upon the day of judgment; namely, the ſeventh or the fourteenth, becauſe in thoſe dayes Nature begins to tranſfer the Humors to thoſe parts.

The breathing is difficult, becauſe while the blood flyeth upward it compreſſeth the *Diaphragma*.

Laſtly, There is a ſtretching of the *Hypochondria*, becauſe the blood begins to move in its fountain, and in the roots of the veins: but this diſtention is not conſtant, and is without pain, as the difficulty of breathing is: for if they ſhould laſt long and increaſe they would be ſigns of the Liver inflamed.

The Prognoſtick of a preſent Bleeding at Noſe is thus.

If Blood flow moderately out of the Note in the day of judgment it is ſign of Health; although *Galen* doth confirm this; yet *Fernelius* denyeth it, ſaying, *lib.* 2. *de ſanguinis miſſ. cap.* 1. That no diſcharge of blood, although critical, is ſign of health; for though it eaſe madneſs, watchings, headach, and other Symptoms, yet it ſcarce ever cureth the Diſeaſe, becauſe the purer portion of blood is ſent forth and the pure remaineth; and this is thus proved, becauſe the blood coming from the noſe is of a laudable colour and ſubſtance, when blood at the ſame time taken out of a vein in the arm or elſe where, ſhal appear to be corrupt.

This Doctrine of *Fernelius* is very real, but not altogether to be received: It is true, That in acute Diſeaſes, eſpecially malignant Feavers, a *Hæmorrhag* doth not alwaies Cure the Diſeaſe: as Sweat is not alwaies a ſign of Health in thoſe Diſeaſes. becauſe theſe Evacuations being forced by Nature before the time, come for the moſt part from the malice of the matter of the Diſeaſe: Yet ſomtimes acute Diſeaſes are cured by *Hæmorrhagia*, as *Galen* taught in his Third Book *de criſ. cap. ult.* and elſewhere. And the reaſon why blood out of the Noſtrils is alwaies pure, is becauſe it comes by drops, and therefore would be ſo quickly cold that the impure parts could not be ſeparated; and the purer parts mixed with the reſt would make the whol maſs red. But blood taken out of the arm, becauſe it comes flowing freely, keeps the colour long in the veſſel from which the impure parts are ſeparated, ſo that the thick and droſſy part goes to the bottom, but the choller and flegm which is more altered and impure, ſwims at the top, and ſo the blood ſeems impure and ſordid.

On the other ſide, if blood ſhould drop from the vein it would appear pure, becauſe it preſently goes together before the *Heterogeneal* parts can be divided by the heat; nay if blood flow freely and be caught in a large veſſel, it wil appear pure becauſe it is quickly cold.

Hæmorrhagyes that are very great are the worſt, for they tend to a Convulſion: For ſomtimes it comes to paſs that Nature being burdened with much blood, and ſtirred up to throw it forth, cannot obſerve a Mean, and makes an over Criſis, which Phyſitians muſt ſtop.

An *Hæmorrhagy* in the beginning of the Diſeaſe is evil, becauſe it is Symptomatical, and comes from the malignity of the matter of the Diſeaſe, Nature being ſtirred up to ſend it forth before her time.

An

An Hæmorrhagy which is on the ſame ſide with the part affected is good, but otherwiſe it is evil ſo in the inflamation of the Liver when blown forth out of the right Noſtril it is good, but out of the left, bad.

Contrarily, When the Spleen is inflamed, if blood come forth of the left Noſtril it is good but out of the right bad: becauſe al good Evacuation ought to be *Kata ixin.*

A few drops coming from the Noſe are evil: for it ſignifies the weakneſs of nature, and the malignity of the diſeaſe.

For al Excretions are condemned by *Hippocrates*, in acute diſeaſes if they be begun only and not finiſhed, becauſe there is greater ſecurity in thoſe Feavers in which nature putteth forth nothing, than in which ſhe puts forth little to no profit.

For then it is to be ſuppoſed that ſhe tends to Concoction; but if a drop appear, it is a ſign that nature was ſtirred up before her time.

But a drop coming upon the day of Indication, and ſigns of Concoction alſo appearing, it ſignifies that there wil be an Hæmorrhagy upon that Critical day.

Hæmorrhagies continuing long, foreſhews the weakneſs of the Liver, and the coldneſs alſo, and an evil habit with a dropſie to be at hand.

To him who have bled at the noſe in Quartane Feavers it is evil, *Hippocrates*, *Aph.* 87. *Sect.* 7. For as *Avicen* ſayeth bleeding in Melancholly and Flegmatick people is hurtful, becauſe it cooleth too much.

To them who in Feavers have loſt much blood at the Noſe, or any part, when they amend their belly wil be looſe, *Hip. aph.* 27. *ſect.* 4. For as *Galen* ſaith in *Com.* when the natural heat is debilitated by bleeding, neither can their meat be wel concocted, nor turned into blood, nor diſtributed into the body: and therefore it is fit they ſhould be looſe bellied, until Nature recover her ſtrength.

In the Cure of *Hæmorrhagia*, firſt obſerve whether it be Critical or Symptomatical: For a Critical is not to be ſtopped, but you muſt ſuffer it to flow in a great quantity: For *Avicen* ſaith, That blood hath come from the Noſe to the quantity of four pints by a Criſis without any decay of ſtrength. And this ſeems to be taken out of *Galen*, who in his Book *de Progn. ad Poſthum. cap.* 13. ſuffered a yong Roman to bleed four pints and an half before he would ſtop it.

Which as it may fal out wel in very Plethorick people, ſo in others it may endanger life; and it is certain that a Critical Hæmorrhagy, although it is the work of Nature, yet ſometimes is beyond meaſure; for Nature being burdened with blood, and ſtirred up to expel it, ſometimes cannot keep within meaſure, but maketh too great an Evacuation; whence we ought to fear a great dejection of ſtrength, and death, and then it is to be ſtopt, as often as any notable infirmity followeth.

So alſo that blood which cuſtomarily floweth without a Feaver is not to be ſtopped, but to be left to Natures ordering, except it be immoderate; for many by ſuch bleeding have been freed from great Diſeaſes, into which after, upon ſuppreſſion thereof they have fallen.

But a Symptomatical Hemorrhagy is to be ſtopt, which may be done by revulſion of the Blood from the Noſe, and by repelling it to the parts adjacent, by ſtopping of the Veins which are open, by ſtaying the diſorderly motion of the blood, and by evacuating the ſharp and thin humors mixed with the Blood, which are the chief Cauſe of Hæmorrhagy, by correcting them, and hindering their encreaſe, and by ſtrengthening the retentive faculty of the Liver and Veins: All which may be done with the Remedies following.

And firſt Blood-letting is the chief thing for Revulſion, which muſt be done quickly before the Patient grow weak, and that out of the Vein on the ſame ſide the Noſtril is, out of which it cometh: on the right ſide, if from the right Noſtril; on the left, if from the left: And *Galen*, *lib. de ſang. miſſ. cap.* 11. confirmeth the efficacy of this Remedy, affirming that he hath preſently ſtopped violent bleedings at the Noſe only thereby. But it muſt be taken in a large quantity if the Patient be ſtrong, and from a large orifice: Although moſt of the Ancient and Modern Phyſitians think otherwiſe; and ſay that blood muſt be let out at a ſmal orifice by little & little often, by which means they ſay the Revulſion will be better. But that you may make the blood move the contrary way, you muſt have a ſtronger motion for hinderance of a weaker; therefore by how much the larger the orifice, and the more violent the motion is of the blood from the Vein opened, by ſo much the ſooner will the blood at the Noſe be ſtopped: But if by once letting blood, and applying other Remedies, the Hæmorrhagy be not ſtopt, you muſt repeat Blood-letting according to the ſtrength of the Patient. You may alſo open the Vein in the Foot, that a Revulſion may be made at a great diſtance, which alſo availeth much, as *Avicen*, *Paul.* and *Trallian* ſay.

After Blood-letting, as alſo before, rub and bind the extream parts, and clap great Cup-glaſſes to the Hypochondria; to the right ſide, if the right Noſtril; to the left, if the left do bleed: For *Galen* ſtopt an Hemorrhagy in a yong Roman, by a Cupping-glaſs to the Hypochondrion without blood-letting, as he ſaith *lib. de prog. ad Poſthum. cap.* 13.

Nor-

Notwithstanding, the applying of Cupping-glasses to the Hypochondria, is not altogether safe, for the blood then being hot may be drawn in too great a measure into the Liver, or the Spleen, and inflame them. Of which there is an example in *Fabricius Hildanus*, *Obs.* 47. *Cent.* 2. of a Courtier who bleeding violently at the Nose; to whom, with other Remedies, there were great Cupping-glasses applied to his Liver: The blood stopt, but there followed a great inflamation of the Liver. Therefore you must be wary in applying Cupping-glasses to the Hypochondria, and never use them but when all other Remedies fail, and after divers Phlebotomies: For after the plenty of blood is taken out of the Veins, there is less danger of attracting too much Blood to the Liver to inflame it, but which way soever they are applied, they draw blood and spirits to those parts whereby their heat is encreased, which seems to be contrary to the opinion of *Hippocrates*. Aph. 13. Sect. 5. where he saith, That in those parts from whence Blood cometh, or is about to come, you must use cold things. The Interpreters say, that cold things are to be applied to those parts from whence the motion of the Blood beginneth, as the Liver and Spleen.

Forestus commendeth Cupping-glasses to the Feet, by Experience, *Obs.* 14. *Lib.* 13. in these words: *When a Gentleman exceedingly bled at the Nose, and no Remedies would help him, having lost at least twelve pound of blood from both Nostrils; I was sent for and after he had bled a whol day, I commanded two Cupping-glasses without scarrification to be applied, one to his Liver, the other to the Spleen, and the blood seemed to stay a little; but after my departure, when his wife perceived him to bleed again out of both Nostrils, and that his cupping had done no good, she commanded that the cupping should be set upon his feet, and the blood wonderfully stopped beyond expectation: But after the Cupping-glasses had been a while fixed, the Patient fell into a swound; and therefore they took them off, and threw water in his face, by which he recovered; and then being refreshed with the scent of Wine, he came to himself, and was restored to his former health, from his bleeding, as it were by Miracle or Inchantment, beyond all expectation.*

Moreover, Cupping-glasses applied to the Shoulders both dry and with scarrification, do draw back the blood from the Nose. But they be not alwaies safe, for they may attract blood from the inferior parts, and so give occasion to a further bleeding.

Some Practitioners do apply Cupping-glasses to the Biceps Muscles of the Arms, by which they make revulsion.

Crato in his Counsels, reckoneth the bending of the little finger on the same side among the revulsives: for by the great pain that will be caused thereby, there will be a drawing back of the blood.

But the blood and Spirits are drawn inwardly more strongly by Swouning, whereby we saw a Bishop in the year, 1629 cured of a violent Hemorrhagy; for being in a malignant Feaver with the inflamation of the right Cidney, which after in the twenty seventh day of his sickness, turned to an Imposthume, he was taken with so violent a bleeding, that in four hours he lost two pounds, and still bleeding and strength decaying, we bethought how we should stop it; and after the use of many remedies to no purpose, the Patient desired to ease his belly, and could not be compelled to do it in his bed; we foretold him, that if he arose, he being very weak would faint away, but that would be good to stay his bleeding: and so it came to pass, for after he rose he swouned; from which with a little Wine he was recovered, throwing also Water in his face; after that he had a large stool was brought to his bed, and bled with less violence; then giving a dram and an half of Lapis Prunellæ in cold Water, presently the blood stanched when the same and other Medicines could not formerly do it. Although fainting be not vulgarly accounted a Remedy against bleeding at the Nose, yet *Hipp. lib.* 3. *Epid. Sect.* 7. saith thus: *These things stop the bleeding of the Veins, swouning, the alteration of the posture or figure of the Body, intercepting, a tent, apposition, and deligation or binding.* *Galen* in 5. meth. cap. 5. teacheth the same, in these words: *Moreover Blood is stanched both by fainting, and by revulsion, and derivation to the parts adjoyning, and by cooling of the whol Body, and especially the part afflicted: But you must observe that fainting doth only profit when the blood floweth from the Veins which are terminated in the superficies of the body, which* Hippocrates *also hints at, when he prescribeth tents, bandage, and the like.* For when blood cometh from the internal parts, as in an *Hemoptoe*, or spitting of blood, immoderate flux of the terms, or internal wounds, then fainting will encrease the bleeding, the heat being thereby drawn into those parts from whence the blood cometh.

Zacutus Lucitanus, *Lib.* 1. *Praxis admirandæ*, Obs. 66. reports that he cured a desperate Hemorrhagy, which would yield to no other Medicines, by an actual Cautery to the soals of both feet; which Remedy he saith had like success in a great bleeding at the mouth coming from the opening of the Vein called *Ranuncula* under the Tongue by corrosion from a sharp Catarrh; and when the Blood had flowen two dates to the quantity of twenty pounds, and many astringents and Emplasters had been used, as also Revulsives and thickening Medicines, with Narcoticks or Stupefactives, by a Cautery in the soal of the foot it was stanched.

If still he bleed after all the aforetaid Revulsions have been tried, you must come to repelling Medicines,

dicines ſuch as are vulgarly called *Anacollemata*, things to be applied to the Forehead and Temples, which are thus made:

Take of *Bole-Armenick, Terra Sigillata, Sanguis Draconis, Frankinſence, Maſtick, and Aloes, of each one dram: Bran and the hair of an Hare cut ſmal, of each half a dram: one white of an Egg, the Juyce of Plantane, and Nightſhade, of each as much as is ſufficient to make a Cataplaſm for the Forehead, and the Temples.*

In extremity you may quickly make a Cataplaſm of Bole-Armenick only, mixed with the white of an Egg and Vinegar for the ſame parts.

The moſt excellent is made of Time and Vinegar, and applied to the Temples and the Forehead as thick as two fingers: and if the firſt application do it not, let it be repeated, and it will certainly cure.

Amatus Luſitanus commends a cap made with the aforeſaid Pouders, mixed with Vinegar and Water, laid upon the Head being ſhaven; which you may try in great extremity.

Alſo you may make a Fomentation of very cold Water, or Water and Vinegar to the Temples and Forehead, changing your cloaths as they grow hot.

Or you may make a Fomentation of the Juyce of Plantane, Knotgraſs, Horſ-tail, Shepheards-purſe, and the like, with a little Vinegar to make it pierce. Where mark, That the Head is not to be waſhed with cold Water, nor repelling Medicines to be laid to the Forehead, before you have made ſufficient Revulſions; otherwiſe the blood being ſtruck in with cooling will fill the Veins above, as *Galen* ſheweth, 5. meth. cap. 6. and ſo the flux will be encreaſed, by the heat encreaſed through *Antiperiſtaſis*, by which the motion and force of the blood is encreated; or if the blood be ſtopt, there will follow a Convulſion, Apoplexy, ſhort and difficult breathing, called *Dyſpnœa*, or the like.

Vinegar alone will ſtop blood if the Forehead be fomented therewith in a Spunge.

Or if you dip a Spunge in Vinegar, and put it into the Noſe.

To throw cold Water in the Face, doth not only drive back the blood, but alſo draweth inward by fear, if done on a ſudden, and unawares. As a ſyncope or ſwouning, as we ſaid before, ſtancheth blood by the retraction of it inward; by the ſame reaſon doth fear alſo. A great quantity, namely, two or three glaſſes muſt be caſt into the face divers times in a ſhort time.

Ordinarily they uſe to hinder the aſcent of the Blood with fomenting of the Neck with a cloth dipped in cold Vinegar and bound about the Neck, changed often before it turn warm.

Vinegar and Water held in the mouth, doth drive the blood down, and keeps the blood from falling into the Throat.

Alſo Vinegar put into the Ear next to the Noſtril bleeding, is good to cloſe the Vein.

A Bean, or piece of money bound to the root of the Noſe, between the Eyebrows, ſtoppeth the flux.

Alſo you muſt obſerve if the Veins or Arteries in the Forehead or Temples do ſwell, for then you muſt bind them down with Money, or a dry Bean ſlit in length, and this is a ſpecial Remedy. And for the better Compreſſion, you muſt lay a Pledget dipt in the white of an Eg beaten with Time, upon the Bean or Money.

The fume of Vinegar ſprinkled upon a hot Iron, taken into the Noſtrils, will cloſe the opened Veins.

As alſo Vinegar and Water often ſnuffed up.

Beſides thoſe things which repel, we muſt uſe things that cloſe and glutinate the Veins. For which end, many Remedies may be put into the Noſe.

Galen, lib. de paratu facilibus, cap. 13. uſed Frankinſence and Aloes poudered, with white of an Egg, and the hairs of an Hare, upon lint.

Or you may make a Tent thus:

Take of *Frankinſence, Aloes, Dragons blood, Bran, Cobwebs, and the hair of an Hare cut ſmal, of each half a dram, made up in a Tent with juyce of Plantane.*

The ſame Pouders may be blown into the Noſe. For which purpoſe alſo great Practitioners do commend the pouder of Eg ſhels burnt, and burnt Paper. But you muſt remember beſides the uſe of theſe pouders, at the ſame time to fill the mouth with cold Water leſt the Medicine get into the mouth.

The Cotton of an Ink-horn ſqueezed a little, and made into a tent, doth powerfully ſtop.

As alſo laid and bound to the Forehead.

If it yet continue, you muſt come to Eſcharoticks, which by burning the mouths of the Veins produce a Scab, and ſo ſtay the blood. But theſe muſt be uſed warily, for when the Eſchar falls off, they will bleed again.

Burnt Vitriol is the beſt, which beſides its Eſcharotick quality, is good to ſtanch blood.

If you will make it gentle, you muſt mix other Medicines thus:

Take

Take of *Galls half a pound*: *Allum a quarter of a pound*: *Calcine them, and blow the pouder into the Noſe.* Or,

Take of *Bole-Armenick, Dragons blood, Frankinſence, Aloes, Time, burnt Vitriol, Sarcocol, and Maſtich, of each one dram*: *Make a fine Pouder.*

White Vitriol is more gentle than burnt Vitriol, and is not very Eſcharotick: yet it ſtaies bleeding very powerfully by aſtringing the Orifice of the Veins, if it be put into the Noſe with a Tent.

You may make Remedies to ſtop blood, by reſtraining its motion by cooling, thickning, and coagulating, thus:

Take of *Sal Prunellæ one dram*: *Troches of Amber half a dram*: *Blood-ſtone and red Coral prepared, of each one ſcruple*: *the Syrup of dried Roſes one ounce*: *Plantane Water three ounces. Make a Julep to be taken twice or thrice in a day.*

Take of *Conſerve of Roſes and Quinces, of each one ounce*: *the Troches of Spodium, or burnt Ivory, and Terra Sigillata, of each one dram*: *Coral prepared, and burnt Harts-horn, of each one ſcruple. Make an Opiate, of which let him take the quantity of a Cheſnut twice or thrice in a day.*

Vinegar and Water called Oxycrate, drunk plentifully ſtaies an Hemorrhagy.

Outwardly to cool the blood, and to hinder its motion, you muſt apply cold Water, or Water and Vinegar to divers parts, powring it upon the Arms, and putting the feet therein, and applying to the Cods, as alſo to the back, becauſe the *Vena Cava* runs that way, and ſo the blood will be cooled when it is exceeding hot, when the aforeſaid Medicines cannot remedy, ſome wet the whol Body with Vinegar and Water, or put him into cold Water, which is not without danger, when the Patient is weak.

It is excellent to temper the heat of the blood, to lay Epithems to the Liver and Spleen made of warm Vinegar and Water.

Finally, In the moſt deſperate Caſe, when no Medicines will prevail, you muſt uſe Narcoticks, or Stupefactives, which preſently ſtop all fluxes and evacuations and motion of Humors; and among the reſt three or four grains of Laudanum is the beſt. But take heed that you give it not to the Patient being very weak, for it is to be feared that the native heat being very little, will be thereby quite exſtinguiſhed. One ounce of the Syrup of Poppies given in an aſtringent Julep at night will do the ſame.

At length you muſt come to proper Remedies which by an occult ſecret quality ſtop bleeding. The moſt uſual and beſt are theſe:

The Juyce of Nettles is extolled for ſtrengthening any blood, of what part ſoever, and therefore it is both given inwardly to four ounces once or twice, as alſo inuſt into the Noſe, and applied to the Forehead and Temples made like a Cataplaſm with Bran, or the whol Nettle beaten. Some ſay that the Root held in the mouth will do the ſame.

Hogs Dung is one of the beſt Specifical Medicines, if it be applied hot to the Forehead and Temples, or ſmelt unto, or put dry into the Noſe, of which this is a form.

Take of *Hogs Dung dried three drams*: *the pouder of Roſes to take away the ſcent of it, half a dram. Mix them with juyce of Plantane, and dip a Tent therein to be thruſt into the Noſe.*

Aſſes Dung uſed thus is alſo commended. And *Rodericus a Caſtro lib. 1. de morbis mulierum, cap. 5.* ſaith that a Phyſitian of ſeventy yeers old given to violent bleeding, carried alwaies Aſſes Dung not quite dry in a box about him, than which he confeſſed he never knew a better Medicine; eſpecially if when it was dry he mixed it with the Juyce of a Nettle, or if wet he put it alone into his Noſe.

Zacutus Luſitanus, lib. ult. praxis Hiſtor. cap. 2. ſaith that he cured one of ſeventeen years of age that was weak and lean, after he had loſt ſeventeen ounces of blood and uſed many Medicines, only with this, He gave him the Dung of an Aſs very finely poudered in al his Drink and Broth, he made Tablets of the ſame with ſugar, and gave them with ſteeled water, by which means only the Patient recovered in ſeven daies ſpace.

The blood it ſelf which comes out of the Noſe, is not only vulgarly commended, but by the learned to ſtop an Hæmorrhagie by a ſpecifical quality; they fry it in a pan and give it the Patient to eat, he not knowing of it.

As alſo they Calcine it in a Potſheard, and mix it with the mentioned Aſtringents.

Others commend the Pouder of Snails burnt with their ſhels: and others put the Pouder of Frogs Calcined into the Noſe.

Pereda ſpeaks of an old Woman of *Mount pelior*, that ſhe was Cured of a Flux at the Noſe of three daies continuance, by only Mints put into the Noſe.

Among other Remedies this is excellent and uſual, The fine Pouder of Spicknard taken the quantity of a dram in Broth, Plantane-water, or other liquor, not only by a ſpecifical force, but alſo by ſtrengthning the Liver it ſtops bleeding.

Finkius

Pinkius witneſſeth that a dried Toad poudered and put in a fine red Sarcnet under the Armholes, or held in the hands til it grow warm, wil ſtanch blood preſently: And that the blood wil be immediately congealed as if it apprehended ſome terrible thing.

Others hang a Toad in the Air while al the fleſh is conſumed, and keep the bare thigh bone which they put into the Noſe, and then it ſtops bleeding preſently.

While you uſe the aforeſaid Remedies, you muſt think of the taking away of the Cauſe, which uſually is a thin watery Humor or Choller which abounds in the blood, and makes it move diſorderly, and provoketh Nature to throw it forth: whence it comes to paſs that when it is purged away and the blood cleanſed that then Nature embraceth blood moſt familiarly as its chief Friend and the treaſure of Life, and wil not labor to caſt it forth.

Therefore you muſt purge twice or thrice if need be with binding and cooling Medicines, thus made,

Take of *Tamarinds half an ounce*: *Plantane Leavs one handful*: *boyl them to four ounces, being ſtrained infuſe of the beſt Rhubarb one dram*: *yellow Myrabolans half a dram*: *Spicknard ſeven grains*: *ſtrain it and diſſolve therein one ounce of Syrup of Roſes, and ad one ſcruple of the Pouder of Rhubarb. Make a Potion.*

In an old Diſeaſe that Returneth often, ſuch a Purge repeated once every Week, is excellent.

And after every Evacuation, Aſtringent Juleps, or Opiates, that are above mentioned; you may make Juleps thus.

Take of *the Roots of Snakeweed, and the greater Comfrey, of each one ounce*: *Plantane, Knotgraß, Rupture-wort, & Fumitory, of each one handful*: *of the four great Cold ſeeds, of each one dram*: *boyl them to a pint, and diſſolve in the ſtrained Liquor of white Sugar, three ounces*: *Make a Julep for three mornings draughts.*

Inſtead of Juleps or Opiats, or after they have been uſed a while, you may give a Syrup made of the Juyce of Nettles, and an equal proportion of Sugar, two ſpoonfuls at a time every morning.

Nor is it ſufficient to take away the preſent Cauſe of the Hemorrhagy, namely, To Evacuate the Peccant Humor, but you muſt ſee that it return not again.

The Bowels are to be ſtrengthened, and their Diſtempers amended; eſpecially the Liver in which thoſe Humors uſe to breed.

And the Juleps formerly preſcribed wil do this, as alſo the Tincture of Roſes to Cool the Liver and ſtrengthen it, is very good.

Outwardly you may apply Epithems made thus,

Take of *the Water of Roſes, Plantane, Purſlain, Sorrel, and Succory, of each four ounces*: *the ſeeds of Purſlain, Sorrel, and Succory, of each one dram*: *the Troches of Camphire, and yellow Saunders, of each two drams*: *Vinegar, two ounces*: *Make an Epithem.*

To theſe you may ad al the Remedies which are preſcribed for the Cure of a Hot Liver.

Sometimes the Hot Diſtemper of the Spleen and Reins is the Cauſe of this Diſeaſe; and then you muſt apply Cooling Medicines to thoſe parts alſo.

To theſe muſt joyn a good order of Diet, which from the beginning of the Cure muſt be diligently obſerved.

And therefore, firſt the Air where the Patient is, muſt be Cool: and if it be Summer time let it be altered, by ſprinkling the floor with Vinegar and Roſe-water, and ſtrowing of the Leavs of the Vine, Willow, or Water-Lillies, or the like.

Let his Meat be thickning of little nouriſhment, as Calves-feet, Sheep and Goats-feet, and the like: Rice, new fat Cheeſe, hard Eggs, and the like.

Let him eat Fruits that are ſomwhat ſharp, binding, and bitter; as Pears, Quinces, Medlars, Services, and Sawces of the Juyce of Pomegranats, Lemmons, Orenges, Sorrel; ſome commend the uſe of Lentils or Peaſe boyled in Vinegar, becauſe they have vertue to thicken, aſtring, and allay the Acrimony of the blood.

Let the Patient abſtain, eſpecially in the beginning of the Diſeaſe while his ſtrength is good, from Wine, Fleſh, and Rear Eggs, which breed much and thin Blood: you muſt give him Moiſt Meats and Suppings in the time of his bleeding: As cooling Broths made of Barley, Oates, and Rice, with Water, for chewing doth provoke bleeding, if he be weak you may give him Fleſh-broth and Panadoes, in which there is Starch diſſolved, which is made without Chalk or Gum Arabick.

Let his Drink be ſteeled Water, and let al his Meat be boyled in the ſame, which wil be of more force if Nettle Roots be firſt boyled therein.

Command him to reſt, ſo that he neither Walk, nor Cough, nor Speak loud or at al, for the motion of the Tongue and Jawes provoke bleeding.

Let his Head be covered, and let him not ſee the blood, for thereby the imagination being moved, he wil bleed faſter.

Let him ſleep, for long Watchings make the blood more ſharp, Chollerick, and thin: but ſleep doth contemperate the Humors, and reſtrain the motions thereof.

Laſtly, Let him avoid the Paſſions of the mind, which cauſe the blood to aſcend, as Anger, Laughing, and Joy.

The End of the Fourth Book.

THE

THE FIFTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Tongue.

The PREFACE.

THE Tongue is the Inſtrument both of Speech and Taſting: But both theſe Actions are hindered by divers tumors which grow thereabout: And eſpecially every Action is diminiſhed, aboliſhed, or depraved by its peculiar Cauſe. That all theſe may be ſeverally deſcribed, this fifth Book hath four Chapters: Of which, The firſt is of Inflamation, and other Tumors of the Tongue. The Second is of the Ranula *under the Tongue; which though it belong to the kinds of Tumors, yet it is handled by it ſelf, becauſe it requires a different Cure from all the reſt. The Third is of the Taſte hurt. The Fourth of the Palſey of the Tongue, and other hinderances of its Motions.*

Chap. 1. *Of the Inflamation of the Tongue, and other Tumors of the ſame.*

AS all the Parts of the Body, and eſpecially the fleſhy parts, uſe to be inflamed; ſo alſo the Tongue by blood flowing unto it; which blood as it is either pure, chollerick, flegmatick, or Melancholick, produceth either a true Phlegmon, or a Phlegmon eriſipelous, œdematous, or ſchirrous, which ſometimes comes to ſuppuration: of which there is an Example in *Foreſtus*, *Obſ.* 24. *Lib.* 14. of a Brewer which had a great Inflamation of his Tongue that brake, which came to ſuppuration.

Alſo the Tongue often ſuffers a ſoft and looſe Tumor, which is purely œdematous, by the falling of Rhewm from the Head; of which *Galen* propounds an Example, *Lib.* 14. *meth. cap.* 8. in a certain man whoſe Tongue was ſo ſwoln, that he could not contain it in his mouth.

Sometimes the Tongue grows very great, which cannot be accounted any kind of Tumor; as *Galen* teacheth, *lib. de diff. morb. cap.* 9. that he ſaw a Tongue which grew exceeding great without any

 ſence

ſence of pain, neither would it pit or yield to the finger, but it was a bare increaſe of quantity in the Tongue, and the ſubſtance was no way hurt, which came by too much nouriſhment brought and converted into the ſubſtance of it.

And *Claudinus*, Conſult. 9. gives an Example of this in a maid of twelve yeers old, whoſe Tongue grew to a great bigneſs, and the Tumor could neither be called an Oedema, nor a Schyrrus, becauſe it was without pain; neither would it yield to the hand preſſing of it, nor take an impreſſion or pit, nor was it without Natural ſence.

The Original of it was a forceable breach of the bridle of the Tongue, by the pain whereof blood was attracted to the part; which being ſent thither continually cauſed this largeneſs. But in this caſe *Claudinus* obſerveth that it is bigger at night, and leſs in the morning, and alwaies livid, or blewiſh: The reaſon whereof he ſaith is, becauſe in the Concoction and aſſimulation of the blood, (which is flegmy otherwiſe, ſuch as is bred in children by reaſon of their moiſt Nature and intemperance) many vapors are raiſed, eſpecially at night, when the heat is drawn in and contracted, by which the Tumor is enlarged: but in the day they are diſcuſſed by the motion and heat of the Tongue, by which means it becomes leſs.

The reaſon of the blewneſs is the Air, to which it alwaies is open; for by the coldneſs of the Air, the blood which cometh to the ſuperficies of the Tongue, before it comes to be like in the ſubſtance, doth encreaſe ſomwhat, and ſo turns livid. For *Galen* ſaith that blood waxeth black with cold, 3. *de ſymp. cauſ. cap.* 2. which yet is not ſo in other parts, becauſe there is no ſuperfluity ſent to them, but as much as is ſufficient for nouriſhment.

The knowledg of theſe Tumors is not difficult, becauſe the preternatural greatneſs of them is viſible.

But the differences of theſe Tumors are theſe: If there be an Inflamation, then there is pain, heat, and redneſs alſo in the Tongue, wherewith alſo the face is ſomwhat infected: But if the Tumor come originally from flegm, the Tongue is white, and there is much ſpittle whoſe taſt is ſweet or without taſt. If there be only a bare encreaſe in the Tongue, there are no ſigns of other Tumors and Vitrous humors.

As to the Prognoſtick: Tumors in the Tongue for the moſt part do not endanger the life unleſs they grow ſo big that they cauſe ſuffocation, or come from a malignant melancholick humor; from whence they may prove Cancers, which is known by their hardneſs, blewneſs, and pricking pain.

You muſt begin the Cure of the Inflamation of the Tongue with Revulſive and Repelling Remedies; and therefore firſt, after you have given a laxative Clyſter, open a Vein, and take away as much blood as the Patients ſtrength will permit.

Then apply Cupping-glaſſes with ſcarrification to the Shoulders.

After that uſe cooling and repelling Gargariſms, and among the reſt the Juyce of Lettice, is commended of *Galen* to waſh the Tongue with often, *Meth.* 14. *Cap.* 8.

Or you may make one more compounded of the Decoction of Plantane, Nightſhade, Peaſe husked, and Pomegranate peels, adding ſom Syrup of dried Roſes, or *Diamoron*, that is, Syrup of Mulberries.

After bleeding, appoint a Purge made of things to purge Choller and Flegm, becauſe flegm from the Head doth peculiarly concurr to the production of theſe Tumors.

After the flux is ſtopped, you muſt labor to derive the humor fixed to the part by Evacuations, Revulſions, and Repercuſſives; and to this end open the Vein under the Tongue, which if you cannot reach by reaſon of the largeneſs of the Tongue, you muſt apply a Cupping-glaſs with Scarrification under the Chin.

If it tend to ſuppuration, it muſt be furthered with a fig ſlit in the midſt, often applied, or with a Gargariſm of the Decoction of Barley, Mallows, Violets, Figs, Raiſons, Quince ſeeds, and Fœnugreek ſeeds, with a little Syrup of Violets and Jujubes.

Suppuration being made, if the Impoſthume will not open of it ſelf, make inciſion: then cleanſe it with the decoction of Barley, Agrimony, and Plantane, with Honey of Roſes.

But a ſoft and lax humor coming of flegm, is cured firſt by a Revulſion with Phlebotomy, if the Patient abound in Blood: then give him a ſtrong Purge, ſuch as *Pilulæ Cochiæ minores*, made of Aloes, Scammony, and Coloquintida, which were happily uſed by *Galen* to one of ſixty yeers, 14. *Meth.* above mentioned. But if he cannot ſwallow Pills, make him a Medicine of Senna, Agarick, Diaphœnicon, and the like.

After theſe Evacuations you muſt firſt apply cooling and repelling Medicines, as we ſhewed in inflamation. And *Galen* in the place quoted, cured a Patient of ſixty yeers, only by waſhing with the Juyce of Lettice after Purging.

Moreover, You may with good ſucceſs waſh the mouth with Juyce of Lemmons, Pomegranates, Sorrel, and Plantane, becauſe they do not only repel with their coldneſs, but alſo with their ſharp-

neſs

neſs draw forth the moiſture that is faſtened in the Tongue.

Alſo the Tongue may be embrochated with Oxymel ſimple, unto which you may ad a little Ginger, Sal. gem. or Sal. armoniack.

You may alſo wath the Mouth with the Decoction of Origan, and Pellitory, with Hydromel, or Honey and Water.

Zacutus Lucitanus, *lib.* 1. in his Hiſtory of the chief Phyſitians, Obſ. 47. in a deſperate caſe, when the Tongue grew to a wonderful bigneſs, ſo that he feared ſuffocation, after emptying and revelling Medicines uſed in vain, applyed four Horſ-leeches to the Tongue, and in a ſhort time, after plentiful bleeding, it became thin and ſmal, and the Patient eſcaped.

The ſame *Zacutus*, Obſ. 48. of the ſame Book, ſaies that he cured a child of ten yeers old, who had a Tongue ſwollen by a deſluxion, ſo big that it could not be contained in his mouth (after Revulſions by bleeding, Cupping-glaſſes with ſcarrification, and ſharp Clyſters) becauſe the Tumor was ſoft and loos, only by profound ſcarrification of the Tongue, and after he commanded that it ſhould be waſhed with ſalt Water, from whence there came ſuch abundance of humors that the child preſently recovered. Which Obſervation he took from *Joachim Camerarius*, who ſaith in his Book of Obſervations, that one who was almoſt ſuffocated with a ſwollen Tongue, cured himſelf by cutting it a croſs with a ſharp Pen-knife, after he had loſt much blood.

Finally, A fleſhy Tumor of the Tongue, or the over-growing of the Tongue, coming of the ſuperfluous fleſh, although it ſeem to be uncurable; yet it is ſhewed by *Claudinus* by Chyrurgery to be done, in the place cited; namely, If whatſoever be ſuperfluous be taken away with an inciſion Knife, firſt giving fit preparations, all which are deſcribed by him in the ſame Place.

Chap. 2. *Of the Tumor called* Ranula *under the Tongue.*

ALthough in the former Chapter divers Tumors of the Tongue are laid down by us, yet there remaineth one called *Batrachos* in Greek, in Latin *Ranula*; for ſince it differs from the reſt in Nature, and requires a different way of Cure, we thought it beſt to deſcribe it in its proper Chapter.

Ranula is a Tumor under the Tongue in that part by which it is bound to the Ligament; and for the moſt part it is ſo large that it is above the lower Teeth; a cleft being in the middle dividing the right ſide of it from the left, it repreſenteth the hinder parts of a Frog, from whence it is called *Ranula*, a little Frog. Others ſay it is called ſo, becauſe they who have it, have an impediment in their Speech, and croak like Frogs, when they ſpeak. It is like the Tumor Oedima, or Meliceris, from which when it is opened, there comes as it were the white of an Egg, or matter like Honey. And becauſe the ſaid matter is contained in a bag, therefore it is accounted a Meliceris. In theſe bags ſometimes is found a ſtone as many obſerve, which *Schenkius* alſo obſerveth, Obſ. 388. Lib. 10.

The knowledg of this Diſeaſe is not difficult, for when the Tongue is lifted up, there is ſeen a certain looſe and ſoft carnoſity, and on both ſides of the Ligament there is a certain round ſwelling like a Peaſe, Bean, or Chenut.

This Diſeaſe is commonly without danger: But in Children ſometimes it threatneth ſuffocation by Reaſon of the neerneſs of the Larynx to the rough Artery. In men if they have pain and a Feaver there is danger, for it may turn to Squinancy. Alſo that Ranula is dangerous which is black or dusky and hard, and inclining to the Nature of a Cancer, and this muſt not be touched.

For the Cure of this Diſeaſe, firſt you muſt take away the antecedent cauſe by blood-letting, and with purging agreeable to the age and nature of the Patient.

And if the Diſeaſe be old you muſt uſe Cauteries and ſweating Drinks.

Then you muſt endeavor to diſſolve the Tumor with Topicks, thus:

Take of *Pomegranate peels, dried Hyſop, and common Salt, of each two drams: Make a Pouder thereof to hold under the Tongue, and uſe it often.*

Foreſtus ſpeaks of a Girl of twelve yeers of age, that was cured in two daies ſpace with this only Medicine; whoſe Author is *Nicolaus Florentinus*, who inſtead of common Salt, uſeth *Sal. armoniack* to men, becauſe it pierceth more, and diſſolveth better. And *Foreſtus* uſed the ſaid Pouder to a Student made with common Salt: as alſo a Decoction made of equal parts of Gals, Allum, and Pomegranate flowers: And laſtly, he commanded the part to be rubbed with parched Salt, and *Sal. gem.* and the Patient was cured without manual Operation, which is ſeldom ſeen, becauſe thoſe Tumors are of the Nature of Impoſthumes, and are contained in a little bag, ſo that when the matter hath been diſcuſſed, they have been filled again.

If this Tumor cannot be cured with diſcuſſing Remedies, you muſt open it, which muſt be often done, for it will not often be diſcuſſed.

You

You must not make a smal Orifice when you open it, because the matter contained in the Bagg, wil be again gathered and the bagg filled (unto which the part being loose and soft, is very much disposed) but you must make a very long Incision through the height of the Tumor in both sides that the whol matter may be discharged at once: then you must wash the Ulcer, first with gentle things, as the Decoction of Mallows: and then with Cleansers, as white Wine and Honey of Roses, or Diamoron, and after with Oxymel till it be clean and free from the Bagg: And finally, to heal it up, wash the mouth with red Wine in which Allum is dissolved.

Forestus Cured the like in a Woman by an Incision made on both sides, and after by washing with Wine and Water mixed with a little Salt.

If the Disease be old, and the Ulcer wil not be cured by the aforesaid Remedy, let it be touched with Oyl of Sulphur twice every day, mixed with Rose-water, one drop of Oyl to six of Water; for so the Distemper wil be corrected, and the part dryed, which must be often washed for confirmation, with Red Wine with Allum dissolved in it.

If after the use of these the Disease return, you must come to an actual Cautery, the manner whereof is taught by *Paræus, lib. 7. cap. 5.*

Chap. 3. *Of the Taste being Hurt.*

THE Taste as other Sences, and al actions of the Body, is hurt Three waies, by being Diminished, Abolished, Depraved; it is lessened when it scarce perceiveth remiss savors and strong savors but a little: It is Abolished when it no waies perceiveth those savors whether they be great or little: It is Depraved when the object seems to be of another taste.

The Causes of Diminishing and Abolishing the taste are the same, only they differ in degrees; for if they be light and weak, they Diminish; if great, they Abolish the taste.

And these Causes are either a Defect of the Animal Spirit in the part, or a Distemper of the Third pair of Nerves which come to the Tongue; or the Tongue it self is Preternaturally affected.

The Spirits fail, either by reason of their scarcity, as in dying men; or of the obstruction of the Nerves of the Third Conjugation by which they are carried: or by reason of a Tumor bred in that part of the Head from whence those Nerves do arise.

The Tongue is either covered with a moist slimy matter, or hath Tumors, Pustuls, or Ulcers, and by these the proper action of taste may be diminished or abolished.

The Taste is Depraved when the Tongue is infected with an evil Humor, as in Feavers, when the Tongue is infected with Choller, al things tasted are thought bitter: otherwise if it be with salt flegm or melancholly al things appear to be salt or sowr, for the outward objects being brought to the Tongue do move the vitious juyce of it, which at that time striking upon the tongue most leaveth its savor thereon, and so those things which are tasted, seem to be of the same taste.

It happeneth also sometimes that the Tongue perceiveth the savors of the juyces contained in its self, although no external Object be applied, as *Galen* teacheth, *1. de sympt. caus. cap. 4.* And it is confirmed by daily Experience in men in Feavers, whose tongue is covered with Choller; which if it be very bitter, they find a continual bitterness on the Tongue though they take nothing into their mouths.

The Diversity of the Causes aforesaid is known by the variety of the tasts and disposition of the Tongue; for a sweet taste and redness of the Tongue signifieth blood: bitterness and yellowness Choller: whiteness with sweetness Flegm: blackness and sharpness Melancholly: a Nauseous taste sheweth that evil Humors are contained in the stomach: Pustuls, Tumors, and Ulcers are manifest to the Eies. And Lastly, If the taste be hurt, and there appear no change in the Tongue, you must suppose that the Cause lieth in the Brain or Nerves.

The Cure is various according to the diversity of Causes; and therefore if the Disease lie in the Brain or Nerves, you must apply Remedies thereto, especially such as use to be prescribed for the Cure of the Palzey: but when the taste is depraved by ill Humors, commonly that Symptom depends upon other Diseases, especially upon Feavers, which being Cured the Symptoms also are removed.

If the Taste be offended by Tumors, the Cure thereof depends upon the Cure of the Tumors above mentioned.

Finally, If it come from Pustles or Ulcers of the Tongue, you must Cure them by blood letting and Purging of sharp Humors; to which you may ad Cooling, Drying, and Binding Topicks in form of a Gargarism: And if foul Ulcers be found, let them be cleansed with Honey of Roses, with a little Oyl of Sulphur or Vitriol, in such a quantity as may gently touch upon the Tongue.

Or,

Or, if you wil Dry more violently, Let the part Affected be often touched with the aforesaid Oyls, pure and not mixed; for so the Aphthe or Thrush and al Ulcers of the Mouth and Tongue are quickly Cured.

Chap. 4. *Of the Palzey of the Tongue, and the Hurt Motion thereof.*

THE Chief Action of the Tongue, is Speech: and this is Abolished, Diminished, and Depraved by divers Causes, which are referred to Similary, Organick, or Common Diseases.

As for the Similary; A moist Distemper with Matter maketh the Tongue more soft and loose, so that it cannot freely exercise its motions.

Dryness doth too much foul the Tongue, as in Feavers.

But Organical, or Diseases of the Instrument, are when the Tongue is enlarged, as we said before concerning Tumors, which hinder the free motion of it: also when the figure or shape of it is deformed, as when the Tongue is naturally too short, or by being partly cut off, or if it be tyed too strait; as also when the seventh pair of Nerves which come from the Brain to the Muscles which move the Tongue are stopped.

Lastly, Common Diseases are Solutions of Continuity or Wounds in the part.

Too much moisture maketh Balbuties, a kind of Stammering, which keepeth men from pronouncing of the Letter R.

And this is either natural as in Children by reason of their much moisture, who are Cured by age when the superfluous moisture is consumed.

But in some there is a moist distemper al their Life, and they are alwaies stammerers; of which *Hippocrates* speaketh *Aph.* 32. *Sect.* 6. thus, *Stammerers are most subject to long Fluxes of the Belly.* *Galen* in his Comments saith, *That they who naturally stammer, have either a moist Brain, or Tongue, or both.* From the moist Brain much moisture may fal into the belly, whence the Flux is caused. And when the tongue is naturally too moist, it is probable also that the belly wil be loose and weak through moistness: because the Stomach and the Tongue have both the same Tunicle: Now the proper passion of a moist belly is a loosness.

But *Avicen* seems to be against this Doctrine, saying, *Fen.* 1. *lib.* 3. *tract.* 4. *cap.* 18. That Stammerers are given much to Melancholly, and Melancholly cometh from a dry Brain: but this Contradiction is Reconciled, thus, *Avicen* meaneth by Stammerers, not such as are properly so called and cannot pronounce R, but such as Stutter, and repeat the same Syllable often before they speak a word; and this cometh from a hot and dry Distemper of the Brain; in which the thoughts are so quick that they out-run the tongue, and hasten its motion, whence comes that disturbance.

But the Stammering aforesaid coming from the Birth, is incurable.

In some an accidentary Stammering cometh by a Catarrh; and great Defluxion of Rhewm upon the Jaws and Tongue, which is cured by Evacuation, Revulsion, and Derivation of the Humors; as also by Strengthening and Drying the Brain: but because the Remedies are the same with those for the Palzey of the Tongue of which we shal now speak, they may be taken from thence.

Two pair of Nerves go to the Tongue: the Third pair to Exercise the act of Tasting and Sence: And the Seventh pair for Speech and diversity of Motion; by the Obstruction and Relaxation of the taste, cometh the Palzey of the Tongue, which is a Privation or Diminishing of the motion of the Part; and this useth to follow an Apoplexey when the hinder part of the brain is too moist, and then other parts of the body, and for the most part half the body hath the Palzey; sometimes it is only in the Tongue when the Nerves and moving Muscles are too moist: also by cutting of those Nerves there cometh a Palzey of which there is an example in *Avicen*, *Fen.* 6. *lib.* 3. *tract.* 1. *cap.* 12. in these words, *A certain man was Cupped and Scarified, and the smal hair like Nerve, was cut with Scarification, which it is the substance of the Pannicle joyned with the Tongue; wherefore the Tongue was relaxed.* We may suppose that these Cupping Glasses were applied to the Neck and hinder part of the head; for since the Nerves that move the Tongue, come from the beginning of the Spinal Marrow which is in the Neck: It is most certain that the Scarification was made so deep that some branch of them was divided.

But although the matter producing this Disease be Flegm, yet sometimes it is thicker and colder; sometimes thinner and hotter as the Humors which predominate in the Body; the knowledge whereof is from *Avicen*, *Fen.* 6. *lib.* 3. *tract.* 1. *cap.* 6. in these words, *And sometimes the redness of the Tongue and hotness shew that the matter is blood; and sometimes much watery spittle sheweth that*

the

the matter is thin, and when there is little benefit by Reſolving Medicines, and much by binding and aſtringent.

This Diſeaſe, if it come from the Brain, and follow an Apoplexy, ſo that other parts alſo are affected is ſeldom cured, eſpecially if the Patient be in yeers; but if it be ſingle, and in the part only it is to be cured, and the eaſier if the Patient be yong.

The Cure of the Palſey in the Tongue, is by taking away the antecedent Cauſe, that is the humor abounding in the Brain, and by diſcuſſing and diſſolving the conjunct cauſe, namely, the humor which is faſtened upon the Nerves that move the Tongue.

The antecedent cauſe will be taken away by the Medicines preſcribed in the Cure of the cold diſtemper of the Brain.

And firſt you muſt purge with Pills, or a Potion there mentioned. After if blood abound, and be either the Principal, or the aſſiſtant Cauſe of the Diſeaſe, take ſo much as age and ſtrength will permit, then adminiſter a Cephalick Apozeme, and if the Diſeaſe ſeem ſtubborn give a ſweating diet; all which are formerly preſcribed in the place mentioned.

After general Evacuations, come we to the Derivation of the matter, cauſing the Diſeaſe by Cupping and Veſicatories applied behind; as alſo by Cauteries. *Avicen* applied a Cupping-glaſs under the Chin, which is now alſo allowed.

Open the Vein under the Tongue, and it will profit, if before you have made general Evacuation to derive the Humor from the Muſcles of the Tongue.

For the diſcuſſing and drawing forth of this Humor, let the Gargariſm following be often uſed.

Take of *Flower deluce roots half an ounce: Origan, Sage, French Lavender, Roſemary, of each half a handful: Cubebs three drams: Liquoris one ounce: Boyl them in equal parts of white Wine and Water to a pint: Diſſolve in the ſtraining, Oxymel of Squils two ounces. Make a Gargariſm; to which if it work not ſtrong enough, you may ad two or three drams of the Decoction of Pellitory of Spain, or of Muſtard ſeed. You may alſo ad Caſtorium if it offend not the Patient with the ſcent.*

To this end you may often rub the Tongue with Oxymel of Squils alone, or mixed with Muſtard Seed.

A bag of Sage is much commended for to rub the Tongue with often, to which you may ad Muſtard ſeed alſo.

Alſo theſe following Pills ought to be held often upon the Tongue.

Take of *the Juyce of Bettony and Liquoris, of each one dram and an half: Caſtor and Aſſafœtida, of each half a dram: Nutmeg and Spicknard, of each one ſcruple: Incorporate them with Honey, and make them into the form of Lupines.*

Here alſo Gargariſms, Maſticatories, and Errhines, which are preſcribed in the Cure of the cold diſtemper of the Brain may be uſed.

Alſo for the ſtrengthening of the Brain, and diſperſing the reliques of the humors therein contained, Fumigations, and Pouders for the Hair, with Caps mentioned in the ſame Chapter are here to be uſed.

Laſtly, You muſt preſcribe the uſual Medicines againſt encreaſe of flegm, namely *Syrupus Magiſtralis*, or ordinary Pills, with a ſtrengthening Opiate, as is there declared.

The End of the Fifth Book.

THE

THE SIXTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Teeth, Gums, Jaws, Pallat, and Wind-pipe, or Larynx.

The PREFACE.

THE *Parts contained in the Mouth and Jaws ſuffers divers Diſeaſes, the Chief whereof we only deſire to lay down, and to omit thoſe that are ordinarily Cured by Chirurgeons: Therefore this Book ſhall contain Seven Chapters: Firſt, Of the Tooth-Ach: Secondly, Of the Blackneſs and Conſuming of the Teeth: Thirdly, Of the Eating away and Exulceration of the Gums: Fourthly, Of the Flux of Blood from the Gums: Fifthly, Of the Ulcers of the Mouth and Jaws: Sixthly, Of the Relaxation or Falling down of the Pallat: And, Seventhly, Of Angina, or Quinzy.*

Chap. 1. *Of the Tooth-Ach.*

GAlen in his Fifth Book of the Compoſition of Medicines, *cap.* 8. & 16. of the Uſe of Parts, *cap.* 2. ſaith, That the Teeth are not only ſenſible in reſpect of their Nerves at the Root, and Membrane which inwardly covers their Cavity, but alſo in their proper ſubſtance; and ſaith, That the Teeth and other parts of the Mouth do taſte, as alſo doth the tongue. And in his Book of Bones, *cap.* 5. he ſaith, Of Bones only the teeth are partakers of the tender Nerves of the Brain; and for that cauſe they alone do manifeſtly feel.

Therefore pain reacheth not only to the Nerves and inward Membrane, but alſo to the ſubſtance of the teeth.

The Tooth-Ach comes from a Flux of Humors, either Cold and Flegmy, or Hot and Watery, Salt and Sharp: hence comes the Diſtention or Convulſion of the parts: & theſe Humors either flow

to the Membranes of the Jaws, and of the holes wherein the Teeth are, or to the Nerve which is inserted in the root of the Teeth, or to the substance of the Teeth. Although some think that the Teeth cannot receive into their own substance afflux of humors and distention, because they are most hard and thick; yet this is taught by *Avicen, Fen.* 1. *Lib.* 1. *Doct.* 1. *Cap.* 5. and *Fen.* 7. *Lib.* 4. *Tract.* 1. *Cap.* 4. *And sometimes*, saith he, *there is matter which doth imposthumate the Tooth it self.* Which Opinion he confirmeth and treateth of chiefly, *Fen.* 1. *Lib.* 3. *Tract.* 3. *Cap.* 1. in these words: *It is not as some Physitians think, that the Brain it self wil not imposthumate, reasoning thus; That which is soft, as the brain, and hard, as a bone, is not extended, and that will not imposthumate which cannot be extended. But this is erronious, because that which is soft, if it be viscous or clammy, may be extended, and bones are imposthumated, as* Galen *teacheth, & we wil shew in our Chapter of the Teeth. Moreover, we say that whatsoever is nourished is extended and encreased with the nourishment, and it is likewise possible that it may be extended and augmented with its superfluity, and that is an imposthume.* This *Avicen* teacheth from the Doctrine of *Galen*, who *Lib.* 5. *de comp. med. sec. loc. cap.* 8. saith, *Because the Teeth cannot grow without nourishment, they are only obnoxious to these two Diseases following, namely, of want, and superfluity of nourishment: by want of nourishment they grow dryer and thinner, and by superfluity of it, there will be an inflamation about the fleshy parts.* Thus *Galen.* But it is probable that pain is more usual (if it be vehement) in those parts which have most exquisite sence, namely, the Nerve and the Membrane in the hole of the Tooth next to the root, which doth not only suffer distention and vellication, but also sometimes inflamation of the humors flowing down; for if blood be mixed with other humors, then the pain hath two causes, namely, Distention, and Compression, which comes from the hardness of the Tooth, which the Membrane being inflamed cannot endure: and this Inflamation of the Membrane is for the most part accompanied with the inflamation of the Gums; which also is reckoned by *Galen* and *Avicen* among the causes of the Tooth-ach.

Now the Humors commonly flow from the Head upon the Teeth and parts adjoyning, sometimes from the inferior parts; for when any bad humors, especially watery, bred in any part, are abounding in the Veins, Nature desiring to cast off her burden, sends them to the weakest parts. And if the Teeth by reason of the distemper, foulness, or erotion are such, the flux will chiefly come thither. *Charls Piso* propounds an Experiment of this (who also thinks the Tooth-ach comes chiefly from a serous humor) *lib. de morb. ab illuv. ser. obs.* 7. where he reports that himself being troubled with the Tooth-ach for many daies, half an hour after he had taken a purging Medicine, vomited up above a pint of cleer water with such success, that ten yeers after he was never troubled with it. By which Experience he alwaies prescribed Medicines that purge water to them who were so troubled, and with good success. Moreover, he striveth to prove that it comes from this cause, by this sign, Because they who have the Tooth-ach, do continually spet.

Besides the Causes mentioned, there are also Worms in rotten Teeth, and they breed of any matter which is contained and putrified in the Cavities, whether it be excrementitious, or come of putrifying meats, especially flesh and sweet meats, which by reason of their clamminess stick to the Cavities of the Teeth.

Others think that the Tooth-ach comes sometimes from wind contained between the Cavity and the Nerve, which doth violently stretch the inward Membrane, whence comes such intollerable pain.

The principal external causes of Tooth-ach, are all those things which cause defluxions; the chief are, Cold Air, South-winds, staying in the Sun, or night Air, Surfet, and all faults in Diet. Ad to these, things that debilitate the part, and make it more fit to receive a defluxion, as rottenness and hollowness in the Teeth, which sometimes make violent pains.

The diversity of Causes is known by divers signs. For pain when it comes from hot humors is stronger, the constitution hotter, the age yonger, if Summer, there is heat sensibly in the part, and inflamation of the Gums often times; it is better for the use of cold, and worse for hot things. But if it come from a cold humor, the signs contrary to these will appear.

If worms are the cause of pain, it will be intermitting, coming and going often, and sometimes the motion of the worm will be felt.

When it comes from Wind, it is known by the excess of pain, and sensible stretching, and it ends in short time, and is easily cured with discussing Medicines.

The Prognostick is divers, according to the variety of the Causes; for that pain which comes from a hot, thin, watery, sharp and salt humor, is more violent, but sooner at an end, by reason of the sudden change of the humor; but that which comes from a cold and flegmy humor, is less, and lasteth longer.

A Tumor rising in the Gums or Jaws, takes away the pain of the Teeth, for the flux is carried to the external parts, so that it no longer lieth in the Internal Cavity of the Tooth.

The Cure must be directed for the taking away the Cause, and mitigating the pain; for although

Anodines

Anodines profit but little except the defluxion be ſtayed, yet ſomtimes we are conſtrained not only to uſe them, but alſo Narcoticks or Stupefactives before we take away the Cauſe; therefore the humor flowing to the Teeth is to be revelled, evacuated, and repelled, and that which is there, is to be derived and diſcuſſed.

Firſt therefore, if the pain comes of hot humors, open a vein in the Arm on the ſame ſide, by which the humor flowing will be revelled. But if it come of cold, bleeding is not ſo good; but in regard of the defluxion it may be uſed, becauſe it is the chief reveller. But then you muſt take leſs blood, except there be a Plethory, in which regard, although it be from ſlegm, you may bleed freely according to *Galen*, who ſaid that a large evacuation of blood agreeable to the Plethory, is the beſt remedy for all pains, which we have found true by experience, not only in the paine of the teeth, but in other parts.

Let him purge the day following, with that which is proper for the humor; in the form of a Potion, if a hot, with Pills, if a cold humor be the cauſe of pain.

After this, if the pain continue, apply Cupping-glaſſes to the Shoulders with ſcarrification, or one great one between the ſhoulders without ſcarrification. A Veſicatory applied to the neck, or behind the Ears doth violently draw back the humors.

Alſo to hinder the defluxion, apply aſtringents to the Temples, as Emplaiſter of Gum Elemi, or Maſtich only, upon a piece of Silk, and heat with a braſs peſtle, the Shop Emplaiſter of Maſtich, or that againſt Ruptures called *ad herniam*. Or this following is good.

Take of *Frankinſence, Hypociſtis, Labdanum, of each one dram and an half: Pitch and Maſtich, of each one dram: Opium half a ſcruple: Oyl of Maſtich as much as is ſufficient: Make a Maſs of Emplaiſter.*

The Root of Comfry freſh and bruiſed, applied to the Temples doth intercept the defluxion very well.

There is alſo a good Plaiſter made of pouder of Allum, and Galls mixed with Pitch.

Riverius the chief Phyſitian to *Henry* the Great, had this Plaiſter as a Secret:

Take of *Cyprus nuts, red Roſes, Muſtard ſeed torrefied or parched, Maſtich and Terra Sigillata, of each one dram and an half. Let them be ſteeped in Vinegar of Roſes twenty four hours; then dry them: Opium diſſolved in Aqua vitæ three drams: Pitch and Colophonia, of each one dram: yellow Wax melted in the expreſſed Oyls, Henbane and white Poppy as much as is ſufficient: Make an Emplaiſter; apply it to the Arteries, and the part affected with pain.*

And becauſe the ſmal Veins by which nouriſhment is carried to the Teeth do run by the Ears, you put Medicines into them for the Cure of the Tooth-ach; as Oyl of bitter Almonds to the Ear on the ſame ſide, or the fume of Vinegar, in which Penyroyal and Origan have been boyled.

Others put Vinegar into the Ear, by which the defluxion is mightily ſtayed, eſpecially if the flux be hot.

But in a cold defluxion, the Juyce of Garlick mixt with Treacle and dropt warm into the Ear, doth wonderfully aſſwage the pain of the Teeth. A Clove alſo of Garlick peeld and put into the Ear, is good.

Alſo aſtringents in the beginning of the defluxion, may be applied to the part pained, cold, if the matter be hot, but if it be cold, you muſt put hot things with your repellers: But in every cauſe, if the pain be great, you muſt mix Anodines with Repellers. As,

Take of *the Roots of Snakeweed, Five-leaved-graſs, and Tormentil, of each one ounce: the Leaves of Vervain, Plantane, and Maudlin, of each one handful: Cypreſs Nuts, Galls, and Acorn Cups, of each two drams: red Sanders, and Cryſtal, of each one dram and an half: red Roſes and Pomegranate Flowers, of each one pugil: boyl them in red Wine and Vinegar, and waſh the part grieved often therewith warm.*

This may be uſed in the beginning of a hot defluxion, but in a cold ad Cypreſs Roots, Box Bark, Ivy Leaves, and the like.

A plainer Medicine is made of Plantane and Roſe Water, with as much Vinegar like an Oxycrate.

Or boyl Galls in Vinegar, and waſh the Teeth therewith. Or,

Take of *the Roots of Cinkfoyl half an ounce: Willow Leaves half a handful: Galls two drams: boyl them in red Wine, and waſh the mouth. This ſtaies the defluxion, and takes away pain.*

Then you muſt uſe theſe Remedies, which aſſwage pain, and take away the cauſe, of which there is in Authors, and vulgarly a multitude: we will give you the beſt; of which you muſt make your choyce with this judgment, That thoſe which do not only diſſolve and diſcuſs, but alſo aſtringe and ſtop the flux, be uſed in the beginning and the encreaſe of the pain, but things that only diſcuſs in the ſtate and declination.

Take of *the Juyce of Houſleek and Nightſhade of each two ounces: Cow or Sheeps milk eight ounces: Oyl of unripe Roſes one ounce and an half: Opium and Saffron of each three grains:*

mix them and apply it warm with a cloth to the Jaw of the ſame ſide often.

Take *the Papp of ſweet Apples two ounces: Bran ſteept in Vinegar three ounces: Oyl of Roſes one ounce: Saffron half a ſcruple: Opium two grains: mix them for a Cataplaſm to the part pained.* Or,

Take of *Barley and Bean meal of each three ounces: Oyl of Roſes and ſweet Almonds of each half an ounce: the juyce of Houſleek one ounce and an half: Milk as much as is ſufficient; make a Cataplaſm to be applied often warm to the part.* Or,

Take *two whites of Eggs, beat them with Roſe Water, and dip ſtuphs therein ſprinkled with two drams of Pepper Poudered: Apply them to the pained ſide over the whol Cheek.*

But here obſerve, That you apply not Aſtringents to the Jaws if they be ſwoln, for it is to be feared, That the Humor wil ſo be Repelled to the Throat, and the Patient Choaked: An Example of which *Valeſius de Taranta* giveth, of a Phyſitian troubled with the Tooth-Ach and Inflamation of the Jaws, who applied only Oyl of Roſes with Vinegar, which brought him to a Squinzy and he died.

Other Waters may be made to waſh the mouth: Thus.

Take of *the beſt white Wine four ounces: white Henbane Roots two drams: let them boyl to the Conſumption of the third part: ſtrain them, and ad one ounce of Vinegar: Varniſh one dram: let them boyl a heat, and let the Mouth be waſhed often therewith.*

The plain Decoction of Vervain is Commended of many for the ſame.

Alſo a Decoction of Guaiacum made with Wine, or Water, and a little ſalt. Or,

Take of *Arſmart, and the barks of the Roots of Henbane, of each equal parts, boyl them in Roſe Vinegar, and waſh the mouth.*

And if the pain cometh from a Hot Cauſe, only boyl a Henbane Root in Vinegar.

If the Arſmart be too ſharp, take a leſs quantity: Nay, you may leave it quite out in a Defluxion coming of a Hot Cauſe, and put Perſicaria Macutata inſtead of it, which is Aſtringent and Cooling, and his juyce may be given ſafely at the Mouth in al Defluxions that are ſharp and Chollerick: Alſo you may uſe the Leaves of Henbane inſtead of the Root.

Some uſe the Leaves of Henbane and Perſicaria Maculata as a ſecret Magnetick Charm, they boyl them in Vinegar, they burn the Leaves being boyled with a gentle fire, and waſh their Teeth with the Vinegar, and they ſay that as ſoon as the Leaves are burnt the pain wil be gone: But I rather think it is Cured by the Vinegar with which the Teeth are waſhed.

In the aforeſaid Decoctions if the Vinegar be ſo ſharp that the Patient can ſcarcely endure it, you may mix half Wine; and in a Cold Cauſe make them of Wine only.

Amatus Luſitanus, Commends Exceedingly Sandarach boyled in Vinegar and Wine, Thus.

Take of *Sandarak one ounce: Wine and Vinegar of each half a Pint: boyl them and let the ſtrained liquor be held a long time in the mouth.*

The Decoction of the Roots of the great Nettle, with a little Nutmeg and Saffron made in equal parts of Wine and Vinegar, and held warm in the Mouth, doth wonderfully draw the Humors forth.

But at the firſt, the pain wil ſeem to encreaſe; but afterward, it wil be mitigated, and ceaſe.

The Root of the ſharp Dock gathered in the Spring before it groweth forth and dried, applied to the Tooth pained, doth appeaſe the pain by a ſpecifical propriety: which is confirmed by the experiment of *Foreſtus*, in *Obſ. 6. lib. 4.* where he ſaith, That he applied this Root green, and cut in ſmal pieces to the Tooth of a Maid with good ſucceſs; and that he Cured many other therewith after he had given them univerſal Medicines.

If the body be wel purged, and the head be not very ful of flegm, Maſticatories to draw the Humors from the part affected wil do very wel: which are made either of Pelitory of Spain a long time held in the mouth and chewed, or as followeth.

Take of *Maſtich, Pelitory of Spain, and Staphiſagre, of each one dram: the ſeeds of Henbane half a dram: Pouder them, and mix them together, and make little balls thereof in a thin linnen Rag, which let him long chew, to make him ſpet.*

Commonly the Oyl of Cloves is uſed in a little lint to ſtop the Tooth if it be hollow, or otherwiſe, for ſo the humor adhering to the part is drawn forth and the part ſtrengthened.

Oyl of Camphire is very profitable for the ſame purpoſe.

Or Diſſolve eight grains of Camphire in one dram of the Oyl of Cloves; and uſe it as above.

But

But above al the reſt the Oyl of Box is extolled, which being but once dropt into the Tooth preſently ſtaies the pain.

This Oyl is made of Box cut in ſmal pieces, and then Diſtilled by deſcent, in two Veſſels, the one put into the earth, the other above, upon which you muſt make a ſtrong fire, and ſo the Oyl wil fal into the lower veſſel.

Beſides the aforeſaid Oyls, the Chymiſts commend the Oyl of the Hazel Nut uſed in the ſame manner.

If the pain be ſo great that it wil not away with the aforeſaid Medicines, you muſt come to Narcoticks, which are let down by Practitioners under divers forms; although their effect is as uncertain as others: but they do ſurely ſtupifie the Pain: Among the reſt Laudanum is chief, which doth not only appeaſe the pain, but alſo ſtop the Flux; and it may be given ſafely after univerſal Remedies to the quantity of three or four grains, if it be wel prepared.

Many Topicks made of Narcoticks are carried about; Theſe Two following are the beſt.

Take of *Opium, Myrrh, and Labdanum, of each one dram: Pouder them, and with white Wine boyl them into a Liniment, which put with lint into the Tooth.*

The Other is the Emplaiſter of *Riverius*, Chief Phyſitian to *Henry* the Great above mentioned.

If Worms be in the Teeth you muſt kil them with bitter things: And this following is good for that.

Take of *Aloes one dram: Camphire half a ſcruple: Aqua Vitæ half a dram: mix them and apply thereof with lint to the Tooth.*

It is to be obſerved, That the Teeth do ſeldom ake except they be hollow to the Nerve; therefore to take away the ſence of pain burn the Nerve with an actual Cautery, or with Aqua Fortis, or Oyl of Vitriol, which often done to a very hollow Tooth, it wil be broken in pieces, and ſo drawn forth.

If the Pain ſtil continueth, and the Tooth be very hollow, you muſt draw it out, and then the pain wil preſently ceaſe and never return.

But you muſt take heed that you draw not the Tooth when the Defluxion falls violently, or when the Head aketh, or the Gums twel, or when there is great pain.

And the Chirurgion is to be Admoniſhed, That he pul it not out violently at one pul leſt the brain be too much ſhaken, and the Jaw bone broken; from whence comes a great Flux of blood, a Feaver, and ſometimes death.

After it is Drawn, cloſe the part with your fingers, then let the mouth be waſhed with warm Oxycrate; and let him take heed of Cold Air, leſt a new Defluxion fal upon the other Teeth.

But if the blood flow ſo faſt that it wil ſcarce be ſtanched (which ſometimes happeneth by the breach of the Vein and Artery, without the breach of the Jaw: And *Varaiola* reports of one that had his Tooth pulled out without iron or force but with the fingers, and yet bled a pint at one time, and as much the next day from the Artery under the Gum) This Flux of blood is ſtopt by laying a hard peice of lint like a ball, and holding it down for one hour or two with the fingers: If that wil not prevail, apply burnt Vitriol, and lay a Ragg upon it dipt in Vinegar, and compreſs it with your finger til you make an eſchar. The laſt Remedy is an actual Cautery by which the blood wil preſently be ſtopped.

If any fearful people refuſe burning and require other means, you muſt try thoſe which Authors preſcribe; As Paſte made of the milk of Spurge, and the pouder of Frankincenſe mixed with a little Starch, the Root of Crowfoot, the Bark of the Mulbery Root, the pouder of Earth-worms, Pellitory of Spain ſteept in Vinegar, and the Root of Wild Cowcumber ſo ſteept, and the like. But the Leaf of Elleboraſter rub'd upon the Tooth is beſt; but you muſt not touch the other leſt they alſo fal out.

A Country man troubled with the Tooth-ach, was perſwaded by another to rubb his Tooth with Elleboraſter; he unwittingly rubb'd al the Teeth on that ſide, and preſently almoſt al his Teeth fel out: Therefore if any wil try this Medicine, I adviſe them to defend the other Teeth with ſoft Wax.

Although when there is a Tumor in the Jaws, the pain for the moſt part ceaſeth; becauſe the matter is carried outwards: Yet for the quick Diſſolving of it, uſe this Liniment.

Take of *Freſh Butter, and Hens Greaſe, of each one ounce: the Pouder of Flower-de-luce-Root, one dram: Saffron half a ſcruple: Oyl of Chamomel and ſweet Almonds, of each half an ounce: make a Liniment.*

A Cataplaſm made of Figgs, Bread and Vinegar, is better.

A Nettle bruiſed, and laid to the Jaw, doth quickly aſſwage the pain.

This

This is the Cure of the Tooth-ach for the present. But if it return often, as is usual, you must use prevention, which is to hinder the breeding of those humors that flow thither; and let the Teeth be strengthened that they may be less capable to receive them. Therefore if it proceed from a hot cause, you must use such Medicines as were prescribed in the Cure of a hot distemper of the Liver and a hot Catarrh. If from a cold Cause you must take that course which is prescribed in the Cure of the cold distemper of the Brain; but you must strengthen the Teeth with the Medicines in the Chapter following.

Chap. 2. *Of the blackness and rottenness of the Teeth.*

MAny times the Teeth do contract a black, livid, or yellow color, from the evil Humors, cleaving unto them, which by long continuance do also corrode them, and make them rotten: and these Diseases come from filthy vapors that fly upwards, and are engendered of evil nourishment, or from the distemper of the stomach, which corrupteth good nourishment.

Quick-silver doth black the Teeth, whether it be used to the whol Body, as in the Pox, or only to the Face. Hence it is that women which use Mercury to make them fair, have black and ill color'd Teeth.

For the Cure you must first remove the antecedent Cause, and if it comes from evil humors in the stomach, they must be discharged, and the distemper of the parts which produce them must be corrected, and a good diet prescribed, and those things forbidden which do corrupt the teeth, especially sweet things.

Infinite Medicines are prescribed by Authors for making teeth white, which may be experienced. We are contented with one, which presently makes them white, cleanseth them, and keeps them from rotting, namely, the spirit of Sulphur, or Vitriol, in which you must dip a little stick, and rub the teeth with the end thereof, and then wipe them with a clout. In a great foulness you may use the Oyls by themselves, otherwise you must mix them with Honey of Roses, or fair Water, lest by the often use of them the Gums should be corroded. *Montanus, consil.* 113. reports that he learned that at *Rome*, of a Woman called *Greek Mary*: to whom when he came when he was yong, and she twenty yeers old, and after when she was fifty, he found her almost in the same condition, and she confessed that her Beauty and strength was preserved by the Spirit of Vitriol, and that her Teeth which were very bad in her youth, were by that, made very fair and firm, and also her Gums; and also that she perceived her self by the use thereof to seem more youthful, and she used every day one drop or two to rub gently her Teeth and Gums.

The Ashes of Tobacco is very good also to cleanse and make white the Teeth.

For prevention, and to preserve the Teeth, first cleanse them with a Tooth-picker made of Mastich Wood, or the like; then wash the mouth with Wine, and rub the Teeth with this Pouder:

Take of *the Roots of Snakeweed, Allum, and white Coral, of each one ounce*: *Make a Pouder to rub the Teeth.*

Or wash them with this Water.

Take of *the fine Pouder of burnt Allum two drams*: *whol Cinnamon half a dram*: *Spring and Rose Water, of each four ounces*: *boyl them in a Glass upon hot Embers to the consuming of the third part. Wash the Teeth therewith every morning with a cloth dipped therein.*

Chap. 3. *Of the Erosion or eating away, and of the Exulceration of the Gums.*

THe Gums are eaten away and exulcerated by sharp corroding humors which come unto them. The parts from whence they come are, the Brain, Stomach, Spleen, and others. Men that have Diseases in the Spleen, are most subject to Ulcers in the Gums, as in the Scurvy; sometimes the erosion of the Gums comes from worms, or the corrupt humors which cause worms, so that it is a plain sign of worms when it continueth long. So saith *Fabricius Hildanus, Obs.* 59. *Centur.* 1. the Son of a Citizen of *Dusseldorp* was long troubled with erosion of the Gums, and died, after the use of many internal Medicines and Topicks: when he was opened we found abundance of worms, which had eaten through his Guts, and many in his Stomach.

The Cure is first to be directed to the antecedent cause, and the vicious humors are to be evacuated by blood-letting and purging; the sharp and hot humors are to be tempered with Apozemes, Juleps,

and

and Phyſical Broths, and the like. The flux of the ſame is to be diverted by Cupping-glaſſes, and Caureries fitly applied. And laſtly, the faults of the parts affected are to be corrected.

Afterwards you muſt uſe Topicks, which are to be altered according to the greatneſs of the diſeaſe, ſo that to a ſimple Eroſion, you muſt apply only thoſe which aſtringe and dry, as this Water following:

Take of *unripe Galls, Acorn Cups, and Flowers of Pomegranates, of each one ounce: red Roſes one pugil: Allum three drams: boyl them in two parts of Forge-water, and one part of old red Wine, and waſh the Gums often therewith.*

If the Eroſion be not taken away with that, uſe this Opiate:

Take of *Dragons blood three drams: Lignum Aloes, red Roſes, Spodium, and burnt Harts-horn, and Cypreſs nuts, of each one dram: Mirrh and Tobacco Aſhes, of each three ſcruples: Allum one dram. Make them into Pouder, and mix them with Honey and a few drops of Spirit of Vitriol, or Sulphur. Make an Opiate, which muſt be ſpread upon linnen cloth and laid to the Gums at night.*

The Spirit of Vitriol and Sulphur, as they cleanſe and whiten the Teeth, ſo they take away the rottenneſs of the Gums, either alone, or mixed with Honey of Roſes, or Water, as in the former Chapter.

If the Ulcer be deep and foul, anoint with this:

Take of *choyce Mirrh and Sugar-candy, of each equal parts: pouder them, and fill the white of an hard Egg cut in the midſt therewith; then tie it with a thrid, and hang it in a Wine-Celler with a glaſs under it, and there will come forth a Liquor or Baſſom, with which anoint often.*

But if by the uſe of the aforeſaid, the diſeaſe be not cured, if the Tooth neer the Ulcer be rotten, you muſt pull it out, and then it will be preſently cured, otherwiſe never.

Chap. 4. *Of bleeding at the Gums.*

SOmtimes abundance of blood flows from the Gums, either Critically, or Symptomatically, although the former be very ſeldom, yet it is ſometimes; ſo we may ſee by Experience, and by reading. So ſaith *Dodonæus, Obſ.* 14. A certain Quarrier having the imal Pox, had a flux of blood from his Gums, and being ſtopt, it made the Urine bloody, which being ſtopt it returned again to the Gums, and there continued till he recovered of the imal Pox. *Amatus Lucitanus, Curat.* 5. *Centur.* 5. ſaies that ſome have had benefit by bleeding at the Gums, and have been worſe when it was ſtopped. Alſo *Zacutus Lucitanus, obſ.* 86. *lib.* 1. *Praxis admir.* ſpeaks of a Goldſmith who when he fell into a Feaver by laboring at the Furnace, being of a ſtrong conſtitution, loſt much blood by opening a Vein and amended, ſo that the ſeventh day (having had an itching of his Gums, and a pain in the lower Lip) the blood guſhed from the Veins of his lower Gums for three daies in ſuch a quantity that he loſt above five pints more, and the more he bled, the more his Feaver abated, and when it was gone the blood ſtopped.

The Gums bleed Symptomatically when the blood is ſharp, and the Liver or Spleen diſtempered: So that in the Scurvy this flux is ordinary.

Sometimes after a Tooth is drawn, there is ſo great a flux of blood by reaſon the Artery is torn, which is the root of the Tooth, that ſometimes men have died thereof.

The Cure of a Symptomatical flux, is by bleeding and purging, and other Remedies for the bowels. As alſo by Topicks aſtringing, made into Gargariſms, Pouders, Liniments, or Opiates.

If it come from a Tooth drawn, you muſt firſt let blood and Cup to make revulſion, and apply aſtringents to the part, as a Cataplaſm, of Bole-Armenick, Terra Sigillata, Sanguis Draconis, and the like aſtringents made up with the white of an Egg. Alſo Time alone with the white of an Egg is good. But if they do not ſuffice, you muſt lay the Patients finger upon the part, and let him hold it there till the blood congeal above the orifice of the Artery. If it cannot be ſtopt with ſleight things uſe ſtronger. *Valeriola, obſ.* 3. *lib.* 5. reports that an old woman who had a Tooth taken forth with the fingers only, had a violent bleeding upon it, from the Artery under the Gum; which he ſtopt with burnt Vitriol when other things failed; which is excellent both for aſtringency and burning. *Zacutus Lucitanus, obſ.* 84. *lib.* 1. *Prax. Med. admir.* relates a Hiſtory of one who having a grievous Tooth that ached, drew it violently forth, and after had a great flux of blood from the Artery torn, which when it could not be ſtopped by Blood-letting, Cupping, and Aſtringents, nor by laying on the finger, nor by burnt Vitriol, at laſt by his advice the place was filled with Gum Arabick, which ſtopt it in three hours ſpace, for it hath power to ſtop, cool, glutinate, and dry. The ſame *Zacutus Obſ.* 85. of the ſame Book, reports of a certain ſtrong Soldier, who after great pain drew a Tooth violently, and bled much from the Artery under the Tooth, for two daies: the beſt Phyſitians uſe

all

al Aſtringents to the part, with Revulſives, and burn the Artery with a hot iron, but al in vain, for he bled ſtil even unto death: *Zacutus* being called, applied the Plaiſter of *Galen*, made of Frankinſence, Aloes, the hairs of an Hare poudered, and mixed with the white of an Egg, by which in a few hours the blood ſtopt and the Patient recovered.

Galen boaſteth that he invented this precious Medicine, *lib. 5. meth. cap. 7.* and ſtopped the Artery in the Elbow: And *cap. 4.* of the ſame Book, and in his Book of Curing by Blood-letting, Chapter the laſt, he confirmeth the Excellency thereof by many ſtories.

Chap. 5. *Of the Ulcers of the Mouth, and Jaws.*

THe ſmal and ſuperficial Ulcers of the Mouth are uſually Aphthæ or Truſh, although in *Galen* and *Hippocrates*, it is ſometimes uſed for Ulcers in other parts; but they which are deeper are abſolutely called the Ulcers of the Mouth and Jaws: Such as are in the French Pox.

Theſe Ulcers breed of ſharp Humors or Vapors coming from divers parts into the Jaws; ſo in malignant Feavers they often happen, or to thoſe that have hot Livers, or foul Bodies: So the Children have the Truſh, as *Hipp. aph. 24. ſect. 3.* either from the ſharpneſs of the Milk which Ulcerates thoſe tender parts in its paſſage, as *Galen* teacheth in his Comment upon the ſame Aphoriſm, or from the corruption of the milk in the Stomach by which ſharp vapors are ſent to the mouth, as *Galen* affirms, *9. de compoſ. med. ſec. loc. cap. ultimo.*

Now theſe Ulcers are divers, as ſome are ſlighter, ſome more dangerous; ſome are in Children, ſome in Men; ſome are joyned with Inflamation, ſome are without; theſe divers degrees are according to the variety of the Humors of which they come: For they proceed either of Blood, Choller, Flegm, or Melancholly, or Choller Aduſt, which hath not only a burning, but often a malignant quality, and begets evil conditioned Ulcers.

Theſe Differences are known by their proper ſigns, for if the Ulcers be Redish they come of Blood: if Yellow, of Choller: if White, of Flegm: if Livid or Blew, from Melancholly, if they ſtink they are foul.

As for the Prognoſtick.

Aphthæ, or Truſh is eaſily Cured, but deep Ulcers and putrid, called in Greek *Nomai*, are hardly Cured: And in Children they are more dangerous by reaſon of their tender fleſh which they ſooner devour: As alſo becauſe ſtrong Medicines cannot be applied unto them; hence ſometimes Children die of them, when they are Malignant and putrid.

Alſo in reſpect of the Cauſe, thoſe Ulcers which come of Flegm, are leaſt dangerous: thoſe that come of Blood or Choller, more: and thoſe that come of Melancholly, moſt of al.

Black and Cruſty Ulcers are deadly, eſpecially in Children.

The Jaws Ulcerated in a Feaver are hard to be Cured, as *Hipp.* teacheth, 3. *Prog.* Becauſe as *Galen* explaineth they ſhew the malignity of the matter.

The Cure is firſt by good Diet, which Cooleth and Dryeth, and hindereth the Generation of the antecedent Cauſe: Therefore when Children have it from their Suck, let the Nurſe be changed, or eate good Diet, as alſo let her bleed and be purged, if need be: eſpecially let her eate Cool Aſtringent things, as Quinces, Pears, Medlers, Services, Lettice, and Purſlain, preſcribe the ſame to men, and let them avoid ſharp things, ſalt, and pepper.

Then you muſt look to the antecedent Cauſe, with Univerſal Evacuations according to the age: And firſt Phlebotomy doth powerfully revel the Humors, and tempereth their ſharpneſs, by Cooling the whol body.

After this Cup and Scarrifie, put Horſleeches behind the Ears and under the Chin, and apply a Veſicatory to the Neck behind.

The next day after you have let blood, you muſt preſcribe a Purge, agreeable to the Humor offending, and the age of the Patient.

From the beginning of the Cure uſe Topicks, called by *Galen* Stomatica, or Medicines for the Mouth: and at firſt they muſt be mild, as Gargariſms, Mouth-waters made of Plantane, Honeyſuckle, and Roſes; Water with Syrup of dried Roſes and of Mulberies: or Decoctions of Plantane, Bramble Leaves, Knot-graſs, Pomegranat Flowers, Red Saunders, and the like; with Syrup afore mentioned.

And if there be Inflamation, you may do wel if you ad the Juyce of Nightſhade, Houſleek, and Purſlain, with as much Sal Prunellæ as wil not make it too ſharp: Or a little crude Allum.

If there be no Inflamation, the Chief & only Remedy is Spirit of Vitriol, or Sulphur, which may be uſed alone to Men, upon a little lint at the end of a ſtick, gently touching the part, by which it wil be preſently Cured if it be a ſimple Aphtha: But to Children you muſt mix the Spirit aforelaid with Honey

Honey of Roſes, ſo that it may be but a little ſharp, and with a little Lint at the end of a Probe often apply it, and they wil be quickly Cured.

If the Ulcers are very painful and inflamed, they muſt Gargle with Milk often, or with an Emulſion of the Cold Seeds, or the Mucilage of Fleabane-ſeeds and Quince-ſeeds extracted with the waters of Roſes, Plantane, and Nightſhade.

If the pain wil not be removed with theſe Revulſions and Topicks, but the Humors are ſtil drawn thither by it, which cauſeth want of ſleep, and Conſumption of the body, which endanger the life; the laſt Remedy is Narcotick, which wil aſſwage the pain and ſtop the Flux, you muſt give it according to the ſtrength and age of the Patient.

I once ſaved a Childs life (by Gods aſſiſtance) of Four Yeers old with one grain of Laudanum, when his Jaws and Tongue were deeply Ulcerated with ſuch an Inflamation, that he could neither take Broth, nor Topicks, the Humors flowing ſo faſt from his mouth, that he lay night and day complaining without any reſt.

If the Ulcer be ſordid, Firſt waſh it with the Decoction of Barley, and Honey of Roſes; and in Children, with Milk chalybeated, or in which Steel hath been often quenched, mixed with Conſerve of Roſes; then uſe ſtronger Medicines, and principally Honey of Roſes above mentioned made a little ſharp with ſome drops of Spirit of Vitriol:

If theſe wil not do, you may ad to the Waters and Decoction above mentioned burnt Allum, the Collyrium of *Lanfrank* and Ægyptiacum, in a quantity agreeable to the Diſeaſe.

Laſtly, If it come from the French Pox, it wil not be Cured til the Pox be Cured.

Chap. 6. *Of the Relaxation of the Uvula, or Falling Down of the Pallate.*

THe Relaxation of the Uvula comes from a Rhewm falling from the Brain upon it, with which there is ſomtimes bloud mixed, and then there is an Inflamation alſo, and this often fals upon the Tonſils or Spongious Kernels; the Inflamation whereof ſhal not here be treated of, becauſe it is Cured by the ſame means, with the Inflamation of the Tongue, and of the Ulcers of the Mouth.

A Wateriſh Humor falling upon the Uvula or Collumella, doth ſo moiſten, ſoften, and relax it, that it wil be extended to the upper part of the œſophagus or Wezand, and cauſe a Nauſeouſneſs, and the Patient wil ſeem to have ſomthing in his Throat which he cannot ſwallow down, by which you may know it without looking into the mouth.

The Cure is firſt by the Antecedent Cauſe, that is, by Evacuating the Humors flowing from the Head, by Revelling and Deriving them with ſuch Medicines as were preſcribed in the Cure of a Catarth.

The Chief Topicks are Aſtringents and Repellers, ſuch as were preſcribed in the Cure of the Ulcers of the Gums and Jaws, and ſhal be preſcribed in the Chapter following of the Cure of the Angina, to which afterwards you muſt ad ſome Reſolvers and Dryers: And though the Gargariſms in thoſe Chapters mentioned, are here good, yet when there is no Inflamation the uſe of Pouders is better; for with them the Vvula relaxed is more powerfully dried and Aſtringed.

And therefore, Firſt apply Pomegranat peels poudered, and after mix it with a little Pepper:

Or,

Take of *Red Roſes and Pomegranat flowers and Peels of each half a dram: the Roots of Snakweed and Tormentil, Galls and Flower-de-luce-Roots, of each one dram: burnt Allum, two ſcruples: make a Pouder. Ordinary Chirurgeons apply the Pouder of Long Pepper, but it is dangerous, for it is to be feared, leſt the Humors ſhould be drawn violently from the Brain, to the part.*

The Manner of applying this Pouder is to depreſs the Tongue with a Speculum Oris, and then blow up ſome pouder in your Uvula ſpoon: do this often til the Humor be ſpent: The inſtrument invented by *Fabricius Hildanus, Obſ.* 21. *Cent.* 2. is the beſt for this.

And if the Uvula relaxed cannot be brought to its former condition by theſe means, but continueth extended and painful; your laſt Remedy is to cut off a piece thereof: in which Operation you muſt take ſome Cautions. The firſt is from *Hippocrates*, 3. *Progn. Text.* 21. where he ſaith, *That Uvula's are Cut and Scarrified, and burnt when they are red and ſwoln, but not without danger; for an Inflamation followeth, and a Flux of Blood; but you muſt endeavor to extenuate theſe accidents by other means at that time: But when the Uvula hangs down, and the lower part of it is greater than the higher, and round, then it is ſafe to operate: but it is better firſt to adminiſter a Cly-*

ſter, if time will permit. *Galen* in his Commentary upon theſe words of *Hippocrates*, ſaith that an Uvula inflamed, is not to be cut off, or ſcarrified; but after the inflamation is gone, ſo that the ſuperior part is leſſened. Another Caution is taken out of *Paulus Æginet.* *lib.* 6. *cap.* 31. you muſt not touch the Uvula with an iron to cut it when it is livid or blackiſh, that is, when it hath malignity in it, and inclineth to be a Cancer. But out of the ſame Author we have a lawfulneſs of the operation, when they are long and white, or as *Hippocrates* ſaith, ſmal at the top. We have an Example of the good ſucceſs of this operation in *Amatus Lucitanus*, Obſ. 65. Cent. 3. upon a Student who had his Uvula hung down like a thong, long, and without blood in it; which when Medicines could not cure, he cut off, and after touching the part with a little Spirit of Vitriol, he cured the Patient.

The third Caution is, That you cut not off too much; for then the Voyce and Breathing will be hurt according to *Galen*, 11. *de uſu part. cap.* 11. and conſumption and death it ſelf will enſue as often is ſeen in the French Pox.

Chap. 7. *Of* Angina, *or Quinzie, or Squinzie.*

THe word *Angina* taken generally ſignifies every Diſeaſe of the Jaws and Throat, by which breathing and ſwallowing are hindered, when there is no defect in the Lungs and Breaſt.

And this is two-fold, a Legitimate and proper Squinzy; and a Baſtard, or improper.

A Legitimate Squinzy comes from an Inflamation by which the Muſcles of the Jaws and Throat being ſwelled, do ſtop and contract the waies of breathing and ſwallowing. This Inflamation doth either poſſeſs the Throat or the Jaws, called *Pharynx*. Both theſe parts have both internal and external Muſcles. And though for the moſt part the *Pharynx* and *Larynx*, Jaws and Throat, do ſuffer in an *Angina* by reaſon of their neerneſs, yet one is more affected than the other: Hence many differences of Symptomes do ariſe, in reſpect whereof *Galen* in 4. *de loc. aff. cap.* 5. makes four ſorts of *Angina's*, which the Grecians before his time named too curiouſly. One is called *Sunagchen*; another *Cunagchen*; the third *Paraſunagchen*; and the fourth *Paracunagchen*. If the Inflamation be in the inward and proper Muſcles of the Larynx, it is called *Cunagche*; if it be in the inward Muſcles of the Pharynx, *Sunagche*; if in the outward Muſcles of the Larynx, *Paracunagche*; and if in the outward Muſcles of the Jaws or Pharynx, it is called *Paraſunagche*.

Not only the Muſcles of the Jaws and Throat are for the moſt part inflamed, as aforeſaid, but alſo the parts adjacent, and the outward part of the Neck, as ſhall be ſaid in the Diagnoſtick and Prognoſtick of this Diſeaſe.

In all theſe kinds of *Angina's*, when there is great danger by the difficulty of ſwallowing, then thoſe things which are given uſe to fly out at the Noſe, eſpecially if they be liquid things, which are more hard to be ſwallowed at that time; becauſe they ſpread themſelves abroad, and therefore cannot ſo eaſily be comprehended of the Muſcles to be ſent into the *Oeſophagus*, which Muſcles cannot ſufficiently contract themſelves by reaſon of the inflamation; but ſolid nouriſhment being more corpulent, need only the ſuperficial action of the Muſcles, and are ſwallowed down by a ſmal contraction of them. But it ſomtimes falls out that ſolid things are harder, and liquid things eaſier to be ſwallowed, which dependeth upon the diverſity of the parts affected: For the Muſcles of the Larynx are ordained for to ſwallow meat, as well as for the voyce; and when the meat is thrown into the *Oeſophagus*, the Larynx is lifted up with the Tongue: But for to ſwallow drink we uſe the Tongue moſt, which while it is drawn inwards it brings the drink from the Lips to the Jaws. If therefore the Muſcles that move the Tongue are more affected, it is harder to ſwallow drink. But if the Muſcles of the Larynx are more hurt, it is harder to ſwallow meat.

Here by the way we muſt mark, that *Hippocrates* ſomtimes by the word *Angina*, doth underſtand only the inflamation of the Larynx, and ſo it is taken more ſtrictly; of which there is an Example 6. Epid. Sect. 8. Text. 1. where he ſaith thus: Some had inflamations of their Jaws, ſome had *Angina's*; where by the name *Angina* he underſtands the inflamation of the Muſcles of the Larynx, and diſtinguiſheth it from the inflamation of the Jaws.

A Baſtard *Angina* is without a Feaver, and is two-fold.

The firſt and moſt ordinary comes of Rhewm falling upon the Jaws and parts neer unto the Larynx.

The other comes from the Luxation of the *Vertebra's* of the Neck, by which the paſſage of the Gullet and Throat, is preſſed and made narrow.

The Cauſe of a true *Angina*, as of other inflamations, is either pure blood, or mixed with Choller, Flegm, or Melancholly, which falls upon the parts aforeſaid out of the Branches of the Jugular Veins, and this is either attracted by the heat or pain of thoſe parts, or ſent from other parts, becauſe the e parts are weak, looſe, and fit to receive a deſluxion, eſpecially if the whol Body abound with humors,

humors, or the Head, or the parts neer the Jaws. For when evil blood aboundeth in the whol Body, and is carried unto the Head, if the Brain be ſtrong it will not receive it, but ſends it down by the ſame Veins into the lower parts; hence come divers inflamations as Parotides, or tumors under the Ears, Ophthalmies, Angina's, and the like.

Young men are more ſubject to the Angina, than old, becauſe they have much Gollerick blood, and becauſe they are full bodied, and have much blood, eſpecially in the Head.

Some Authors ſay that men are more ſubject to Angina's than women; which it ſeems *Hippocrates* obſerved, 6. Epid. Sect. 7. where deſcribing an Epidemical Conſtitution, in which Angina's, Coughs, and Peripneumonia's, or Inflamations of the Lungs, were frequent, he affirmeth that few women were ſick, and he gives no other reaſon, but becauſe they went leſs abroad than men, and therefore were not ſo ſubject to injuries from the Air. Which Reaſon doth not agree with the univerſal Propoſition, That women are leſs ſubject to Angina's than men; but this may be a true Reaſon, becauſe women have colder Blood, a leſs Larynx or Wind-pipe, and narrower Veins of the Throat. For which Reaſon thoſe parts do not ſo eaſily receive defluxions.

The precedent Diſeaſes may be reduced to their internal Cauſes, as continual, putrid, burning, and eſpecially Epidemical Feavers, ſuch as were mentioned by *Foreſtus*, Obſ. 2. Lib. 6. which happened in the yeer 1517. at which time all that were infected had an inflamation of the Jaws, and died within ſixteen or twenty hours, except they were let blood within ſix hours. But in this *Angina* the Feaver is not Symptomatical, but Eſſential, and the *Angina* is ſymptome to it, becauſe part of the matter cauſing the Diſeaſe is ſent to this place; for in Epidemical Feavers, *Angina's*, Pleureſies, Inflamation of the Lungs, Diſenteries, and the like do happen, from ſome ſecret force and influence of the Stars, by which ſomtimes one part of the Body, and ſomtimes another is more affected.

Whatſoever can cauſe a flux of humors to theſe parts may be reckoned among the external Cauſes of this Diſeaſe: As Southernly winds, according to *Hippocrates*, Aph. 16. Sect. 3. in time of much rain, many diſeaſes happen, as long Feavers, Fluxes of the Belly, Putrifactions, Falling-ſickneſſes, Apoplexies, and Angina's. Alſo for the producing of this laſt, the inequality of weather doth much, when the parts are made looſe by heat; and by cold ſuddenly coming thereupon, the humors are ſent thither. A ſudden cooling after heat, and drinking of cold water doth the ſame, or if the Head be kept too hot or too cold.

The firſt Cauſe of a Baſtard Angina, is propounded by *Hippocrates*, 4. *de vict. rat. in morb. acut. text.* 39. where he ſaith, an Angina comes when in Winter and Spring time much ſlimy flegm falls from the Head to the Jugular Veins, which obſtructeth the paſſages of the Spirits with its cold glewineſs.

There is another Cauſe of a Baſtard Angina given by *Hippocrates*, 2. Epidem. Sect. 2. namely, a Tumor riſing in the Vertebra's of the Neck, and eſpecially in that which is called *Dens*, or the ſhape of a Tooth by *Hippocrates*, by which the *Vertebræ* are drawn inward, and therefore a Cavity appears in the external part. Now this Tumor either comes from flegm, removing by its encreaſe the *Vertebra* from its ſeat, or from blood falling upon the Muſcles, from whence comes an inflamation by which the Muſcles being contracted draw the *Vertebra's* inward, and then it is a true Angina coming from the inflamation of the ſaid Muſcles. There may alſo be a Luxation of the *Vertebræ* by a flegmatick humor looſing their Nerves, and making them ſlippery between the Joynts. And laſtly, it may come from an external Cauſe, as a fall, or ſtroak, as in other parts.

An Angina is generally known, firſt by its proper ſigns, namely, difficulty of breathing and ſwallowing, when there is no fault in the Breaſt and Lungs, and when pain is felt about the Jaws and Throat: and in a true Angina, redneſs, heat, and a feaver are ſigns.

The Differences may be diſtinguiſhed by their proper ſigns. In *Synanche* there is leſs difficulty of breathing, but great difficulty in ſwallowing, ſo that moiſt things can ſcarce be ſwallowed, but come out at the Noſtrils.

In *Paraſynanche* there is leſs difficulty of breathing, nay, very little, becauſe the inflamation of the external Muſcles of the Jaws doth little hinder reſpiration, there is pain and redneſs outwardly in the Neck, when the outward parts are inflamed.

In Cynanche there is great hinderance of Reſpiration, ſo as the Patient ſeems to be ſtrangled, and ſomtimes is ſtrangled for a ſhort time, and cannot breath but with the Neck upright, and the Mouth open.

The Jaws are much pained, yet there is no redneſs or Tumor inwardly in the Jaws, nor outwardly in the Neck; the Tongue is livid, black, and retorted, or bent by reaſon of the great fulneſs of the Veins about it. There uſeth alſo to be an acute Feaver, you may find an acute deſcription of this kind of Angina in *Hipp.* 3. *de Morbis*. And this is remarkable, which is obſerved of few, the inward Muſcles of the Larynx are not here only affected but the Lungs themſelves, from whence is difficulty of breathing and Suffocation, which *Dodonæus* obſerveth very wel, Obſ. Med. Cap. 18. where he relates a hiſtory of a Butcher who at noon felt a pain about his Jaws and Throat, and ſome diffi-

culty in swallowing, and died strangled the same night; his body being opened the substance of his Lungs were found turned into matter.

He gave other Examples, *Anno* 1565. in which yeer many had the Angina, with pain about the Larynx, which ceasing, they fel into Peripneumonia, and they being opened after death, had either their Lungs ful of Water or imposthumated; but nothing was perceived about the Larynx or its Muscles, which might shew an inflamation: And in these Causes he supposeth that the Larynx did not suffer principally, but by consent; and it is probable that the Aspera Artery, or rough Artery and its branches may be filled and extended with the Humor flowing from the head, and then if the Humor be sent to other vessels, the Aspera Artery and Larynx are freed from pain, and the Lungs are infected, and so an Angina may turn into a Peripneumonia: We may gather that the Lungs may be affected in an Angina from *Hippocrates*, 4. *acut. text.* 30. & 31. where he laies down Two kinds of Angina's from the diversity of the Humors; one, in which a Flux of Rhewm in Winter and Spring is carried to the Jugular veins; another, in which Choller abounds, which is in Summer and Autumne: of the last he speaks thus, When a hot and salt Defluxion comes from the head, being sharp it gnaws and ulcerates, fils with Spirits, brings an Orthopnæa or difficulty of breathing with the Neck stretched forth, and much drouth. Besides, there is no Tumor; the Tendons of the Neck behind are stretched like a Cramp, the voice is hindered, the breath is little, and often stopped, such have the Artery ulcerated, and the Lungs inflamed, so that they cannot breath: Thus *Hippocrates* he saith also that a hot and sharp Defluxion wil bring an Orthopnæa, because it biteth, ulcerateth, and filleth with Spirits, which are carried to the place hurt; hence comes the filling of the Lungs from whence Orthopnæa comes: When there is no room for receiving of the external Air, how much so ever the Lungs be enlarged. *Hippocrates* affirms this, 3. *de morbis*, where in the Cure of a Squincy he saith, the vein under the Breast or Papp is to be opened, for in this part there is a hot Spirit from the Lungs, and a little after he saith, You must make hast to cause Spetting, and that the Lungs may grow less, as if the Lungs were swoln by the hot Spirit contained therein. But it is most remarkable that when the Spirits are carried in great plenty to any part, there is also blood carried therewith, which if it flow in such a quantity that it cannot be wel governed by nature, it useth to make inflamations and imposthumes; from whence it is no wonder if in such an Angina the lungs become purulent or full of water.

In a Paracynanche the breath is less difficult than in a Cynanche; but more difficult than in Synanche, there is some redness and tumor about the Jaws.

A Bastard Angina is known by the Flegm, by want of Feaver, by the plenty of humors flowing to the mouth.

But a bastard Angina coming of a Luxation is known by the hurt motion of the Head and Neck, and by the Preternatural Cavity which appears in the Neck by reason of the Vertebra inwardly depressed.

The knowledg of the Causes is taken from the universal and particular signs of the humors predominating in the whol Body.

When an Angina comes of blood, there is heat and redness in the Face, and a great distention in the part affected. When it comes of Choller, the pain and heat is greater, with thirst, bitterness in the mouth, and sharpness. And if it comes from flegmatick blood, the pain and redness is less, and the Feaver little.

From the part affected some knowledg of the humor offending may be had. For Chollerick blood for the most part maketh an inflamation in the Muscles of the Larynx; but flegmy blood goes rather to the Jaws; for when the Veins of the Larynx are smal, only thin blood goes thither; but the Jaws being loose and spungy, do more easily receive the flegmatick humors.

Finally, From the time of the yeer you may know the peccant humor: For Chollerick Angina's do come chiefly in the Summer and Autumn, because in the Summer Choller breedeth, and in Autumn it is retained. But flegm breeds in Winter and the Spring, because the humors gathered in Winter are then melted and sent from the Head into the inferior parts.

As to the Prognostick. A true Angina is a most acure Disease, and very dangerous by reason of the hinderance of respiration, and for strangulation, which sometimes happens by the stoppage of the passages, by which respiration is made. Therefore by how much the greater the Constriction, so much the more danger, and so the first kind of Angina is most dangerous, because the inflamation of the internal Muscles of the Larynx doth more stop the passage. Whence *Hippocrates*, Aph. 34. Sect. 4. saith thus: *If a Suffocation comes presently upon a Feaver, and no Tumor in the Jaws, it is mortal.* Which Opinion he confirmeth in *coac.* & *progn.* saying that these kinds of Angina's do strangle in the same day, and in the second, third, and fourth.

The second sort of Angina, though it be very dangerous, yet is it not altogether deadly as the first, because the inflamation of the external Muscles of the Larynx doth not make so great and so sudden a constriction. Of this *Hippocrates* spake 3. Prog. Text. 17. thus: *Whatsoever Angina's do resemble others in pain, and make a Tumor and redness in the Jaws, are very deadly, and are of longer continuance than others if they be very red.*

The

The third kind is leſs dangerous, becauſe the Breath is leſs hindered than the Swallowing, from the inflamation of the internal muſcles of the Jaws: But the Swallow hurt is not ſo dangerous. Of this *Hippocrates* ſpeaks in the Book above cited, Text. 18. in theſe words: *If the Jaws and Neck are red, theſe Angina's continue longer; but they are chiefly preſerved who have red necks and breaſts, and the holy fire without, not within.*

The fourth kind is leaſt and ſafeſt, becauſe the inflamation is furtheſt from the Throat. Hence *Hippocrates*, Aph. 37. Sect. 6. ſaith, *If a Tumor appear in the neck in him that hath an Angina, it is good, for the Diſeaſe comes forth.* He confirms the ſame in 3. Progn. Text. 20. thus; *But it is moſt ſafe to have a Tumor or redneſs come forth.*

Hippocrates ſeems to comprehend all theſe Differences in one Sentence, 6. Epid. Sect. 7. where ſpeaking of the ſigns of an Epidemical Angina, he ſaith: *In the ſum of all, To them that could only not ſwallow, the diſeaſe was mild, and eaſie to be endured; but it was deſperate to them who had withal a difficulty of breathing.*

If the matter cauſing the Angina be carried to the Lungs, either the Patients die, or elſe turn Fools, or Empyick, that is, impoſthumated between the Breaſt and Lungs; as *Hippocrates*, Aph. 10 Sect. 5. and 3. Progn.

In an Angina that is ſtrong, if the Patient foam at the mouth, it is deadly, Aph. 43. Sect. 2. for it ſhews a great ſtraitneſs about the Heart, and violent heat, from which the proper moiſture of the Lungs is ſqueezed forth, and carried to the mouth in a kind of froath.

They who have an Angina, if they ſpit not concocted matter, but a little, viſcid, ſlimy, and thick, are deſperate; *Hipp. in coac.*

The Tumors of the Jaws in an Angina ſuddenly vaniſhing without reaſon are deadly, *Hipp. in coacis.* Without cauſe or reaſon, that is, without a precedent Evacuation by Art or Criſis; for it ſignifies the returning of the matter inwatd, from whence a more dangerous Diſeaſe may be in the internal parts; or as it ſometimes fals out, the matter returning to the ſame part makes a ſudden ſuffocation.

The Cure of the Angina is made by the ſame Indications which are obſerved in the Cure of all Inflamations, ſo the humor flowing to the part is to be revelled and repelled, that which is there is to be derived and diſſolved: But if it cannot be diſſolved, it is to be digeſted and ſuppurated; all which may be done as followeth:

Firſt, appoint a ſlender, cooling, and moiſtening Diet, of Barley, Cream, Chicken Broth, or Capon Broath, with cool Herbs, and the like. If the Patient cannot ſwallow by reaſon of the narrowneſs of the Oeſophagus, ſo that from thence you fear loſs of ſtrength and death. You may free him from that danger by putting down a Catheter into the Oeſophagus, to which you may fit a Syringe by which you may ſend Broath into the Stomach. The Practical Phyſitians uſe nouriſhing Clyſters, by which ſome nouriſhment may be carried to the Liver from the Meſeraick Veins. Let his drink be Barley Water, and other things uſed in acute Feavers. Let the Air be temperate, and without extremity, for the cold will ſtop the pores, and the hot will encreaſe the defluxion and inflamation. The Patient muſt lie with his head high, and his neck upright, that he may better breath: he muſt avoid much ſleep, as in internal inflamations; for as *Hippocrates* ſaith, Blood runs inward in time of ſleep, and ſo the confluxion of humors to the part affected will be encreaſed.

But ſince Angina is a moſt acute Diſeaſe, and ſomtimes kills a man in one day, you muſt uſe great Remedies with much diligence. Therefore in what hour ſoever the Phyſitian comes, let him preſently let blood, on the ſame ſide that is affected, out of the Head Vein, or if that appear not, out of the Median, to a pound, or a pound and an half, or two pound, as much as his ſtrength will permit, for in this there is moſt hope; but you muſt not take all that blood away at once, leſt the Patient faint, by which he would be in danger; but by degrees, and intermiſſion, at every third or fourth hour. This kind of blood-letting is ſo neceſſary in this diſeaſe, that it may be hindered by no contrary indication. So in the flowing of the Terms, or at any other time you muſt take away blood in a great quantity. Of which we have a preſident in *Zacutus Lucitanus*, 2. *Prax. admir. cap.* 135. of a Woman which was in her ſeventh month great with Child, and was taken with a Squinzy; but being ſeven times let blood in one day was cured. If the Diſeaſe be not violent, you may firſt give a Clyſter; but if otherwiſe, afterwards.

While Phlebotomy is iterated, make other revulſions in the ſame day with Cupping-glaſſes, both dry, and with ſcarrification upon the ſhoulders and loyns, make frictions and painful Ligatures upon the extream parts.

Having bled enough, fall to purging the next day, not expecting the concoction of humors, becauſe the diſeaſe admits of no parley; therefore give one proper to the humor, nay, if the diſeaſe do conſtrain you, let blood, and give a purge, both in the ſame day; as *Trallianus* did by his confeſſion, *Lib.* 4. *Cap.* 1. in theſe words: *I truly remember that I, when occaſion required, opened a Vein in*

the

the morning under the Tongue, and at night gave a purge of the extract of Scammony in Broth, and could scarce hinder strangulation for all that, and another the next day; after I had opened both the Arms, purged him again.

Now your purge must be of gentle things, if the disease come of Choller, lest the humors should be moved too violently, and so come to the part affected. Also if the Inflamation come only of blood, it is better to abstain altogether from purging. But if flegm run with it, make stronger Purges, and give Agarick, and Diaphœnicon with Senna; nay, in a strong flegmatick Angina you may rise to those Medicines which cause violent vomiting, and among the rest, the *Aqua Benedicta* of Dr. *Rowland* is the best, which given to the quantity of two ounces, doth wonders, and for the most part cureth the disease in the space of two hours. Moreover, it hath no evil taste, and so may easily be sipped up, which you cannot do in other Medicines, which by reason of their evil taste cannot be taken but at one draught by the Patient; therefore they can seldom be purged till the passages are a little opened. But that is supplied by often Clysters, and therefore they who cannot take *Aqua Benedicta Rulandi*, by reason of its heat, or their weakness (because they must be strong who take it) nor any other Medicine, must use often Clysters that are very sharp to draw down the Humors.

For the same Revulsion, it is good to apply Cupping-glasses to the Neck and Shoulders with scarrification, Frictions, and Ligatures, to the lower parts, and to wash their feet with hot Water.

But a Vesicatory to the Neck behind, doth more strongly revel the humors flowing from the head, which you must do presently after blood-letting.

After Revulsions are sufficiently and diligently made, you must derive the Humor from the part, and first open the Veins called *Ranulæ* under the Tongue, it is commended by *Hippocrates*, *Galen*, and the Modern Physitians, by which the blood which doth immediately cause the inflamation, is drawn forth.

The Ancients in a desperate Angina, open the Jugulars, which though some late Writers have approved, yet it is out of fashion, being thought dangerous by reason of the bleeding, which can scarcely be stopped by reason of the largeness of the Veins. But Experience hath taught that this operation is not so dangerous if it be well administred. First then, bend the Patients Head on one side as much as you can til his chin almost touch his shoulder; then open the Vein without a Ligature, with a smal Orifice, according to its longitude, for so it will more easily cicatrize; and having taken a sufficient quantity of blood, bring the Head to its natural position, and so sometimes the blood will stop of its self. But you must presently apply *Galens* Emplaster described 5. *Meth. Cap.* 4. made of Hares hair, Aloes, Frankinsence, and the white of an Egg, so the flux of Blood is surely stopped. *Trallianus* reports in *Lib.* 4. *Cap.* 1. that he cured many of the Squinzy with opening of the Jugular Veins; and *Zacutus Lucitanus*, *obser.* 89. *lib.* 1. *Praxis admir.* tells of a Spaniard which was cured of a most violent Angina.

A Cupping-glass with Scarrification under the Chin, is good for derivation, by which *Zacutus Lucitanus*, *obs.* 88. *lib.* 1. *Prax. adm.* saith he cured a woman of a *Cunagche*, or dog Squinzy.

Scarrifications under the Jaws, and upon the Neck are good, if deep, by which means *Benivenius* saith in *lib. de abdit. morb. caus. cap.* 38. *Nicholas Rota* was cured of a desperate Angina; whole story *Sennertus* hath fully related, *Pract. Med. lib.* 2. *part* 1. *cap.* 24.

While the aforesaid Medicines are used, the inflamation of the Throat and Jaws is to be allayed with Topicks, and they are to be varied according to the time, as in other inflamations, so in the first Repelling Medicines, are good made into Gargarisms that they may presently touch the part inflamed.

Take of *Plantane, Nightshade, and Woodbine Water, of each three ounces: Syrup of Mulberries three ounces: Sal prunella, one dram and an half. Make a Gargarism.*

Or of a Decoction thus:

Take of *Plantane, Sorrel, and the tops of Brambles, of each one handful: the Grains of Sumach half an ounce: one Pomegranate beaten with grains and peel: red Roses one pugil: make a Decoction to a pint: Dissolve in the straining Syrup of Mulberries, and the composition made of Nuts, of each one ounce and an half; Sal prunella two drams: Make a Gargarism.*

Concerning Gargarisms you must observe, that they are to be suspected, because the parts inflamed are moved thereby, which should be at rest; but you may remedy that if you hold the Gargarism in the Mouth, turning backwards, and not move it.

Without Gargling you may use the Spirit of Salt, Sulphur, or Vitriol, which mixed with Water, to qualifie their sharpness, are to be taken by little and little; for by passing through the part affected, they qualifie its heat, and being sent from the Stomach to the Liver and Veins, it allaies the heat of the blood; which Remedy is also good in the Inflamation of the Jaws and Tonsils.

While you use repelling Gargarisms, you must apply outwardly to the neck, loosning and resolving Liniments, that the matter may be brought forth; thus made.

Take

Take of *Oyl of Chamomel, Lillies, and ſweet Almonds, of each one ounce: Hens greaſe and freſh Butter, of each one ounce and an half: Saffron one ſcruple: Make a Liniment to be applied with greazie wool.*

This Liniment will aſſwage pain, which if violent, it may be qualified alſo with a Gargariſm made of Milk, or an Emulſion made of the four cold great ſeeds, or of Mucilages of Fleabane and Quinces, drawn with Roſe water, adding Syrup of Violets, or Caſſia diſſolved in Whey, or in a Decoction of Marſh-mallow Roots.

After the beginning of the Diſeaſe when it encreaſeth, or is at a ſtand, you muſt mix Digeſters and Diſſolvers with Repellers, which muſt be done the ſecond day, becauſe the Diſeaſe is moſt acute.

Take of *the Leaves of Hyſop and Plantane, of each one handful: Liquoris, Raiſons ſtoned, of each one ounce: fat Figs twelve: red Roſes and Barley, of each one pugil: make a Decoction of a pint. Diſſolve in the ſtraining Honey of Roſes, and Syrup of Violets, of each one ounce. Make a Gargariſm.*

Obſerve, That as long as the Inflamation continueth, you muſt mix ſome things that repel with Diſſolvers and Aſtringents, leſt the part which by Nature is ſoft, ſhould be more relaxed, and made more fit to receive a defluxion.

But outwardly you muſt apply Diſſolvers moſt, with a Swallows neſt, which by the Opinion of all Writers hath a ſpecifical property againſt this Diſeaſe.

Take of *the pouder of a Swallows neſt, and of Album Græcum, of each one dram: the pouder of Flower-de-luce Roots and Chamomel, of each half a dram: Hens greaſe and Oyl of Lillies, of each one ounce, yellow Wax a little: Make a Liniment.*

Or it may be made into a Cataplaſm thus:

Take *one Swallows neſt, Mallows, Violets, of each one handful: Althæa Roots, Lilly Roots, of each half an ounce: fat Figs three or four: Chamomel and Melilot Flowers, of each one pugil: boyl them and beat them; then put to them, Barley meal, Linſeeds, and Fœnugreek, of each three drams: Saffron, one ſcruple: freſh Butter one ounce: Oyl of Chamomel and ſweet Almonds, of each as much as will make a Cataplaſm to be applied to the fore part of the Neck.*

In the mean while, you may uſe Eclegma's, or things to be licked, now and then, that the matter which breaths forth of the part, or falls upon it from the head, may be clenſed.

Take of *the pouder of the Electuary of Diatragacanth frigid, two drams: Simple Diaireos one dram: Sugar-candy, and Penides, of each half an ounce: Diamoron one ounce: Syrup of Jujubes, as much as is ſufficient. Make a Lohoch.*

If the Tumor will not be diſcuſſed, but tendeth to ſuppuration, which uſeth to be upon the fourth or fifth day, you ſhall aſſiſt it with the Cataplaſm aforeſaid, and other Emollients and Suppuratives, and he muſt hold thoſe Medicines at the ſame time in his mouth, which was preſcribed formerly for aſſwaging of pain. Or,

Take of *ſliced Liquoris and Raiſons ſtoned, of each one ounce: fat Figs ſix: Althæa and Quince ſeeds, of each two drams: the flowers of Chamomel, one pugil: boyl them in Hydromel. Diſſolve in the ſtraining, boyled Wine two ounces. Make a Gargariſm.*

It is alſo good to hold Caſſia new drawn, in the mouth, that by degrees it may diſſolve into the Throat, for it aſſwageth pain, diſſolveth and maturateth.

If the Tumor come to ſuppuration, which may be known by the decreaſe of ſymptomes, and will not break, let the ſick man, or ſome about him, put their fingers into his mouth, and endeavor to break the impoſthume, which if it cannot be done, let his mouth be wide opened with a *Speculum oris*, and then open the impoſthume with a crooked inciſion knife called a Biſtort. Then let the Patient hold down his Head leſt the matter fall upon his Lungs: after, waſh the Ulcer with Barley Water and Honey of Roſes, Water and Honey called Hydromel, or Wine and Honey called Oinomel; after this, dry it up with Allum Water.

Others put a Wax Candle anointed with Oyl of ſweet Almonds into the Oeſophagus to break the Apoſthume; which if they cannot do, they uſe a ſharp wooden knife, or at laſt an inciſion knife.

Others touch it with Oyl of Vitriol, which preſently breaks it, *Arcalanus* opens it with a Lancet fixed at the end of a ſtick leſt it ſhould touch other parts. *Faventinus* commends the ſame, in theſe words; *Take a little round ſtick, & in the end of it, fix a little ſharp Iron as long as half a finger; then open the mouth, and put a ſtick between the Teeth, then let him open the impoſthume with the former Inſtrument: when it is open, let him bend forward with his mouth open, that the matter may come forth.*

Schenkius out of *Dovynetus*, uſed to break an impoſthume with the Decoction of Agarick, and confirmeth it by the following Hiſtory taken out of *Dovynetus, Apolog. lib. 3. cap. 1. A Noble Woman called* Gabriella Gouner, *Lady of* Saulton, *being taken with a Squinzie in Autumn, which*

is

is most dangerous, I remembred that I read in Aetius, lib. 15. cap. 6. *that Agarick doth destroy hidden imposthumes, or draw them forth; presently I took Agarick, and cut it and steeped it in the decoction of Althæa with the fourth part of white Wine, and Figs, and a little Ginger, with a little Syrup of Marsh-mallows, and gave it to the Lady to drink, commanding that she swallow it not down suddenly, but hold it in the mouth a little, if she would be cured: she obeyeth, and while I was talking with her, behold abundance of white stinking matter came forth of her mouth, in so much that her daughter that held the Bason fainted, the other people ran away, others came and took away the matter, others perfume the room; which done, I came to the Patient, and found her delivered from the impediment in her voyce, difficulty of breathing, and her feaver, and out of all danger.*

If the matter seem to tend to the external parts, you must open it outwardly; which *Lanfrank* saith he did with good success, *Chir. maj. doct. 2. tract. 3. cap. 5.* in these words: *Because the Chyrurgeon is much confirmed by good experience, I will tell you what befel me in the City of* Millane, *with a Lady of fifty five yeers old, which had a flegmatick Squinzie in the whol Throat, inwardly and outwardly, but outwardly it appeared most swoln, and she could neither speak nor swallow: being sent for, I felt her pulse, and found her exceeding weak; touching the part affected I found the matter very deep, and that she was more likely to be choaked, than that it should break either internally or externally: then I got ready my Rayfor, and touching the place with my fingers I found ripe matter between the Chin and the Epiglot, and there I made a deep incision, by which I drew forth a great part of the corrupt matter, but willingly left a great deal behind, for a reason known; then her breath grew better, and pulse stronger; then giving her Broath, a great deal of it came forth of the wound: then I invented a silver pipe which should pass the wound being put into the mouth, and by which she should receive her nourishment. I used Mundificatives, and Maturatives to the whol Throat and Neck, till I drew out of the wound a great piece of viscous matter, and stinking, like a Gut as long as my finger, which was condensed by heat; which taken away, the place did no longer stink, and the Patient began to cheer up: but I continued to mundifie, and after with Incarnatives and Cicatrizers, I healed up the wound, and the Patient was cured.*

Here may be related the History of *Beniven* before mentioned, of one in a Squinzy, who was left of other Physitians, and was cured by him with deep scarrification under the Jaws, and in the Neck, from whence much matter flowed.

If the Apostthume break inwardly in the Mouth, let it be clensed with Barley Water, and Hydromel (as is said.) But sometimes the Ulcer is foul, and then you must use stronger, thus made:

Take of *Scabious and Agrimony, of each one handful: Cypress nuts one dram: Flowerdeluce Roots, and round Birthwort, of each half an ounce: Mirrh half a dram: red Roses two pugils: boyl them in Hydromel to a pint; strain it, and wash the part ulcerated therewith.*

This Decoction is very good to clense an Ulcer; but if it be not sufficient, use the Collyrium of *Lanfrank*, which is wonderful.

After it is well clensed, you must endeavor consolidation with Bole-Armenick mixed with Honey of Roses for an Eclegma, with Frankinsence and Mirrh.

It comes to pass sometimes that the Inflamation decreasing, the Tumor will neither be dissolved, nor suppurated, but grow harder; in which case you must use Emollient and Suppurating Cataplasms, made thus:

Take of *Althæa, and Briony Roots, and of the wild Cucumer, of each one ounce: Mallows, Pellitory, Origan, and the lesser Centaury, of each one handful: fat Figs, six or seven: Linseed and Fænugreek, of each one ounce: Boyl them, beat them, and strain them, and then ad of the ponder of a Sallows Nest burnt, and of Album Græcum, of each three drams: Brimstone one dram: fresh Butter, and Ducks Grease, of each one ounce: Oyl of Dill two ounces. Make a Cataplasm.*

For a Conclusion, we will speak something of *Laryngotomia*, or cutting of the Throat, which Ancient Physitians mentioned, and the Modern approve and confirm by experience: As when in a desperate Squinzy when the Patient is almost choaked, an incision is made in the rough Artery, by which there is a passage for Air into the Lungs, and for vapors coming out of them. This *Avicen* alloweth, Fen. 9. lib. 3. cap. 11. *Paulus*, lib. 6. cap. 33. *Rhasis*, 3. continuentis. *Alsaharavius*, *Avenzoar*, *Albucasis*, and *Halyabbas* in their proper Chapters.

Galen sets down the same out of *Asclepiades*, in his Introduction, chap. 13. Of the Modern *Brassavolus*, comment. in lib. 4. Of *Hipp.* concerning Diet in acute Diseases, Sect. 35. saith, that he made this operation with his own hands, and good success.

But

But this is ſeldom uſed by Chyrurgeons for fear of diſgrace through the death of the Patient; for men are more apt to make the operation the cauſe of death than the diſeaſe, although the Phyſitian have been very careful, and foretold them the danger.

Moreover, In a deſperate Angina the Lungs are often affected, and full of humors, whence comes ſuffocation; and then the inciſion of the rough Artery will not profit. Which danger *Jerom Fabricius ab Aquapendente* obſerving, being a good Chyrurgeon, ſaith that he never undertook this Operation, nor any other in his time. But he confeſſeth it may be uſed, ſo that the Lungs and rough Artery be not full of filth: and he ſheweth the manner of it in its proper Chapter moſt exactly, from whence any one may take it.

The End of the Sixth Book.

THE SEVENTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Breaſt.

The PREFACE.

BY this name Thorax, *or Breaſt, we mean thoſe parts only which ſerve for breathing; for although the Heart be contained in the* Thorax, *yet the Diſeaſes thereof ſhall be ſet down in a Book by themſelves. But in this we will only ſpeak of thoſe which hinder breathing, and hurt the part of Reſpiration; as Aſthma, Pleureſie, Peripneumonia, or Inflamation of the Lungs, Empyema, and Phtyſis; and we have ordained proper Chapters for each of them.*

Chap. 1. *Of* Aſthma, *or Difficulty of Breathing.*

THe Breath is hindered by divers Cauſes, either by ſympathy, or propriety of part.

The hinderance of breathing by propriety called *Idiopathica*, comes from the Lungs diſtempered, and therefore every Diſeaſe of the Lungs hurts their action, which Diſeaſes are either in the ſubſtance of the Lungs, or in the Veſſels thereof.

In the ſubſtance of the Lungs come inflamations, pimples, impoſthumes, ulcers, and ſomtimes a drying, and atrophy of the part; ſomtimes a ſerous watery humor is ſuckt into the ſpungy ſubſtance of the Lungs, and hinders their free dilatation; ſomtimes, though ſeldom, there is a ſchirrus, a ſtone, or hard ſwelling in them.

In the Veſſels of the Lungs, there are often obſtructions, which hindering the free paſſage of the Air, cauſe difficulty of breathing.

Breathing is hindered by ſympathy or conſent from other parts, which are not only neer, but remote, ſo the Membrane that goeth about the ribs being inflamed, or the Diaphragma, or Mediaſtinum, the breath is hindered. So by cuſtom there is a great and often breathing when the heart is inflamed, as in Feavers; and on the contrary, when the Heart is cold, as in dying men, it is diminiſhed and

and ceaſeth; the ſame happeneth in ſwouning or ſyncope, when the action of the Heart, and conſequently Reſpiration ceaſeth.

So in the Empyema, or Dropſie of the Breaſt, when matter or water is collected in the Cavity of the Thorax, the Dilatation of the Lights, and Reſpiration is alſo hindered.

So the Muſcles of Breathing being hurt, hinder Reſpiration, as in wounds and tumors of them, eſpecially in an Apoplexy, when the influence of the Animal Spirits is kept from them.

Moreover, The Inflamation of the Muſcles of the Larynx makes difficulty of breathing in a Squinzy.

So alſo the Diſeaſes of the Hypochondria do hinder Reſpiration by conſent, as tumors of the Liver, Spleen, Sweetbread or Pancreas, do by their weight draw down the Diaphragma to which they are joyned, and ſo hinder the motion of it. Alſo vapors and wind ſent from thoſe parts compreſs the Diaphragma, and hinder its action, from whence comes a flatulent Aſthma. The ſame happeneth by the abundance of wind or water contained in the belly of an Hydropical man, and compreſſing the Diaphragma. Laſtly, Vapors coming from the Mother hinder Reſpiration, from whence this diſeaſe is called, Suffocatio Hyſterica.

Among the aforeſaid hinderances of Reſpiration, the Aſthma is handled by it ſelf, becauſe the other depend upon other Diſeaſes; they ſhall be mentioned in their places.

Although Aſthma uſed generally, comprehendeth in a large ſignification, all kinds of difficulty of breathing; yet it ſignifies more ſpecially that ſhortneſs of breathing which comes from the ſtuffing of the Lungs, and the obſtruction of the Bronchion, or Griſtles of the Wind-pipe; which of its ſelf eſſentially is without a Feaver, although ſomtimes it be joyned therewith. And again, it is ſubdivided into three other kinds; as firſt, *Dyſpnœa*; the ſecond called alſo *Aſthma*; the third *Orthopnœa*.

Dyſpnœa is a difficulty of breathing, in which the breath is drawn oftener and thicker, from the ſtuffing of the Lungs. This is leſs than Aſthma, or Orthopnœa, becauſe the matter obſtructing is leſs, and it rather ſtops the ſubſtance of the Lungs, than Griſtles or Bronchia: hence it is that there is no ſnorting at all, which comes from the commotion of the humors contained in the Bronchia, with the Air continually paſſing through.

Aſthma is a great and often breathing, in which the Diaphragma, the Intercoſtal Muſcles between the Ribs, and of the Abdomen, are violently moved, joyned with ſnorting and wheeſing. For in a true Aſthma properly ſo called, the Bronchia of the Lungs are filled with flegm, which (as is ſaid) being moved by the Air, make that noiſe.

Orthopnœa is a great difficulty of breathing, in which the Patient cannot breath but ſitting, and with the neck extended upright; and the aforeſaid Muſcles are not only moved vehemently, but alſo thoſe of the Breaſt and Shoulders.

The names *Dyſpnœa* and *Orthopnœa*, as we ſaid of Aſthma, are uſed commonly for all difficulties of breathing, which happen in Pleureſies, or Inflamation of the Lungs, or the like.

The ſame may be ſaid of *Apnœa*, which doth not only ſignifie a depravation of breathing as the former, but alſo a diminiſhing or aboliſhing thereof; and this happeneth in ſyncope, Hyſterical Paſſions, and ſtrong Apoplexies.

The humor which cauſeth an Aſthma, is for the moſt part flegm, which falls from the Head into the Lungs, and obſtructs the Bronchia or Wind-pipe. Somtimes it comes from crude and ſerous humors brought by *Arteria Venoſa* into the Lungs, and if theſe flow to the Bronchia, they produce a true Aſthma with ſnorting; but if to the ſubſtance of the Lungs, or ſmooth Arteries, they cauſe a baſtard Aſthma without ſnorting.

This kind of Aſthma, which is unknown to vulgar Phyſitians (who will acknowledg no other cauſe but a defluxion from the Head) is confirmed, not only by not ſnorting, but from the thick and turbulent Urine of the Patient at that time, eſpecially in the fit, becauſe ſome part of thoſe thick and crude humors in the Veins is ſent to the Reins and Bladder. And ſome Aſthmatical men are ſubject to ſtoppage of Urine, and when they are ſo, they are free from it. But when the fit of the Aſthma comes, the difficulty of Urine ceaſeth, becauſe the matter of the diſeaſe contained in the Veins goes from one place to another: We have alſo ſeen ſome ſubject to a flux in the Belly, who while they were ſo, were free from the Aſthma; but when that ſtopped, the Aſthma returned. Moreover, this kind of Aſthma which is without ſnorting, is ſo directly oppoſite to bleeding, that when a Vein is opened in the fit, as ſoon as it bleedeth, the Patient begins preſently to breath better, and in the end, or after a little ſpace, they are cured of their fit. And finally, theſe kind of Aſthmatical men, are for the moſt part of an ill habit of body, and have an œdematous humor in their feet, which ſheweth that the cauſe of the Aſthma at that time came from the Liver, and is contained in the Veins, ſo that ſomtimes a Dropſie followeth in many. Hence *Aretæus* reckoneth a wind in the Midriff, and belchings, without reaſon among the ſigns of an Aſthma at hand, which certainly do come from a crude matter moved in the Midriff.

That flatulent matter doth of its ſelf ſomtimes produce another kind of Aſthma, which is called

Asthma flatulentum, or *Hypochondriacum*; when many thick vapors rising from the Hypochondria, do compress the Diaphragma, and hinder its motion, whence comes great difficulty of breathing, without snorting.

The Knowledg of this Disease, and its kinds, may be by what hath been said.

In a Dispnœa, the breath is thick, without noise or anhelation, and with less trouble.

In an Asthma the Breast is more heavy, the Breath thicker and quicker, with anhelation, snorting, and wheesing.

But in Orthopnœa, the Patient cannot breath but with his neck upright, and if they lie down, they are ready to be choaked.

The Signs of the Causes are these:

If Asthma come from gross humors gathered in the Lungs, the difficulty of breathing comes by degrees, by little and little, and is continual.

But if Humors come at a distance from other parts into the Lungs, the difficulty of breathing is not continual. For albeit Asthma which comes from matter contained in the Lungs, useth to be encreased by external causes, as Anger, Southernly winds, and the like; yet in Asthma which comes from matter flowing from another part, the encrease is more manifest. If this matter come from the brain, there is a manifest Catarrh; but if no signs of a Catarrh appear, you must conjecture that the matter comes by the Veins to the Lungs, and the swelling of the feet, and evil habit of body called *Cachexia*, is a sign that the Liver is affected.

If a thick humor be contained in the Bronchia of the Lungs, the Respiration is with noise and cough; as also by spitting the disease ceaseth, or is diminished.

If the Humor be in the Veins, or substance of the Lungs, there is no noise, and there is seldom any spitting by Cough.

As to the Prognostick. An Asthma is a Chronical disease, and very hard to be cured, and often ends in a Cachexia or Dropsie. Yong men are sometimes cured, and not without great labor, but old men never. Infants except they be speedily cured, die by a Catarrh, which followeth:

They who grow crooked upon an Asthma or Cough, die before they come to ripeness of age, because the gibbosity hindereth the convenient growth of the breast, nevertheless get their due encrease and bigness, but having not room enough to dilate themselves; from whence the heat of the Heart being not sufficiently fanned, the Patient dieth.

A Pleurisie, or Peripneumonia coming upon an Asthma, is deadly, because the Lungs being weakned by a long disease, cannot resist so great a disease coming thereupon, and expel the matter.

The Cure of the Asthma is two-fold, namely, in the Paroxysme, and out of it.

In the fit, presently you must open a Vein, a Clyster being given, if the blood do seem any way to abound: for when the Veins are empty of blood, the Respiration is more free. But if the disease be elder, and blood hath been often drawn, it is better to abstain from bleeding, because by diminishing the natural heat, it will encrease flegm.

It is good to open the Veins in the Ancles in this disease, coming by consent from other parts.

After bleeding, or if it be omitted as not thought fit, you must purge flegm, with the things prescribed in the Cure of the cold distemper of the brain, putting to them alwaies things proper for the breast as much as may be.

Vomits, although disallowed by some in this disease, yet are they most convenient, as frequent experience hath taught, and sometimes the fit is taken away with a vomit only.

Among these the chief is *Aqua Nicotiana*, or Tobacco Water, given in the quantity of an ounce; and it may be made into a Syrup with Sugar: In want whereof you may use the Salt of Vitriol, *Aqua benedicta Rulandi*. Now the reason is excellent why Vomits do so much good in this disease. For while the thin humor falling from the head insinuateth it self into the Aspera Arteria, and the Bronchia of the Lungs; and the thick falls into the Stomach, and is there so fixed that it can scarcely be taken away. And while the weak heat of the Stomach doth stir the matter, thick vapors are produced, which puffing up the Stomach, compress the Diaphragma, and cause difficulty of breathing. Hence it comes that when the Stomach is emptied, the fit ceaseth, or is much less. Moreover, An Asthma sometimes (nay often, according to *Sennertus*) cometh of crude humors about the Liver, and in the Veins, which are carried by the *Vena Arteriosa* into the Lungs, and compress the Bronchia, from whence cometh an Asthma. For the evacuating and revelling of these humors from the Lungs, a Vomit is very good. As also for this cause, the Remedies purging humors downward are very excellent.

The Juyce of our Flowerdeluce, doth gently move and purge downward, taken to the quantity of half an ounce, with one ounce of Hippocras, which *Platerus* in his Observations saith he hath used with good success.

You may give two ounces of the juyce of Flowerdeluce, if the former did work sufficiently.

Also

Alſo you may uſe ſharp Clyſters often for revulſion. But they muſt be given in ſmal quantities, leſt by filling the Bowels the Diaphragma be compreſſed.

You muſt alſo uſe Frictions to the inferior parts, and apply many Cupping-glaſſes thereon, as alſo to the Neck. Afterwards you muſt extenuate and diſſolve the thick humors, and diſcuſs the vapors that come from them. For which purpoſe you may give a ſpoonful of Cinnamon Water, either by its ſelf, or with Syrup of Violets: as,

Take of *Cinnamon Water two ounces*: *Syrup of Violets one ounce*; *or inſtead of that, mix with the Water one ounce of Oxymel to diſcuß the humors better.*

It is alſo profitable to give three, four, or five drops of Chymical Oyl of Sage, Roſemary, or Annis ſeeds with a little Wine; or ſprinkle therewith the Tablets of Diatragacanth frigid, and ſo let the Patient eat them.

Others commend one ſcruple of Saffron given in a ſpoonful of Wine. Alſo *Aqua Clareta* thus made is very good.

Take of *Aqua vitæ four ounces*: *Water of Colts-foot and Scabious, of each two ounces*: *Cinnamon ſix drams*: *ſtrain them through an Hippocras Bag. Let him take two or three ounces.*

Tobacco taken in a pipe hinders the fit; ſo doth the Leaf chewed: and alſo the ſmoak of Cloves in a pipe.

In the mean time you muſt uſe expectorating Medicines, which bring forth the thicker matter upwards. As,

Take of *the Syrup of Horehound, Liquoris, and Coltsfoot, of each two ounces*: *Oxymel ſimple one ounce. Mix them, and let him lick it by little and little.*

Take of *waſhed Turpentine one ounce*: *Ammoniacum two ſcruples*: *Flower of Brimſtone one ſcruple*: *mix them into ſoft pills, of which let him take one every ſecond hour with half an ounce of the Syrup of Hyſop.*

Take of *the Oyl of ſweet Almonds new drawn without fire ſix ounces*: *Sugar Candy two ounces*: *Mix them for a Lambitive.* Or

Take of *candied Elicampane three drams*: *Sugar-candy half an ounce*: *Syrup of Hyſop and Horehound, of each one ounce*: *Ammoniacum diſſolved in Aqua vitæ half a dram. Mix them for a Lohoch.* Or,

Take of *Conſerve of Violets and Elicampane, of each ſix drams*: *the pouder of the Electuary Diatragacanth frigid, Diaireos Solomonis, of each one dram*: *Syrup of Violets and Maidenhair, of each as much as will make a Lohoch.*

Take of *Althæa Roots one pound*: *Elicampane four ounces*: *Quinces, or Marmalet thereof, ſixteen ounces*: *boyl them in Water till they are dry*: *Beat them and ſtrain them, adding two pints of Honey*: *boyl them again gently. Take them from the fire, and ad of Cinnamon one dram*: *flower of Brimſtone half an ounce*: *Liquoris perfumed with Muſk and Roſe water two drams. Make a ſoft Electuary*; *of which let him hold now and then as much as a Hazel nut in his mouth*: *'tis alſo very good to take half an ounce thereof morning and evening, when the fit is off.*

Alſo you muſt anoint the Breaſt with Mollifying and diſcuſſing Oyntments and Liniments, thus made:

Take of *the Oyl of Chamomel, Flowerdeluce, and ſweet Almonds, of each half an ounce*: *freſh Hens greaſe, one dram*: *the Pouder of Marſh-mallow roots and Flowerdeluce, of each one dram*: *the meal of Linſeed and Fœnugreek, of each two drams*: *Gum Ammoniacum diſſolved in Wine one dram and an half*: *Wax, as much as is ſufficient. Make a Liniment.* Or,

Take of *the Mucilage of the ſeeds of Quinces, Line, and Fœnugreek drawn with Scabious and Coltsfoot Water, of each ſix drams*: *the Pouder of Flowerdeluce root and Hyſop, of each half an ounce*: *Saffron one ſcruple*: *Oyl of Lillies and ſweet Almonds, of each two ounces*: *Wax as much as will make a Liniment.*

If the fit be long, clap a Veſicatory to the hinder part of the head.

Out of the fit you muſt ſtop the Defluxion, and alſo cut, clenſe, and expectorate that which hath fallen into the Lungs.

For ſtaying the defluxion, all thoſe Remedies are good which were mentioned in the cure of the cold Catarrh.

But you muſt take a Caution concerning ſome of them.

Firſt, In Apozems, Syrups, or the like, you muſt not make them two hot and dry, which by conſuming of the thin parts, may make the remainder thicker, and ſo the Diſeaſe will be worſe, But you muſt rather mix moiſteners, as Raiſons, Figs, Liquoris, Jujubes.

Secondly, Inſtead of Head Medicines, you muſt uſe things fit for the Breaſt, above mentioned.

Thirdly, For the Derivation of the Humors that abounds in the Head, uſe Errhines, Sternutatories, Gargariſms, or Apophlegmatiſms: Which laſt are not ſo proper, by reaſon of the neerneſs of the

part

part by which the humor runs to the Lungs. But Errhines and Sternutatories may be uſed ſafely.

Fourthly, To ſtrengthen the Head, and dry it, Fumigations are there commended; which are not ſo proper in this, eſpecially if taken in at the mouth and noſtrils, becauſe they make the breath ſhorter, and bring the fit. But with them you may air the Patients Caps, without, from the Chamber.

For to cleanſe and expectorate the thick Humors that ſtick to the Bronchia of the Lungs, the Medicines already mentioned, or theſe following, may be uſed.

Take of *Elicampane root, and Polypody of the Oak, of each half an ounce: the Leaves of Origan, Calamints, Hyſop, Savory, Maidenhair, Scabious, and Coltsfoot, of each one handful: the ſeeds of Marſh-mallows, and Cotton, and Carthamus, of each three drams: Liquoris and Raiſons ſtoned, of each ſix drams: Jujubes, Sebeſtens, and fat Figs, of each five, make a Decoction to a pint and a quarter of Hydromel; diſſolve in the ſtraining a pound and a quarter of white Sugar; make a Syrup well boyled, for a Lambitive.*

You may make a better and cheaper Syrup thus.

Take of *Elicampane Roots three drams: Spaniſh Tobacco one dram: infuſe them a whol night in ſix ounces of Aqua Vitæ: in the morning ſtrain them, and ad of the beſt Sugar four ounces; ſtir it well upon the fire, and ad of the ſyrup of Eryſimum or Coltsfoot two ounces: Oyl of Sulphur as much as will make it ſharp: make a Lohoch.*

Theſe following are proper for to unſtuffe and cleer the Lungs.

Take of *Ammoniacum, and Bdellium, diſſolved in Vinegar of Squills, of each half an ounce: Flower of Brimſtone three drams: the leaves of Coltsfoot and dryed Savory, poudered, Diaireos ſimple, of each half a dram; with ſyrup of Hyſop and Oximel of Squills make a maſs of Pills; of a dram whereof make ſix Pills, and let him take three of them two hours before ſupper twice in a week.* Or,

Take of *Aloes Succatrine, half an ounce: Myrrh and Ammoniacum, of each half a dram: Saffron half a ſcruple: Flower of Brimſtone half a dram: with the ſyrup of Coltsfoot make a maſs of Pills, of which let him take a dram two hours afore dinner for ſome dayes.*

Let the Water which is taken out of a hollow Briony Root, be diſtilled in *Balneo Mariæ* to eight ounces, whereof mix half an ounce of Spirit of Vitriol or Sulphur, let him take every day a ſpoonful faſting.

Take of *Tobacco Leaves, Hyſop, white Horehound, and Maiden-hair, of each two handfuls: the Roots of Flower-de-luce and Liquoris of each half an ounce: boyl them to a pint and an half, diſſolve in the ſtraining of white Sugar one pound, of the beſt Honey half a pound: make a ſyrup: well boyled, clarified, and perfumed, with a little Saffron and Cinnamon, let him take a ſpoonful or two every morning.*

The Oximel and Syrup of Tobacco invented by *Quercetan*, preſcribed in his Diſpenſatory, is of the ſame vertue.

The Tincture of dry Tobacco is drawn with Aqua Vitæ, a little thereof mixed with Honey, and that held in the Mouth as big as a Peaſe or Bean, ſwallowing it by degrees, this draws Flegm in abundance from the Stomach and Lungs.

Hogs Lice, called Millepedes, or Aſelli, in number twelve, put into a linnen Cloth, are to be ſteept in white Wine, and then ſtrained and ſo given to be drunk, and do in a ſhort time cleanſe the Lungs.

Oleum Sacchari doth powerfully diſſolve thick glutinous Humors in the Lungs, and cauſeth expectoration: But the Compound Oyl following is beſt.

Take of *the Roots of Flower-de-luce, and Elicampane poudered, of each half an ounce: the Pulp of Dates and Raiſons, of each three drams: Citron and Orange peels, of each one dram and an half: Benjamin two drams: Saffron one dram: infuſe them two dayes in the ſpirit of Wine well rectified: then take of the liquor by inclination, diſſolve as much Sugar Candy poudered as you can therein, then fire the ſpirit of Wine ſtirring them continually till it comes to a liquor as thick Oyl, then mix as much Oyl of Sulphur as will ſharpen it.*

A Decoction of Red Coleworts taken many dayes with a little Sugar, doth help the Aſthma.

But the Juyce of Red Coleworts with Sugar of Roſes, or Syrup of Coltsfoot, taken in form of a Julep for many dayes is better.

The Spirit of Sulphur doth diſſolve ſlymy Flegm, and open the Bronchia if four or five drops are taken in Broth, or convenient Syrup.

Turpentine is much Commended for this uſe, given often to two or three drams with the Oyl of ſweet Almonds or Conſerve of Violets, or you may make it into the form of an Opiate thus.

Take of *Turpentine well waſhed in Coltsfoot Water one pound: fat Figgs half a pound: Penides four ounces: Oyl of ſweet Almonds one ounce: mix them into an Opiate.*

Saffron in Sawce is good for the Breaſt; alſo a Junket made of Muſtard ſeed and Honey doth expectorate.

Oxymel

Oxymel allo with Agarick taken two ſpoonfuls in a morning, doth purge the Lungs.

The flower of Brimſtone made into Pills with freſh Butter, given three daies together to one ſcruple, doth much help the Aſthma. *Lac Sulphuris* doth the ſame better in eight grains, which is the greateſt doſe.

Alſo theſe Tablets following are excellent.

Take of *the pulp of Marſh-mallow roots, and of the greater Comphry, of each two ounces: flower of Brimſtone two drams: the flower of Benjamin half a dram: Sugar diſſolved in white Lilly Water eight ounces: make Tablets, which let the Patient hold often in his mouth.*

The Decoction of an old Cock is commended, and it is thus made:

Take of *the Roots of Elicampane, and Flowerdeluce, of each half an ounce: Hyſop and Horehound dried, of each ſix drams: Carthamus ſeeds one ounce: Annis and Dill ſeed, of each two drams: Liquoris and Raiſons ſtoned, of each three drams: the pouder of Fox Lungs prepared two drams. Beat them, and fill the belly of an old Cock therewith; then boyl him in fifteen pints of Water till his fleſh comes from his bones. After it is well ſtrained, ſet it in a cold place that the thickeſt may ſettle, and the thin may be taken off; of which let the Patient take ſix ounces with one ounce of Oxymel ſimple.*

If you will make it purging, you may ad two or three drams of Senna for every doſe, or half an ounce of Manna. Or if you will have it ſtronger, you may ſomtimes put in ſome Electuary that purgeth flegm.

Platerus prefers the following Preparation of a Cock before the reſt:

Take *an old Cock, kill him, pull him, and draw him; ſtuff him with theſe things following: Fox Lungs freſh, or prepared and dried, one ounce: Raiſons ſtoned, and Figs, of each two ounces: Elicampane one dram: Hyſop, Savory, Horehound, Thyme, Calaminth, Penyroyal dried, of each one dram: Fennel and Annis ſeed, of each one dram: Carthamus ſeeds bruiſed and Polypody, of each half an ounce: white Tartar one dram: Salt half an ounce: two yolks of Eggs: freſh Butter half an ounce: Cut them and bruiſe them, and ſew them into the Cock, boyl him till his fleſh comes from his bones in a large veſſel with ſo much Water as you may need to ad no more: then ſtrain it, and put to ten pints, one pound of pure Honey that it may not quickly corrupt. Let him take a Porrenger full every morning; in which let him diſſolve Manna and new drawn Caſſia, of each half an ounce, continuing it for a month and longer; which will be the better, if preſently after he take a dram of Turpentine with Penides in form of a Bolus, or otherwiſe.*

Ludovicus Septalius in his Practical Obſervations condemneth theſe Cock-broths as unprofitable, or hurtful: His Reaſons are, Becauſe they do not anſwer Experience, and have been uſed in vain by him and other Phyſitians of *Millane*. For by long boyling, the nitrous parts (by which thoſe Broths are thought moſt to profit) do ſettle, and are loſt in the ſtraining: but the ſlimy, glutinous, thick, and fatty, from the skin, feet, wings, muſculous and nervous parts do remain. Hence the matter is made thicker, and leſs fit to be expectorated.

But *Septalius* his Experience, muſt not be preferred before ſo many famous Phyſitians Experience, both old and modern. For if it did not profit ſome which he and others have cured, many other things might hinder, as namely, the evil diſpoſition of the Patient, and contumacy of the diſeaſe, or other things not well ordered which concerned the Cure, or the Medicine it ſelf not well made. And whereas he ſaith, that the nitrous parts do fall to the bottom by long boyling, and are loſt in the ſtraining, it is ridiculous; for only the Earthy parts do ſettle, but the nitrous part once taken into the liquor, is never ſeparated. Hence it is that the longer you boyl Broth the Salter it is. But this Salt doth cut, extenuate, and open, it is ſo far from incraſſating being ſalt. Neither hath the fleſh, or other parts of a Cock, ſuch a glutinous ſubſtance as he imagineth, as you may find in Neats feet, or Calves feet, but rather an attenuating quality, becauſe it is full of nitrous ſubſtance. And if purging and altering Medicines be made according to the Precepts of Pharmacy and Art, they do leave all their ſtrength in the Decoction, becauſe dayly Experience teacheth us that ſuch Broth of an old Cock doth purge. And if we may oppoſe our Experience to that of *Septalius*, we can truly ſay, that we have found admirable effects of theſe Broths in violent Aſthmaes and Chollicks. But this we uſe to alter in theſe Broths; We give many draughts in a day leſt it ſhould be ſpoiled by keeping. But this is the Example of what we preſcribe in this diſeaſe:

Take of *the Roots of Elicampane and Flowerdeluce, of each one dram and an half: Hyſop and Coltsfoot, of each one handful: Liquoris and Raiſons ſtoned three drams: fat Figs four: Senna three drams: Polipody of the Oak and Carthamus ſeeds bruiſed, of each half an ounce: Annis ſeeds one dram and an half: Boyl them with the third or fourth part of an old Cock: make a Broth for twelve or fifteen daies.*

By this Purging Wine following, *Platerus* cured a Woman of a Dyſpnœa, inclining to a Dropſie:

Take

Take of *Flower-de-luce-Roots one ounce*: *Elicampane, and Squills prepared, of each half an ounce*: *Horehound one handful*: *Elder Bark and Danewort, of each one dram*: *Senna one ounce and an half*: *Agarick two drams*: *Ginger one dram*: *Shake them well together, and ad of Wine four pints, boyl them a little*: *She drank hereof six dayes together when she went to Bed, the Dyspnœa ceased, the Tumor vanished, and she was finely Cured.*

But we must observe that we repeat Purging often in this Disease, under divers formes, lest nature should be used too much to one Medicine: So Clensing, Cutting, and Expectorating Medicines, and the rest are to be alterated for the same reason.

Chap. 2. *Of* Pleuritis, *or a Pleurisie.*

A Pleurisie is either True; or Spurious, called a Bastard Pleurisie.

A True Pleurisie is the Inflamation of the Membrane that goeth about the Ribs of the internal intercostal Muscles.

But a Bastard Pleurisie is the Inflamation of the external intercostal Muscles.

There are also other pains of the Side and other parts of the Breast which are improperly called a Bastard Pleurisie.

When the *Mediastinum* is inflamed, the Lungs cleave to the ribs, [illegible] when serous humors flow from the Head to the Membranes of the Breast, or when Wind doth tear the Muscles or Membranes of the Breast, or vapors rising from the Stomach, as in the Worms.

We have said that in a true Pleurisie not only the Membrane Pleura, but also the internal Muscles are inflamed, because it is impossible but the Inflamation of the Membrane should be communicated to the contiguous Muscles.

Besides, Others do affirm that the Lungs are inflamed in every Pleurisie, and confirm their Opinion by Authority, Reason, and Experience: The Authority is that of *Hippocrates*, *lib. de loc. in homine*, where he saith, That a Peripneumonia is when both parts of the Lungs are inflamed; but if only one part be inflamed, it is a Pleurisie. Also Reason may seem to confirm this, for the signs of a Pleurisie are also the signs of Peripneumonia; namely, a Cough, continual Feaver, difficulty of Breathing, and spetting of Blood.

Also the Prognostick and Cure is the same in both.

They say moreover, That they have found by experience in the opening of those who have died of Pleurisies that their Lungs appeared alwayes to be inflamed.

It is to be granted that in many the Lungs are affected as wel as the Pleura, for the Defluxion may easily fal upon both; because the Lungs are fastened to the upper part of the Pleura: but we must avouch that often the Pleura alone is only affected, and not the Lungs: or at least they are so lightly affected, that the Disease cannot be said to be an affect of that part. The Authority of *Hippocrates* in this, is cast off by some as false, and contrary to many of his own Assertions, in which he acknowledgeth the Pleura only as the part affected; especially in his 1. *lib. de morbis.* where he often saith, That Choller and Flegm do stick to the side, and cause vehement pain. But *Mortianus* doth reconcile this; saying, That *Hippocrates* speaks in that place of a Peripneumonia which comes of a Defluxion from the Head, a portion whereof fals upon the Pleura, and he cals it by the name of a Pleurisie, that he may distinguish that which inflameth one part of the Lungs, from that which inflameth both: For the same nature of a Disease being in both the Pleurisie and Peripneumonia, makes the likeness of Symptoms in both, being both from inflamation, and nearly adjoyned.

And though many who have died of Pleurisies, have been found to have their Lungs affected, it is not to be concluded that it is so in al; for the most vehement Pleurisies which use to cause Death, do many times turn into a Peripneumonia. But many do witness, and we have found by experience, That in many bodies dead of Pleurisies, the Pleura only hath been found putrified.

It may be questioned, Why the Pleura, rather than other Membranes, should be inflamed? But the Answer is from *Hippocrates*, 1. *de morb. text.* 124. according to the Division of *Salius*, where he saith, That the side is a very weak part, because it is naked from flesh in respect of other parts, and hath nothing to rest upon; therefore when the humors are moved and inflamed, their Defluxion is easily sent thither.

The matter Causing a Pleurisie is for the most part Chollerick Blood which doth easily penetrate a thick Membrane; As *Avicen* speaking of a Pleurisie, saith, Except the Humor be thin and Chollerick it cannot pierce into the Membrane. Other Humors may also Cause this Disease so they have a serous Chollerick Humor mixed with them for a Vehicle: I say other Humors not Excrementitious but Natural, which are contained in the form of blood, and are called either blood it self, or blood that is waterish, or melancholly.

But

But you muſt note, that thin Humors make a true Pleuriſie, and thick, a Baſtard Pleuriſie.

Now this blood is carried by the Veſſels which nouriſh the Breaſt, eſpecially the *Vena Axillaris*, and *Azygos*; and if it offend either in quantity, quality, or motion, it is caſt upon the Membrane and Muſcles adjoyning.

The Difference of Pleuriſies is taken from the part affected, and the Cauſes.

In reſpect of the place of the pain, it is divided by *Hipp. 2. acutor.* into an aſcending Pleuriſie, namely, when the pain reacheth more to the Throat; and a deſcending Pleuriſie, when it goeth down to the Hypochondria. Sometimes it is extended more towards the back, of which *Hipp. 3. de morbis* makes mention; and ſometimes it comes more forward.

In reſpect of the Cauſe and the Humor offending, it is called either Sanguineous, coming of blood, Chollerick, Phlegmatick, or Melancholick.

There is alſo another excellent Difference made by *Hippocrates*, 1. *acut.* where a Pleuriſie is divided into a dry and a moiſt Pleuriſie. A dry one is that in which there is little or no ſpitting, not only in the beginning, but continuance of the Diſeaſe; of which there are divers Cauſes, as the Crudity of the matter, the thickneſs and ſlimineſs thereof, the weakneſs of the faculty, the obſtruction of the Bronchia, or the vehemency of pain. But a moiſt Pleuriſie is that in which there is abundance of ſpittle, from the beginning of the diſeaſe.

The Diagnoſis or knowledg of this Diſeaſe, is by the ſigns, as ſaith *Galen*, 5. *de loc. aff. cap.* 8. and elſwhere; who reckoneth Five.

1 A pricking pain of the ſide.
2 A continual ſharp Feaver.
3 Difficulty of breathing.
4 A hard pulſe like a ſaw.
5 An often troubleſom Cough.

A pricking pain is chiefly in the Membranes, and comes from a Chollerick matter, and this pain poſſeſſing the ſide, ſtretcheth it ſelf into the parts adjacent, one while to the Throat, another while to the Hypochondria, by the continuity of the Membrane, which covers the whol Cavity of the Breaſt. By this ſign a Pleuritis is diſtinguiſhed from a Peripneumonia, in which there is no pain, or very little of the ſide, except it be joyned with a Pleuriſie.

A continual ſharp Feaver hath its original from a Flegmon or Sanguineous tumor in ſome part neer the Breaſt, and therefore is ſymptomatical: although ſometimes an eſſential Feaver be joyned with a Pleuriſie; and gives it ſometimes a being, for it often happeneth in the beginning of continual Feavers, that the blood boyling in the veins is expelled by Nature unto ſome part which is moſt fit to receive it; as the ſides, and there it breeds an Inflamation. The ſign of this is, That the Feaver firſt ſeizeth upon the Patient, and the ſecond or third day after the pain is in the ſide. But when the Feaver is ſymptomatical, then the pain in the ſide comes firſt, but the Feaver a little after.

Difficulty of breathing doth neceſſarily follow in this diſeaſe, becauſe the parts inflamed cannot ſufficiently diſtend themſelves to draw in a great quantity of Air, which is requiſite for the cooling of an inflamed heart.

The Pulſe is hard becauſe the Membrane is affected, and ſtretched forth, which alſo diſtendeth the Arteries, and they therefore make that difference of pulſe, called *Serratilis*, like a ſaw; for when you lay many fingers upon the Arteries of the Pulſe, one part ſeems to be more lifted up than the other, ſo that it ſeems to repreſent a ſaw.

A troubleſom Cough follows a Pleuriſie, becauſe Nature doth continually ſtrive to expel that which is troubleſom from the part affected: as alſo ſome of the matter ſweateth from thence into the Lungs, which moveth the expulſive faculty, whence the Cough cometh.

There is alſo a ſpitting of blood as another ſign, which is neither in al Pleuriſies, nor at al times of the Diſeaſe; therfore it is not reckoned as a proper ſign. They who ſay that the Lungs are alwais affected in a Pleuriſie, do affirm that the blood is ſpit from the Lungs, and they deny that it can paſs from the Membrane about the Ribs to the Lungs, becauſe it is very thick; and alſo the Membrane about the Lungs is of the ſame Nature, and cannot therefore be pierced by that blood which is without the Veſſels. But *Galen* doth cleerly confute theſe, 5. *de loc. aff. cap.* 3. where he firſt ſhews that the matter contained in the Cavity of the Breaſt may be taken into the Lungs, and be ſent upwards, by two cleer Examples. The one is of thoſe who have received a wound in the Breaſt that pierceth into its Cavity; for if an injection of Honey and Wine be made into the wound, and it be preſently cloſed at the orifice, in a little time the injection will be coughed up and ſpit forth, and the Patient wil have the taſte of it in his mouth. Another Example is taken from a Fracture of a bone, when the skin is not broken; which while the Callus is growing, and the broken bones begin to glutinate, that blood which flowed to the part affected is carried forth to the skin, and goeth through it, ſo that it moiſtneth and fouleth all the rowlers and ligatures about the part. *Galen* alſo ſhews the manner how blood, matter, or the like, being contained in the Cavity of the Breaſt may be taken through the lungs,

namely, by the extream outward orifices of the Bronchia or branches of the rough Artery, which are ſpread through the Lungs, and end in the ſuperficies of them.

Although the orifices of the Vein Arterial, and Artery Venal are alſo carried to the ſuperficies of the Lungs, yet the orifices of the Bronchia are more large and open than they. For by how much greater the Body or Trunk of the rough Artery is, than the Trunk of the Venal Artery, or Arterial Vein, by ſo much the greater are its branches than theirs; and its orifice than theirs; becauſe all theſe Veſſels are equally divided and diſtributed into the whol body of the Lungs. Moreover, the ſubſtance of the rough Artery, and its Bronchia or branches, are Cartilaginous or griſly, from whence it is that they cannot cloſe together ſo much as other Veſſels; and their orifices are more conſtantly open, by which they can better receive the matter from the Cavity of the Breaſt.

But *Galen* teacheth that the matter contained in the Breaſt is taken through at the time of breathing, when the Thorax is ſtraightened; for then the Thorax doth preſs thoſe things that are in the Cavity of it, and drive them into the Lungs, ſo that ſome part of them at leaſt is carried into the orifice of the Bronchia. Neither is the ſoftneſs of the Lungs, which yeild to a compreſſion, and therfore cannot be forced to receive the matter, any hinderance. For this ſoftneſs is the cauſe why all the matter is not received; yet it is no obſtacle but ſome part thereof may be received in, although the greateſt remain in the Cavity by reaſon of the ſoftneſs aforeſaid. Let us ad to this Doctrine of *Galen*, the wonderful providence of Nature, which hath found out waies, not only manifeſt, but alſo unknown, and ſomtimes incomprehenſible, by which ſhe uſeth to expel things hurtful; as we ſaid of the matter in Fractures, which is purged forth by the inſenſible pores of the Muſcles, and of the Skin.

A baſtard Pleureſie is diſtinguiſhed from a true, in that the pain is encreaſed when the Patient lieth on the contrary ſide, in a true Pleuriſie; for then the part inflamed is pulled, and more diſtended by its own weight; but in the other, the Muſcles external being inflamed, are compreſſed when the Patient lieth on the ſame ſide, and therefore he hath then greater pain.

The times of this Diſeaſe, are known by theſe ſigns following:

In the beginning of it, all the ſymptomes are weaker, the pain and feaver ſmal, there is a dry Cough, and very little and crude ſpittle: In the encreaſe of the Diſeaſe, the feaver and pain encreaſe, and there is more ſpittle. In the ſtate or height the ſymptomes are more vehement, want of reſt, dotage, pain of the Head; and if the diſeaſe will be cured, there is much concocted ſpittle eaſily raiſed. In the declination, the ſpittle is perfectly concocted, a free ſpitting, and decay of all ſymptomes.

The ſigns of the Cauſes, are generally taken from the temper of the Patient, the time of the yeer, the Country, the Diet, and the like. But eſpecially theſe things ſhew that a Pleuriſie comes of pure blood, red and bloody ſpittle, a ſtretching and pricking pain, the fulneſs of the Veins, eſpecially about the Forehead and Temples, redneſs of the whol face, a full Pulſe, thick and red urine, ſomtimes with a blew crown.

Theſe ſigns ſhew that it comes from Chollerick blood, yellow ſpittle, a burning feaver, great thirſt, a hard and quick pulſe, a more acute pricking pain, greater watchings and reſtleſneſs, bitterneſs of the mouth, a thin and very yellow urine.

Theſe ſigns ſhew that it comes from Flegmatick blood, a white, viſcous, or frothy ſpittle, ſweet and ſlow in coming forth, a remiſs feaver, little thirſt, much ſpittle, a leſs, but heavy pain, more ſleep, a little pulſe, and not ſo hard, pale and thick urine.

Theſe ſigns ſhew that it comes of Melancholick blood, blak ſpittle, tough and ſlow in coming forth, a leſs pain and feaver, a red urine and dark, a dry Cough, a black and rough tongue, a belly bound.

The Prognoſtick is taken firſt from the remiſſion or vehemency of the Symptomes. For if pain, difficulty of breathing, and a feaver be not great, they ſignifie that the diſeaſe is gentle; but if the pain be great, and the Cough, and there is nothing raiſed up, and if the feaver be violent with great difficulty of breathing, you muſt look upon it as a deſperate Pleuriſie.

A ſmal pulſe, quick, and hard, foreſhew death in a Pleuriſie. And *Galen* ſaith that none of this have been cured; *Gal. 4. de præſag. ex pulſ. cap. 5.*

An exquiſite Pleuriſie in which nothing is raiſed by Cough, or when with the ſpitting after it began, is reſtrained, having ſtill the pain and weight in the ſide, is moſt dangerous. For it ſignifieth a very crude diſeaſe, which will either ſhortly kill, or be long in cure.

If the ſpitting begin with the firſt, or within three daies, it ſignifieth the diſeaſe will be ſhort; but if it begin late it will be long. *Hipp. Aph. 1. Sect. 5.*

Yellow Choller mixed with flegm or a little blood, appearing in the beginning of the diſeaſe with much ſpittle, is a ſign of recovery.

Very bloody ſpittle is dangerous; for it ſignifieth a ruption, either of a Vein, or of the fleſh; from whence we expect ſuppuration: For it is thought that little blood doth breath through.

White,

White, glutinating, and round ſpittle, is evil, for the clammineſs comes from the fiery heat which burneth the matter.

Green and ruſtick ſpittle, is evil, but black worſt of all: For it ſignifies the greateſt aduſtion or extinction of the Natural heat.

A plentiful ſpitting which doth not abate the pain and other ſymptomes, is evil: For it ſignifieth great plenty of matter.

A Pleuriſie in old men, women with child, and in them that are Aſthmatical, or have twice or thrice had the ſame diſeaſe, is dangerous.

Whoſoever hath the diſeaſe in the ſide called Pleuriſie, and are not cleanſed of it in fourteen daies, have an Empyema, or collection of matter; Aph. 8. Sect. 5. Others do extend it to the twentieth day.

A Diarrhœa, or looſneſs coming upon a Pleuriſie or Peripneumonia, is evil; Aph, 16. Sect. 6. which we muſt underſtand of a Pleuriſie, in which there is ſo great an inflamation that the Liver and Stomach conſent therewith, or when the ſtrength is ſo gone by the diſeaſe that the retentive faculty is almoſt ſpent. But if the Pleuriſie be not ſo great, and be in a body full of evil humors, the flux of the belly uſeth then to be healthful, eſpecially if any ſigns of concoction went before.

A Chollerick and plentiful vomiting in the beginning of a Pleuriſie ſignifieth health to come: For Nature being eaſed by that evacuation of Choller, doth more eaſily overcome the diſeaſe.

If a Peripneumonia comes from a Pleuriſie, 'tis evil; Aph. 11. Sect. 7. For it is the tranſlation of the matter to a more noble part.

If the pain in the Pleuriſie, and the Chollerick ſpitting, go away without reaſon, the Patient falls mad. *Hipp.* 3. *Prorrhet.* For the Choller is carried into the Head, and then the urine looks thin and white.

A Pleuriſie which followeth an old diſeaſe, or is in a body of evil habit, is dangerous.

Thick bodies uſed to exerciſe, do ſooneſt die of Pleuriſies and Peripneumonia's, as *Hipp. in Coac.*

And Experience teacheth us that almoſt all the Diggers taken with Pleuriſies, do die thereof: Becauſe ſuch ſtrong bodies fall not ſick, but upon ſome great cauſe, and by reaſon of their thickneſs they cannot eaſily ſweat, ſo that the diſeaſe cannot breath forth.

They who in a Pleuriſie have much noiſe in their Breaſt from the ſpittle, and their countenance dejected, with yellowneſs in their Eyes, and miſts; in theſe death is to be expected, *Hipp. in Coac.*

They who in Pleuriſies have Chollerick tongues at the firſt, are judged in ſeven daies; but they who have not much Choller upon their tongue til the third or fourth day, are judged about the ninth day.

For the Cure of a Pleureſie, firſt the humor cauſing it is to be revelled, derived, and diſcuſſed, and if it cannot wholly be diſcuſſed, it muſt be digeſted, maturated, and expectorated; as alſo the Feaver which is commonly eſſential to a Pleuriſie, and not alwaies ſymptomatical, is to be cured by proper Medicines. All which may be done by the following Remedies.

And firſt you muſt (after a Clyſter, if the diſeaſe be not very violent) open the Baſilica on the ſame ſide; but if it be violent, give the Clyſter afterwards.

You muſt bleed every day till the pain or feaver grow leſs; nay, ſometimes twice in a day, if the Pleureſie be very violent.

Hippocrates in his 2. *lib. de ratione victus in acutis*, *Text.* 10. gave an excellent rule to poſterity moſt profitable in practice, That blood be let till the color of it change: For if at the firſt or ſecond time, it appear crude, flegmy, or watery, it is to be continued every day, ſometimes twice a day till it appear red or yellowiſh. But if it appear red in the beginning, you muſt bleed ſo often till it become livid or black, for that will ſignifie, that the laſt blood came from the part affected, or the neighbor Veins, which is altered by the part inflamed, and of crude is made red, or of red, black or blew by aduſtion.

Although the obſervation of that Rule bring commonly good ſucceſs, yet ſometimes you muſt not expect that change of color, but deſiſt from bleeding; namely, when the ſtrength is little, or the Patient is of a thin habit of body eaſily diſſolved, or the weather very hot. And although blood-letting is excellent in the beginning of the Diſeaſe, yet if it be omitted, or done inſufficiently, you may open a Vein after the ſeventh, ninth, or eleventh day, according to the Example of *Hippocrates*, who in 3. Epidem. opened a vein for Anaxion in the eighth day, either becauſe he was not ſent for ſooner, or becauſe that it was a moſt crude Pleuriſie, which will ſcarce concoct till the eleventh day.

But when he expectorateth freely, then you muſt abſtain from Phleboromy, which will ſtop his ſpitting, and bring him in danger of his life.

But blood-letting is ſo neceſſary in the beginning of this Diſeaſe, that it muſt never be omitted, neither in old nor yong, nor women with child, in child-bed, or having their terms; unto all which Experience hath taught us that Phlebotomy is good in this Diſeaſe. Yet you muſt obſerve ſome

Rules in bleeding of women in Child-bed, or having their Terms, which you may find hereafter in the Fifteenth Book, and the laſt Chapter, concerning the Cure of acute Diſeaſes in women that lie in.

From the beginning of the diſeaſe twice or thrice in a day, you muſt give cooling Juleps, which reſtrain the heat and boyling of the humor, and ſtop the defluxion; thus made:

Take of *Poppy Water four ounces: Syrup of Violets, or Poppies, one ounce: Sal prunella one dram. Make a Julep.*

After the firſt Phlebotomy let the ſide be anointed with this Liniment, covering the part with greazy wool ſewed into a linnen cloth.

Take of *Oyl of Lillies, Chamomel, and ſweet Almonds, of each one ounce: freſh Butter, and Hens greaſe, of each one ounce and an half. Make a Liniment.*

Many put Wax to theſe Liniments, which is not good, becauſe it ſtoppeth the pores; but the mutilaginous bodies do not, becauſe they cool and aſtringe.

In a malignant peſtilential Pleuriſie, you may ad to your Liniments, Oyl of Scorpions of *Mathiolus*, or a little Treacle.

After the ſecond bleeding, you muſt apply this Fomentation, made thus:

Take of *Althæa roots, and Lillies, of each two ounces: the Leaves of Mallows, Violets, and Pellitory, of each one handful: Line and Fenugreek ſeeds, of each one dram: the flowers of Chamomel, Melilot, Elder, and Violets, of each one pugil: Boyl them together, with which foment the ſide that is pained in a Hogs bladder.*

After Fomentation apply the Liniment aforeſaid, to which in the progreſs of the Diſeaſe, you may ad more diſſolving Oyls; as of Dill and Flowerdeluce; as alſo the pouder of Flowerdeluce and Saffron. And to the Fomentation ad diſcuſſing Herbs, as Origan, Calaminth, Hyſop, and the diſcuſſing ſeeds.

Many other Topicks are very profitable againſt Pleuriſies, which Authors relate; as theſe:

Firſt, anoint the part with Oyntment of Marſh-mallows, then lay on the pouder of Cummin ſeed, or a Colewort Leaf heat at the fire, and anointed with the ſame.

Faventinus mixeth the Oyntment of Althæa with Oyl of ſweet Almonds, and after he hath anointed, ſprinkles on the pouder of Cummin ſeeds, and laieth on a Colewort Leaf; and this he commends highly.

Alſo the Cataplaſm following is very profitable.

Take the *Reſidency or Ingredients of the Decoction above mentioned for a Fomentation; beat them in a ſtone Morter, adding of the Oyl of ſweet Almonds, Lillies, and Chamomel, of each two ounces: Hens greaſe one ounce: Barley and Bean flower, of each as much as is ſufficient to make a Cataplaſm.*

Alſo a live Hen ſlit through the back, and ſprinkled with the pouder of Flowerdeluce roots, being applied doth very well.

The Paunch of a Sheep laid hot to the part is a very good Anodine: but the Lungs are better.

The Chymical Oyl of Wax being mixt with the Liniments, aſſwageth pain, and powerfully diſcuſſeth the matter.

Hot Bread from the Oven, dipt in freſh Butter, and applied, doth very much diſſolve the matter fixed to the ſide.

After he hath taken twice or thrice of the Julep aforeſaid, you may uſe Pectoral Juleps thus made:

Take of *Barley one pugil: Liquoris and Raiſons ſtoned, of each one ounce: Jujubes twenty: the four great cold Seeds, of each three drams: Bugloſs and Violet flowers, of each one pugil: boyl them to a pint and a quarter. Diſſolve in the ſtraining, Syrup of Violets and Jujubes, of each two ounces. Make a Julep for four doſes to be taken morning and evening.*

Or if the Feaver be very ſharp, and much watching, you may make the Emulſions following:

Take of *Almonds blanched, and ſteeped in cold Water, one ounce: the four great cold ſeeds, of each half an ounce: Lettice and white Poppy ſeeds, of each two drams: beat them in a marble morter, powring on by degrees, the Decoction of Barley and Liquoris one pint and an half: ſtrain it and diſſolve in it Syrup of Violets three ounces. Make an Emulſion for three doſes to be taken morning and evening.*

Some Practitioners in want of ſleep give Narcoticks; as Syrup of Poppies, *Philonium Romanum*, and Laudanum, which are dangerous in this diſeaſe: for they ſtop ſpitting, and aſtringe and ſtrengthen the Breaſt. From whence often times comes ſudden death.

But this muſt be underſtood of the whol doſe of Narcoticks: for given in a very ſmal quantity they do good in vehement pain, a thin defluxion which cauſeth a Cough, and in want of ſleep. In which caſes I have often given one grain of Laudanum with good ſucceſs, and ſomtimes often. But the uſe of this is moſt proper in the beginning of the diſeaſe; for then the humor flowing to the part may be reſtrained,

reſtrained, and the encreaſe of the Diſeaſe hindered.

When the Cough is violent, and Nature begins to evacuate by ſpitting, let the Patient hold often in his mouth Sugar of Roſes, Sugar candy or Penides, or the Tablets of Diatragacanth frigid, Syrup of Violets and Jujubes. Or this Eclegma following:

Take of *Sugar candy, and Penides, of each one ounce: the pouder of Diatragacanth frigid two drams: Syrup of Violets and Jujubes, of each as much as will make a Lohoch; which let him take often with a Liquoris ſtick, or make it of Butter, Honey, and Sugar, of each equal parts: the Oyl of Linſeed, or of ſweet Almonds, being freſh drawn without fire, mixed with Sugar, doth much help the Cough and pain in the Pleuriſie, eſpecially if it be drunk in Broth, or any other Decoction.*

If the ſpittle be thick, you muſt mix ſome attenuating and cutting Medicines, as Syrup of Colts-foot, Liquoris, Oxymel ſimple, pouder of Diaireos, and the like.

You muſt take theſe lying with the face upwards, for ſo they better go to the Lungs.

As the Diſeaſe encreaſeth, you may uſe this reſtoring Medicine to ſtrengthen.

Take of *Conſerve of Violets one ounce: Conſerve of Borrage flowers, and Bugloſs roots, of each half an ounce: Confection of Alkermes two drams: pouder of Diamargariton frigid, and Diatragacanth frigid, of each one dram: Sugar of Roſes as much as all the reſt. Make a Compoſition covered with Gold to be taken often with a ſpoon.*

Purging is improper in a true Pleuriſie, except it be in the declination; and then you may appoint thus:

Take of *Senna half an ounce: Annis ſeeds one dram: Bugloſs and Maiden-hair, of each half a handful: Liquoris and Raiſons ſtoned, of each three drams: the flowers of Bugloſs and Violets, of each one Pugil. Boyl them to two ounces: in the ſtraining, diſſolve of Rhubarb infuſed in Scabious Water with a little yellow Sanders, four ſcruples: the beſt Manna, and Syrup of Roſes, of each one ounce. Make of theſe a Potion.*

In the whol time of the diſeaſe, let him take Barley Water for his ordinary drink, made with Liquoris, Poppies, and Maiden-hair; and let not his drink be actually cold, for it would hurt the Breaſt. Wine in this Diſeaſe is Poyſon, and alſo all ſharp things which provoke Coughing, and by their aſtringency hinder ſpitting.

In the declination of the Diſeaſe, after purging, and when the Feaver is leſs, if the pain continue, you may apply to the part, Cupping-glaſſes with Scarrification two daies together. They may alſo be applied before the declination, after often bleeding: And if the pain ſtill encreaſe, and return, you may again let blood, and after Cup with Scarrification.

Zacutus Luſitanus having taken off the Cupping-glaſſes, applied ſix Horſeeches with good ſucceſs, as he witneſſed, *obſerv.* 104. *lib.* 1. *Praxis admirandæ.*

For the ſame purpoſe to diſcuſs the reliques of the matter, having firſt tried Fomentations and Liniments, you may apply with benefit, the Emplaiſter of Brimſtone, and Bay-berries.

Beſides vulgar Medicines, there are ſome proper and ſpecifical, namely the ſhavings of a Boars Tuſk, the aſhes of the Pizzle of a Bull or Deer, the flowers of red Poppies, or Corral prepared.

Quercetan in his Diſpenſatory commends an Apple made hollow, and one dram of Frankinſence put therein and roaſted, which the Patient muſt eat, and drink three ounces of Carduus Water after, then cover himſelf warm, and ſweat. He will have this Medicine uſed after the third day, and affirmeth that many have been reſtored therewith.

The flowers of Box-tree do ſo much purge the Blood, that if a dram of them in pouder be given with Poppy Water, and a Vein opened an hour after, the blood will continue pure.

Hart-dung diſſolved in Carduus Water, and ſtrained, doth powerfully diſperſe the pain, and the humor in the Pleuriſie.

White Hen-dung given in a dram of the ſame Water, doth as much.

Theſe Dungs have much Volotile Salt, which is very piercing and diſcuſſing.

You may make a Potion of them both thus:

Take of *Hemp ſeed one ounce: bruiſe them, then put to them, of the white Dung of a Hen, and of Horſe Dung, of each half an ounce: diſſolve them in five ounces of Carduus Water; ſtrain them, and drink it.*

The Blood of a wild Goat given to ten drops with the aforeſaid Water, doth powerfully diſcuſs the Pleuriſie: In the want thereof, you may give the blood of a tame Goat. But becauſe the ſtrength of him is little, you may give thereof to the quantity of one dram. You muſt prepare it thus:

Hang up the Goat by the Horns, and bend his hinder Legs backward to his Horns, then cut out his Stones, and take the Blood in a broad Veſſel; dry it in the Sun in Summer, or at other times upon an Oven. It is far different from the Goats Blood in the Shops.

The

The Soot of a Chimney given to a dram is very good, but much rather the ſpirit of Soot, deſcribed by *Hartman* in his Practice of Phyſick.

In an Epidemical Pleuriſie, Sudoroſicks are to be given, ſuch as are preſcribed in malignant Feavers, which alſo ought to be made as proper for this Diſeaſe as may be.

A Diarrhœa coming upon a Pleuriſie is dangerous: therfore you muſt give Syrup of Myrtles, which doth ſtay the Diarrhœa, and alſo expectorate: and this is to be mixed with other Syrups. Let the Belly and Reins be anointed with aſtringents, as uſeth to be done in all Diarrhœa's. Give Clyſters made of Barley Water, which, as *Galen* ſaith, doth cool and aſtringe if it be boyled with red Roſes, and alſo Yolks of Eggs be diſſolved in it.

Chap. 3. *Of* Peripneumonia, *or Inflamation of the Lungs.*

Peripneumonia hath the ſame eſſence with a Pleuriſie, and is diſtinguiſhed only by the part affected, becauſe that is the inflamation of the Lungs, and this of the Membrane that compaſſeth the Ribs. They differ ſomwhat in the matter, for a Pleuriſie comes often of Choller, but a Peripneumonia of Flegm; although all humors (as we ſaid of a Pleuriſie) may produce this diſeaſe, I mean humors which are like blood, and make up the maſs of it. For as thick humors do hardly penetrate the thick Membrane called *Pleura*, but thin and Chollerick eaſily; ſo on the other ſide, thick flegmatick humors do eaſily go to the ſoft and thin ſubſtance of the Lungs, and ſtick cloſe thereto; but thin and Chollerick humors do eaſily paſs by. But this hindereth not, but the Chollerick blood may ſometimes cauſe the inflamation of the Lungs, as *Hippocrates* 1. *de morbis*, deſcribeth the Eryſipelas, or Chollerick tumor of the Lungs, which comes from Chollerick blood thrown into the Lungs from the right Ventricle of the Heart by the Arterial Vein. But an oedematous Inflamation comes from flegmatick blood falling upon the Lungs by way of defluxion from the Head. But only excrementitious flegm, falling as a Catarrh from the Brain, can make a Peripneumonia, becauſe it putrifieth in the Lungs, and attracteth blood, by the mixture whereof there is an inflamation, and this often happeneth in old folk. *Meſue* ſaith that this Peripneumonia comes rather of Choller, becauſe the Lungs are nouriſhed with Chollerick blood which cometh in great plenty to them by the Arterial Vein. To whom we anſwer, that freſh, thin, and ſteeming blood made in the right Ventricle of the Heart is carried into the Lungs, which by reaſon of its purity, is eaſily governed by Nature, and is ſent by the Venal Artery to the left Ventricle of the Heart, and it ſeldom is altered from its Natural condition, which uſeth to make a Peripneumonia. But contrarily, a defluxion from the Head cutting through the large paſſages into the Bronchia of the Lungs, if it there putrifie, will draw blood unto it, and make a Peripneumonia.

This Peripneumonia is ſometimes alone without another diſeaſe, ſometimes it followeth other diſeaſes, as Squinzy or Pleuriſie. *Galen* in Com. 11. Sect. 7. Aphor. teacheth that a Peripneumonia doth follow a Pleuriſie two waies: Either when a Pleuriſie is turned into a Peripneumonia, or when an inflamation of the Lungs followeth a Pleuriſie. This tranſmutation is when the former diſeaſe ceaſeth, and the other comes; but it comes upon it when it is white, the former remaineth.

Therefore the immediate internal cauſe of a Peripneumonia is blood, often flegmatick, ſeldom chollerick, and moſt ſeldom melancholick. Which either comes from the whol body being plethorick, or cachochymical, that is, full, or of evil habit; or from ſome part which is replete or diſtempered.

The External Cauſes of Peripneumonia and Pleuriſie are the ſame; namely whatſoever defluxion can come to thoſe parts: the chief whereof are: Firſt great exerciſe and violent motion of the Body, eſpecially after long reſt, and high feeding. For then the humors abounding from high diet, and kept in by long reſt, by exerciſe are diſperſed, attenuated, and heated, and are after ſent to the weaker parts, moſt fit to receive them, among which the Breaſt and Lungs are chief, becauſe by ſtrong exerciſe, there is cauſed great and often breathing, and ſo they become wearied, and the ſubſtance of the Lungs being ſoft and looſe can eaſily receive the humors coming to them.

Secondly, Among the external Cauſes the cold and Northernly Air is reckoned, when it comes ſuddenly after a Southern and warm; for the pores are opened by warm Air, and the humors are more fluid, which by the cold Air coming after, are compreſſed, and the humors ſent to the weak parts.

Laſtly, From *Hipp. lib.* of Air, Places, and Waters, the drinking of ſtanding Pools and Lakes, begets the Peripneumonia; for ſaith the Divine old man, we obſerve diſeaſes of the Lungs to be moſt in Marſhy Countries.

Alſo

Alſo the Signs of a Peripneumonia do agree with the ſigns of a Pleuriſie. Two are the ſame, as a ſharp Feaver, and a Cough; which ſomtimes is dry, ſomtimes moiſt, or with more Flegmatick ſpittle coloured with Choller or Blood; and in the progreſs of time, the ſpittle becomes Mattery when the matter of the Diſeaſe grows ripe, and concocted by heat, which ſomtimes comes to paſs when the ſubſtance of the Lungs is not hurt; for if they ulcerate, a Conſumption wil follow.

So we may obſerve, That in ſore Eyes that are Mattery, the humors are converted into Matter when the ſubſtance of the Eye is neither ſuppurated, nor ulcerated.

The other ſigns differ in reſpect of the part affected; the difficulty of Breathing is greater than in a Pleuriſie by reaſon of the narrowneſs of the part inflamed, ſo that the Patient ſeems to be chouked and cannot breath but with the head upright: For the part cannot be compreſſed by reaſon of the extention and repletion, nor be more dilated, although it be much dilated, yet it takes in but little Air, therefore the reſpiration is quick and often, with ſnorting: This is augmented by a Feaver by which the breath is hotter, and the deſire of cold air is greater.

The Pulſe is great, faint, and ſoft by reaſon of Flegm and the looſeneſs of the Lungs: yet there is ſome hardneſs by the Choller and blood: it is unequal from the impreſſion of the Artery neer the Heart, and in thick Humors moſt: Somtimes it is intermitting, watery, vermicular, when the Lungs are rotten by too much moiſture.

There is a heavy pain that reacheth from the Breaſt to the Back, ſomtimes it is between the Shoulders, and ſomtimes under one only Shoulder, and from thence communicated to the Throat and Pap: Eſpecially in a Cough, ſomtimes they feel no pain til they begin to Cough: ſomtimes there is alſo a pricking pain in the ſide when it is joyned with a Pleuriſie as it often happeneth: Although the Membrane that covers the Lungs be of the ſame nature with the Pleura, as *Galen* taught 4. *de loc. affect. cap.* 5. Yet there is not ſo great pain in a Peripneumonia as in a Pleuriſie, for two Differences which are laid down by *Galen* in the place afore-cited.

The Firſt is, Becauſe the Nerves that go to the Membrane of the Lungs, are few and very little; but they which go to the Pleura, are many and great.

Th Other is, Becauſe the Breaſt conſiſts of Bones and Fleſh, which wil not be ſtretched, from whence the pain is greater.

But the Lungs are ſoft and yeilding, and therefore their pain is leſs.

There is Redneſs in the Cheeks, by reaſon of the hot vapors which fly into the head and carrying with them the thinner blood. And this Colour is moſt in the Cheeks, becauſe their skin is thinneſt.

There are beſides theſe ſigns, Heavineſs, Weakneſs, and a Toſſing, with great ſenſe of Heat in the whol Body.

The Tongue is Yellow, and then it groweth Red; a great thirſt, ſwelling of the Eyes, and of the veins of the Temples.

There is a Delirium, or Doting, when it comes from Choller; and a Coma, when it comes from Flegm.

If the Diſeaſe comes of Chollerick blood, the ſpittle wil be yellow, the heat and thirſt greater, more difficulty of breathing with leſs Heavineſs; the air breathed forth is more hot: the Feaver is very violent, the Pulſe ſwift, the Delirium great, the Water thin, yellow and cleer, the age, time of the year, the Country, and Diet before, do al atteſt for Choller.

If Flegm (which is moſt ordinary) produce the Diſeaſe, the ſpittle wil be white, viſcous, and froathy; the Feaver, burning of the Breaſt, thirſt, and drineſs of the tongue, wil be leſs: the weight of the Breaſt greater; the Pulſe ſlower, and ſofter; the Age, old; Habit of body, time of the Yeer, and the Country, are cold and moiſt.

If the Diſeaſe come from pure Blood, the Spittle wil be Red; the Urin Red and Thick; the Face more Red; the Veins of the Temples more ſwoln; with heavineſs and diſtention of the whol body; and other things that declare abundance of blood.

Laſtly, If Melancholly blood be the Cauſe, the Spittle wil be black or blewiſh; the Tongue black, from the beginning dry and rough; there wil be alſo heavineſs and great ſighing between breathing; and al the ſigns of Melancholly predominating in the whol body.

The Prognoſtick of this Diſeaſe is thus to be made.

A Peripneumonia is more dangerous than a Pleuriſie; and for the moſt part deadly by reaſon of the neceſſity of reſpiration, and the neerneſs of the Heart.

Celſus ſaith, That this kind of Diſeaſe hath more Danger than Pain; and for the moſt part Killeth.

But ſtrength of Body, leſs vehemency of Symptomes, yellow Spittle, not mixed with much Blood, raiſed in the beginning; a great flux of blood at the Noſe in the Critical day; or a flux of the Belly which is Chollerick and froathy; or a flux of the Hemorrhoids or Terms, do ſhew ſome hope of recovery.

Impoſthumes

Impoſthumes about the Ears, or inferior parts, being well ſuppurated and kept open, do foretel recovery, as *Hipp. in progn.*

If a Peripneumonia be turned into a Pleuriſie, it is good, and though it ſeldom happen, as *Galen* teacheth, Comment. Aphor. 11. Sect. 7. becauſe there is a going from a Diſeaſe more dangerous, to one leſs dangerous. And this tranſmutation is known by a pricking pain of the ſide coming thereupon, and by abating the ſhortneſs of breath.

But the vehemency of the Diſeaſe and ſymptomes do declare a dangerous and deadly Peripneumonia, as want of ſpittle, continual watching, a Delirium or Coma, coldneſs of the extream parts, ſnorting with great difficulty of breathing, blewneſs and crookedneſs of the nails.

Moreover, A Peripneumonia coming upon a Pleuriſie is moſt dangerous, as *Hippocrates* teacheth, Aph. 11. Sect. 7. becauſe the tranſlation of a humor from an ignoble part, to a more noble, is evil; and the ſtrength being ſpent by the diſeaſe foregoing, can endure the force of a new, and worſe.

When the urine is thick in the beginning of the Diſeaſe, and after before the fourth day it becomes thin, death is at hand. *Hipp. in Epacis.*

The Cure of the Peripneumonia is very like that of the Pleuriſie, and there muſt be firſt bleeding as much as the ſtrength will permit, once or twice in a day till the diſeaſe abate: for ſince the Lungs are then full of blood, and draw much from the heart, which is inflamed, you need not fear to let blood thrice, four, five, or ſix times.

But if a Peripneumonia follow a Squinzy, or Pleuriſie, you may let blood more warily becauſe the ſtrength is abated by the former Diſeaſe.

You muſt let blood from the Baſilica Vein of both arms, if the whol Lungs be equally affected, or from either, on that ſide the pain is, or on which the Patient lets more weight, or from which he ſuppoſeth he raiſeth moſt ſpittle.

You muſt bleed women in this diſeaſe, firſt in the Ancle Vein, and after within ſix hours in the Arm; except it be ſo deſperate that you are conſtrained at the firſt to bleed in the Arm. In which caſe, all the time you bleed, and a little before, you muſt apply Cupping-glaſſes to the Thighs.

But after, if the ſtrength will not permit further phlebotomy, you muſt apply Cupping-glaſſes to the Shoulders and Back, both dry, and with Scarrification, as much as the Patient can ſuffer.

Alſo Emollient and looſening Clyſters are good revulſives; but you muſt not uſe too ſtrong purging Medicines therein, leſt you bring a flux of the Belly, which is moſt dangerous in this Diſeaſe.

If a crude flegmatick humor coming from the head cauſe this diſeaſe, or nouriſh it, a Veſicatory laid to the hinder part of the Head, doth very much good.

In the mean while uſe the Juleps and Emulſions preſcribed in the Cure of a Pleuriſie. Anoint the Breaſt with Oyl of Violets, ſweet Almonds, or with freſh Butter, or the like, or with this Liniment:

Take of *Oyl of Violets, and Water Lillies, of each one ounce and an half; freſh Butter and Mucilage of Fleabane ſeeds, of each one ounce: Oyl of Roſes half an ounce: the Troches of Camphire one dram. Make a Liniment.* Or,

Take of *Oyl of Violets three ounces: the Oyl of Pompion ſeeds, and Breaſt-milk, of each one ounce: freſh Butter one ounce and an half: Mix them and make a Liniment.*

You may provoke ſpitting with Syrup of Violets and Jujubes, and the reſt, preſcribed in the Cure of a Pleuriſie. As the Lohochs and Compoſitions there mentioned, given with this Caution, In a thin matter give things that thicken, and in a thick matter give things that attenuate.

Let his ordinary drink be Barley Water, with Liquoris, as in a Pleuriſie.

Purging is not good in this Diſeaſe, except in the declining of it, and you muſt make choyce of ſuch things then, as were preſcribed in the Cure of a Pleuriſie.

Chap. 4. *Of* Empyema, *or matter in the hollow of the Thorax.*

Although the word *Empyema* ſignifie all Suppuration, yet Cuſtom hath prevailed ſo that it is taken only for a Collection of matter in the Cavity of the Thorax.

Now there is a Three-fold Cauſe of the gathering of matter between the Lungs and the Thorax.

The firſt is an Inflamation ſuppurated, which happens in a Pleuriſie or Peripneumonia; and when the Impoſthume is broken, the matter falls into the Cavity of the breaſt. The ſame may be in a Squinzy, as *Hippocrates* teacheth, Aph. 10. Sect. 5. in theſe words: *Whoſoever is freed from an Angina,*

Angina, they have a Diſeaſe in the Lungs, and die within ſeven daies; but if they live longer, it comes to ſuppuration.

The ſecond is blood falling into the Thorax, where by continuance it muſt needs come to Suppuration. So *Hippocrates*, Aph. 20. Sect. 6. *If blood be ſent into the Belly beſides Nature, neceſſarily it is ſuppurated.* But this ſuppuration is not alwaies true, and properly ſo called, as *Hippocrates* teacheth, but rather to be called a corruption, of which there is matter like quitor produced. This Blood may come from a Vein wounded.

The third Cauſe is flegm falling from the Head & other parts into the Breaſt, and there putrifying. So *Hippocrates*, Aph. 38. Sect. 7. *The diſtillations into the upper Belly are ſuppurated in twenty daies.* *Galen* in his Commentaries, by the upper Belly underſtands the Breaſt. But the flegm there putrifying doth not beget a true *Pus*, or matter, but ſomthing like it; as we obſerve in flegmatick Tumors, as Atheroma, Steatoma, Melicer is, which are kinds of Impoſthumes.

The Diagnoſtick ſigns are of two ſorts: Some declare the diſeaſe to be in the beginning; others that it's old, and confirmed.

Hippocrates layeth down Three ſigns of this Suppuration, beginning 2. Progn.

The firſt is when the Feaver groweth ſtronger, becauſe the Pleuriſie, or Peripneumonia is not purged; for while the matter is turning into *Pus*, the feaver is encreaſed, *Hipp.* Aph. 47. Sect. 1.

The Second is a quaking, which comes when the ſharpneſs of the matter doth twitch the Membranous parts.

The Third is weight, and ſence of heavineſs in the part; for the humor being contained in the Cavity doth weigh heavier than when it is diffuſed. *Galen* addeth in 4. *de loc. aff. cap.* 9. fluctuation or routing: *For* (ſaith he) *if any one is forced to turn in his bed, and perceive ſomthing to flow down at that time, it is no doubt but that there is much matter contained there.* And you may often hear the fluctuation, unleſs the thickneſs or plenty of the matter, which fills the whol Cavity of the Thorax, do hinder the fluctuation. To theſe you may ad difficulty of Breathing. For although after the Impoſthume is broken, the pain of the ſide ceaſeth, and the Diaphragma and Muſcles of the Thorax move more freely; yet becauſe the Lungs are oppreſſed with matter round about them, ſo that they cannot move freely, and ſome part of the matter is ſucked into the ſubſtance of the Lungs, from whence it is that the Lungs are ſo heavy, and the Bronchia is obſtructed, thence is ſhort breathing. For the purulent ſpittle comes from the filth ſent into the Lungs and Bronchia, which ſhews an Empyema; but this is not alwaies a ſpitting of matter by reaſon of its thickneſs, which keeps it from coming to the Bronchia.

But a long lingering Feaver, partly putrid, partly Hectical, milder in the day, and ſharper at night, much ſweat, eſpecially at night, a conſtant troubleſom Cough, ſignifie that the Diſeaſe is old and confirmed; as alſo when the Cheeks grow red, and the Eyes hollow, the Nails crooked, the Legs ſwel, and Puſtuls break forth of the Breaſt by reaſon that the ſharpeſt part of the matter breaks out of the Skin; theſe ſignifie the Diſeaſe confirmed.

You may know which ſide is affected from *Hippocrates*, 2. Progn. text. 21. *If* (ſaith he) *an Empyema be only in one part, you muſt turn the Patient, and learn whether he be pained, or hotter in one ſide than the other, and to ask him if he perceives any burden to hang on the ſide that is upward, and if it be ſo, in which ſide ſoever the weight is, the ſuppuration is on the other; as if heat and weight be in both ſides, the Pus is contained in the whol Cavity of the Breaſt.* Alſo *Avicen* adds a Conjecture which he took from *Hipp.* 3. *de morb.* *Apply* (ſaith he) *a linnen cloth wet to both ſides, and that will be dry ſooneſt which lieth upon the part where the matter is contained.* We may lay down another ſign from our own Experience, which was not obſerved by Authors, namely, In the ſide affected there will be an Oedematory Tumor, from a Potion of the thinneſt matter breathing through the Muſcles of the Thorax. And when, in ſuſpition thereof there appears ſuch a Tumor, and blowing up of the skin on either ſide, you may certainly pronounce that the Empyema is there, and you may ſafely open the ſide.

The chief Prognoſtick Signs are given by *Hippocrates*, 2. Progn. Text. 63. in theſe words: *In Suppurations they chiefly eſcape, whom the feaver left the ſame day they broke; and they who preſently deſire meat, and are freed from thirſt, and have ſmel, and laudible excrements: and if the Pus be white and even, and of the ſame color, and when it is voided without pain or great Coughing. But they die whom the feaver leaveth not, or to whom ſeeming to leave them it returns again, and who are thirſty and have no appetite, have a looſe Belly, the Pus green, and livid, or frothy. They die who have all theſe ſigns: But they who have but ſome of them, ſome die, and ſome lie long ſick.*

To theſe we will adjoyn theſe following Prognoſticks.

They who have an Empyema, and by reaſon of the abundance of matter, lift up their whol Breaſt when they Breath, are quickly choaked. *Galen*, 4. *de Loc. Aff. Cap.* 7.

If an Empyema is not ſpit forth in forty daies, it turns into a Conſumption, which brings death. *Hipp. Aph.* 15. *Sect.* 5.

A Suppuration on both ſides of the Thorax, is more dangerous than in one; alſo that on the left ſide is more dangerous than on the right: by reaſon of the left Ventricle of the heart, which is more greivoutly affected with the matter gathered on that ſide.

Whoſoever are Burnt or Cut for a Suppuration, if the Matter cometh forth pure and white, they eſcape: but if it be bloody, foul, and ſtinking, they die. *Aphor.* 44. *Sect.* 7.

If the Matter flow plentifully by Stool and Urine, and the Patient continue ſtrong, it is a ſign of Recovery, although this Evacuation is very ſeldom: yet is it ſpoken of by *Galen*, *Aetius*, and *Paulus*: As alſo the way declared by *Galen* through which it paſſeth, 3. *de loc. affect. cap.* 4. and *com. in aphor.* 30. *ſect.* 3. In the firſt place he ſpeaks thus, *This queſtion doth not a little diſturbe the followers of* Eraſiſtratus, *who think that there is nothing but ſpirits in the Arteries. But we find no difficulty in it, becauſe we know that the ſmooth Artery in the Lungs, ſo much Pus as it receiveth from an Impoſthume broken, can carry the ſame into the left Ventricle of the heart, which after goes to the Reins by the great Artery.* In the laſt place, he ſaith, That the matter contained in the Lungs doth firſt come to the Ventricles of the Heart, and then to the great Artery; or by the hollow Vein to the outſide of the Liver, from thence to the inſide, and ſo to the Guts. From which you may eaſily ſee the way by which an Empyema may be purged by ſtool and urine.

If the Patient grow better, and be almoſt cleanſed, and then again raiſeth ſtinking Spittle, he dieth of that which remaineth and returneth. *Hipp. in Coac.*

For the Cure of this Diſeaſe: Firſt, if you cannot hinder the Suppuration of the matter in the Thorax, you muſt further it by convenient Cataplaſms. As,

Take of *Marſh-mallow Roots three ounces*: *fat Figs ten*: *Raiſons ſtoned one ounce*: *Chamomel and Melilot flowers, of each one pugil. Boyl them all well, then beat them and ſtrain them, then ad the flower of Line, Fœnugreek ſeed, and Wheat, of each one ounce*: *Oyl of Lillies, ſweet Almonds, and freſh Butter, and Turpentine, of each one ounce. Make a Cataplaſm.*

Alſo to help Concoction, and maturation within, you may give this following Apozeme:

Take of *Marſh-mallow Roots, and of the greater Comphry, of each one ounce*: *Agrimony, Colts-foot, Scabious, and Maiden-hair, of each one handful*: *the four great cold ſeeds, of each one ounce*: *Anniſs ſeeds one dram*: *Liquoris and Raiſons of the Sun ſtoned, of each one ounce*: *the three Cordial Flowers, and Chamomel, of each one pugil*; *Make a Decoction to one pint and an half*; *diſſolve in the ſtraining, Syrup of Colts-foot, Liquoris, and Sugar-candy, of each two ounces. Make an Apozeme perfumed with the Pouder of Flowerdeluce Root one dram*; *for five mornings draughts.*

This following Eclegma is good for the ſame purpoſe:

Take of *the pulp of fat Figs one ounce*: *freſh Butter two ounces*: *Oyl of ſweet Almonds newly drawn without fire, one ounce*: *Sugar candy two ounces*: *Starch two drams. Make a Lohoch.*

Venice Turpentine waſhed with Barley Water given to the quantity of three drams with the pouder of Liquoris, doth much profit for Maturation, Diſcuſſion, and Cleanſing.

But if the Empyema will not be ſpit up (as ſometimes it will not) you muſt come to opening of it, which you muſt do between the fourth and fifth Ribs, beginning to count from below, with many Cautions, which are elegantly ſet down by many Chyrurgions, eſpecially by *Hieronymus Fabricius ab Aquapendente*, in his Book of Manual Operations. But it is more profitable to open the Impoſthume which comes from a Pleuriſie before it break, and the Pus flow into the Cavity of the Breaſt, which is known by the Tumor which is againſt the place of Suppuration, and by other ſigns of an Empyema. And then you muſt not open it below, and between the fourth and fifth Rib, becauſe if you make an orifice far from the impoſthume, there wil no matter come forth; but you muſt open it in the middle of the Tumor, firſt applying a Cauſtick. But if no Tumor appear, it is hard to open it before the Impoſthume be broken.

But if any will try, he muſt find out the place in which the Patient finds weight, pain, and heat. And it muſt be made between two Ribs upon the higher part of the Rib, becauſe there is a Vein and Artery neer the Inferior; which you muſt obſerve in the opening of every Empyema. While the matter is taken forth by degrees, let the Patient take a Wound Drink twice a day, which will purge the blood, cleanſe the Ulcer, and hinder putrefaction: As

Take of *Sanicle, Bugle, Scabious, Bettony, St. Johns wort, Carduus, Mouſear, Burnet, Perewinkle, Agrimony, Plantane, of each one handful*: *the ſeeds of St. Johns wort, and Carduus benedictus, of each half a dram*: *Cordial Flowers one pugil*: *Boyl them in Hydromel to a pint and an half. Take ſix ounces every time.*

With this ſame Decoction Injections may be made into the Cavity of the Breaſt.

For his Drink, let him take Hydromel, or Barley Water, or Spring Water with Sugar.

If after the Breaſt is opened the matter do not flow freely, you muſt draw it forth with the following Plaiſter, which doth powerfully draw from all Impoſthumes.

Take

Take of Rozin of the Pine-tree that is freſh, cleer, and ſweet, half a pound: Oyl of Bayes and Turpentine, of each one ounce: Gum Elemi two ounces. Firſt let the Rozin and the Gum be melted and mixed; then ad the Turpentine and the Oyls, and let them boyl a little; then ſtrain them. Make a Plaiſter thereof for the part: change it once a day in Winter, and twice in Summer; cut it in two or three places that the matter may paſs through.

Chap. 5. *Of the Dropſie in the Breaſt.*

THe Dropſie in the Breaſt is like to Empyema which comes from a ſerous humor contained in the Cavity of the Breaſt. The common Practitioners do not deſcribe this Diſeaſe, although *Hippocrates* doth it excellently, 2. Lib. of Diſeaſes called dropſies in the Lungs, thus: *There is a Feaver, and a Cough, quick breathing, the feet ſwell, the Nails are contracted, and they ſuffer as they do in an Empyema, but not ſo violently, and longer; and if you powr any thing in, or apply a fomentation or fumigation the matter doth not follow; and by this you may know that it is not matter, but water that is within: and if you try a long time to diſcover it by your Ear laid to his ſide, it boyls inward like Vinegar; after that it goes into the belly, and then he ſeems to be recovered; But in progreſs of time, the belly is inflamed, and that endureth the ſame, or more: ſome ſwell in the belly, eeds, and face.* Thus *Hippocrates*.

This Diſeaſe ſeldom happeneth, it is more often than it is diſcovered, for it is not ordinarily known. Many relations of it are given by *Schenkius*, by which it appears that he never ſee it till their bodies who died of it were opened by him. Therefore we will deſcribe it exactly that a Phyſitian may not be deceived.

This ſerous humor, either may be bred in the Lungs, by the proper fault of them, as when it doth not concoct its own nouriſhment, but turneth it into Water, which by degrees is ſent to the Cavity of the Breaſt, or by bladders breaking upon the Lungs, which are mentioned by *Hippocrates* in his Book of Internal Diſeaſes, and alſo by others. Or it is ſent into the Breaſt from other parts, as from the Hypochondria eſpecially, when the Liver or the Spleen are diſtempered with a Schirrus or other diſeaſe by which much water is produced. This watery humor, is either ſent by the Veins to the Lungs which are weak, or elſe from the Cavity of the Abdomen it is carried to the Breaſt by Inſenſible Tranſpiration. Now Experience teacheth that this ſerous humor may be ſent from one Belly to another, becauſe the dropſie of the Breaſt turns into a dropſie of the Belly, and a dropſie of the belly into the Breaſt, from whence they are ſuddenly choaked.

The Diagnoſis of this Diſeaſe (as hath been ſaid) is very hard, for almoſt all the ſigns are the ſame with the ſigns of other Diſeaſes of the Breaſt. But a noiſe of Water in the breaſt, is only peculiar to this Diſeaſe, and to Empyema, which may be heard within if the body be moved to and fro, or be taken upon a ſtrong mans ſhoulders and ſhaken.

But all the Signs which we mentioned from *Hippocrates* taken together, may make a certain Diagnoſis. To which you may ad this one, as being moſt evident to ſhew the Diſeaſe, and by which the Dropſie in the breaſt is only diſtinguiſhed from other difficulties of breathing: namely, When at every firſt beginning to ſleep this difficulty of breathing cometh and hindereth it, and by night encreaſeth, and towards morning by degrees abateth.

To theſe you may ad ſomtimes, a pain of one Arm or Shoulder, which comes either from the humor falling from the Head into the Breaſt, part whereof falls into the Arm, being near, or from the water contained in the breaſt, and ſent to the Arms by the Axillary Veins of the Arm-holes; or from the Refrigeration of the Intercoſtal Muſcles, from which the Nerves are derived to the Arms, or from ſome other ſympathy by way of vicinity: For *Hippocrates* in *Coacis* obſerved this Sympathy of the breaſt and arms, *If thoſe parts or lobes of the Lungs which hang towards the right and left ſide of the Cheſt, be vehemently inflamed, ſo that they ſway or reſt upon one ſide of the Cheſt or Ribs, the watery matter breaks out on the ſame ſide of the Body where the Lungs lean or reſt.*

This is a great Diſeaſe, and hard to be cured, for they who have it have their Natural heat very weak, and their natural ſtrength alſo, from ſome great diſeaſe in the bowels: from whence it comes (that when the humor collected in the breaſt is evacuated by Medicines which is very difficult) there comes more in the place of it; from whence the diſeaſe is not only nouriſhed, but encreaſed; ſo that at length by abundance of water they fall into the Dropſie called *Aſcites*; yet in the beginning before the bowels are much hurt, it ſomtimes may be cured.

For the Cure of this diſeaſe, you muſt obſerve two Indications; namely, That the matter contained in the breaſt be evacuated, and that the breeding thereof again be hindered.

It is a hard thing to empty the water contained in the breaſt, becauſe the waies are not open by which it ſhould be brought forth. Therefore *Hippocrates* doth adviſe to open the ſide, which becauſe we never ſee practiſed, and never read in any Author that it was done with good ſucceſs, we cannot

abſolutely approve; and we may ſpeak of it as we have of the Opening or Tapping of the Dropſie, in its proper Chapter.

Therefore it is better to attempt this Evacuation with Medicines that expel Water, ſo which purpoſe al thoſe Medicines preſcribed by us in the Cure of the Dropſie, are good. Where we muſt obſerve diligently, That if when the Diſeaſe is confirmed, and much ſerous humor is gathred in the Breaſt, you give a violent Purge, thoſe humors wil be much moved, from whence there wil come a great Suffocation which wil kil the Patient: therefore be wary, and give your Medicine in a leſs Doſe, though oftener, and mix them with ſtrong Openers that purge Urin, that both the paſſages may be unſtopt, and the Matter carried to the Uritories.

Among Water Purges the Minerals are beſt, as Mercurius Dulcis, and Mercurius Vitæ ſo corrected that it may work only downward.

Alſo Diureticks alone, or Medicines to provoke Urin often uſed are good, becauſe they turn away the matter coming to the breaſt, to the bladder, and by way of Conſequence they bring it alſo from the breaſt.

Alſo Sudorificks are profitable, to the carrying away of this ſerous matter; and we ſaw a man of ſixty years old, who by the uſe of a Sweating drink made of Guaiacum and Sarſa taken fifteen days together, and by provoking ſweat with the vapor of the Spirit of Wine, was Cured.

Cauteries applied to make Iſſues in the Thighes and Legs, are alſo good to take Water from the breaſt.

You may hinder the breeding of this Water, by amending the faults of thoſe parts which ſend this Matter.

So if the Lungs be in fault you muſt apply proper Medicines unto them: if the Liver or Spleen be troubled with Diſtemper, Obſtruction, Scirrus, or the like, you muſt cure them by Medicines taken out of their ſeveral Chapters.

But thoſe things which do ſtrengthen the Vital and the Natural parts wil alwayes agree, ſuch as are preſcribed in the Cure of Weakneſs, Dropſie and Flux of the Liver.

Chap. 6. *Of* Hæmoptyſis, *or Spetting of Blood.*

ALthough uſually the word *Hæmoptyſis* doth ſignifie al manner of Spetting of blood from what part ſoever it doth proceed whether from the Breaſt, Lungs, Rough Artery, or from the Jaws, Gums, Pallat, Uvula, Brain, Stomach, Liver, and Spleen. Yet *Galen*, *lib.* 1. *decriſ. cap.* 5. ſaith, That *Hæmoptyſis* properly is taken for that ſpetting of blood which comes from the Vital parts, as the Breaſt, Lungs, and rough Artery.

It is a Symptome in the excretion of thoſe things which are wholly beſides Nature.

But ſince every Symptome depends upon a Diſeaſe as its next and immediate Cauſe: the Cauſe of this wil be either an Organical, or a Common Diſeaſe: The Organical is Two-fold; the opening of the Veſſels called in Greek *Anaſtomoſis*; and Rarefaction called *Diapedeſis*. Alſo the Common Diſeaſe is Two-fold, namely the breaking of the ſame Veſſels called *Rexis*, and the Corroſion of them called *Diabroſis*.

The Internal Cauſe immediately producing the Diſeaſes is a great quantity of blood.

Blood exceeding in quantity wil either break the Veins or open their Orifices, and ſo make either a *Rexis*, or *Anaſtomoſis*.

The ſame blood offending in quality, as when it is too hot or too thin, it wil come forth by way of *Anaſtomoſis*; but becauſe heat wil open the Orifices, and the thinneſs cauſeth it to flow more eaſily: Alſo the ſame qualities make a *Diapedeſis* or Rarefaction: for heat doth make thin the Tunicles of the Veſſels, and the thinneſs of the blood cauſeth it to flow more eaſily through the pores of thoſe Tunicles.

Laſtly, The ſharpneſs of the blood doth gnaw the Tunicles of the Veins and exulcerate them, & ſo cauſe a *Diabroſis*, or Eroſion; this alſo is cauſed by ſharp or ſalt humors which diſtil from the head, or coming from other parts to the Lungs.

Moreover, The External Cauſes do concur for the production of this Diſeaſe either mediately or immediately: It is produced immediately by a ſtroak, fal, wound, or the like; but they produce it immediately which encreaſe blood, heat and attenuate; as high and hot feeding, ſtoppage of Terms or Hæmorrhoids, too much exercite, great clamor, heat, long ſtaying in the ſun, and many others.

Moreover, External Cold may cauſe the Ruption of the Veſſels, by making their Tunicles harder and not ſo eaſily to be extended; but with this muſt be joyned ſtrong Motion, or abundance of Humors.

The Diagnoſis of this Diſeaſe is difficult in reſpect of the part from whence it comes: yet *Galen* declareth

declareth it in few words; 4. *de loc. affect. cap.* 6. namely, blood coming from the Gullet and Stomach is put forth by vomit; when it comes from the Vital parts, by Cough: from the Jaws and Weazand, by Hawking: from the Mouth by ſimple ſpetting, which wants a more cleer explication when blood comes from the head to the inner parts of the Weazand and the Jaws, it comes forth by Coughing, and ſo it doth when it comes from the breaſt; and therefore it is not diſtinguiſhed by this ſign.

Moreover, When blood coming from the Lungs or Breaſt is brought out by Coughing: There are other neceſſary ſigns from which the parts affected may be diſtinguiſhed.

Firſt therefore when blood comes from the head, although it ſometimes cauſe Coughing; yet the greateſt part thereof is put forth by Hawking, and there is a tickling in the Pallat as in a Catarrh: as alſo when you look into the Pallat it appeareth to be foul, and bloody; and it is more confirmed to be from the Head if at that time the Noſe bleed.

When the blood comes from the Lungs, it is diſtinguiſhed from that which comes from the Breaſt by *Galen* in the place mentioned; for that which comes from the Lungs is froathy, in greater plenty, and without pain: but from the Breaſt, it is black, little, and with pain.

But it may be objected, That blood coming from the breaſt is carried by the Lungs, and by conſequence is froathy, becauſe it is mixed with the air taken in, as that which comes immediately from the Lungs.

And *Avicen* ſaith, That blood from the breaſt is froathy: I Anſwer, That it is one thing to ſpet ſome froath mixed with the blood; and another thing to ſpet nothing but froath, which only comes from the ſubſtance of the Lungs.

Therefore you may obſerve Three degrees of froath: for it is either wholly froathy from the fleſh of the Lungs, which it reſembleth, for the Lungs are but a congealed froath; or it comes from the Veſſels of the Lungs and is very froathy: or it is mixed with froath and comes from the breaſt.

But the moſt certain ſign that it comes from the Lungs is taken from the pain, which is fixed and continueth where the ſolution of continuity is.

And you muſt obſerve, That blood is ſometimes ſent from the Liver, Spleen, Matrix, and other parts into the Lungs and ſpet forth: ſo that the Breaſt is not primarily, but ſecondarily affected; which thing is hardly to be diſcovered.

But we may conjecture of it, namely if any of the aforeſaid parts be troubled with pain, inflamation, or any other diſtemper, and there neither is, nor hath been, any other fault in the breaſt.

You may find out the ſigns of the Cauſes from what hath been ſaid: For if blood be brought by the Anaſtomoſis of the Veins, there went before ſome Cauſe that opened the mouth of the Veſſels, then blood is thrown forth in a pretty quantity and without pain. But if it come forth by Diapedeſis or Rarefaction, then is it wateriſh, little, and without pain.

When it breaks forth by Rixis, or Eruption, it is very much; if a Repletion went before, or any External Cauſe that might break the Veſſels.

Laſtly, If it comes by Diabroſis, or Corroſion of the Vein, there went before ſalt and ſharp diſtillations from the head: The blood is ſalt, and ſharp, and ill coloured; and ſome Cauſes of ſharp humors were formerly: in the beginning there is but little blood, but after when the Corroſion is greater, then is much blood ſpet forth, and at laſt there is a ſpetting of Matter.

Hippocrates, Aphor. 25. Sect. 4. doth lay down the Prognoſtick of this Diſeaſe, as what kind of blood ſoever is ſpet out of the mouth from any part below, it is evil: for every opening of a veſſel which letteth blood come forth ſo, is dangerous; eſpecially in the Lungs; concerning which his Aphoriſm chiefly ſpeaks.

But ſometimes ſuch ſpetting of blood may be without hurt; namely, When Nature by a critical Motion doth purge the ſuperfluous blood by thoſe waies. And it is obſerved, That Women which have had their Terms ſtopt have without harm at certain times ſpet blood from their Lungs by the Anaſtomoſis of the veins.

In reſpect of the Cauſes. Diapedeſis or Rarifaction is leſs dangerous than Anaſtomoſis; Aperſion and Eruption is moſt dangerous; for unleſs it be healed within three or four dayes there cometh an inflamation, which being ſuppurated produceth an Ulcer, from whence cometh a Conſumption: Whence *Hippocrates* ſaith, Aphor. 15, & 16. Sect. 7. That from ſpetting of blood there followeth ſpetting of Matter, and from ſpetting of Matter a Phthiſis or Conſumption.

But *Diabroſis* or Corroſion is moſt dangerous; and *Galen* ſaith, That it is incurable by reaſon the Ulcer that followeth it is incurable.

The Cure of *Hæmoptoe* or ſpetting blood, is wrought by Revulſion of blood from the Lungs by correcting the evil quality thereof, and cloſing the vein that is opened, by aſtringing and conglutinating means.

Firſt therefore let blood from the Arm on the ſame ſide on which you find heavineſs or pricking, in a ſmal quantity often, and at a diſtance for the better Revulſion.

After that, open the vein in the Foot, and ſo you wil make a Revulſion to a further diſtance, and this

this will be more profitable if the diſeaſe come from obſtruction of the Terms. If the Patient be ſubject to the Hemorrhoids, you muſt open them with Horſ-leeches.

Alſo apply Cupping-glaſſes with Scarrification to the ſhoulders and back, or without Scarrification to the Groins and under the Ribs. Rub and bind the extream parts, and in all the time of the Cure, at ſome diſtance apply often thoſe Cupping-glaſſes to the Hypochondria, or under the Ribs.

And let him take the following Julep thrice every day.

Take of *Plantane and Poppy Water, of each two ounces: Syrup of dried Roſes one ounce: Lapis Prunellæ one dram: Mix them for a Julep.*

Laſtly, You muſt often purge the ſerous and Chollerick humors which make the blood more thin and fluid with Medicines that have an aſtringent Vertue: As,

Take of *Rhubarb one dram: yellow Myrobolans half a dram: Tamarinds half an ounce: Infuſe them in Plantane Water; ſtrain it and diſſolve in it Powder of Rhubarb half a dram: Syrup of dried Roſes one ounce. Make a Potion.*

Then give Medicines that cloſe the Orifices of the Veſſels by an aſtringent quality, but ſuch as will not retain the blood in the Breaſt by too much aſtriction; therefore mix ſometimes with them ſuch as diſſolve and expectorate the congealed blood which is out of the Veſſels.

Of all which theſe following are the beſt:

Take of *Bole-Armenick, Terra Sigillata, both ſorts of Coral, Blood-ſtone, of each half a dram: Sugar of Roſes half an ounce. With one white of an Egg well beaten with Roſe Water, make a Lohoch.*

Or you may make one more ſpeedily, and more pleaſant thus:

Take of *the Water of the white of an Egg well beaten two drams: Sugar of Roſes one ounce: white Starch three drams. Mix them for a Lohoch.* Or,

Take of *Conſerve of Roſes, and the greater Comfry, of each one ounce: Bole-Armenick and Terra Sigillata, of each one dram: With the Syrup of dried Roſes make an Opiate to be often held in the mouth, and ſwallowed by degrees.*

Take of *Conſerve of dried Roſes, Troches of Amber, and of ſealed Earth, of each half a dram: prepared Pearls one ſcruple: Sugar of Roſes as much as of all the reſt. Mix them and let him take a ſpoonful thereof one hour before meat.*

Take of *the Juyce of Purſlain twelve ounces: Sugar eight ounces: Boyl them to a Syrup, of which let him often lick.*

This is the beſt for ſpitting of blood. And if you want Purſlain, you may take Plantane.

The Syrup of Comfry according to *Fernelius*, preſcribed by *Bauderon*, is good for the ſame.

Take of *Yarrow with the white Flower: and yellow Flower, of each two handfuls: Green Roots of Tormentil, with the Leaves if they may be had, otherwiſe of the dry, one ounce: the greater Burnet one handful: Conſerve of red Roſes half a pound: ſpring Water ſixteen pints: put them in a glaſſed pot covered and luted, that the vapors may not come forth: then boyl them in* Balneo Mariæ *ſixteen hours; keep the ſtraining in a glaſs, and take ſix ounces thereof every morning, noon, and night.*

Take of *the Troches of Amber one dram: Plantane and Roſe Water, of each one ounce and an half: Syrup of Mirtles and dried Roſes, of each half an ounce. Mix them for a Julep.*

Take of *Spirit of Vitriol half a ſcruple: Plantane Water four ounces. Mix them for a Potion.*

This preſently ſtops blood coming either by Cough or Vomiting.

Two ſpoonfuls of Syrup of Coral taken every day, is good againſt all manner of bleeding. But the Tincture of Coral drawn with Juyce of Lemmons, is more powerful.

Quercetan in his Diſpenſatory, preſcribeth this following Water againſt ſpitting of blood, which is very excellent.

Take of *the Roots of Snakeweed, Comfry, and Tormentil, of each one ounce: Knotgraſs, Yarrow, Veronica, Winter-Green, Sanicle, Shepheards-purſe with the Roots, of each one handful: Bramble tops, and Maſtich wood, of each half a handful: Sumach and Myrtle berries, the ſeeds of Plantane, Barberries, and white Poppies, of each ſix drams: the flowers of Water Lillies, Guords, Quinces, and red Roſes, of each two pugils. Bruiſe them and mix them; then ſteep them four daies at the fire in the Juyces of Plantane, Purſlain, Sorrel, and Agrimony, of each two pints: then ſtrain them well, and put to them Acacia and Hypociſtis, or Conſerve of ſloes, of each two ounces: ſealed Earth, Bole-Armenick, of each half an ounce: the Electuary of Diatragacanth frigid, two drams: then macerate them again four daies, and diſtill them. Take two or three ſpoonfuls of this Water alone, or with ſome proper Syrup.*

The

The Chymical Oyl of Amber doth pierce, aſtringe, and dry powerfully, if you give two drops thereof in Plantane Water: As *Ceſalpinus* teacheth in his *Speculum Artis Medicæ*.

Mercurialis in his conſultations doth highly commend the ſeeds of white Poppies, or white Henbane to be taken every morning in the quantity of a dram, with Sugar of Roſes and Syrup of Purſlane: So you may alſo uſe the white Diacodium or Syrup of Poppies preſcribed in the Cure of the Phrenzy.

Amatus Lucitanus doth highly commend the Juyce of Nettles, in theſe words: *They which have vomited blood, after they have been given over by Phyſitians, have been cured only by the juyce of Nettles drunk five or ſix daies faſting, in the quantity of four ounces, and by Nettle Broth.*

Sanguis Draconis doth wonderfully conglutinate all inward Veins, if you give half a dram thereof with Plantane Water, or other proper Liquor, or Medicine.

The uſual Pills to hold under the Tongue, may be made thus:

Take of *the Mucilage of Gum Arabick and Tragacanth, drawn with Plantane Water, of each two drams: Mummy and Maſtich, of each one dram: Sugar of Roſes as much as will make Pills, of which let him hold one continually in his mouth.*

And take this following Pouder in his Broths.

Take of *red Coral and prepared Pearl, of each half a dram: Gum Arabick and Tragacanth, of each two drams. Make a Pouder.*

Or boyl white Poppy ſeeds and Sumach tied in a clout, in his Broth.

Narcoticks are good in this caſe, and you muſt uſe them thus:

Take of *Syrup of Poppies, Jujubes, and dried Roſes, of each one ounce: Mix them, and take a ſpoonful every night.* Or,

Take of *Syrup of Poppies and Purſlain, of each three drams: Terra Sigillata half a dram: Purſlain and Plantane Water, of each one ounce and an half. Make a Potion to be taken at night.* Or,

Take of *Syrup of Myrtles and Poppies, of each one ounce: Bole-Armenick half a dram: mix them to be taken at night.*

Sometimes you may give Treacle of four months old, as *Galen* teacheth, 5. Method. cap. 13. or *Philonium Romanum*, or *Laudanum*.

Platerus reports that he cured one, only with the Troches of Winter Cherries, with Opium diſſolved in Goats milk, taken ſome daies; and alſo that he cured a Woman with one ounce and an half of Manna given in Broth, and with blood, and the uſe of the Tablets following, morning and evening for many daies.

Take of *the Seeds of white Henbane poudered finely two ſcruples: red Coral half a dram: Gum Arabick one ſcruple: new Violets ten: the Juyce of Barberries two drams: Sugar diſſolved in Roſe and Plantane Water, two ounces. Make Tablets.*

Trallianus, lib. 7. cap. 1. doth highly commend the Blood-ſtone, by which he ſaith that he cured many, giving it to four ſcruples, with the Juyce of Pomegranate, or Knotgraſs; but to them who bled not much, he gave it with warm water. But he ſaith you muſt ſift it well, give it often, that it may better be diſtributed, and in Wine.

Antony Valerius exercit. ad cap. 27. lib. 1. *Hollerij* de morb. internis, reports, that he cured, when all means failed, by this Pouder, which he had from *Julius Scaliger*.

Take of *Spodium, red Roſes, Bole-Armenick, Terra Sigillata, and Blood-ſtone, of each half an ounce: red Coral, Amber, and Pearls not perforated, of each two drams and an half: Gum Arabick and Tragacanth of each two drams: the ſeeds of Purſlain, Mallows, Ribwort, red Roſes, burnt Harts-horn, and white Starch burnt, of each three drams. Make thereof a fine pouder, and give three drams thereof with rain water.*

This Pouder *Scaliger* borrowed of *Serapio*, who mentioned it in his Book of Spitting of blood; and which *Valeſcus* alſo commends. And you may make Tablets thereof with Sugar diſſolved in Roſe or Plantane Water.

The Electuary of *Hælideus* is like it, and eaſier made; which was wont to be famous in *Germany*, and ſo commended of *Geſner*, *Eraſtus*, and *Crato*, thus:

Take of *the ſeeds of white Poppy and Henbane, of each ten drams: Terra Sigillata, and red Coral, of each five drams: old Sugar of Roſes, as much as will make an Electuary. Give hereof one dram morning and evening, after univerſal Medicines have been given.*

But becauſe that ſpitting is ſtopped by the uſe of Aſtringents, and thence comes difficulty of breathing, you muſt at times uſe things that mollify the Breaſt, and alſo ſtop bleeding, ſuch as they which are compounded of Gum Arabick, Tragacanth, Starch, and Syrup of dried Roſes, Quinces, Mirtles, and Jujubes the Juyce of Plantane and Purſlain, while you uſe Aſtringents, if the Belly be bound give a Clyſter or Purge, that leaves ſome Aſtringency.

In

In the whol time of the Cure, if you ſuſpect that there is any congealed blood in the breaſt, you muſt diſſolve it with Oxycrate thus made, according to *Galen*, 5. Meth. that it may be pleaſant and not provoke Coughing with the Vinegar; for ſo it diſſolveth the blood and gently bindeth: Let him take ſix ounces warm twice or thrice in one day: and if it provoke Coughing ſweeten it with Sugar: but you muſt uſe this when the bleeding begins to ceaſe; for this alſo Amber and Mummy mixed with glutinatours and aſtringents is good.

Alſo for the allaying the Heat of the Liver, uſe often a Cooling Epithem to the right ſide.

Take of *Roſe, Plantane, and Succory Water, of each four ounces: Vinegar of Roſes two ounces: the Pouder of the Electuary of the three Saunders one dram and an half: Camphire one ſcruple: make an Epitheme to be applied warm to the Liver.*

After the uſe of the Epitheme anoint the ſame part with Oyntment of Roſes, or the Cerat of Saunders, with a little Roſe-Vinegar.

Anoynt alſo the Reins of the Back with Oyl of Roſes and Water-Lillies waſhed with Vinegar; adding a little Camphire to allay the heat of the blood in the hollow Vein: But you muſt beware of things that are too Aſtringent, leſt they drive the blood from the hollow Vein into the Lungs.

It is alſo very good to waſh the ſtones with Oxycrate to ſtop the Flux and allay the heat: for there is a great conſent between theſe parts.

A Bath would alſo be good to allay the heat of the Bowels; but becauſe they relax and ſo open the Veins, you muſt avoid it.

Let him drink Syrup of Myrtles, Purſlain, and dried Roſes; or Sugar of Roſes with Barley-water, or with the Water wherein Blood-ſtone or ſealed Earth hath been infuſed. Or mix Conſerve of Roſes with the Water, or with Water wherein Coriander hath been infuſed, made ſharp with the Spirit of Vitriol: or with the Tincture of Roſes.

A weak Decoction of Yarrow drunk ordinarily is good againſt al bleeding.

If a ſharp Defluxion from the Head upon the Lungs, be the Cauſe of this Diſeaſe, beſides what hath been ſaid, you may uſe thoſe Remedies which are preſcribed in the Cure of a Hot Catarrh.

After the Blood is ſtopped, to keep it from returning you muſt firſt abſtain from al things that ſtir the Humors, as violent exerciſe, great heat, anger, roaring, rich Wines, the meates mentioned which are either ſalt or ſpiced.

Conſerve of dried Roſes muſt be held in the mouth, eſpecially at bed time.

Take of *Conſerve of Roſes and of Comfry Roots, of each one ounce: the Troches of Amber, and ſealed Earth, of each half a dram: red Coral and prepared Pearls of each one ſcruple: Sugar of Roſes as much as all the reſt: make a mixture, of which let him take a ſpoonful ſomtimes one hour before meat.*

Let him be purged four times in a yeer, or oftener if occaſion be, with the Potion of Rhubarb and Myrobalans above mentioned; to which, inſtead of Syrup ad one ounce of Manna.

You may with good ſucceſs give a ſcruple of torrefied Rhubarb every morning one hour before meat, eſpecially if the blood be very ſerous, as it is commonly in Hæmorrhages.

Alſo Rhubarb not torrefied given in the ſame quantity; for ſo the blood after the ſerous watery Humor is carried away wil grow thicker: Or, You may give a dram of Rhubarb once every Week.

There is alſo a Magiſtral Syrup to cleanſe the blood from thin ſerous Humors. As,

Take of *the Leaves of Bugloß, Fumitory, Hops, Succory, Endive, Agrimony, Plantane, Maiden-hair, of each one handful: the Tops of Aſparagus, Vervain, and Eyebright, of each half an handful: the Seeds of Gourds and Mellons, of each half an ounce: Endive and Dodder ſeed of each two drams: Liquoris ſcraped, and Raiſons, of each one ounce: ſweet Prunes twelve: Senna four ounces: Polypody of the Oak two ounces: Agarick tyed in a thin Clout, ſix drams: Mace one dram: the Three Cordial Flowers & red Peaſe or Pulſe of each one pugil: boyl theſe to a pint & an half: diſſolve in the ſtraining of the juyce of ſweet Apples three ounces: fine Sugar one pound and a quarter: make a Syrup boyled well, & ſented with yellow Saunders: Then infuſe in it one ounce of Rhubarb beaten and tyed in a Clout, let him take an ounce and an half, or two ounces, with Broth twice in a month.*

Make an Iſſue in the right or left Leg, as the Liver or Spleen are affected.

Laſtly, Let him uſe for a whol Month Aſſes-Milk ſteeled, for prevention of this Diſeaſe.

For his Drink, take Water boyled a little with Coriander ſeeds, or the Decoction of Barley and Liquoris.

CHAP.

Chap. 7. *Of* Phthiſis, *or Conſumption.*

ALthough the word *Phthiſis* ſignifie every Conſumption, yet it is moſt properly taken for that extenuation of body which cometh after an Ulcer in the Lungs.

For this Extenuation of body comes from a putrid lingring Feaver, which turneth to an Hectick; and this Feaver comes from the Ulcer in the Lungs, from which by reaſon of their neerneſs to the Heart putrid Vapors are continually ſent thither and cauſe the Feaver, which after is diſperſed from the Heart into the whol body; ſo al the parts being too cold and dry, and receiving the intemperate putrifying heat, do not wel concoct their nouriſhment, but are ill nouriſhed, from whence you may plainly perceive a Conſumption of the ſubſtance of the whol body: for that Feaver by reaſon of its continuance from the perſeverance of the Cauſe turneth Hectick: and its often joyned with a putrid Feaver, which is known by the Urine, and by the Diſtempers extraordinary at ſometimes, inſomuch that in ſome Conſumptions you may obſerve fits of an intermitting Feaver.

A ſharp and Corroding Humor, either coming from other Parts, or breeding in the Lungs, is the immediate Cauſe of an Ulcer in the Lungs.

Firſt ſharp and ſalt Rhewm falls from the brain, which being violent eaſily ulcerateth the Lungs: Somtimes Flegm that is not ſharp nor ſalt wil do the ſame: namely, if it lie long in them and putrifie, and from the putrifaction ariſeth an Acrimony, which Corroding Ulcerateth: yet this putrid flegm in the Lungs doth not alwayes ulcerate, as we may obſerve in a Catarrh when putrid Matter is ſpet forth, and the Lungs are ſound.

But there are two Conditions for the Cauſing of an Ulcer: one in reſpect of the matter flowing; another in reſpect of the Lungs: In reſpect of the Matter it is required that it ſhould be ſo diſpoſed, that when it is putrified it begets a ſharpneſs which may cauſe an Ulcer: In reſpect of the Lungs, they muſt be extraordinary tender, and diſpoſed to corruption, which in a word is called a Vitious Conſtitution of the Lungs, coming from the Parents uſually, of which we will ſpeak hereafter.

Now the Humors that Exulcerate and putrifie the Lungs, come from the parts adjoyning, as the Pleura, Mediaſtinum, Diaphragma, rough Artery, and eſpecially from an inflamation in them, which comes to Suppuration and turns into an Empyema: of which *Hippocrates* ſpeaks, Aphor. 15. Sect. 5. *They who fall from a Pleuriſie into an Empyema, if the Empyema break in fourty dayes and come away, are Cured; but if not, they fall into a Conſumption.*

The Humor is in the Lungs when from ſome veſſel broken, corroded, or opened by a wound, the blood flowing doth putrifie; or when an Ulcer is left there from the ſmal pox.

Somtimes from the evil Conſtitution of the Lungs, evil Humors proceed; which corrupt their ſubſtance and cauſe a Conſumption: and this comes commonly from the Parents, from whence a Conſumption is reckoned among the Hæreditary diſeaſes, of which it is the chief, ſo that we may obſerve how many whol Families are taken away with this diſeaſe.

This evil Conſtitution of the Lungs is not in the firſt qualities, but hath ſome malignant and venemous quality, by which it becomes infectious: Although we deny not but a ſoft and looſe ſubſtance of the Lungs, and therefore more fit for Corruption, doth much conduce to the breeding of this Diſeaſe.

This evil Conſtitution of the Lungs cauſeth that ſome fal into Conſumptions without a Diſtillation, Inflamation, or any other evident Cauſe, but only from the fault of the part that corrupteth its own nouriſhment.

Somtimes it comes from a Puſtulæ bred in the Lungs and broken, which by *Hippocrates*, 1. *de morbis*, is made two-fold:

One by him is called, A Crude Puſtule, becauſe it never comes to Suppuration, but growing by degrees ſtops the paſſage of the breath, and at length kils the Patient.

The other is that which cometh to Suppuration, and is called the Impoſthume of the Lungs, and theſe come two wayes, either by Defluxion, or Congeſtion; and the Matter gathered is either in a Bagg or without it in the very ſubſtance of the part.

The thickneſs of the Bagg often cauſeth that ſuch an Impoſthume is carried many yeers in the Lungs undiſcovered, and without any hurt to the body: From whence *Hippocrates* ſaith, Aph. 41. Sect. 6. *They who have an Impoſthume in the body, and feel it not, it is by reaſon of the thickneſs of the Matter, or of the place wherein it is that they feel it not*: For this Cauſe many who ſeemed to be in perfect health have ſuddenly died by an Impoſthume broken within: of which there are Examples in *Fernelius, lib. 5. de morbis, de part. morb. & ſympt. c.* 10. among which he mentioneth two Phyſitians who fore-ſaw the danger without ſigns.

If the matter which comes from the Impoſthume broken, flow into the Ventricle of the Heart, the ſick preſently die: but if it come to the Bronchia, or paſſages in the Lungs, it may be ſpit up; if the body be ſtrong, and the matter little in quantity; but commonly there is an ulcer remaining in the Lungs which cauſeth a Conſumption.

Moreover, There are external Cauſes, as contagion, which is the chiefeſt; for this Diſeaſe is ſo infectious, that we may obſerve Women to be infected by their Husbands, and Men by their Wives, and all their Children to die of the ſame; not only from the infection of their Parents ſeed, but from the company of him that was firſt affected.

And this Contagion is more eaſily communicated to them that are of kin, wherefore it is not ſafe for a Brother or Siſter to enter into the Chamber for the *Miaſmata*, or vapors infective, which come from their Lungs, and infect the whol Air of the Chamber, and being drawn in by others (eſpecially if they are any way diſpoſed to the ſame Diſeaſe) beget the ſame diſeaſe in their Lungs.

There are other external Cauſes, eſpecially very hot or cold Air; the hot Air doth melt down the ſharp humors which are contained in the Brain, and ſends them to the Lungs. The too cold Air by aſtringing, compreſſing, and Squeezing doth cauſe the like defluxion: But the Air in Autumn is moſt dangerous, becauſe by its inequality in heat and cold, it cauſeth ſharp and ſalt diſtillations; whence *Hippocrates* ſaith, Aph. 10. Sect. 3. *Autumn is the worſt time for People in Conſumptions.* Secondly, Sharp and ſalt meats and drinks do cauſe a Conſumption, which fill the Head with ſalt and ſharp vapors. And laſtly, all thoſe internal and external Cauſes which uſe to produce ſpitting of blood, which uſeth to end in a Conſumption, may be ſaid to be Cauſes thereof.

Among the Antecedent Cauſes, evil humors throughout the whol body, are accounted the chief, which being moved by external cauſes, are ſent to the brain, and from thence to the Lungs. Among which you may reckon the ſuppreſſion of the Terms, Hemorrhoids, or other uſual evacuations, which doth cauſe Catarrhs and defluxions.

The aforelaid Cauſes do produce this Diſeaſe, eſpecially among thoſe whom *Hippocrates* calleth *Phthirodeis*, and *Pterugodeis*, that is, ſuch as have a ſtraight and diſtreſſed breaſt, a long neck, and ſhoulder bones ſticking forth, who muſt of neceſſity fall into this diſeaſe, if they have tender Lungs, or any hereditary inclination thereunto. Alſo they are inclined to a Conſumption, who have a weak Head, which is eaſily filled winh ſuperfluous Humors, which are ſent to the Organs or Inſtruments of the Spirits.

There are no true and proper Differences of Conſumptions, but ſuch as come from the variety of their Cauſes. Yet *Hippocrates* doth lay down many kinds which are worth the obſerving, which muſt be reduced, not to a true Conſumption, but to one in general, which is without ulcer of the Lungs. And firſt *lib. 6. epid. ſect. 8. text.* 47. he ſheweth of a Conſumption which came from a running of the Reins, in this Hiſtory: *A Satyre called* Grypalopex, *being twenty five yeers old, had Nocturnal Polutions, and dayly loſs of Seed; who when he came to be thirty yeers of age, fell into a Conſumption, and died.* For by the continual loſs of Seed the nouriſhment of the body is taken away, by which the ſolid parts are conſumed and dried.

There is another kind in *Hipp. 2. de morb.* called the Conſumption of the back, which comes from too much Lechery, which deſtroyeth the whol habit of the Body, and takes away the nouriſhment from the ſolid parts: this happens to new married folks, who are unſatiable, and is the chiefeſt of the Conſumptions of the back; for *Hippocrates* laies down four kinds thereof: The firſt is that mentioned, which comes from Lechery. The ſecond is laid down *lib. 2. de intern. affect. text.* 13. which comes from too much blood, and nouriſhment going to the Spinal Marrow, by which the Natural heat, and all other faculties are ſtifled and deſtroyed. Now *Hipp. 5. epid.* ſheweth that the body may conſume by too much blood, in a ſtory concerning one, who, when nothing would nouriſh him, but he ſtill grew leaner, was perfectly cured, when all other Medicines failed, by bleeding in both Hands as long as the Veins would diſcharge. The third kind is in the place mentioned, namely, when the marrow of the back is dried, by which the whol body drieth and conſumeth. *Hippocrates* mentioneth two Cauſes of this drineſs: one is the obſtruction of the veins which go to the back with nouriſhment; another is the flowing of Choller from the head upon the back, which *Hippocrates* ſheweth in his Book *de locis in homine.* The fourth is deſcribed in the ſame Book, and it comes from a diſtillation upon the marrow of the back, in theſe words: *Moreover, when a defluxion falls upon the Back, this kind of conſumption cometh with pain in the Loyns, and ſeeming emptineſs to the Patient in the internal parts of the head.* In the ſame Book, numb. 18. he ſaith thus: *When there is a defluxion upon the Marrow, there is a ſecret undiſcernable Conſumption.* He calls it ſecret, becauſe when the body decaies, you cannot ſo eaſily find out the cauſe: he calls it undiſcernable, becauſe you cannot perceive the inconveniences of the defluxion at the firſt. But it ceaſeth to be ſecret and undiſcernable, if the defluxion be not only upon the marrow of the back, but alſo upon the *Os Sacrum*, and Hip: for then the diſtillation is apparent, and there is pain and loſs of motion, with dejection of mind. Theſe are more cleer in *Hippocrates*, in his Tenth Book *de glandulis*, in theſe

theſe words: *There is another Diſeaſe which comes from a defluxion from the Head by the Veins upon the Marrow of the Back, and from thence to the* Os Sacrum, *and Hip, which is a Conſumption alſo which deſtroyeth, for then the Shoulders and both the feet are weak, and after the leggs, and they alwaies die of it, though they have been formerly cured.* This kind of Conſumption is to be obſerved, becauſe it often happeneth, eſpecially to ſuch who have weak Nerves, which will eaſily receive the defluxion.

To this kind you may refer that which comes of want and hunger; which *Galen* mentioneth, *lib. de Maraſmo*, when the Body decaies for want of nouriſhment. Now Nouriſhment is wanting to the ſolid parts, not only for want of meat, which the Stomach concocteth, and ſends to the Liver to make blood for the whol Body: but alſo when the *Chylus* which is ſufficiently concocted in the ſtomach cannot paſs through the Meſeraick Veins, by reaſon of their obſtruction; as it happeneth to them who have a Struma, whoſe Meſentery for the moſt part is full of Glandles; by which the milky Veins called *Venæ Lacteæ*, are compreſſed, from whence the whol Body grows lean, and they die of a Conſumption.

But the ſolid parts are deprived of their neceſſary nouriſhment when ſalt blood that is not fit for nouriſhment is gathered into the Veins, which, as *Galen* ſhews, are incurable, 5. Meth. except by *Epicraſis*, or change of habit. And finally, *Galen, lib. de Maraſmo, decimo meth.* and in other places, ſpeaks of a Conſumption from a manifeſt or hidden Inflamation, from the ſyncope of the Heart or Stomach, and the like, which may be ſeen in their proper places.

The Diagnoſtick ſigns by which you may know a true Conſumption, do ſome of them, declare a Conſumption beginning, or begun, or confirmed, which are very well ſet down by *Hipp. 1. de morbis.*

The ſigns of a Conſumption at hand, are in *Hipp.* Book, mentioned, Text 9. in theſe words: *There is alſo a Suppuration when flegm flows from the Head upon the Lungs; and firſt for the moſt part it flows privately, and cauſeth a little Cough, and the ſpittle to be bitter, and a little heat.*

In this ſaying there are contained four ſigns of an eminent Conſumption.

The firſt ſign is, A defluxion from the beginning cloſely conveighed to the Lungs, becauſe then the matter is little, and becauſe the thinner part of the humor, which floweth about the rough Artery, and doth not vex the Lungs, which otherwiſe would be more diſturbed in the beginning, before they are weakened; thence it is called a ſecret defluxion, becauſe there is little hurt at the firſt done thereby.

The ſecond ſign is, When the Humor flowing makes but a ſmal Cough, being at the firſt but little and thin.

The third ſign is, When the ſpittle is more bitter than uſually it was, becauſe the humor that muſt ulcerate the Lungs muſt be ſweet, ſharp, or ſalt; which qualities being altered by a preternatural heat, do turn bitter: for it is known that ſweet and ſalt things overmuch boyled, do grow bitter. But in regard that preternatural heat is not very great at the firſt, the ſpittle is but a little bitter.

The fourth ſign, is a little heat, as being feaveriſh; for when the matter is not much moved, but receiveth putrifaction from the heat of the place, wherein it hath been long contained, the Feaver cannot be very violent, for the putrid matter can many waies be refrigerated; therfore it is no wonder if the Feaver be ſmal in the beginning.

To theſe ſigns of *Hippocrates* we may ad an evil formation of the Breaſt and Youth, which meeting with the aforeſaid ſigns, muſt needs declare a conſumption to be at hand.

The evil faſhion of the Breaſt is when it is narrow, and the Shoulder-blades ſtick up like wings, when the fore part of the Breaſt is narrow, and the hinder part broad, for then the Breaſt is both ſmal and evil proportioned. The ſtraightneſs of the Breaſt ſhews want of Natural heat, and the evil proportion ſhews its weakneſs. For if the Natural heat were much and vigorous, the breaſt would have thereby been extended. But ſuch and ſo great is this diſpoſition, that *Hippocrates* calls it a Natural Conſumption, coming from a principle in Nature. Wherefore they who are thus made muſt of neceſſity fall into a Conſumption, except ſome other diſeaſe take them off. Which by the way is obſervable, for if they have any acute diſeaſe, who are thus inclined, they ſeldom eſcape, becauſe the Natural heat is weak and little, and therefore will eaſily be overcome by a ſtrong diſeaſe. Therefore the moſt wary Phyſitians in ſuch kind of Natures and habits, do uſe to prognoſtick rather death and danger, than health or recovery, when they fall into any diſeaſe.

In them who are inclinable to this Diſeaſe, Youth is moſt dangerous, according to *Hippocrates*, Aph. 9. Sect. 5. eſpecially from Eighteen to Thirty Five yeers, in which time there is much blood for to break the veſſels; as alſo it is then thin and ſharp, more proper to open and corrode the Veſſels: In Children, the Catarrh is made ſlow with much Moiſture: in Old Men, it is allayed with Cold: but in the Middle Age, for the Reaſons aforeſaid, it doth often exulcerate.

Moreover, in Youth many diſtempers come by Diet, by which many ill humors are produced and the blood infected: as alſo by reaſon of violent Exerciſe, as running, wreſtling, leaping, fencing, going in the ſun, a vein may be broken in the Lungs which may produce a Conſumption.

The signs of a Consumption begun, are set down by *Hippocrates* in his Book of Diseases before mentioned, *Text* 10. in these words, *In progress of time the Lungs are exasperated and ulcerated within by the Catarrh putrifying there, whereby the breast seems ponderous, and there is a pain before and behind; and there is more sharp heat in the body: and the Lungs by reason of their heat draw moisture from the whol body and especially from the head, which also is made hot from that body, and spetteth forth thick matter.*

In these Words there are *Six Signs* contained of a Consumption begun.

The First sign is, That the Lungs are exasparated in progress of time: that is, The Cough is more violent; for the Disease increasing the Distillation is stronger, and the Lungs are peirced therewith, and provoked to Cough forth that which hurteth them: which Cough doth not only come from the matter flowing down, but from that which flowed formerly: for being not Coughed up it groweth foul by long continuance, by which means the Lungs are more forced to expulsion.

The Second sign is, The weight of the Breast which comes from the matter gathered into the Lungs: For albeit the Lungs of themselves do feel little or nothing, yet because they are tyed to the Breast by Membranes, they perceive a weight, when they are burdened.

A Third sign is, A sharp pain before, and behind: for the matter contained in the Lungs doth with its evil quality offend them, as wel as with its quantity and putrifaction, by which the Membranes are pricked, which cause great pain: for the pain in the Membranes is alwayes pricking. Now this pain is perceived before and behind; because these Membranes are joyned before to the Sternon, and behind to the Back: and the cause of this pain is from a great Cough, called by *Hippocrates*, A Malignant, or Cruel Cough.

The Fourth sign is, When sharp Heat falls into the body, and there followeth a violent Feaver: for when through progress of time the matter putrifieth more, it is probable that the Feaver wil be greater; for although the matter from the beginning do only putrifie in the Lungs, yet by reason of the Suppuration made in the Breast with an Ulcer, the filth is communicated to the humors contained in the Veins; from which come divers sorts of putrid Feavers, and these differ from that Feaver which comes only from the Ulcer in the Lungs, through the filthy vapors which are carried from them into the Heart, which turns to an Hectick; and therefore in a Consumption there is a Hectick Feaver often joyned with a Putrid.

The Fifth sign is, When a great quantity of Flegm falls from the Head to the Lungs: which *Hippocrates* confirms, when he shews the Cause of that great Defluxion; namely, The Lungs by their Heat drawing Flegm from the whol body: Hence it is that the humors contained in the whol body are the matter of a continual and great Flux which doth so trouble men in Consumptions. The Lungs by the filth which they have contracted, grow hot; by which heat Flegm is drawn from the Brain, which the Brain fetcheth from the whol Body: And this is one of the principal Causes of the extenuation of the whol body: for al the humors, good and bad, are carried to those parts, and so the whol body decayeth.

The Sixth sign is, Spetting of thick rotten Flegm: for when the Matter putrifieth and there is an Ulcer, quittor or filth must needs come from thence, and therefore the Spittle is Mattery: but it is between thick and thin: for after that it hath by long continuance in the Lungs grown thick, it is made thinner by the addition of that which breaks from the Ulcer, and so it becomes moderate, which *Hippocrates* calls Subcrassum, or Thickish.

To these mentioned Signs of *Hippocrates* you may ad this as most certain, namely, The Extenuating the body with a lingering and constant Feaver: For besides the putrid Feavers above mentioned which come and go by fits, and grow from the humors which putrifie in the Veins: there is also alwayes present a lingering daily Feaver coming from the vapors sent from the Ulcer to the Heart which corrupteth the nourishment of the whol body, and makes it dry and hot, from whence the body must needs grow extenuated.

To these you may ad Sweatings at Night, with which men in Consumptions are often troubled as soon as they begin to sleep: for by sleep the Heat is drawn in which encreaseth the Inflamation of the Lungs; and the heat inwardly increased, causeth abundance of vapors, which are thickned in the skin, and turned into sweat.

Moreover, There is a continual rigor which comes from the sharpness of the matter which pricketh the Membranes.

And Lastly, You may ad sweetness of spittle, which useth to come when it begins to Suppurate, which is the original of Saltness.

Hippocrates shews also the signs of a Consumption confirmed, in his 11. Text of the Book above mentioned in these words, *The longer this Disease lasteth, the more absolute matter will be spet, and the Feavers be the sharper, the Cough more frequent and strong. the body will more consume, and yet the body is disturbed downward from Flegm, and this comes from the Brain. when any man comes to this he must perish.*

In

In theſe Words we may obſerve that there are Five Signs of a Conſumption confirmed.

The Firſt is, The Spittle being more Mattery, or rather Matter it ſelf.

The Second is, A ſtrong Feaver, and ſharp, more putrifying; and the Ulcer more foul.

The Third is, An often and violent Cough more than formerly; often becauſe of the great provocation and little evacuation, therefore nature laboreth to do that at divers times which ſhe cannot do at once: and it is a ſtronger Cough, not only becauſe the greater ſharpneſs of the Water doth more violently ſtir up the expultive faculty; but alſo becauſe of the wearing away of the ſolid parts, the breaſt is made more hollow, hence comes a hoarſ and ſounding Cough, as from a hollow place.

The Fourth ſign is, Pining and want of Apetite, which makes them leaner; now the want of Appetite comes from the diſtillation which doth not only fal upon the ſpirital members, but alſo upon the natural: eſpecially the Stomach, whoſe mouth is thence weakened to the loſs of Appetite; as alſo from the putrid vapors ſent thither either from the Feaver or the Ulcer.

The Laſt ſign is, A looſe belly which comes from Flegm falling from the head, by which in time the ſtomach and guts are weakened, and the retentive faculty deſtroyed: and this kills the Patient as we ſhal ſhew more at large in the Prognoſticks.

To theſe ſigns of *Hippocrates*, we may ad ſome other:

The Firſt is, A great Extenuation of the whol body, ſo that al the Muſculous fleſh is conſumed, and the bones appear only covered with skin: and hence it is that the nayls are crooked, becauſe the Fleſh which was in the tops of the Fingers to hold up the nayls, is conſumed.

To this you may ad Difficulty of breathing, both becauſe the Faculty is weak, as alſo becauſe the Bronchia of the Lungs are ſtopt with putrid matter; as alſo becauſe the part is for the moſt part putrified and conſumed, and therefore cannot take in ſufficient air to cool the heart; ſo that what the Lungs cannot do by one breathing, it muſt do by often.

And Laſtly, We may ad, That in a confirmed Conſumption that is deſperate, the Hair falls off, the Cheeks wax blue, except it be after meat, and then the vapors ſent up make the red Lice breed in abundance, and the Feet ſwel.

Neither need we ſo many ſigns, for if any ordinary man, ſaith *Areteus*, ſhal ſee a man pale, weak, and coughing, and very lean, he wil conclude him to be in a Conſumption.

Yet we muſt obſerve diligently, That ſomtimes a violent Catarrh falling upon the Lungs wil reſemble a Conſumption ſo, that filth like Matter, ſhal be ſpit forth, and thence may a Feaver come through putrifaction and extenuation of body: but they who are ſo are eaſily cured by diligence in means, therefore let us diſtinguiſh this rightly from a Conſumption, which is chiefly done by diſcerning between putrid Flegm and Matter. Thus;

Matter is of a dun Colour, and leſs White than Flegm; ſomtimes of divers Colours, and being put into hot Water it ſinketh and diſſolveth: but Flegm ſwims at the top and ſticks together by reaſon of its ſliminels, and wil not diſſolve.

But if ſome of the Spittle diſſolve and the reſt not, it is made of Flegm and Matter, which often happeneth.

As for the Prognoſtick, it is very hard to Cure a new Ulcer in the Lungs; but it is impoſſible to Cure an Old, becauſe it is opened by the continual motion of the Lungs and by Coughing, ſo that it wil not be united: as alſo the force of the Medicine is gone before it can come at it, and the loſt ſubſtance of the Lungs cannot be repaired.

Moreover, An Ulcer, Spittle, Feaver, and Leanneſs, require contrary Remedies, for thoſe things which dry the Ulcer, do hinder Spittle, increaſe the Feaver, and Leanneſs: and Moiſt things which are good againſt the Feaver and Leanneſs, do make the Ulcer more foul.

Somtimes the Ulcer ſeems Cured, and there is a ſcab upon it, but with the leaſt motion it fals off, and the Diſeaſe returns.

A Conſumption which comes from a ſmal Ulcer of ſhort continuance, although it be difficult, yet is not uncurable if proper Medicines be timely uſed: And they who have gathered Obſervations mention many ſo Cured; now there is moſt hope when the Patient is ſtrong, the ſpittle white, even of one colour, and eaſily raiſed; if the humor falling from the head paſs through the Noſe, and if thereupon the Feaver abate, if the Appetite be good, & there be no thirſt, & if the belly bound & in good order, if the Patient have a good habit of body, yong, and have his breaſt large and hairy.

They whoſe ſpittle ſtinketh, or have looſe bellies, or cannot ſpet, are neer death, as *Hippocrates* teacheth, 1. Prog. & Aph. 11. & 12. Sect. 5. And, Aph. 16. Sect. 7.

A Conſumption coming upon an acute Diſeaſe doth kill ſpeedily, but if it come from other Cauſes it is Chronical, and laſteth many yeers: And *Avicen* ſaith, That he knew a Woman that lived twenty three yeers in a Conſumption. And *Matibew de Gradi* ſaith, That another Woman which was alwayes about the fire, lived in a Conſumption twenty eight yeers.

The Cure of this Diſeaſe, as is ſaid, is for the moſt part impoſſible, if the Diſeaſe be Old; but if it be New it may ſomtimes, and eaſier when it is but coming upon them who are diſpoſed thereto by

an

an hereditary disposition, but are not yet fallen into it. Therefore we shal first lay down a Prophylactick or preservative, and then shew how to cure the disease.

Therefore for the amending of the evil disposition in a Consumption, use a cooling diet, and moist, and all such things as correct the blood, and make it mild, and correct its saltnes and sharpnes: as the Waters of sweet Baths, the use of Milk and the like. As also China Roots boyled in smal Beer; but the Decoction of the Sanders is the best, which is not only good in a Consumption at hand, or begun, but also in salt and thin distillations, and in old bleeding from thence. The Decoction of Guajacum doth wonders upon the same account with the former, either given in distilled Waters, with a little white or red Wine, as the disease will bear it. Now the Decoction of Guajacum, and of Sanders, are made both alike, both for the first and second drink, and given the same way. To these you may ad change of Air, which is good both to prevent and cure, And lastly, those Remedies are good which we will lay down for the cure of the disease confirmed, to be used first.

Now the whol Cure consisteth in the clensing and glutinating of the ulcer, by taking away the Causes that produce and nourish it, by opposing the Hectick Feavet, and restraining of the Consumption.

First therefore, because an ill habit of body may encrease the Ulcer of the Lungs, you must use gentle purges, at divers distances, as long as the body is not very low. And these must be made of Manna, Rhubarb, Cassia, or Syrup of Roses, thus:

Take of *Barley half a pugil: Liquoris scraped, and Raisons stoned, of each three drams: Jujubes four: the flowers of Bugloß, and Violets, of each half a pugil: boyl them to three ounces: In the straining dissolve Rhubarb infused in Scabious Water with yellow Sanders four scruples: Manna one ounce: Syrup of Roses half an ounce. Make a Potion.*

Or give two ounces of Manna with Chicken or ordinary Broth.

Or make a Bolus of Cassia one ounce, and one scruple of the pouder of Liquoris.

In the beginning you may give stronger purges for to draw down the salt and sharp Catarrh which is the chief Cause of the Ulcer, such as are prescribed in a hot Catarrh.

Also before the body be too lean, at the first you may let blood to allay the Feaver, and the acrimony of the humor.

But in the beginning of the Cure you must stay and divert the Catarrh from the Breast, otherwise all other things will be in vain. And all those things which were prescribed for the Cure of a hot Catarrh are good in this case.

Besides a Seton to the Neck, is very good. And *Fabricius Hildanus* reports that he cured many by this way.

At length you must come to the Cure of the Ulcer; for which, give things that clense, knit, and expectorate. Many there are of this nature. But these following are the best.

Milk doth hit all intentions for Cure: It clenseth with its serous parts, it conglutinateth with its coagulating part, and nourisheth and refresheth with its unctious part. But there are divers kinds of Milk, and Womans Milk is the best, because it is more agreeable to our Natures, especially if it be sucked from the breast. *Platerus* affirms that he knew many cured by the use thereof; and that one of them did not only recover, but grew so strong, that least his Nurse should want milk for him, he got her with child again.

But because many will not endure that sort, Asses Milk is commended, which because it is very full of Whey, doth easily pierce into the Veins, and excellently clense the Ulcer: the next to this is Goats Milk. Let the Ass be fed with Plantane, Vine Leaves, Brambles, Polyganon, Grass, Barley, and Rye. Let him drink it new milked, warm, therefore let the Ass be brought neer the Chamber, and be milked into a warm Vessel. First let him take it in a smal quantity three or four ounces, that his Stomach may be used to it, encreasing the quantity by degrees to eight or ten ounces, or a pint, and least it should grow sowr or curdle in the Stomach; and that it may agree better with the Lungs, put Sugar of Roses to it, one ounce thereof to eight of milk: let him not sleep after his Milk immediately, but walk gently about the Chamber: let him not eat before the Milk be concocted, and he find a stomach, and that it be more effectual. You must not give it in a strong Feaver, or when there is a pain in the Head, or swelling in the Hypochondria, or a Chollerick flux, according to *Hippocrates*, Aphor. 64. Sect. 5.

Commonly it is taken only once in a day; but it is better twice; and best if the Patient live only upon it. For besides that it doth work more powerfully in a great quantity, there is a great profit by not mixing it with Broth and other meats, for they will easily putrifie. If therefore the Disease be very desperate, give Milk after purging every six hours with *Manus Christi* of Pearl and Coral. And least strength should fail, let him intermix a restoring distilled Water.

Sugar of Roses is very profitable, as also the Conserve; by use whereof, *Avicen* reports that he cured a Woman of a desperate Consumption, so that she was not only sound, but very fat afterwards.

Mesue

Meſue alſo witneſſeth that many have been recovered by the ſame, and he directeth that the Conſerve of Roſes be new, not above a yeer old, taken in a great quantity, and often, with Medicines, Meat, and drink, and alſo by it ſelf at any hour. But firſt give Clenſers, becauſe it will otherwiſe aſtringe and retain the excrementitious matter in the Lungs. But when breath begins to fail, and the Patient cannot raiſe flegm, let him take expectorating things; as Syrup of Hyſop and Colts-foot, and other Lohochs. And if heat ariſe from drying too much, give Syrup of Violets, Jujubes, the Mucilage of Fleabane and Quinces, and the like.

Montanus, *Valeriola*, and *Foreſtus*, ſay that they have ſeen ſome cured by taking Sugar of Roſes in great quantities. An Apothecary whom I knew in a Conſumption, made a great quantity of Sugar of Roſes for himſelf, and eat it conſtantly, by which he was cured.

An Infuſion of Yarrow, Tormentil, Burnet, and Conſerve of Roſes made in *Balneo Mariæ*, is very good, as it is deſcribed in the Chapter of ſpitting of blood, if it be uſed twenty daies together.

The Decoction of Bugle in Mutton Broth, doth excellent againſt a Conſumption and inward ulcers, it doth a little gently looſen the belly againſt the Nature of all the Conſolidæ.

Trallianus, *lib. 7. cap.* 1. boaſts that he cured many with Blood-ſtone. The preparation and uſe whereof we have ſhewed in the Cure of ſpitting blood.

The Syrup of the Juyce of Ground Ivy is commended by *Quercetan*, thus made:

Take of *the Juyce of Ground Ivy two pound and an half*: *let it be digeſted in* Balneo Mariæ. *To this Juyce well refined, put Sugar of Roſes one pound*; *Penides four ounces*: *Boyl them to a Syrup, to be taken now and then a ſpoonful.*

He alſo addeth the flower of Brimſtone to it to make it into a Lohoch, of which he gives four times in a day; and he boaſteth that he hath therewith cured many.

The Syrup of the flowers of St. Johns wort, made by Infuſion in *Balneo Mariæ*, is very good in this Diſeaſe, as alſo for all inward ulcers.

The Syrup of Comfry is excellent; for it clenſeth, healeth, and ſtrengtheneth by aſtringing; as alſo Comphry Roots boyled in Broth

It is affirmed that many have been cured by this Hydromel.

Take of *China Roots ſliced, ſix ounces*: *Colts-foot Roots three ounces*: *Burdock and Avens Roots, of each three ounces*: *Elicampane Roots two ounces*: *Lungwort Leaves, and Scabious Leaves and Roots, both the Veronicaes, Ulmaria, and Herb Two-pence, of each two handfuls*: *all the Capillar Herbs, of each one handful*: *the tops of Bugle, Bettony, Cowſlip flowers, and red Veronica, of each four pugils*: *Ground Ivy Leaves and Roots three handfuls*: *Jujubes, Dates, Sebeſtens, and Raiſons ſtoned, of each one ounce and an half*: *Spaniſh Liquoris one ounce and an half*. *Let them all, being well ſliced, boyl in thirty two pints of ſpring Water till half be conſumed, with a little gentle fire*: *ad to the Liquor being ſtrained, of the beſt Honey four pound*: *Boyl it again, and ſkim it*; *then ſtrain it through an Hippocras Bag, putting thereto half an ounce of Cinnamon, ſix drams of Coriander ſeeds*: *Annis and ſweet Fennel ſeeds, of each three drams*: *put the Liquor in a large Veſſel, and let it work in the Sun*; *for ſo it will be done in forty daies*; *otherwiſe it will be longer*: *but you muſt keep the Veſſel alwaies full and open, that it may froath over*: *therefore you muſt make more Hydromel than the Veſſel will contain*; *and if the diſeaſe require it you may uſe it freſh before it worketh till you make another in the Veſſel*; *and you may make this quantity twice or thrice at once, becauſe it muſt be taken divers months together*. *Let him take a good draught hereof twice or thrice in a day.*

This following Syrup is made more eaſily, and hath great Vertue:

Take of *the Juyce of Ground Ivy, Veronica, and Carduus Benedictus refined, of each eight ounces*; *in which, boyl gently Maiden-hair, Politrice, Scabious, and Lettice, of each half a handful*: *Diſſolve in the ſtrained Liquor one pound and an half of white Sugar*. *Make a Syrup well boyled, adding in the end three drams of the Extract of Juniper*; *Juyce of Liquoris and the Extract of Carduus, of each four ſcruples*. *Let the Patient take one ſpoonful an hour before dinner, and another before ſupper, and another at bed-time.*

Cardanus ſaith, that he cured many Conſumptions with this courſe following: namely, by giving no other nouriſhment than Barley Broth made without Fleſh, and Water with Sugar, and every morning four ounces of the Decoction of the Tails and Legs of Cray-fiſh made in Barley Water with two drams of Sugar.

Arcæus, *Ingraſſias*, *Fracaſtorius*, and *Eraſtus*, ſay with admiration, That they have cured many Conſumptions by the uſe only of Guajacum for a long time continued; yet this in reſpect of the antecedent cauſe, which is a hot and ſharp humor, ſeems to be an enemy.

Avenzoar reports that his Grand-father cured a Conſumption, with well leavened Bread, and Sallet Oyl, and alſo that he did the ſame.

This Pouder following is highly commended by *Valeſcus de Taranta*, and it is reported to be invented by *Haly Abbas*, and he ſaith, that he cured one with it. And *Foreſtus* ſaith that he cured his Brother with the ſame.

Take

Take of *white Poppy-ſeeds ten drams*: *Gum Arabick, Starch, and Gum Tragacanth, of each three drams*: *Purſlain-ſeed, and Mallows-ſeeds, of each five drams*: *Pompion, Melons, Cowcumbers, Gourds, and Quince ſeeds, of each ſix drams*: *Spodium, and Juyce of Liquoris, of each three drams*: *Penides the weight of all the reſt*: *make a Pouder*: *give every morning two drams thereof with the Syrup of Poppies or Jujubes*: *Let him alſo take it in Barley, Cream, or Almond Milk, and with other meats.*

Cappivaccius, and *Claudinus* do approve of Oyl of Vitriol to dry the Ulcer, giving two or three drops with Roſe-water or Juyce of Plantane, with a little ſugar.

Crollius alſo commends the Elixir Proprietatis which is made of the Spirit of Sulphur; with the Spirit of Wine, Myrrh, Aloes, and Saffron.

The Chymiſts do highly commend the Medicines made of Brimſtone, as the Flower, Milk, and Ballom thereof, as you may read in their Books: You may uſe them thus very wel.

Take of *the Flower of Brimſtone, and Pouder of Frankinſence, of each one ſcruple*: *put them into a hollow Apple, then roaſt it, and let the Patient eat it with ſugar every morning for eight or ten dayes together.* Or,

Take of *Conſerve of old Roſes, Diamargariton frigid, and Diapenidion, of each one ounce*: *Flower of Brimſtone three drams*: *make it up with clarified Honey, of which let him take the quantity of an Hazel-nut twice or thrice in a day.* Or,

Take of *Flor. Sulphuris three drams*: *Sugar diſſolved in Roſe-water three ounces*: *make Lozenges, which let him hold in his mouth often.* Or,

Take of *Lac. Sulphuris half a dram*: *Magiſtery of Pearl, and Coral, of each half a ſcruple*: *the Emulſion of Melon-ſeeds made with Coltsfoot or Veronica-water, two ounces*: *the Julep of Roſes ſix drams*: *Cinnamon-water, and Manus Chriſti, with Pearl, of each two drams*: *Mix them, and let him take two or three ſpoonful every morning.*

Some Chymiſts commend Antimonium, Diaphoreticum wel Calcined with thrice as much Saltpeter, ſo that al the vomiting quality be gone, which muſt be given every day in Lozenges made with Sugar of Roſes, or mixed with Conſerve of Roſes, or with the Medicines above mentioned.

The Ballom of Peru is good to heal Ulcers in the Lungs, if you give one drop made into a Pill with Sugar, every day.

The Pouder of Burnet, one dram given every day in Broth, is eſteemed excellent.

Ruffi Pills are commended by ſome taken one ſcruple every day, but made as followeth they do wonders.

Take of *the Maſs of Ruffi-pills, one ounce*: *Antimonium, Diabboreticum, and Gum of Guajacum, of each half an ounce*: *Make a Maſs with the Balſom of Peru*: *of this let him take one ſcruple every day for one Month.*

The Syrup of Coral, and Gelly of Quinces are good for the ſame.

Rodericus out of *Fonſeca* commends the Decoction of yellow Saunders for a good Medicine againſt Defluxions upon the Lungs; which he prepareth thus:

Take of *Succory and Sorrel Water, of each four pints*: *yellow Saunders ſliced three ounces*: *infuſe them one day, then boyl them in Balneo Mariæ in a cloſe Veſſel three hours*: *take three ounces of this every morning in Beer for fourty dayes together.*

Alſo al the Medicines which we mentioned for the Cure of Spetting blood, are here very good.

Fumigations may be wel uſed to dry the Ulcer of the Lungs very wel, and they muſt be often taken in at the Mouth and Noſe: You may make them thus:

Take of *the Gum of Ivy one dram and an half*: *Frankinſence one dram*: *Myrrh half a dram*: *Amber one ſcruple*: *Benoimin and Storax, of each half a dram*: *Hypociſtis two ſcruples*; *Coriander ſeeds, red Roſes, and red Saunders, of each one ſcruple*: *Pouder them, and mix them with the Mucilage of Gum Tragacanth*: *make Troches and caſt them upon Coals.*

Or, Make plain Fumes of Frankinſence, Myrrh, Maſtich, and Benjamin, alwayes in the Chamber that he may take in the dry and ſweet ſcent of them.

You may make a ſtronger Fumigation, but it is not to be uſed but in ſtrong bodies. Thus,

Take of *Gum Anime, or Gum of Guajacum, two drams*: *Tobacco half an ounce*: *dry Coltsfoot one ounce*: *Hyſop, white Horehound, Roſemary, and Orpiment, of each three drams*: *make a Pouder*; *put a little thereof into a Tobacco-pipe, take of it twice a day faſting, and half an hour after a draught of this Decoction.*

Take of *China and Sarſa of each half an ounce*: *Scabious, Coltsfoot, and ground Ivy, Ulmaria, Maiden-hair, and Avens Leaves and Roots, of each one handful*: *whol Barley one pugil*: *Liquoris ſcrap'd, and Currens, of each one ounce*: *boyl them to two pints, and put to it being ſtrained four ounces of ſugar of Roſes*: *Let him take half a pint twice in a day as aforeſaid.*

For the Rich People you may uſe a moiſt Fumigation made of the Decoction of Herbs, which is a good

a good way to carry the ſtrength of them directly to the Lungs: You may uſe al ſuch Herbs as are proper for the Lungs and to Cure Ulcers. Take this following for an Example:

Take of *green Coltsfoot eight handfuls: Hyſop two handfuls: bruiſe them and put them in a Pot with a little water, lute it cloſe, then ſet it into the Oven when the Bread is half baked, and then take it out with the Bread, and put a Funnel into a hole made at the top, and ſo take in the ſmoak through the mouth at the Lungs, and put it out at the Noſe, and it wonderfully provokes ſpetting.*

You muſt alſo Morning and Evening uſe a Cooling Liniment to the Breaſt. As,

Take of *Gum Tragacanth and Arabick of each one dram: infuſe them in Roſe water a day and a night: put then thereto of Oyl of Violets one ounce and an half: Freſh Butter half an ounce: Sal. Prunellæ two drams: Campbire one ſcruple: Breaſt-milk as much as will ſerve: Mix them in a Mortar to an Oyntment.*

To Repair a Conſumption, or to Prevent or Hinder it beſides Reſtoring Diets, which are principally made of Barley, Almonds, Pine-nuts, Rice, Nuts, and the like, which Authors declare; Milk commended at firſt is very good, and a Bath of hot Water of Barley and Almonds bruiſed: but this is not good in a Catarrh, nor while there is a putrid Feaver, nor when the Lungs are ful of Excrements.

Let his Drink be Water and Sugar, Barley Water, and Liquoris: an Infuſion of Liquoris, a thin Hydromel, or a weak Decoction of China.

The End of the Seventh Book.

THE EIGHTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Heart.

The PREFACE.

THE Heart *hath many Diſeaſes, Similary, Organick, and Common: But becauſe few will ſubmit to the Phyſitian, in regard of the nobleneſs of the part, which will endure long pain, but a man is ſuddenly gone, and there is no time for Phyſick; we who intend to bring all our Labors into practice, will lay down only three Diſeaſes of the Heart, which are uſual, and require many Medicines; and we ſhall bring them into three Chapters. The firſt ſhall be of Swooning. The ſecond of Palpitation of the Heart. And the third of Weakneſs.*

Chap. 1. *Of* Syncope, *or Swooning.*

Syncope is defined by *Galen*, 12. meth. c. 5. to be a ſudden failing of all the Strength: For although the Heart only ſuffer, and the Vital Spirits are only intercepted; yet when it fails, the reſt muſt ſuffer, becauſe they have a continual and neceſſary influence from it.

It is called a ſudden failing of all the Strength, that it may be diſtinguiſhed from other Diſeaſes, in which the ſtrength goes by degrees, till death come: nor is the Doctrine of *Avicen* againſt it, *Fen.* 1. *Lib.* 3. *Tract.* 2. *Cap.* 2. where he propounds the ſign of a Syncope that comes by degrees; for although the Cauſes that diſſolve the Spirits, do ſomtimes work by degrees, yet when they grow great they make a ſudden Syncope: and therefore *Avicen* rather propoundeth the ſigns that go before a Syncope, than thoſe that accompany it.

Moreover, This Definition may ſeem to agree with an Apoplexy, in which there is a ſudden failing of all the ſtrength; but in an Apoplexy there is ſtrength in the Heart, and the Pulſe is generally great and full. And alſo there is great hinderance of breath, with ſnorting; but in a Syncope the breath is no waies ſtopped.

The

The queſtion is, Why? When the action of the heart ceaſeth, doth the action of the Brain alſo ceaſe, ſince the Animal Spirit is made of the Vital by way of Concoction, and muſt therefore ſtay ſome time in the Brain, although the Vital do not conſtantly come to it? We anſwer, That the Brain as all other parts, for the perfecting of its actions doth alwaies ſtand in need of adventitious heat, which is brought to it by the Vital Spirits, and therefore when the Vital Spirits come not, neither doth heat come for the Brain to perform its functions.

There are other Diſeaſes very like to Syncope, differing only in degrees from it, namely, *Eccluſis*, *Leipothumia*, and *Aſphuxia*: *Eccluſis*, is a light fainting: *Leipothumia*, or *Leipopſuchia*, or *Apopſuchia*, is a very ſtrong and great fainting: *Syncope* is the greateſt, which if it go ſo far that the pulſe in the whol Body ceaſeth to beat, it is called *Aſphyxia*, which is next unto death.

The word *Synchope*, was not uſed by *Hippocrates*, and the Ancient Greeks; but they call'd this Diſeaſe *Leipothymia*, *Lipopſychia*, and *Aſphyxia*. But it was invented a little before *Galens* time, and uſed for the greateſt; ſo *Galen*, 1. *ad. Glauc. cap.* 14. ſaith, *Leipothymia* is an imperfect Syncope, and goes before it.

By what hath been ſaid, it appears, that the part affected is the Heart, where the Vital Spirits are all made; by whoſe influence the Natural heat and Spirits in every part are made to act: therefore when that ceaſeth by ſtoppage of the Influx of the Vital Spirits, it is neceſſary that the ſtrength of all parts ſhould fail, and their actions ceaſe.

The immediate Cauſe of this Diſeaſe, is the defect of the Vital Spirits, not wholly, for then ſudden death would come; but ſo great, that Nature is conſtrained (leſt the ſtrength of the Heart ſhould totally fail) to fetch the Spirits from the other parts to the Heart, by which means the parts loſe their functions.

Now this defect of Spirits comes four waies: Either becauſe they are Naturally few; or becauſe they are diſſipated, and ſpent; or becauſe they are preternaturally altered and corrupted; or laſtly, becauſe they are ſuffocated and deſtroyed: They are few by fault of the faculty making, or matter from which they are made. The Faculty is hurt, either by a diſeaſe proper to the Heart, or by conſent from another part.

The proper Diſeaſes of the Heart which are the chief, are great diſtempers, which overthrow the Natural temper, or deſtroy the ſubſtance of the parts, or of the Natural heat; as ſwooning Feavers, ſharp, and malignant, *Syntacticæ*, or *Colliquantes*, or fainting, peſtilential, hectical, or *Maraſmodes*, which conſume; to this come organical diſeaſes, as too much conſtriction and dilatation, and conſtant ſolutions, which come to the Ventricles of the Heart.

The Faculty may be hurt by conſent from other parts, which have great ſympathy with the Heart, as the Brain and Liver, and ſomtimes from the mouth of the Stomach, by reaſon of its neerneſs and exquiſite ſence; from whence a Syncope is divided into a Heart and Stomach Syncope. The Cardiaca or Heart Syncope, is when the Heart is principally affected; but the Stomachia, or Stomach Syncope, is that which comes by conſent from the Stomach. Somtimes it comes from the Mother, by filthy vapors ſent from thence to the Heart, from whence comes the Suffocation of the Matrix, Apnoea, or want of breath, and Hyſterical Syncopes, as thoſe vapors do aſſault the Lungs, Diaphragma, or the Heart.

The fault is in the Matter, when the Air or Blood is defective, or corrupted; from whence the Vital Spirits are generated. There is defect of Air when the Reſpiration and Tranſpiration is hindered; but the defect of Blood, is when Nutrition is hindered; there is a corruption of both, when their qualities are changed: So when the Air is infected in time of Peſtilence, it begets Leipothymia and Syncope, as alſo ſtinking vapors, and ſweet alſo do the ſame with ſome Women; and the blood is corrupted from evil meats.

Too great Evacuations, whether ſenſible or inſenſible, do diſperſe the Spirits. The ſenſible are chiefly of Blood, from the Mouth, Noſe, Womb, Belly, Hemorrhoids, Phlebotomy, and great Wounds: and next of other Humors, which though they are Excrementitious, yet becauſe of their great Evacuation the Spirits are much diſperſed, and cauſe a Syncope. Theſe Humors are diſcharged by Vomit, Stool, Urine, Sweat, the opening of a great Impoſthume, eſpecially if it be inward, as an Empyema; or outward, as in a Dropſie when the Navil is tapped.

The inſenſible Evacuations are by the Rarifaction of the Skin, and by the acrimony and thinneſs of the Humors, immoderate heat, hot Baths or Houſes, great Labors. Alſo long watchings, and faſting, Lechery, great anger, and joy, long and violent ſickneſs do diſſipate the Spirits; as alſo great pain of the Heart, Stomach, Guts, Reins, Ears, Teeth, and of all Nervous parts.

An evil diſpoſition of the Bowels doth alter and corrupt the Spirits, and whatſoever doth procure a malignant quality which is adverſe to the Heart, as Air, Stinks, veriemous and peſtilential, taken in by the Breath, or bred in the Body from putrifaction of Humors; as alſo poyſon taken in, or applied outward, or ſent to the Heart by biting of venemous Creatures.

Laſtly, The vehement returning of blood and Spirits to the Heart, and an abundance of evil va-

pors gathered about the Heart and the parts adjacent, and too much cold and thick blood gathered about the Heart and its Veins, Arteries, and parts adjacent, do ſuffocate and deſtroy the Spirits.

We lately ſaw a Noble Lady, a Virgin, which from her Infancy was ſo ſubject to this Diſeaſe, that with every light paſſion of the mind ſhe was taken therwith, taken with a violent Syncope which uſhered death in by a ſudden return of blood and Spirits to her heart; for when ſhe ſhould have been married to a fine yong man which lov'd her deerly, and her Parents, Friends, and Kindred were ſolemnly met about it, they gave her a Pen to write her hand to the Contract; but ſhe having not fully written her name fel down dead upon the ground: Hence we eaſily conjecture, that there was a great and ſudden retraction of the Blood and Spirits to the Heart by a vehement paſſion of the mind, which choaked the Natural heat, and the Spirits therein, of which ſhe died ſuddenly.

Petrus Salius Diverſus ſaw, as he reporteth, Lib. de aff. part. cap. 4. a Girle of fourteen yeers old fal into a Syncope from abundance of cold and thick blood garhered about her heart and the great veſſels: for having for a whol day a heavineſs of head with giddineſs and diſturbance, ſhe died the next day after ſuddenly: After being opened, the blood appeared ſo congealed in the great Artery and Vena Cava or hollow Vein, that taking it by the end you might draw it out like a Sword from a Scabbard.

Wherefore we judged, That the ſudden death came from the interception and ſtopping of the Veins by congealed blood.

This happeneth ſeldom, for you ſhal ſeldom ſee blood in dead bodies ſo congealed: for the veins have ſuch a property to retain blood, that even after death they keep it thin, though without them it groweth alwayes thick.

But *Salius* gives the Reaſon of this Congealation by comparing it with blood without the Veſſels, which as ſoon as it is cold, is congealed; and the ſooner from the coldneſs, thickneſs and ſlymineſs of the Melancholick or Phlegmatick humor therein contained.

Somthing like to this may be-fal blood conſtrained in the veins which abounding with vicious juyce thick and cold, doth ſo fill the greater Veins, that it ſtops the ſpirits, and ſo extinguiſheth them: and then the blood grows cold and thick, from thoſe humors which otherwiſe would have been thin.

The *Spagiricks* refer this to a congealing Spirit, made of a peculiar and extraordinary mixture of Humors, which ſince it ſeldom happeneth, the Diſeaſe is very rare: And truly a ſimple Refrigeration cannot cauſe that concretion, for then in dead bodies, eſpecially in winter, the blood would alwayes be thick in the Veins, but we find it alwaies thin; but we may ſuppoſe that this Congealing Spirit is like that which cauſeth a Catalepſis, or Congealation which makes the parts inflexible.

The Chymiſts do acknowledge ſuch kind of Congealing Spirits to be in many Creatures, Vegetables, and Minerals; ſuch as are reported to be raiſed out of the Earth, in ſome Hiſtories of Men and Beaſts who have been Congealed by filthy vapors coming from Earth-quakes, or Dens; ſo, that their bodies became preſently ſtiffe: And *Cardanus* ſaith, That ſuch ſpirits are in Thunder-bolts, in the Hiſtory of the Eight Mowers, who Supping under an Oak were ſtruck ſtiffe, and remained as at firſt, the one ſeeming to Eat, the other to reach the Pot, and the other to Drink.

The Signs to this Diſeaſe by either are from the Subject which is more capable to receive it, or from the Fit either coming or preſent, or from the Cauſes that produce it.

The Subjects which are moſt fit to receive a Syncope are men who by ſome Natural Debility or Weakneſs from ſome Diſeaſe, become faint-hearted. Women rather than Men, eſpecially in their Terms, or with Child: As alſo they who have fine Conſtitutions, ſubject to the Jaundice, Spleen, or Melancholly.

Theſe things ſignifie that a Syncope is coming to them who are ſubject to it; Anxiety and ſudden diſturbance of mind, heavineſs in the head, giddineſs, an apprehenſion of divers colours, green, and yellow, a ſudden and often change of the colour in the face, and of the beating of the Pulſe.

When *Leipothymy* is preſent the ſame ſigns are, but greater; and there is often a cold ſweat, alſo the ſick complain of their faintneſs.

But theſe ſigns ſhew a Syncope, A ſudden failing of al ſtrength, a ſlow pulſe, low and at length ſtopping, a pale and blewiſh face, coldneſs of al the body, eſpecially externally; a cold ſweat eſpecially in the temples, neck, and breaſt, from whence the Diſeaſe is named.

The ſigns of the Cauſes are commonly manifeſt, for Feavers malignant, acute, ſyncopal or fainting, cauſe a proper Syncope or Swooning, are eaſily known: As alſo thoſe external Cauſes which make a ſudden Syncope, may be plainly ſeen, As Anger extraordinary and Joy, a ſudden Fright, ſtinking ſmels, great bleeding, and other large evacuations, long watchings, and faſting, much lechery, and grievous pain.

Theſe things do ſignifie that the Humors and the Body are thin, a ſharp noſe, hollow eyes, temples fallen; and the gnawing of the mouth of the ſtomach, trouble of mind, pricking, heat and great pain, do ſhew abundance of Choller.

When

When there is abundance of crude Humors you may know by the enlarging of the body, ſwelling about the breaſt, a pale colour, black and blew, a ſmal, obſcure, and unequal pulſe.

A ſwounding by way of Sympathy from other parts, is known by the ſigns of thoſe parts affected; ſo that if it come from the ſtomach, that hath been diſtempered with loathing, vomiting, gnawing, the mouth hath been bitter, and dry, and the like. The ſame Judgement is to be taken in other parts: but if you ſee no ſign of any other part affected, you may conclude that it comes principally from the heart.

Moreover, A Syncope is diſtinguiſhed from other Diſeaſes by its proper ſigns. From an Epilepſy, becauſe that hath a Convulſion, but a Syncope not: From an Apoplexy, becauſe in that the breath is ſtopt, and there is often ſnorting, and the pulſe is not much abated, except when Death is at hand; but in a Syncope the Pulſe is almoſt gone, and the breath is free. It is diſtinguiſhed from the Mother, for in that the breathing parts are moſt affected, ſo that the Patient is almoſt ſtrangled, but the Pulſe is not much altered, nor the colour of the face, but keeps its natural complection, and ſometimes is higher coloured; but in a Syncope the breath is not ſtopt, but the pulſe is almoſt gone, and the face is pale: But ſometimes a Syncope is joyned with the Suffocation of the Mother, and then the Pulſe is not perceived.

The Prognoſtick of this Diſeaſe is firſt taken from *Hippocrates*, Aph. 41. Sect. 2. *They who often and violently faint without a manifeſt Cauſe, do die ſuddenly.* For as it is ſaid, a great Syncope doth quite take away the ſtrength from the heart.

A Syncope from which a man is not recovered by Roſe Water thrown in his face, and Wine given to drink with ſneezing-pouder put into the Noſe is deadly.

When one is raiſed from a Syncope, health is not to be promiſed; for if his Pulſe return not, but his colour be wan, and he ſtill be cold, he wil quickly Relapſe, in which is danger.

That Syncope which comes from immoderate Evacuations, fear, ſorrow, or ſome evident Cauſe, is of leſs danger than that which comes from an internal Cauſe.

As for the Cure, becauſe it comes from divers Cauſes, it muſt be various.

But of what Cauſe ſoever it come, in the time of the Fit theſe are good, Lying upon the back, throwing of cold Water in the face, provoking to neez, putting of ſtrong Wine, Cinnamon, or imperial Water, Aqua vitæ, Coeleſtis, and the like into the mouth, holding of hot bread to the Noſe, loud calling and ſhaking, ſtopping of the Noſtrils, wringing of the Fingers, pulling of the Hair, rubbing, binding, and cupping.

But in reſpect of the Cauſes which are divers, you muſt vary the Cure thus:

If it come from want of meat, he wil be Cured with ſtrong Wine, and a Toaſt, or Sop: Alſo with nouriſhing Broths, and Reſtoring diſtilled Waters among other things, a diſh of Eggs with ſugar, Wine and Cinnamon deſcribed in the following Chapter.

If it come from thinneſs of the Humors by which the ſpirits do eaſily flie away, give him ſweet things and meats of good juyce, and thickning; let the pores of the skin be ſtopt with Oyl of Roſes, and let the Patient ſtay in a cold place.

If it come from the Mother, you muſt give Medicines for that.

If it come from ſome evil quality, give Cordials and Antidotes, ſuch as are preſcribed in malignant Feavers.

If from poyſon, give things to expel it: Firſt a Vomit, and then Treacle; and then if he feel burning or gnawing in the Guts, let him take Milk or Butter, or fat Broth, or cooling Cordial Potions.

If it come of immoderate Evacuation, let the Patient be refreſhed with Scents, Meat, Drink, ſleep, and reſt.

If from too great loſs of Blood, lay him upon his bed, with his Head backwards, daſh his face with cold Water, give him a little Wine with cold Water.

If it come of too much Purging, give him new Treacle, or old if you cannot get new, with two grains of Opium diſſolved in Wine, or three grains of Laudanum which is better. And let the Belly be anointed all over with this following Oyl:

Take of *Oyl of Myrtles, and Quinces, of each one ounce and an half: Oyl of Wormwood one ounce: With a little Roſe Vinegar mix them and anoint often.*

Give a Clyſter of ſteeled Milk with three Yolks of Eggs, and two drams of Philonium Romanum.

Uſe Frictions of the Arms and upper parts, give him a Sop in Wine, or Wine alone.

And laſtly, Every Evacuation whether it be of Blood from the Noſe, or Womb, or other parts, or of Humors by Vomit, or Stool, muſt be ſtopped with their proper Medicines preſcribed in their ſeveral Chapters.

That Syncope which comes from too much Sweat, is cured by Medicines that reſtrain Sweat; as with Cold, or Roſe Water alone, or with a little Vinegar ſprinkled upon the Face and Hands. Alſo

ſo let the Air be cooled with the ſame Water, and with Fanning. Apply cold Epithems to the Heart made of Roſe, Sorrel, and Borrage Water, with Pouder of Diamargariton frigid, with a little Wine to make it pierce.

You muſt alſo give often cooling Juleps made of Syrup of Sorrel, Violets, and Apples, or Lemmons, with cooling Waters, and Lapis Prunellæ. Let the Pores be cloſed with anointing the Skin with Oyl of Roſes, Myrtles, and Maſtich. Let him abſtain from Wine. Let him not be rubbed, but let him move often gently, being lightly covered.

Let his bed be perfumed with this Pouder following:

Take of *the flowers of Water-lillies, red Roſes, of each three ounces: the beſt Labdanum half an ounce: Storax two drams: Myrtles, and grains of Sumach, of each two ounces. Make a Pouder.*

If it come from ſuffocation of the Spirits, you muſt call them forth by Frictions, Ligatures, Cupping-glaſſes, and the like. And if this Suffocation came of Repletion, you muſt bleed plentifully, but by degrees.

If it comes from terror and fear, you muſt alſo bleed, leſt it cauſe an Obſtruction or Inflamation.

Chap. 2. *Of the Palpitation, or Breathing of the Heart.*

AS in a Syncope the motion of the Heart is diminiſhed, ſo in this Diſeaſe it is depraved. It is wrongly ſtiled by ſome a trembling of the Heart, when trembling is a paſſion of the Animal and voluntary motion, and is not proper to any parts but ſuch as have voluntary motion.

Galen in his Book of Trembling, Palpitation, and Convulſion, ſaith, That Palpitation comes only from the Diſeaſe that is from the Cauſe which lifteth up, and depreſſeth the part, without any help of the Faculty; but Trembling comes partly from the Faculty, partly from the Diſeaſe. Hence it is that many uſing the word Palpitation indifferently to any part, think it is in the Heart, as in the Skin and Muſcles, in which it comes from wind driven violently thither: for if the Heart be moved as a Bladder by water or wind, they ſuppoſe that to be a Palpitation. But the reaſon is different; for the Skin and Muſcles cannot naturally dilate and contract themſelves, but by Diſeaſes. But the Heart hath a Natural Faculty to contract and dilate it ſelf, therefore a Palpitation cannot be without its motion. And they do in vain muſter up *Galens* Reaſons, ſo thought by them, to prove that the Palpitation of the Heart comes not by Nature, but by a Diſeaſe, or cauſe of a Diſeaſe. For *Galen* in all thoſe places ſpeaks of no other Palpitation than that which is in the Skin and other external parts, and not of the palpitation of the Heart, which is of another Nature; and *Galen* 2. de ſympt. cauſ. cap. 2. ſaith that the Palpitation of the Heart and Arteries, is different from that of the other parts.

Therefore the Palpitation of the Heart is an immoderate and preternatural ſhaking of the part, with a great Diaſtole or Dilatation, and a vehement Syſtole or contraction which ſometimes is ſo great that as *Fernelius* obſerves, it hath often broken the Ribs adjoyning, & ſometimes diſplaced them which are over the Paps; and ſometimes it hath ſo dilated an Artery forth into an Aneuriſm as big as ones fiſt, in which you might both ſee and feel the pulſation.

This immoderate ſhaking of the Heart comes from the Pulſative Faculty provoked.

But here may be objected, That in Feavers all theſe things are found, for this is an immoderate Syſtole and Diaſtole, by the provocation of the Faculty through ſome troubleſom matter, or by encreaſe of heat in the Heart.

To this we anſwer, That the motion of the Heart in Feavers is diſtinguiſhed from Palpitation, only by its degrees, and the depraved motion of the Heart when it is vehement, is called Palpitation; but if it be not vehement, it is called a quick, great, and ſwift Pulſe, and is referred to the differences of Pulſes.

Now the Efficient Cauſes of this Palpitation may be referred to Three Heads: Either it is ſomwhat which troubleth and pricketh; or neceſſity of Refrigeration; or defect of Spirits: which two latter may be referred to the encreaſe of Cuſtom.

The Moleſting Cauſe is moſt uſual, ſo that many Authors knew no other, the other are rare, and that is either a vapor or wind which troubleth the Heart either in quantity or quality, or both. The quality is either manifeſt or occult.

A vapor troubleſom in a manifeſt quality, is either in the Heart and its parts adjoyning; or it is ſent from other parts; and this ſuddenly getting to the inmoſt parts of the Heart, doth ſtir up the Expulſive Faculty, which being Naturally very ſtrong, ariſeth powerfully with all its force to expel the enemy.

In

In the Heart, and thereabout, especially in the Pericardium, are gathered sometimes cold and thick Humors, which send up vapors to the Ventricles of the Heart, which cause Palpitation.

But from more remote parts, vapors and wind are sent to the Ventricles of the Heart; as from the Stomach, Spleen, Mother, and the other parts of the lower Belly.

Many times a Vapor that troubles the Heart by an occult quality, ariseth in malignant Feavers, Plague, and after Poyson, and sometimes from Worms putrified, and the terms stopped from corrupt seed, or other putrid matter which do much stir up the Expulsive Faculty thereof.

Divers Humors do molest the Heart, either with their quantity or quality; so too much Blood oppressing the Veins, Arteries, and Ventricles of the Heart, so that they cannot move freely, makes a Palpitation by hindering motion, which that the Faculty may oppose it moveth more violently. So Water in the Pericardium, being in great quantity, doth compress the substance of the Heart and its Ventricle, so that they cannot freely dilate themselves. The same do Humors flowing in abundance to the Heart, as it happens sometimes in Wounds, Fear, and Terror.

Humors offending in quality, hurt the Heart, if they be venemous, putrid, corrupt, sharp, or too hot, especially burnt Choller coming to the Heart, and provoking its Expulsion.

Also Tumors, though seldom, cause this Disease; as Inflamation of the Heart, Imposthumes, or Swelling in the Arteries of the Lungs neer the Heart; which *Galen* saith befel *Antipater* the Physitian, 4. de loc. aff. by which, after an unequal Pulse, he fell into a Palpitation and an Asthma, and so died: so *Dodonæus* reports that he found a Callus in the great Artery next to the Heart, which caused a Palpitation for many yeers. Also Tumors in the Pericardium, whether they be without humors and scirrhus, or with humors in them, as the Hydatides or watery Pustles, and little stones, bones, and pieces of flesh are sometimes growing in the Heart, which cause Palpitation. So *Platerus* reports, that in one who had a long Palpitation, and died thereof, there was found a bone in his Heart. But *Schenkius* reports, that in a Priest who was from his youth to the age of forty two troubled with a Palpitation, there was found in the bottom of his Heart an Excrescens of flesh which weighed eight drams, and resembled another Heart.

The Second Cause of Palpitation is necessity of refrigeration, which is, when there is a preternatural heat in the Heart, by which the Spirits are inflamed within, and therefore the motion of the Heart and Arteries is encreased, that what is spent, may be restored, and the heat cooled; and this comes sometimes from an internal cause, which is rare, but oftener of an external, as anger, vehement exercise, and the like. As *Platerus* observed in a yong man, who being hot and angry at Tennis, fell into a Palpitation of the Heart, and so died.

The third Cause, is the defect of Spirits which comes by hunger, watching, anger, Joy, fear, shame, and great Diseases, and other causes which do suddenly dissipate the Spirits, which defect the Heart laboring to repair, that it may beget more quick and plentiful, and send them into the whol Body sooner, it doth enlarge its motion, and make it quicker.

You must observe for conclusion that it is more ordinary to see a Palpitation which comes by consent from other parts, than from the Heart it self: For it hath a consent with all parts by the Veins and Arteries, by which, Vapors, Wind, and Humors are sent. Which all shall be shewed in the Diagnosis following:

The Diagnosis or knowledg of this Disease, is directed either to the Disease, or the Causes which produce it.

The Disease is subject to sence; it may be felt with the hands, somtimes seen and heard; for the Artery may be seen to leap especially in the Jugular. And *Forestus* saith it may be heard, by an Example of a yong man, that they who passed by might hear it by laying their Ear to the Window.

Also the Causes are distinguished by their Signs: A hot distemper is known by the greatness of the Pulse and swiftness, by a Feaver and heat of the Breast, by great and often breathing, and desire of cold things.

If the Palpitation come of wind, it quickly comes and goes, and is presently raised by little motion, and the Breath is difficult, with trembling sometimes at the knees, mists in the Eyes, noise in the Ears, and sometimes pain of some part, which quickly is gone; but you must gather the Nature and quality of the Vapor by the signs of the Humor which aboundeth in any part, because vapors do always arise from Humors.

If the Palpitation come from Humors in the Heart, the Disease doth not come so suddenly, and continueth longer, and you may know what kind of humor it is by the signs of the Humor which abounds throughout the whol Body. And especially if it be from Blood, from which it most often proceedeth; and this is known by a divers and unequal Pulse, sometimes great, sometimes smal, slow, and swift, to which the Breathing answereth in proportion; the Patients heart seemeth to be bound and oppressed, as appears by the exceeding heat, distension of the Veins, redness of Face, the time being Spring, the Age, Region, and Diet causing blood to abound.

That

That which comes by conſent from other parts, is known by the proper ſigns of the parts affected, ſo we know that it is from the ſtomach, when there is want of Appetite, loathing, vomiting of baſe Humors, and gnawing at the Stomach. A troubleſom breathing about the Pancreas or Spleen, or any other diſeaſe of the Spleen, ſheweth that the matter lurketh there, from whence the vapors fly to the Heart; ſo ſuppreſſion of the Terms, and Hyſterical fits, declare that it comes from the Womb.

The Water abounding in the Pericardium is harder to be known, but we may conjecture, if the Pulſe be weak and faint, and the Patient bemoaneth himſelf, that his heart as it were is ſomtimes in Water, and is ſuffocated, and if it be conſtant, and he incline to an Atrophy or Hectick.

If malignant humors cauſe it, there will be great change in the Pulſe, a loſs of ſtrength, ſomtimes fainting, and other ſigns of malignity.

If it come from a Tumor there is remarkable variety in the Pulſe, and the motion of the Heart is different from the natural, very unequal and inordinate, and if the humor be hot, there will be great inflamation in the Body, great thirſt, difficulty of breathing and fainting will follow with death: but if the Tumor be hard, and in the Pericardium, the diſeaſe is conſtant, and the Patient decayes by degrees without any manifeſt cauſe: if fleſh, or any more ſolid thing grow to the heart, there will be a continual Palpitation from the beginning of the Diſeaſe to the end of Life.

Laſtly, You may know when it comes by want of Spirits, by the precedent cauſes, which deſtroyed the Spirits, and by the quick and ſmal pulſe, and when it comes from the leaſt labor or motion. Somtimes the like befals them that are well from walking or other motion, with a change of Pulſe, and a reſembling Palpitation.

The Prognoſtick is to be taken thus: It is dangerous from the hinderance of the motion of the Heart, by which Life is preſerved, and it brings Syncopes and death: For it is a true Obſervation of *Galen*, Com. Aph. 41. Sect. 2. and 5. de loc. aff. cap. 2. All that in youth, or in declining age are troubled with the Palpitation of the Heart very much, die before they are old; for the often Palpitation is a ſign that the Vital faculty was very weak.

A Palpitation by Propriety is worſe than by conſent, and ſomtimes deadly. And that which is of an internal, is worſe than that which comes of an external Cauſe, unleſs it be from poyſon, or ſome great wound.

If it come from a Tumor, or ſolution of Unity, it is incurable.

The Cure is various, according to the variety of the Cauſes: and firſt that which comes from a peculiar diſtemper of the Heart and Pericardium, is incurable; therefore we muſt look only at the Cure of that which is by conſent, which depends upon the divers diſeaſes of the parts, whoſe Cure muſt be ſought in their proper Chapters.

But beſides thoſe Remedies which take away the Cauſe, you muſt uſe thoſe which aſſwage the Symptomes by refreſhing the Heart, and ſtrengthening it, and which diſcuſs the vapors which ariſe from melancholly, or crude & wateriſh Humors; as Cordial Juleps, Opiates, Epithems, & Perfumes, which are preſcribed in weakneſs, and theſe that follow.

Take of *Conſerve of Balm, Roſemary-flowers, Borrage-flowers, and Clove-gilly-flowers, of each one ounce: Confection of Acorns and old Treacle, of each one dram: the Powder of Diamber, and Diamoſchi dulcis, of each one ſcruple: with the Syrup of Citron Barks make an Opiate, which let him take often.*

Take of *Bugloſs, Roſe, and Orenge-flower Water, of each two ounces: the ſyrup of Clove-gilly-flowers, one ounce and an half: Cinnamon Water half an ounce: the ſpirit of Roſes two drams: Confection of Acorns one dram: mix them and give two ſpoonfuls now and then.*

This following Liquor which immitateth the Juyce of Hearts deſcribed in the following Chapter, is good.

Take of *Hogs or Sheeps Hearts three: Cinnamon and Cloves of each one dram: Lettice and Sorrel ſeeds, of each one dram and an half: white Wine two ounces: Borrage, Scabious, and Roſe Water, of each one ounce and an half: Confection of Alkermes, one dram: boyl them all between Two Diſhes, and let him take two ſpoonfuls of the Liquor morning and evening.*

Take of *Red Roſes and Roſemary-flowers of each two drams: Lavender flowers one dram: Angelica ſeeds, Citron peels, Cloves, Cinnamon, and Mace, of each half a dram: Saffron one ſcruple: Muſk and Amber-greece of each ſix grains: Make a Bag with red Silk and ſprinkle it with Roſe water and white Wine, and apply it warm to the Heart.*

Take of *Oyntment of Roſes half an ounce: Oyl of Cinnamon and Cloves of each ſix drops: Muſk and Amber-greece of each four grains: Mix it for a Liniment for the heart.*

Purging Clyſters and Carminative to expel Wind are often to be given.

But in the Fit it is beſt to open a vein; And *Galen* witneſſeth 5. de loc. aff. cap. 2. That he never did it without profit.

Some

Some apply Cupping Glaſſes without Scarrification to the Breaſt, which they ſay are excellent to diſcuſs Wind there contained. Others to the Hypochondria, when the matter of the Diſeaſe is there.

But *Zacutus Luſitanus* applied a Cupping Glaſs with Scarrification to the heart with wonderful ſucceſs, as you may read in *prax.admir.obſ.*133.*lib.*1.

Others commend true Rhapontick given to two ſcruples in Wine, or Wine wherein the ſame hath been ſteeped.

Chap. 3. *Of* WEAKNESSE.

ALthough Weakneſs of Strength doth generally comprehend the hinderance of al Actions, Animal, Vital, and Natural; yet more particularly it comprehends the Vital which are known by a Weak Pulſe: yet this Weakneſs uſeth to be found in al great Diſeaſes, in which Nature doth yeild or reſiſt the Cauſe.

Therefore as in Palpitation the Action of the Heart that is Pulſation is depraved, ſo in Weakneſs it is diminiſhed.

Which is the ſame with a Syncope, but it differs in this, In a Syncope it is ſo little that it is hardly perceived; but in Weakneſs the Pulſe is manifeſt and not ſo little.

In this alſo the Animal Faculty is alwaies offended: Hence comes weak motion without hurt of the Brain, Nerves, or Muſcles, but from the defect of Vital Spirits which are not ſo ſufficiently ſent to the Head that they may be made Animal.

The immediate Cauſe of Weakneſs is Defect of the natural heat and ſpirits from which the life and ſtrength of the parts do depend.

And this Defect is in every part from the Defect of Vital Spirits, and heat flowing from the heart.

Now the Vital Spirits are Defective, either becauſe they are not bred many; or becauſe they are diſſipated after they are Bred, or Corrupted, or Suffocated, as we ſaid in a Syncope, where there is this difference, That in a Syncope the Cauſes of Defect of Spirits, do ſuddenly produce their effect; but in Weakneſs they operate by degrees. And therefore in Syncopes and Leipothymia al the Vital Spirits almoſt, do ſuddenly fail, but in this there are fewer then ought to be communicated to every part.

Moreover, When the Natural heat wants not only adventitious heat, but alſo radical moiſture to feed upon: if this moiſture be wanting and diminiſhed, the natural heat muſt be leſs, and the ſtrength abated.

Now the Cauſes which hinder the ſpirits from being Generated, or maketh them diſperſe themſelves, or Corrupt, or Suffocate them, are propounded in the Treatiſe of a Syncope.

The Diagnoſis of this Diſeaſe needs no Explication becauſe it is manifeſt, and the Patients do complain of their Weakneſs. But the ſigns of the Cauſes were Propounded in the Syncope.

The Prognoſtick depends upon the various diſpoſition of Cauſes, for as they are greater or leſs, there is more or leſs danger.

The Cure of this Diſeaſe is to be directed to two things, To the taking away of the Cauſe, and the Reſtauration of the Heart and vital ſpirits.

The Cauſes are, almoſt al great Diſeaſes, in which either Nature yeilds to, or reſiſteth with difficulty, therefore the taking away of the Cauſe belongs to the Cure of almoſt al Diſeaſes: which you muſt take from their proper Chapters.

But the ſtrengthning of the Heart, and reſtoring of the vital ſpirits are to be here declared; ſomtimes to be preferred before the Cure of the Cauſe, when death ſeems to be at hand: but we muſt alwayes take heed leaſt when we encreaſe the ſtrength we encreaſe the Cauſe of the Diſeaſe: and therefore in a hot Diſeaſe you muſt uſe more temperate Cordials, but in a Cold Diſeaſe thoſe that are more hot.

Firſt then mix Cordials in his nouriſhment, as Confectio Alkermes, or Confectio de Hyacyntho in Broths, or with pleaſant Wine or Cinnamon Water, if there be great weakneſs.

Boyl alſo between two Diſhes a piece of a Leg of Mutton, after the skin and fat is taken off, and after that let the Patient drink the Broth, being ſtrained, at one draught. Or,

Take *the Fleſh of a Capon after the skin and fat is taken away, cut it in pieces, and put it in a glaſſed Pot well Luted, and ſet it in Balneo Mariæ to boyl for five hours, then let the Patient take two or three ſpoonfuls of the Liquor in all his Broths.*

Or you may make a diſtilled Water thus:

Take *a Capon or an Hen, after the ſkin is taken off, and the fat, cut it in pieces; then powr upon it Water of Bugloſs, Borrage, Sorrel, Roſes, and Orange Flowers, of each half a pound: the Poudr of three Sanders, Aromaticum Roſatum, and Cinnamon, of each half an ounce: yellow Sanders one ounce: Lemmons ſliced, three. Diſtill them according to art, which muſt be given every hour by the ſpoonful.*

The Juyce of Legs of Mutton only is of much uſe.

Half roaſt a Leg of Mutton, and ſlaſh it upon the Spit; take the Juyce and boyl it a little in the diſh, and give it either alone, or with Broth, or with Yolks of Eggs.

Valeriola doth much commend the Juyce taken out of Sheeps Hearts. And *Zacutus Lucitanus* confirms it by his Experience, ſaying, That he with this only Medicine a month continued, cured a rich man, who often ſwouned through weakneſs of the Vital Faculty, and reſolution of the Blood and Spirits, when many other Medicines had been uſed in vain.

The Juyce is thus taken forth:

Slit the Heart of a Sheep or Goat in the middle, then waſh it well, and laſt waſh it with Roſe Water; then cut it in ſlices and put it in a glaſſed Veſſel with a few Cloves, and no other Liquor. And after the Pot is well luted, put it into the Oven after it is drawn, till the Juyce come forth. Give this to the Patient to drink.

The Italians uſe Caudles of Yolks of Eggs, Wine, Sugar, and Cinnamon, which is very reſtorative.

Zacutus Lucitanus makes a fine diſh of twenty Yolks of Eggs; as you may ſee in the 107. Obſervation, Lib. 2. of his Admirable Practice.

You may make Cordial Juleps thus:

Take of *the Water of Bugloſs, Roſes, and Orange flowers, of each one ounce: Syrup of Apples and Lemmons, of each half an ounce: Confectio Alkermes one dram: Cinnamon Water two drams. Make a Julep.*

Or make this following mixture:

Take of *white Sugar two ounces: moiſten it well with the beſt Cinnamon Water; then put to it as much Spirit of Vitriol as is ſufficient to make it ſharp; then add of the Eſſence of Cinnamon four drops; the Eſſence of Mace, Nutmegs, and Annis ſeeds, of each three drops; the Eſſence of Cloves two drops. Mix them, and take it either by it ſelf, or in Broth.*

You may alſo make a reſtoring Opiate thus:

Take of *Conſerve of Roſes, Bugloſs, Borrage, and Clove gilli-flowers, of each one ounce: Citron Barks, and Nutmegs candied, of each three drams: one candied Myrobalan; Confectio Alkermes half an ounce: the Spirit of Roſes, and Eſſence of Citrons, of each half a dram: the Eſſence of Cinnamon ſix drops: With the Syrup of Apples make an Opiate; take it often.*

This Water following is excellent:

Take of *the Jelly of Harts-horn drawn with white Wine, four pints: the Blood of a Lamb and a Calf clenſed with the hands from all fibres, of each two pints: Muſchadel, Canary, and Malago Wine, of each three pints: of Calfs Hearts cut in pieces four: Crums of new white Bread dipped in Milk two pound and an half; the Juyce of Balm one pint and an half: Roſe and Orange Flower Water, of each one pint: great Citrons ſliced three: Cinnamon four ounces: Mace one ounce: Put them in a large glaſs Still, and ſtill them in* Balneo Mariæ.

You may make a moſt excellent and precious Cordial Water after this manner:

Take of *Amber-greeſe two drams: Muſk two ſcruples: Lignum Aloes one dram and an half: the white part of Benjamin three drams: after they are bruiſed and mixed, put them into Spirit of Wine, and ſetting them upon a gentle fire draw out the Tincture fully; and then filter off the Liquor, and draw off half the ſpirit with an Alembick upon the aſhes with a very gentle fire; keep the Liquor cloſe ſtopped in a Glaſs, with a Cork waxed over, and a bladder; of which you may give two, three, or four drops in Broth, or in Juleps, or in this following Syrup.*

Take of *Cinnamon Water four ounces: the beſt Roſe and Orange flower Water, of each ſix ounces: Mix them, and diſſolve therein as much Sugar candy as you can, and make it into a Syrup without fire; with a ſpoonful whereof, mix four Drops of the aforeſaid Cordial Liquor.*

Of the Ingredients remaining from the former Liquor, with as much of Damask Roſes, and four times as much Benjamin, you may make Cakes to perfume the Chamber.

Apply both Liquid and Solid Epithems to the Heart, and yong Pidgeons ſlit and ſprinkled with Cordial Pouders.

Apply

Apply to the Stomach, bags of Spices dipped in Wine. Let the Stones and privy Members be fomented with Confection of Alkermes diſſolved in Wine.

Let the Arteries of the **Temples, Hands and Feet** be touched with Confectio Alkermes, adding a little Cinnamon Water.

Apply this following to the **Noſe**:

Take of *the Leaves of Balm, Bazil, and Marjoram, of each two drams*: *Citron peels, yellow Sanders, and Cloves, of each one dram*: *Saffron half a ſcruple*: *Amber-greeſe ſix grains*: *Muſk four grains*: *tie them in a clout and dip them in Roſe and Cinnamon Water, and ſmell thereto often.*

Or make a Balſom to anoint the Noſtrils with the Chymical Oyls aforeſaid of Nutmeg, Cinnamon, and Cloves, with a little Wax.

The End of the Eighth Book.

THE NINTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Stomach.

The PREFACE.

AS there are divers *Actions of the Stomach, ſo there are divers Hinderances of thoſe Actions which Cauſe variety of Diſeaſes: For this part being ordained to Concoct meat, and make the Chyle; for the performance thereof firſt it is conſtrained to deſire Meat and Drink by the Appetite which may be diminiſhed, aboliſhed, or depraved. When it is aboliſhed, it is called* Anorexia, *&* Apoſitia: *When 'tis diminiſhed, it is called* Inappetentia, *and Loathing: But when it is depraved, it is called* Doggshungs, *or* Pica, *or* Malacia: *Too great deſire of Drink is called* Sitis Morboſa: *Theſe Diſeaſes mentioned do concern the attractive Faculty, they which concern Concoction, as it is diminiſhed, aboliſhed, or depraved, are comprehended under the name only of Concoction hindered; if the Retentive and Expulſive Faculty be hurt, it conſiſts in Vomiting and Hickocks: There are divers kinds of Vomitings according to the divers Condition and nature of the Matter Vomited forth. And becauſe the Stomach is of exquiſite ſence of Feeling by reaſon of the famous Nerve it hath from the ſixth Conjugation, it is therefore as other ſenſible Parts, ſubject to pains; and it hath ſomtimes Tumors, (as other parts) and Inflamations, Impoſthumes, and Ulcers. That therefore we may in this Book explain all the Ordinary Diſeaſes of the Stomach, we will Comprehend it in Eleven Chapters. The Firſt, Of Inappetentia, or Loathing of meat. The Second, Of Fames Canina, or Dogs Appetite. The Third, Of Pica and Malacia, or Green-ſickneſs. The Fourth, Of Sitis Morboſa, or diſeaſed Thirſt. The Fifth, Of Concoction hindered or hurt. The Sixth, Of Hickocks. The Seventh, Of Vomiting. The Eighth, Of Vomiting Blood. The Ninth, Of the Diſeaſe called Chollera. The Tenth, Of Pain in the Stomach. The Eleventh, Of its Inflamation, Impoſthume, and Ulcer.*

CHAP.

Chap. 1. *Of Want of Appetite, or Loathing of Meat.*

INappetentia, and Loathing, is either from the aboliſhed or diminiſhed Action of the ſtomach: When it is Aboliſhed it is called *Anorexia*, & *Apoſitia*: but when it is Diminiſhed it is called *Duſorexia*, but by Cuſtom *Anorexia*, & *Apoſitia* are uſed for both.

The Cauſes of this Diſeaſe are divers, which that we may bring into Order, let us conſider the Natural Cauſes of Hunger or Appetite: Theſe are called by *Galen*, lib. 1. de ſymp. cauſ. cap. 7. Symptomes: and are Five, The Firſt whereof is emptineſs of the parts. The Second is the Natural Appetite of thoſe parts ſo emptied. The Third is the Sucking and Attraction of the Meſaraick Veins in the Stomach and Guts. The Fourth is the ſenſe of their ſucking in the Stomach. The Fifth is the Animal Appetite wch cometh from the Nerve in the mouth of the ſtomach which comes from the Brain, and is endued with great ſenſe and feeling. As alſo the Melancholick Humor which comes from the Spleen to the mouth of the ſtomach, which with its ſharpneſs gnaws the inmoſt Tunicle of the ſtomach, and is like ſawce to ſtir up Appetite; which that it may be natural, it is neceſſary that al thoſe Cauſes be in Order; for if there be any fault in either, then there is a hurt or hinderance of Appetite.

Therefore the Firſt Cauſe which is Emptineſs of Parts, if it be wanting there is no Attraction made by them from other parts and the ſtomach, and ſo there is no Appetite: now this Emptineſs is wanting either when the parts are filled with plenty of crude juyces, by reaſon of gluttony or drunkenneſs; or for want of exerciſe, or uſual evacuations, or when there is ſo much fat that it is ſufficient to nouriſh the parts: Alſo the great ſtoppage of the pores of the skin, doth hinder the emptineſs of the parts: or great weakneſs of the natural heat, ſo that it can diſperſe none or but little of the ſubſtance of the Parts: or the calling of that heat to the concoction of the matter of a Diſeaſe whereby the nouriſhment of Parts is neglected, as in Feavers.

The Second Cauſe is Natural Appetite, and the Attraction of nouriſhment to the ſtomach; and this is depraved when the Parts though empty, wil not draw by the veins, by reaſon they have loſt their ſtrength, but languiſh and forget their duty: As happeneth in acute, malignant, peſtilential, ſynteckick, and hectick Feavers: And in immoderate evacuations, as in Flux of the Liver, Womb, Hæmorrhoids, Bleeding at the Noſe, Great Sweat, much Lechery, long Faſting, and the like.

The Third Cauſe is, The Attraction of the ſtomach by the Meſaraick Veins, which uſeth to be depraved by ſtoppage of thoſe veins, by which means the empty Parts cannot attract their Chylus, nor make the mouth of the ſtomach ſenſible: ſo we may perceive in Children troubled with Struma, to conſume by a long Flux of Chyle, by reaſon al the Meſentery is full of Glandles which ſtop its Veins, and hinder the paſſage of the Chyle to the Liver, by which means it is ſent half concocted forth by ſiege, and the Parts are deprived of their neceſſary nouriſhment.

The Fourth and Fifth Cauſes, which are Senſe of Sucking, and Animal Appetite, do require a good diſpoſition in the ſtomach, brain, and nerves: Therefore whatſoever can alter their diſpoſitions may alſo deſtroy Appetite; ſo every great diſtemper of the belly, eſpecially if it be hot and dry, doth hinder Appetite. Great heat by diſperſing the moiſt ſubſtance of the ſtomach, doth take away Appetite; as alſo great Cold not only poſitive as when the bowels are ſo cold that they are ſtupified by Air, Water, Froſt, Snow, and the like; but alſo privative, when the native heat is ſpent, which *Galen* cals Narcoſis or Stupefaction, as by long bleeding, feavers, and the like, by which the ſtrength of the ſtomach and other Parts is conſumed. Evil alſo and corrupt Humors; whether hot or cold, do cauſe want of Appetite: The hot are chollerick, aduſt, putrid, or virulent, whether they are bred in the ſtomach for want of Concoction, or brought from other infirm Parts.

The Cold Humors are, Flegmy and Slimy, gathered in the ſtomach by evil Concoction, or coming from the whol body, as in them who by often Vomitings bring the corruption of other Parts into the ſtomach.

Or from the Brain by Catarrhs in which the ſtomach uſeth to be troubled with Flegm: The ſuppreſſion of the Terms and Hæmorrhoids alſo, by choaking and ſmoothering the natural heat do alſo diminiſh the Appetite.

Moreover, The diſtemper of the Brain and Nerves Cauſe that the Sucking is not felt in the ſtomach in them who have loſt or depraved the Animal Faculty; therefore they are ſick in mind, as in an Apoplexy, Lethargy, Phrenzy, Madneſs, and the like; as alſo in a Palſie by reaſon of the Obſtruction

of

of the Nerve of the ſixth Conjugation which comes to the Stomach, or by reaſon of the ſtupefaction thereof, by the uſe of cold and narcotick things.

The knowledg of this Diſeaſe is manifeſt, for the Patient will complain of his want of appetite, and loathing of Meat. But the ſigns of the Cauſes are partly manifeſt, and partly to be diſcovered by art.

And firſt, they which cauſe the want of emptineſs, are known by former high feeding, repletion, want of exerciſe, or evacuation, long ſleep, and other Cauſes of crude Juyces; as alſo if the body be full, and the Veins ſwoln. Alſo the thickneſs of the Skin ſignifieth the ſame, for that hinders the diſperſing of the nouriſhment, as alſo ſome great diſeaſe in ſome particular part, by which there is a diſperſing of the Natural heat in the whol body, ſo that it is ſo weak that it cannot concoct the nouriſhment brought to the parts, and ſupply its wants.

The ſigns of the ſecond Cauſe are manifeſt, namely acute, malignant, peſtilential, and ſyntectick Feavers, ſtrong evacuations, and other Cauſes, by which there is a great decay of Natural heat in the parts, ſo that they cannot attract neceſſary nouriſhment.

The ſigns of the third Cauſe are obſtructions, whoſe ſigns are known in the diſeaſes of the Liver, Spleen, and Meſentery.

The ſigns of the fourth and fifth Cauſe, need a more curious ſearch, and firſt heat in the Præcordia, eſpecially in the Stomach, thirſt, dryneſs, and bitterneſs of the Tongue and Jaws, and a Feaver, do ſignifie a hot diſtemper of the ſtomach, and abundance of Choller. And if this hot humor do flow from other parts, the diſeaſe of that part will ſhew it, as inflamation of the Liver, or other part. But if no other part ſeem to ſuffer, you muſt conjecture that the fault is in the Stomach, or that evil meats have been received. To theſe are joyned Cardialgia, Heart-ſcalding, Nauſea or loathing, Vomiting, and Purging, the Nature of which humors are known by what is ſent forth. A cold diſtemper and much flegm is known by cooling Cauſes afore going, or ſuch as diſperſe the Natural heat, and extinguiſh it; as alſo from the ſence of weight in the Stomach, from ſharp belching, or from a ſlimy thick humor ſent out of the mouth, or by ſtool.

The ſame is ſignified by a long Catarrh, and a diſeaſe in ſome part which may ſend flegm or melancholly to the Stomach, as of the Spleen, Womb, or the like. Alſo the diſtempers of the Brain and Nerves are to be known by their proper ſigns.

As to the Prognoſtick: As a good Appetite is good in all Diſeaſes; as *Hipp.* Aph. 33. Sect. 2. ſaies, To be right in mind, and to be willing to take that which is brought, is good: ſo want of Appetite uſeth to be an evil ſign. For it ſignifieth a great digreſſion from the Natural ſtate; and it comes, as *Galen* teacheth, Com. in 3. Epid. either from evil Humors in the Mouth of the Stomach, or from the loſs of the Faculty, whoſe duty it was to be ſenſible of the want of nouriſhment, and conſequently to deſire it. So *Hipp.* in 1 Epid. ſaith concerning men in Conſumptions that died in the time of an Epidemical diſeaſe, they alwaies abhorred meat and drink. And ſo *Galen*, Comment. in 3. Epid. ſaith that he hath ſeen many in a Plague time which could take no ſuſtenance, and died: But ſome who were ſtronger, and took courage, and did eat, recovered. So in *Hipp.* 3. Epid. Sect. 1. Ægr. 2. *Hermocrates*, who died the twenty ſeventh day, *abhorred meat all the time, and in the laſt daies could not taſt.* And Sect. 2. of the ſame Book, Ægr. 6. Euryanactis *her daughter, abhorred meat all the while, and drank nothing worth ſpeaking of, died about twelve daies after.*

But we muſt obſerve, that loathing of meat is bad if it come from the deſtruction of the Natural heat: but it is not ſo dangerous if it come from abundance of evil humors, and Cacochymia; as you may ſee in *Hipp.* 7. Epid. by the Son of *Cleomenis*, who without a Feaver abhorred meat for two months, through abundance of crude and viſcid flegm, which he at laſt vomited up. So in the beginning of Diſeaſes, and eſpecially of Feavers, want of Appetite is not ſo dangerous, becauſe then Nature being buſie about the concocting of filthy humors, is called from her uſual deſire of meat. But after, when the Feaver is appeaſed, and the humors that cauſed the Diſeaſe being ſpent, ſhe returns to her old cuſtom.

In Children, want of Appetite is worſe than in others, becauſe their ſubſtance is moiſt, and eaſily diſſipated, and requires more uſe of nouriſhment to reſtore them.

In men recovered of a Diſeaſe, loathing threateneth a relapſe, by reaſon the reliques of the Diſeaſe cauſe it.

In a continual Diſeaſe, loathing and ſincere dejections are evil. *Hipp.* Aph. 6. Sect. 7. loathing is an evil ſign in long diſeaſes: but they who are like to eſcape, have the contrary; that is, a good appetite. But ſincere dejections coming, do cauſe a worſe Prognoſtick; becauſe *Hippocrates* underſtands by ſincere dejections, ſuch as have no humidity mixed with them, when the humor alone without any Water, is caſt forth, whether Choller or Melancholly; for theſe ſtools do ſhew that all the Natural humidity is burnt up by the heat of the Feaver.

In long Diſeaſes of the Guts, loathing of meat is evil, and with a Feaver worſe; *Hipp.* Aph. 3. Sect. 6. when there are deep and putrid Ulcers in a dyſentery, the Stomach ſuffering with the Guts doth

doth not well concoct, which offence ariſing higher, affects the mouth of the Stomach with loathing. There are ſome in Dyſenteries, who abhor meat from the beginning of the Diſeaſe, by reaſon of the evil humors which come from the Liver; for the ſuperfluous part of them comes to the mouth of the Stomach, which is not alwaies dangerous. But in long Diſeaſes when it is ſo, there is either a putrifaction about the Ulcer, or a great Inflamation, both which are deſperate.

The Cure of this Diſeaſe, if it come from the diſtemper of other parts, muſt be by the Cure of it. But if it come only from a fault in the Stomach, it is to be reduced to a hot or cold diſtemper joyned with matter.

A hot diſtemper is to be cured firſt by purging of Choller gently and often. And this may be made of Rhubarb, Myrobalans, Tamarinds, Syrup of Roſes, or of Succory with Rhubarb; Or if the Patient be ſubject to vomiting, you muſt give him a gentle one.

The ſame Humor is to be altered with Juleps or cooling Broths, in which you muſt not omit the Spirit of Vitriol or Sulphur; becauſe all ſharp things do not only allay Choller, but provoke an appetite. Hence it is that we uſe Sallets in Summer, to provoke appetite.

Or you may alter and purge this Humor at once with a convenient Apozeme, to which, for the Stomach, ad half a handful of Sea Wormwood, and half an ounce of Citron Myrobalans.

After Purging, Marmalad of Quinces is good to ſtrengthen the Stomach; or the Syrup mixed with Syrup of Wormwood, the Lozenges of Diamargariton frigid, or Triaſantalon, or Diarrhodon abbatis, if there be a ſuſpicion of Obſtruction. Or this Opiate:

Take of *Candied Lettice, and Guords, of each one ounce: Conſerve of Sorrel, Roſes, Succory, and Bugloſs, of each half an ounce: red Sanders, Coral, and Pearl prepared, of each half a dram: the Troches of Spodium and Sorrel ſeeds, of each one ſcruple. With Syrup of Lemmons make an Opiate, of which let him take the quantity of a ſmal Nut morning and evening, drinking after a little Wine and Water.*

Anoint the Stomach outwardly with this Oyntment.

Take of *Oyl of Roſes, Myrtles, and Quinces waſhed with Vinegar of Roſes, of each two ounces: all the Sanders, red Coral, Coriander ſeed prepared, and red Roſes, of each one dram: grana Kermes and Spodium, of each half a dram: white Wax as much as is ſufficient. Make a Liniment, with which anoint the Stomach with your warm hand only twice or thrice in a day, putting in a little Roſe Vinegar at the ſame time.*

Or lay on a Roſe Cake ſprinkled with Roſe Vinegar, or ſteeped therein, which you muſt remove before it groweth hot.

Laſtly, In the continuance of the Diſeaſe a Bath is good twice or thrice uſed, by which many are brought to their former appetites.

Vinegar, and all ſharp things are good with their meat.

A loathing cometh from a cold diſtemper, when flegmy melancholick humors are gathered into the Stomach, and hinder its office; or being drawn from all other parts of the Body, as in them who uſing to vomit, draw the impurity of other parts to the Stomach, or from the Brain, Spleen, and Mother, and other parts.

In the Cure hereof, you muſt firſt look at the diſtemper of the parts from whence they come, which muſt be amended with Remedies laid down in their proper Chapters.

Then you muſt apply Medicines to the Stomach by Evacuation of the Humor offending, and ſtrengthening the parts.

Evacuation may be made by vomit or ſtool.

By Vomit, If the Patient be Nauſeous, and eaſie to vomit, with Medicines for that purpoſe.

But if the Humors be thick, and faſtened upon the Tunicles of the Stomach, and the Patient is not uſed to vomit, they muſt be purged, eſpecially with Pils, becauſe they ſtay longeſt in the Stomach; as *Galen* ſheweth cap. 7. lib. 4. *de ſanit. tuenda.* Who exceedingly commends Pils of Hiera; which may be given to two ſcruples or a dram in the morning two hours before meat: and you may make them freſh, thus:

Take of *the beſt Aloes waſhed with the Juyce of Wormwood one ounce: Agarick trochiſcated two drams: the pouder of Rhubarb ſprinkled with white Wine one dram: Nutmeg and Spicknard of each half a dram: Salt of Tartar, Maſtich, and Cinnamon, of each one ſcruple: With Syrup of Wormwood make a Maſs of Pills; of a dram whereof make ſix Pills guilded. Let him take them in the morning if you will purge much; or give half a dram two hours before dinner twice or thrice in a week. They may be quickened with Diagridium, if you will have them ſtronger.*

If you fear the Liver is too hot, you may mix cool things; as red Roſes, Sanders, Diamargariton: and make up the Maſs with Compound Syrup of Succory.

Strong Pills are not good, becauſe they wil draw humors from other Parts to the ſtomach.

If he cannot ſwallow Pills, you muſt give him Hiera to drink with a convenient Liquor. Or,

If a Potion ſhal be unpleaſant, make an infuſion of Senna, Myrobalans, Rhubarb and Agarick in Worm-

Wormwood Wine, or the ſtomach Decoction, diſſolving in it a little of the Electuary of Citrons ſolutive, if you wil make a ſtronger.

If this Diſeaſe comes from ſlow, ſlimy Flegm, before Purging you muſt diſſolve it with Honey of Roſes, and Oxymel, with ſyrup of Hyſop and the like, with a cutting and cleanſing Decoction.

Or, This following Apozeme will do both.

Take of *the Roots of common Acorus, Cypreſs, and Calamus Aromaticus, of each one ounce: dried Citron peels, and Sarſa, of each ſix drams: Wormwood, Mints, Marjoram, Germander, and Chamæpitis, or Ground-pine, of each one handful: Citron and Annis-ſeeds, of each two drams: Senna, two ounces: Carthamus-ſeeds bruiſed, one ounce: Agarick trochiſcated, three drams: Dodder of Thyme, or Epithimum Flowers, Sage, Roſemary, and Lavender, of each one pugil: boyl them to a pint and an half: in which diſſolve of the Syrup of Wormwood and candied Citron-peels, of each two ounces: make a cleer Apozeme, and ſcent it with a little Cinnamon, and pouder of Aromaticum Roſatum for four mornings draughts: in the firſt and laſt whereof you may diſſolve for the better Purging three drams of the Solutive Electuary of Citrons, with one ſcruple of the pouder of Rhubarb.*

The uſe of Turpentine is good, becauſe it cleanſeth al the Bowels; eſpecially if you make it into Pills with Rhubarb.

It is not good to let blood in this Diſeaſe, except the Liver be very hot.

After ſufficient Purging, you muſt come to Strengthning; both Internally, and Externally: Thus,

Take of *Syrup of Wormwood, one ounce: Let him Drink it Faſting many mornings: or Wormwood-wine.*

Take *Conſerve of Mints, Citron peels candied, and candied Mutmegs, of each half an ounce: one candied Myrobalane: of Confectio Alkermes, three drams: the inward skins of Hens-maws poudered, two drams: Cinnamon and Aromaticum Roſatum, of each one dram: with ſyrup of Mints make an Opiate: or candy them with ſugar of Roſes; uſe it in the morning, drinking after it a little Wine.*

Salt of Wormwood is good to be put to the aforeſaid Medicines, Or, Oyl of Mints Chymical.

Or, Salt of Wormwood with Orange peels, or either of them to half a dram in Wine, or Broth.

This following Syrup is moſt excellent:

Take of *the ſyrup of Quinces, and Citron Barks candied, of each two ounces: Cinnamon water, one ounce: Oyl of Sulphur twelve drops: mix them to be taken now and then a ſpoonful.*

Clarret Water is uſual, and it is made thus:

Take of *Cinnamon groſly poudered two ounces: ſteep them in one pint of Aqua Vitæ in a glaſs; in another glaſs put ſix ounces of ſugar with half a pint of Roſe water: let theſe Glaſſes ſtand two or three dayes; every day ſhaking them often; then mix them both together and ſtrain them by filtration; keep the Liquor in a Glaſs cloſe ſtopt, and let the Patient take a ſpoonful or two Faſting.*

In *Paris* the Syrup of Wormwood made by *Pena* is highly eſteemed; made thus,

Take *half a pound of candied Citron barks ſliced: boyl them in equal parts of the Waters of Succory and Agrimony, make a ſtrong expreſſion and put to it the juyce of Quinces, and Wormwood water, of each half a pint; in which infuſe for four dayes four ounces of Schœnanth in a cloſe veſſel well glaſſed and ſet upon the Embers; diſſolve in the ſtraining as much ſugar as is needful; then boyl them to a ſyrup, in which when it is hot diſſolve one dram of aſh-coloured Amber: keep it in a cloſe Glaſs.*

Cinnamon Water alone is excellent good in a Cold Stomach, or with other Medicines, as Syrup of Wormwood, Mints, or Coral; to which you may alſo put Amber-greece.

The Syrup of Cinnamon made with Aqua Vitæ, according to *Quercitanus* Diſpenſatory is no leſs powerful.

And Cinnamon Water diſtilled with Juyce of Quinces.

And alſo the Spirit of Maſtich made thus,

Take *three ounces of Maſtich, one ounce of Galangal, half a pint of Spirit of Wine, digeſt them and diſtil them.*

The Elixir Proprietatis, deſcribed by *Crollius*, is good, if you give twelve or fifteen drops in Wine they wonderfully ſtrengthen the Stomach.

You may make Tablets for the ſame purpoſe thus:

Take of *the pulp of Rinds of freſh Oranges, and Aromaticum Roſatum, of each two drams: white Sugar diſſolved in Orange flower water four ounces. Make Lozenges.*

Tablets

Tablets of Aromaticum Roſatum, Opiata Solomonis, and old Treacle are good for the ſame.

A Decoction of Guajacum or Saſſaphras taken many dayes together with a little ſweating, or without in weak people, is very good in this Diſeaſe, being of long continuance.

Alſo Sulphurous and Nitrous Baths, as our Bellilucanæ being taken in great quantity many dayes, do powerfully cleanſe the Stomach and Gutts from al ſlimy filth.

Take of *Agrimony, Centaury the leſs, and common Wormwood, of each half an handful: boyl them to half a pint, and ad one ounce of ſugar, drink it, either in a cold or hot Cauſe.*

Hartman exceedingly commends the uſe of Zeadoary in theſe words, *The often uſe of Zedoary doth ſo ſtrengthen the ſtomach, as nothing more, therefore we may commend it having tryed it often, and never miſſed; you muſt eate it often.*

Coſtæus Commends hot Wine thus, *Hot Wine drunk ordinarily doth amend the imbecillity of the ſtomach: It is uſually obſerved that they who have been continually vexed with Wind and Pain from an evil Concoction when they have begun to drink warm drink, have been cured, and lived after a long time more comfortably.*

You muſt give him Wine in Water, wherein Coriander hath been boyled, for his ordinary Drink.

But obſerve, That if a hot diſtemper of the Liver meet with that of a cold ſtomach, as often it doth, you muſt give hot Medicines warily, and rather thoſe that are remperate.

Zechius Commends this Bolus following, in theſe words, *That the ſtomach may be warmed gently and not dryed, you can uſe no Medicine inwardly more powerfull.*

Take of *waſhed Turpentine two drams: Pouder of Maſtich half a dram: Aromaticum roſatum half a ſcruple: make a Bolus to be taken two hours before meat.*

This digeſtive Pouder is uſual to help Concoction,

Take of *Coriander ſeeds prepared half an ounce: ſweet Fennel ſeed and Annis ſeed of each two drams: Cinnamon and Cloves of each half a dram: Sugar twice as much as the reſt: make a Pouder, of which let him take one ſpoonful after every meal.*

The Ballom of Peru is good if you give a few drops in Wine one hour before meat.

Or in form of a Pill, one or two drops in ſugar for many dayes.

There are ſome ordinary Medicines for this, Hippocras Wine, a Decoction of Annis, Coriander and Cinnamon mixed with ſugar for ordinary drink.

The Dukes Pouder, commonly ſo called, made of two parts of Sugar and one of Cinnamon, to ſprinkle upon al meats.

A Salt to be eaten with meat, made of Coriander, Annis ſeeds, long Pepper, Galangal, and Nutmegg, mixed with an equal proportion of Common ſalt.

Some Grains of Pepper whol or beaten, taken faſting.

Acrons ſtuck with Cloves and Cinnamon, and candied with Sugar, Citron, and Orange peels candied together, Annis ſeeds, Fennel, Coriander and Cinnamon introſted with Sugar, al theſe men may uſe as they pleaſe.

Citron Peels are more pleaſant than the reſt, but becauſe it wil grow ſo dry that it wil hardly be chewed; we are often conſtrained to make it up in a Mortar with Roſe Water, in the form of an Opiate.

Candied Myrobalans and Nutmegs may be uſed for the ſame, and be made up as the former, though they are not ſo apt to grow hard.

The Eſſences of Annis, Cinnamon, Citron peels, Nutmegs, and Olives, are excellent to ſtrengthen the ſtomach, and they muſt be uſed as above in the Diſeaſes of the Heart.

Of Meats, They which are Salt do moſt provoke Appetite, and Sharp things in a ſmal quantity; and mixed with other things leſt they cool the Stomach.

Outwardly apply Liniments, Fomentations, and Emplaiſters, thus made:

Take of *Cypreſs Roots, Galangal, Flower-de-luce, and dried Citron peels, of each two ounces: Mints, Hyſop, Sage, Roſemary, and Marjoram, of each one handful: Annis ſeeds, Bayberries, Nutmegs, Cloves, and Cinnamon, of each three drams: the flowers of Stœchas, Schœnanth, and Roſemary, of each one pugil; ſlice thoſe that muſt be ſliced; and bruiſe thoſe that muſt be bruiſed, according to art, and put them into two Bags with holes pricked through, and ſteep them in ſtrong Wine, and lay them warm to the ſtomach one after another.*

Take of *the Oyl of Wormwood, Mints, and Spike, of each half an ounce: Oyl of Nutmegs, two drams: Wood of Aloes, Mace, and Cinnamon, of each one ſcruple; with a little Wax make a Liniment, which will be better if you ad ſix drops of Oyl of Cloves, and of Muſk and Ambergreece, of each eight grains.*

Alſo there is a Liniment of Oyl of Nutmegs, Balſom of Peru, or of Oyl of Wormwood, Maſtich, and Ballom of Peru.

Take of *the Emplaiſter of Maſtich one ounce: Aromaticum Roſatum one dram: Oyl of Nutmegs as much as is fit to make a Plaiſter like a Buckler for the Stomach.*

Crato doth wonderfully commend this following Plaiſter:

Take of *Labdanum two ounces: Wax four ounces: Oyl of Nutmegs three drams. Make an Emplaiſter.*

Galen adviſeth 7. meth. not to keep theſe Plaiſters long upon the part, for at length they will diſſolve the hear.

Many Practitioners do not only apply theſe Remedies before to the Cartilage called *Xiphoides*, like a ſword; but alſo behind upon the thirteenth Vertebra, becauſe the proper orifice of the Stomach inclineth backward; but the thickneſs of the Vertebra is ſuch, and of the Muſcles under them, that the ſtrength of the Medicine cannot pierce through to the Stomach.

Take of *Galangal, and Calamus Aromaticus, of each three drams: Maſtich, and Cloves, of each two drams: one Nutmeg: dried Citron peels half an ounce: Annis ſeeds one dram and an half. Make a bag of theſe being bruiſed and put into red ſilk pricked through, and into muſked Cotton, to be worn alwaies upon the Stomach.*

The Skin of a Vultur dreſſed and worn upon the Stomach, is commended for the ſame: in want of which a Hairs Skin, or a piece of Scarlet may be uſed.

Chap. 2. *Of Dogs Appetite, called* Fames canina.

HAving in the former Chapter ſpoken of Appetite diminiſhed and aboliſhed, now we ſhall ſpeak of it depraved. And this is done two waies: When it either offendeth in quantity or quality. It offends in quantity when nouriſhment is required in a greater quantity than Nature would; and this is called *Boulimia*, or Dogs Appetite: It offends in quality when things are required which are evil, or are not food, and this is called *Pica* or *Kitta*. Of the firſt we ſhall ſpeak in this Chapter, of the laſt in the Chapter following.

The word *Boulimia* comes *apo tou bou kai limou*, becauſe the Particle *Bou* put to other words, encreaſe the ſignification, as if it were compared to the greatneſs of an Ox. It is alſo called *Phagedaina*, which word is given to Ulcers which eat the fleſh and enlarge, and therefore called *Ulcera Phagedaina*, that is, ſpreading Ulcers. Now it is called *Fames Canina*, or Dogs Appetite, becauſe they who have it are hungry as Dogs.

But you may obſerve that theſe two words, *Boulimia*, and *Fames Canina*, are ſomtimes confounded, and uſed for the ſame thing: and ſomtimes diſtinguiſhed, ſo that it is called *Fames Canina*, when after much feeding they vomit like Dogs. But ſome purge rather than vomit, when Nature throweth down that which it cannot concoct. In *Boulimia*, vomit doth not follow, but ſomtimes Lipothymia. There are ſome who feed unſatiably, and yet vomit not, nor purge, but concoct all, and if they have not preſently more, are ſick. As *Sennertus* reports of a Scholler, who was black colored, who eat not only in the day, but night, and digeſted it without vomiting; he could not be ſatisfied with delicate meats, but required groſs, and therefore would eat no Bakers Bread, but ſuch as the Country people made, and would eat as many raw Parſnips in a Summer morning as could be bought for ſix pence, without damage.

Hence it appears that this diſeaſe is a Symptome of an action depraved, in reſpect of quantity, which action being encreaſed, is called Dog-like, or an Appetite beyond Natural Meaſure. The part affected is chiefly the mouth of the Stomach. The cauſe containing, is ſence of ſucking, and vehement pulling, which ſtirs up the Appetite.

Galen 2. de ſymp. cauſ. cap. 7. reduceth the immediate cauſes of this Diſeaſe to two Heads, in theſe words: *Evil Appetites exceeding in quantity, which are called by ſome Canine, are then, when either ſome evil ſharp Juyce biteth the Stomach, or when the whol Body immoderately concocting, wants nouriſhment; for evil Juyce which is cold, biteth like the Natural ſucking, and produceth appetite by the reſemblance of Nature.* The immediate cauſe of a preternatural Appetite, according to *Galen*, is firſt a vicious humor, and cold, ſticking to the Stomach: Secondly, want of Food by over much concoction.

Evil Humors ſticking to the Stomach, cauſe immoderate Appetite, becauſe they by their too much coldneſs, ſharpneſs, and fowrneſs, do conſtringe, wrinkle, and pull the mouth of the Stomach, and ſo make a ſence of feeling like a natural ſucking, and beget a falſe Appetite.

This Humor is either fowr flegm ſtaying long in the Stomach, or many times Melancholly ſent from the Spleen into the Stomach, which in a natural ſtate, and a moderate quantity and quality begets a moderate and natural Appetite; but if it be preternatural and exceed, it makes the Appetite too great.

The

The want of Food, by reaſon whereof the Veins do continually ſuck from the Stomach, either it comes from too great Evacuation by bleeding, purging, vomiting, ſweating, and the like, or from too great a Conſumption of the alimentary ſubſtance, by reaſon of the immoderate heat of the parts, or the thinneſs of the humors, and body, and looſneſs of the pores, watchings, baths, immoderate exerciſe, much venery; all which do diſſolve the ſubſtance, making humidity; and by theſe emptineſs being cauſed, and want of food, the meat is carried from the Stomach ſooner than it ought.

Alſo this *Fames Canina*, or Dogs Appetite, may come from Worms which devour the Chylus; as *Trallianus* reports, *lib. 7. cap.* 4. of a Woman in this Diſeaſe, which voided a worm twelve Cubits long by the uſe of Hiera, and was cured.

The Hermetical Phyſitians do lay down another cauſe of this wonderful Appetite, namely, a certain diſſolving Spirit begot in the Body, which by an inhærent property doth ſo readily conſume whatſoever meat is taken, ſo that it doth not allow Nature a lawful and neceſſary bound of nouriſhment. This they call a hungery devouring, ſalt, ſharp, vitriol Spirit. For ſay they, as from divers Salts, Vitriol, Niter, common Salt, and Salt Armoniack, with the like, Aqua fortis is made by Chymiſtry, which will diſſolve the hardeſt Stones, Mettals, into Liquor in a ſhort time; ſo that Gold which will not be diſſolved in a month by a ſtrong fire, in a quarter of an hour will be diſſolved in *Aqua regia*, and be turned into a Liquor of the ſame color.

This Doctrine is diligently to be examined; for as the digeſtion of the Stomach in its Natural condition hath ſomthing to be admired by the curious Searchers into Nature; ſo the ſame being made preternatural hath ſomthing to be wondered at.

This is wonderful in the Natural digeſtion of the Belly, that the hardeſt meats are digeſted therein, and in three or four hours ſpace are turned into a Chylous Liquor, ſo thin that it may be ſtrained through the narroweſt branches of the Venæ lacteæ; and that Dogs do turn the hardeſt bones into the ſame Liquor, is not to be attributed to a ſtronger concocting heat, becauſe meat in a pot, although the fire be never ſo hot, cannot in twenty four hours, or many daies be converted into the ſame. The Galeniſts hold that this comes from the faculty of the Stomach, which faculty works not without an Inſtrument, becauſe if there is an *Idioſyncraſia*, or a certain proportion of the firſt qualities, as is commonly reported, its chief action muſt be from heat; for cold, moiſture, or drineſs, do nothing to that great diſſolving of food, and heat, as it is ſaid, hath not that power. Therefore the Idioſyncraſia is ſomwhat more unknown, and not to be expreſſed. Let us therefore ſearch after it in the Macrocoſm or greater World, of which there is a great Analogy or reſemblance in the little World. And therefore the more witty Hermets ſay that there is a certain Spirit or acide Liquor ſent from the Spleen into the Stomach, which diſſolveth the ſolid nouriſhment, and ſhortly converteth it into Chylous Liquor, and that is the principal Inſtrument of digeſtion. And ſome conjecture that this may be made, becauſe Birds who digeſt the hardeſt nouriſhment have a Spleen round about their Maw; for the fleſh which is found about their Stomachs is like the ſubſtance of a Spleen; from whence there is a more noble uſe of the Spleen than what is allowed by the Ancients, who ſaid that it was only for the purging of the groſſer ſort of Blood; becauſe according to this opinion it ſerveth for concoction of meat. Therefore if the Spirit or ſharp Liquor which comes from the Spleen when it is in its Natural condition, makes a natural and moderate digeſtion; the ſame ſpirit being altered from its natural condition and defiled, or made ſharper or more diſſolving, it will ſooner diſſolve ſolid nouriſhment; and when they are ſo diſſolved and thrown from the Stomach, it will make a new immoderate Appetite. We do not conclude that this new Doctrine is certain and undoubted, but we only ſhew it that ſolid wits may examine it. And we will talk of it again when we ſpeak of the cauſes of the hinderance of Concoction.

The ſigns by which this diſeaſe is known are manifeſt; for it will appear to them that eat, and to the ſtanders by, that the Appetite is depraved which cauſeth ſuch devouring of meat, which afterwards is thrown up by vomit, and then it is Fames Canina, and if Vomits follow not, then there is fainting, with coldneſs of the extream parts, and this is called *Boulimia*.

The ſigns of the Cauſes may be found by the Antecedents, Concomitants, and Conſequents. Theſe are the ſigns of a cold diſtemper, and of ſharp humors in the Stomach, belching, and ſharp vomiting, crude dejections, or ſtools, want of thirſt, and external Cauſes of refrigeration afore going. If it come from defect of Nouriſhment, the Patient is lean, and there are cauſes preſent or fore-going of the diſſolving of the Humidity; and laſtly, the ſigns of Worms ſhall be ſpoken of in their proper Chapter.

The Prognoſtick of this Diſeaſe, is thus: If it come only from External Cauſes it is not dangerous if they be preſently taken away: And if it come of Worms there is little danger, for when they are taken away the Diſeaſe is cured.

But it is very dangerous if it follow great Evacuations and meltings of the body; eſpecially if after meat when the belly is yet ful there come a fainting; for when that which ſhould moſt help, becomes unprofitable, it ſignifies a great diſtemper of the Stomach.

So a Dog Appetite continuing with Vomiting and great Purging is dangerous, for it useth to end in an evil habit, dropsie, lethargy, consumption and the like.

As for the Cure, because Fames Canina for the most part takes its Original from Melancholick and Flegmatick Humors fastened in the Mouth of the Stomach; therefore Medicines must principally be directed to them; such as do empty and change the Humors and also strengthen the part affected.

You must Evacuate by Vomit or Stool with Medicines Prescribed in the Cure of Want of Appetite from a Cold Cause; for although these Diseases are contrary, yet come they from the same Humors, different in the degrees of Coldness, and second Qualities, and such as diversly affect the Stomach.

Also the Remedies there Prescribed to heat the Stomach and strengthen it both internally and externally are excellent, because they not only correct the Cold Distemper, but dry and cause thirst; and thirst coming, hunger is diminished.

Moreover, Wine plentifully taken asswageth hunger, according to *Hippocrates*, Aph. 21. Sect. 2. And especially the Spirit of Wine, or Aqua Vitæ.

They do properly stay Hunger which do much moisten the Stomach, relax it, and asswage the sharpness of humors. As al Fat things and Oyls, as *Villanovanus* reports, That one thus diseased did eat a hot Loaf dipp'd in Oyl; and a Woman drank the melted Sewet of an Ox with as much warm Oyl at Twice, and both did so Disdain Meat, That they eat nothing in Five Dayes, and were Cured.

Narcotick Medicines by Dulling the too exquisite sense of the Stomach, do lessen this Disease; and new Treacle is most usual for it because besides its stupifying quality it doth correct the malignity of the Humors which is some cause thereof.

But because these are to be used but seldom and not without urgent necessity, somtimes you may use old Treacle, for the reason aforesaid, as also to strengthen.

Five or Six Grains of Amber-greece taken in a rear Eg doth not only strengthen the Stomach, but by a special quality cureth this Disease.

Chap. 3. *Of Pica and Malacia.*

Pica and *Malacia*, are a depraved Appetite; by which, evil, unprofitable, and hurtful things are desired.

It is called *Kitta* or Pica from the bird called a Pye, either in regard of the variety of colours, or because it eateth lumps of Earth, for Women in this Disease use to eat Earth and Chalk, and the like: It is called Malacia by *Pliny*, for these Women through Weakness of mind, and tenderness, want that right and natural Appetite.

This Disease comes of evil corrupt Humors, which are gathered into the Stomach by reason of its hurt Concoction, or else sent from other parts.

Flegmatick and Melancholick People are most disposed for the production of these Humors, especially Women, to whom this Disease seems proper and peculiar; although somtimes Boyes and Men, though seldom have the same: Eating of evil Diet doth cause this, want of any natural Evacuation, especially of the Terms, Sadness, Distemper of the Liver and Spleen, Obstructions and Weakness, divers diseases of the Womb, and the like.

These Vitious Humors according to the divers degrees of distempers and other dispositions have a diverse nature, from whence come divers appetites of evil things: For since som Humors are crude and inconcocted, others burnt, and adust; some require sowr things, sharp, bitter, and very cold, so that they are delighted with the continual use of unripe Fruits, Vinegar, Juyce of Lemons, Pomegranats, and Orenges, cold Water, Snow, Ice, and the like. Others desire Earthy, Dry, and Burnt things, as Gloves, Cinnamon, Nutmegs, and other Spices, Salt-Ashes, Chalk, and the like.

This Disease is Common to Women in the Chlorosis, or Green-sickness; to Women great with Child; and such as have their Terms stopped; which staying in the Body corrupt, and ascending do infect the Stomach, from whence its Actions are depraved, and chiefly the Appetite is taken from its natural Condition.

Boyes are somtimes troubled herewith, and especially if they are born of a Woman that hath the Chlorosis: Nor are men altogether free from it, although it happen seldom; and they are especially troubled therewith who are Melancholick, have Obstructions, or want their usual Flux of the Hæmorrhoids.

It is Disputed much among Authors, Whether a Depraved Appetite require those Things which are like to the Preternatural State or Distemper of the Stomach, or those that are Contrary? *Galen* raised

raiſed the firſt Diſpute, *cap.* 3. *artis parvæ*, where he teacheth, *That the Stomach being diſtempered, doth deſire Contraries, and in its natural ſtate and temper it deſireth things like to its ſelf.* Which Doctrine *Avicen* following, *Fen.* 1 3. *lib.* 3. *tract.* 2. *cap.* 19. ſpeaks thus, *When there is an evil Humor gathered in the ſtomach, different in quality from its own nature, then it doth require things contrary to it; therefore ſome deſire Clay, Coals, Earth, Loam, Chalk and the like, by reaſon of the quality that is in them, to dry up and cut that which is contrary to the quality of the Humors:* But they who are in health deſire judicially rather things like, than contraries; for ſince fancy is much imployed in ſtirring up of Appetite, and is much ſtirred up from the diſpoſition of the body, it is probable that the humor predominating ſhould move the fancy to deſire things like unto it; For as cholerick men both in time of health and ſickneſs, do dream of Fire and Anger: and Flegmatick men of Snow, Ice, and Waters: the Apprehenſion of which things proceeds from the Humors predominating in the body: So when the ſeat of Appetite the mouth of the Stomach is affected by foul humors there long continuing, they do imprint their ſimilitudes in the Fancy which ſtirs up the Appetite to deſire things like it though never ſo contrary to reaſon, which is now overcome by the force of imagination.

Moreover, If things contrary to the diſeaſe or its cauſe were deſired by the continual uſe thereof, the diſeaſe would be cured; daily experience confirmeth this.

By which we are taught, That Virgins in the Green-ſickneſs, and Women with Child, do for the moſt part deſire thoſe things which are agreeable to their preſent Diſtemper and evil Habit, ſo that they who have Salt and Aduſt Humors long for Coals, Salt, Spices, and the like: but they who have Melancholly or Salt Flegm predominating, deſire Vinegar, green Fruits, and the like.

As for the Authority of *Galen*, ſome wholly reject it; ſaying, That if it were true, That Diſeaſed Diſpoſitions ſhould deſire their Contraries, al ſick men, of evil Habit, would deſire Meat of good nouriſhment; which is not true, for we often ſee that ſick men deſire evil meats, and refuſe good: and we ſee that bodies inflamed, whether they are in a preternatural ſtate, as in Feavers; or in a natural, as by violent exercile, require cooling.

Some deſire to Reconcile this Opinion of *Galens*, ſaying, That in this Pica the diſtemper upon the Stomach is habitual and connatural, and therefore doth cauſe an Appetite like to a natural, which is for things like it; which may be thus explained, When we ſay that every natural temper doth require the like, and every preternatural the contrary; the laſt is to be underſtood of diſtempers which come without overflowing moiſture; for they which are with much moiſture when it is ſucked up by the tunicles of the Stomach, do rather deſire things like the moiſture with which they are wet, becauſe the Humor which now pierceth al the Tunicles although it be noxious, yet it is not troubleſome: On the contrary, when the humor only poſſeſſeth part only of the Stomach, or is only in the bottom, the Stomach deſires the contrary to that which is offenſive unto it; but if it poſſeſs the whol Stomach, and be ſoaked into its Tunicles, then the natural Faculty is deſtroyed and ſo changed, that it doth not deſire any thing but what is like to the Humor ſo ſoaked in, and ſo it may be rightly ſaid that the humors was become as it were connatural.

Platerus and *Sennertus* do eaſily free themſelves from theſe difficulties, by flying to an occult quality, and they take occaſion from hence, if the Patients ſo affected ſhould require things like to the cauſe of the diſeaſe, then by the plentiful uſe of them the diſeaſe would be exceedingly encreaſed, but we ſee that they wil devour Chalk, Clay, Coals, and the like traſh, and receive not the leaſt hurt thereby, by which men that are ſound would be almoſt killed.

Moreover, They ſay that Women with Child wil often void ſalt and ſowr humors, and yet not require ſalt or ſowr things, but the contrary. And laſtly they affirm conſtantly that there is no agreement of Coals, Chalk, raw Fleſh, and the like with the Humors. And therefore they ſay that they muſt not reſt in manifeſt qualities, and that the Cauſe of this Symptome and wonderful Appetite cannot be taken from them, but they muſt fly to ſome occult quality not to be explained.

Yet *Sennertus* confeſſeth that it is probable that this Appetite depraved, ſhould proceed rather from a like, than a contrary quality: but what that quality is cannot be explained, becauſe the things which are deſired have no agreement with the humors either ſweet, ſalt, or ſowr in manifeſt qualities.

We may Reconcile al theſe thus:

The deſire of Traſh is ſtirred up by humors of the like nature and temper, but theſe humors beſides their native temper have a certain peculiar fault from corruption, which ſince it cannot be wel explained, it may be called an Occult Quality.

The Knowledg of this Diſeaſe is eaſie, for the Patient can relate it; it is manifeſt that the part affected is the mouth of the Stomach, for that is the Seat of Appetite. The Cauſe alſo may be found out by conjecture from the ſuppoſed deſire of things like. For if they deſire Coals, Salt, and the like,

like, we may gather that the diſeaſe depends upon Salt and burnt humors, which will more cleerly appear, if any of thoſe Humors be caſt forth by vomit or ſtool, if there be ſharp belchings, or ſalt, a taſt bitter, ſowr, or ſalt.

As to the Prognoſtick; This Diſeaſe is Chronical, of continuance, but not very dangerous, if the Body by Nature or Art may be brought to its old condition, which is not very difficult. For in time the Humor offending may be ſent forth by vomiting naturally, or by Medicines: and the Terms or Hæmorrhoids ſtopt, which cauſed this diſeaſe firſt, may in time be diſcharged; which if neglected, and Nature ſinks under the burden, great diſeaſes follow: For when the firſt Concoction is hurt, it is neceſſary that the ſecond and third be corrupted, from whence come great Obſtructions, evil habits, and dropſies. Or if the Humor be carried in greater plenty to the Stomach, and partake of greater Malignity, ſomtimes it produceth violent Cardialgiaes, or Heart diſeaſes; from whence fainting, ſwooning, and ſomtimes death doth follow.

If Women in this diſeaſe begin to abſtain from traſh, and to eat good meat with leſs diſdain, it is a moſt certain ſign of health at hand.

Women with Child uſe to be freed of this diſeaſe about the fourth month, becauſe then the Child is grown greater, and ſo conſumeth more of the humors, and the mother hath ſent it forth by often vomitings; but if it laſt longer, 'tis dangerous; for it ſignifies that the evil diſpoſition of the Stomach hath taken deep root, which will hardly be pluckt up.

It is better for people in this diſeaſe to deſire ſharp and ſowr things; it is worſe if they deſire things contrary to Nature, as *Avicen* teacheth, *fen.* 13. *lib.* 2. *tract.* 2. *cap.* 20. for it ſignifies a greater diſtance from the Natural ſtate, which is harder to be cured.

The Cure of this diſeaſe is divers, according to the variety of the Bodies affected.

In Women with Child, few Medicines are to be uſed, by reaſon of the unfitneſs of the ſubject, and danger of Miſcarriage, but you may give them gentle things, and ſuch as were preſcribed in the Cure of want of Appetite to cleanſe and ſtrengthen the Stomach. Nor muſt you omit blood-letting, which done ſparingly and often, is of great conſequence.

But in Virgins of the *Clorosis*, or green ſickneſs, this diſeaſe is cured with the ſame Remedies, which ſhall be preſcribed for the Cure of Cloroſis in its proper place.

But the *Pica* which is in men, is very ſeldom, becauſe it comes from obſtructions of the Liver and Spleen, you may uſe thoſe things which ſhall be preſcribed for the Cure of them.

Chap. 4. *Of the Thirſty Diſeaſe, called* Sitis Morboſa.

THe Appetite of Drink, or Thirſt, may be three waies hurt, as that of Meat, by diminiſhing, aboliſhing, and depraving; it is diminiſhed many times by a ſweet inſipid humor, which moiſteneth the Tunicle of the Stomach, or from too much moiſture in the whol Body, from whence it is that the parts do not draw the drink from the Stomach. It is aboliſhed by acute Diſeaſes through interception of the ſence, when the mind is ſick, or becauſe the Natural Faculty is decayed by the extinction of the Natural heat; from whence *Hipp.* ſaith, *It is evil not to thirſt, when a cauſe of thirſt is taken*: and ſince thirſt diminiſhed doth depend upon the ſame cauſe, from which want of Appetite is produced, and thirſt aboliſhed, is only in acute Diſeaſes, we ſhall not ſpeak here of them particularly. But we will only ſpeak of thirſt depraved, as being moſt uſual: and this is to be divided two waies, and Hunger. The one requiring divers kinds of Drinks; the other great quantities, and often. That which deſireth filthy drink is to be referred to Pica, as when they deſire Vinegar, Lemmons, and ſalt Water. It remains that we ſpeak of thirſt encreaſed, which is an uſual Symptome when the Appetite offends in the quantity of Liquor, and much drink is deſired.

The immediate Cauſe is a want of moiſt nouriſhment, and drineſs of the Stomach, and of other parts which make the Stomach ſenſible of their wants.

This drineſs and want of moiſture, uſeth to come from all ſuch things which can conſume the dewy moiſture of the Stomach and the whol Body, and dry it up, and they are hot and dry. The dry do principally ſuck up the Humor, and the hot things ſecondarily.

Alſo this diſeaſe is either by Propriety, or by Sympathy. It is by Propriety when the innate moiſture of the Stomach is altered and drawn forth by an unequal diſtemper, dry or hot, or both; ſomtimes by a ſimple diſtemper, but often by that diſtemper which is joyned with matter; as a ſalt, ſharp, or filthy humor fixed in the mouth of the Stomach, or contained in its Cavity. But that which is by Sympathy, comes by conſent from the whol Body, or ſome part whoſe Veins having loſt their moiſture, do ſuck from the Stomach; as it is in Feavers, Inflamations of the Liver, Lungs, and other parts, as alſo in hot and dry diſtempers, eſpecially of the Reins, as you may ſee in a Diabetes, or involuntary

voluntary pissing, which is called by the name of *Dipsacus*, by reason of the great thirst which accompanieth it.

The outward Causes are all such as extraordinarily heat or dry, as very hot and dry Air, long continuance in the Sun, or at the fire, use of Salt meats, sharp, and spiced, much use of old rich Wine, great watchings, too much evacuation, especially by purging.

The Hermetical Physitians say, that immoderate preternatural thirst comes from some thirsty spirits which are bred of Sulphureous excrements, which will not be satisfied with simple cooling and moistening, but with other Spirits like unto themselves; as we see in Feavers that a strong thirst is little allayed with much Water, which with sharp Spirits of Vitriol, Sulphur, Salt, and the like, wil be satisfied with a less quantity of Water.

The knowledg is easie, for the Patients will complain. But the Causes are known by their proper signs; as a hot and dry distemper cleaving to the Stomach and other parts; as also sharp, salt, and bitter humors, some whereof are sometimes cast forth, or they have their tasts in their mouths, if the humors are in the Stomach; but if thirst come by consent from other parts, the signs of those Diseases will be manifest.

As to the Prognostick: That thirst which comes from Primary Causes is safest, for that is quenched presently with drink. But that which comes from internal Causes, is more or less dangerous, according to their differences.

That thirst which comes with Feavers, and other easie cures, endeth with them. But if it come from great and dangerous Diseases, it is very dangerous; as in a Dropsie in which thirst is not slacked, but rather encreased with drink.

The Cure of this Disease is often in Feavers, and Inflamations of some parts; which is described sufficiently in our Method of the Cure of Feavers, Sect. 2. Cap. 2.

But if Thirst be contracted by immoderate Evacuations causing a dry distemper of the Stomach, and other Causes, the Cure is by suppressing those Evacuations, and by restoring the empty parts with moist Medicines.

Therefore first, having ordered a restoring Diet, as in a Hectick Feaver, Consumption, and Marasmus. Two Remedies prescribed by *Galen* are the best, 7. meth. namely, Milk and Baths. Although *Hippocrates*, Aph. 64. Sect. 5. forbids milk to thirsty people, that is to be understood of those who thirst from abundance of Choller, and putrid Humors, in whom Milk is easily putrified; not of those who thirst from drineſs and Consumption. We shewed the use of Milk in the Cure of a Consumption.

Let the Bath be made of the Decoction of Althæa Roots, and Lilly Roots, with Mallows, and Violet Leaves, and of a Decoction of the Heads, Feet, and Guts of Sheep, or melt fresh Butter, or Oyl in warm Water, to be changed often.

Going out of the Bath, let the Loyns, Back, and Stomach be anointed with Oyl of Violets, the Marrow of a Veal Bone, and the like, with which let as much Breast, or Goats Milk be mingled, as they will receive.

Let the Patient in the mean while use restoring Syrups and Lozenges, and other Remedies which shall be laid down in the Cure of an Hectick Feaver.

This following Opiate is excellent:

Take of *Eryngus Roots candied, and Conserve of Bugloss, of each two ounces: Conserve of Violets and Borrage-flowers, of each one ounce: Confectio Alkermes half an ounce: Diapenedion newly prepared without the Species, two drams: with Syrup of sweet Apples make an Opiate, of which let him take the quantity of a Chesnut at the time of thirst, drinking after it a little Borrage Water.*

Chap. 5. *Of the Hurt Concoction of the Stomach.*

THe Concoction of the Stomach called *Chylosis*, as of all other parts, is hurt three waies, either by diminishing, abolishing, or depraving. This Concoction diminished is called *Bradupepsia*; the abolished *Apepsia*; the depraved is called *Dyspepsia*; all which differences are comprehended in this one word *Crudity*. Now this Crudity is two-fold: either nidorous, stinking, and acidous, or sharp. The nidorous Crudity is when the nourishment is turned into a stinking, burnt matter, as when the stink of Eggs, or rotten fish, or fryed Oyl, is smelt by belching, which happens often in hot Chollerick Bodies. But a sharp sowr Crudity is when meat turns sowr, and the belchings are sowr, and this comes from a cold distemper. To these you may ad a third difference of Crudities, when by reason of weak heat the matter is imperfectly concocted, and is turned into flegm without sowrness.

The

The Cauſes that hinder Concoction in the Stomach may be brought into three Heads, namely, a fault in the Organ, Object, and things External and Internal.

The fault in the Organ comprehendeth all diſeaſes in the Stomach, whether they be Similar, or Organical, or Common, all which may overthrow its actions, but diſtemper is commonly the cauſe of hurt Concoction; for ſince Concoction is made by a moderate heat according to Nature, if at any time it want its due moderation, the Concoction is hurt. So a cold diſtemper of the Stomach which diminiſheth the Heat, if it be gentle it only weakeneth the Concoction, and make a Bralypepſia, or ſlow Concoction. If the cold diſtemper be greater, it aboliſheth Concoction, and makes Apepſia. But a hot diſtemper doth deprave Concoction, and make a Dyſpepſia, which is a difficult Concoction. Theſe diſtempers are ſometimes ſimple, and in ſuch who have Naturally a weak Stomach, and ſmal Natural heat; or have a ſharp and burning heat, but they are commonly with matter: hence in Hypochondriack Melancholly, much flegm and fermentation of a black Humor uſe to cauſe Crudities, Winds, Swellings, Rumblings, and ſowr belchings.

The fault of the Object, that is, the nouriſhment which is the proper Object of the Stomach, comes many waies, when it offendeth in Subſtance, Quantity, Quality, time, or Order of being taken.

Nouriſhment is vitious in reſpect of its ſubſtance, when it is too hard and difficult to be concocted, as Deers fleſh, Hairs fleſh, eſpecially if old, and made hard with Salt or Smoak, Bread full of Bran, Muſhroms, Roots, Pulſe, and the like, which are called Dyſpepta.

Meats offend in Quantity when too much is taken at once, and therefore cannot be overcome by the heat, hence come Crudities, which are moſt uſual among them who do ſurfet themſelves. If there be leſs eaten than is required, it may ſeem to be crude, becauſe too little meat will be burnt and dryed in a Chollerick Stomach.

Meats offend in Quality which are too cold and moiſt, and windy, or they which are too hot, whereby the thinner part of the Chyle is burnt, and turned into nidorous vapors.

To this may be reduced the Art of Cookery, and Sawce-making; for the divers waies of roaſting, boyling, and making of Sawce, do alter the diſpoſition of Meat, by which means they become more eaſie or hard of Concoction.

The time and order of eating being prepoſterous, may alſo ſpoil the Concoction, as if any one ſhould omit his uſual time of eating, and fall to at midnight, or a little before he goes to ſleep, fill his Stomach; or if after taking of ſolid and aſtringing things, as Cheeſe, Pears, Quinces, and the like, they take liquid things which do ſoon corrupt.

Alſo external things may ſpoil the Concoction, if they be immoderate: ſo too cold Air by dulling the natural heat, if it be weak or too hot, by diſſipating the heat may hinder Concoction; as alſo immoderate exercile, eſpecially after meat, by drawing the natural heat forth from the Stomach to the external parts, and ſo diſperſing it extraordinarily; as alſo by throwing the Chylus yet imperfect into the Guts. The ſtoppage of the Belly and other excrements, or an immoderate flux, great watchings, ſleep in the day time, great paſſions of the mind, eſpecially ſadneſs, and deep ſtudy preſently after meat, and the like, do not a little hinder the action of the Stomach.

Beſides the Cauſes mentioned, the Hermeticks of late time mention one leſs uſual, and not noted by the Ancients, which alſo is not plainly demonſtrated by them; but it is confirmed by ſome conjectures, not to be contemned; of which we made mention in the explaining of the Cauſes of Fames Canina. Firſt therfore they affirm that the Natural Concoction of the Stomach is not made by heat only; but that quick melting of ſolid meats by which it is converted into Chylus, is from another cauſe; ſince Experience teacheth that meat boyling in a pot at a ſtrong fire many daies, will never be diſſolved: and bones in a Dogs Stomach are quickly diſſolved, and turned into Chylous Liquor; and in the bellies of Fiſhes which have no actual heat, all that is brought in is diſſolved and concocted the ſame way. Therefore they lay down the principal Cauſe of this diſſolving to be a certain Spirit or ſharp Liquor ſent from the Spleen into the Stomach, which hath great power to diſſolve. And they take this opinion from *Galen*, by whom it is confirmed that a Melancholick Humor ſent from the Spleen into the Stomach, doth cauſe appetite, and that either by aſtringing or wrinkling the inner Tunicle of the Stomach, or pulling of it by its ſharpneſs, which may be oppoſed; for if it do it by aſtriction, then all aſtringent things would do the ſame; and if by pulling, ſharp things rather than ſowr would provoke Appetite. Therefore they think it more probable, that that humor ſhould ſtir up Appetite by accident, by cauſing want of nouriſhment, by diſſolving of that which comes in. And therefore they allow a more noble uſe of the Spleen than ever the Ancients thought of, namely, to be a chief inſtrument to ſerve the Stomach in Concoction: This may be conjectured from Birds which diſſolve the hardeſt ſeeds, and have a Spleen round about their Stomach or Maw, that it may more powerfully inſpire that diſſolving Spirit, or communicate unto it ſowr Liquor. And *Helmont* from his own experience ſaith, that that ſowr Spirit is very ſtrong in Birds; for he relates that when he was a Boy and kept a Sparrow, he gave it his Tongue, which the Sparrow catching with his Bill deſired to

twal-

ſwallow; and that touching the Throat of the Sparrow with the tip of his Tongue, he found it exceeding sharp. The diſſolving Spirit inherent in the Gizzards of Birds is proved from Phyſical Practice, in which the Gizzards of Hens for to help Concoction are uſually preſcribed in digeſtive powders, and it is credible that they produce that effect by helping the diſſolution of the meat, and the ſame are preſcribed in the Stone, and they do much diſſolve them; and that is more manifeſtly declared in that from the Gizzards of Birds, there is a ſalt taken which is excellent to diſſolve the Stone: out of which ſalt, being in great plenty in their gizzards, Nature being wiſe and provident knows how to draw a ſpirit in a living Creature, by help whereof with the natural heat ſhe may diſſolve ſolid nouriſhment: and it is ordinarily ſeen, that there is a ſpirit made of diſſolving ſalt, as of Vitriol, Niter, Armoniack, and common ſalt, which is more powerful to diſſolve.

Therefore the Spirit or ſharp Liquor which is ſent from the Spleen into the Stomach while it is in its natural ſtate makes a laudable Concoction, but if it be changed it overthrows the actions of the Stomach as aforeſaid, from theſe Poſitions, That a Dog Appetite was ſtirred up, when that ſpirit or acid Liquor, is too active and powerful to diſſolve: So on the other ſide, if the diſſolving power be too weak, or be defective, there followeth a diminiſhed or aboliſhed concoction. Hence *Helmont* ſaith, That the 1. Aph. of *Hipp.* Sect. 6. which is this: In long raging of the Guts, if ſowr belchings ariſe, which were not formerly, it is a good ſign; is thus to be interpreted, becauſe that ſowr belching ſignifieth that that fermentation which was loſt by the diſeaſe begins to return.

Let us hold up this new Doctrine by our own Experiment, for in the yeer paſt, 1648. we had a great Flegmatick and Melancholick Flux for four months, and were brought thereby to extream leanneſs, by reaſon all our nouriſhment turned into a Flegmatick and ſlimy ſubſtance, from the debility of the Stomach which could not well concoct the ſame, after many Medicines uſed all along that time, the chief part whereof profited little or nothing, at length by the often uſe of very ſharp Vinegar in a few dayes we were perfectly cured of that violent diſeaſe; by the force of which Vinegar we may conjecture that the natural ſowrneſs which was almoſt loſt was much reſtored: We uſed this Vinegar at our meat with hard Egs, which being cut in pieces we dipped therein, and for ſome dayes we continued the uſe thereof in all our meats: And we manifeſtly perceived that if the Vinegar was not very ſharp it did our Stomach little good.

The Knowledg or Diagnoſis of this Diſeaſe, according to the differences of hurt Concoction is divers: And firſt, Apepſia and Bradypepſia are known by the ſame ſigns only differing in degrees: and theſe ſigns are ſowr belchings, vomiting or purging forth of food either not, or but half concocted, ſome cauſes of refrigeration went before, there is a weight, extention and inflamation in the ſtomach, inconvenience by taking cold things; thin urine, watriſh, and pale; ſometimes thick and red from that impure and filthy juyce which by reaſon of the imperfection of the firſt concoction could not be ſeparated from the Chylus, but being ſent to the Reins with the ſerous humor, makes the urin foul, ſuch as uſeth to be voided by Melancholick and Scorbutick perſons.

See the Explication of this Urine more at large in *Sennertus*, lib. 3. pract. med. part. 8. ſect. 2 cap. 7. but theſe ſhew Concoction depraved or Dyſpepſia, Nidorous ſtinking belchings, the like taſte or ſmk in the mouth, ſenſe of thirſt and heat, inconvenience by hot things.

If the Stomach is affected principally, there will be the proper ſigns of its Diſeaſe; but if by conſent, this ſympathy is to be found out from the proper ſigns of the part affected: but if the ſymptome depend upon the fault of external cauſes, or of the object, it will appear by the relation of the Patient and thoſe that ſtand by, from the preſent or foregoing Conſtitution of the ſame.

The Prognoſtick is thus made; the fault of Concoction which comes from external cauſes is eaſily helped, by taking away thoſe cauſes, and by ordering a good diet.

Concoction hurt is more eaſily cured when it comes of humors which are brought from other parts into the ſtomach, then when it is only from the ſtomach: for as if thoſe humors are purged before they faſten any diſeaſe in the ſtomach, concoction is reſtored.

The Aboliſhed Concoction of the Stomach is worſt of al, becauſe the whol nouriſhment of the body is fruſtrated, from whence comes moſt deadly diſeaſes, as Lientery, Dropſie, Atrophy, and the like.

The Concoction Diminiſhed brings its inconveniencies, as Chollick, Cachexy, or evil Habit, and ſometimes divers ſorts of Dropſies.

The Concoction Depraved, is the Cauſe of many Evils; of Obſtructions, Scabs, Feavers, and the like.

The Cure is wrought by taking away Cauſes external, antecedent, and conjunt, which do cauſe, encreaſe, and preſerve this diſeaſe.

And firſt obſerve, if the humors be brought from other parts into the ſtomach, and in this caſe they muſt firſt be Evacuated and Revelled, the diſeaſe of the part ſending thoſe humors is to be amended, and the ſtomach ſtrengthned, the cures of the diſeaſes of other parts muſt be taken from their proper Chapters: But the ſtrengthening of the ſtomach may be taken from the cure of the Want of Appetite.

But the Hurt which comes to the Concoction from the proper fault of the ſtomach, that chiefly takes its beginning from cold or hot humors; and therfore requires the ſame cure, which was propounded for Want of Appetite coming of the ſame Cauſes, which we wil not repeat.

Laſtly, If the proper Cauſe of the Hermeticks afore-mentioned be worth obſerving, you muſt look to it; firſt correcting the Evil ſtate of the Liver, and then reſtoring the Spirits diſſolving, with ſome acid ſubſtance; of which kind is Spirit of Sulphur, Vitriol, Salt, juyce of Lemons, Pomegranats, Orenges, and Vinegar.

Chap. 6. *Of* Singultus, *or Hiccough.*

Singultus or Hiccough, is a depraved Motion of the Stomach, by which it deſires to expel ſomething that is hurtful.

It is diſtinguiſhed from vomiting, becauſe that which is ſo ſent forth, is contained in the Cavity of the Stomach; and it is wholly turned to throw it out: But in Singultus the matter offending is fixed in the Tunicles of the Stomach, therefore it doth contract it ſelf, and ſhakes its fibres, to exclude it. And that we may comprehend loathing alſo in this Definition, we ſay that the expulſive motion of the Stomach is three waies: For either Nature would ſomtimes riſe to expel, and cannot; or it is not ſufficiently raiſed to this motion, and then it is Nauſea or loathing: ſomtimes it riſeth and expelleth, and then it is Vomiting: or laſtly, it riſeth to expel, and cannot, and that is Singultus.

This is a Convulſive Motion, not a Convulſion, which is only in the Muſcles, and parts given to voluntary Motion.

The immediate Cauſes of Singultus are propounded by *Hipp.* Aph. 39. Sect. 6. that is, Emptineſs and Repletion, as of a Convulſion. But *Galen* and *Avicen* ad a third Cauſe, namely, a provocation by a ſharp matter. Some labor to bring the matter provoking to a kind of repletion, that they may excuſe *Hippocrates*. But when the matter is plain, we need not confound and darken the evidences of things for Authors words: For what is more cleer, than that Singultus comes from the expulſive faculty provoked? Therefore whatſoever can provoke is the immediate cauſe of Singultus or Hiccough. But Humors and Vapors offending either in quantity or quality may provoke the Stomach to expulſion, and ſo repletion and acrimony are two diſtinct cauſes. But it is not eaſie to ſhew how emptineſs makes a Singultus: For ſince its Eſſence is in defect, none will ſay that Nature riſeth to expel a defect; but rather will be moved to refreſh and repair it, and ſo it doth rather move the Attractive than the Expulſive Faculty. But if Singultus follow great Evacuations, as in ſharp Feavers, and malignant, and purging with Hellebore, it is not ſimply to be attributed to the Evacuation, but rather to a malignant quality in the Stomach, coming from the Diſeaſe, or ſome Medicine taken.

The Matter cauſing Singultus is either gathered in the Stomach, or ſent from the Liver, Spleen Guts, or other parts; or from the whol Body. So ſharp Nouriſhment, or ſharp Medicines, or ſharp Humors, or gnawing Worms contained in the Stomach, cauſe a Singultus by propriety: but inflamation of the parts adjacent by water or vapors ſent to the Stomach, make it by conſent: as alſo becauſe the Tumor, eſpecially when the Liver is inflamed, doth compreſs the Stomach, by which the expulſive faculty is continually provoked. Finally, Humors may be brought from the whol Body, or ſharp humors to the Stomach, in diſeaſes of the whol Body, as appears in ſharp and malignant Feavers.

The Diagnoſis, or knowledg of this Diſeaſe, is manifeſt of it ſelf. But the ſigns of the Cauſe are thus to be diſtinguiſhed, ſo that if it be by propriety, the diſeaſe is more laſting, and there will appear ſigns of the Humors contained in the Stomach, and the diſeaſe is aſſwaged by Vomit. The Humor contained in the Stomach is known by vomit, belching, taſte in the mouth, and by other ſigns. And finally, if it come from a diſeaſe in any other part, you may take the ſigns thereof from their proper Chapters.

As to the Prognoſtick: Singultus that comes from any principal Cauſe, as Meat, Drink, or Cold, is not dangerous; as alſo that which goes before a Criſis by Vomit, and then other ſigns muſt be healthful.

If any have the Hiccough in a great Feaver, the Diſeaſe is very dangerous, *Hipp. in Coacis.* For it comes from ſharp Humors, and malignant, which pull the Tunicle of the Stomach inwardly, and force its expulſive faculty. And *Valleſius* ſaith, that he never knew any extenuated perſons taken with a hot and malignant Feaver, who had a Singultus, to eſcape: So it is in *Hipp.* 3. Epid. Sect. 2. Ægr. 12. A woman living in the Marker, had many Hiccoughs upon the twelfth day, and died the fourteenth day of her ſickneſs. Alſo *Platerus* obſerved, that a Singultus coming upon burning Feavers, and continuing, is for the moſt part a forerunner of death; and the ſame is deadly in a Dyſentery, or bloody flux.

After

After Vomiting, Singultus and redneſs of the Eyes is evil, *Hipp.* Aph. 3. Sect. 7. Theſe two ſigns coming after Vomiting in acute Diſeaſes, and continuing any time, therefore are ſaid to be deadly, becauſe they declare an inflamation of the Brain or Stomach; which inflamation is not only the cauſe of Hiccoughs and redneſs of Eyes, but alſo of Vomiting: For if Vomiting come from ſharp Humors that gnaw the mouth of the Stomach, and its Tunicles, when thoſe Humors are thrown out by Vomit, the Singultus and vomiting would ceaſe, nor would any ſharp vapor be ſent to the Eyes, which ſhould make them red: But when Vomiting doth not only not profit, but alſo brings after it Hiccoughs and redneſs of the Eyes; it is moſt certain that theſe three, namely, Vomiting, Hiccoughs, and Redneſs of the Eyes, do come from the Inflamation of the Brain or Stomach: for the Brain being inflamed, doth through abundance of blood ſend it to the Eyes, and into their extream Tunicles, whence comes redneſs; to which alſo the Stomach conſenting by the Nerves of the ſixth Conjugation, is eaſily from the Inflamation of the Brain brought to Vomit and Hiccough. Alſo the Stomach inflamed by a concourſe of hot blood to the Eyes by reaſon of the great conſent between thoſe parts, brings Vomit, Hiccoughs, and redneſs of the Eyes, which the beginning of ſuffocations do demonſtrate, and the appearance of things before the Eyes which are in the Stomach diſordered; whence *Hippocrates* in his Book *de locis in homine*, affirms that the Eyes are chiefly hurt by Vomiting.

Singultus from Inflamation of the Liver is hurtful, *Hipp.* Aph. 17. Sect. 7. which comes then, as *Galen* ſhews in his Comment upon that Aphoriſm, when the Inflamation is greater and worſe, for then it is ſo great in the Liver that it lieth upon the Stomach, and brings the Singultus: nay, ſometimes by conflux of matter, there is ſometimes an inflamation or Eryſipelas in the Stomach: or elſe there comes gnawing from the ſame being ſucked into the Tunicles of the Stomach.

The Cure of this diſeaſe is directed to the Cauſes, which as I ſaid, do either produce it by way of Sympathy, or Propriety. The Cauſes which produce it by ſympathy, are the diſeaſes of other parts, which being cured, this is cured, although theſe Medicines are to be adminiſtred then, which are good to allay the Symptome, which ſhall be afterwards declared.

This Diſeaſe by Propriety comes of Flegm, Wind, Choller, or ſome ſharp or maligant Humor.

That which comes from Flegm in the Tunicles of the Stomach is cured by Medicines which cut the Humor, cleanſe and purge it, and by ſtrengtheners of the part, ſuch as were preſcribed for the Cure of want of Appetite coming of a cold Cauſe. To which we may ad theſe following, as more proper to this diſeaſe.

Take of *Caſtor one dram*: *the juyce of Mints four ounces*: *Mix them, let the Patient take one ſpoonful or two every fit*: *and you may anoint the Stomach with the ſame Medicine warm, twice or thrice in a day.*

He may take Vinegar of Squils often to cut and diſſolve the matter contained in the Tunicles of the Stomach, or inſtead thereof, Oxymel of Squils.

Cloves held often in the mouth do not a little profit.

Alſo the *Elixir Proprietatis* of *Crollius*, is very profitable.

Take of *Dill ſeeds, two or three drams*: *boyl them a little in eight ounces of the beſt Wine*; *of which let the Patient take one ounce firſt and laſt. Let the ſame Seed be put into a cloth, and often ſmelled to.*

When the Diſeaſe is violent, theſe Pills following are very good.

Take of *Caſtor and Myrrh, of each three drams*: *Sal gem. half an ounce*: *Diagridium, and Maſtich, of each one dram*: *Agarick newly trochiſcated three drams*: *Aloes, as much as all the reſt*: *make them with Juyce of Mints into a maſs, of one dram whereof, make ſix Pills gilded. Let him take two or three in the morning twice in a week, two hours before meat.*

Plainer Pills, and almoſt as good, may be made of Hiera with Oxymel, of which you may give a dram.

In the daies between the taking of Pills, give this Pouder:

Take of *Dill ſeeds half an ounce*: *Zedoary, Lignum Aloes, Nutmegs, Cloves, and ponder of Diambra, of each one dram. Let him take two ſcruples in a morning with a little ſweet Wine, or put to them three ounces of Common Salt, and let him eat it with all his Victuals.*

Apply this Cataplaſm following to the Stomach.

Take of *Roots of Ariſtolochium, or long Birthwort, Flowerdeluce, Bay-berries, dried Leaves of Rue and Mints, of each three drams*: *Caſtor and Myrrh, of each two drams*: *Cloves, and Hypociſtis, of each one dram. Make a Cataplaſm with Honey of Roſemary.*

At length, when the diſeaſe is ſtubborn, you muſt uſe the Decoction of Guajacum and Baths of Brimſtone, as the beſt Medicines.

That which comes from wind, is cured by the ſame Medicines, adding thereto things to expel wind.

Apply also Cupping-glasses to the region of the Stomach, which miraculously do presently abate, and take away the windy diseases of the Stomach.

That which comes from a sharp Chollerick Humor, besides those Remedies which were prescribed in want of Appetite coming of a cold distemper, most proper also to this Disease, must be cured by Phlebotomy (if there be Plethory or fulness) by vomiting and gentle purging every third day, thus made:

Take of *the pouder of Rhubarb, sprinkled with Endive Water half an ounce: the pulp of Tamarinds, two drams: the seeds of Endive and Purslain, and of Spodium, of each one dram: yellow Saunders, and Diagridium, of each half a dram: with syrup of Lemons make a Mass of Pills of half a dram; whereof make Four or Five Pills to be given in the Morning as aforesaid.*

Upon other daies let him take Conserve of Roses and Borrage, mixed with a little Triasantalon or the Opiate mentioned in the Cure of Want of Appetite.

Emulsions often used, made of the Cold Seeds, do powerfully asswage the sharpness of the Humor; or in a disease not very hot, the milk of sweet Almonds.

Syrup of Apples, with Syrup of Quinces is to be given in a spoon.

He must take Broth often.

And must drink cold or warm Water or Ptisans often.

The Oyl of sweet Almonds doth asswage the sharpness of the humors.

Let the Stomach be Fomented with a spung dipt in Rose water.

Take of *the Cerat of Saunders and Oyntment of Roses, of each one ounce: Mastich half an ounce: Citron peels and pulp of Quinces, of each one dram: with Juyce of Housleek and a little Turpentine, make two Emplaisters, of which lay one to the fore part, another to the hinder part of the stomach.*

Anoint the region of the Liver with Cooling Oyntments, because the Humors use to flow from thence to the stomach.

If you suspect any infection, you must give Treacle and other Antidotes, and anoint the stomach with the Oyl of Scorpions according to *Matthiolus*.

These Medicines following are good against the Hiccough of what cause soever.

First, Expel the Humor offending by Vomit, if the Patient can wel endure it; and Repeat it, if the Disease abate, and give stronger if necessity requires.

As *Platerus* sheweth in his *Practice*, of which he gives an example, in his *Observations* in these words, *A Chirurgion being sick began to Hiccough day and night so that he could neither sleep, speak well, or take meat: at last being thus weak and nothing profiting him, when he was in an agony, we gave him not without fear but at his own entreaty, a strong Chymical Vomit at hand, by which he vomited abundance of choller green and black, and so was cured.*

If the Patient abhor Vomits, Purge him.

But prepare the Humors first or before you repeat it, with cutting and clensing means; after use these following:

Apply Cupping Glasses to the Back against the Stomach or before.

Bind the Stomach that it may not be dilated.

Use Ligatures to the remote parts.

Take Annis-seed, for they say that doth specifically cure.

And give often Clysters to draw the Humors from the Stomach.

Apply yong Creatures to the Stomach.

And, Take Vinegar of Squils in a spoon.

Neezing doth shake off the Matter which is compacted in the Tunicles of the Stomach; as *Chrysimachus* the Physitian in *Plato* cured *Aristophanes* by Neezing, when he could not be cured by holding his breath, and gargling of cold water.

Galen, 8. *de comp. med. sec. loc.* mentiones the Medicine of *Asclepiades*, of which he examineth every Simple, and approveth them as if it had al Faculties fit for this intention; namely, To discuss and Evacuate the Matter hurtful, by Stool and Urin, to strengthen the stomach; and lastly to mitigate sharpnels.

The Composition is thus:

Take of *Costus or Galangal, Saffron, Spikenard, Roses, Mastich, of each four scruples: Asarabacca and Aloes of each two scruples: Opium one scruple: with the Juyce of Fleabane make them into little Balls or Cakes, and let him take one of a scruple in weight every morning.*

In imitation of that you may quicklier prepare Pills for one Dose, of one dram of Aloes two or three grains of Laudanum; And if you wil Purge more, give three or four grains of Diagridium.

Duretus

Duretus teſtifieth what excellent force Aloes hath in this Diſeaſe, in theſe words, *Many when they have been almoſt dead with the Hiccough, have been cured with Purging five dayes together with Hiera after they have voided black glutinous humors.*

Platerus reports in his Obſervations, That he Cured a Boy of ten yeers old, that was troubled night and day for eight dayes together with the Hiccough, with the Water of green Nuts, diſtilled with Rhadiſh firſt macerated in Vinegar, which he gave as a Vomit; and though he vomited not, yet he was eaſed; and taking a draught thereof at night, was preſently Cured.

Foreſtus reports, That he Cured one with one draught of the Decoction of Dill-ſeeds, Carva, Purſlain, and white Poppy-ſeeds, made in ſmal Ale.

Claudinus doth highly commend Diaphœnicum with Philonium Romanum, when the Cauſe and the Symptome are very violent.

Laſtly, Narcoticks only do alone Cure this when al other things fail, by ſtupifying of the ſenſe of the part which is too exquiſite.

Chap. 8. *Of* Nauſea, *and Vomiting.*

N*Auſea* and Vomiting differ only in degrees, and both are the motion of the Stomach by which it either expelleth or labors to expel things contained therein; therfore Nauſea is a deſire to Vomit with trouble, and only ſending and pewking forth a thin wateriſh Humor by Salivation: whatſoever troubles the Stomach either in quantity or quality uſeth to ſtir that up, when it cannot be voided by reaſon of the weakneſs of the Stomach, or the ſtrength of the upper Orifice, or thickneſs of the Matter, or ſliminess.

But Vomiting, which is called in Greek *Emetos*, or *Emeſia*, is a Depraved motion of the Stomach, which ſhaketh it, by which the Expulſive Faculty is ſtirred up by Contraction of the Fibres of the lower part and looſening thoſe in the ſuperior, doth ſenſibly with a violent Motion throw upward the Matter contained therein, which is troubleſom unto it; it is called a Depraved Motion both in reſpect of the Object troubling it, as alſo in reſpect of the Motion it ſelf, which is from the bottom of the Stomach to the Mouth of it, turning it, when the natural Motion of the Stomach is Compulſive towards the Guts and the Pylorus.

The Differences of Vomitings are taken from their Cauſes, which are either External or Internal; therefore it is Divided firſt into Natural and Artificial; the Natural again, is either without a Diſeaſe, or in the Diſeaſe; from whence ariſeth a Three-fold Difference, one is called Periodical, another Critical, and another Symptomatical.

Periodical is that which without a Diſeaſe, is uſed for preſervation often, from whence we reade in *Hippocrates*, That the Ancients did Vomit Twice every Month, either at diſtance, or together.

And there are many in our times, who uſe either every Month, or Week, or Day to Vomit Choller, or Flegm; by which they are Preſerved from many Diſeaſes: And this is not properly a Symptome, becauſe there is no Diſeaſe preſent; but it is rather to be termed a Motion of Nature.

Critical Vomiting often happens in Diſeaſes, and by that the Matter of the Diſeaſe, if preparation be firſt made, is wholſomly Evacuated; either al, by which it is Cured; or in part, by which it is Diminiſhed.

Symptomatical Vomiting comes from Nature provoked and weakned and without eaſe to the Patient, becauſe it is not enough, or it is nouriſhed continually with the Matter that maketh the Diſeaſe.

Other Differences of Vomitings are taken from the things vomited, for they are either Nouriſhable or Excrementitious; the firſt is of Meat, Chylus, or pure or mixed blood: the latter is of Flegm, Choller, Melancholly, Water, Matter, Worms, and the like.

Artificial Vomiting, generally is whatſoever is from an External Cauſe: The External Cauſes, are chiefly Stroaks, Falls, Compreſſion of the lower Belly, Southernly weather, or infectious Air, Poyſonous Breath, Stinking Smels, Violent Exerciſe, Riding, Sayling at Sea, eſpecially in a Southernly wind, beholding or conceiving of ſome filthy thing: And the like External Cauſes which provoke Nature, or move the Humors; but eſpecially things taken in have great force, not only vomits called *Emetica*, and Poyſons which we diſtaſte; but alſo Nouriſhment either hurtful in their Nature, or hated peculiarly of ſome; as in *Hippocrates*, who ſpeaks of one who with eating of Muſhromes or Toad-ſtooles, died Vomiting. The ſame happened to a Courtier of *Antoninus* the Emperor, who by eating much mouldy Cheeſe died Vomiting. The quality of Food wil do the ſame if it be Fat or Oyly, as alſo a propoſterous order in eating, when moiſtning and looſning things

are

are eat after aſtringents, and alſo too much food taken, though never ſo good, as appears in Gluttons; for then Nature being over charged, deſires to throw out what ſhe cannot concoct, to which ſhe is alſo ſtirred up by the evil quality which is brought to thoſe meats by corruption, or evil concoction.

The internal Cauſes are either Antecedent, or Conjunct.

The Antedent Cauſes either come from the whol Body, or from ſome proper peculiar part into the Stomach. They come from the whol Body in a Plethory, evil habit or Cachexy, Feavers, and other diſeaſes of the whol Body. The Humors are often derived from ſome peculiar part into the Stomach in the inflamation of the Liver, Spleen, or other Obſtruction of the Meſentery, from the Terms ſtopped, or Hemorrhoids, from a Catarrh, or the like. To this you may ad the evil Conformation of the *Porus Cholidochus* when it is not placed into the Duodenum, but into the Stomach, whence they are called *Pichrocholi Ana*, who are often troubled with Chollerick Vomits, by reaſon of this evil Conformation. Alſo this vomiting cometh by the Periſtaltick motion of the Guts, when they are ſtopped in the Chollick, and the humors cannot well get forth, but come upwards; alſo Worms coming up into the Stomach from the Guts, and pulling the inward Tunicle thereof, do cauſe vomiting. And laſtly, An Impoſthume broken in the Spleen, Metentery, and other parts of the Abdomen, uſeth to cauſe a vomiting of Matter.

The Conjunct Cauſes of Vomiting, are them before mentioned, when they come to the Stomach; for while they were in other, they were antecedent Cauſes. Theſe are eſpecially divers Humors, ſome bred in the Stomach, eſpecially Flegm, of which there is often much in the Stomach, by Crudities, and want of Concoction when the Stomach is weak, and turns it into flegm. So alſo is there ſomtimes green Choller in the Stomach bred of corrupt Humors, as *Galen* teacheth, Com. in 2. Progn. and this cleerly appears in ſucking Infants, who through corruption of Milk in their Stomach uſe to avoid green ſtools like Leeches, or Verdegreeſe.

This green Choller which comes from corrupt nouriſhment in the Stomach, is not the ſame with that which cometh from yellow Choller by aduſtion and torrefaction.

The Signs of Vomiting are manifeſt. But the Cauſes, as they are divers, ſo they have divers ſigns.

Firſt then, if Vomiting come from a fault in the Stomach, there are ſigns of that part being affected, as loathing of meat, heavineſs, extenſion, ſwelling in the Region of the Stomach, ſlow and hard Concoction, ſowr and ſtinking belchings, and other ſigns that ſhew the diſtemper of that part. So if it come from a Common and Organical Diſeaſe in the Stomach, as a Tumor, or Ulcer, the ſigns of theſe Diſeaſes will diſcover themſelves. But if Vomiting come by ſympathy from the whol body or other parts, there will appear ſome Diſeaſe of the whol body, or ſome part.

The whol Body is affected in Feavers, evil Habit, Jaundice, Atrophy or want of nouriſhment. But the Principal parts from which the Humors are ſent more frequently to the Stomach, are the Brain, Liver, Guts, and Womb.

If the Humors flow from the Brain to the Stomach, there will appear ſigns of diſtillations, frothy and flegmy vomitings, and a great loathing at meat time.

If the Humor come from the Liver, it is commonly Choller; and Vomiting before meat, is worſe than after; and there appears ſome diſeaſe in the Liver, as pain or tumor.

If the Matter come from the Guts, either there will be Chollick or Illiack paſſion, or the ſigns of Worms.

Laſtly, If it come from the Womb, there is Conception, ſuppreſſion of Terms, or other Symptomes.

We may alſo know by ſome ſigns whether the Humor be contained in the Cavity of the Stomach, or ſtick to the Tunicles thereof. For if it be in the Cavity it is eaſily caſt forth, and there is ſtretching in the Stomach, and trouble after Meat, which will not ceaſe till the Humors are ſent out by vomit, which are for the moſt part thrown out alone, and the Meat retained. But if the Humors ſtick to the Tunicles, vomiting is chiefly after Meat, and the Meat is caſt forth without the Humors, but when there is no Meat, there is a loathing, and that which is caſt forth, is thick and ſlimy, and with great ſtraining.

The external Cauſes are known by relation of the Patient, as if he hath eat or drunk too much, or received a ſtroak, or eat any evil thing.

The ſigns of Vomiting to come are ſhewed by *Galen, lib.* 3. *de criſ. cap. ult.* as Headach, dark giddineſs, trembling of the lower Lip, gnawing at the mouth of the Stomach, often and much ſpitting.

You muſt make the Prognoſtick thus:

Vomiting from Choller and Flegm, which is neither very thick, nor very much, and which hath both thoſe Humors exquiſitely mingled, is good. For it is commendable in ſubſtance, quantity, and quality. For of all excrementitious Humors, Flegm and Choller are the mildeſt: if then they be

be vomited well mixed, and in a moderate quantity and conſiſtence, it hath all the laudable conditions.

Chollerick and Flegmatick Vomitings on a critical day are very good: For not only mixed are good, but vomiting of one ſingle, if it cauſe the Diſeaſe. So in Chollerick Feavers, when Choller comes forth critically, or Flegm in Flegmatick Feavers, the Diſeaſe is at an end, or at leaſt there is great hopes of recovery.

A Vomiting naturally after a long flux of the Belly, cures the diſeaſe, Aph. 15. Sect. 6. for there is a revulſion of the Matter to the contrary part. And this ſhews that Nature is refreſhed, and gets ſtrength: For as the Phyſitian ought to labor for the retraction of thoſe things that flow to any part. So Nature, when ſhe begins to prevail, makes a repulſion of the Humor, which flows to the part affected, that the part may be refreſhed and ſtrengthened.

Little and violent vomiting in a ſharp Feaver, is evil; for it is not good to void ſparingly in a Criſis; for it ſignifieth one of theſe two things: Either abundance of Matter which Nature cannot bear, but muſt ſend ſome of it forth: or the weakneſs of Nature, which ſtriveth in vain to ſend forth that which is ſuperfluous.

Vomitings of divers colors are evil, it ſignifieth divers Humors lurking in the Body, and therefore Nature will be more put to it with divers enemies; for if it be troubleſom to Nature to contend with divers Nouriſhments, how much more dangerous is it to ſtrive to concoct and tame divers preternatural Humors, eſpecially in acute Diſeaſes, in which there is but ſhort time to fight, which ſhould be long, that there might be more hope of Nature being a Conqueror.

Green Vomiting like Leeks, Verdugreeſe, as alſo blew, black, or ſtinking, is deadly: For it ſignifieth that there is abundance of Choller of thoſe colors: And all theſe kinds of Choller uſe to produce malignant and deadly diſeaſes. And if there be a ſtink, it ſhews a great corruption of Humors, with which Nature cannot long conſiſt.

In acute Feavers, Vomiting without mixture of Humors is evil, according to *Hipp.* 1. Porrhet. For a pure Humor is not only crude, but incapable of Concoction, becauſe it excludeth not only the act, but the power of Concoction. *Hippocrates* calls every humor that is without mixture, and every Excrement that is hot and crude, *Acriton*, becauſe it is bred either by the defect of ſome part, or by reaſon the watery, ſerous matter is exhauſted by the heat of a Feaver. Therefore in ſharp Feavers it ſhews that there is a great inward inflamation, and for the moſt part ſuch as Nature cannot conquer.

As for the **Cure**: If Vomiting come from a diſeaſe in ſome other part, it needs no other Medicines than thoſe which are agreeable to the diſeaſe from whence it comes.

But if it come from Chollerick, Flegmatick, or Melancholick Humors which ſtimulate and provoke the Stomach, either by their quantity or quality, you muſt throw out thoſe Humors by Vomitive Medicines.

But if they be thick and glutinous, or clammy, they are to be cut and cleanſed, as we ſhewed in the Cure of want of Appetite.

The beſt Vomit in this caſe, is that which is indifferent gentle, and not too weak, as warm Oyl: nor muſt you give ſtrong ones made of Antimony, which draw violently from remote parts. But ſuch as do cleanſe and diſſolve the glutinous Humors, as *Gylla Theophraſti*, or white Vitriol prepared: but Salt of Vitriol brought to a high redneſs by Calcination, is the ſtronger.

If Vomits are unpleaſant, you muſt take away the Matter with often Clyſters and gentle Purgations with Rhubarb in them, which aſtringeth and ſtrengtheneth afterwards.

In Chollerick Vomitings, theſe Pills following may be preſcribed:

Take of *Aloes waſhed with Roſe Water three drams: the pouder of Rhubarb ſprinkled with Borrage Water one dram: Maſtich, red Sanders, and Coral prepared, of each one ſcruple: With Syrup of Roſes Solutive make a Maſs of Pills, of which take half a dram, or a dram every other day till the Vomiting be ceaſed.* Or,

Take of *Rhubarb poudered one dram: yellow Myrobalans one ſcruple: Spodium, or burnt Ivory, and Harts-horn ſhaved, of each ſix grains. Make a pouder, and give it twice in a week, in a little Broth.*

Or make a Bolus of Hiera Picra, or three drams of Diacatholicon, with one dram of poudered Rhubarb.

In a moſt violent Vomiting, give three grains of Laudanum, with two ſcruples and an half of Cochie Pills the leſs, the Vomit will be ſtayed, and five hours after they will work downwards. There is a good quantity of the purging Pills in this Receipt, becauſe Laudanum doth aſtringe, and therefore it muſt be given with Medicines made of Diagridium, and Coloquintida. And if the Medicine do not come away, you muſt give a ſharp Clyſter.

After ſufficient purging, you muſt ſtrengthen the Stomach with Syrup of Quinces, ſowr Pomegranates, old Conſerve of Roſes, or Comfry Roots, Conſerve of Quinces; or this following Julep, if it be very Chollerick and vehement.

Take

Take of *the juyce of sowr Pomegranats six ounces: the juyce of Mints clarified two ounces: Sorrel Water one pint: white Sugar half a pound: make a Julep, in which while it is clarifying boyl gently in a clout of yellow Saunders, red Roses, and Spodium, of each one dram: Let him take four ounces first and last.*

Take of *Terra Sigillata, or sealed Earth, Bole Armonick, red Coral, prepared Pearl, Purslain, and Sorrel seed, of each one dram: shavings of Harts-horn, and of dried Mints, of each one scruple: red Roses half a pugil: Make a Pouder to be taken in Broth, or the like; or in a spoonful of Cha'ybiate Water.* Or,

Make Tablets thereof with Sugar dissolved in Plantane Water, or an Opiate with Syrup of Quinces, Conserve of Roses, or Comfry Roots.

Some few Grains of the best Mastich, taken in the Morning, is good to stay Vomitting.

Three Grains also of Balsom of Peru taken in a rear Egg, or in Sugar like a Pill, do it better.

Also a Decoction of Beans, or Pease, after the first Water is cast away, with a little Vinegar, is much Commended.

And the Crude Juyce of Quinces, taken Two or Three spoonfuls at a time, doth Wonders.

Camphire often smelt to, or taken with a little Rose Water, and a little Pouder of Diamoscum, is good for the same.

The Spirit of Vitriol mixed with Plantane or Spring Water, to make it sharp, doth also powerfully stay Vomiting.

If it be very violent, make the Water sharper with Spirit of Vitriol; or give it in Sack, or rich Wine; if you want Spirit of Vitriol, use the strongest Vinegar without mixture, one spoonful or two at a time.

One Scruple of Salt of Wormwood, mixed with a spoonful of the Juyce of Lemons, is a most excellent Medicine; especially in those Vomitings which happen in Malignant Feavers.

If the Patient grow very Weak with Vomiting, give him Laudanum with Conserve of Quinces, or Syrup of dried Roses; and then apply a Cupping Glass to the Stomach, and a Cataplasm of Leaven, pouder of Wormwood, and Orange peels, made up with juyce of Mints.

Apply also outwardly a Fomentation to the region of the Stomach, a new Spunge dipt in Rose water and Rose vinegar; or let the Spunge boyl in strong Vinegar, and apply it hot to the Stomach.

Or make a Fomentation of the Decoction of the Roots of Snake-weed, Plantan-leaves, Purslain, Mints, Bramble-tops, and Willow-tops, and then anoint it with this Oyntment.

Take of *Acacia, Hypocistis, grains of Sumach and Myrtles, of each two drams: Mastich and grains of Kermes, of each one dram: Oyl of Myrtles two ounces: Wax as much as is sufficient; make an Oyntment: or apply this following Cataplasm.*

Take of *Quinces boyled in Rose water and Vinegar, or Marmalate thereof well beaten, three ounces: the pouder of Mastich, Grane of Kermes, and Myrtle berries, and Plantane-seed, of each two drams: with the Juyce of Mints, or Quinces, or Syrup of Wormwood, make a Cataplasm.*

Or, Steep a Crust of Bread in Rose Vinegar, and sprinkle it with this pouder following:

Take of *red Roses, and Pomegranate flowers, and Coriander seeds prepared, of each one dram and an half: Mastich, red Coral, Sorrel seeds, Spodium, of each half a dram: yellow Saunders one scruple: mix them into a pouder.*

Or, Apply this following Emplaister:

Take of *Mastich plaister, one ounce: the pouder of Myrtles, and Bistort-Roots, of each half a dram: with the Oyl of Mastich make an Emplaister in the form of a Buckler.*

If the Vomiting be very violent, and bring a Feaver Symptomatical, and the Body very full, it is good sometimes to let blood to prevent inflamation which may be in the internal parts by reason of the violent straining; and this must be done warily, and but a little, least the strength be abated.

Moreover, It is good to apply Cupping Glasses to the Back and Navel, and to rub and bind the extream parts.

You may bind about the Neck Linnen Clothes dipt in Oxycrate to repel the humors: putting of the hands into cold Water, doth stay all kinds of vomiting.

And Last, When other things avail not, use Narcoticks which do very quickly stop all Evacuations.

In

In a Flegmatick Vomiting (if it wil not be ſtaid with the aforeſaid Vomits) give Pills of Hiera, with Rhubarb and Agarick, or other fit Purges.

Then come to ſtrengtheners for the Stomach, ſuch as were preſcribed for the Cure of Want of Appetite: to which ad this following:

Take of *Conſerve of Roſes and Comfry Roots, of each one ounce: confection of Hyacinth, three drams: the pouder of Diambra, and Aromaticum Roſatum, of each half a dram: Troches of Spodium, terra Sigillata, and grana Kermes, of each one ſcruple: with ſyrup of Quinces make an Opiate.*

The Spirit of Vitriol with Wormwood water, or Juyce of Mints, doth mightily ſtay Vomiting, and Strengthen the Stomach.

Or, One or two ſpoonfuls of Aqua Imperialis, given after Vomiting if the Stomach be very Cold.

Apply theſe things following outwardly:

Take of *Wormwood, Mints, and Balm, of each three handfuls: boyl them in a ſufficient quantity of Vinegar and Wine, to the conſumption of the third Part; make a Fomentation for the ſtomach.*

After apply the Plaiſter afore-mentioned, or the Cataplaſm of Quinces, uſing the Pouder of Nutmegs and Cloves, inſtead of Myrtles and Plantane. Or,

Take of *Wormwood and green Mints of each one pound: a Toaſt dipt in Roſe-water weighing half a pound: the Pulp of Quinces, or Marmalat of the ſame, two ounces: Maſtich half an ounce: Mace and Nutmegs, of each two drams: beat them all well together with Oyl of Quinces and make an Emplaiſter.*

Or, Make a Cataplaſm of Quinces boyled in ſtrong Vinegar and then beaten with a little Muſtard-ſeed and Pouder of Cloves.

Or, Apply a Toaſt dipped in ſtrong Wine and Juyce of Mints, and ſprinckled with pouder of Nutmeg, Cloves, Frankinſence, Maſtich, and Graines of Kermes.

Villanovanus much Commends ſharp Leaven, which he applieth to the Stomach twice or thrice, being ſteept in ſtrong Vinegar and juyce of Mints: this doth moſt certainly ſtop Vomiting after convenient Evacuations, and Revulſions.

In a long Vomiting where the Stomach is very Weak, you muſt uſe ſtrong Aſtringents made thus.

Take of *the Roots of Snakeweed and Tormentil, Pomegranate peels and flowers, and Hypociſtis, of each two drams: Leavs of Mints, and dried Wormwood, of each half an handful: Sumach and Myrtle berries, of each one dram: red Roſes one pugil: Cinnamon, Cloves, and Maſtich, of each half an ounce: green Galls, and Cypreſs Nuts, of each two drams: boyl them in Iron water and Red Wine, in which diſſolve a little Musk, for ſweet things do much aſſwage Vomiting, of which let the Patient take two ounces every morning, and Foment his ſtomach with the ſame.*

After the Fomentation apply ſome Plaiſter or Cataplaſm, made as aforeſaid.

Chap. 8. *Of Vomiting Blood.*

THis Diſeaſe is a caſting forth of Blood from the Stomach by the Mouth: And as al other Bleeding, it comes from the Veins either by Anaſtomoſis, or opening of them by Diapedeſis, or Rarefaction, by Rixis breaking, or by Diabroſis corroding, which Diſeaſes of the Veins were ſhewed in the Cure of Spetting of Blood, called Hæmoptyſis.

The Cauſes alſo are the ſame.

And Firſt the Conjunct Cauſe; Exceſs of Blood in quantity or quality.

Blood offending in Quantity, wil break or open the mouths of the Veins, and ſo comes Rixis, or Anaſtomoſis, which happeneth in ful bodies.

If it offend in Quality, as when it is too hot, or thin, it may cauſe an Anaſtomoſis, becauſe heat doth open the Orifices, and thinneſs makes it flow eaſily through; The ſame Qualities may Cauſe a Diapedeſis; for heat doth make thin the Tunicles of the Veſſels, and thinneſs Cauſeth the Blood to paſs through their pores.

Laſtly, Sharpneſs gnaweth and Ulcerateth the Tunicles of the Veins, and ſo produceth a Diabroſis.

The Antecedent Cauſes are the ſame with the Conjunct, but they differ in place; for when blood offending either in Quantity or Quality, doth immediately open the Veins: it is called a Conjunct Cauſe; and the ſame being contained in the Veins, is called an Antecedent Cauſe.

The parts sending, of which the chief are, the Head, Liver, Spleen, and Womb, are antecedent Causes.

Often times Blood is carried from the Head to the Stomach by the Pallat and Gullet, or Oesophagus: and also a violent Catarrh of sharp and Salt flegm, doth corrode the Stomach, and open the Veins thereof.

It is carried from the Liver and Spleen by the Veins that go to the Stomach from the Womb, when blood by the stoppage of the Terms, runs back and opens the Veins of the Stomach, so that some Women have had their Terms by vomiting blood constantly at the time.

Vomiting of blood comes oftener from the Liver and Spleen, than from other parts, and from the Spleen than the Liver, because it doth more consent with the Stomach. For it is evident by Anatomy, that the great branch of the Gate Vein, or *Porta*, goeth to the Spleen, from which many Veins are sent to the Stomach both above and below; and these are so great that being distended with wind or blood, they are as thick as the middle finger: this we have observed in Dissection. Moreover, the *Vas breve* being wide, as in a natural state, it doth continually send Melancholly into the Stomach; so being in a Preternatural state, it may send great plenty of blood. But observe here, that in this case, that blood is voided by stool as well as vomit, both because a part thereof which went to the Stomach, is sent downwards, and also because the Meseraick Veins are open, and send blood into the Guts, which by its long passage through the Guts groweth black, and comes forth like Tar.

The external Causes are, all things that can wound or bruise, as also great heat which causeth boyling of the blood; hence it is that yong men to the age of thirty five, are very subject to vomit blood, and other bleeding, as also great cold by too much astriction may endanger to break the Veins: the same doth unseasonable Motion and Labor, unusual Exercise, great hollowing, and the like, which move the blood violently in the Veins.

And finally, All the Causes of Blood-spitting afore mentioned. For Blood being violently moved either in the Veins or Arteries, whether from an external, or an internal Cause, goes sooneſt to that part which is weakeſt, and most fit to receive it; and therfore if the Stomach, or the Veins going thither are so disposed, there will be vomiting of Blood rather than any other way of bleeding.

The Diagnostick of this Disease lieth chiefly in the discovery of the part from which the blood comes.

If from the Stomach, the scituation of the part, and the constant pain and heavineſs thereof will demonstrate, and there is less blood, for the Veins of the Stomach are small, and it comes with loathing, and there is a biting when they swallow, as also somtimes it comes forth mixed with Meat, Flegm, or Choller.

If it come from the Head, there will be tickling about the Jaws and Pallat; and some blood will be blown out of the Nose with Snot; there went before it some Head-ach or heavineſs, which after bleeding ceaseth.

If from the Liver or Spleen there is more plenty of blood, and somtimes a tumor or dolor in the part. From the Liver the blood is red and frothy, from the Spleen it is thick and black. Also Blood from the Liver goes most downwards, because it commonly goes from thence to the Guts through the Meseraicks, and must ascend from them into the Stomach to cause Vomiting, but it doth easier descend. Contrarily, that which comes from the Spleen, is rather by vomit, because the Veins from the Spleen to the Stomach, are shorter and narrower.

Lastly, If from the suppression of the Terms, you may know it from the Woman, and it will come at those times which will be more probable, if there be no disease in any other part.

As for the Prognostick: Vomiting of Blood, of what cause soever, is dangerous; for it either threateneth death suddenly; or if it stay in the Stomach, and putrifie, it breeds faintings, swoonings, and suffocations.

Vomiting of Blood from suppression of the Terms, is less dangerous than that from the Liver or Spleen; for when they are brought down it is usually cured, as *Hippocrates* taught, Aph. 34. Sect. 5. in these words: *When a Woman vomiteth Blood, if her courses break down, she is cured.* And in this case only, the opening of the inferior Veins doth provoke the Terms, especially if she take something besides for that purpose.

They who after Vomiting of Blood fall into the Dropsie called Ascites, do die thereof. *Dodonæus* doth testifie that he never knew any that escaped: and Experience teacheth that a Dropsie from any kind of bleeding is deadly; for it comes from a great dissipation of Natural heat, which cannot be repaired.

For the Cure of this Disease use Medicines which revel the Blood from the Stomach, and correct its distempers and the open Veins with astringents and glutinatives. To which ad those things which concern the part chiefly affected, from whence the Blood is sent into the Stomach, according to the divers Nature, and Disease of the part.

And because Diet is of chiefest concernment in this Disease, let us shew some Rules therefore.

Let

Let his Nouriſhment be commonly aſtringent and Emplaſtick, and cold both actually and potentially, as Barley, Almonds, Rice, Panadoes, Gellies, and eſpecially Starch made without Chalk, and boyled in Milk, which is good alſo in ſpitting of Blood: to all theſe you may alwaies add ſome Pomegranates, or Vinegar of Roſes. Alſo hard Eggs ſteeped in Vinegar are good; Bread crums ſteeped in cold Water, and Chicken Broth, with Sorrel, Purſlain, Plantane, and unripe Grapes; the feet and hips of Sheep, Kids, and Calves, boyled to a Jelly, for the firſt courſe, let him take that which is aſtringent, as a Quince, or ſowr Apple, or Pear roaſted in the embers, Marmalat of Quinces, or Jelly of ſharp Cherries, Medlers, or Services.

Let him abſtain from all ſharp, ſalt, peppered, and fried Meats, as alſo from things that breed much Blood, except he grow weak, and then you may give him them ſparingly. He muſt be but little nouriſhed, for the leſs Blood is bred, the Diſeaſe will be the leſs, and the empty parts by their attraction will ſtay the flux.

Let him drink little, only a little Iron Water with a little Juyce of Pomegranates. He muſt drink no Wine except it be thick and ſharp, which we call Tortium, and it muſt be when there is no Feaver.

Let the Air be cool, without Wind, Sun, or Moon ſhine; let him ſleep little, and not in the day; for although all fluxes are ſaid to be ſtopped by ſleep, yet this by long keeping the heat in the Center may be encreated. Let his Belly be looſe, and he kept free from paſſions.

After his Diet is thus ordered, we muſt go on to Chyrurgery and Medicine.

And firſt take away a little Blood, often, for the greater Revulſion: and that out of the Liver Vein called *Baſilica*, in the right Arm, if it come from the Liver; in the left, if from the Spleen; or from the Ankle Vein, if from ſtoppage of the Terms.

Uſe Frictions and Ligatures to the extream parts, and give clenſing Clyſters.

Apply Cupping-glaſſes to the Buttocks, Thighs, and Loyns, and to the Hypochondria.

Give half a ſcruple of Camphire with four ounces of Oxycrate, or Plantane Water. Which *Rondeletius* commends in his Counſels for excellent.

If you ſuſpect there is congealed Blood, give him a glaſs of Vinegar and Water, or Oxycrate, for it eaſily diſſolveth blood, and ſends it from the Veins of the Stomach, and ſhuts them up.

And foment the Stomach cold with the ſame.

When Vomiting ceaſeth, to aſtringe the Veins, uſe theſe following:

Take *the white of an Egg, Roſe Water and Vinegar, of each one dram and an half: Beat them well; then ad two drams of Chalk. Let the Patient take now and then a ſpoonful.* Or,

Take of *prepared Coral, Terra Sigillata, Bole-Armenick, Blood-ſtone, and Troches of Amber, of each one dram: Plantane Water, and Syrup of Myrtles, of each two ounces: mix them for to be uſed as the former, or the pouder in Broths.* Or,

Take of *the Juyce of Plantane four ounces: give it cold morning and evening.* *Galen* ſaith there is nothing better for to ſtop any kind of Bloody flux.

The Juyce of Purſlain and Polyganon, or Knot-graſs taken with Sugar, is very good for the ſame.

Take of *Plantane and Purſlain Water, of each one ounce and an half: the Syrup of Myrtles half an ounce: the Syrup of Poppies two or three drams: Sal Prunellæ one dram: Mix them for a Julep often to be repeated. Or make a Julep of the Decoction of the ſaid Herbs.*

Take of *old Conſerve of Roſes, and of Comfry Roots, of each one ounce: of Cydoniatum half an ounce: one candied Myrobalan: Troches of Carabe, and Terra Lemnia, of each two drams: Coral prepared, and Crocus Martis, of each one dram: With the Syrup of dried Roſes, make an Opiate to be taken often.*

The Troches of Carabe do not only aſtringe, but diſſolve congealed blood, therefore uſe them often.

The Syrup of Coral is good; but the Tincture drawn newly with the Juyce of Lemmons is better.

When Blood is vomited violently, and will not be cured by what hath been ſaid, ſo that death threateneth; you muſt give Narcoticks, either at the Mouth, or by Clyſters.

Anoint the Stomach without with Oyl of Roſes, and Myrtles waſhed in Vinegar; and after ſprinkle on the pouder of Coral, Bole-Armenick, and Terra Sigillata.

Or anoint with this:

Take of *the Juyce of Plantane, and Knot-graſs, of each one ounce and an half: Vinegar of Roſes one ounce: Oyl Olive ſix ounces: Boyl them till the Juyces are conſumed: then ad of Sanguis Draconis, Maſtich, Pomegranate peels, and Myrtles, of each two drams: Camphire one ſcruple: as much red Wax as will ſerve to make an Oyntment.*

Let him drink ordinary Water, wherein Iron hath been quenched, with Syrup of Quinces, and Spirit of Vitriol: alſo make all his Broths of Iron Water.

Let his Hypochondria and Loins be Fomented with the Decoction of Plantane and Purſlain made in Oxycrate.

Let his hands be put into cold Water, for ſo al Vomiting is ſtaied.

After uſe the Oyntment of *Galen*, called, Refrigerans; waſhed in Vinegar, to the ſame parts.

After ſufficient Phlebotomy, you muſt appoint an often and gentle Purge to take away the cauſe, and deſtroy the Diſeaſe, by which the blood wil be purged from Wateriſh and Chollerick Humors which produce this Diſeaſe.

Theſe kinds of Purges, given by a wiſe Phyſitian, do Miracles; as we have learnt by Experience.

They muſt be made of Rhubarb, Myrobalans, Tamarinds, and Tryphera Perſica; which Medicines do al aſtringe with their Purging, & do no wayes ſtir the Humors, ſo that you need not fear they wil provoke Vomiting of blood; you may give them in form of a Bole, with Syrup of Myrtles, or of dried Roſes; or in form of a Potion, with the Decoction of Succory, Sorrel, Purſlain, or the like.

In time of Purging, which may continue three or four dayes in a ſmal Doſe; at night you may give the aforeſaid Opiate or Syrup of Coral, or ſome of the afore-mentioned Aſtringent and ſtrengthening Medicines.

Finally, To prevent, you may give for a long time once in a Week, one dram of the Pouder of Rhubarb, or the Magiſtral Syrup preſcribed for to prevent Spetting of Blood; as alſo almoſt al other Medicines laid down in the Cure and Prevention of that, are very good here.

Chap. 9. *Of the Diſeaſe called Cholera.*

THis Diſeaſe is a violent ſending forth both by Stool, and vomiting corrupt, ſharp, and chollerick Humors.

It is called Cholera *Apo tes Choles* from Choller, as *Galen* ſhews from the opinion of the *Gnidian* Phyſitians, 2. meth. c. 2. that it comes from yellow Choller and evil humors like it which is ſent upwards and down-wards. But *Alexander Trallianus*, lib. 7. c. 14. wil not have this Name to be derived from a Chollerick humor, becauſe Choller is not alwayes vomited, but alſo often times a ſerous and Flegmatick Humor; but it comes rather *Apo toon Cholaſtoon* from the Inteſtines which were called *Cholados* by the Antients; becauſe theſe Humors come from the Inteſtines and intrals: yet the firſt Etymology is more to be approved, becauſe it is uſed not only by *Galen*, but by *Hippocrates* 7. epid. text. 19. by *Celſus*, lib. 4. cap. 11. and *Aurelianus*, lib. 3. acut. cap. 19. And although a chollerick humor is not alwayes ſent forth, yet one like Choller, ſharp, biting, and corrupt, is alwayes voided.

Some ſay the Stomach is the part affected, others the Guts, others both; but we muſt be of *Galen*'s mind, who ſaith, 3. de ſympt. cauſ. cap. 2. The part which is principally affected is the Stomach, whoſe expulſive Faculty is vehemently ſtirred up, ſo that it expels the noxious humors at both orifices. But there is no doubt but the Gullet and Guts are ſecondarily affected.

Therefore this Affect is a Symptome of the expulſive Faculty being hurt, and vehemently ſtirred up, for it cannot depend upon the retentive faculty debilitated, for then the humors flow by degrees as in Lienteria and Cœliaca Paſſio: but we muſt confeſs that the Diſeaſe is more violent if the Retentive Faculty being weak do not reſiſt the expulſive.

Moreover, The Concoction is hurt alſo, by which evil humors are bred in the Stomach which ſtir up the expulſive Faculty: but this is an Antecedent Cauſe, *Hipp. 4. de victus ratione in acutis textu* 104. laies down Two kinds of Choller, the one Moiſt, and the other Dry; the Moiſt is that which hitherto hath been deſcribed, and which is meant only in this definition as being the more uſual: but the Dry is more rare, and it comes from a windy ſpirit going from the Stomach and Guts, and griping thoſe parts through which it paſſeth.

Theſe Winds are produced either from the fiery heat of the Stomach corrupting the meat and making it ſtinck, or from windy rank meats, and Onyons, Radiſhes, and the like. *Sennertus* addeth another Cauſe, borrowed from the Hermetical Doctrine, namely, Salt Humors, and Aduſt in the Hypochondria, which grow hot by the mixture of another humor: For (ſaith he) as Salts and the Spirits of Salts mixed with ſharp Spirits, make abundance of flatuous Spirits, as appears by the mixing of Oyl of Vitriol and Aqua fortis with Salt of Tartar. So doth it fal out in mans Body, by the Commixtion of a Salt and Aduſt Humor with other Spirits, there are many windy Spirits produced.

The immediate Cauſe of this Diſeaſe is a Chollerick, Burnt, Sharp, Salt, or rotten Humor in the

the Stomach, Guts, Spleen, Meſentery, or Prancreas, or ſome nouriſhment of evil quality, ſome ſtrong deadly Medicine, or poyſon taken. *Hipp. 7. Epid. Text.* 90. doth reckon up almoſt all the Cauſes of thoſe evil Humors, in theſe words: *Chollerick Evacuations upwards and downwards, come from eating too much fleſh, eſpecially Swines fleſh not roaſted: Alſo for meats not formerly uſed, from drunkenneſs with old Wine, and ſweet, from Pine Kernels, Locuſts, rotten Nuts, and from the uſe of Garlick, Leeks, Onions, eſpecially from boyled Lettice, Coleworts, and the like crude things; alſo from Tarts, and ſweet meats, Honey meats, Fruits ſoon periſhing, eſpecially from Cucumers, Pompions: and theſe Evacuations happen moſt in Summer, for then they are eaſily corrupt, and are indigeſted.*

It is worth the obſervation from whence ſo many Chollerick Humors ſhould come, which in this Diſeaſe are ſent forth by Vomit and Stool? It is uſually anſwered, that they come from the Meſentery, and the places adjacent, and ſomtimes from the whol Body, which though it be probable, yet we may ſay, That Humors corrupted in the Stomach, and parts neer therto, do infect other Humors with their Malignity, and that Nature is conſtrained to ſend to the Stomach and Guts, as venemous Medicines, Antimony, Coloquintida, Elaterium, and the like, by corrupting of the good Humors, do make an Hypercarthaſis, or over-purging.

The ſigns of this Diſeaſe, are an often and plentiful ſending forth of Chollerick, ſharp, and other corrupt Humors by vomiting and ſtool; a gnawing of the Stomach and Guts; a ſwelling with wind, pains, thirſt, with much heat and diſturbance; great Nauſeouſneſs, and loathing, which is somwhat appeaſed with cold drink, but preſently is caſt forth with hot. The Pulſe is ſomtimes ſmal and unequal; ſomtimes with great ſweating, and Convulſion of the Thighs and Arms, ſwooning, coldneſs of the extream parts, and other grievous Symptomes.

The Cauſes of this Diſeaſe are eaſily known.

And firſt, the external are known by relation of the Patient, and thoſe that ſtand by. If he have taken too much, or food of an evil quality, or poyſon, or ſome violent Medicine.

The internal Cauſes are known by the quality of thoſe Humors which are ſent forth. We conjecture that it comes from the fault of the Stomach, if other parts are not diſtempered, and when there is a continual loathing, gnawing, and pain of the Stomach, the matter is ſent forth green; but if it be bred in the Veins, there is commonly a Malignant Feaver adjoyned.

You muſt make your Prognoſticks thus,

If it be very violent, it brings commonly ſudden death. If it come from ſome evil Food, it is leſs dangerous; for when that is ſent forth, the Diſeaſe ceaſeth.

By how much the greater the Symptomes are, as Swooning, Convulſion and coldneſs of the extream parts, by ſo much neerer at hand, is death.

Hippocrates in Coac. ſheweth that this is ſomtimes Critical to Feavers called *Lipyriæ*, which can no other waies be cured (as he ſaith) but by a great caſting forth of Choller both upwards and downwards; and theſe Criſes or Judgments happen ſeldom, and ought to be ſuſpected, becauſe they have not the conditions of a good and Health bringing Criſis.

If vomiting begin to ceaſe, and the wan and deadly color of the Face to be reſtored, there is hope of Health.

In the Cure of this Diſeaſe, in the beginning thereof, ſome evacuation may be allowed while the evil and corrupt Humors do flow forth. And you muſt help it forward with drinking warm Water with Syrup of Vinegar, or with a great deal of thin Chicken Broth; which if it provoke not Vomit, will allay the ſharpneſs of the Humors. Or you may evacuate them with Rhubarb brought into a Pill with Syrup of Wormwood, and with cleanſing Clyſters.

Alſo fat mollifying Clyſters are to be given, made of Milk, Oyl of Roſes, freſh Butter waſhed with Roſe Water, or made of Chicken Broth, or Veal Broth with Yolks of Eggs; with which, as the diſeaſe ſhall require, you may mix Narcoticks.

Alſo Clyſters of Oxycrate are good, or made of the Decoction of Lettice, Plantane, with a little Vinegar, Syrup of Water-lillies, and Yolks of Eggs.

Alſo you muſt qualifie the Humors ſharpneſs with internal Medicines; as with the Decoction of Purſlane and Plantane with Syrup of Quinces and dried Roſes, with Lapis Prunellæ, if there be heat and thirſt.

And you muſt ſtop Vomiting with thoſe things both internal and external, which were preſcribed in the Cure of Chollerick Vomiting, Chap. 7.

Among which, the Narcoticks are beſt, and eſpecially new Treacle, which given in the quantity of a dram, doth preſently ſtop thoſe violent Evacuations. Laudanum doth the ſame, if you give four grains thereof.

If there be great weakneſs (as often happeneth) it is not ſafe to give the whol doſe of Laudanum; but it is better to give one or two grains, and to give it once or twice in a day, as neceſſity urgeth: for ſo the force of the Humors will be reſtrained, and Nature will have time to tame and concoct them.

After

After vomiting and purging are ſtayed by the Medicines aforeſaid, & the ſtrength is reſtored by Cordial means, the Patient ſeemeth to be paſt danger; which doth not only ſomtimes deceive the ſtanders by, but alſo the Phyſitians themſelves: for after a day or two of reſt and intermiſſion, the ſymptomes return more ſtrong and violent, and deſtroy the Patient who was made weak by their former encounter; which danger you muſt prevent, not only with Reſtauratives, and things that take away the heat of the Humors, as before mentioned, which muſt be continued after they are appeaſed; but eſpecially with Blood-letting, which doth revel the burnt and boyling blood, and greatly aſſwage it: and you muſt do it twice, or thrice, if the ſtrength be not impaired by the firſt, but rather ſeem to be refreſhed. Some Practitioners adventure in the time of the fit, when the ſtrength is decayed, adventure to open a Vein, becauſe they ſay the ſtrength is oppreſſed. But it cannot then be done without danger: and ſomtimes the Patient preſently after dieth, to their ſhame. For though we acknowledg that there is an oppreſſion of the ſtrength by reaſon of the ſuperfluous Humor, which is contained in the Veins, being an Enemy to Nature; yet it cannot be denied but it is greatly decayed by thoſe grievous vomits and ſtools. It is better therefore firſt to allay the violence of the Humors, and after the ſymptomes are aſſwaged to open a Vein.

And becauſe in this Diſeaſe the ſtrength quickly fails by ſtrong evacuations, you muſt be very careful in the reſtoring of it by that way which is ſhewed in the Cure of weakneſs in the eighth Book, and the third Chapter.

Chap. 10. *Of Pain in the Stomach, called* Dolor Ventriculi.

IT is a ſad and troubleſom ſence in that part, from ſome things that gnaw and ſtretch it till it break, or be wounded.

In the Stomach, you muſt conſider three parts, which much differ one from the other, namely, its upper Orifice, and its lower, called *Pylorus*, and the reſt of its Body which maketh up the whol Cavity.

The upper Orifice is of exquiſite ſence, by reaſon of the great Nerve which it hath from the ſixth Conjugation, and therefore pain therein is very ſharp, and makes the Heart which is the moſt noble part, and neer unto it ſenſible of the ſame; from thence it is called *Cardialgia*, and *Cardiogmos*: for there is ſuch a neer conſent between the mouth of the Stomach, and the Heart, that the Ancients called it by the name of the Heart, *Cardia*.

But if the Membranes of the Cavity, or the Pylorus be pained, it is called ſimply *Dolor Ventriculi*, and ſomtimes *Colica Ventriculi*, eſpecially when it comes of wind.

The immediate Cauſe of this pain, is ſolution of Continuity by things ſharp and diſtending, and they are chiefly Humors, or Wind; and ſomtimes Worms gnawing the Tunicles.

Sharp and malignant Humors, as green Choller, or black, ſalt Flegm, corrupt Matter ſent into the Stomach from an Impoſthume broken in the Liver or Breaſt, and all other ſharp Humors which may cauſe pain.

Alſo ſharp vapors coming from thoſe Humors uſe to cauſe this pain.

The Wind contained in the Cavity of the Stomach doth cauſe ſwelling and painful diſtenſion, eſpecially if it be reſtrained within its Tunicles, which makes a very ſtubborn Diſeaſe, and cannot eaſily be ſent out.

The Diſeaſes both of the Stomach it ſelf, and of the parts adjoyning, uſe to breed this pain, as any great diſtemper, either hot or cold, and eſpecially an Inflamation, and ſomtimes a Schirrus or other hard Tumor which maketh a heavy pain; as alſo Wounds and Ulcers of the ſame part, and ſwellings in parts adjoyning by wind or other waies, cauſe this pain by compreſſion of the Stomach.

Now theſe Humors and Winds which cauſe pain in the Stomach, either come from the whol Body, or ſome parts thereof. From the whol Body, in Feavers, or when the Body is filled with evil Humors. And from other parts, eſpecially the Liver, Spleen, and Brain: from the Liver there comes Choller; from the Spleen, Melancholly; and from the Head, ſalt Flegm.

Alſo this pain may ariſe from other extraordinary Cauſes not uſual; as *Schenkius* obſerves from ſtones bred in the Stomach, *lib.* 3. *obſervat.* And *Fabricius Hildanus*, obſerv. 33. lib. 4. reports that a Woman had a piece of Rind or ruſty Bacon two yeers in her Stomach, wherewith ſhe was continually pained, and which after by taking a Vomit, ſhe threw up, and was cured.

The external Cauſes of this Diſeaſe, are either evil qualified, or of ſharp Nouriſhment, which of themſelves produce it, or things apt to breed Wind; or things taken in too great a quantity, which putrifie and turn ſharp; or things that are too hot, and breed much Choller: As alſo ſtrong, ſharp, deadly

deadly Medicines, either taken in too great a quantity, or not ſufficiently corrected, and poyſon.

The Diagnoſtick Signs are from the part affected, and the cauſe.

And firſt, when the pain is under the Cartilago *Enſiformis* or *Xiphoides*, it ſhews that the upper Oriſice of the Stomach is affected: but that it is a true Cardialgia in the mouth of the Stomach, you may know more certainly when there is a moſt ſharp pain from the exquiſite ſence of the part with ſuch trouble and diſturbance that the Patient cannot ſtay in a place, or in one poſture, but often ſwounds and fainteth by conſent and ſympathy of the Heart with the Stomach, not only by neerneſs to it, but alſo by reaſon of the diſſipation of the Spirits by the pain. Sometimes the Brain conſents, by Reaſon of the famous Nerve which is in the Stomach, and the ſharp vapors which are directly ſent into the Head from thence, from whence come Cephalalgia, Hemicrania, Vertigo, and Epilepſie.

In other parts of the Stomach there are great pains, but they have not ſo great Symptomes, and therefore they are like the Chollick, differing only in place.

The Cauſes alſo are known by their proper ſigns. The moſt manifeſt are taken from the Excrements; for Choller, Flegm, Wind, or Worms, are voided at the Mouth or Belly, it is eaſie to conjecture that the Diſeaſe depends upon theſe Cauſes. But if no Humor be diſcharged we may know when Choller, Flegm, or Wind abounds by their proper ſigns; and the ſigns of Worms are to be taken out of their proper Chapter: As alſo the proper diſeaſes both of the Stomach and parts adjoyning which produce this Diſeaſe, are known by their proper ſigns. The knowledg of the Humor cauſing this pain, is alſo taken from the time of its coming, encreaſe, and ceſſation. Some are troubled moſt violently before meat, and this ſhews that Choller is predominant, which is ſtirred in time of emptineſs, and drawn to the Stomach, and made more ſharp. Some are pained preſently after meat, becauſe the raw biting Humors, which before were quiet, and fixed to the Tunicles of the Stomach, are moved when Meat is taken, or they which were in the bottom of the Stomach, are raiſed up, and diſturb the mouth of the Stomach. Others are pained in time of Concoction, becauſe ſharp gnawing vapors ariſe from the Matter, cauſing the Diſeaſe from the heat encreaſed in the Stomach in time of Concoction. Others are pained four or five hours after meat, becauſe it is corrupted by evil concoction, and ſo gnaweth the Stomach. Some are worſt after ſleep, and that comes from a Catarrh from the Head in the time of ſleeping, which being heaped up in the Stomach, produceth pain afterwards. Sometimes the pain is appeaſed after Meat, becauſe the ſharpneſs of the Humors is qualified by the ſweetneſs of the Meat.

As for the Prognoſtick, it is moſt certain that Cardialgia is more dangerous than any other diſeaſe of the Stomach by reaſon of the exquiſite ſence of the Mouth of the Stomach, and its great conſent with principal parts.

The danger is more or leſs, according to the malignity of the Cauſe, and the vehemency of the ſymptomes.

A continual acute Feaver joyned with a great pain of the Stomach, threateneth great danger; as *Hippocrates* ſaith, Aph. 65. Sect. 5. *In Feavers, if there be great heat about the Stomach, and Cardiogmos, it is evil*: for it ſignifieth that there is a great Inflamation of the Stomach, or abundance of bad Humors contained therein.

The pain of the Stomach coming from Worms or Wind, is commonly leaſt dangerous, becauſe the Cauſe is not ſo bad, and not fixed to the part. But ſomtimes from Worms gnawing in the Stomach, great Symptomes happen, of which the Patient ſuddenly dieth.

So when the diſtemper which begets wind, is ſtubborn and habitual, it is not without danger, for it turneth to a dry droplie; *Hippocrates*, Aphor. 11. Sect. 4. In a Cardialgia, coldneſs of the extream parts ſignifieth death at hand.

The Cure of this Diſeaſe is to be varied according to the diverſity of the Cauſes. If it come from the Diſeaſes of other parts, you muſt cure them. But if the Cauſe be in the Stomach alone, the pain comes either from wind, or ſharp Humors and Chollerick, or from Inflamation, Impoſthume, or Ulcer.

That which comes from Wind is to be cured by Medicines that diſcuſs and evacuate that flatulent Matter, as alſo the flegm from whence it comes.

And firſt you muſt give a gentle Emollient Laxative Clyſter, and preſently after another Carminative, that is, expelling wind, and diſcuſſing, of the Decoction of Origan, Calamints, Penyroyal, Rue, the leſſer Centaury, Annis ſeeds, Fennel ſeeds, Carrots, and Cummin ſeeds, and the like: In which diſſolve Benedicta Laxativa, Oyl of Dil, Rue, and Honey of Roſemary.

If the pain continue, you muſt make a Clyſter of equal parts of Sack, or Hippocras, Oyl of Rue, or of Nuts, with two ounces of Aqua vitæ.

Or make a Clyſter of white Wine with Oyl of Juniper, or eight drops of the Chymical Oyl of Cinnamon or Cloves, which doth Miracles.

Then foment the Stomach with this:

Take of *Cypreſs Roots, Galangal, Calamus Aromaticus, of each one ounce*: *Mints, Origan, Penyroyal, Marjoram, Hyſop, Sage, of each one handful*: *Annis, Fennel, Caraway, and Carrot*

ſeeds,

seeds, and Bay berries, of each half an ounce: Chamomel, Melilot, Rosemary and Lavender flowers, of each one pugil: beat them, and slice them: put them into two bags, and boyl them in Sack; then squeeze them, and apply them one after another to the Stomach and all the Belly.

When the Matter is not so cold, this Fomentation following may be prepared, which is highly commended by *Forestus*, because it hath presently cured when other things failed.

Take of *Althæa Roots half an ounce: red Roses, Chamomel Flowers, and tops of Wormwood, of each one handful: Boyl them in common Water, and Chamomel Water, to one pint and an half, adding in the end a little Rhenish Wine, Rose Water, and Vinegar. Make a Fomentation.*

After Fomentation, anoint with Oyl of Rue, and Dill mixed with Aqua vitæ, and a little Chymical Oyl of Sage, or Cloves.

After the anointing, apply a Plaister of Bay-berries, or instead thereof a Cataplasm of Honey and Cummin seed.

While these are doing, if there be loathing, you may provoke vomiting gently, or give a Purge against flegm.

After Purging give Oyl of bitter Almonds newly drawn, mixed with white Wine, or Hippocras mixed with Aqua Clareta, or Cinnamon Water.

This following Julep is most admirable to assuage pain, discuss wind, and strengthen the Stomach.

Take of *Wormwood, Centaury the less, and Agrimony, of each half a handful: boyl them to five ounces, and ad to it being strained, one ounce of Sugar. Let him take it two mornings together.*

Amatus Lucitanus commends highly the distilled Water of Chamomel flowers as a most excellent Remedy to assuage the pains of the Stomach and Entrals, of which you must give three ounces warm. Or in the defect of that, you may make a Decoction of Chamomel flowers, which is so much commended by *Forestus*, who saith that he cured a Merchant with this only Decoction, once only given, of great pain of his Stomach, which made him to roar; which when he had drunk off, he belched, and fell into a sweat, and all his pain vanished, as by an Inchantment, so that he needed no other help. You may also make a Vomit at the beginning of the disease, which by evacuation may abate the pain, of this Decoction, made with Dill seeds, or Agarick, or the Roots of Afarabacca, dissolving therein, Oxymel, Syrup of Vinegar, or of Roses Solutive.

Galen teacheth that a Cupping glass applied to the Stomach, doth presently take away pain. But you must use this Caution, That no crude Humor, or very little, lie in the Stomach, otherwise the pain will be encreased.

Also you may with good success apply Bread hot from the Oven, cut in the middle, either by it self, or sprinkled with Spices.

Lastly, If the pain continue violent, you must use a bath of the Decoction of mollifying Herbs that are hot, which is most safe and powerful, for it takes away the pain by discussing the wind, and sending it forth by the open pores, which it will better do, if you give some discussing Medicine to the Patient while he is in the Bath; for both internal and external helps concurring, the work will be done.

The Bath must be very hot that the wind may be the better discussed, and the thick Humors melted.

If by reason of the vehement pain, Clysters can neither be given nor retained, you must give a Purge in the Bath, and let him stay therein an hour, or half an hour, till the power of the Medicine touch the Stomach.

Sometimes when the violence of the pain threatneth danger, you must give Narcoticks, which being wisely given, bring wonderful effects.

Some mix Narcoticks with their Purges that the pain may be allayed, and the Matter evacuated: such as the Medicine of *Elideus* commended by *Forestus*, made thus:

Take of *Diaphœnicon half an ounce: Philonium Romanum two scruples: with the Water or Decoction of Chamomel make a Potion.*

After the pain is gone, let them who are subject to this Disease, be purged once or twice in a month, to take away the immediate cause of wind. And let them use strengtheners, such as were prescribed in the Cure of Concoction hurt.

That pain which comes of Choller, is to be cured by the evacuation thereof, with a gentle vomit or Purge, or with frequent Clysters that are emollient, not sharp or hot.

Afterwards, qualifie the sharpness of the Humors with cooling Juleps that thicken, with Emulsions of the great cold Seeds, new Milk, new Oyl of sweet Almonds, Yolks of Eggs, and the like.

In the mean while omit not Opiates, and other strengtheners prescribed in the former Cures.

And at last, when need requireth, use Narcoticks.

Apply outwardly a Cataplasm of Bread and Milk, with yolks of Eggs, and Saffron.

Or

Or Bread from the Oven broken in the middle and dipt in Vinegar.

Or Foment the part with the Decoction of Chamomil-flowers, Violets, and Water Lillies, or which is beſt, put the Patient in a warm Bath, for that is moſt proper.

After the pain is gone leſt it ſhould return, let the Patient Purge twice every month, and let the hot Diſtemper of his Belly be corrected with a Cooling Diet and Convenient Remedies.

That Pain which comes from Inflamation, Impoſthume, or Ulcer, may be Cured with the Remedies Preſcribed in the following Chapter.

Chap. II. *Of the Inflamation, Ulcer, and Impoſthume in the Stomach.*

ALthough al kinds of Tumors may ariſe in the Stomach as wel as other parts, yet we wil ſpeak here only of a Phlegmon or Inflamation, which is moſt uſual; the other happen ſeldom, and may be Cured by the ſame Method with the Tumors of other internal parts.

The Inflamation of the Stomach is a preternatural Tumor coming of Blood which is ſent into the ſubſtance of the Stomach and its Membranes by the Veins derived from the branches of the Vena Porta.

This Blood is either pure and makes a proper Phlegmon, or mixed with Choller, Flegm, or Melancholly, and makes a Phlegmon Eryſipelatous, Oedematous, or Schirrous.

The External Cauſes may be many, al that inflame the Blood, as hot meats, wine, or al that can drive it to the part; as a blow upon the belly, eſpecially when it is ful; to which you may ad things that are very ſharp and very hot, as Cantharides, ſublimate.

The ſigns of this Diſeaſe, called Diagnoſtica, are a great Pain, burning, pricking, diſtending and bearing, reaching to the back; you may feel a Tumor, and ſomtimes ſee it, the ſhoulders are drawn downwards; the breathing is difficult, as alſo ſwelling and belching, ſomtimes blood is vomited; there is a moſt burning Feaver, with moſt greivous Symptomes.

If the Inflamation be pure only from blood, it is ſomwhat gentler; but if it be with Choller called Eryſipelas, there are greivous Symptomes, and the febris called Lipyria in which the exterior parts are cold, and the internal burn, and there is an unquenchable thirſt; ſuch a kind of Feaver uſeth to be in an Eryſipetous inflamation of the inteſtines.

Like to this Inflamation of the Stomach, is that which is in the upper part of the Liver by which the Stomach is covered or in that part of the belly which lieth upon it; which is only diſtinguiſhed by the deadly Symptomes, for then the Stomach hath the moſt deſperate.

From what hath been ſaid is eaſie to Prognoſtick and to pronounce this Diſeaſe to be for the moſt part deadly.

But that is moſt Dangerous which is over the whol Stomach, or its upper part, or which is like to an Eryſipetas.

Galen 3. Prorrhet. ſhews, That much Loathing and Rumbling of the belly, is evil: For it ſhewes that evil Humors do ſtick cloſe to the Tunicle of the Stomach, and pul them to provoke Expulſion.

If the Inflamation do not kill, nor is diſperſed, it turns to an Impoſthume, which is known by the mitigation of the Pain and the Feaver, while the Tumor remaineth.

After the Impoſthume is broken there remaineth an Ulcer which is known by voiding of Matter by Vomit and Stool.

But an Ulcer is produced in the Stomach, not only from an Impoſthume, but from other Cauſes which we ſhal here reckon up, leaſt we ſeem defective in the Theory.

The Cauſes of Ulcers in the Stomach, are either Internal or External.

The Internal are ſharp Humors bred in the Stomach, or ſent thither from other parts, as yellow Choller, or black, or ſalt Flegm.

The External are ſharp Medicines that Corrode, or Poyſons, and Wounds of the Stomach not wel Cured, which turn into Ulcers; as alſo the breach of ſome great Veins which could not wel grow together, after much Vomiting of blood.

An Ulcer bred in the Stomach is known chiefly by Matter which is caſt forth by Vomit or Stool, to which principal ſign there are others to be added: Firſt there is perceived in the belly a pricking pain joyned with burning, eſpecially when any thing is taken that is ſtrong in quality, either ſharp, ſalt, or ſowr, or very hot, or cold: there is alſo no Appetite, ſtinking belching, and a conſtant lingring Feaver.

The Prognoſtick is alwayes deadly, except the Ulcer be very little, and only in the ſuperficies,

and without a Feaver. For the Membrane of the Stomach being ulcerated, being a Spermatick part, will hardly grow together again: the Nouriſhment will not be well concocted in a Stomach ill affected, but will be thrown out before concoction, and ſo rend the Ulcer. Moreover, Medicines do little good becauſe cleanſers which are required for cure of Ulcers increaſe pain; and dryers which alſo are required, are continually hindred by the Meat and Drink, and Chyle, and other Humors which continually are in a weak Stomach.

The Cure of the afore ſaid Diſeaſes, is ſeveral.

And firſt, the Cure of Inflamation is to begin with Blood-letting often in both Arms, as the ſtrength will endure. And although by reaſon of ſwooning and coldneſs of the extream parts, the ſtrength ſeem at firſt to be impaired, yet becauſe it comes from oppreſſion, it requires evacuation, and therefore blood-letting muſt not be denied.

Moreover, the opening of the Hemorrhoids, if the Patient be uſed to that evacuation, doth revel Blood from the Stomach. Alſo Cupping-glaſſes both dry, and with Scarrification to the Shoulders, Back, and Buttocks, with Ligatures and Frictions of the extream parts, and heating of them (becauſe they are uſually cold) with hot cloathes, and anointing with Oyl of Flowerdeluce, and Spike, and other hot things are very good.

We diſallow Purges in this caſe, becauſe they trouble the Humors, and draw them to the part affected.

But *Avicen* commends the Decoction of Tamarinds, or half an ounce of Caſſia diſſolved in Whey, or Endive Water if it be given every day to the ſeventh day, becauſe they purge not by attraction, but by mollifying, mitigate ſharpneſs, and aſſwage pain. But it is better in the beginning to abſtain from all Purges. After the ſeventh day is paſt, when there appear ſome ſigns of Concoction and declination, you may give a Purge of Rhubarb one dram, with one ſcruple of red Sanders infuſed in Borrage Water, adding one ounce or two of Syrup of Roſes, that the filth which ſticketh to the part may be brought forth more powerfully.

In the mean while, you muſt every day give Emollient, Cooling, and Lenitive Clyſters, ſuch as theſe:

Take of *Chicken Broth, or the Decoction of Mallows and Violets, of each one pint: Caſſia new drawn, one ounce: Oyl of Roſes and Violets, of each two ounces: Sugar one ounce and an half: With two Yolks of Eggs make a Clyſter.*

You muſt give altering and ſtrengthening Medicines at the Mouth, they may be the ſame which were prepounded in the Cure of the Pain of the Stomach from a Chollerick Humor.

But the Syrup of Water Lillies, and of the Juyce of Purſlain, are peculiarly good, eſpecially in the beginning, becauſe they ſupply the place of Repelling Medicines.

Alſo Emulſions made of the four great cold Seeds, and white Poppy Seeds are good, for they aſſwage pain and heat. As alſo theſe following Juleps.

Take of *Roſe Water three ounces: Plantane Water two ounces: the Juyce of Sorrel and Pomegranate Wine, one ounce and an half: Sugar of Roſes one ounce: Boyl them a little, and ſtrain them. Let him take two ounces twice or thrice in a day.*

If the pain be great, you may give the Syrup of Poppy.

Let his Drink be Barley Water with Syrup of Violets taken cold.

In the progreſs of the Diſeaſe, you muſt mix other Medicines with the aforeſaid, which may help to diſſolve. To this end you may preſcribe theſe following Juleps:

Take of *the Syrup of Water Lillies, Apples, and of the Juyce of Purſlain, of each one ounce: Syrup of Sea Wormwood half an ounce: Lettice, Sorrel, and Fennel Water, of each three ounces: the pouder of Diamargariton frigid one dram: Make a Julep for three Doſes to be taken twice in a day.*

To theſe you may ad reſtoring Opiates, Narcoticks, and the like, all which are to be varied many waies, according to the Judgment and Wiſdom of the Phyſitian.

Turpentine waſhed with Wormwood Water, if it be given twice or thrice doth either diſſolve or maturate the Impoſthume of the Stomach.

Let this following Fomentation be applied in the beginning.

Take of *Sorrel Roots two ounces: Endive, Succory, and Mallows, of each one handful: Lettice, and white Poppy ſeeds, of each three drams: white and red Sanders, of each half a dram: Violets, and Water Lillies, of each one pugil. Make a Decoction, adding a little Roſe Vinegar. Let the Stomach be fomented warm therewith.*

Or make one with the diſtilled Waters of Lettice, and Water Lillies with a little Vinegar, and Pouder of Triaſantalon.

After fomenting, let the part be anointed with Oyl of Roſes and Violets mixed, or with this following:

Take of *Oyl of Roſes one ounce and an half: Oyl of Violets, and Roſe Vinegar, and of the Juyce*

Juyce of Sowthistle, of each half an ounce: Boyl them to the consumption of the Juyces; then ad of red Sanders one dram: red Roses half a dram: Lavender and Camphire, of each half a scruple: as much Wax as will make an Oyntment.

Caraplasms in the beginning are not good, because they burden the part with their weight, and by retaining the heat, encrease the Inflamation.

In the declination, when the Tumor is resolved, which is chiefly to be desired; you may apply a dissolving Fomentation, made thus:

Take of *Flowerdeluce Roots two ounces: the Leaves of Mints, Marjoram, Penyroyal, Sea Wormwood, of each one handful: Annis and Fœnugreek seeds, of each two drams: Grains of Kermes one dram: the flowers of Starchas, Rosemary, Chamomel, of each one pugil: Make a Decoction, adding in the end a little white Wine. With this foment the Stomach.*

After fomenting, anoint the part with Oyl of Wormwood, Nutmeg, Spike, and the like; of which you may make an Oyntment with a little Wax and Pouder, Orris Roots, or Cinnamon. But Emplasters and Cataplasms, because they burden the part with their weight, are not here good.

But if the Tumor tend to Suppuration, foment the part with the Decoction of the Flowers of Chamomel and red Roses: Then apply this following Cataplasm:

Take of *Althæa Roots two ounces: Brank Ursine, and Roses, of each one handful: Boyl them well, and beat them together: then ad of Barley meal, Lin-seed, Fœnugreek, and pouder of Chamomel, of each half an ounce: white and red Sanders, of each two drams: with Oyl of Roses, and Chamomel. With a little Hens Grease make a Cataplasm, often to be renewed.*

After the Imposthume is broken, let the Ulcer be clensed with Hydromel, given in a smal quantity: To which you may ad the Manna of Frankinsence, according to *Galens* Precept. Or give it with Barley Water with Sugar of Roses in the beginning, in time of heat.

When the Ulcer groweth old, of what Cause soever it come, either from sharp torroding Humors, or burning Medicines, or Poyson, Broths of cool Herbs, and frying of Barley, Almonds, and Sugar of Roses, or new Milk with Sugar, and a little Honey, are very good. At length, Chalybeate Milk and Iron Water for ordinary drink; or Water wherein a piece of Bole-Armenick, or Terra Sigillata hath been steeped, is very excellent. To which you may put a little sharp Wine, if there be but little heat in the part.

Then give this Apozeme:

Take of *Barley one pugil: Scabious, Agrimony, Burnet, and Maiden-hair, of each half a handful: Melone seeds two drams: red Roses dried, one pugil: make a Decoction to one pint, in which dissolve three ounces of Syrup of dried Roses. Make an Apozeme for four doses to be repeated often.*

Also the Decoction of China, is excellent for internal Ulcers, when there is no Feaver, taken twenty daies, or more, swearing gently, for so the Ulcer will be dried by degrees. But if you fear a consumption, boyl the China Root aforesaid in Chicken Broth, or Pidgeon Broth with the aforesaid Herbs, and Barley made clean.

In an old Ulcer, the drinking of Mineral Waters, either of Vitriol, Iron, or Allum, for a Month together, are very good.

In the whol time of the Disease to keep the Stomach clean, use gentle Purges, as Rhubarb, Tamarinds, Myrobalans, Syrup of Roses, and Diacatholicon, taken once in a week.

Lastly, To heal up the Wound, use these following:

Take of *Bole-armenick, Terra Sigillata, red Coral, and Blood-stone wash'd all in Rose Water, of each one dram: Sanguis Draconis, Gum Arabick and Traganth, of each half a dram: white Poppy seeds bruised and parched, Hypocistis, Frankinsence, and Sarcocol, of each one scruple: Sugar of Roses one ounce: Make a Pouder, of which take a dram in Plantane Water, or Conserve of Roses every day.*

Or make an Opiate of the same Pouder with Conserve of Comphry and Roses, Syrup of Quinces, and Myrtles. Or you may make Troches of the same Pouder, with the Mucilage of Fleabane seeds, or Gum Traganth. All which the Patient may use by turns, lest he grow weary of the same.

Outwardly, to close the Ulcer, you may apply to the Stomach, a Fomentation of the Decoction of Wormwood, Roses, Pomegranate peels, Galls, Pomegranate Flowers, Myrtles, Frankinsence, Mastich, or the like. And lastly, anoint the part with an astringent Oyntment, or apply an astringent Emplaster.

The End of the Ninth Book.

THE TENTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diseases of the Intestines, or Guts.

The PREFACE.

THE Perfection of all Nourishment consists in these Three Operations, to Ingest, Digest, and Egest; that is, To take in, Concoct, and send forth: The first respects the Appetite: The second the Concoction, & belongs to the Stomach: But the third respects the Intestines, whose office of Egestion or sending forth being moderate, and according to the rules of Nature brings great benefit to the whol Body: On the contrary, if it be defective as in the binding of the Belly, or abound as in divers Fluxes, there arise divers greivous Diseases: Moreover, the reteining of superfluous things doth cause Chollicks, Iliacks, and Hemorrhoids: And finally putrifactions in the Guts doth not only produce Fluxes, but Worms: That all these may be severally Explained, this Book shall contain Eleven Chapters: The First is of the Chollick: The Second of the Iliack Passion: The Third of binding of the Belly: The Fourth of Lienteria or Cœliack Diseases: The Fift of Diarrhœa: The Sixth of Dysentery: The Seventh of Tenesmus: The Eight of the Hepatick Flux: The Ninth of the Worms: The Tenth of the Flux of the Hemorrhoids: The Eleventh of the pain of the Hemorrhoids.

Chap. 1. *Of the Chollick.*

THe Chollick takes its Name from the part affected which is the Gut called *Colon*: which is long and winding, and ordained for receiving the Excrements of almost al the Body; these Excrements retained too long, use to cause this pain.

Therefore the Causes of the Chollick are excrementitious Matter, which by distending, pricking or corroding can make a Solution of Continuity, and these are either Winds or Humors.

Winds are bred of Crudities, or a cold Distemper of the Stomach or Intestines; and if they be not

not sent forth by reason of the hard excrements or other things that obstruct the Intestines, they are in great plenty shut up in the Guts, especially the *Colon*; and make a very violent pain.

Also grois Humors, Cold and Flegmatick, being fastened upon the Tunicles of the Guts cause the same pain both by gnawing, if they are sharp or salt; as also by cooling the part, which by consequence must suffer Constriction and Divulsion, as *Galen* speaks of himself, That having had a great Fit of the Chollick did void glairy Flegm that was actually cold; and by producing Wind which is easily raised from a gross, slimy, and slow Humor, by a weak heat.

Lastly, Chollerick and sharp Humors; as also Melanchollick and sowr by pricking and twitching the Guts, make these pains: but we may doubt in the action of these Causes how the Chollick should be sometimes more violent, sometimes more remiss, since the same matter remaineth in the Intestines? To which Doubt we thus Answer, That the matter doth sometimes lie quiet, and then it causeth none or very little pain; but sometimes it is moved and stirred up by divers Fermentations which happen among the Humors, as in an Epilepsy, the fits of the Mother and Agues.

But you must observe diligently that those Winds or Humors do not only remain in the Cavity of the Guts, for then were they easily excluded by evacuating, cleansing, and carminative Medicines, but for the most part they are fixed to the very Coates of the Guts, whence it comes that they are not so easily taken off; but they make a long and a stubborn Disease which will not easily be cured: So thick Flegmatick and Melanchollick humors to flow by degrees through the veins of the Guts into the fleshy substance, and do not presently cause pain; but till they so encrease that they provoke nature to expel them, and so being moved they cause pain; or send out Vapors which being included in the Tunicles of the Intestines, do stretch and extend them, and finding no passage, cause a long pain. And Choller being after the same manner spread and sucked into the veins of the Guts and the Tunicles thereof doth stir up sharp pains which use to be long, because the Choller is very hard to be pulled from the substance of the Guts.

There is another kind of Chollerick Chollick, which turns into a Palsie, not known to the Ancients, which comes of a Chollerick Humor, not in the Gut Colon as the former, but suddenly sent into the Membranes of the Abdomen, and it is carried thither from the Cystis, or bladder of Gall, or the Melentery in the Crisis of continual Feavers, or from great anger, or some other external Cause, when by reason of Obstructions it cannot be sent by the common passages, but by a preposterous motion it is presently sent to the aforesaid Membranes of the Abdomen, hence comes a cruel pain like that of the Chollick, which neither by Clysters, Fomentations, or other Medicines can be cured; but continueth many Months, by which means the body consumeth, sometimes it is like an intermitting Feaver, sometimes and often like a continual lingring Feaver: and at length when the pain begins to ease, there is a Palsie, by reason the Humor gets by degrees into the back by the Membranes of the Abdomen: This Palsie doth trouble the upper parts most; but the Thighs and Legs commonly are pained, in some they are wholly resolved and made numb, because the Choller being light flyeth to the upper parts: Sometimes it gets into the Brain, and begets Epileptick Convulsions, from whence death commonly ensueth.

There are other Causes of the Chollick, but less usual; namely, Stones bred in the Guts, and knots of Worms which stop them: The compression of the Guts from Tumors in the adjoyning parts, or narrowness by reason of Inflamation, and other Tumors of the Intestines, or Contortion, or twisting of them by reason of Wind which is the way to the Iliack Passion; sometimes also the Matter causing the Chollick is Poysonous and Malignant, and makes a Pestilent Chollick; as *Paulus Ægineta* reports, That a Pestilent Chollick in Italy infected most of the Roman Provinces. Finally all hard Bodies by Obstructing and Distending the Guts may make a Chollick, as stones bred there, many Cherry-stones swallowed, hard Cheese, and the like: *Platerus* reports, That a certain Governor long laboring of the Chollick with Convulsions, after the use of Clysters, voided a great quantity of hard Cheese which had a long time stuck in his Guts, because before his Sickness he had eaten immoderately thereof.

The External Causes are Cold Air, which constring: and indurate the Belly; or too Hot Air, by which the Excrements grow hard, and loose their moisture; the use of meat and drink not agreeing with the Constitution; as raw Fruits, and binding; grois meats, and hard of digestion; too much rest, and immoderate sleep; unseasonable exercises, immoderate venery; and other External Causes which disturbe the Concoction of the Stomach.

The Knowledge of this Disease generally is easie: For first the pain is very sharp, for if it be light it cannot be called a true Chollick from the Opinion of *Galen*, lib. 6. de loc. aff. cap. 2. And it is sometimes moveable, sometimes more in one place than in another: sometimes in the region of the Liver, sometimes of the Spleen, Stomach, Reins; sometimes above, sometimes beneath the Navel, and oftentimes it is most upon the left side; in which, as *Bauhinus* first observ'd, there is a little streighness; for when the Excrements in the upper and widest part of the Colon grow into hard lumps according to its Capacity great, and then by Wind are driven into a streighter part, they must needs pass with much

much pain, in which Symptome the Chollick, and the Spleen, and the Stone, are not distinguished but by comparison of other signs; for sometimes the pain is like an Auger boring, or a Sick fastened, more fixed in some part. When the Stomach consenteth, there is vomiting of Flegm, Choller, that is green or the like. After Meat the pain is greater, because the Stomach being filled compresseth the Intestines. The Belly for the most part is bound, so that the Patient cannot so much as break wind, and if any thing be voided either naturally or by art, it is for the most part windy, and like Cow-dung, with water at the top, because it is most Flegm which useth to be so. Sometimes the Belly is so bound that in the heigth of Pain, Purging Medicines that are very strong, will not work.

The Signs of the Causes are thus to be distinguished:

If the Pain come of Flegm, it is not so great, unless it be mixed with wind which cannot get forth of the places wherein it is contained: for then the pain is very great; sometimes in one part, as if it were bored through with a wimble or stick; sometimes in many, if the wind do remove, the Patient is better for hot, and worse for cold things. He used a Diet formerly which bred flegm, his water is sometimes more crude and white, not always, which deceiveth yoog unexperienced Physitians, and sometimes in a flegmatick and flatulent Chollick, the Urine will be yellow and reddish by reason of the extraordinary pain which doth inflame the Spirits and Humors contained in the Veins and Arteries. Which *Avicen* wisely observed, Fen. 13. Lib. 3. Tract. 3. Cap. 11. *Let no man be deceived* (saith he) *to think by the foulneß, inflamation, and redneß of the Urine, that therefore the Diseaſe is hot; for that is common to all Urines.*

If the Chollick proceed of wind, there will be a stretching pain, and a swelling of the Belly: the Patient perceiveth a rumbling of the Belly, and much wind, and he is better when he breaketh it: he used a Diet to breed it, as unreasonable drinking of cold water, often use of Peale, Rapes, Chesnuts, Sallets, Fruits, and the like. And if the wind be contained in the Cavity of the Guts, the pain is movable, not in one place, and is sometimes greater. But if it be in the Coats and Tunicles of the Gut, the pain is fixed because the wind cannot move, and it is constant because it cannot get forth.

If the Chollick come from a sharp and Chollerick Humor, it is most grievous, pulling and pricking, there is heat, thirst, and often a Feaver, the Urine is very Chollerick. It is worse for hot Meats and Medicines, and better for cold. By sending forth of Choller the disease is diminished, and there was before, a Diet breeding Choller.

The pains of other parts under the Navil, are easily distinguished from the Chollick by their proper signs, except the Stone, whose signs are so like with those of the Chollick, that very skilful Physitians have been deceived by them: As *Galen* himself was, as he confesseth 2. *de loc. aff. cap.* 5. when he was troubled with the Chollick, he thought that he had the Nephritis, and that a stone was fastned in one of the Ureters till the Humor was purged away, and the pain ceased; after which he found it to be the Chollick.

But by these following signs these two Diseases may be plainly distinguished, if they be well observed.

First, The Nephritis: or pain of the stone, is fixed in the Reins, and comes from thence to the Testicles, according to the length of the Ureter: But the Chollick is movable, and girts about the middle of the belly like a girdle.

Secondly, The Chollick encreaseth after Meat by reason of the compression of the Intestines from the full Belly: but the Nephritis encreaseth not, but rather decreaseth, because some of the Nourishment is carried to the Reins, which doth something asswage the pain.

Thirdly, In the Chollick, the vomiting is more vehement, and the Body is more bound, because the Colon lieth in the bottom of the Stomach, and the Intestines being stretched, or much provoked, do constringe themselves that they may expel what is noxious. But both the Symptomes are common to both Diseases, so that you can hardly know their intension and remission, because a strong Nephritick pain, may cause a greater vomiting and affriction of the Belly, then a weak Chollick.

Fourthly, In a Chollick there is more ease found after Evacuation than in a Nephritis.

Fifthly, In a Nephritis or the stone, the Urine is first clear and thin; afterwards there is a sediment, and at length sand and little stones are voided. But in the Chollick the Urine is thick from the beginning.

As to the Prognostick: The Chollick for the most part, if it be gentle and little, and not long, nor in one place constantly, but intermitting and not binding the Belly, is curable, and without danger. But if the pain is very great and fixed in one place, not intermitting, and if the Belly be bound that nothing can get forth, with great watchings, and if vomiting follow, hiccoughs, doting, and coldness of extream parts, with cold sweats, it is deadly.

A stubborn Chollick coming of sharp and Chollerick Matter degenerateth into other grievous Diseases, as Arthritis, Epilepsie, or Paralysis, which is most usual.

An

An Epidemical Chollick, which is contagious and peſtilent, is commonly deadly.

The Cure of this Diſeaſe is divers, according to the variety of the Cauſes.

And firſt, there is the ſame Cure of a flatulent and pituitous Chollick, which begins with an Emollient Clyſter, after which followeth one Carminative and diſcuſſing, as was preſcribed in the *Dolor Ventriculi*, from the like Cauſe, which muſt be repeated twice, thrice, or four times in a day, till the pain be gone; and if he go not to ſtool in one or two Clyſters, as ſomtimes happeneth, you muſt give a ſharp Suppoſitory. In one of the aforeſaid Clyſters, you may do well to ad four ounces of the *Aqua Benedicta Rulandi.*

Or two or three drams of Coloquintida boyled in an Emollient and Carminative Decoction.

If Clyſters will not give eaſe, you muſt not ſtay too long upon them, but uſe ſome gentle Medicine. It hath been obſerved that when a ſick man had taken three Clyſters without benefit, that another Phyſitian came and gave but one ounce and an half of Manna, with two ounces of the Oyl of ſweet Almonds in the fat Broth of a Hen, and cured the Patient. But in a pain that comes from groſs flegm you muſt give ſtronger Medicines.

Afterwards, Fomentations, Oyntments, Baths, Emplaiſters, and the like, are good, which were declared in the Cure of the *Dolor Ventriculi* of the ſame Cauſe, to which you may ad ſome ſpecifical things, which are fit for this Diſeaſe.

Waſh the Guts of a Wolf in white Wine, then dry them in an Oven in an Earthen pot, till they may be poudered. Let the Patient take a dram thereof in white Wine, and he will be preſently cured.

Boyl fair Water, and ad to it the fourth part of Oyl, and ſome groſs Pepper; let him take three or four ſpoonfuls as hot as he can endure it, and the pain will be inſtantly gone.

Take of *the beſt Aloes one dram: Laudanum four grains: Diagridium ſix grains: Mix them and make ſix Pills gilded: Let him take them at a convenient time. They take away the pain after one hour, and then purge out the noxious humor.*

Inſtead of theſe you may give Diaphœnicon, and Philonium Romanum, as is preſcribed in the Cure of the pain of the Stomach. *Hipp. Lib. de intern. aff.* propoundeth a Purge of Purſlain, and Juyce of Poppies.

Six ounces of Oyl of ſweet or bitter Almonds, do aſſwage pain, and caſt the Matter cleaving to the Inteſtines downwards.

If you mix it with theſe things following, it will be better:

Take of *Oyl of ſweet Almonds, or Sallat Oyl for poor people, four ounces: Spaniſh Wine one ounce and an half: Syrup of Poppies one ounce: Mix them for a Potion.*

Alſo Oyl of ſweet Almonds mixed with Manna in fat Broth as beforelaid, doth eaſe pain, and evacuate the Matter offending.

One dram of Annis ſeeds poudered and given in Wine, doth firſt aſſwage, and the ſecond time it is given, quite take away the pain; applying at the ſame time a Cataplaſm of Turpentine three ounces, laid on with Stuphes ſprinkled with Pepper and Sanguis Draconis finely poudered, of each one dram.

Galbanetum Paracelſi is good to diſcuſs the Humor if the whol Belly be anointed therewith. The deſcription is in *Crato* thus:

Take of *Gum Elemi, Ivy, Galbanum, Oyl of Bayes, of each equal parts: diſtil them in Sand with a Retort; keep the Liquors aſunder, firſt the Water, then the cleer Oyl, then the thick Oyl like Honey, which you muſt uſe firſt.*

Take of *Calamus Aromaticus one ounce: Galangal three drams: the outward yellow of the Orange peel four ounces: Cinnamon, Annis, and Fennel ſeeds, of each three drams: Cummin ſeeds ſix drams: Juniper berries green half an ounce: Bay berries three drams. Pouder them finely, and infuſe them in ſix pints of the beſt Spaniſh Wine in a hot place ſix dayes; then diſtil them* in Balneo Mariæ. The Doſe is one ounce after Evacuations.

You may with good ſucceſs apply to the Belly Gum Caragna, and Tacamahacha; but firſt let a great Cupping-glaſs be applied to the Navil.

Although you apply not the Plaiſters, yet you muſt not forget to cup; which as *Galen* ſaith, doth diſcuſs pain that comes of wind like an Enchantment.

If the Diſeaſe laſt long, you may cure it with a Decoction of Guajacum continued for many daies, Purging ſomtimes, and giving often Clyſters. And if it come of glaſſy flegm, let Guajacum be boyled in Wine, as *Amatus Luſitanus* uſed it with good ſucceſs, *Curat.* 32. *Cent.* 1.

After the pain is allayed, uſe an Apozeme to purge flegm for the carrying away of the reliques, or inſtead thereof, the Decoction of an old Cock made with inciſing, attenuating, and purging things. Or that excellent Julep preſcribed in the Chollick of the Stomach.

A Chollerick Chollick is cured by Emollient Clyſters, and ſuch as temper the acrimony of the Humors.

Let

Let the Belly be Fomented with an Emollient Decoction, which is Anodine; or which is better, make a Bath of the ſame.

Alſo Caraplaſms made of Barley and Linſeed Flower, boyled in Oyl of Chamomil, applied to the bottom of the Belly are good.

As alſo a Cooling Epithem to the Liver, made thus:

Take of *the Juyce of Endive and Succory, of each half a pint: the Juyce of Lettice, and Roſe-Vinegar, of each two ounces: mix them and make an Epithem.*

Give Juleps of Poppy, Lettice, Endive, and Sorrel Water, with Syrup of Violets, Apples, and Lemons.

If the Pain be urgent, come to Narcoticks.

When the pain is mitigated, give the infuſion and expreſſion of Rhubarb in Succory Water with Syrup of Roſes, often, til al the filth be evacuated.

If this be too gentle to eradicate the Diſeaſe, give Mercurius Dulcis, which being ſomtimes given with ſome Purging Diagrediats, doth finiſh the Cure.

They who are not to take Diagrednm, may take Mercurius dulcis alone made into a Pill with conſerve of Roſes, drinking after it the infuſion of Senna with Rhubarb, adding a little Manna and ſyrup of Roſes.

After this you may give your ſharp Vitriolated Waters.

When the pain is violent, fly to Baths and Laudanum, to which you may ſomtimes mix Purgers, but in a great quantity; becauſe their force wil be hindered by the Laudanum.

Galbanetum Paracelſi, although hot, is fit to diſcuſs the Humor if al the Belly be anointed therewith: it is deſcribed formerly.

Somtimes Blood-letting is good where there is fear of a Feaver by the heat of the blood: and if the Feaver be begun, do it preſently.

When there is a great Thirſt, give cold Water. as *Galen* teacheth, lib. 12. meth. cap. 7. And *Amatus Luſitanus* ſaith, That he Cured one preſently with it: And *Septalius* ſhews in Two Stories in the Seventh Book of his *Practical Animadverſions*, That he hath given the ſame, and taken it with very good ſucceſs.

For the Cure of that Chollick which turneth into a Palſie, after the Belly is looſened with many Clyſters, and the firſt wayes being made open by a Purge, put the Patient into a warm Bath made of an Emollient Decoction, twice, thrice, four, or five times in a day, that the ſharpneſs of the humors may be allaied, and the pores of the Membranes opened.

The day after let the Humor be Purged with a fit Medicine; then let him be bathed again, and if his ſtrength wil endure it, let him do it every other day, til the humors are Purged and the pain gone, and the Patient Cured.

In the mean time let the Clyſters be continued, eſpecially thoſe made of Milk are beſt to aſſwage pain, to which you may put Caſſia, Oyl of Violets and Lillies.

Let the Belly be often anointed with Oyl of Chamomil, Dill, ſweet Almonds, Lillies, or with freſh butter.

Then let him uſe Whey and ſharp Waters.

And Laſtly, When the Diſeaſe is of long continuance, you may uſe thoſe things which were preſcribed for the Cure of Hypochondriak Melancholly.

Nor muſt you omit Phlebotomy from the beginning of the Diſeaſe before Purging, and it muſt be often repeated if the Blood be evil, or the pain come of a Catarrh any wayes.

Finally, Al the Medicines mentioned in Chollerick Chollick may here be applied, which if it avail not, ſome Phyſitians uſe this following Potion, which though it be ſordid and not fit for men wel educated, yet they ſay it Cureth preſently.

Take of *Horſe-dung one ounce: break it in pieces, and infuſe it in one pint of Poppy-Water with eight or ten drops of ſpirit of Vitriol: ſtrain it gently, and divide the Liquor into three Doſes, for the time of the violent pain.*

But if it turn into a Palſie, you muſt anoint the Spina or back Bone and the Paralytike parts with a Reſolving and a Nerve Corroborating Balſom if there be no Feaver; but if there be, bind Wool dipt in Oyl, or ſome digeſting Oyntment, to the Paralytike parts, taking heed of Cold, by which the humor wil be faſtned to the parts, and the breathing forth of it hindered.

Galbanetum Paracelſi is beſt, if it be applied to the parts aforeſaid, and the Navel.

CHAP.

Chap. 2. *Of the Iliack Paſſion.*

ILEOS, or *Iliack Paſſion*, took its name (as ſome ſay) from the Gut *Ileum*, which chiefly is Affected in this Diſeaſe; although the other thin and ſomtimes thick Guts are capable of the ſame: Or, rather from *Eileſthai*, which ſignifieth to be rowled and girt about; therefore the Latins call it *Volvulus*, or *Convolvulus*, becauſe the Guts in this Diſeaſe ſeem manifeſtly to be rowled about, and to be moved upwards: it is alſo called *Kordapſos*, becauſe the Guts, if you lay your hand on them, ſeem to be like a ſtretched or twiſted cord.

The *Barbarians* cal it *Miſerere mei*, becauſe it is a miſerable Diſeaſe and commonly deadly, and therefore needs divine Commiſeration.

This Iliack Paſſion is a prepoſterous motion of the Inteſtines, in which the Belly is alwayes bound; and the Excrements which ſhould be carried downwards, are brought to the Stomach, and caſt out by vomiting.

It is known that the Inteſtines have a natural motion by which the Chylus and Fæces are by degrees carried downwards, which is called *Periſtalticus*; this motion is by the Orbicular and Tranſverſe Fibres which contract the Inteſtines, and is compared to the motion of Earth-worms which move the parts of their bodies ſucceſſively. And this motion is ſomtimes inverted by preternatural Cauſes, as when the Fibres of the Inteſtines which ought to be contracted from above down-wards, are contracted upwards; and whatſoever is in the Guts is not ſent towards the Belly but towards the Stomach, and then is this Iliack Paſſion: We obſerve ſomthing like this in Vomiting; for when the Fibres of the Oeſophagus contract themſelves from the upper part towards the Stomach, the meat is ſwallowed down; but when by an inverted order they contract themſelves from the part beneath upwards, there is vomiting. This Periſtaltick inverted motion comes from the vehement ſtirring up of the Expulſive Faculty of the Guts, which when it cannot throw down-wards the ſuperfluous Excrementitious matter, doth by a violent motion caſt it upwards. This motion is ſomtimes ſo violent, that not only Chyle, and Wind, and Excrementitious Humors, but the Fæces alſo, and Excrements which ſhould be ſent out by the Anus are thrown forth by vomiting; So that Clyſters and Suppoſitories alſo are ſnatcht up and vomi ed out: So *Matthew de Gradi* reports of a Girle of twelve yeers old, who in this Diſeaſe for three dayes together, did not only vomit up Dung and Clyſters, but alſo a long Suppoſitory a ſhort time after it was adminiſtred unto her; and when another Suppoſitory was tyed to her Thigh, that was preſently broken off and vomited up with a piece of the Thred at it: And when Thirdly, a Suppoſitory was tyed with four ſtrong Threds as before, that alſo was broken off and Vomited up with part of the Threds: And at length when the Mother, as deſired by the Phyſitian, to adminiſter another, it was drawn upward with ſo much violence, that ſhe was conſtrained ſuddenly to draw it out leaſt it ſhould be again Vomited up. There are the like ſtories in Authors, which for brevity take we omit.

This ſtirring up of the Expulſive Faculty of the Guts comes from divers Cauſes: The chief is Obſtruction; therefore whatſoever doth ſo violently obſtruct the Guts that nothing can deſcend, doth beget this Diſeaſe: for after the Faculty hath long labored to throw out ſuperfluities the ordinary way, and is fruſtrate of her intention; deſiring to ſatisfie the neceſſity of excluſion, ſhe takes another Courſe, and by a prepoſterous motion drives them upwards, and vomiteth them out.

The Cauſes obſtructing are hard Dung long retained, groſs vapors gathered in abundance into the Guts and violently diſtending them; Inflamation, and other great Tumors, which wholly ſhut up the internal Cavities of the Gut, and the circumvolution of it, ſo that it is as it were tied in a knot, which often happeneth in a Hernia or rupture, and alſo in the Chollick, after which often follows this *Ileos*, becauſe the Inteſtines being ſtretched with wind, do rowl together, and ſomtimes knit a knot.

The more unuſual cauſes which do ſo provoke the expulſive faculty that are conſtrained to alter their motion, are great Ulcers, or ſharp Humors which twitch the Guts; for when the fæces or other Humors going downwards, do touch the ulcerated part, they ſo prick it that the faculty is provoked not to ſuffer ſo noxious a thing to paſs, but driveth it upwards with violence; which motion the other Inteſtines ſtirred up by ſympathy, do follow till the noxious Matter goes to the Stomach, which following the ſame Motion, by the help of the aforeſaid faculty, drives it forth by vomit.

The Signs of the Iliack Paſſion are partly Common to thoſe of the Chollick, and partly proper.

The Common Signs are, pain in the Abdomen, ſwelling and puffing up of the Belly, a bound Belly, loathing of Meat, Nautea, Vomiting, want of Reſt, difficulty of Breathing, and Piſſing.

Thoſe which are Proper and peculiar to this Diſeaſe, are a ſharp pain and moſt violent, puffing up

and very violent distension, an eminent hard tumor in the Hypogastrium, a total suppression of feege, so that nothing is voided that way. In progress of the Disease, there is irregular vomiting, first of Choller, then of Flegm, and Chylous Matter, and at length of dung, or rather of a Matter like it, of corrupt and stinking Meat, for the fæces are seldom sent upwards, when they are neer death, there is abundance of cold sweat, refrigeration of the extream parts, trembling of the Heart, disturbance and fainting.

Galen in Comment. Aph. 10. Sect. 7. affirms that the proper and inseparable sign of this Disease is not to go to stool at all. But *Hippocrates* seems to affirm the contrary, 3. Epid. Sect. 2. Text. 7. in an History of a Woman thus affected, which dwelt at *Tisamen*, saying there were thin, few, and crude dejections. To which difficulty we answer, That in the beginning of the disease, some stools may be from the fæces contained beneath the Gut affected, which by Nature or Art may be excluded before all the Intestines consent and lose their proper and Natural faculty. But when the Disease is confirmed and the motion of all the Guts is peristal like and inverted wholly, there is nothing more sent downward.

The signs of the Causes are these: If *Ileos* come from Inflamation (which often happeneth) the Disease is most acute, and comes quickly to the heighth, there is an intense feaver, a most vehement pain, Chollerick Vomitings and flegmatick do soon appear, and faces and dung do presently, and other deadly signs before mentioned.

If it come from the fæces endurable, there went before it a constriction of the Belly for many daies, and in the beginning there is no pain, but afterwards there is, the Disease is of longer continuance, nor is it so acute as that which comes from Inflamation, neither is the pain so great, nor the Feaver so strong, and sometimes there is none.

If it come from wind or flegm, it followeth for the most part the Chollick, and signs of the Chollick, of flegm and wind went before, which are laid down in the Chapter afore going.

As for the Prognostick. Every *Ileos* is dangerous, but one more than another. That is most deadly, in which first there is chollerick, then flegmatick, and after stinking vomiting; and *Galen*, 6. *de loc. aff. cap.* 2. saith none of these escape; but Experience teacheth that some do, as when the disease comes from retention of the fæces, or *Hernia Intestinalis*, or Rupture in the Guts.

They who have this Disease with the Strangury, die within seven daies, except a Feaver coming, the Urine be more plentifully voided. *Hipp.* Aph. 44. Sect. 6. if the Strangury come of thick and and flegmatick Humors which are plentiful in the Veins and Guts, a Feaver coming thereupon, they may be concocted, melted, and attenuated, and pissed forth, by which means the *Ileos* is cured. Although *Galen* in his Comment upon this Aphorism, saith that he is ignorant of what *Hippocrates* saith here, and that it cannot be confirmed by Reason and Experience.

If Symptomes be remitted, and either Medicines or meat taken at the Mouth, pass through, there is hope of recovery.

The Cure of this Disease, is to be varied according to the difference of the Causes. And first, if the obstruction comes from the Fæces indurate, or from gross and slimy flegm, you must use Emollient and Laxative Medicines, both internally and externally.

First then, give Clysters of the Decoction of Althæa, Mallows, Violets, Chamomel, and Melilot, with Lin-seed and Fœnugreek seed, or of common Oyl to a pint, in which you may dissolve the third part of Butter, or of the Broth of a Sheeps Paunch, in which dissolve Butter, Honey, and Sal gem. To which Decoction, if there be wind (as commonly there is) it is good to put Carminatives and Discussers.

After the Matter is somwhat mollified with these Clysters, you must give first some gentle Purges, then stronger, and last the strongest.

In the mean while you must apply Fomentations and Liniments that are Emollient, to the whol Belly, and continue them long. The Paunch of a Gelding warmed in hot Water, applied to the Belly, is good; but mollifying Baths are better, especially if they be made of Air only.

Also you may give inwardly the Oyl of sweet Almonds either alone with white Wine. To which if the pain be great, you may ad the Syrup of Poppies, as was shewed in the Cure of the Chollick.

And lastly, If there be vehement pain, and much flatus, you may give those other Medicines which are prescribed in the Cure of the Chollick, not omitting Purges, which being opportunely given, take away the Cause.

That which comes from Inflamation of the Intestines, is to be cured by often Blood-letting, if strength permit, both in the Arm and Foot, and by applying of Cupping-glasses with Scarrification to the Groins. Also Emollient Clysters and cooling, are to be given, made thus:

Take of *Althæa Roots two ounces: Mallows and Violets, of each one handful: Guord seeds half an ounce: Line and Fleabane seeds, of each two drams: Water Lillies and Roses, of each one pugil: Chamomel Flowers half a pugil: make a Decoction, in a pint whereof dissolve two ounces of Oyl of Roses; Cassia one ounce: make a Clyster, and in progress of time ad Oyl of Violets and Chamomel.*

The

The aforeſaid Emollients muſt be boyled in Oxycrate.

Or give new Milk with a little Sugar, and the white of an Egg, or the Mucilage of Fleabane ſeeds one ounce, to aſſwage pain.

Or you may make a Clyſter of Oyl of ſweet Almonds, Barley Cream, ſtrained from the Decoction of it, adding a little freſh Butter and Sugar.

A Clyſter may be made of ſimple Oxycrate, and be every day given, which is excellent againſt the Inflamation of the Guts.

Anoint with Oyl of Violets, ſweet Almonds, and Chamomel, with Mucilage of Linſeed, Fænugreek ſeed, and Quinces, with Axungia of Hens and Ducks, and ſweet Butter.

Alſo make a Fomentation of the Decoction of thoſe Simples which were preſcribed for a Clyſter.

Alſo Foment in the beginning with Oxycrate, and after let the Simples aforeſaid, be boyled in Oxycrate.

And make a Cataraplaſm of the reſidence of thoſe things in the Decoction with Barley Meal, Fœnugreek, Lin-ſeed, and Butter, with Axungia's and Oyls aforeſaid.

Alſo a Bath of warm Water, in which cold and Emollient things have been boyled, is moſt convenient.

After bleeding, give two ounces of Oyl of ſweet Almonds to appeaſe pain, and if it be very great uſe Narcoticks.

If there be no vomiting, you muſt provoke it with a draught of warm Water with Oyl of Violets, for ſo the upper parts will be purged, and the Humors will be revelled from the part affected. In the whol time of Cure, you muſt give Juleps and Emulſions preſcribed in the Inflamation of the Stomach.

Let his Drink be Barley Water: and in the beginning let him abſtain from all Nouriſhment for twenty four hours, that ſome of the Matter may be conſumed; then give him Chicken Broth. This Diſeaſe is to be attended with diligence, for it is for the moſt part deadly.

The chief buſineſs in the Cure, is by abſtinency; and this is taken from the example of thoſe that are wounded in the Guts, for they are almoſt famiſhed for forty daies. Therfore let men in this diſeaſe for four or five daies, take only three ſpoonfuls of Broth every day, that vomit may be hindered which doth encreaſe the Diſeaſe.

Moreover, Food bringeth no comfort to the ſick, for it turneth not to nouriſhment, but is plainly corrupted, and the Chyle which goes from the Stomach into the Guts, is mingled with the excrements retained, and encreaſeth vomiting.

He may drink more freely, becauſe it goes more eaſily to the Liver, and it may be fit to oppoſe the Diſeaſe, if it be well tempered Oxycrate, and in a ſmal quantity.

Laſtly, It comes ſomtimes but ſeldom, from the circumvolution of the Inteſtines; and this is either from Wind, which tortureth them; or from a Hernia called Interocele, or Rupture.

That which comes from Wind, is cured by the ſame Medicines which Cure the flatulent Chollick. But if after long uſe of theſe Medicines, the belly will not be opened, but all things taken are vomited up, that there is little hope of health, the laſt Remedy muſt be uſed, which *Hippocrates* propounds 3. *de morbis*, namely, That a pair of Smiths Bellows be applied to the *Anus*, and that they blow into his Belly. Then give an Emollient Clyſter with Troches of Alhandal to bring out the fæces. This is good not only againſt the *Ileos* from contorſion of the Inteſtines, but in that which comes from a grievous obſtruction, for by dilating the Guts it takes away the obſtruction. *Amatus Luſitanus*, *Curat. ult. Cent.* 1. teſtifieth that he cured one deſperate by this means: as alſo *Epiphanius Ferdinandus* in his Phyſical Hiſtories, Hiſt. 74. reports that the ſon of *John Altimar* of *Naples*, a moſt expert Phyſitian, was ready to die of this Diſeaſe, and taken as it were from the Graves mouth by this means. But *Aurelian* diſalloweth it, becauſe the wind coming from the Bellows may much hurt with its cold. But this may be avoided if the Bellows be filled with wind by the fire.

Paræus alſo propounds another unuſual Medicine, by which he boaſteth that he cured many at deaths door, namely, by drinking three pound of Quick-ſilver in Water alone, for with its weight it doth unite the Gut, and open, and ſends down the hard excrements, which Remedy is commended by others, who ſay that it may be taken without harm.

But we may wel fear ſo great a quantity, leſt it extinguiſh the Native heat with its coldneſs, and coagulate the Blood in the Veins; therefore in a deſperate caſe it is better to give a leſs quantity. Some give two ounces in a rear Egg, and think good to repeat it if the firſt Doſe do not ſucceed well, but you may ſee in our Obſervations, that one ounce hath done well.

But when the Illiack Paſſion comes from the Guts falling into the Cods, all the care is to place them right, which muſt be done by the gentle hand of a Chirurgion, long fomenting the part affected, firſt with an Emollient Decoction, and Relaxing Oyls, giving often Emollient and Carminative

Clysters, so placing the Patient that his Head be low, and his Thighs high, for some having been hung by the Heels, were quickly cured.

If the Hernia comes with Inflamation of the Intestine, it is cured with a fomentation of cold water. If wind stretch the Gut, discuss with a Fomentation of Spirit of Wine. See the examples of both Cures in our Observations.

Chap. 3. *Of Astriction, or binding of the Belly.*

BY Astriction of the Belly, we do not understand all kind of supression, by which nothing is let forth downwards, as in the *Ileos*. But only a dull and slow dejection, by which the fæces and reliques of Meat are seldom and not according to the quantity of Food thrown forth; therefore they are necessarily indurated, because of their long continuance being dried with heat, and some moisture is alwaies drawn from them by the Meseraick, which reach not only to the thin, but thick Guts. It is a Symptome of the Expulsive faculty diminished, or the retentive encreased, and it is the cause of many diseases; therfore the Excreta and Retenta are reckoned among the six things not Natural, which not keeping the Law of Nature, produce divers Diseases, so it being bound, sends vapors to the Head, and produceth Catarrhs, and other Diseases of the Brain, disturbs the Concoction of the Stomach, and the actions of other parts.

The Causes of this Symptome are many: And first, hardness of the fæces, and driness, are not only Effects, but also Causes of them, because being hard, they are more difficult to be voided, and do less provoke the expulsive Faculty. They become dryer and harder chiefly, and oftenest from the excessive heat of the Liver, which powerfully draws away all the moisture contained in the Intestines, and leaves the fæces dry. This is also caused by violent motion, especially riding: also by few Excrements through want of food, or because they have no acrimony to prick the Intestines, as it happens in cold Meats; and when the Choller doth not go to the Guts, as we observe in the Jaundice. And lastly, Many diseases of the Guts may cause this constriction, as a cold and dry Distemper, Tumors, Obstructions, Numbness of the Anus, and Palsey, and many others.

The Signs depend upon the knowledg of the Causes, which must be taken from their proper Fountains.

The hot distemper of the Liver is to be taken out of its proper Chapter. Also Tumors, and other Diseases of the Guts, have their proper Diagnosis, or signs, and so the external Causes, as little Meat, or coldness thereof, riding, and the like, are known by relation of the Patient.

As for the Prognostick: The Constriction of the Belly is more or less dangerous, according as the Cause is greater or less. For if it come of Inflamation, or other Tumor of the Intestines, it is very dangerous: but from other Causes less. It useth to be contumacious and long when it comes from the fæces indurate; and thence come often Chollicks, which return after they have been cured, by reason of the new dryness of the fæces; as also because though the Belly seems to have been made sufficiently soluble by purging, and many liquid Excrements are discharged, yet there remains sometimes many hard Excrements in the Guts, which breed new pains, and cannot be taken out, but by many Clysters given after Purging.

The Cure of this Disease depends upon taking away the Causes, which are to be taken from their proper Chapters. But because it is commonly long, especially when it depends upon a hot distemper of the Liver, and dryness of the Guts; and in the mean time the Belly bound brings many inconveniences. We will speak of its Cure by its self, which is generally done by Emollients, and Laxatives made thus:

Take of *Althæa, or Marsh-mallow, and Lilly Roots, of each two ounces: Mallows, Marsh-mallows, Mercury, Violets, and Brank Ursine, of each one handful: Lin-seed and Fœnugreek of each half an ounce: Annis seed one dram and an half: sweet Prunes three pair: Chamomel and Melilot flowers, of each one pugil: boyl them to a pint and an half. Dissolve in the straining Oyl of Lillies and Lin-seed, of each two ounces: fresh Butter one ounce and an half: Diacatholicon, and Diaprunis simple, of each six drams. Make a Clyster to be given as often as need requireth.*

Sometimes instead of this use the following:

Take of *the Decoction of Sheeps entrals one pint: fresh Butter two ounces: Cassia, Diacatholicon and Diaprunis simple, of each half an ounce: red Sugar one ounce: Make a Clyster.*

Also twice in a month, or thrice, you may give one pint of common Oyl alone for a Clyster.

And because Nature will grow dull by too much use of Clysters, and at length will never officiate that way; but when she is provoked by one, you must endeavor to mollifie the Belly with other means.

For

For this end, ſweet Prunes and roaſted Apples with Sugar, may be taken one hour before dinner, as *Galen* ſheweth 2. *de facult. alim. cap.* 31. For if they be taken immediately before dinner, they will not work. Or take Chicken Broth, or other Broth, in which have been boyled, Beets, Borrage, and ſome Apples, or one ſpoonful of Oyl of ſweet Almonds newly drawn without fire, with as much Syrup of Maiden-hair, or two ſpoonfuls of this Syrup following:

Take *of the Mucilage of Fleabane ſeeds, and of Quinces drawn with Mallows Water, one pound and an half: white Sugar one pound. Make a Syrup according to art.*

That the Prunes may work better, let him drink half a glaſs of *Vinum Lymphatum*, or Wine and Water, before and after he taketh them, freſh Butter taken an hour before Dinner the bigneſs of a great Nut, and drink Wine and Water will do the ſame thing.

Once in a week let him uſe one of theſe following Medicines:

Take *of Caſſia new drawn one ounce: Cream of Tartar one dram: Make a Bolus.*

Take *of Manna one ounce, or an ounce and an half: Mix it with Broth, and take it in the morning.* Or,

Take *of Oyl of ſweet Almonds, and Manna, of each one ounce: Diſſolve them in Broth to be taken two hours before dinner.*

Take *of pulp of Caſſia two ounces: Tamarinds and Manna, of each one ounce: the pouder of Senna half an ounce: Cremor Tartari two drams: With Syrup of Roſes ſolutive make an Opiate. Let him take half an ounce or an ounce.*

Or diſſolve in the Decoction of Prunes half an ounce, or an ounce of Manna: let him take it one hour before dinner as all the aforeſaid, for ſo they will work better.

Ptiſans of Succory, Agrimony, and Sorrel, caſt into Water that begins to warm, and infuſed one night, either drunk alone, or with Wine, for ordinary Drink doth keep the Body looſe.

This following Broth doth moſt certainly looſen the Belly, and keeps it ſo.

Take *of Beets and Mercury, of each one handful: Boyl them in Broth, and take it one hour before dinner.* Or,

Take *of Conſerve of Damask Roſes with Manna and Sugar, of each equal parts, one ounce for a doſe.*

Laſtly, A Bath, or Tub with a Decoction of Emollient Herbs is very profitable to moiſten all the parts Natural and mollifie the Belly.

Chap. 4. *Of Lientery, and Cœliack Paſſion.*

LIentery is a kind of Flux of the Belly, in which the Meat is quickly ſent through the Belly, as it was taken unchanged. But in the Cœliack Paſſion the Meat comes forth crude, and imperfectly concocted, whence it appears that theſe two Diſeaſes differ only in degrees, ſo that Lientery is referred to the act aboliſhed, and Cœliack Paſſion to the act diminiſhed. For although the Meat is ſent forth, either altogether unconcocted, or imperfectly concocted, yet theſe Diſeaſes are not to be referred to concoction hurt, but rather to the retention; for they are either il concocted, or not at al, becauſe they are quickly ſent forth, and are not long enough retained to be concocted. Hence it is collected, that though this Diſeaſe be reckoned among the Diſeaſes of the Guts, yet the Stomach is much affected, and ſomtimes more than the Inteſtines: Hence *Galen 6. de loc. aff. cap.* 2. ſaith that a Lientery and Cœliack Paſſion come both by fault of the Stomach and Guts.

Many Cauſes of theſe Diſeaſes are propounded by Authors; all which we may refer to three Heads; the cold diſtemper of the Stomach and Liver, the provocation of thoſe ſame parts; and a great debility of the retentive faculty from ſome deadly diſeaſe.

The cold diſtemper generateth great plenty of flegmatick and glutinous humors, which covers and daubs over the wrinkles of the Stomach, ſo that it cannot retain the food. Hence we may admire why *Galen 6. Aph.* 1. doth ſpeak againſt the old Greeks, who called this Diſeaſe *Lienteriam*, or ſmoothneſs of the Inteſtines therefore, becauſe the internal ſuperficies, or the Stomach being made ſmoother, doth not retain the Meat; whereas the Stomach doth not retain the Meat til a perfect concoction be made ſo much by the roughneſs of the inward coat, as by an innate propriety of aſtringing. For as we muſt confeſs that the principal cauſe of retention is the faculty; ſo alſo muſt we acknowledg that the faculty doth want inſtruments fitly diſpoſed, without which it cannot act: and therfore ſince the inward Tunicle of the Stomach is made rough and wrinkled, that the Meat may be retained in the Stomach, it is no doubt but if that roughneſs be taken away while the wrinkles are filled up with flegm, the retention of the Stomach wil be hurt, ſo that the Food wil ſlip away unconcocted. The like is in the Womb whoſe inward Tunicle is rough and wrinkled, that it may the better retain the Seed for Conception; but if it be covered with glutinous Humors, it doth not retain, and the Seed preſently comes forth, whence many Women are barren.

But

But let us note, That if any wil ſtrictly examine this word, he ſhal find that this Symptome is rather to be called the Smoothneſs of the Stomach than of the Inteſtines: neither doth it comprehend al its ſorts, but only that which comes from Flegm, which becauſe it is moſt uſual, the reſt have their denomination from it.

The provocation of the Stomach and Guts is by ſharp Humors which by twiching thoſe parts ſtir them to ſend them forth too ſoon, as it is in the Bladder, which being pricked by Acrimony, doth often piſs: Hence comes the Strangury, *Galen* 6. Aph. 1. ſaith, That by thoſe ſharp humors there is an Ulcerous Diſpoſition in the Stomach, as the Aphthæ, or Thruſh is in the mouth of Children.

The great imbecillity of the Retentive Faculty in great and deadly Diſeaſes often cauſeth a Lientery, as you may ſee in a Dyſentery, which when nature is conquered degenerateth into a Lientery, the Stomach being drawn to conſent with the Guts which are ſo grievouſly affected, and its Faculty being overthrown; ſo alſo in Malignant Feavers there happeneth often a Lientery wherby the Food as ſoon almoſt as taken is caſt forth unconcocted; and the ſame is when Poyſonous and Hurtful things are taken.

There is alſo another Cauſe different from the former, which peculiarly makes a Cœliake Paſſion, namely, The Obſtruction of the Meſaraike Veins which hinder the paſſage of the Chylus to the Liver; whence it muſt needs be caſt forth by the Belly, but that this may be, it is neceſſary that al the Meſaraick Veins, or the greateſt part of them be ſtopped, as in Children who have the Struma, or Kings Evil, whoſe Meſentery is found ful of Glandles, by which the Meſaraike Veins are ſtopped: and theſe continually have a Chylous and Cœliake Flux: They eat much and grow leaner til they fal into a Maraſmus.

Ætius and *Celſus*, and many of their followers, do propound another Cauſe of the Lientery, namely, A Smooth and Thick Scar in the Guts remaining after a long Dyſentery, by which the mouths of the Veins being ſtopped, the diſtribution of Nouriſhment is hindered, and thence comes a Lientery, which Cauſe we cannot entertain for then al the Guts ſhould have been Ulcerated, and the Scar in them al ſhould ſtop al the meſeraiks which is not agreeable to reaſon: becauſe it is impoſſible that al the Guts ſhould be ulcerated, and the man not die.

The chief Signs of theſe Symptomes do appear by what is ſaid, for if crude meat and unchanged deſcend quickly and often through the Guts it ſignifieth a Lientery; but if it be ſomewhat changed and ſeem like Chylus; it ſhews a Cœliack Paſſion.

The Signs of the Cauſes are thus gathered,

If Lientery or Cœliake Paſſion come of a cold diſtemper and Flegmatick humors, there wil be ſowr belchings, the excrements of the belly are Flegmatick, there wil be thirſt and want of pain: if the Flegm come from the Head, as it often doth, the excrements are frothy, and the Flux is greater after ſleep; And there are other Cauſes which alter the Head, and other Signs of a Catarrh.

If it come from Irritation, or provocation, there is ſomtimes a gnawing in the Stomach, a heat in the Hypochondria, there is great thirſt, ſharp excrements and chollerick.

As for the Prognoſtick, Thus,

Lientery and Cœliack Paſſion laſting long is dangerous, becauſe it catcheth away the nouriſhment from the whol body, from whence comes an Atrophy, or a Dropſie: and if it follow great and acute Diſeaſes, it uſeth to be deadly.

The Cure of this Diſeaſe is to be altered according to the variety of the Cauſes that produce it.

And Firſt,

That which cometh from Flegm may be Cured by thoſe Remedies which were propounded for the Cure of Want of Appetite coming of a cold Cauſe; Chuſing thoſe things which are moſt Aſtringent to ſtay the Fux of the Belly.

Therefore you muſt begin with Purging of the peccant humor with Medicines made of Aloes, Rhubarb, and Myrobalans.

Clyſters are here of little force, while the Stomach is chiefly diſtempered; except an immoderate Flux do require them: and then they muſt be Aſtringent and ſtrengthening according to the Forms which ſhal be propounded in the following Cures.

After Purging ſufficiently you muſt ſtrengthen the Stomach with Opiats, Pouders, Fomentations, Plaiſters, and other Remedies mentioned in the place above quoted, in which (as I ſaid) you muſt not omit Aſtringents, as Maſtich, Citron peels, Coriander ſeeds, Snake-weed Roots, Tormentil, Coral, &c.

And beſides others, the Opiate following which is greatly Commended by *Amatus Luſitanus* is Convenient, by which he ſaith he Cured an Old man, after many other Medicines failed.

Take of *Conſerve of old Roſes ſix ounces: of the beſt Treacle ſix drams: Syrup of Quinces as much as will make an Opiate, of which let him take half an ounce in the morning, not drinking preſently after.*

That

That which comes of Choller is to be cured by thoſe Remedies which were laid down againſt Chollerick Vomiting; as alſo by thoſe which ſhal be deſcribed in the Cure of a Chollerick Diarrhœa.

That which comes from the imbecillity of the Retentive Faculty in a deadly, or at leaſt dangerous Diſeaſe, is to be cured firſt with Fomentations applied to the Region of the Stomach, thus made:

Take of *the Roots of Snakeweed, Tormentil, and dried Citron peels, of each two ounces: the Leaves of Mints, Plantane, and Sea Wormwood, of each one handful: Nutmeg, Cloves, and Cinnamon, of each three drams: red Roſes four pugils, beat them and cut them according to art, and fill two bags pinked therewith, and ſteep them in equal parts of Iron Water, and red aſtringent Wine; or in Wine alone, if there be no great Feaver, and let them be applied to the Stomach warm one after another.*

Afterwards uſe this Oyntment, or ſome Emplaiſter made of thoſe which are preſcribed for Chollerick Vomiting.

Alſo anoint the whol Belly with Oyle, or aſtringent Liniments.

Give Clyſters of Broth in which red Roſes have been boyled, diſſolving therein Sugar and Yolks of Eggs, and ſometimes *Confectio de Hyacintho*, if the Patient be very weak.

And finally, You may give at the Mouth, ſtrengthening and aſtringent things, as in the Cure of Vomiting before mentioned; as alſo thus, which ſhal be ſhewed for the flux of the Belly.

In a Cœliack Paſſion the Food is ſent forth crude and imperfectly concocted. It only differs from Lientery in degree, and is cured with the ſame Remedies.

But if the ſtools be altogether Chylous, this Diſeaſe doth not depend upon the fault of the Stomach, but upon the obſtruction of the Meſeraick Veins, which is uſual, eſpecially in Children. And therefore it is to be cured by Remedies which open obſtructions and ſtrengthen the Liver, becauſe that is commonly alſo weak; but you muſt uſe no aſtringents, leaſt another kind of flux ſhould follow. Theſe Medicines are at large ſet down in the Cure of the Diſeaſes of the Liver.

Chap. 5. *Of Diarrhœa.*

Diarrhœa is that kind of flux of the Belly, by which the excrementitious Humors are ſent forth without Blood or Food, and without the Ulceration of the Inteſtines.

By the Conditions of Diarrhœa properly ſo called, is diſtinguiſhed from other kinds of fluxes, becauſe in Lientery and Cœliack Paſſion, the Food is caſt forth unconcocted, or half concocted; in a Dyſentery and Tenelmus, Blood is mixed with the Excrements, as in the flux of the Liver, called *Hepaticus*, and in the *Hæmorrhoidal*.

Many are the Differences thereof; which that they may be clearly explained, are to be referred to three Heads: The firſt whereof reſpects the Matter which is voided; the ſecond the place from whence it comes; the third, the Manner, and efficient Cauſe which produceth the flux of the Belly.

In reſpect of the Matter voided, this flux is divided into a Chollerick, Flegmatick, Melancholick, and ſerous, or watery.

In reſpect of the place from whence it comes; either it comes from the whol Body, or ſome peculiar Part, as the Brain, Stomach, Guts, Liver, Spleen, Meſentery, Womb, and other Parts.

Thirdly, In reſpect of the Manner and Efficient Cauſe; one Diarrhœa is Critical, another Symptomatical; one comes from an internal Cauſe, as a diſtemper, or evil diſpoſition of the internal parts; another from an external, as from ſome Medicine or Poyſon.

Theſe Differences are ſeldom found ſingle, but they are often complicated in one and the ſame flux. So a Chollerick flux is from the Liver or the whol Body, a Flegmatick from the Brain or Stomach, a Melancholick from the Spleen, and a Serous from the whol Body.

Alſo theſe Differences are complicated from a divers mixture of Humors, ſo that ſometimes Choller, Flegm, and Water, are ſent forth by the ſame flux.

There is another kind of Diarrhœa different from the reſt, which is called *Syntectica*, or *Colliquativa*, coming from the melting away of the ſubſtance of the Body, and Humors by the violent hot diſtemper of the ſolid parts: ſuch as happeneth ſometimes in the Inflamation of the Bowels, in a ſtrong burning Feaver, hectick, or peſtilential; in which a fat Matter as it were mixed with Oyl or Greaſe is voided.

Laſtly, *Fluxus ſtercoroſus*, or a dungy flux, is another kind, in which much liquid excrement is often voided, which comes from excrementitious Meats corrupted in the Stomach, or a great plenty of Excrements heaped up in the Inteſtines.

The

The Knowledg in general is manifeſt, namely, when more liquid Excrements are voided, and oftener than uſually Nature doth allow.

The Signs of theſe Differences which are taken from the matter are manifeſt to the Senſes, namely, Whether they be Flegmatick, Melancholick, Cholerick, or Serous.

The Parts Sending have a more difficult Diagnoſis or way of Knowledg, yet they are thus Diſtinguiſhed:

If the Humors flow from the whol body, there either is, or hath lately been, a continual Feaver, or ſome other diſeaſe of the whol body, as Cachexia, evil Habit, or Leucophlegmatia, or white Dropſie; or there hath been over-eating or drinking, and there is no ſign of any Diſeaſe of any peculiar part.

If it be Critical, it is a benefit to the Patient, and is eaſily endured; and thence the Diſeaſe is either Cured, or Diminiſhed.

Somtimes there hapneth a Critical Diarrhœa without a Diſeaſe in ſome bodies which uſe to lay up evil Humors; and being ſtrong, do throw them forth at times when they abound and burden nature as *Galen* taught, 7. meth. Cap. 11. of which Flux *Celſus* maketh mention, *lib.* 4. *cap.* 19. in theſe words, *It is healthful for to go often to the Stool in one day, and in many dayes together if there be a Feaver, and if it ceaſe before the ſeventh day; for the Body is purged, and that which inwardly would have hurt, is now ſent forth.*

Among Critical Fluxes, the Serous is one; which comes without a Diſeaſe aforegoing, in them who have much Water in their Veins, and that chiefly in the Harveſt time, or Autumne: namely, when the night and morning cold of Autumne, finding the paſſages external and pores of the skin open, by reaſon of the heat of Summer aforegoing doth therefore inſinuate it ſelf deeper into the body, preſſing forth internally the Serous Humors contained in the Veins, which Nature afterwards being over-burdened with, ſends by the Meſeraick Veins into the Inteſtines, and many times into the Uriters.

Hence it is that many in the beginning of Autumne, and in the firſt cold weather, do make abundance of Urine for many dayes together.

But if a Diarrhœa be Symptomatical, it troubles the patient much, and weakeneth him; and the Diſeaſe upon which it comes, is encreaſed; or at leaſt is in the ſame ſtate.

This Symptomatical Flux in burning Feavers and Malignant, is often melting; and hence it is known, becauſe the Excrements appear unctious, and the body forthwith becomes lean, and conſumed, and almoſt in a Maraſmus.

If the Diarrhœa comes from the Brain, the Stools are frothy, as *Hippocrates* taught, Aphor. 30. Sect. 7. which is not alwaies ſo; For Flegm may flow from the brain without Wind, which is the only cauſe of froth: as alſo Wind may be mixed with Humors that are bred or contained in the ſtomach or inteſtines, from whence the Excrements may be frothy, though they come not from the Head.

Therefore we muſt joyn other Signs to this, namely, If the Brain have any manifeſt Diſeaſe, as a Catarrh, Deafneſs, Lethargy, Apoplexy, or great Heavineſs, Pain, or Sleepineſs; and if the Flux be more at night than day.

If it come from the fault of the Stomach, there wil be the Signs of the Concoction of the Stomach Hurt; As if the Food be corrupted, and have a ſharp and ſtinking quality, by which the Expulſive Faculty is ſtirred up to expel them.

Alſo there wil then be the Signs of a Hot Diſtemper of the Stomach: So, if the Stools be Crude and Flegmatick, and if Concoction be ſlow and diminiſhed, we argue that the Concoction of the Stomach is hurt by a cold Diſtemper: and laſtly we know that the fault is in the Stomach, if the Patient did before fill himſelf with evil Food which would eaſily corrupt.

The Flux of the Belly comes from the Guts, when they are ful of Worms, and then there wil be ſigns of Worms which you may take from their proper Chapters.

If from the Liver, The Stools wil be Cholerick, becauſe Choller is bred there; and there wil be Signs of a Hot Diſtemper, Inflamation, Obſtruction, and other Diſeaſes of the Liver.

If from the Spleen, The Stools wil be commonly black or blackiſh, a diſtention in the left Hypochondrion, a heavineſs alſo or pain there, and other ſigns of the Spleen Diſtempered wil appear.

If from the Meſentery, There wil be extenſion, ſtretching, or pain in that part: But Humors gathered in the Meſentery, come commonly from the Liver and Spleen.

If from the Womb, There wil be ſtoppage of the Courſes, or the Symptomes of the Womb affected, which uſe to be more violent, and the Flux alſo at that time when the Terms ought to flow.

The

The Prognoſtick of a Diarrhœa is made thus,

A Flux of the Belly which is eaſily endured, and in which the Patient finds refreſhment, is good: On the contrary, that which is painful and weakneth, is evil: The firſt is to be accounted Critical, the laſt Symptomatical.

When the Liquid Excrements grow thicker, it is good: For it ſignifieth, That the Faculty Worketh well by Concocting of evil Humors: which is done by making them thick.

Thin Excrements with pain often voided are evil, for they ſignifie great ſharpneſs of Humors which do violently pul, ſtimulate, prick, and gnaw the Guts.

Liquid Stools without Feeling when they are voided, are evil: For they either ſignifie Diſturbance of Mind, or Doting, or Diſſolution of the Natural Heat, which is followed by the loſs of Senſe.

Liquid Stools beginning with an acute Diſeaſe, and continuing with the ſame, is evil: for it ſignifies great plenty of Matter, or an evil quality therein, which forceth Nature to ſo ſudden a flux.

If a ſtrong Diarrhœa comes upon him who hath the Leucophlegmatia, it cauſeth recovery, *Hipp.* Aph. 29. Sect. 7. For there is an Evacuation of the Matter, which was in the whol Body. But this wants a limitation. The Aphoriſm is true, if this flux happen in the beginning of a Diſeaſe while the ſtrength is good; otherwiſe it doth not take away the diſeaſe, but the Patient.

If a Woman with Child have a flux of the Belly, ſhe is in danger to miſcarry; *Hipp.* Aph. 34. Sect. 5. For the food which ſhould nouriſh the Infant, is for the moſt part carried away, and the ſtrength is abated; as alſo the Ligaments of the Womb are relaxed by a continual flux of Humors thither; as alſo the Child and the Womb are infected by the vapor of thoſe excrements which are continually voided.

Yellow Stools like Yolks of Eggs; green, like Verdegreece; livid, black, of divers colors, or very ſtinking, are evil: For the reaſon which we gave in the Chapter of Vomiting.

As to the Cure: Since a Symptomatical Diarrhœa comes commonly from corrupt Humors, Chollerick, Flegmatick, Melancholick, or Serous, and eſpecially from Chollerick, which provoke the expulſive faculty of the Inteſtines by their ſharpneſs. You muſt begin the Cure by Evacuation of the Humor offending, which muſt be done by a Medicine which doth aſtringe by purging, leſt that flux ſhould be encreaſed by motion of the Humors; and you may make it thus:

Take of *the beſt Rhubarb one dram: Citrine Myrobalans half a dram: Yellow Sanders half a ſcruple: Infuſe them in Plantane Water, diſſolve in the Liquor ſtrained half a dram: the pouder of Rhubarb, and one ounce of Syrup of Roſes. Make a Potion.*

You may ad Diacatholicon, or other Medicines, according to the condition of the Humor to be purged.

Alſo Vomiting is ſomtimes good, becauſe it Revelleth and Evacuateth the Matter of the Diſeaſe.

If there be ſigns of blood abounding, and ſtrength, you muſt firſt let blood. And if there be a Feaver, you muſt open a Vein, though there appear no Plethory, or fulneſs.

Before and after Purging, give cleanſing Clyſters, ſuch as theſe:

Take of *whol Barley two pugils: Bran and red Roſes, of each one pugil: Liquoris ſcraped, and Raiſons whol, of each one ounce: boyl them to a pint: Diſſolve in the ſtraining of white Sugar one ounce; Yolks of Eggs two. Make a Clyſter.*

After the Body is ſufficiently emptyed, you muſt give aſtringents, and ſtrengtheners, both at the Mouth, and by Clyſters, as alſo to the Belly; the Forms whereof you may take out of the Cure of Dyſentery.

Beſides, You may conveniently uſe theſe that follow:

Take of *Chalybeat Vinegar one part: Chalybeat Water two parts: the Leaves and Fruit of Myrtles, Quinces, Medlars, Cervices, of each two handfuls: Cypreſs Nuts ſix pair, boyl to halfs. Foment the Belly warm with the ſtrained Liquor often.*

Take of *Oyl of Maſtich, Quinces, and Myrtles, of each one ounce: Sanguis Draconis, Frankinſence, and Gum Traganth, of each one dram: Wax as much as will make an Unguent to anoint after the Fomentation.* Or,

Take *Crums of toaſted Bread infuſed in Chalybeat Water, and Quinces roaſted in the Embers, or Marmalade, of each three ounces: Frankinſence, Maſtich, Sanguis Draconis, of each two drams: With Syrup of Quinces and Wormwood, make a Cataplaſm.*

Take of *Maſtich two drams: Boyl it in three pints of Water for ordinary drink, Iron Water is alſo good; but in a hot Diſeaſe, it is good to uſe the Tincture of Roſes, or Conſerve of Roſes mixed with Spring Water, or Water wherein Gold hath been quenched, mixed with Syrup of Quinces.*

Amatus Luſitanus reports of one that was cured of a Chollerick Diarrhœa by taking much cold

Water in the Summer time. We also once prescribed to a Sanguine man who was troubled with a Chollerick Diarrhœa in the midst of Summer with great thirst, Sal Prunella in his ordinary drink, and Juleps made of Lettice and Purslain Water to be taken thrice in a day, and he was cured in twenty four hours.

If the Humor be very sharp, and adust or burnt, the Patient must be purged sparingly with mild Medicines, otherwise the Disease will encrease, and he is to be cooled and moistened; as also to be blooded a little.

In the same case a warm Bath is very good; the Example whereof is in our Observations.

Plantane boyled in Broth, is excellent.

And least a Diarrhœa turn into a Dysentery, you must give Clysters of Chalybeate Milk, and Emulsions of the cold Seeds, and of white Poppy Seeds, to asswage the sharpness of the Humor.

As also this Syrup following.

Take of *the Juyce of Quinces six ounces: the Juyce of Endive and Sorrel, of each three ounces: Sorrel and Plantane Seeds, of each two drams: red Coral one dram: Plantane Water four ounces: Boyl them to the Consumption of half: strain and press them well; put to it as much Sugar to make a Syrup to be taken two drams first and last.*

In al Diarrhœa's, after universal Medicines, this following Bolus is good.

Take of *Conserve of old Roses half an ounce: Candied Quinces one dram: the pouder of Tormentil one scruple: With Sugar make a Bolus to be often repeated. Or if the Disease be old you may make an Opiate of the same, or the like, in a greater quantity to be taken at many times.*

Or to astringe more powerfully give this Pouder:

Take of *Sanguis Draconis, Frankinsence, Mastich, Mummy, Terra Sigillata, Lapis Hæmatitis, or Blood-stone, Troches of Amber, of each one dram: true Bole three drams: make a Pouder, of which give two drams in convenient Liquor.*

Rhubarb twice infused, and then twice or thrice washed in Rose Water and dried, is good.

The Lozenges of the three Sanders, with four times the quantity of Rhubarb given twice in a day, the weight of two drams, do take away the Matter, and strengthen the Bowels.

The Leaves of Fleabane laid upon fire so that the smoak may be taken through a hollow Chair, do stop the flux of the Belly by a specifical quality. As also if the same Herb be beaten with Vinegar, and applied to the Stomach.

Also the smoak of Mullin taken through a hollow Chair, is excellent; the example of which is in our Observations.

Syrup of Coral is excellent, and much more the Tincture or Magistery of the same.

The Conserve of the wild Rose, or sweet Bryar Rose, is good against a Chollerick flux, especially if it be mixed in astringent Opiates.

But when there is danger of weakness through a long and often flux, you may give Laudanum with Mastich and Terra Sigillata.

When it is very violent, a Clyster of Broth and new Treacle is excellent.

Pils of Bdellium taken twice or thrice in a week, or every other day, are good against al old fluxes.

For the same is the often use of Medlars; as *Forestus* confirms by experience, obs. 1. lib. 22. in these words: *One that had a constant Flux, and spent all he had upon Physitians, came to me for counsel, whom I advised to eat Medlars, though green, as many as he could, by which he was speedily cured. As it was with a Zeland Merchant that came to* John Spirinchius, *a Physitian of* Lovan, *who having been long sick, and of a Dysentery at last, and could not be cured by any, was at length by his advice cured only with Medlars, and gave the Physitian three hundred Crowns for his advice.* Thus Forestus.

But we must observe that the Body before the use of Medlars be cleansed from Excrements.

In an old Diarrhœa, the following Medicines are excellent:

Take of *the shavings of Ivory three drams: Confection Alkermes one dram: Sugar dissolved in Rose Water four ounces. Make Lozenges.*

Take of *Crocus Martis six grains: Bezoard Mineral half a scruple: Conserve of Roses two drams: Spirit of Vitriol three drops: Mix them in a Bolus to be given twice a day, long after and before Meat.*

Take of *the Juyce of Persicaria Maculata, and of the great Housleek, of each three ounces: boyl them till the third part be consumed, and give them in the morning, they do certainly cure any flux though very old.*

Mercurius Diaphoreticus given some daies together, twelve grains at a time, taketh away all the impurities of the Body, which use to beget fluxes.

The Decoction of Juniper Berries in Wine given three daies together, is good; and also one dram of the Pouder of Grashoppers given in white Wine. These two by deriving the Matter of the flux to the Ureters.

The

The Decoction of Juniper is thus made:

Take of *Juniper Berries one handful: red Wine one pint and an half: boyl them to the conſumption of two thirds. Let him take the ſtraining three daies together.*

The Water of Brimſtone Mines cure an old Diarrhœa by purging the whol Body, and by ſtrengthening the Stomach. Of which there is an example in our obſervations.

If a Diarrhœa come from a Catarrh, you muſt look to the Brain, as the part that ſends it, with the Medicines preſcribed in the Cure of a Catarrh. But if it depend upon the Obſtruction or weakneſs of the Liver or Spleen, you muſt cure them as ſhal be ſhewed in their proper places; and then there is little or no uſe of aſtringents. *Platerus* in the Cure of the Hemorrhoids, ſaith that hot blood given as a Clyſter, doth wonderfully cure a flux.

Chap. 6. *Of* Dyſenteria, *or Dyſentery.*

A Dyſentery is an often and bloody looſneſs of the Belly, with pain and torment depending upon the ulceration of the Inteſtines.

The word *Dyſenteria* is taken commonly among the Antients for every bloody flux of the Belly: but ſtrictly and properly it is taken only for the bloody flux, which comes from an Ulcer in the Inteſtines.

Gal. 3. de ſymp. cauſ. cap. 2. nameth four kinds of bloody fluxes, which he commonly calls Dyſenteries.

The firſt is when any part of the Body is cut, or when any exerciſe is omitted, or any bleeding is omitted, as uſual bleeding at the Noſe and Hæmorrhoids, that by reaſon whereof the blood abounding is ſent by the Meſeraick Veins to the Inteſtines, and ſo evacuated by the Belly.

The ſecond is, when by reaſon of the weakneſs of the Liver, Watery blood like that water wherein fleſh hath been waſhed, is voided; as it is in the Hepatick or flux of the Liver, of which we ſhal hereafter ſpeak.

The third is when Melancholick and ſhining blood is caſt forth, which by reaſon of the long continuance in the Liver or Spleen is burnt, and mixed with Melancholly. Shining ſignifieth burning, becauſe blood which groweth black by cold doth not ſhine, but loſeth that brightneſs or ſplendor which it had before.

The fourth Difference, is when the Patient at ſome ſhort diſtance voids blood with Humors or Excrements, with which ſomtimes there is mixed Pus or Matter, and that with pain and torment, by which we may conclude that there is an Ulcer of the Guts. And this is properly called a Dyſentery, of which only we here diſcourſe.

The Internal Cauſes of a Dyſentery, are ſharp and ulcerating Humors, as yellow Choller, green like Leeks or Verdegreece, and black; as alſo ſalt flegm bred in the Head from great heat, or in the Belly by putrefaction, and ſo brought to the Inteſtines, where cleaving a long time, it doth ulcerate.

Here is a great Doubt propounded by Authors; How yellow Choller in a ſhort time ſhould cauſe a Dyſentery? When green Choller in a long time maketh only a Diarrhœa, which never turneth into a Dyſentery, ſince the green is made of the yellow by aduſtion, and hath more ſharpneſs.

Mercatus anſwereth, That there muſt be a clammineſs, by which it may remain long in the Guts to corrode and gnaw them, as wel as a ſharpneſs. And therefore if yellow Choller be ſuch, it cauſeth a Dyſentery; on the contrary, if green Choller be more fluid, and ſtay leſs while in the Guts, it makes but a ſimple Diarrhœa.

Sennertus ſaith that this anſwer is probable; but it doth not ſatisfie, becauſe oftentimes there are fluxes, in which there is clammineſs with ſharpneſs, and yet there is no Dyſentery. And contrarywiſe, often times there is no clammineſs in Chollerick Humors which cauſe a Dyſentery, and therefore he thinks that the Humors which produce a Dyſentery have a peculiar occult quality, with which the Inteſtines are offended and ulcerated, as the Lungs are with the fiſh Lepus, and the Bladder with Cantharides, and no other part. And he proveth that malignant quality in that a Dyſentery is contagious for the moſt part, ſo that the infections which come from the vapors riſing from the excrements of thoſe that have a Dyſentery, do only infect the Guts of them that are infected, and not upon other parts. The ſame happeneth in other Epidemical and infectious Diſeaſes, in which the poyſon doth go only to ſome peculiar part; ſo their Pleureſies, Peripneumonia's, or Impoſthumes in the Lungs, and Squinzies which are infectious. So the Poyſon of a mad Dog doth only infect the Head. This is more cleer to be ſeen in Purging Medicines, which have a peculiar vertue to move the Humors in the Body, and bring them to the Guts, which wil not only, being taken at the Mouth, purge by ſtool, but laid to the Navil are taken by vapor at the Noſe; it is probable that they piercing into the Veins and

Arteries by the Pores of the Skin aud extremities of the Veſſels, do ſtir up motion, and Fermentation or working in the Humors, becauſe the bad Humors are ſeparated from the good, and by pricking or ſtimulating of Nature, they are driven to the Inteſtines by the force of the Medicine, directing the expulſive faculty to thoſe parts. By the ſame reaſon, but after another manner, do Sudorificks, or Sweating Medicines, and Diuretick, or ſuch as provoke Urine work; the former forcing the Humors to the Skin, the latter to the Bladder. From which we may collect that the infection of a Dyſentery, by what manner or part ſoever it is admitted into the Body, doth cauſe a certain fermentation or working in the Humors by giving them a Diſpoſition like it ſelf; which being an enemy to the Guts, doth provoke the flux of the Humors to them, by which they are ulcerated; and they being infected with the like diſpoſition, do infect the Humors and Nouriſhment; from whence comes a true and proper Dyſentery.

It is demanded of divers Authors, What is that ſnotty and white Matter which is voided in ſuch great plenty in Dyſenteries, mixed with Blood and other Humors? Some think that it is the fat of the Guts; others that it is that with which the Inteſtines are lined for the better paſſage of the excrements; others, that it is flegm from the Head or other parts; others, that it is Pus or Matter from the Ulcers. But we conclude, That it is nothing elſe but a preternatural excrement of the Guts; for they being decayed from their Natural Conſtitution, cannot convert their proper Nouriſhment into their own ſubſtance, but by an imperfect way change it into that Matter; which when it is unfit for nouriſhment of thoſe parts, is expelled forth, and then the parts wanting again Nouriſhment, attracteth or draweth new, which is changed as the former, and there muſt needs be a great encreaſe thereof, becauſe the part affected continually draweth Blood from the Veins, which is changed into this ſlimy ſubſtance, by which it is deceived of its expectation, and therefore again draweth new for its Nouriſhment, which it continually aimeth at, but cannot turn into its own ſubſtance, but into this ſlimy Matter, of which there is ſo great an encreaſe. The ſame thing is done in other parts, and eſpecially in great and profound or deep Ulcers. For the part Ulcerated when by reaſon of its evil diſpoſition, it cannot be wel nouriſhed, draws blood continually from the Veins, which is changed into Pus or Quittor, by which means the whol body by degrees conſumeth. Nor doth this befal only parts ulcerated, but others that have no Ulcer or Impoſthume; ſo that although the aforeſaid Excrement be like Quittor, yet is not true Pus or Quittor; for that comes only from an Ulcer or Impoſthume. This chiefly appears in an Ophthalmy or Inflamation of the Eyes, in which when there is no Ulcer or Impoſthume, there is a continual Excrement like Quittor, which comes only from the diſtemper of the part, and the depravation of the Homiofis, or quality by which it makes Nouriſhment like it ſelf. The ſame befals men in Aſthma or Ptiſick, and other Diſeaſes of the Lungs, for their Lungs being diſtempered, do il concoct their own Nouriſhment, but turn it into an Excrement like Quittor, which is expelled by coughing, and yet they have no Ulcer in their Lungs; as many learned Phyſitians wil conclude when they ſee the Matter.

The External Cauſes of a Dyſentery, are al things that produce ſharp and evil Humors, or give them being produced, a diſpoſition to cauſe a Dyſentery. The principal are, ſharp Meats, or very ſubject to putrefaction, as Fruits ſoon rotten, and al unripe things, Waters that are drunk ordinarily, wherein there is Crudity or a Mineral, and Medicines which are deadly qualified, and evil Air, as *Hipp.* Aph. 11. Sect. 3. when the Winter is too cold or dry, the Spring too wet, and too full of South winds, then there wil be Dyſenteries in the Summer. And Aph. 12. Sect. 3. If the South wind blow much in Winter, and it rain much: but if it be dry, and the North wind blow much, in the Spring, thoſe ſeaſons produce Dyſenteries.

But the proper Diſtemper of the Air to produce a Dyſentery is known in a contagious or Epidemical Dyſentery, which ſometimes is more dangerous than others. As alſo there is an Infection in the Excrements of thoſe that have this Diſeaſe to them that ſmel them, and if they be caſt into the Privy they infect moſt of the Family that ſit over them.

The Signs of a Dyſentery are taken out of the Definition mentioned, an often bloody Evacuation with pain and torments of the Belly, and ſometimes a Feaver, watching, thirſt, loathing of Meat and other Signs common to many Diſeaſes.

But it is hard to know whether the thick or thin Guts are ulcerated. Uſually if the pain be above the Navil, they ſay it is in the thin Guts, and if below, in the thick; but this is contrary to reaſon, becauſe both the thin and thick Guts are carried both to the ſuperior and inferior parts. Therefore this ſign is rather to be taken from the quality of the pain, and the excrements. For if the thin Guts are affected, there is vehement pain, like pins pricking, becauſe they are more Membranous, and of more exquiſite ſence. As alſo they go not to ſtool preſently after the pain, and there is blood in every ſtool; for becauſe the Blood and purulent Matter comes far before it be voided, it is more mixed with the Dung; but if the thick Guts are affected, the pain is leſs vehement and lathing, there is preſently after a going to ſtool, the Blood and Matter ſwim upon the excrement, or are very little mixed, and in a great Ulceration there are as it were little pieces of fleſh.

The

The Signs of the Cauſes are taken eſpecially from the Colour of the Excrements, when they are yellow, green, white, or black, to which you may ad the Signs of Humors abounding from the Age, Temperament, time of the yeer, and courſe of Life.

The Prognoſtick is thus made,

If the Thin Guts are Ulcerated there is more danger, for they are more Nervous, and being neerer the Liver they receive more pure Choller.

Dyſenteries coming from black Choller, or Melancholly, are deadly; *Hippocrates*, aph. 24. ſect. 4. becauſe the Ulcer grows Cancerous, which is ſeldom Cured outwardly in the body. But if this Melancholly comes by Criſis, of Judgement, it is not ſo dangerous. But you muſt beware leaſt you take Congealed blood for Melancholly.

A Dyſentery from Choller or ſharp Diet is eaſily Cured: from ſalt Flegm it is worſe than from Choller, becauſe by reaſon of the Clammineſs it ſtayes longer in the Guts to ulcerate.

In long Diſeaſes of the Guts, Loathing of Meat is evil, and worſe with a Feaver: *Hippocrates*, Aph. 3. Sect. 6.

If in a Dyſentery there be as it were little pieces of Fleſh voided, it is deadly: Aphor. 26. Sect. 4. for it ſignifieth a deep Ulcer which takes away pieces of the guts.

Much Watching, Stools without mixture of Humors, black, ſtinking, much blood, a Lientery coming after, Hickers, Chollerick Vomits, pain of the Liver, Midriff, great thirſt, do commonly declare that it is deadly.

A Dyſentery coming to thoſe which have the Gout or a Diſeaſe in the Spleen, is good: *Hippocrates*, 2. progn. & aph. 46. ſect. 6. but this is rather a ſimple Diarrhœa which ſends forth the matter of thoſe Diſeaſes.

Old Men and Children more commonly in this Diſeaſe than Men of middle Age, *Hipp.* 2. *progn* Children becauſe of their tenderneſs, and their not obſerving rules: Old Men becauſe their ſtrength is ſpent, and becauſe there is a great overthrow of their natural ſtate thereby: for they do not eaſily produce excrements that are fit to cauſe a Dyſentery.

The Cure of this Diſeaſe is wrought by Medicines that aſſwage, cleanſe, and evacuate ſharp humors that Conſolidate and dry Ulcers and ſtop the flux.

At firſt you muſt evacuate the Humor offending leaſt it do more miſchief, and you muſt Purge often; and if you think it not ſafe to purge every day or every other day, do it every third or fourth day: Rhubarb is the beſt for this purpoſe, either given in ſubſtance with Broth, or made into a Potion, as in Diarrhœa, Or thus,

Take of *Plantane half an handful*: *Liquoris ſcraped, and whol Raiſons, of each three drams*: *Red Roſes one pugil*: *Tamarinds ſix drams*: *yellow Myrobalans rub'd with Oyl of ſweet Almonds, two drams*: *boyl them to three ounces*: *Diſſolve in the ſtraining, of Rhubarb infuſed with Lavender in Plantane Water one dram*: *Syrup of Quinces one ounce*: *Make a Potion*:

Or,

Take of *Tamarinds half an ounce*: *Citron Myrobalans, two drams*: *boyl them in Barley and Plantane Water, infuſe in the ſtraining, of Rhubarb one dram and an half*: *yellow Saunders half a ſcruple*: *to four ounces of the ſtraining ad one ounce of the ſyrup of Roſes ſolutive*: *make a Potion.*

The Decoction of Myrobalans made thus, and given in many Draughts, is Commended of many.

Take of *the rinds of Myrobalans Chebs, ten drams*: *Citron Myrobalans five drams*: *Currans two ounces*: *boyl them in twenty ſix Pints of Water, to the Conſumption of the third part*: *ſtrain them, and adde ten drams of Sugar, clarifie it, and put to it half an ounce of Cinnamon.*

Penotus Commends the following Potion as good againſt both Dyſentery and Diarrhœa.

Take of *the Bark of Guajacum beaten two ounces*: *boyl them to halfs in a ſufficient quantity of Water, adding of red Roſes, Pomegranate Flowers, and Plantane, of each two drams*: *boyl them for an hour, and then adde to the ſtraining of powdered Rhubarb one dram*: *Diacatholicon, three drams*: *make a Potion.*

Many give Parched or Torrified Rhubarb, that the Purging Quality may partly be taken away: But *Amatus Luſitanus* takes the ſecond Infuſion of Rhubarb, and ſaith, That in the firſt Infuſion all his ſharpneſs is taken away, and it is better ſo than Parched, for by ſo doing it is burnt.

The Preparation is thus made:

Take of *Rhubarb one dram and an half*: *infuſe it in three ounces of Plantane Water ſome few hours, ſtrain it, preſs it gently, and then infuſe it again in three ounces of new Plantane Water, and diſſolve in the ſtraining half an ounce of Caſſia*: *make a Potion.*

If you deſire, by reaſon of the abundance of crude Humors, to Purge more, then you may make Syrup of Roſes, or Diacatholicon, or other mild things, but beware of ſtrong.

Sometimes

Sometimes a Vomit is very good, if the Patient be inclinable, and the Humors ſtand in the Stomach; for it makes a revulſion of the Humors from the part affected. Which *Amatus Luſitanus* wiſely mentioned, Curat. 44. Cent. 2. in theſe words: *If the Phyſitian can draw upwards, and caſt out by Vomit a Humor that is Chollerick and ſharp, flowing to the Guts to make a Dyſentery, it would be contrary to the Precepts of* Galen, *in his Book of Medicinal Art, and Method of Cure, to carry the matter by the Guts which are full of Ulcers. But when the Phyſitian cannot do it, although he ought to try his beſt skill, he muſt then uſe Purges, and eſpecially Rhubarb.* This *Hippocrates* taught, Aph. 15. Sect. 6. *After a long flux of the Belly, if Vomiting come of it ſelf, the diſeaſe is cured.* But *Galen* in his Comment upon this Aphoriſm, ſaith, *That this is the example of thoſe things which are done rightly by Nature, which a Phyſitian ought to imitate.* And *Mercatus* confirms the ſame in theſe words: *Divert the Humors another way by bleeding if thou canſt; alſo purge, and Vomit, eſpecially in ſalt flegm, for thus we have ſeen old Dyſenteries cured.*

Angelus ſala preſcribeth this following Vomit in a Dyſentery:

Take of *Salt of Vitriol half a dram, or a dram: Syrup of Quinces, and Bettony Water, of each one ounce: Cinnamon Water ten drams: Mix them and drink it off.*

There is great Diſſention among Authors concerning Blood-letting in this Diſeaſe. And it is the Opinion of the wiſeſt, that in a Feaver and Inflamation of the Inteſtines (which is commonly joyned with an Ulcer) that it ought to be in the beginning of the Diſeaſe, before the ſtrength be decayed by it: for ſo there is a revulſion of Blood, and ſharp Humors flowing to the Guts. And *Valeſcus de Taranta*, and *Amatus Luſitanus* in an old Dyſentery drew Blood. *Valeſcus* ſaith, *That a very old man had a Dyſentery three months; I being ſent for, when other Phyſitians oppoſed it, commanded a Vein to be opened, he preſently amended.* And *Amatus* ſaith thus; *That an honeſt Phyſitian went to a man, who had a Dyſentery thirty daies with a great Feaver, and after the uſe of divers Medicines was brought very low, and lean, his flux continuing with much Blood, and drew Blood from the Liver Vein of his right Arm: and obſerve with what ſucceſs; Preſently, miraculouſly the blood ſtopped, though his flux continued. But by Clyſters with Sugar, and aſtringent Medicines, both internal and external, his belly was bound, and he cured.*

In the mean while give many Clyſters, firſt aſſwaging, mild, and cleanſing; then glutinous and aſtringent; and ſometimes in one Clyſter all together, or moſt of them.

Mild, gentle, and anodine Clyſters that aſſwage pain, are made of Milk, either alone, or with two or three yolks of Eggs, or with the Mucilage of Fleabane Seeds and Quinces, of each four ounces; with Sugar or Honey of Roſes one ounce; Goats Suet one ounce; or with Milk wherein Gold, Iron, or Flints have been quenched, that the ſerous part may be conſumed, and ſo it may be more glutinous.

In want of Milk, you may give Almond Milk, or Barley Cream, or Rice Milk, alone or together; as alſo the Broth of Mutton, Chicken, Capon, or a Sheeps Head, and mix the former things therewith. It is uſual to boyl Roſes, and the Herb Hort-tail with a Sheeps Head. Or this following:

Take of *Marſh-mallow Roots one ounce: cleanſed Barley, or Rice one Pugil: Lin-ſeed and Quince ſeed, of each one ounce: Fleabane ſeed half a dram: Chamomel flowers one pugil: Boyl them in Milk or Broth, adding the Suet and Yolks of Eggs, and other things before mentioned.*

Or you may make it of Milk alone, boyled with Marſh-mallow Roots at the firſt, to cleanſe and aſſwage the pain.

If the Pain be great, you muſt mix Narcoticks; as Philonium Perſicum, one or two drams: Pils of Hounds-tongue one or two ſcruples: Syrup of Poppies one ounce and an half: Laudanum five or ſix grains, in your Clyſters.

If there be an Inflamation in the Guts, which may be known by conſtant pain, and increaſing when it is touched, alſo by a Feaver and dryneſs of the Tongue; let blood again, give Clyſters of Roſe Water, with Salt of Lead, and foment the Belly with Oxycrate, or Wine and Water.

Alſo you may give Salt of Lead at the Mouth to ten grains, with Conſerve of Roſes.

Cleanſing Clyſters are made of Barley Water, Bran, red Roſes, Sugar or Honey of Roſes.

But for the greater cleanſing and glutinating the Ulcer, ad one dram of Turpentine diſſolved with the Yolk of an Egg. When the Ulcer is more foul, you muſt uſe greater cleanſers, as Beets, Pellitory of the wal in the aforeſaid Decoction. The ſtrongeſt Cleanſers are, Centaury, Wormwood, Gentian, Brine or Pickle, from *Galen* 12. Meth. Cap. 1. and the like; the uſe of which is now very rare.

Zacutus Lucitanus durſt uſe Arſenick, and yet with good ſucceſs; as you may ſee Obſ. 18. Lib. 2. of his Admirable Practice of Phyſick.

Some Chymicks uſe of the Oyl of Wax in Clyſters one dram; and anoint the Belly with the ſame.

To glutinate or heal up the Ulcer, firſt uſe gentle Dryers in Clyſters, and a little aſtringent; then ſuch

ſuch as are more drying and binding. Therefore make them firſt of Chalybeat Milk, in which Roſes have been boyled, or of Barley Water, or Water of parched Rice, and red Roſes one pugil, adding to both Clyſters two Yolks of roaſted Eggs, ſometimes Honey of Roſes; and when you will have it work better, one ounce of the Juyce of Plantane.

To bind and glutinate more, make it thus:

Take of *the Roots of Comphry and Mullein, of each one ounce: Plantane and Comphry leaves, of each one handful: red Roſes, and parched Barley, of each one pugil: Myrtles two drams: Make a Decoction in Ciſtern Water; in one pint of the ſtraining, diſſolve of Honey of Roſes one ounce; one white of an Egg, or one ounce of the Mucilage of Gum Traganth, Goats Suet two ounces: the Juyce of Yarrow and Knot-graſs one ounce. Make a Clyſter.*

Take of *Snakeweed Roots, or Tormentil, one ounce and an half: Shepheards-purſe, Knot-graſs, Horſtail, and Mouſear, of each one handful: Pomegranate flowers, Acorn cups, Cypreſs Nuts, of each two drams: parched Rice one pugil: make a Decoction in Forge Water: in a pint of the ſtraining diſſolve two ounces of the Juyce of Plantane, and two Yolks of roaſted Eggs. Make a Clyſter.*

Angelus ſala wonderfully commends the following Clyſter:

Boyl a Sheeps Head cloven in two, till the fleſh come from the bones, add to the Broth ſtrained of the tops of St. Johns Wort two or three handfuls; Tormentil Roots groſly bruiſed two ounces: Infuſe them three or four hours upon the Embers. Let the ſtraining be twice or thrice given as a Clyſter.

The Juyce of Plantane alone, or with the Milk or Barley Water, is good.

Gum Traganth two drams, or the Infuſion of it in Roſe or Plantane Water, is good to put in Clyſters; or it makes a very good one if it be mixed with Juyce of Plantane and Goats Suet inſtead of Gum Traganth. Or with it you may with profit uſe Gum Arabick, Frankinſence, Maſtich, and Sarcocol. All which being diſſolved in the aforeſaid Liquors, do work by glewing, neither do they exaſperate the Ulcer as the ſtrong Aſtringents. *Amatus Lucitanus* doth much approve Clyſters made of them, becauſe they do cover, as with a Plaiſter, the internal Superficies of the Guts againſt the gnawing of the Matter; he makes them thus:

Take of *Barley Water ten ounces: one white of an Egg well beaten: Gum Arabick and Goats Greaſe, of each half an ounce: Oyl of Roſes two ounces: Bole-Armenick and Gum Traganth, of each one dram: mix them for a Clyſter.*

But leſt thoſe Emplaſtick Clyſters ſhould faſten the ſharp Matter, and ſhut it up by their clammineſs, you muſt uſe cleanſing Clyſters alſo, which muſt not be long retained; and you muſt ſometimes uſe cleanſing Clyſters intermixed with aſtringent.

In the aſtringent you may put Acacia, Hypociſtis, or Conſerve of Sloes, Sanguis Draconis, Bloodſtone, the Juyce of Maddir taken out with Roſe or Plantane Water, Bole-Armenick, Terra Sigillata, or ſealed Earth, the Troches of Amber, and the white Troches of *Rhaſis* to one or two drams. Other Pouders are hurtful, becauſe they ſettle in the Liquor, and provoke the part to pain.

And it is better to infuſe the aforeſaid Pouders in Liquor, or in a Decoction, and to give them ſtrained.

While you give Clyſters, you muſt give at the Mouth, Medicines of the ſame Nature, and that oftener when the upper Guts are ulcerated, to which the Clyſters cannot reach.

If there be no Feaver, you may profitably, when you intend to cleanſe, give Goats Milk; and when you intend to glutinate, Cows Milk, both with Sugar of Roſes. But Chalybeat Milk, that is, Steel infuſed, doth knit or glutinate better; three ounces thereof with Juyce of Plantane, and Sugar of Roſes, of each one ounce, make an excellent Medicine. Or boyl Comphry Roots in Steeled Milk.

Or make Bread of the fineſt Barley with Yolks of Eggs, and ſet it into the Oven after the Bread is drawn: Crum Milk and Sugar therewith till it is as thick as a Pultis; of which let him take five or ſix ſpoonfuls twice or thrice in a day.

Veal broth boyled very long doth aſſwage pain in the Ulcers.

And Cream of Rice doth heal them up.

Lerius reports in his Hiſtory, That many troubled with Dyſenteries, in a long voyage almoſt ſtarved, and were cured with Rice boyled in Milk with Yolks of Eggs, and Juyce of Ground Ivy.

Alſo you may boyl Rice in Almond Milk, in which Gold hath been quenched.

Cream of Barley with Sugar doth cleanſe and cool.

Broth made of Burnet with Butter, given three daies together morning and evening, doth much further the Cure, and the more if the Decoction of Burnet at the ſame time be given for ordinary Drink.

The Rinds of two greeniſh Oranges boyled in eight pints of Water for ordinary Drink, doth half the Cure.

Of

Of the Pouder of a dead-mans Skul one dram twice or thrice given in Broth or other convenient Liquor doth quickly cure perfectly.

Two ſpoonfuls of the Mucilage of Gum Tragacanth drawn with Roſe Water or Gum Arabick half a dram, may be diſſolved in al his Broths; as alſo one ſpoonful of the Gelly of Harts-horn is good.

After the Body is wel Clenſed, give aſtringent Decoction to compleat the Cure; which muſt be made of the Roots of Snake-weed, Tormentil, Comfry, Plantane Leaves, Yarrow, Shepherds-Purſe, Horſe-tail, Mouſe-ear, Agrimony, Plantane and Sorrel Seeds, Sumach, Grape-ſtones, Red Roſes, &c. in Cyſtern Water; diſſolving therein the Syrup of Quinces, Myrtles, or of dried Roſes, as alſo ſomtimes Acacia Hypociſtis, Conſerve of Sloes, Bole Armenick, Spodium or burnt Ivory.

The Juyce of Quinces boyled to the conſiſtence of a Syrup or Rob, without an addition given a ſpoonful or two often is very profitable.

The like Juyces may be made of Pears, Cornel, or Dog-tree Berries, and other ſharp Fruits.

Take *the Fat Guts of a Sheep, boyl them till the Liquor come to half a Porringer, then put a little ſweet Oyl thereto and let him drink it; if the Dyſentery be not very ſtubborn it cureth it at the firſt or ſecond draught.*

Oyl and Roſe Water given in equal parts do the ſame.

Let two yolks of hard Egs, and mixed with Roſe Water, be taken with Sugar and a little Nutmeg twice or thrice.

The Juyce of Plantane only given, three or four ounces at a time, or mixed with other proper things, is excellent; and if there be an inflamation it allayeth it.

Hollerius ſaith, That the Juyce of Ground-Ivy taken, hath ſaved many a mans life.

Juleps of Waters or Decoctions and Aſtringent Syrups are to be often given.

Syrup of Coral, as alſo the Tincture and Magiſtery thereof are very good, which muſt be taken often in a ſpoon; Or theſe following,

Take of *ſyrup of Grapes, Myrtles, and of Juyce of Plantane, Quinces, and dried Roſes, and ſyrup of the Juyce of Purſlain, of each one ounce: mix them for the uſe aforeſaid.*

In the end of a Dyſentery the Juyce of Wormwood and Mints wel purified, and made into a Syrup with Sugar, is very available: For Mints mixed with Wormwood hath great force to ſtrengthen the Stomach.

And if the Dyſentery came by eating much Fruit, in the beginning Syrup of Wormwood with Cinnamon or Treacle Water is excellent, if you at the ſame time uſe Fomentations and Emplaiſters to ſtrengthen the Stomach.

A Quince made hollow and filled with the ſhavings of Virgins Wax, roaſted under the Embers, given for ſome few days together, is a moſt proper Remedy.

Quercetanus makes the ſame Medicine of Pomum Curtipendulum made hollow and filled with Gum Arabick and Wax, of each one dram, then roaſted, and after 'tis eaten let him drink a draught of aſtringent Decoction.

Others roaſt a yong Pidgeon ſtuft with Wax, and give it for a dinner.

The uſe of Medlers, according to *Foreſtus*, cures old Dyſenteries, lib. 22. obſ. 1. which we mentioned in Diarrhœa.

Bruyerinus, *lib.* 8. *de re cibaria*, *cap.* 12. writes that he was Cured of a deſperate Dyſentery by eating raw Service-berries, by the advice of an Old Woman.

Nor let us omit the Oak Grape mentioned by *Martin Ruland*, which he ſaith is under the Earth upon the Roots of an Oak in Spring time, of a binding taſte, outwardly like Purple, inwardly white and like Milk, which dieth in Summer and turns to a ſtick, and therefore muſt be dried in the ſhade, and poudered in the Spring: He ſaith, That there is no more excellent Pouder to ſtanch Blood and Dyſenteries than this. Alſo *Encelius*, *Bauhinus*, and *Skenkius* mention the ſame.

In every Flux of putrid Humors let the Guts be ſtrengthened with bread twice baked, firſt boyled in Vinegar and then dried; after it is twice or thrice thus prepared, pouder it, and thicken Broth therewith.

Alſo there are many Pouders for this: As,

Take of *Snake-weed and Tormentil Roots, of each one dram: Red Coral and Pearl prepared of each half a dram: make a Pouder to be taken one dram at a time in Broth, or the like: You may make it more Aſtringent with Red Roſes, Myrtles, Pomegranat Flowers, Harts-horn burnt, or Ivory burnt, or Troches of Spodium: Or for more Binding, with Sanguis Draconis, Acacia, Galls, Bole Armenick, ſealed Earth, Blood-ſtone: And if you deſire to glutinate, alſo ad Fleabane-ſeeds, Starch, and Gum Tragacanth.*

The

The Eaſtern Bole, given one dram in Broth, doth cure the Dyſentery if ſufficient Purging went before. Or,

Take *Pouder of Tragacanth one dram*: *Nutmegs, Coral prepared, of each half a dram*: *mix them, and let it be given at twice or thrice with a rear Egg, or Broth.* Or,

Take of *Gum Arabick one dram*: *Coral and Bole prepared, of each half a dram*: *mix and uſe it as the former.* Or,

Take of *burnt Harts-horn, Bole Armonick, both Corals, all the Saunders and Maſtich, of each half a dram*: *Frankinſence and Tragacanth, of each half a ſcruple*: *mix them for a pouder of which take half a dram often.*

Foreſtus doth highly Commend the following Pouder,

Take of *Citrin Myrobalans and Rhubarb a little parched, of each one ſcruple*: *make a Pouder for one Doſe.*

Hercules Saxonia ſaith, That al new Dyſenteries are preſently, and ſurely Cured by this Pouder:

Take of *Cuttle-bone burnt two drams*: *ſponge dipt in Pitch and burnt in a Pot, and of Egg-ſhels the inward skins taken away, of each one dram*: *make a Pouder, the Doſe is one dram in a convenient Liquor.*

The Pouder of Elder-Berries is by Experience approved, it is preſcribed by *Quercetanus* in his Diſpenſatory, and there you may ſee the uſe of it.

You may give Opiates made after this manner,

Take of *conſerve of old Roſes and Quinces, of each one ounce*: *conſerve of Comfry Roots half an ounce*: *Coral prepared one dram and an half*: *Crocus Martis, Bole Armonick, ſealed Earth and Plantane ſeeds, of each one dram*: *Spodium two ſcruples*: *with ſyrup of dried Roſes or Myrtles make an Opiate*; *of which give the bigneſs of a Cheſnut twice or thrice in a day*; *Or with an equal weight of Sugar you may make a Compound to be uſed often.*

Mycleta Nicolai is good for the ſame.

Crato wiſely admoniſheth, That before the ſeventh day, before the Ulcers of the Guts are wel clenſed, you give no aſtringents at the mouth, nor externally, but after the ſeventh day you may begin with gentle aſtringents.

Montanus doth wholly forbid them, and uſeth only Clenſers, Aſſwagers of pain and thickners: But when the matter of the Diſeaſe is wel evacuated, the weakneſs of the retentive Faculty by which the Flux is nouriſhed, may be wel taken away with aſtringents.

Therefore it wil be profitable, after ſufficient Purging to give for many days Bole, Terra Lemnia, pouder of Elder-berries, or other aſtringents and dryers with Sugar, till the Patient be wel: but if too much binding ſeem to hurt, you muſt purge again, then bind and after purge; and you muſt obſerve that thoſe Earths do avail too wayes, namely by Binding, and by Oppoſing the evil quality which is in the Diſeaſe: And the Obſtruction which is feared by their uſe is taken away by Sugar mixed with them.

To allay Pain, and heal the Ulcer, this Electuary is beſt.

Take of *the mucilage of Quince-ſeeds, Comfry Roots, and Gum Tragacanth, all extracted with Roſe Water, of each one ounce*: *Starch one dram*: *Red Coral two drams*: *Bole Armonick prepared one dram*; *Pomegranate Flowers half a dram*: *Rob, or conſerve of Services, or Quinces two ounces*: *Sugar of Roſes one ounce*: *make it like an Electuary*: *the Doſe is two drams.*

Narcoticks, or things that bring reſt given at the mouth do wonders, for they take away pain, ſtop the Flux, provoke ſleep, and refreſh the ſtrength: but they are better when they are mixed with Aſtringents and Strengthners. As,

Take of *old conſerve of Roſes two drams*: *Laudanum three grains*: *Confectio Alkermes, half a ſcruple*: *make a Bolus.*

In a Malignant, and Epidemical, or Common Dyſentery, Medicines of Bezoar and Sudorifick, or Swearing Medicines, are powerful; for it is obſerved that by theſe Remedies, that the matter hath been diſcharged, and the Dyſentery cured: Therefore obſerve at firſt the nature of the Humor; for if it be Malignant, as in a Common Epidemical Diſeaſe it is, you ſhal in vain try other Medicines, except at the ſame time, and in the beginning you give Antidotes or Cordials. Here you may uſe al things proper to a Malignant Feaver: And beſides thoſe things that provoke Swear, as Bezoar and Aqua Theriacalis, or Treacle water; Harts-horn, ſealed Earth, Bole Armonick, Unicorns-horn, Coral, Amber, Scordium, St. Johns-wort, Plantane, Tormentil, Burnet, and many others are very good.

Outwardly to the whol Belly apply Oyl of Quinces and Roſes; or if you wil have it more aſtringent Oyl of unripe Olives, or put the third part of Vinegar to them, and boyl them to the Conſumption of the Vinegar: If the Stomach be Affected alſo, adde Oyl of Maſtich, and Wormwood.

After Anointing, Sprinkle the part with ſome Aſtringent pouder, made of Myrtles, Pomegranate peels, Galls, Cypreſs Nuts, Acron Cups, Red Roſes, Pomegranate flowers, Frankinſence and Maſtich; to which for the more binding, ad Bole Armenick and Terra Sigillata, or Sealed Earth.

Of the ſame Pouders without the Oyls, you may make an Ointment for the ſame Uſe, with a little Wax: Or, You may uſe Unguentum Comitiſſæ alone, or with other Ointments.

The Cataplaſm preſcribed before for Diarrhœa, and this following, if you will Bind ſtrongly, may be uſed:

Take of *Bole ſix drams*: *Frankinſence ſix ounces*: *Sanguis Draconis, Maſtich, and Mummy, of each two drams*: *make a Pouder, which you may apply to the Belly beneath the Navel if you mix it with Vinegar and the white of an Egg and lay it upon a Cloth.* Or,

Take *three ounces of Spiders Webs, and one white of an Egg well beaten: fry them in a pan, and apply them hot to the Navil.*

A Cataplaſm of Treacle and ſealed Earth to the Belly, is good in an Epidemical or contagious Dyſentery.

This following Cataplaſm to ſtrengthen the Liver, is much commended of *Solenander* in every flux, both of the Liver, called *Hepaticus*, and in a Dyſentery, and old Diarrhœa. Nor muſt you fear Aſtringents, ſaith he, becauſe they are tempered with things to ſtrengthen the Liver.

Take of *Liver-wort and Schœnanth, of each one handful*: *Indian Spike half a pugil*: *Maſtich, and Mace, of each half an ounce*: *Lignum Aloes three drams*: *Myrobalans Chebs, and Emblicks parched, of each one ounce*: *Bole, ſealed Earth, and Blood-ſtone, of each ſix drams*: *Coriander ſeeds prepared one ounce and an half*: *Spodium or burnt Ivory, two drams*: *Roſes one ounce*: *the Species of three Sanders without Camphire half an ounce*: *Ruſt of Iron prepared one ounce*: *Barley flower two ounces*: *Oyl of Maſtich and Myrtles, of each as much as is ſufficient*: *make an Emplaiſter to cover the whol Belly, from the Cartilage called* Enſiformis *or* Xiphoides, *to the* Os Pectinis, *or the Bone at the bottom of the Belly.*

You may alſo make a Fomentation for the whol Belly of a Decoction of aſtringent things made in Iron Water, with a little red Wine and Vinegar. Or,

Take of *red Roſes two handfuls*: *Wormwood and Mints, of each one handful*: *Nutmeg and Cypreſs Roots, Maſtich and Galangal, of each one dram*: *With a linnen cloth, make a bag as big as the belly, which being warmed in red Wine, or Vinegar, may be laid upon the belly.* Or,

Take of *Wormwood, Mints, Plantane, Oak Leaves, and tops of Brambles, Horſtail, and Knot-graſs, of each one handful*: *Chamomel flowers two pugils*: *red Roſes half a handful*: *Myrtles one dram*: *Seeds of Sumach, Plantane, and Coriander, of each ſix drams*: *Nutmegs three*: *make a Decoction in ſteeled Water, and red Wine for to foment the Belly.*

Rulandus doth apply a bag of Bran boyled in Vinegar.

If the pain be great, apply a linnen cloth wet in ſteeled Milk that is warm.

But if Fomentations wil not Cure, you may uſe Waters to ſit in called *Inſeſſus*. Theſe are commended by *Matthew de Gradi*, *Savanarola*, and *Jachinus*, who ſaith that they are a great ſecret for the Cure of Children, for by their actual heat they do drive the Humors ſomwhat towards the Skin; and by their aſtringent quality ſtop the flux. But you muſt not uſe them if the Body be very full of evil Humors; or if the Dyſentery be malignant, and joyned with a Feaver. They are made of Oak buds, green Cypreſs Berries, green Pine-nuts, or Leaves, Barks, and other ſuch like boyled in Water, of the aforeſaid Decoctions for Fomentations.

You may make Fumigations that the Patient may receive the vapor of them through a hollow Chair.

Eſpecially a Decoction made of Mullein, and the Fume thereof received, is commended in this Diſeaſe, and alſo for a Diarrhœa.

Faventinus commends a Fumigation made of Turpentine caſt upon a hot Iron, taken up into the Body twice a day.

And he commends alſo this Fomentation:

Take of *Balm one pound*: *Mullein one handful*: *Put them in a long bag; boyl it well in red Wine and ſtrong Vinegar, and apply it to the Fundament.*

Rulandus uſeth a Decoction of Acorns in Vinegar for a Fomentation.

And *Faventinus* propoundeth this following Lotion as a ſecret to ſtop the Dyſentery:

Take of *the droſs of Iron, and filings of Steel, both prepared in Vinegar, of each one pound*: *then boyl them in two pints of very ſtrong Vinegar to the conſumption of half. Let the Patient put his feet and his hands half an hour every morning and evening therein.*

In a long Diſeaſe, and when there are Ulcers in the Guts, Quick-ſilver is good, if it be mixed with Oynt-

Oyntment of Roſes, and the belly anointed therewith. As alſo the Clyſters afore mentioned for filthy Ulcers.

At the ſame time, you may give Milk, and Syrup of Myrtles.

Alſo one dram of true Ballom given in a Wafer doth wonderfully heal al inward Ulcers.

For aſſwaging pain, apply the Caul of a new killed Sheep to the belly, and bind it on, eſpecially to Children, and repeat it often.

If the Liver, Stomach, or Brain, cauſe this flux, you muſt uſe proper Medicines to them, alwaies making choice of thoſe that do aſtringe and ſtrengthen.

For his ordinary Drink, give him Spring Water with Conſerve of Roſes, the Tincture of Roſes, a Decoction of Oaken Leaves, or Water wherein *Terra ſigillata* is infuſed, or wherein red hot Gold hath been quenched with Syrup of Quinces, Myrtles, or dried Roſes. Or when there is no Feaver uſe a weak Decoction of Maſtich with the Syrups aforeſaid. According to *Crato*'s Judgment, you muſt not uſe any chalybeat or ſteeled Drink; for it doth not aſtringe, as commonly they ſuppoſe, but troubleth the belly. Others commend the Decoction of Gramen or Dogs Tooth, becauſe it is good to dry and divert by Urine.

Laſtly, 'Tis worth the Obſervation, which *Ætius* ſpeaks, Lib. 3. Cap. 8. and *Paulus*, Lib. 1. Cap. 35. that old fluxes are dryed up by Venery. Which *Hippocrates* ſaid formerly, 7. Epid. in the end: *Exceſſive Venery doth cure fluxes of the belly.* *Amatus Luſitanus* learned this Truth by Experience, Curat. 41. Cent. 2. *One troubled with a Dyſentery* (ſaith he) *very violently, was married, and the firſt night he lay with his Wife, was cured.*

Let this be added for a Concluſion, which is related in the Cure of Diarrhœa, out of *Platerus* in his Cure of the flux of the Hemorrhoids; Hot Blood of either Man or Beaſt given in a Clyſter, doth wonderfully ſtop and cure the flux.

Chap. 7. *Of Teneſmus.*

TEneſmus, is a continual deſire to go to ſtool, and voiding of nothing but Slime or bloody Matter.

The immediate Cauſe of this Diſeaſe, is an Ulcer in the ſtreight Gut called *Inteſtinum rectum*; from which, Quittor or filthy Matter continually floweth, and ſtirreth up the expulſive Faculty, by which means there is a continual deſire of going to ſtool. Moreover, there is voided a ſlimy Matter mixed with blood, from the depravation of the *Homoioſis* (or quality that converts things into its likeneſs) of the ulcerated part, becauſe it cannot wel concoct its proper Nouriſhment, and make it like it ſelf, but turns it into another ſlimy ſubſtance; as we ſhewed more at large in Dyſenteries, and other Ulcers of the Guts.

But in regard we ſaid in the Chapter of Dyſentery, That al the Inteſtines might be ulcerated in that diſeaſe; thence it ſeems to follow, That the Ulcers of the ſtraight Gut called *Rectum* belong to a Dyſentery. Yet Cuſtom hath ſo prevailed, that when the Rectum is only hurt, it is called by the name of *Teneſmus*: And becauſe when other Guts are affected, if the Rectum ſuffer, there is alſo Teneſmus or needing, although the diſeaſe be then called a Dyſentery; therefore Dyſentery and Teneſmus are of the ſame Nature, and have the ſame Cauſe, and differ only in reſpect of the part affected. And therefore we need not repeat the Cauſes, becauſe they are the ſame with thoſe that produce a Dyſentery.

For the Knowledg of this Diſeaſe, there is no more required but to diſtinguiſh it from a Dyſentery, which you may learn from the definition. For in a Teneſmus, there is a continual needing; but in a Dyſentery it is by fits: beſides, in that, after great ſtraining, there is voided only a little ſlime, bloody or mattery; but in a Dyſentery, both Excrements and Humors are continually voided.

The Signs of the Cauſes are the ſame with a Dyſentery.

As for the Prognoſtick, *Celſus* Lib. 4. Cap. 19. ſaith that a Teneſmus is eaſily cured, and that of it ſelf it never kils any, yet *Galen*, 5. *de uſu partium, cap.* 4. reckons it among the chiefeſt Diſeaſes of the Belly; and truly it may very wel be accounted grievous in reſpect of its troubleſomneſs and long continuance; yet it is not dangerous except it come of Melancholly, for then it tends to a Cancer ulcerated: beſides, it brings great inconveniences, as Miſcarriage or Abortion to Women. So *Hipp.* Aph. 27. Sect. 7. ſaith, If a Woman with Child have a Teneſmus, ſhe wil miſcarry. For the continual ſtraining at ſtool doth much diſturb the Womb, which is ſo neer to the ſtraight Gut. Beſides, the ſame Muſcles which ſerve to throw out the Excrements, are imployed for delivery; therefore when they daily compreſs the lower Belly, they cauſe Abortion. Laſtly, the Ulcers of the *Rectum Inteſtinum* being neer the *Anus* or Fundament, if they continue long, turn to an incurable Fiſtula.

The Cure of a Teneſmus, little differs from the Cure of a Dyſentery. And therefore firſt, the ſharp Humors that come from the Liver and other parts, are to be purged with Medicines that leave an Aſtringent quality, as chiefly Rhubarb, which muſt be ſo often given till the Humor ſeem to be ſpent.

If there be an Inflamation (which is chiefly known by a Feaver) or if much blood, you muſt open a Vein. And in caſe it continue after bleeding, and cauſe a ſtrangury or difficulty of Urine (as it often doth) it is very good to open the Hemorrhoids with Hors-leeches.

Alſo you muſt uſe aſſwaging Clyſters when there is much pain; and cleanſing, glutinating, and aſtringent, according as the Ulcer requireth; the Forms whereof are to be found in the Cure of Dyſentery.

But in the uſe of Clyſters, obſerve firſt, that you give them often, and in a ſmal quantity, only half a pint, becauſe they wil be hardly kept any time, by reaſon of the continual needing. And the pipe muſt be warily conveyed in, leſt the pain be encreaſed.

And you muſt diligently apply Fomentations, Inſeſſions or Baths to ſit in, Fumigations, Suppoſitories, and Oyntments.

You may make a Fomentation thus,

Take of *Mullein & Wormwood, of each ſix handfuls: boyl them in new Milk, and put them into two Bags, which apply to the Anus and whol belly one after another very warm.* Or,

Take of *Chamomel Flowers, and Roſes, of each one handful: Red Wine two Pints: infuſe them two hours upon hot Embers: Foment the Fundament as hot as can be ſuffered with four times doubled cloathes: After let the Patient ſit upon a ſponge dipped and ſtrained from the ſame Liquor.*

Or, Fill two Bags with Barley Bran and boyl them in Vinegar: Let the Patient ſit one while upon one, another while upon another as hot as he can.

If he void much Blood, make the Fomentation thus,

Take of *Mullein Leaves and Roots two handfuls: Red Roſes one pugil: Pomegranate peels, and Galls, of each half an ounce: boyl them in two parts of Iron-Water, and one of Red Wine for a Fomentation: which you may make ſtronger if you ad half an ounce of Allum.*

Inſeſſus, or Baths to ſit in to aſſwage Pain, are made of Emollients boyled in Water, or Broth of Sheeps Heads and Feet, to which you may ad Violets, Nightſhade, Gourds, and Mellons ſliced, but for healing of Ulcers you muſt make them of Aſtringents afore-mentioned.

Fumigations are good to dry the Ulcer made of Frankinſence burnt, or the Decoction of Savin made in Oxycrate, or other things mentioned in the Cure of a Dyſentery, the Fume whereof muſt be taken ſitting in a hollow Chair. But this following is Commended by *Foreſtus.*

Take of *Maſtich one dram: Frankinſence one ſcruple: Myrtles one dram and an half: Red Roſes two ſcruples: make a Pouder for a Fumigation.*

Suppoſitories are good in this Diſeaſe, they muſt be gentle and mild, leaſt they exaſperate the part which is ſo ſenſible: They are fitly made of Goats Suet cut into the form of a Suppoſitory; for they appeaſe the pain & heal the Ulcer: but they wil be better againſt Pain if you mix the ſeed finely poudered of Poppies or Henbane, & tye them in a knot in Paper like a Suppoſitory: But far beſt if you inſtead of theſe things put three drops of the Oyl preſſed out of theſe Seeds to every Suppoſitory: or one grain of Opium diſſolved in half a ſcruple of Oyl of ſweet Almonds.

The Ulcer wil be ſooner healed, if you firſt diſſolve the Suet, either alone, or with white Starch, Gum Tragacanth beaten, and firſt ſteeped in Plantane Water, or elſe with ſome Narcoticks: Or, thus,

Take of *Gum Tragacanth as much as is ſufficient, ſprinkle it with Plantane Water that it may only ſwel and not diſſolve; then ad as much of the mucilage of Fleabane ſeeds, or Quince ſeeds, and mix them with the white of an Egg roaſted; then with melted Wax make them into a Suppoſitory: You may alſo ad Narcoticks: as likewiſe to Cure the Ulcer better, the Pouders of Ceruß, Tutty, Bole, Pomegranate Flowers, and the like which dry without Acrimony, and ſharpneß; And theſe muſt be very finely Poudered and ſifted, leaſt the Part be Exaſparated.*

You may apply Oyls and Oyntments as in a Dyſentery, to the Belly and Fundament: As Oyntment of Roſes, Populeon, or of the Mucilages, of the whites of Eggs, Oyl of Roſes, and the like, to take away Pain and Inflamation: and other things that ſhal be mentioned in the Chapter of Hæmorrhoids, or to Cure the Ulcer, the white Oyntment of Rhaſis or Pompholygos, melted in Hydromel, or in Honey and Water.

Laſtly, In a more deſperate Condition, uſe Narcoticks both inwardly and outwardly; but three or four grains of Laudanum is beſt given with Maſtich and Terra Sigillata, or mixed in a Clyſter made of a Decoction of the Flowers of Chamomel.

CHAP.

Chap. 8. *Of* Fluxus Hepaticus, *or Flux of the Liver.*

A Flux of the Liver, is that in which ſerous and bloody Humors like water wherein fleſh hath been waſhed, are voided

This Diſeaſe is produced from the Liver being weak and out of tune; by reaſon whereof it cannot breed good blood, but turneth the Chylous Matter into thin and ſerous blood, which becauſe it is not fit to nouriſh, is ſent by Nature into the Inteſtines, from whence comes this flux of the Liver.

This weakneſs and diſorder may come from any diſtemper: For by the exceſs of any of the firſt qualities, the native heat, and its power to make blood, is dejected. Yet this hath a doubt riſing from Experience, becauſe we ſee often, that great diſtempers of the Liver, and exceſs in the firſt qualities, do produce other diſeaſes, and not this. And again, this flux is many times without the exceſs of the firſt qualities. That therefore the Nature of this Diſeaſe may be declared, we muſt ſay with wiſe *Varandæus* my Maſter, There is ſomthing more than an ordinary diſtemper for producing of this diſeaſe. And it is occult or hidden, conſuming the radical moiſture in the Liver, which alſo deſtroyeth the Natural heat.

This evil diſpoſition, and occult diſtemper may come by burning and ſwooning Feavers by a hot diſtemper of the Bowels, which melteth the Oyly ſubſtance by occult corruption, and corruption of Humors, by a great coldneſs from flegm and Melancholly abounding, which doth oppreſs and corrupt the Natural heat; and it may come by outward Cauſes, as great draughts of cold Water, Snow, or Ice, extraordinary eating of raw Sallets, Poyſon, and Medicines that purge too vehemently. By drinking of too much new Wine, ſalt, ſharp, and peppered Meats, and ſtrong things which parch the ſubſtance of the Liver. To theſe you may add al other Cauſes which by too much cooling or heating do diſſolve the ſtrength and tone or order of the Liver.

Hitherto is declared a true and proper flux of the Liver which hath this ſign, there are Liquid and ſerous ſtools, like waſhings of fleſh, from the weakneſs of the Liver, which cannot ſanguifie or make blood well, or from a malignant diſtemper which ſpoileth the Natural heat and moiſture.

There is alſo a baſtard flux of the Liver, which comes of a ſimple diſtemper without any fault of the radical moiſture; by which diſtemper the faculty is not hurt, but the work hindered, ſo that inſtead of pure blood, there comes impure and corrupt, or the good turns into evil, when in a true of the Liver there is never any good blood in the Liver.

The Blood is corrupted, either by the mixture of Choller, or Melancholly, or ſome other impure Matter, or from its too long ſtaying in the Liver, and the parts adjacent, by which it is made thicker or burnt, or rotteth; or from the fault of the Spleen, which doth not ſuck away the droſſie blood; and in this baſtard flux, ſomtimes thick, ſomtimes black, and ſomtimes blood is voided mixed with Humors of divers colors.

The ſigns of this Diſeaſe may be gathered from what hath been ſaid. For in a true flux there appear moiſt ſtools like waſhings of fleſh, which is not in other bloody fluxes, if in a Dyſentery at any time, it is ſeldom, and then there is choller, flegm, and excrements of divers colors voided: and in a Dyſentery there is pain and torment of the belly, but in this none.

The Signs of the Cauſes are known by their proper Characters: For if the weakneſs of the Liver come from a hot diſtemper, there went a burning and conſuming Feaver before, or there is green vomits or ſtools, thirſt, and a Feaver, foulneſs of Body, and want of appetite, and ſtinking Evacuations; but if it come from a cold cauſe, the ſtools are leſs ſtinking, neither is there thirſt or conſumption; the whol Body is colder and blewiſh.

Somtimes there comes a Feaver from the putrefaction of Humors, which changeth the ſaid ſymptomes; but you muſt examine the Cauſes afore going, which will declare both diſtempers. Alſo in this cold diſtemper the Patients deſire much ſtrong Wine.

A moiſt and dry diſtemper are known by the contrary effects. A moiſt cauſeth more and oftener ſtools, very thin; but a dry, little and thicker ſtools, but there is alſo great thirſt.

Laſtly, The external Cauſes are known by the relation of the Patient, and thoſe that are with him.

A baſtard flux of the Liver hath almoſt all ſigns of a Dyſentery, only there is no pain of the belly, nor pieces of fleſh in the ſtools as in a Dyſentery.

The Prognoſtick of this Diſeaſe uſeth to be evil and deadly; for when a principal part is very ill, by conſumption of the radical moiſture, whoſe reparation is ſcarce to be hoped for, we can expect for the moſt part nothing but deſtruction, eſpecially when the Diſeaſe comes of heat.

When

When this diſeaſe comes in Feavers, there preſently follows a melting of the Body, and great putrefaction, which preſently kils the party: For in malignant and peſtilent Feavers the danger is encreaſed according to the evil condition of the Cauſe. But when this Diſeaſe comes of a cold diſtemper, it uſeth to laſt longer, and turn into an incurable Dropſie.

Laſtly, A baſtard flux of the Liver, although it be dangerous, yet is it leſs than a true, becauſe it comes only from a ſimple diſtemper and evil diſpoſition of the Humors, the tone and ſtrength of the Liver remaining ſound, and may be cured by taking away the Cauſes that defile the Blood.

The Cure of this Diſeaſe is wrought by Medicines that ſtrengthen the Liver, correct its diſtemper, and ſtay the flux. And becauſe it comes oftenеſt of a hot diſtemper, therefore we wil firſt ſpeak of the Cure of that diſtemper, becauſe it comes ſeldom of a cold Cauſe, and is to be cured as a Dropſie.

Firſt therefore (although Evacuations ſeem to be needleſs by reaſon of the greatneſs of the flux) you may give Rhubarb either alone, or with Myrobalans, as in the Cure of Dyſentery, becauſe it doth ſtrengthen the Liver, and the rather if you find any filth in the ſtools: for many Patients have been cured by only one ſcruple of Rhubarb given many daies together in Conſerve of Roſes.

Clyſters are here of little worth, becauſe the Liver is affected; yet ſomtimes you may give one of chalybeat or ſteeled Milk, or of a gentle aſtringent Decoction, leſt the Guts ſhould be too much relaxed.

But you may make Juleps to ſtrengthen the Liver, and correct its diſtemper, thus:

Take of *Succory, Graminis (or Dogs Teeth) and Sorrel Roots, of each one ounce: Endive, Succory, Plantane, and Dodder, of each one handful: Sea-wormwood half a handful: red Sanders one dram and an half: the ſhavings of Ivory and Spodium, of each two ſcruples: Coriander ſeeds prepared one dram: red Roſes one pugil: boyl them to one pint and an half; diſſolve in the ſtraining Syrup of Quinces, and ſimple Syrup of Vinegar, of each two ounces: Make a Julep for four Doſes to be taken morning and evening.* Or,

Take of *Plantane Water four ounces: Syrup of dried Roſes one ounce: Spirit of Vitriol as much as will make it moderately ſharp: make a Julep to be repeated often.*

He may alſo take of theſe Syrups following, often in a ſpoon:

Take of *Syrup of Myrtles, Quinces, and dried Roſes, of each one ounce: the Syrup of Succory ſimple or compound with Rhubarb, one ounce and an half: mix them.*

There is an excellent Syrup made of the Tincture of Roſes, made in Roſe Water, and with Sugar of Roſes brought into a Syrup.

Alſo this following Pouder given to the quantity of half a dram or a dram once or twice in a day in a rear Egg, Broth, or other fit Liquor may be uſed with profit.

Take of *Plantane and Sorrel ſeeds, of each one dram: Endive, Purſlane, Dodder, and Coriander ſeeds, of each one ſcruple: red Roſes, and Troches of Spodium, Gum Tragacanth torrefied, of each half a dram: the inward skins of Hens Gizzards dried, half a ſcruple: make a very fine Pouder.*

Or the Lozenges made of the three Sanders, with a double quantity of Rhubarb given to two drams at a time, are good to ſtrengthen the Liver; as alſo this following Opiate:

Take of *Conſerve of Succory Roots one ounce: Conſerve of old Roſes half an ounce: the pulp of Currans ſix drams: Crocus Martis one dram: prepared Coral, ſhavings of Ivory, and Hartshorn, of each one ſcruple: with the Syrup of dried Roſes make an Opiate, adding half a ſcruple of Spirit of Vitriol, of which let him take the bigneſs of a Cheſnut three hours before meat. You may alſo add the Liver of a Wolf prepared, which is a ſpecifical proper Medicine according to divers Authors.*

Raiſons of the Sun, becauſe they are good for the Liver, are commended in this diſeaſe, therefore you may eat them in great plenty with their ſtones: which that they may be better taken, may be beaten firſt in a Marble Mortar.

Or make a Rob or Syrup of Raiſons, boyling them in red Wine, if it be not too hot, and then ſtraining out the Juyce, and boyling it again til it is thick: which you may uſe alone, or in ſome of an Opiate, with theſe following:

Take of *Currans half a pound, boyl them to the thickneſs of a Pultis in old Wine; paſs them through a ſieve, and mix with the ſtraining, candied Citron peels half an ounce: the pouder of the three Sanders, and Diamargariton frigid, of each one dram: Coral prepared, and red Roſes of each four ſcruples: the Liver of a Wolf prepared three drams: make an Opiate.*

The Syrup of Coral is very excellent to ſtrengthen the Liver, and ſtay the flux thereof: but the Tincture thereof is far better: As alſo the Extract or Magiſtery given in Plantane Water.

The Juyce of yong Nettle tops given either by it ſelf to two ounces, or with Water and Vinegar every morning for three daies together, ſtops the flux, and purifieth the corrupt blood.

But

But becauſe in this Diſeaſe the Body is much conſumed, a reſtoring diſtilled Water that wil alſo ſtay a flux, either muſt be given often by it ſelf, or with all other Drinks.

Take a *fat Capon, and a Partridg, and pulling of the Feathers and the Guts out, fill their Bellies with Succory, Agrimony, and Snails, of each one handful: Conſerve of Roſes three ounces: Plantane and Coriander ſeeds prepared, of each two drams: Citron Myrobalans one dram: Blood-wort half a handful: the Troches of Amber and of Spodium, of each four ſcruples: the pouder of the Electuary de Gemmis (or precious Stones) the three Sanders, and Diamargariton frigid, of each one dram: Sprinkle them all with aſtringent Wine, and putting them into the bellies of the Fowls: boyl them in a cloſe veſſel in four pints of Water til half be conſumed: then put them al into a glaſs Limbeck with three ounces of good Wine; diſtil them in* Balneo Mariæ *for the uſe aforeſaid.*

For Drink, let the Patient take the Tincture of Roſes, or the Decoction of Succory, and Dogs-tooth, with Syrup of Quinces, and ſome few drops of Spirit of Vitriol.

Things made of Barley, Almonds, and Rice, are beſt in his Meats.

Outwardly to his Belly apply thoſe things which were preſcribed in the Cure of Dyſentery, with ſome things for the Liver, as Wormwood, Roſes, all the Sanders, Spodium or burnt Ivory, &c. Which anointings of the Belly muſt reach to the region of the Liver.

You may alſo apply the following Epitheme to the Liver:

Take of *Endive and Succory, of each one handful: Dodder, and both ſorts of Wormwood, of each half a handful: red Roſes one pugil: red Sanders one dram and an half: Spodium two ſcruples: boyl them to one pint and an half, and diſſolve in the ſtraining two ounces of Roſe Vinegar: boyl them again gently, and make an Epitheme.*

Let the ſame part be anointed with the following Oyntment:

Take of *Cerat of Sanders two ounces: Oyl of Quinces and of Wormwood, of each three drams. Mix them for a Liniment.*

Laſtly, If the Patient be troubled for want of ſleep, as is uſual, becauſe this kind of flux is moſt in the night, you muſt uſe Narcoticks, ſuch as were propounded for the former fluxes.

Chap. 9. *Of the Worms.*

ALthough Worms breed in divers parts of the Body, yet becauſe they are more uſual in the Gut than in other parts, therefore we wil ſpeak only of thoſe.

By ſome it is queſtioned, to what kind of Diſeaſe that is preternatural the Worms are to be referred? But we can take away al occaſion of doubting, by ſaying that after a divers conſideration they may refer to all kinds of Diſeaſes; for as they prick and pull the Guts, or obſtruct them, and produce other diſeaſes, they may be ſaid to be cauſes of diſeaſes. But as they are ſubſtances added to thoſe which ought naturally to be contained in the Guts, they are reckoned by *Galen* in the number of thoſe Diſeaſes which are in the number encreaſed wholly againſt Nature, as the ſtone alſo. And laſtly, as they are ſent out preternaturally by the belly, or the mouth, they are to be referred to the fault in Excretion, or ſending forth.

Galen in his Comment upon the Aphoriſms, Aph. 26. Sect. 3. propounds three kinds of Worms: The round Worms, which are often bred in the Guts, and get often up into the Stomach; the Aſcarides, or little Worms like ſmal thrids, which uſe to lie in the inferior part of the thick Inteſtines, and over againſt the Sphincter Muſcle; and the broad Worms, called *Faſcia*, becauſe they are long and broad like Childrens Swathing bands. This kind is more rare to be ſeen than the reſt, and a Phyſitian ſhall ſcarce ſee them in his practice twice or thrice in a yeer, yet there are great Controverſies among Authors about them; ſome ſay it is one Worm only; ſome that it is made of many united, which they call *Cucurbitinos*, or Gourd Worms, and ſay that they are parts of the broad Worm; others make a fourth kind, containing the Gourd Worms; but we do not intend here to ſhew their Reaſons and ſeveral Experiences they have ſo much boaſted of: the curious Reader may ſearch for his better ſatisfaction, *Rondoletius*, *Platerus*, *Sennertus*, and many others.

Moreover, There is a great Controverſie of the Cauſes of Worms: ſome ſay they come of putrid heat, others from the Natural, others ſay that both concur for the production of them.

The firſt ſay, That all Inſects or Vermine come from corruption, according to *Ariſtotle*. The ſecond ſay, That putrid heat is ſtrong, fiery, and deſtructive, and therefore is not fit to produce a live body. The third ſort, to reconcile the former, ſay that the Matter is diſpoſed by the putrid heat to generate Worms and the Natural heat doth turn it ſo prepared into worms by way of Concoction.

But this Reconciliation wil not hold, becauſe according to the axiome in Phyſicks it is the property of the ſame thing to diſpoſe the matter and bring in the form, and therefore the preparation of

the matter, and the introduction of the form, ought to be from the same agent; besides, Worms breed in Carkasses where there is no native heat, we may say that the heat which is putrid, in respect of the matter putrifying, is native in respect of the Worms, because the natural and putredinal heat differ but in degree, but divers degrees of heat are required for the generation of divers Creatures; and therefore heat which is putrid in respect of us, may be natural in respect of another Creature: So the heat which is natural to a Lyon, would cause Feavers in us; and by consequence is putrefactive: Many flie to the heat of the Sun which is the universal Cause of al generation; but we must alwayes acknowledge a particular Cause from whence the effect is immediately produced, by the Concurrence and Co-operation of the universal Cause: but here is a greater difficulty, because it is a common axiome or theoreme, That nothing can beget a thing more Noble than it self; and therefore heat is not the chief agent in breeding of Worms which are in the prædicament of substance, and heat is but an accident; and whatsoever is spoken of the Sun, the form of a Worm is more Noble than the form of the Sun, because it is the form of a living Creature; and that of the Sun is *Forma mixta*, or the form of a mixed body only: This Doubt brings us into that large and weighty Disputation of an Æquivocal Generation, in the Circuit whereof very excellent Philosophers have Writ whol Volumns, to which we send our Reader, and chiefly to *Fortunius Licetus* his Book of the *Spontaneous Generation of Living Creatures*: Let it suffice in this place to say that many of their Opinions are brought to this, They believe Seeds of many things to be in divers Substances, which according to their divers Changings, come to light; even as the matter is more or less disposed by putrefaction, or other alteration to receive this or that form: and the Seed which is more agreeable to that Disposition is brought into act, and bringeth into the matter a form proper to its self. This Opinion doth not much differ from the old Philosophy, which teacheth, That Forms proceed from the power in the Matter: but they think it safer to hide the Seeds of things in their Matter, which are truly efficient, than to acknowledge only the power of the Matter, which hath no power to be an efficient, for we must find out some efficient with the power in the Matter which may raise a Form from it, or rather introduce, or bring a Form into it.

The material Cause of Worms is commonly sweet Flegm which groweth putrid, by which it gets a Disposition to be turned into Worms; but we think it no wayes necessary, that food which wil breed Worms, should be first turned into Flegm: For Worms may breed of their immediately being putrified, as we see in Flesh, Cheese, Chessnuts, Apples, Pears, Cherries, and other Fruits which bring forth Worms by being putrified: So it is in our bodies, especially in Children which are given to Gluttony and eat the aforesaid things, and take new commonly before the old is Concocted. Hence is it that they putrifie and breed Worms.

But let yong Physitians observe this, It is daily observed in Practice, That Sucking Children, that eat meat are most troubled with Worms, and because their Stomachs are not able to digest it, therefore it is corruption and turned into Worms; moreover, Milk is quickly digested in the Stomach, and presently sent to the Guts; and if it hath meat mixed with it which could not so suddenly be digested, it wil be sent into the intestines with the Milk, and therefore corrupt and breed Worms. And observe, That Worms never breed of Milk only, so that as often as you consider the Disease of an Infant, take notice, Whether it have the Worms or no, which Women alwayes proclaim and say al their Diseases came from thence, as they ascribe al the Diseases of Women to the Mother; and the Physitian may certainly pronounce that the Child hath not the Worms, if it live only upon Milk, and have eat neither meat nor Broth: *Galen* in his *com. aph.* 26. *sect.* 3. taught this, saying, That in Children that Suck milk only no Worms do breed; the Reason whereof is not plain. Many say, That in sucking Childreu the Heat is not strong enough to breed Worms. And this is confirmed by *Galen* in the place cited; where he saith, That strong Heat is required for the Generation of Worms; and thence he saith it comes that Worms are more in Youth, than Infancy; which also *Hippocrates* teacheth in the Aphorism aforesaid; and which he seems to gain-say in *lib.* 4. *de morbis*, where he saith, That Worms breed in Children before they are born; but these have not stronger heat than they that suck: And *Hippocrates* gives another Reason why Children in the Womb should have Worms, because their Excrements are reteined; but when they are born they do not breed Worms, because then their Excrements are not reteined. But this wil not satisfie, because oftentimes in Children that Suck the Excrements are reteined, and yet they have no Worms while they live only upon milk; therefore since the aforesaid Reasons do not content solid wits, we expect the new Thoughts of Wise men touching this matter; and in the mean while, we wil briefly declare our Opinion, and leave to the Judgment of the Learned: We say then, That Milk putrifying doth grow sowr, and then is unfit for to breed VVorms, but rather hindereth them; for it is known that al sowr things do kill VVorms: Hence it is that the Juyce of Lemons is so ordinarily given against them, and in ordinary drink a little Spirit of Vitriol to sharpen it doth wonders.

It is Commonly thought, That among the Material Causes of Worms, Sweet things are the chief; which is to be doubted of, because it is confirmed by a Common Axiome, That Sweet things do easily

turn

turn into Choller, and Choller by its bitterneſs doth kil Worms: but we can eaſily anſwer this doubt thus; In Chollerick Bodies, and ſuch as are ſharp with heat, ſweet things do eaſily breed Choller, becauſe by over Concoction, they grow bitter, as we ſee dayly in artificial Concoction: but in other Conſtitutions that are not Chollerick, ſweet things do not breed Choller, but rather flegm, when they are ſent too ſoon from the Stomach into the Guts, and ſo being crude, and only half concocted, they putrifie, and become a fit Matter to breed Worms.

But there is yet a difficulty concerning Sugar and Honey, which ſince they have a ſubſtance not ſubject to Putrefaction, but rather that doth preſerve other things from it, cannot breed Worms. This Reaſon convincing, we ſay that Sugar and Honey will not breed Worms, becauſe their ſubſtance is incorruptible; but being once bred, they do feed and maintain them, becauſe the Worms loving ſweet things, do ſtir themſelves at the approach of Honey and Sugar, and get into the Stomach, where they grow with ſpeed; from whence thoſe Symptomes do ariſe which are proper to Worms.

The ſigns of Worms in the Guts are divers; not all in all people alike. The uſual and moſt ordinary ſigns, A ſtinking Breath ſomwhat ſowr, as the women call it, and ſtools like Cow dung, of a gray color like Potters Earth diſſolved. Other ſigns are leſs uſual, as a continual Feaver, which is often in a day, more violent from the motion of the Worms, with heavineſs, cold ſweat ſomtimes, and fainting, loathing, vomiting, and unquenchable thirſt. The Pulſe is unequal, the Cheeks are by turns red or blew, the Eyes ſhine, the Noſe itcheth, the Teeth gnaſh, and ſomtimes chatter, there is a ſmal dry Cough, much Spittle: ſomtimes there is heavineſs of head, and ſleepineſs; ſomtimes doting, and Epileptick Convulſions. There is often a pain in the Belly, by gnawing, ſomtimes by inflamation and diſtenſion or ſtretching forth like men in dropſies: ſomtimes there is ſtarting in the ſleep, and ſome tremble, and riſe up, and fall aſleep again; ſomtimes all the body puneth, and the Patient hath a Dogs Appetite, inſatiable, which is moſt uſual in the flat worms, which eat up all the Food. Moreover, If Gourd Worms, called *Cucurbitini*, be voided, they are a ſign of flat. The Aſcarides are known by the itching of the Anus, or Fundament, and the Excrements are many times filled with them.

For a Concluſion, The conſuming, putrefaction, and eating away of the Gums, is to be reckoned among the ſigns of the Worms, which is confirmed by this following Obſervation: A certain Boy was a long time troubled with eating away of his Gums, many Medicines both internally and externally were applied, and all in vain; at length he died: The body being opened, there were found ſo many Worms, that in ſome places the bowels were eaten through, and many were found in the empty places of his Belly.

As for the Prognoſtick: Many Worms are worſe than few, great than little. Many times they are dangerous, and bring great Diſeaſes; as a ſtrong Feaver by fits, ſwooning, ſpeechleſneſs, doting, epilepſie, chollick, and dogs appetite.

In the beginning of a diſeaſe, it is evil for VVorms to come forth, either alive or dead, eſpecially if they come forth alone, and without dung; for when they are alive, and come forth, they ſignifie great crudity, or want of nouriſhment; but dead, they ſignifie great putrefaction, by which they are killed.

VVorms in the declining of a Diſeaſe, coming forth with the Excrements, ſignifie Health, if concoction appear; for it appears then, that Nature ruleth and maſtereth the Excrements.

The Cure of the Worms is by driving them out, becauſe they are wholly againſt Nature. And this is done by purging Medicines, which kill VVorms, and evacuate the Matter that breedeth them.

Rhubarb is the beſt, which you may give in a Flux or Feaver. But you muſt firſt give things that kill them, or at leaſt that drive them to the inferior Inteſtines by things taken at the Mouth, or thoſe things that draw them down by Clyſters.

The uſual forms whereof, are theſe:

Take of *Dogs-tooth, and Purſlane Water, of each one ounce and an half: Syrup of Lemmons one ounce: Confectio de Hyacintho one dram: the Pouder againſt Worms, one ſcruple. Make a Potion; give it preſently, and then this Clyſter:*

Take of *whol Barley, Bran, and red Roſes, of each one pugil: Liquoris and Raiſons, ſcraped and ſtoned, of each half an ounce: Boyl them to half a pint, or three quarters of a pint: Diſſolve in it ſtrained, red Sugar one ounce, and one Yolk of an Egg. Make a Clyſter.*

You may ad Caſſia, or Diacatholicon, if you deſire it ſtronger.

After thoſe Medicines have been given once or twice, give this Potion:

Take of *Rhubarb one dram: yellow Sanders half a ſcruple: infuſe them in Water of Dogs-tooth or Purſlain, two or three ounces: ſtrain them, and diſſolve in it, the pouder of Rhubarb, and pouder againſt the Worms, of each one ſcruple: Syrup of Roſes one ounce: Mix them for a Potion.* Or,

Take of *the pouder of Rhubarb and Coralline, of each half a dram, more or leſs, according to the age: Dogs-tooth Water two ounces: Syrup of Violets one ounce. Make a Potion.*

If the Feaver be not great, two drams of Hiera Picra more or leſs, are to be mixed in a Potion: for by its bitterneſs it killeth and expelleth Worms excellently.

If theſe things will not Cure them, uſe theſe following:

Take of *Dogs-tooth, and Sorrel Water, of each one ounce*: *Endive, Succory, Sorrel, and Purſlane, of each one handful*: *the tops of St. Johns-wort, Scordium (or Water Germander) and Centaury the leſs, of each one pugil*: *Coralline three drams*: *boyl them to a pint*; *diſſolve in the ſtraining three ounces of Syrup of Lemmons. Make a Julep for three or four Doſes, to be taken twice in a day.*

Take of *the Oyntment de Artanita, or (Soubread) three ounces*: *Quick-ſilver one dram*: *mix them, and anoint the whol belly.*

Then purge again, and often, till the body be cleanſed.

And you may ad to the former Decoction, Senna, Agarick, Rhubarb, &c. and give it but once in a day.

Rondoletius highly commends the Electuary Diacarthamum, as an excellent Remedy to expel Worms, and to purge Flegm and corrupted Chyle, of which worms breed and are nouriſhed; alſo he commends the infuſion of Agarick in Oxymel. Which Remedies are proper, if there be no Feaver.

But becauſe often times the diſeaſes of the worms in ſome Children cannot be cured without much labor and time, there are many Remedies found out by Authors, both internal and external.

Among the Internal, firſt we will treat of Pouders, whereof there are divers Forms in Authors.

The chief are theſe following; the doſe whereof, is from one ſcruple to a dram, according to the age of the Patient in ſome convenient Liquor.

Take of *Worm-ſeed half an ounce, Coralline three drams*: *Harts-horn two drams. Make a Pouder.* Or,

Take of *Worm-ſeeds, Coralline, and Harts-horn burnt, of each equal parts.* Or,

Take of *Hiera ſimplex two drams*: *Worm-ſeed, Scordium, the leſſer Centaury, and Coralline, of each one dram. Make a Pouder.*

Take of *Rhubarb and Agarick, of each one dram*: *Troches of Alhandal one ſcruple*: *Diagridium half a ſcruple*: *Coralline and burnt Harts-horn, of each half an ounce*: *Myrrh, Zedoary, and Tanſie flowers, of each one ſcruple*: *Salt of Wormwood and Tartar, of each half a dram. Make a fine Pouder.*

In the uſe of theſe Pouders, obſerve that they which are made of hot things, are to be given ſeldom, and in ſmal quantities to hot Natures, and in Feavers.

VVomen uſe to give to Children troubled with the worms, VVorm-ſeed made up with Sugar, or mixed with Honey; which is an excellent Medicine, becauſe the worms deſiring ſweet things, take in the Honey, and withal the VVorm-ſeed, whereby they are deſtroyed.

But becauſe VVorm-ſeed is very hot, it may be made temperate by infuſing it two hours in Vinegar, and after mixing it with boyled Honey into the form of an Opiate, which *Amatus Luſitanus* doth praiſe as a principal Medicine againſt VVorms

Burnt Harts-horn is commended by *Foreſtus*, given with Raiſons, or otherwiſe, and ſome have been cured with that alone. But it is chiefly good for them who have the worms, and a flux withal. In which diſeaſes coming together, he commends alſo the Juyce of Plantane, and the Decoction of Knot-graſs given to drink. To which may be added Topicks applied to the Belly, partly aſtringent, and partly having vertue to kill worms.

Women do uſe common Oyl given with Wine, for that Oyl ſtops the pores of the Worms, and ſo choak them for want of breath, and VVine kills them by its ſharpneſs. But when there is a Feaver, it is better to give Oyl with the Juyce of Lemmons or Pomegranates; or which is better, Oyl of bitter Almonds with the ſaid Juyces, or Orange flower water.

Stocherus in his Empirical Medicines, commends the Oyl that is taken out of a dried Hazel ſtick, if it be given but a drop or two at a time to a child; or to a youth, three or four in a crum of Bread; *For* (ſaith he) *it doth immediately kill them, and caſt them forth by ſtool*; *alſo by but touching of Worms or Lice out of the Body, it killeth them.* The beſt Authors will have this Oyl of Hazel to be the *Oleum Heraclinum*, by which *Martin Ruland* did cure Children of the VVorms in a moment, by anointing only their Lips and Navils, as you may ſee in his Centuries.

But we have found by Experience that the Oyl of Juniper given but a drop at a time in Broth, to be excellent for children ſo troubled, if they have not a Feaver.

But Quick-ſilver would exceed all, if we durſt give it inwardly; which great Doctors ſay may be done. Some of whom I wil mention, ſo that they who pleaſe to try it, may have Authority for it.

Mathiolus in his fourth Epiſtle to *Stephanus Laureus*, the Emperors Phyſician, ſaith, *Becauſe Quick-ſilver (as Diolcorides ſaith) doth no otherwiſe kill, but by tearing the Guts with its great weight:*

weight: we fear not that it will do it in a ſmal quantity, eſpecially becauſe its weight and roundneß will eaſily carry it through the Body. Therefore let us not wonder why Braſſavolus *that famous Phyſitian of our Age, hath written that he gave Quick-ſilver to Children without any inconvenience. And alſo a* Padua *Phyſitian uſed it with good ſucceß, but never would tell us the way of giving and preparing of it. And I, though I never gave it, have ſeen Midwives give a ſcruple, or half a dram to Women that had hard labor, without inconvenience, and alwaies with good ſucceeß.* Thus *Mathiolus.*

Falloppius in his Tractate of the French Pox, Cap. 76. *If* (ſaith he) *Quick-ſilver be drunk down, it doth not ſo much as when it is uſed with an Oyntment; I have ſeen Women to cauſe Abortion take a pound thereof without hurt. I give it to Children for the Worms, and it doth bring no ſymptome, but only kill the Worms.*

Platerus in the Cure of the Worms, ſaith the ſame; *Give a drop or two, or half a ſcruple of Quick-ſilver, and it kills the Worms, or makes them crawl out of the Body, and it may be done without hurt, as we ſhewed elſwhere.*

Fabricius Hildanus in his 71. Obſervation, Cent. 2. ſaith, of a woman troubled with the Worms, ſent to him by *Gilbert Saracenus*, thus: *Having reckoned up many Medicines to theſe* (ſaith he) *I added the excellent Medicine of Quick-ſilver, a dram and an half ſtrained through Leather, and yet ſhe was not freed of them.*

John Baptiſta Zappa, in his Book of Womens Secrets, Chap. 5. tells many famous Stories of the Cure of Worms by Quick-ſilver, when Aloes and VVormwood would not do it. He ſhews two waies of giving it.

The firſt is this:

Take of *Quick-ſilver one dram, but a ſcruple or two for little Children: Benjamin half a ſcruple: four or five drops of Aqua vitæ. mix them in a glaß mortar with a glaß peſtle; then put to it a little Conſerve of Roſes or Violets for a Bolus, which let the Patient take in the morning by it ſelf, or with a little Bread.*

The ſecond way is this:

Take *a little courſe Sugar, and three or four drops of Spring Water: mix them in a glaß mortar till they are like Honey: then put to it as much Quick-ſilver as was aforeſaid: mix them together, with ſix or ſeven drops of Oyl of ſweet Almonds, which will keep the Quick-ſilver from coming again to its body: And with a little Conſerve of Roſes, make a Bolus.*

Baricellus in his Book called the Genial Garden, ſaith thus: *Quick-ſilver, which ſome account poyſon, is ſafely given againſt worms, and it is accounted ſo certain a Medicine in Spain, that the Women there give three grains thereof to children which newly ſuck up their milk. I cured a Widdow which vomited nine daies together by reaſon of Worms, and ſcarce eat in three daies, neither could retain any thing ſhe took; to whom I gave two ſcruples of Quick-ſilver, with a little Conſerve of Quinces, and ſhe voided downwards above an hundred Worms, and was cured the ſame day, and went about her buſineß, to the great admiration of her Parents, being formerly weak and lean. I have given it alſo to others, and with good ſucceß alwaies; and I keep continually at home, Quick-ſilver infuſed in Water, which Water I give to children for Worms; nor did I ever receive any diſcredit thereby.* Mathiolus *uſed the ſame,* Horatius Angenius, *and many other famous men, who all do extol the benefit of this Medicine. You may give it to Children in ſubſtance, one ſcruple, and to youths two ſcruples or a dram. It is mortified and corrected with red Sugar, in a glaß mortar, wherein it muſt be ſo long ſtirred that it be inviſible, and leaſt it ſhould return to its former condition, you may add thereto two drops of the Oyl of ſweet Almonds. Give it with Sugar of Roſes Violets, or Quinces, faſting.* Thus *Baricellus.*

Sanctorius in meth. vitand. error. lib. 5. cap. 11. ſaith, *That except we uſe ſtrong Medicines to kill worms, as waſhed Aloes, or a ſcruple of Quick-ſilver, with a little Turpentine and Aloes made into a ſmal Pill, we do nothing.*

They who fear to uſe Quick-ſilver crude, may give it prepared, as *Mercurius dulcis*, not only thrice, but ſix times calcined (for by often preparation the malignity of it is abated) with ſome few grains of Diagridium, to carry it ſooner out of the Body, and expel both the Worms, and the Matter of which they breed.

You muſt enlarge or diminiſh the quantity, according to the Age of the Patient. As for example, to a Boy of eight or ten yeers old, it may be thus given:

Take of *Mercurius dulcis twelve grains: Diagridium ſix grains: Make a Pouder to be given with a roaſted Apple and Sugar, or the like.*

For ordinary drink, the Water made of Quick-ſilver, which was formerly mentioned, is very profitable, or that in which Quick-ſilver hath been ſhaken in a glaſs half full, for the ſpace of one hour.

Alſo VVater wherein melted Tin hath been often quenched. But if you will rather uſe

Quicksilver, it is better to let the Water boyl with it, and so it wil be stronger.

Also Spring Water made sharp with some few drops of the Spirit of Vitriol or Sulphur, is of no less force. For sharp things do properly kill VVorms, and the Water is to be made more or less sharp according to the age of the Party.

The Decoction of Dog-tooth with Coriander seed prepared, is used vulgarly for ordinary drink, mixed with Syrup of Lemons or of Pomegranats; Or you may put Sugar and a little Vinegar in the Decoction.

While the aforesaid Remedies are used, you must give Clysters often the whol time of the Disease, first made of sweet things to attract and draw down the VVorms, as at first we said: which may be made not only of a Decoction of Liquoris, Raisons, and Figs, but also of Chicken-broth and Sugar, and Honey of Roses, or of Milk if there be no Feaver, otherwise it wil be easily Corrupted.

But if we conjecture that the VVorms are already in the thick Guts, because then they can scarcely ascend into thin Guts, you may give Clysters to kil them, made thus:

Take of *Dog-Tooth Roots, one ounce: Beets, Mallows, Pot Mercury, and Purslain, of each half an handful: Coralline one pugil: Coriander seeds prepared, and Wormseed, of each two drams: boyl them in a Quart of Water, in one Pint of the straining dissolve two ounces of Oyl of Roses, Cassia newly drawn, six drams: Hiera Picra, two drams: Honey of Violets one ounce: make a Clyster.*

If you wil have a stronger,

Take of *Gentian Roots one ounce: common Wormwood and Southernwood, of each one handful: the lesser Centaury half an handful: Lupines half an ounce: Wormseed two drams: make a Decoction: In as much of the straining as you think fit, dissolve the Oyl of Wormwood one ounce and an half: Salt one dram and an half: Make a Clyster which must be repeated, and in the last that the Worms may be brought forth after they are killed, dissolve of Benedicta Laxativa, and Hiera Picra, of each three drams, or half an ounce.*

If there be a Flux of the Belly, give this following Clyster:

Take of *Tormentil Roots, and of Round Birth-wort, of each one ounce and an half: Pomegranate Peels and Myrobalans, of each one ounce: Pease a smal handful: Myrtle berries one dram: Red Roses one pugil: make a Decoction and dissolve in the straining of Oyl of Mints or of Wormwood, one ounce: make a Clyster.*

Outwardly may divers Topicks be applied, not only those that were mentioned, but these following.

Take of *Gentian Roots one ounce: Birth-wort Roots six drams: Orange Peels one ounce: Coloquintida one dram: burnt Harts-horn two drams: Saffron half a dram: make a Pouder, which mix with Oyl of Wormwood, or Bitter Almonds, and with a little Wax make an Unguent.*

Also common Oyl boyled with the Pulp of Coloquintida is powerful.

Also Oyl of Wormwood, and St. Johns-wort, must be applied to the whol Belly, morning and evening.

Take of *Oyl of Wormwood, Mints, and bitter Almonds, of each half an ounce: the Juyce of Wormwood and Rue, of each two ounces: Tormentil, white Dittany, and Zedoary, of each half a dram: Ox Gall three drams: Aloes one scruple: Pouder them, and with a little Wax make an Oyntment:* Or,

Take of *Coloquintida six drams: Pouder it, and with an Ox Gall lay it to the Navel, by which both the Worms are killed, and the belly kept loose.*

Take of *Myrrh seven drams: Mastich eight ounces: Aloes eighteen ounces: common Salt one pound: bruise them all and Distil them by a Retort with a gentle Fire, and great diligence; first you will have a Water, than an Oyl; with which if you anoint the Navel of a Child, all putrefaction will be clensed which is in the Mysentery.*

Also you may make a Cataplasm thus,

Take of *the meal of Lupines two ounces: Myrrh and Aloes, of each two drams: Ox Gall as much as is fitting: Oyl of Wormwood two ounces: make a Cataplasm for the Belly.*

If a Looseness hath Continued long, apply this following Cataplasm:

Take of *Oyl of Quinces and Wormwood, of each one ounce: the Juyce of Purslain extracted with Vinegar, one ounce and an half: Pease flowr an ounce: Lupine flowr half an ounce: Red Coral and burnt Harts-horn, of each three drams: mix them together with as much Turpentine as wil make a Cataplasm.*

A Cataplasm also made of only Hiera Picra, is most powerful.

Somtimes you may use Fomentations, when there is a great stretching and puffing up of the Belly. Made thus:

Take

Take of *Wormwood, Southernwood, Tanſie, Scordium, Mallows, and Violets, of each one handful: beaten Lupines half an ounce: Centaury one pugil: boyl them in Vinegar and Water, and Foment the whol Belly hot therewith very often.*

Finally, For Flat VVorms and *Aſcarides*, or Arſ-Worms, Clyſters made of bitter things are good; to which you may ad the Purging things aforeſaid, while the filth of which they breed be purged away.

Chap. 10. *Of the Immoderate Flux of the Hæmorrhoids.*

ALthough the moderate Flux of the Hæmorrhoids be healthful, and preſerveth a man from many and grievous Diſeaſes, as *Hippocrates* taught in Epidemii, and in his Aphoriſms, as from a Pleuriſie, Peripneumonia, or Inflamation of the Lungs; Nephritis, or the Stone in the Kidneys; Madneſs, Melancholly, and innumerable other: Yet the immoderate Flux is moſt dangerous, and brings other pernicious Diſeaſes, as Weakneſs of the whol Body, Coolneſs of the Bowels, and eſpecially of the Liver; an Atrophy or want of nouriſhment, an evil Habit, and Dropſie by the loſs of Natural Heat, by ſpending too much Blood which is the treaſure of Life, and the cheeriſher of the whol Body.

And this Immoderate Flux hath the ſame Cauſes which uſe to provoke other ſorts of Bleeding: namely, Blood offending in Quantity or Quality; when it offendeth in Quantity, and is brought in great plenty to the Hæmorrhoid Veins, it doth violently dilate them and open their Orifices, by the ſtrength of the Expulſive Faculty: but ſomtimes too much Blood coming thither, doth oppreſs the Retentive Faculty.

Hence it comes that ſhe being Defective in her duty, there is a great Flux which muſt be reſtrained by art.

But while Blood offends in Quality, as ſharpneſs or thinneſs, it ſtirs up the Expulſive Faculty, to caſt forth by thoſe Veins not only the unprofitable but profitable Blood, the Blood Cauſing this Flux is made ſharper by a mixture of Choller, or ſharp Water.

This immoderate Flux is known by the loſs of Strength, and a Senſe of Weakneſs coming from a long Flux and loſs of Blood: As alſo from an evil yellowiſh colour of the whol Body, as if it were the Jaundice.

If the Diſeaſe come from Quantity of Blood, there went before Cauſes of increaſe of Blood, and the Patient bears it wel in the beginning, and is more cheerful; but afterwards the Flux continuing, he grows weak, and dejected.

But if it comes from ſharpneſs and thinneſs of the Blood, there went before Cauſes that breed choller or ſharp Water, the body is of a Chollerick Conſtitution and burnt: the blood floweth violently, and it is very red, ſhining, and as it were flaming, when otherwiſe offending only in Quantity it uſeth to be black and Melancholly.

The Prognoſtick is gathered eaſily from what hath been ſaid, when we reckon up thoſe grievous Diſeaſes which come from this.

For the Cure, The Blood muſt be ſtanched, or moderated at leaſt, which muſt be done by Revulſives, Derivatives, Thickners, and Aſtringents.

And firſt, Phlebotomy is a Revulſive Remedy in every Flux of blood, therefore in the Hæmorrhoids thus flowing, draw blood from the Arm; and more plentifully if there be ſigns of fulneſs and much hath not been loſt, otherwiſe take but little, and at divers times.

Alſo Frictions and Ligatures of the Superior parts do revel the blood, as alſo Cupping Glaſſes applied to the Shoulders, Breaſts, and Hypochondria, which for the better Revulſion may have Scarification in the Shoulders, but they muſt be often applied to the places afore-mentioned.

Alſo a Gentle Purge doth derive the Chollerick Humors which make the blood ſo violent in the Guts; and this muſt be made of Purging things that have an Aſtringent Quality, as Rhubarb, Myrobalans, and Tamarinds, ſuch as were preſcribed againſt Vomiting of Blood: And *Mercurialis* teacheth, That Tamarinds have an eſpecial power to ſtop this kind of bleeding, whether they be taken boyled or in ſubſtance.

Alſo ſharp French Pruens which are ſomwhat like Tamarinds being often eaten afore meat, are good: and their uſe is convenient to keep the body looſe, and if theſe wil not ſuffice you may ad other things which were propounded for the Cure of a Belly bound, becauſe by uſe of Aſtringents the belly wil be bound, and by ſtraining to diſcharge the Excrements that are hard, the Veins wil be more open and bleed more.

Afterwards

Afterwards you muſt uſe thoſe things that thicken the Blood, and aſtringe the looſe Veins, ſuch as were preſcribed for vomiting and ſpitting of blood, in form of a Julep, Pouder, Opiate, and the reſt; coming to Narcoticks, as is there ſaid, if great need require.

And beſides thoſe Remedies, the Pills of Bdellium are much commended by Authors; which *Rondeletius* rejecteth, becauſe the Apothecaries have not true Bdellium, and uſe Mirrh inſtead thereof, which cauſeth bleeding. But *Solenander* oppoſeth him, ſaying by Experience, that he hath found theſe Pills make of ordinary Bdellium, ſo cleerly to produce their effect, that he wil not doubt of the compoſition. Except ſome ſhould think that the Myrrh is made dull by drying things, and aſtringents that are mixed therewith. To this we may add what *Bauderon* in his Diſpenſatory, and other Modern Writers ſay, That we have true Bdellium brought from *India* at this day, which is hard to be diſtinguiſhed from Myrrh.

The uſe of theſe Pills, is after this manner:

Take of *Pills of Bdellium one dram: the Troches of Amber, and Terra ſigillata, of each one ſcruple: With the Mucilage of Quince ſeeds extracted with Roſe Water. Make a maſs of Pills, of which let him take a ſcruple twice a day, before Dinner and Supper.*

At the ſame time you muſt uſe Topicks made after divers forms.

A Fomentation of Mullein boyled in Smiths VVater, or aſtringent VVine, is beſt; for that Plant is proper for the pain and bleeding of the Hemorrhoids. But you muſt diligently obſerve in the uſe of Fomentations, that they be either cold, or moderately hot.

A more compound Decoction may be made thus:

Take of *Snakeweed Roots half a pound: Plantane, Mullein, Bramble and Oak buds, of each two handfuls and an half: Sumach berries, Pomegranate flowers, green Galls, and Pomegranate peels, of each one handful: Myrtles half a dram: red Roſes two pugils: Allum one ounce: boyl theſe in three parts of Forge water, and one of old red Wine, for a Fomentation.*

Martin Ruland commends a Fomentation made of two bags, applied hot by times, made of red cloth, and filled with beaten Acorns and Oak Leaves, and boyled long in ſtrong Vinegar.

Of the Decoction before mentioned, with a greater quantity of every Simple, you may make a Bath to ſit in, which the ſick man muſt uſe ſomwhat cold, as is ſaid of a Fomentation.

Unguentum Comitiſſæ is very good, if you anoint the Back and Hemorrhoids therewith: or you may make for the preſent this following:

Take of *Oyl of Roſes, Olives, and Myrtles, of each two ounces: the Juyce of Plantane and Mullein, of each one ounce and an half: red Wine Vinegar one ounce: boyl them till the juyces are conſumed: then add of Bole, Sanguis Draconis, Frankinſence, and droſs of Iron finely poudered, of each one dram: Wax as much as will make an Unguent.*

Rondoletius approves rather of thoſe Oyntments which are made without Oyl, becauſe they are more aſtringent: and they are thus made:

Take of *the Juyce of Plantane, Shepheards-purſe, and Mullein, of each two ounces: the ſimple Syrup of Vinegar three ounces: boyl them gently; then add of Bole, Terra ſigillata, and Snakeweed Roots poudered, of each one dram and an half: Sanguis Draconis one ounce: Ceruſs waſhed two ſcruples: mix them into the form of a Liniment.*

If the Hemorrhoids be ulcerated, you may make this following:

Take of *Oyl of Roſes two ounces: Frankinſence and Aloes, of each one dram: Sarcocol, Sanguis Draconis, and Bole, of each half a dram: Spodium, and Carabe, of each one ſcruple: white Starch three drams: Juyce of Plantane one ounce. Make an Unguent.*

The Fat of an Eel, which comes out when it is roaſted, put to the Oyntments, makes them better by a proper Vertue.

Alſo you may with profit apply a Cataplaſm to the ſaid parts, made thus:

Take of *Bole, Aloes, Maſtich, Frankinſence, and Sanguis Draconis, of each half an ounce: the ſtones of Myrobalans, and Galls, of each one dram: mix them with the white of an Egg, and Juyce of Plantane. Make a Cataplaſm.*

Or the Hairs of an Hare burnt, and Spiders webs mixed with the white of an Egg, will make a Cataplaſm, which you muſt apply to the Vein where it is open, if it appears, or put it gently in.

Suppoſitories are good for this uſe, becauſe they are put up into the part.

The Form of them is,

Take of *Colophony, and Frankinſence, of each three drams. Bole half an ounce: Ceruſs and burnt Lead, of each one dram: Acacia half a dram: pouder them finely, and make them into a Suppoſitory with Goats Suet.*

Make Injections into the part by a Syringe of the Juyce of Plantane, and other things mentioned for a Fomentation. The Blood of any Creature newly drawn, and injected while it is hot, doth wonderfully reſtrain any flux of blood from the belly.

The

The Lungs of a Sheep being hot and bloody, being ſat upon, have great power to ſtop this Blood.

Alſo Fumigations made of the Decoctions of the Fomentations aforeſaid, are good for the ſame end. To which you may ad thoſe things mentioned in a Dyſentery. As alſo this following:

Take of *Frankinſence, Aloes, Maſtich, red Roſes, Myrtles, and Wormwood, of each half a dram: Troches of Carabe one dram: Make a groſs Pouder to be caſt upon the hot coals; and let the fume thereof be received in a large funnel by a hollow chair, tying a wooden or ſilver pipe to the narrow hole, and putting it into the Fundament.*

A Fumigation made of Mullein is the beſt of all.

If you can apply Remedies to the Veins that bleed, it is beſt therefore that they may appear And therefore let the Patient be laid upon a Table, and ſtrain as if he were at ſtool till they appear; uſing an Inſtrument if there be need. And then apply the afore mentioned Cataplaſm of the Hair of an Hare and Spiders Webs, or other very drying Remedies; Bole, Allum, or burnt Vitriol. Alſo to touch the Vein with Oyl of Vitriol, is good; or in extream danger with *Aqua fortis*.

Which things, if they prevail not, *Hippocrates* in his Book of Diet, in acute Diſeaſes, and of the Hemorrhoids, ſhews the way of tying, cutting, and burning of them; which operation is out of faſhion now, as being moſt painful and perilous. Although *Maſſaria* ſaith that he once ſaw it, the ſtory whereof will be profitable to be related; for by that you may learn the way of working, and the event. The Hiſtory is this: Frederick Corſicus *of* Vincentia, *firſt had the pain, then the immoderate flux of the Hemorrhoids: And when he had in vain tried many things, went to* Padua; *where the Phyſitians by a common conſent, concluded that the blood muſt be ſtopped. But when many means inwardly and outwardly, were in vain uſed, in the end finding no Remedy, they concluded to try this Manual Operation: But having no fit Chyrurgion, they ſent for a Neapolitan, who profeſſed this Art, and he cut, tied, and burnt the Hemorrhoids of* Fabricius *thus: Firſt he bound him ſo that he could no waies move; then he ſeparates the Hemorrhoids from the Inteſtine; then with a Needle, he paſſeth throw, and ſeweth them, and tieth all about ſtrongly: then cutting off the part of the Vein which is above the ſewing, he burns it with a hot Iron. It was a painful Operation from the Ligature, Section, and Burning: So that* Frederick *had a Feaver, and great pain. But the Chyrurgion gave him a few Medicines by which he was freed both from feaver and pain in a few daies to the admiration of all men there, and recovered from bleeding. But it is not to be omitted, how he being too confident, and neglecting bleeding and purging, which he ſtood after in need of, keeping no orderly diet; the next yeer he was taken with a peſtilent Feaver, and died. From whence we may obſerve the Precept of* Hippocrates, *Aph.* 12. *Sect.* 6. *That one Hemorrhoid muſt be kept open. Except the Patient, as* Aetius *obſerveth, had rather prevent the danger that comes by ſtopping of it by a good diet, exerciſe, bleeding, and purging.*

But in an ordinary Cure by Medicines, you muſt conſider the Liver and Spleen, becauſe the Meſeraick Veins are inſerted into them, eſpecially if they be hot or weak. And therefore not unprofitably do we apply Epithems, or cooling and ſtrengthening Oyntments, ſuch as we preſcribed in the flux of the Liver, and ſhal more at large be laid down in the hot diſtemper, and inflamation of thoſe parts. Sometimes the Obſtruction of the Bowels, and Meſeraick Veins do cauſe this Diſeaſe; which are to be taken away for the Cure of the Patient. And we have ſometimes done it with Pills of Steel, which are preſcribed in the Obſtruction of the Liver.

The whol time of Cure, let the Patient drink ordinarily Iron Water, or the Decoction of Yarrow.

At the ſame time, above all things you muſt rectifie the blood, which is the chief cauſe of this flux. Therefore if it be ſharp and Chollerick, it is often to be corrected with the infuſion of Rhubarb and Tamarinds. If it be hot and thin, with thickening and cooling Medicines: if watery, with dryers: if much, with a ſlender Diet. For it is vain to think of ſtopping of the blood, except the original of the evil be firſt taken away. Which *Solenander* obſerved, Conſ. 22. Sect. 4. in this following Hiſtory. *I remember* (ſaith he) *that I had one* Ann, *a Dukes Daughter, of a great flux of the Hemorrhoids; and becauſe ſhe was far ſpent, I took much pains to ſtop the flux. But when I perceived that the firſt day after they were ſtopped, ſhe began to ſwel about the Heart. Being ſent for again, the ſeventh day I opened the Veins again; nor could I ſafely ſtop them before I had given gentle Evacutions, and altering and ſtrengthening things for the Liver.*

After you have cured the flux of the Hemorrhoids, you muſt prevent their return: which is done by good Diet, and bleeding twice or thrice in a yeer, and with an ordinary Purge of a Magiſtral Syrup, or other Medicine, with an iſſue made in the Leg, and the like; which are to be altered according to the divers diſpoſitions of Bodies. Moreover, Mineral Waters of Vitriol, Allum, and Iron, are very convenient.

Fonſeca commends the Decoction of the Maſtich Tree, or the Infuſion of it in VVine, for a Prevention, thus made:

Take

Take of *the shavings of Mastich wood two ounces: infuse them in twelve Pints of Wine twenty four hours in a warm place, then strain it and drink of it a whol month for ordinary drink: for it hath strength to stop the Hæmorrhoids, and strengthen the Stomach.*

Chap. 11. *Of the Pain of the Hæmorrhoids.*

THe *Hæmorrhoid* Veins that are in the end of the *Rectum Intestinum*, or streight Gut, sometimes do swel and cause very great pain.

This swelling comes of the same Cause with the Flux or bleeding of the Hæmorrhoids; namely, Of blood offending in Quantity or Quality, which if it findeth not away, and cannot open the ends of the Veins, there it settleth, and by filling of the Veins causeth a Tumor with Inflamation, and pain. The principal Cause why Blood cannot get out of the Veins, is the thickness of it, because it is Melancholly: for commonly the Hemorrhoid Veins, especially internal, are said to receive Melancholly from the Spleen, and sometimes to purge it forth.

Authors give many differences of Hemorrhoids, from their greatness, number, figure, and place: whence some are called great, others little; some more, some less; some are like Grapes, Mulberries, Warts, or Bladders; thence termed Uval, Moral, Verrucal, or Vesical. Some are External, some Internal.

From these things the knowledg of them is easie; for from a Tumor in the outside of the Fundament, from its greatness, color, and consistence, the differences are known. And they are to be distinguished from other Diseases which use to be in the Fundament, as *Rhagades*, Clefts; *Condylomata*, Swellings with Inflamation; *Thymi*, Kernels; *Fici*, Piles, and the rest.

Rhagades are certain Ulcers like Clefts in the Hands and Lips, from vehement cold. They have no likeness with the Hemorrhoids; but we will explain them with the rest, although they are properly to be referred to external Diseases, that you may with the knowledg of the Hemorrhoids know all diseases of the Fundament.

Condylomata are certain Tumors of the Skin, which being wrinkled, if it swel by Humors, it is called *Condyloma*. It is distinguished from a Hemorrhoid, because a Hemorrhoid is greater, black, and round in a Vein; but this is long, of the same color, and not in the Veins.

Thymi are carnous swellings, which are not only in the Fundament, but Privities of Men and Women, like Warts, and like the flowers of Thyme, from whence they have their name. These are little, white, or reddish, without pain; but the Hemorrhoids are greater, black, for the most part painful.

Fici are also fleshy Swellings, but greater than *Thymi*; also they are blew and painful, and therefore more like Hemorrhoids: but they are distinguished from them, because they are all flesh; but the Hemorrhoids shew the Veins full, and enlarged at the ends. Moreover, *Fici* for the most part ulcerate, and are malignant, so that they are like a Cancer.

Those Caruncles, or pieces of flesh which grow in the Fundament, are like these *Fici*, called *Cristæ*, or Tutts, usual in *Italy*, but unusual among us, because they come from an impure and unnatural Lechery: they look like the Combs of Cocks, and thence they have their name: Because they are nothing like the Hemorrhoids they need no distinction. But let this be for a Conclusion, All the aforesaid Diseases are cured only by Chyrurgery, so that a peculiar way is not to be layed down here.

As for the Prognostick, The Swelling Hemorrhoids, they are seldom dangerous; but sometimes so inflamed, that you may fear a Gangrene; or else they extreamly torment the Patient.

Hemorrhoids, if they come to Suppuration, or an Ulcer, often times leave a Fistula, which is many times incurable, by reason of the tenderness of the part, and the great moisture which hindereth the healing of it.

For the Cure hereof, first let blood in the Arm, and make a Revulsion from the part affected. Which being sufficiently done, you may also open the Vein in the Ancle for revulsion.

The same is done by Cupping of the Hypochondria for Revulsion, and the Hipps for Derivation.

Strong Purges are not good in this case, because they draw the Humors to the part, and encrease the Tumor. But you must constantly keep the Body open, because hard Excrements, and voided with straning, encreate pain. An Infusion of Cassia given morning and evening, is good for this, thus made:

Take of *Lettice, Bugloss tops, Mallows, of each one handful: Liquoris scraped, and Raisons stoned, of each half an ounce: Bugloss, Borrage, and Violet flowers, of each one pugil. Boyl them to eight ounces. In the straining infuse Cassia new drawn one ounce; strain it, and clarifie*

it;

it; *and then put thereto one ounce of Syrup of Violets. Give it twice a day as aforeſaid.*

Sometimes to aſſwage the ſharpneſs of the Humor you may give the Emulſions of the cold Seeds, made with the aforeſaid Decoction.

In the mean while, divers Topicks are to be uſed to appeaſe pain, take away Inflamation, and diſcuſs the Humor. Or Oyl of ſweet Almonds newly drawn, and which is better, the Oyl of Peach Kernels, or Gourd Seeds, Poppy, or Henbane Seeds.

Oyl of Box-tree is beſt, becauſe it is ſtupifying: And as it cures all Tooth-ach miraculouſly, ſo doth it mitigate all other: and this, if you lay but a drop with a little Lint upon the Hemorrhoids; or if you mix it with Lin-ſeed Oyl, in this proportion, that there be half an ounce of that, and one ſcruple of Oyl of Box.

Quercetan highly commends the Oyl of Nuts in which Sows or Hog-lice have been boyled. You may alſo boyl Hog-lice in common Oyl, and it will much aſſwage pain.

Plain Oyl of Eggs, or made in a Leaden Mortar, doth the ſame.

Divers Liniments and Oyntments may be preſcribed for the ſame: Some whereof do only appeaſe pain; ſome diſcuſs the Tumor, and dry; others heat the Ulcers. And you may apply them with Lint.

Take *one Yolk of an Egg; as much Oyl of Roſes, or Violets as will make a Liniment: To which if you put Populeon, it will aſſwage pain better; and when the pain is very violent, you may add a little Opium.* Or,

Take of *Hens Greaſe half an ounce: the pap of an Apple roaſted in the Embers one ounce: Saffron half a dram: Populeon half an ounce: With the Yolk of one Egg make a Liniment.* Or,

Take of *Oyl of Violets two ounces: Populeon half an ounce: With one whol Egg make an Oyntment: or let the white of an Egg be beaten with Breaſt-milk, and applied to the part, with clouts dipped therein.* Or,

Take of *the Mucilage of Fleabane ſeeds two ounces: Oyl of Violets three ounces. Make a Liniment.* Or,

Take of *the Mucilage of Fleabane and Fœnugreek ſeeds extracted with Wine, of each two drams: Freſh Butter three ounces: Goats Suet one ounce. Mix them in a Leaden Mortar for a Liniment.*

Or Butter alone, ſet in a Leaden Mortar in the Sun till it wax black, is an excellent Medicine.

Alſo freſh Pomatum is very Anodine.

Take of *the Juyce of Purſlain and Honey, of each four ounces. Mix them in a Leaden Mortar into the form of a Liniment.*

Take of *Unguent of Roſes two ounces: Quick-ſilver two drams. Mix them into a Liniment.* Or,

Take of *white Diachylon mollified with the Oyl of Chamomel two ounces: Saffron one ſcruple: Opium three grains. Make an Unguent.*

Horſtius much commends an Oyntment made of wild Flax, with its flowers boyled in Hogs greeſe. To which being ſtrained, and a little cooled, you muſt add the Yolk of an Egg, and apply it to the part with Lint. He ſaith that it aſſwageth theſe kind of pains miraculouſly, and that he had from *John Wolf* that famous Phyſitian of *Heſſe*, who refuſed to diſcover it to his Prince, the Landgrave of *Heſſe*, till he promiſed him every yeer a fatted Ox.

Theſe Liniments following are good to diſcuſs the Tumor, and aſſwage pain.

Take *Leeks and roaſt them in a wet cloth in the embers, and beat them with freſh Butter, and they will take away pain and ſwelling.*

A red Onion doth the ſame boyled with the pap of a Lilly, and beaten with Oyl of Myrtles.

Take *the Oyl of Peach Kernels, and bitter Almonds, of each two ounces: Liquid Storax and Bdellium, of each two drams. Diſſolve them in* Oleo, *and mix them for a Liniment.*

The Balſom of Sulphur made of the Flower of Brimſtone, and Spirit of Turpentine, is good to aſſwage pain and ſwelling, and to cleanſe the Ulcers of thoſe parts. And better, if inſtead of Oyl of Turpentine you uſe the Oyl of St, Johns-wort, and of Eggs. Alſo when there is great ſwelling with Inflamation, you may uſe Oyl of Roſes, or of Violets inſtead of the Oyls aforeſaid.

Alſo Cataplaſms are good for the ſame purpoſe. Of which the moſt common for taking away all pains, is that of white Bread and Milk boyled, adding Oyl of Roſes, and Yolks of Eggs.

Aquapendens commends a Cataplaſm of Plantane, Pellitory of the wall, and Mallows boyled in Water, and after with Oyl of Roſes; to which, when he would have it more drying, he adds Barley Meal, and Millet Meal: And if the pain be great, he makes it of Milk. He commends alſo the Cataplaſm of Leek Heads, boyled in Common Oyl or Oyl of Myrtles, or made of Pilewort boyled in Water.

Green Elder Leaves boyled to ſlime in Water, and then ſpread upon a cloth as big as the Palm of your Hand, and applied hot to the Patient lying upon his Belly; if it be often renewed for many hours, and the part firſt anointed with common Oyl, or the Decoction of the ſame, is very excellent.

The Leaves alſo of Elder ſtamped and applied cold, do take away the pain the third dreſſing.

Alſo Purſlain ſtamped and applied, aſſwageth pain and ſwelling, heats the Ulcers, and conſumeth proud fleſh.

A white Onion roaſted in the Embers, and made with freſh Butter into a Cataplaſm, doth aſſwage pain, and diſcuſs the Tumor.

Let Fomentations be applied to the part to take away pain, made of the Decoction of Mullein, Mallows, Holyhocks, Pellitory, Lin-ſeed, Fœnugreek ſeed, Marſh-mallows, Chamomel flowers, and Dill boyled in Milk, or in the want of Milk, in Water and Oyl, or Tripe Broth.

You may make a Bath with a greater quantity of the ſame Ingredients.

Cold Water alone, is a good Fomentation, and a Bath alſo. But in Winter warm it.

Alſo foment in Roſe Water in which Salt of Lead hath been diſſolved, eſpecially if the part be inflamed.

To take away ſwelling, it is good to foment with red Wine wherein Allum is boyled.

Polypody of the Oak, and St. Johns-wort boyled in equal parts of Wine and Water, doth ſenſibly abate the ſwelling of the Hemorrhoids, if the Decoction be ſqueezed in by degrees with a ſponge, the Waters of hot Baths applied with Spunges, or to ſit in, are alſo good.

Aquapendens applieth a Spunge dipped in Time Water and ſqueezed, and after bound upon the part; a Fumigation of the aforeſaid Decoction while it is hot, or of Mullein boyled in Milk with Rye Flower, doth alſo appeaſe pain. Or,

Take of *Houſleek two handfuls*: *boyl them in white Wine, and let the Patient receive the Fume through an hollow Chair.*

To conſume and dry up the Piles, a Fumigation made of the Pouder of Darnel, Mullein, Pilewort, caſt upon hot coals, is good, and better if you mix Brimſtone therewith. Alſo it is made of Brimſtone only, which taken in with a Funnel, drieth up the blind Hemorrhoids. Alſo a Fumigation made of a Fire-ſtone quenched in Vinegar.

And this following Injection is marvelous good for the ſame, if often uſed.

Take of *Juyce of Plantane, and Oyl of Violets, of each four ounces*: *Natural Balſom half an ounce.* *Make an Injection into the Anus.*

Amatus Luſitanus in the 91. Cure, Cent. 2. doth praiſe this following Suppoſitory, in theſe words: *A Roman Lady which lived at St. Angelo's Bridg, having her Womb forth, complained alſo of the pain of the Hemorrhoids: And after we had uſed many choyce Medicines, by which ſhe received no benefit, we gave her a Suppoſitory of Goats Suet and Opium, by which ſhe was cured perfectly. But we waſhed the part afterwards with ſtrengthening things warm, as ought to be after ſtupefying Medicines have been applied.*

The ſame *Amatus*, Curat. 6. Cent. 3. commends this following Topick in theſe words: *A Reverend man was grievouſly troubled with the Hemorrhoids; and after divers means uſed by Phyſitians, was cured by us with this Medicine immediately.*

Take *an Orange, and make it hollow, and fill it with Oyl of Roſes, and of Spike: then roaſt it, and apply it hot, repeated often, it is wonderful.*

The Lungs of a Goat are uſed commonly, applied hot to the part, or ſome ſlices made hot between two Diſhes with a little VVater, to aſſwage pain.

Both the aforeſaid Balſom of Sulphur, and theſe following Oyntments, are good for the Piles ulcerated.

Take of *new Oyl of Eggs two ounces*: *Stir them in a Leaden Mortar, and apply them.*

Take *four ounces of Oyl of Roſes, and one ounce of Ceruß*: *With half an ounce of Litharge, and ſix drams of new Wax, and four grains of Opium.* Make an Oyntment. Or,

Take of *Frankinſence, Myrrh, and Saffron, of each one dram*: *Opium two grains*: *One Yolk of an Egg*; *Oyl of Roſes, and Mucilage of Fleabane ſeeds, of each as much as will make an Oyntment.*

If they will not eaſily be diſſolved, you muſt open them after convenient Revulſions, rubbing them with a rough cloth dipped in the Juyce of Onions, in which there was diſſolved one dram of Aloes. This is *Hartmans* Secret. But they are ſoon opened, and with leſs pain, with a Pen-knife, or Horſ-leeches.

Some ſpecial things are taken by the Mouth to aſſwage pain, and conſume the Hemorrhoids. The chief are theſe:

The Decoction of Yarrow taken three daies as ordinary Drink, and the ſeed of three Leaved Graſs given many daies together with the Yolk of an Egg, is alſo excellent.

The

The Pouder of Mullein given in Milk, or otherwiſe, is much approved againſt the Swelling of the Piles.

The Pouder of Yarrow and Tormentil, are commended to do the ſame.

The Juyce of Mullein by its ſelf, or mixed with Sugar of Roſes, or Penedies; or made into a Syrup with Sugar, is alſo excellent.

Finally, Pills of Bdellium taken often, do conſume the Piles, and take away the cauſe of them inſenſibly.

An Iſſue made in the Legg, is very good for them who are ſubject to this Diſeaſe.

The End of the Tenth Book.

THE ELEVENTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Liver.

The PREFACE.

THe Liver (as other parts) is ſubject to all kind of Diſeaſes: For as it is compounded of ſimilary parts it hath divers diſtempers, and as it is an organical part, it is Affected with Tumors and ſtoppages, as alſo with ſolution of Continuity, which is Wounds and Ulcers. And although the Dropſie be in the whol Abdomen or Belly, as in an Aſcites or Tympanites; or in the whol Body, as in Anaſarca: yet the Original thereof for the moſt part is from the Liver. We intend here only to ſhew the chief Diſeaſes which are moſt ordinary, and we ſhal Comprehend them in Six Chapters: The firſt whereof is concerning the Hot diſtemper of the Liver: The ſecond of the Inflamation, Ulcer, and Impoſthume of the Liver: The third of Obſtruction of the Liver: The fourth of the Jaundice: The fifth of Scirrhus: The ſixth of the Dropſie.

Chap. 1. *Of the Hot Diſtemper of the Liver.*

MAny men have a Hot Diſtemper of their Liver, from their Birth; of which here we ſhal not treat, but only of that preternatural Diſeaſe which manifeſtly hindereth the Actions of the Liver.

This Diſtemper is either Simple, or Compound; either with Matter, or without; but for the moſt part it hath Matter joyned with it, becauſe a Hot Diſtemper of the Liver uſeth to produce Hot and Chollerick Humors.

The Cauſes of this Diſtemper are Hot Weather, immoderate Exerciſe, much Anger, and other great Paſſions of the Mind, and eſpecially hot nouriſhment, and Phyſick, or things Spiced, a pure and ſtrong Wine drunken plentifully: To theſe you may ad the Heat of the Part adjacent as in ſtrong Feavers, the Liver waxeth Hot from the heat of the Heart.

The

The Signs of a Hot Diſtemper of the Liver, are Loathing of Meat, eſpecially Fleſh; Thirſt, binding of the Belly, vehement heat in the whol body, eſpecially in the palms of the hands and ſoles of the feet; leanneſs of the whol body, the Patient is worſe for hot things, and better for cold: and if there be plenty of hot Humors, there wil ſomtimes be Vomiting and purging of Choller; there is a bitterneſs in the mouth, and for the moſt part a Feaver.

As to the Prognoſtick, A Hot Diſtemper of the Liver is not very dangerous, becauſe it is not much contrary to the Conſtitution of the Liver, but it uſeth to be the Cauſe of many Diſeaſes not only of the Liver, but alſo of other parts: It is hard of Cure, eſpecially when the Stomach is cold, as often it is; for thoſe things which are given to Cool the Liver hurt the Stomach and enlarge its Diſtemper.

The Cure conſiſts altogether in the correction of the Diſtemper by cooling Medicines, and by the Evacuation of the Chollerick humors which comes from the Liver, encreaſing the Diſtemper, and that Diſtemper it, and is the Cauſe of other Diſeaſes.

And firſt, Opening of a Vein doth much cool the Liver, takes away ſome of the Choller, and opens the Obſtructions which comes from Choller; therefore you muſt open the Liver Vein of the Right Arm, and let ſuch a quantity of blood as is agreeable to the fulneſs and ſtrength of the Patient, either at once, or divers times, according to the greatneſs of the Diſeaſe and the continuance of it, and that after a Clyſter or Laxative Medicine hath been adminiſtred.

Then you muſt give a Medicine which doth gently Purge Choller, and Repeat it often at diſtance; or an Apozem for divers Doſes; or the Magiſtral Syrup, or Syrup of Succory, Compound with a four-fold proportion of Rhubarb which is moſt convenient, becauſe it doth innocently purge the Chollerick Humors, cooleth the Liver, ſtrengthneth it, and opens Obſtructions.

The Forms of theſe Medicines, are theſe that follow:

Take of *clenſed Senna and Tamarinds, of each half an ounce: Annis ſeeds one dram: Succory and Sorrel, of each one handful: ſcraped Liquoris three drams: the three Cordial Flowers, of each half a pugil: boyl them to three ounces: and diſſolve in the ſtraining, of Rhubarb infuſed with a little Lavender Spike in Succory Water, one dram and an half: double Catholicon three drams: ſyrup of Roſes one ounce: make a Potion, give it in the morning with due cuſtody.*

For the finer ſort of People you may make Clarified Potions which are lately invented, which are in form of a Julep, but ſomwhat unpleaſant to the taſte, and in them there is preſcribed a double quantity of Purging Medicines becaute the much ſtrength of them is loſt in the Clarifying, ſo that they do ſeldom work upon ſtrong bodies; eſpecially in a dry Country where the Humors are leſs flowing and not ſo obedient to purges; but in moiſt Countries, theſe kind of Medicines work ſucceſfully.

This following is an Example of Clarified Potions.

Take of *clean Senna one ounce: Annis ſeeds one dram: Succory Leaves and Maiden-Hair, of each one handful: ſcraped Liquoris half an ounce: boyl them to ten ounces, and infuſe in the ſtraining two drams of Rhubarb: Caſſia new drawn, and double Catholicon, of each one ounce: bruiſed Tamarinds half an ounce: Coriander ſeeds prepared one dram: ſyrup of Roſes one ounce: ſtrain them and clarifie them according to art: make a Potion.*

An Apozeme to Purge Choller is thus made:

Take of *Sorrel, Dogs-tooth, Succory, and Dock Roots of each one ounce: Endive, Succory, Dandelion, and Maiden-hair, of each one handful: of the Four great ſeeds, of each three drams: ſcraped Liquoris one ounce: Succory, Bugloſs and Violet flowers, of each one pugil: clean Senna two drams: Tamarinds one ounce: Mace, and Cloves, of each one dram: boyl them to a Pint and a Quarter: in the ſtraining diſſolve half an ounce of Rhubarb infuſed in the aforeſaid Decoction with a little Cinnamon, of compound ſyrup of Succory, and Roſes ſolutive, of each two ounces: make an Apozeme, clarifie it, and aromatize it with two drams of yellow Saunders, for four mornings draughts.*

A Magiſtral Syrup may be made of the ingredients of the former Apozeme, with a treble quantity of Purgers, and adding an equal proportion of Sugar to the Decoction.

A Syrup made of Juyces is moſt uſed amongſt us, it is of great power in Chronical Diſeaſes, which come from a Hot Diſtemper of the Liver, and from yellow and burnt Choller: And it is made thus:

Take of *the new made Juyces from their Fæces, of Endive, Succory, Sorrel, Fumatory, Burrage, and Bugloſs, of each three Pints: the Juyce of ſweet Apples newly drawn and purified two Pints: freſh Polypody of the Oak, half a pound: clean Senna eight ounces: Dodder of Thyme three ounces: Agarick newly Trochiſcated half an ounce: Mace and Cloves of each half a dram: infuſe them, and boyl them according to art while there remains one Pint and an half of the ſtraining, in which diſſolve of Rhubarb infuſed with a little Lavender in the aforeſaid Juyces and ſtrained, one ounce: white Sugar one pound and an half: make a Syrup well boyled, clarified, and aromatiqed*

aromatized with two drams of Triaſantalon: keep this ſyrup in a Glaſs: give two ounces at a time, or three, twice or thrice every month with Chicken Broth wherein Endive, Succory, and Sorrel have been boyled; or in Whey.

Theſe things following are excellent to cool the Liver. And firſt for ordinary Drink, uſe the common Ptiſan made of Barley Water and Liquoris, or with Dog-tooth and Sorrel Roots. Or mix ſuch a Decoction with Syrup of Lemmons, or Maiden-hair. Or they who are more dainty may take only the ſimple Spring Water, mixed with the aforeſaid Syrups. And if you deſire to cool more, you may put as much Spirit of Sulphur, or of Vitriol, as will make it a little ſharp. And when the heat is very vehement, you may give a dram of Lapis Prunellæ therewith. There is alſo made a moſt pleaſant Drink of Conſerve of Roſes mixed with Spring Water and ſtrained: to which you may ad ſome drops of Spirit of Sulphur or Vitriol to make it ſharp and red like VVine.

You may alſo make a Tincture of Roſes thus:

Take of *red Roſes dried one ounce: warm Water three pints: Spirit of Sulphur or Vitriol one dram and an half: Infuſe them three or four hours: add to it being ſtrained, three quarters of a pound of white Sugar. Keep it for your uſe.*

The Alexandrine Julep for this purpoſe, is made thus:

Take of *Spring Water one pint: Roſe Water, Juyce of Lemmons, and white Sugar, of each four ounces: Boyl them with a gentle fire till they are skinned.*

Theſe two laſt Remedies are uſed two waies, either for ordinary Drink, or as a Julep twice or thrice in a day.

Alſo divers Juleps to cool the Liver uſe to be preſcribed; of which, the Forms following may be Examples.

Take of *Sorrel, Succory, Dog-tooth, and Dock Roots, of each one ounce: Endive, Succory, Sorrel, and Maiden-hair, of each one handful: Succory, Bugloſs, and Borrage Flowers, of each one pugil: boyl them to a pint. In the ſtraining diſſolve Syrup of Lemmons three ounces: Make a cleer Julep for three Doſes, to be taken twice in a day. If you will make it cooler, add a little Spirit of Sulphur or Vitriol to every Doſe to make it ſharp. And to make it colder yet, add a dram of Sal prunellæ.*

VVhen Herbs are wanting, you may make a Julep of ſtilled VVaters thus:

Take of *Endive, Succory, and Sorrel Water, of each three ounces: Syrup of Lemmons, and Pomegranates, of each one ounce and an half: Make a Julep for three Doſes.*

You may alſo make Juleps that are good and pleaſant, of Juyces: an Example of all which, may be this that followeth:

Take of *the Juyce of ſweet Apples newly drawn, and taken from the fæces, four ounces: the juyce of Lemmons three ounces: Roſe Water two ounces: the Juyce of Pomegranates one ounce: white Sugar half a pound. Make a Julep for three Doſes.*

Inſtead of Juleps, Phyſick Broth may be made for the dainty folk, of the Herbs aforeſaid boyled with a Chicken. To which you may add one dram of Lapis Prunellæ, that it may cool the better; or make it ſharp with ſome drops of Spirit of Vitriol.

Blood of Succory and Germander, brought into a Syrup as followeth, are good to cleanſe the blood, open obſtructions, and cool the Liver.

Take of *Succory Water made in Balneo Mariæ, as much as you pleaſe: the Leaves of Succory two parts: Germander one part: Steep them together, and digeſt them in Balneo Mariæ three daies: then ſtrain them, and add to the Liquor, freſh Succory, and Germander: then digeſt them again three daies; then ſtrain them: and let this way of Infuſion be repeated eight or ten times. The Liquor will turn red like blood, to which you muſt put as much Sugar, and make it into a Syrup.*

Beſides, You may make Opiates and Tablets to cool the Liver, and ſtrengthen it, thus:

Take of *Conſerve of the Flowers of Succory, Violets, Water-lillies, and Bugloſs, of each one ounce: the powder of the three Sanders one dram and an half. With Syrup of Lemmons make an Opiate to be taken often.*

Take of *the Lozenges of the three Sanders, with a double quantity of Rhubarb, four ounces. Let him take every morning two hours before meat, one of the weight of two drams.*

Conſerve of Hips of the Canker Roſe, well cleanſed, and boyled with Sugar into the Form of a Marmalade, doth powerfully cool the Liver, if the Patient taketh it inſtead of the former Opiate.

The Tincture of Coral, made with Juyce of Lemmons, doth cool and ſtrengthen the Liver, if you give two ſpoonfuls thereof every day, or twice in a week at the leaſt.

A Bath of warm VVater uſed often, doth more powerfully and profitably cool and moiſten the Body than any other Remedy, eſpecially in lean folk.

VVhey is good for the ſame, if it be uſed fifteen daies, or more, together. It is made beſt by boyling

ling the Milk, and powring in a little Vinegar or Juyce of Lemmons, and afterwards ſtraining it.

Amatus Luſitanus prepareth it thus:

Take of *Whey one pint: very ſharp Syrup of Vinegar three ounces: Mix them, and after a little boyling let it be taken as Mineral Waters, twice or thrice, and then walk upon it. The Ancients took it five pints at a time.*

Quercetan prepareth it thus:

Take of *Whey two pints: Juyce of Lemmons two ounces: the new made Juyce of ſweet Apples three ounces. Clarifie them all together at the fire with the white of an Egg, and put to them a little Sugar. When it is ſtrained, take ſix or eight ounces every morning, for fifteen or twenty daies together.*

And if the Body be lean and conſumed, you may give Milk alone, eſpecially if it be of an Aſs, for many daies.

The Decoction of China prepared with the Juyce of Lemmons, is alſo good for this purpoſe, eſpecially if there be Obſtructions. It is made thus:

Take of *China Roots ſliced one ounce: Spring Water ſix pints: the Juyce of Lemmons three ounces: Steep them twenty four hours: then boyl them till the third part be conſumed; then ſtrain them through a Hippocras Bag, and let him take ſix ounces thereof morning and evening, and mix it with Wine when he pleaſeth.*

Laſtly, Mineral Waters that have Vitriol, are good, becauſe they open and cool.

If the Diſeaſe continue after all this, open the Hemorrhoids with Horſ-leeches once or twice in a month.

And alſo uſe outwardly Epithems and cooling Oyntments to the Region of the Liver.

Make Epithems of Sorrel, Succory, Roſe, or Plantane Water, or of Vinegar and Camphire: to which for the ſtrengthening of the part, add a little Pouder of the three Sanders.

The Oyntments are, *Galens* cooling Oyntment, and the Cerat of Sanders.

Chap. 2. *Of the Inflamation, Impoſthume, and Ulcer of the Liver.*

THe Inflamation of the Liver, is a hot Tumor ariſing from Blood, which is out of its Veſſels, and ſent into the ſubſtance thereof.

And as the Blood is either pure, or mixed with other Humors, ſo doth it produce divers kinds of Tumors. For if it be pure, it makes a true Phlegmon; but if it be mixed with Choller, Flegm, or Melancholly, it produceth an Eryſipelous, Oedematous, or Schirrous Phlegmon. And if the ſaid Humors predominate over the Blood, there is a Phlegmonous Eryſipelas, œdema, and ſchirrus.

There is another difference in reſpect of the place in which the Inflamation is; it is either in the gibbous part, or Cavity of the Liver. Which is thus to be underſtood according to *Galen*, 5. *de locis, aff. cap.* 7. An Inflamation cannot be in either part of the Liver diſtinct, ſo that the other ſhal be free, becauſe the fleſh in the part is contained in all parts, and therefore when one part ſuffereth, the other alſo ſuffereth in ſome meaſure.

Moreover, That which *Galen* taught 13. Meth. Cap. 14. is worth obſervation: When the hollow part of the Liver is offended, it is neceſſary that the Inflamation reach to the Veins of the Meſentery, which come from the Gate Vein. And Experience teacheth that they who have died of this Inflamation have had, not only an Impoſthume in the Liver, but alſo in the Meſentery.

We muſt alſo obſerve from *Hippocrates*, Aph. 45. Sect. 7. That an Impoſthume ſomtimes is only in the Membrane which covereth the Liver, and ſomtimes in the ſubſtance, or Parenchyma of it: *For* (ſaith he) *they who have a hot Liver ſuppurated, if pure white quittor or matter flow from thence, do eſcape; for it is contained in the Tunicle: But if it be like Lees of Oyl, they die.* *Galen* in his Comment, ſaith thus: *They who have matter in the Tunicle of their Liver, and the ſubſtance not ſuffering, do all eſcape: but they who are corrupted in the very fleſhy ſubſtance of the Liver, die; and there is good reaſon to be given why they do.*

The immediate Cauſes of this Diſeaſe are, too much Blood, or the boyling heat, thinneſs, and ſharpneſs of the ſame; or the motion and ſtirring of it in the Veins; from whence by the aforeſaid Cauſes, it is eaſily thrown into thoſe parts which are moſt fit to receive it. The Liver is moſt fit to receive blood abounding when it is too hot, or hath any pain, for heat and pain do attract, or if it have any Natural or adventitious weakneſs: For all parts that are burdened with any Humor, do disburden themſelves upon the weakeſt. Among theſe Cauſes you may reckon the obſtruction of the Liver, by which the thick Humors are retained, and are inflamed by a Preternatural heat.

The

The External Cauſes may be many, as too much heat of the body from immoderate Excerciſe, the Sun, or fire: but Meats ſharp and ſpiced, immoderate taking of two much ſtrong Wine, too much Letchery, Fear, a Stroak or Fall upon the Liver ſide, alſo hot Medicines applyed without reaſon thereto; as *Fabricius Hildanus* reports of one who having a cold diſtemper of the Stomach had Emplaſters and hot Oyntments of Pepper, Cardamons, Oyl of Cloves, and the like applyed to him, by which means the Inflamation of the Liver was encreaſed: for the Liver covereth the Stomach, and the Medicines which are applied to the Stomach, do firſt touch the Liver with their Vertue.

Cupping Glaſſes applied to the Region of the Liver wil do the ſame, of which *Fabricius Hildanus* brings an Example concerning one who bled at the Noſe, to whom he applied great Cupping Glaſſes upon the Region of the Liver which ſtayed the blood; but a great Inflamation of the Liver followed.

The Signs of this Diſeaſe are many according to *Galen* and other Authors, which we ſhal lay down ſeverally, becauſe many errors are committed in the diſcovery thereof.

The Firſt Sign is Heavineſs in the right Hypochondrion which comes from the Repletion and Diſtention of the Liver; becauſe being of its own nature large and very compact, if it be filled with much Humor it wil grow very heavy: which the Patient apprehends when he turneth from one ſide to the other.

The Second Sign is Pain, which ſomtimes is perceived in one place, ſomtimes in two or three: in the Region of the Liver there is a weighty Pain; ſomtimes it is very extending in the lower Ribs when the Inflamation reacheth to the Ligaments of the Liver which are faſtned to the Ribs: ſomtimes the Pain is communicated to the Throat, by the continuation of the Membranes, which have conſent with the Membrane which covers the Liver.

The Third Sign is a Feaver, which is commonly at night, and is more or leſs ſharp according to the Humor offending: for in a Chollerick Inflamation it is moſt burning; but in a Flegmatick, gentle; and in a Sanguine Inflamation, moderate between both.

The Fourth Sign is Difficulty of Breathing, becauſe the Liver is tyed to the Diaphragma, or Midriff; and therefore by its weight forceth it downwards, as alſo preſſeth it with greatneſs and ſwelling; ſo that both wayes the free motion of the Diaphragma is hindered.

The aforeſaid Signs are Univerſal or proper to declare the Diſeaſe: there are many other equivocal Signs, which alſo do much avail to the knowledge of the Diſeaſe: As a dry Cough, a hard Pulſe unequal, and like a Saw: the colour of the Tongue firſt red, and then black: great Loathing of meat: unquenchable Thirſt: vomiting of Choller, and ſomtimes of Flegm: a pale Colour of the whol Body tending to the Jaundice, yellowiſh: red and flaming Urin, which is ſharp: when the Patient lieth with his face upwards, he is more at eaſe than when he lieth on either ſide; becauſe when he lieth upon the right ſide the Liver is preſſed upon by the Stomach; when he lieth upon the left, it is extended by its own weight, hanging down; the Belly is bound, by reaſon of the Heat which conſumeth al the moiſture of the Chylus matter: Somtimes it is looſe, namely, when a great weakneſs of the Liver is joyned with the inflamation; for then the Excrements are ſent forth moiſt like the Water wherein Fleſh hath been waſhed.

The Signs of the Differences are theſe; If the Gibbous or Convex part of the Liver be affected, there is a Tumor to be felt in the right Hypochondrion, and it makes the figure of the Liver like a half Moon: there is great pain in the Breathing, and it reacheth to the right ſide of the Throat, ſo that it ſeemeth to be pulled down: There is a greater Cough and Difficulty of Breathing, and greater weight.

But if the Hollow part of the Liver be affected, the Tumor is not ſo eaſily felt; but becauſe as I have ſaid, one part of the Liver cannot be inflamed, but the other muſt alſo ſuffer; when the part is touched and preſſed down, ſome pain is perceived.

Moreover, Becauſe this part lieth upon the Stomach, there is a greater loathing of Meat, vomiting, thirſt, and loolneſs of the Belly, from the food corrupted in the Stomach which is diſtempered by the neerneſs of the Liver to it.

The Signs of the Cauſes are theſe,

If the Inflamation come from pure Blood, there is either a perfect Red or duskiſh colour in the face; the Pulſe is great, ſoft, and wateriſh; the Urin is red and thick; the Body is full of fleſh: there is ſweetneſs in the mouth, the party is yong and hath fed high.

If Choller predominate, the Face is yellow, the Pulſe ſwift, hard, and unequal, the Urin thin and very yellow, ſomtimes flaming: the Body is lean and thin: the Eyes hollow: the Mouth bitter: there is vomiting of Choller, and Cauſes that bred Choller went afore.

But becauſe the Inflamation of the Muſcles of the Abdomen or Belly is very like the Inflamation of the Liver, there we muſt diſtinguiſh them by their proper Signs.

In

In the Inflamation of the Muſcles of the Abdomen, the skin is ſo extended that if you lay hold of it you cannot move it; the humors of the ſtreight Muſcles are long and over the whol belly comprehending the Navel: and the inflamation of other Muſcles is in the form of them. On the contrary, the Inflamation of the Liver is in the ſhape of the part affected; and if you lay hold on the Muſcles, they yeild and the Tumor is ſomwhat deeper.

Moreover, The color of the whol Body is of much concernment for the diſtinguiſhing of theſe Diſeaſes; for in the Inflamation of the Muſcles, it is freſh, and almoſt in its Natural condition; but in the Inflamation of the Liver, it is pale, yellow, and like the Jaundice.

There is a famous Example of this in *Galen*, 5. *de loc. aff. cap.* 7. of one *Steſianus*, who when he was judged by other Phyſitians to have an Impoſthume in the Liver; *Galen* being ſent for, at the firſt view of his face, preſently ſaid that there was none, and ſearching his Belly, he found it in the Abdomen: He judged upon this ground, Becauſe the Patient had not his face ſo diſcolored, as uſeth to be in the Inflamation and Impoſthume of the Liver.

The like Example is in *Valeriola*, Lib. 4. Obſ. Cap. 5. of a certain Woman which was thought by another Phyſitian to have a Phlegmonous Tumor in the Liver. But ſaith he, *When ſhe ſent for me, I judged it not to be ſo, but in the Muſcles.* And a little after he ſaith, *When I firſt came, I touched the place, and I found a long ſwelling in the right Hypochondria, down to the very Navel; the Face was red, freſh, and of a Roſie color, mixed with white, continuing all the time of the Diſeaſe in the ſame ſtate; the Urine was very good, both in color, and in reſpect of the things contained: From all which it appeared, that not the Liver, but the Muſcles over it were affected; for when the Liver is affected, there is alwaies a diſcoloring of the face.* For *Galen* ſaith, that he knew many diſeaſed in their Livers by their colors, Lib. 5. de loc. aff. cap. 7. for the color in ſuch is commonly yellowiſh, white, and inclining ſomtimes to green.

Moreover, It is troubleſom to diſtinguiſh a Pleuriſie from an Inflamation of the Liver: as you may obſerve in *Galen*, 5. de loc. aff. cap. 7. in his Hiſtory of *Siculus* the Phyſitian, who was deceived in himſelf, ſuppoſing that he had a Pleuriſie; becauſe he had a Feaver, little and frequent breathing, a ſmal Cough, and a pain neer the lower Ribs: but *Galen* by his ſtools, which were like water wherein fleſh had been waſhed, knew that his Liver was inflamed, for ſuch a flux doth ſhew that the Liver is greatly diſordered. But this ſign cannot alwaies diſtinguiſh a Pleuriſie from an Inflamation of the Liver. For as *Galen* teacheth in the place cited, ſuch kind of moiſt and bloody ſtools come only when the Liver is inflamed, when it is alſo very weak, otherwiſe one ſign of the Liver inflamed is (by *Galen*) coſtiveneſs. Therefore when the Liver is not weak, you muſt look for other ſigns, by which you may diſtinguiſh them.

If then the Inflamation be in the Pleura towards the right Hypochondria, the pain wil be vehement and pricking, the breath more difficult, there will be no change of color, the Cough will be greater, and not dry, but commonly (eſpecially in the encreaſe of the Diſeaſe) with bloody Spittle, ſomwhat at leaſt diſcolored; and laſtly, the Pulſe will be hard, and like a Saw: But in the Inflamation of the Liver, the pain is leſs, joyned with heavineſs, the color is yellowiſh, there is a dry Cough now and then, the Pulſe is not ſo hard; and laſtly, there is a Tumor in the right Hypochondrion.

And if the Inflamation be in the Meſentery, the Tumor will appear beneath the Region of the Liver, there will be no change of color in the Face, the ſtools will be moiſt, in which at firſt there wil be thin and unconcocted Matter, afterwards concocted, in thoſe of whom there is hope of recovery.

The Prognoſtick of this Diſeaſe, is thus made:

Every Inflamation of the Liver is very dangerous, and for the moſt part deadly. And if it doth not kill preſently, it ends in a Dropſie, or Atrophy, or Conſumption. All the hope of recovery is from the ſtrength, as *Galen*, 10. meth. cap. 5.

An Inflamation of the Gibbous or bunchy part of the Liver, is more dangerous than that which is in the hollow part, by reaſon it is neerer the Heart, the Midriff, and hollow Vein.

An Inflamation coming from Choller, is more dangerous than that which cometh of pure Blood, becauſe then the Feaver is ſtronger, and other ſymptomes greater.

The Hiccoughs in an Inflamation of the Liver are evil, *Hipp.* Aph. 17. Sect. 7. For it ſhews the encreaſe of the Inflamation, and malignity, which doth by conſent diſturb the Stomach.

A Looſneſs joyned with an Inflamation of the Liver, is deadly, except the Matter voided be concocted, and the flux be Critical.

If the Inflamation of the Liver cannot be diſcuſſed, as it ſeldom can, and if the Faculty be ſtrong, it turns into an Impoſthume; otherwiſe it turns into a Gangrene or Sphacelus. The Suppuration for the moſt part wil be within twenty daies. And this Impoſthume is very dangerous, and few eſcape thereof. But if it be little, and only in one part of the Liver, and the matter white and even which comes forth by Urine or Stool, they eſcape. Alſo a Tumor in the Convex, or outward part of the Liver, which appears in the Skin as it were movable, may be opened with an actual Cautery;

and if the Matter coming forth be pure and white, they escape, for the Matter is contained in the Tunicle; but if it be like Lees of Oyl, they die.

After the Impostthume is broken, if the Patient live, there remains an Ulcer, which is very troublesom to cure; and if it be not superficial, it causeth a Dropsie or Marasmus.

Also an Ulcer may be in the Liver from sharp Humors that corrode it, especially if they be cholerick, and spread through the substance of the Liver, which putrifying by degrees, get a malignant and venemous quality.

The knowledg of this Ulcer, which comes from the sharpness of the Humors without Inflamation afore going, is difficult. But it may be known by some signs. And first, there is an ulcerous pain in the right Hypochondrion, and the Patient waxeth lean; and if it be in the hollow part of the Liver, there are stools with Pus or Matter, and sometimes with Blood, and pain of the Guts by reason of the sharpness of the Humors, like a Dysentery, which is distinguished from this Disease in this, Because there is a weight and pricking about the Liver. And sometimes Authors have observed that pieces of the Liver have been voided by stool. But if the Ulcer be in the gibbous or outward part, the Water is Mattery without any distemper of the Reins or Bladder. There is a final Feaver in the encrease of the Disease, which turneth into an Hectick. The color is yellow, and sometimes there are final pustuls which come from the adustion of Humors in the Face. There is a loathing of Meat, and especially of flesh, a stinking breath, and often fainting.

Concerning the Prognostick, It bringeth a lingering Hectick Feaver.

And if the Ulcer be not small, superficial, and cured betimes, it is deadly.

Those Exulcerations of the Liver which follow Inflamations and Impostthumes, are more dangerous than those that arise without them.

The Cure of the Inflamation of the Liver, is the same with that of the Inflamation of the Stomach aforementioned, and chiefly in respect of Phlebotomy, Purges and altering Remedies are to be given in the beginning of the Disease.

You must also give often Clysters, such as were prescribed in the Inflamation of the Stomach.

But afterwards, cooling, clensing, and opening Juleps, such as were described in the Chapter aforementioned, bewaring that they be not too sweet, for by sweet things, the Liver being inflamed, grows larger, as *Trallian* teacheth, Lib. 4. Cap. 10.

Let his Drink be the Decoction of Barley, Dog-tooth, with a little Liquoris, Syrup of Violets, or Maiden-hair.

In the Decoction you may ad to the former Juleps, the Roots of Smallage and Parsley, the Leaves of Agrimony, Maiden-hair, &c.

And afterwards Turpentine, washed Agrimony, or Parsley Water given twice or thrice, takes away the reliques of the Disease.

But if the Disease be stubborn, and last long, you must prescribe an Apozeme of opening and loosening things, thus:

Take of *the Roots of Smallage and Parsley, of each two ounces: new Polypody of the Oak three ounces: the Leaves of Agrimony, Burnet, Ceterach, Maiden-hair, of each one handful: Annis, Fennel, and Parsley seeds, of each one dram: Chamomel and Violet flowers, of each one pugil: clean Senna one ounce: Boyl them to a pint and a Quarter. Dissolve in the straining Rhubarb infused with a little Lavender in Succory Water, two drams: simple Syrup of Vinegar four ounces. Make an Apozeme for four Doses, to be taken every other day.*

Outwardly, many Topicks are good to be used the whol time of the Disease. And in the beginning, Epithems, Liniments, and cooling Plaisters, such as stop Fluxes, made thus:

Take of *Endive, Succory, Sorrel, Plantane, and Rose Water, of each three ounces: Vinegar of Roses one ounce: the pouder of the Electuary of the three Sanders, one dram and an half: Camphire half a scruple. Make an Epithem to be applied warm to the Region of the Liver.* Or,

Take of *the Leaves of both Endive, Succory, Plantane, Bugloss, Burrage, and Water-lilly flowers, of each one handful: Roman Wormwood half a handful: red Roses two pugils: red and yellow Sanders, of each two drams: boyl them to one pint and an half. Dissolve in the straining half a pint of Rose Water; Rose Vinegar one ounce; Camphire one scruple. Make an Epithem.*

If you desire to cool more, you may ad the Juyces of the aforesaid Herbs.

Take of *Oyl of Roses two ounces: Oyl of Wormwood half an ounce: mix them and wash them with Oxycrate, and anoint the place therewith after the use of the Epithem.* Or,

Take of *Oyl of Roses, and of Myrtles, of each two ounces; the Juyce of Endive and Succory, of each one ounce: Vinegar half an ounce: boyl them to the Consumption of the Juyces: then add the pouder of red Sanders, and Roses, of each one dram: as much Wax as will make an Unguent.*

Or

Or you may uſe the Oyntment of Roſes alone, or *Galens* cooling Oyntment waſhed with Oxycrate.

In the progreſs of the Diſeaſe, when the Feaver and pain decreaſe, you muſt mix Diſſolvers with Coolers, either in equal, or unequal proportion, as the Diſeaſe grows neerer to the ſtate or declination, theſe muſt be wiſely compoſed. But that you may know what to make them of, we wil ſhew you ſome Examples.

Take of *Oyl of Roſes two ounces: Oyl of Wormwood one ounce: Oyl of Chamomel half an ounce: Pouder of the three Sanders one dram: Spicknard half a dram: Wax, as much as will make a Liniment.*

Take of *clean Dates ten: whol Raiſons three ounces: boyl them in Oxycrate; then beat them with Chamomel, Melilot, and red Roſe Flowers, of each one pugil: Spicknard and Schœnanth, of each one dram: Smallage and Parſley ſeeds, of each half a dram: Endive and Purſlain, of each one dram and an half: Oyl of Wormwood and Roſes, of each one ounce: Barley meal two ounces. Make a Cataplaſm.*

Or you may make one not ſo hot, thus:

Take of *Barley meal three ounces: red Sanders two ounces: Oyl of Roſes three ounces. Mix them with the Decoction of Endive and Succory, for a Cataplaſm.*

In the declination, when the Feaver is gone, you muſt uſe Diſſolvers, with Emollients, leſt any hardneſs ſhould remain, and ſome Aſtringents to ſtrengthen the part.

Take of *Marſh-mallow Roots three ounces: Cypreſs Roots, and Calamus Aromaticus, of each half an ounce: Mallows, Violets, and Agrimony, of each one handful: both the Wormwoods, of each half a handful: Fœnugreek, Annis, Fennel, and Line ſeed, of each half an ounce: Chamomel, Melilot, and Dill flowers, of each one pugil: Spicknard, Schœnanth, and Maſtich, of each one dram and an half. Make a Decoction of them, and foment the part affected with it, ſomwhat hot.*

Take of *Oyl of Chamomel, Lillies, and ſweet Almonds, of each one ounce: Oyl of Wormwood and Spike, of each half an ounce: the Pouder of Schœnanth, Roſata Novella, and Wormwood, of each one dram: Wax ſo much as will make a Liniment to be uſed in the declination of the Diſeaſe.*

If the hardneſs of the part continue, it will be good to add to the former Liniment, Gum Ammoniacum diſſolved in Vinegar. Or this Plaiſter:

Take of *the Emplaiſter of Melilot and Diachylon with Flowerdeluce, of each one ounce. Mix them, and ſpread them upon Leather, cut like a half Moon, to be laid to the part.* Or,

Take of *Gum Ammoniacum diſſolved in Vinegar one ounce: Labdanum and Maſtich, of each two drams: Oyl of Wormwood and Wax, of each as much as will make a Plaiſter.*

If the Inflamation tend to ſuppuration, which is known by encreaſe of the Feaver, and the pain, according to *Hipp.* Aph. 47. Lib. 2. there is great danger, and few eſcape in this caſe. Yet you muſt further the Suppuration with the aforeſaid Emplaiſters, which will diſſolve the Matter which will be diſſolved, and ſuppurate that which will be ſuppurated or ripened; as alſo with mollifying Cataplaſms, and you muſt give inwardly Chicken Broth wherein Mallows, Marſh-mallows, Figgs, and Prunes have been boyled.

After the Impoſthume is broken, if white Matter flow by ſtool or urine, you muſt cleanſe with Barley Water, or Whey with Honey of Roſes, or with thoſe Remedies which are preſcribed for the Cure of the Ulcer of the Stomach. But if the Suppuration tend outwardly, you muſt open it with a red hot Inciſion Knife, according to *Hippocrates*. And if the Matter come forth white and concocted, there is hope of Cure; but if red, filthy, and ſtinking, the Patient is neer death.

Chap. 3. *Of the Stoppage, or Obſtruction of the Liver.*

THe Obſtruction of the Liver is a preternatural cloſing or ſtraightneſs of the Branches of the Vena Porta, and Cava, that is, of the Gate and Hollow Vein, and ſomtimes of the ſubſtance of the Liver, hindering the paſſage of Natural Humors, and the diſtribution of the Nouriſhment, coming from ſome Matter which filleth their Cavities.

Hence it is that Obſtruction is an Organical Diſeaſe, namely, in the way and paſſage obſtructed, which hinders the diſtribution of Blood for the Nouriſhment of the parts. Theſe waies or paſſages are not only the Veins which are diſperſed through the whol ſubſtance of the Liver; but alſo the Pores and inſenſible Paſſages, with which the whol ſubſtance of the Liver, and alſo of other parts, is very full; which being ſhut up by a preternatural Humor; neither can the heat of the Liver be cooled, nor can the thin vaporous Excrements be evacuated.

The Matter that Cauſeth the Obſtructions, commonly is a groſs Excrement, viſcous and clammy, which being not able to paſs freely, ſticks in the paſſage, and is more and more thickned by the heat of the part, ſo that the longer Obſtructions continue, the worſe they are.

Somtimes plenty of Humors cauſe an Obſtruction, as *Galen* ſheweth, 10. meth. cap. 2. in theſe words, *Of Obſtructions ſome come of abundance of Humors, and ſome from the Quality, as when they are groß or clammy; Blood letting is the beſt Remedy againſt thoſe which come from plenty, and the uſe of attenuating things is beſt againſt thoſe that come of Quality.*

This Obſtruction which comes from plenty of Humors, happens chiefly in the Veſſels and their cavities when being too full, they are ſo diſtended, that they cannot contract themſelves for the ſending forth of the Matter contained: As we may obſerve by the Bladder when it is ſtretched out by long retention of too much Urin, that it cannot contract it ſelf; from whence there comes a ſtoppage of Urin, or difficulty of voiding thereof.

Not only Humors, but alſo ſomtimes many groſs Vapors, which cannot eaſily be diſcuſſed (becauſe the way is not open, as in the Chollick) may be the Cauſe of Obſtruction, as *Galen* teacheth, 3. de loc. aff. which Cauſes are very rare, and abſolutely denyed of ſome.

The Humors which ſtoppeth with its thickneſs is chiefly Flegm, which wil eaſily grow groſs and clammy. Melancholly is next, which by its coldneſs, thickneſs, and droſſineſs, may cauſe Obſtructions: Alſo Blood may do the ſame by its Quantity and thickneſs: And laſtly, Choller ſtaying long in the Liver grows thick, and breeds dangerous Obſtructions. The Antecedent and Principal Cauſes, are al things that produce thick and clammy Humors, and thick and cloudy Air, Meats of groſs Juyce, viſcous, hard of Concoction, and diſtribution, aſtringent, cold, and not fit for to be eaten, as Pears, Quinces, Services, Medlars, Muſhrooms, Cheeſe, Pulſe, Peaſe or Beans, Beef and Pork, ſlymy Fiſh, and dryed in the ſmoak, Bread not wel baked, Rapes, Cheſnuts, thick, red, and aſtringent Wine, and muddy Ale.

Alſo an evil Diſpoſition of the Liver, eſpecially a cold diſtemper, which may alſo produce Obſtructions from good Juyce, as when it doth not wel Concoct, but turns the meat into a ſalt tartarous and mucilaginous or ſlymy Matter.

Alſo the Diſtemper of the Stomach may be a Cauſe of Obſtructions, when it begets too crude a Chyle, which cannot after be wel ordered by the Liver, becauſe the fault of the firſt Concoction is not amended by the ſecond.

The Signs of this Diſeaſe are to be divided into divers ſorts, ſome ſignifie the kind of the Diſeaſe, others the part affected, and others the cauſe that produce it.

The Signs that ſhew the kind of the Diſeaſe are common to al natural parts that are ſubject to Obſtructions: for they ſhew only Obſtructions lying in the lower Belly, and theſe therefore wil ſerve for the knowledg of the Obſtructions of the Spleen, and Metentery eſpecially.

Theſe Signs ſhew that there are Obſtructions in the ſaid parts,

The Excrements of the Belly being out of their natural condition, eſpecially when they are moiſt, white, chylous, or bloody: white Urine, thin and watery, and as it were ſtrained, becauſe the thicker parts cannot paſs through by reaſon of the Obſtructions, but only the pure water comes through unmixed; and it may be yellow if there be heat.

Difficulty of Breathing, eſpecially when the Patient walketh faſt, or goes up a hill, or pair of ſtairs, becauſe the Parts obſtructed do draw the Midriff down-wards, and hinder its free motion; the Face is pale; there is leanneſs and dulneſs over the whol body; the Pulſe is unequal; and laſtly, there is ſuch a ſenſe of weight in the Hypochondria as they who have been feeding very hard; Therefore *Hippocrates*, 4. *de victus ratione in acut.* calls that heavines a fulneſs of the Hypochondria, attributing that Diſeaſe to the Hypochondria, which properly belongs to the Stomach: for as often as the Spleen and Liver are filled with evil Humors, and ſwel, they are preſſed and feel a heavineſs, after the leaſt eating of the lighteſt meats, as they who have over-gorged themſelves. This Sign doth ſo ſurely declare the Obſtruction of the Hypochondria, although there be neither pain nor apparent ſwelling, that *Proſper Marrianus* in his Comment upon the aforeſaid Book of *Hippocrates*, affirmeth, That he hath concluded that the Bowels were obſtructed, before ever he handled the Hypochondria.

The ſtretching of the right Hypochondrion ſheweth the part affected, together with the other ſigns, and ſomtimes pain, that is heavy and dul, which encreaſeth after meat, eſpecially if exerciſe immediately follow; ſomtimes a dry Cough; difficulty of Breathing by reaſon of the neerneſs of the Diaphragma, and a greater weight of that part than of any other.

The Signs of the Cauſes are if it come from Humors, the pain is more heavy, extending and fixed: if from Wind, it is ſharper and more moveable: if from cold Humors, there is more ſenſe of weight in the right ſide, the Face is more pale, there is no Feaver nor thirſt; there was a cold and thick diet without exerciſe that preceded: if it comes from hot Humors, there is leſs weight, more thirſt, the Face

Face is yellow by reaſon of Choller, or red by reaſon of Blood, there is a Feaver and a pricking pain ſomtimes, and hot diet went before.

The Prognoſtick of this Diſeaſe is to be made thus,

A New Obſtruction is eaſily taken away, an Old hardly.

An Obſtruction of the Liver, except it be ſpeedily and wholly taken away, uſeth to bring many Evils, namely, Putrefaction of Humors, Feavers, Inflamations, divers Fluxes of the Belly, conſtant and vehement, becauſe the nouriſhment can paſs to the parts: the Chollick, Jaundice, Evil Habit of body, Dropſie, Scirrhus, and other infinite Diſeaſes, ſo that *Avicenna* calls Obſtructions the Mother of Diſeaſes.

An Obſtruction made by Humors, is worſe than that which comes of Wine.

That which comes of Crude and Flegmatick Humors, or of Wind, is ſomtimes cured by a Feaver; becauſe the Heat doth diſcuſs the Flatus, or Wind; makes Flegm thin, and more apt to flow.

The Cure of an Obſtruction is to be begun with an univerſal Evacuation of the whol body; by a Potion agreeable to the nature of the Diſeaſe: Afterwards if there be ſigns of Plethory or fulneſs, and if the body be not very thin, you muſt draw blood out of the Liver Vein in the Right Arm.

Then preſcribe this Apozeme,

Take of *Smallage, Parſley, and Fennel Roots, infuſed a whol night in white Wine, of each one ounce: the Roots of the greater Celandine, two ounces: Fearn Roots, Elicampane barks, the Roots of Capars, the inward bark of an Aſh, and Tamariſk, of each half an ounce: Wormwood, Agrimony, Maiden-hair, Germander, the tops of Saint Johns-wort, and the Leſſer Centaury, of each one handful: Smallage, Parſley, Annis, and Fennel ſeeds, of each half an ounce: clean Senna, Polypody of the Oak, and the Kernels of Carthamus ſeeds, of each two ounces: Epythimum, or Dodder of Thyme, one ounce: Ginger and Cloves, of each one dram: the flowers of Tamariſk, Marigolds, and Red Fitches, of each one pugil: make a Decoction to a Pint and a quarter, diſſolve in the ſtraining of the Syrup of the Five Roots, and of Roſes Solutive, of each two ounces: make an Apozeme, clarified and aromatized with two drams of Cinnamon for four mornings draughts, adding to every Doſe one dram of Cream of Tartar, ſalt of Wormwood and Tamariſk, of each half a ſcruple.*

In the laſt Doſe (if the firſt hath not ſufficiently purged) diſſolve of the Electuary of Citrons Solutive and Diacarthamum, of each one dram and an half.

Somtimes we put white Wine in the Decoction before mentioned. Somtimes a little Vinegar, according to the nature of the Patient.

If the Patient be dainty, and will not take an Apozeme, inſtead thereof you ſhal give theſe Broths,

Take of *Smallage, Parſley, and Sparagus Roots, of each half an ounce: Agrimony, Hyſop, Maidenhair, of each one handful: Criſtal of Tartar one dram: boyl them with a Chicken or a neck of Mutton, make Broth for nine dayes together every morning.*

The Criſtal of Tartar diſſolved in new made Broth and ſtrained is better, for when the Decoction is cold, for the moſt part it congealeth again, and is ſeparated from it: and when you give it in the Broth, you muſt ſtir it about well with a Silver Spoon afore it be taken, or you will leave the greater part in the bottom of the Diſh.

Every other day, infuſe in his Broth, half an ounce of Senna and one dram of Annis ſeeds.

As long as he taketh theſe Medicines, and after, as often as need requires, let the Region of the Liver be fomented every morning one hour before he taketh his Broth, and every evening one hour before Supper, with this following Fomentation:

Take of *Marſh-mallow, and Briony Roots, of each one ounce and an half: the Roots of Danewort, Cypreſs, Eryngus, the Barks of the Roots of Capars, and the middle rind of Tamariſk, of each one ounce: the Leaves of Mallows, Marſh-mallows, Violets, Agrimony, Germander, Mints, and Wormwood, of each one handful: Lin-ſeed, Fœnugreek, and Juniper Berries, of each half an ounce: Coriander ſeeds, and yellow Sanders, of each three drams: Broom, Elder, Chamomel, and Melilot flowers, of each one pugil: boyl them all in two parts of Chalybeate Water, and one of white Wine, added in the end: and when it is ſtrained, add half a pint of Vinegar: Foment the part as aforeſaid.*

After the Fomentation, let the part be anointed with the following Oyntment.

Take of *Oyl of Lillies and Capars, of each two ounces: the Juyce of the Roots of Briony and Smallage, of each three ounces: Boyl them till the Juyces are conſumed, adding the Oyntment of Marſh-mallows, and Gum Ammoniack diſſolved in Vinegar, and ſtrained, of each one ounce: Carrot ſeeds, and Spicknard, of each one dram and an half: yellow Wax as much as will make an*

Unguent.

Unguent. Uſe it as aforeſaid, adding in the time of anointing, a little Vinegar of Roſes.

After the uſe of theſe Remedies, this Opiate following is good to wear away the reliques of the Obſtructions, and recover ſtrength to the part.

Take of *Conſerve of Wormwood, Maiden-hair, and the Flowers of Tamariſk, of each one ounce: the Conſerve of Elicampane Roots, and Citron peels candied, of each half an ounce: one candied Myrobalan: candied Nutmegs three drams: Confection Alkermes two drams: the Pouder of Diarrhodon Abbatis, one dram: Salt of Wormwood, and Tamariſk, of each two ſcruples: Saffron one ſcruple: Amber-greece half a ſcruple: with the Syrup of Citrons make an Opiate, of which let him take the bigneſs of a Cheſnut every morning two hours before meat, and drinking after it, a little Hippocras.*

Warm Baths are alſo very good, in which ſoftening and opening things have boyled.

If the Obſtructions are very ſtubborn, theſe following Pills are very good.

Take of *the beſt Aloes infuſed in the Juyce of Wormwood very well, half an ounce: Gum Ammoniack diſſolved in Vinegar and ſtrained, three drams: Myrrh diſſolved in warm Wine, and ſtrained, two drams: the pouder of the three Sanders, and Cryſtal of Tartar, of each one ſcruple: Agarick newly made into Troches, and of the beſt Rhubarb, of each two drams: the Salt of Wormwood and Tamariſk, of each half a dram: Saffron half a ſcruple: With the Syrup of Roſes ſolutive, make a Maſs of Pills, of which let him take half a dram two hours before dinner twice in a week.*

Inſtead of the Apozeme aforeſaid, you may make an old Cock Broth, when the Obſtructions are old and ſtubborn.

Take of *Polypody of the Oak, and Carthamus ſeeds, of each one ounce and an half: the tops of Time and Epithimum, of each one pugil: Annis, Fennel, and Caraway ſeeds, of each two drams: clean Senna two ounces: Cryſtal of Tartar half an ounce: beat them, and fill the Belly of an old Cock therewith: boyl them in three parts of Water, and one of white Wine, till the fleſh of the Cock fall from the Bones. Make Broth, and let the Patient take it four mornings.*

Or (which is better) make a Decoction for one draught every day of the fourth part of the Ingredients.

To this Broth you may ad Herbs, and opening Roots in a ſmal quantity.

Quercetan commends exceedingly in his Diſpenſatory, the Compound Pouder of the Root of Cuckoo-pintle, to open Obſtructions; of which you may give two drams for divers daies together, in a convenient Decoction.

But of all Remedies, to take away old Obſtructions, Medicines made of Tartar, Vitriol, and Steel, are the beſt.

Of Tartar there is made Cryſtal, Salt, and Spirit, which are to be given in divers forms.

The uſe of Cryſtal of Tartar is formerly mentioned in the Apozeme, and Phyſick Broths, made either of a Chicken, or old Cock.

Concerning this Medicine, yong Phyſitians are to be admoniſhed, that it is of more force than it is commonly ſuppoſed to be, although we ſeldom obſerve it in Practice, by reaſon of the negligence of Apothecaries, the deceit of falſe Chymiſts, and vulgar Diſtillars, which ſtill Chymical Medicines to the Apothecaries, of which, few are good, but moſt adulterate.

The negligence of Apothecaries for the moſt part is, That they had rather buy Cryſtal of Tartar of ſuch fellows, than make it themſelves (though it be the eaſieſt of all) becauſe they ſell it cheaper than they themſelves can make it: for thoſe Impoſtors wil ſell a pound for ſeven pence, or eight pence, from which alone the Apothecaries might argue deceit, perceiving that they would be loſers in ſo telling, if it were rightly made.

The deceit lieth here, Thoſe Impoſtors put a little Tartar, and a great deal of Allum into their Decoctions; not becauſe Tartar is ſold dearer, but becauſe it yields but a little Cryſtal; but Allum will run all into Cryſtal. Hence it is that the Phyſitians are deceived of their intentions, becauſe Allum is aſtringent, which is contrary to the opening Faculty which they deſire.

Moreover, There is another wrong done to this Medicine, when it is made in a Braſs Kettle, which leaves a malignant quality upon the Medicine; for it is a known and vulgar ſaying among Apothecaries, You muſt not boyl ſharp things in Braſs Veſſels, becauſe they eaſily pierce, and attract a noxious Tincture from them. But the Cryſtals of Tartar are moſt ſharp, called by ſome *Acidum Tartari*, or the ſharpneſs of Tartar.

This Error is often made by Apothecaries; and almoſt all they who make this Cryſtal themſelves uſe Braſs Veſſels, ſo that I have ſeen ſome Tartar look Skie-colored from the Verdugreece which it hath taken from the Copper. Therefore Phyſitians ſhall do conſcienciouſly, honorably, and for the good of their Patients, if they cauſe their Apothecaries to make Cryſtal of Tartar themſelves, and in Glaſs, Iron, or Earthen Veſſels glaſſed.

The Salt of Tartar hath great power to open Obſtructions, and may well be mixed with Apozems,

Opiates,

Opiates, and opening Pills. But the chief uſe of it is in a looſening Ptiſan, or Barley Water, made of two drams of Senna, infuſed in eight ounces of cold Water, with one ſcruple, or half a dram of Salt of Tartar, by which the Tincture of the Senna will be powerfully extracted; ſo that this Ptiſan ſhal work better than any ordinary one; and continued many daies it takes away all Obſtructions: we have ſeen Quartan Agues cured, by the uſe of it fifteen daies together. If you fear the ſharpneſs of the Salt of Tartar, you may correct it with the Spirit of Sulphur, or of Vitriol, putting fifteen drops of Spirit, to half a dram of Salt.

You may find the uſe of the Spirit of Tartar in our Obſervations for the Cure of the Dropſie, under the Title of a Diuretical Spirit.

Of Vitriol, only the Oyl or Spirit is uſed in Apozemes, Syrups, and other Forms of Medicines.

This following Syrup, which is good againſt all Obſtructions of the Liver, Meſentery, and Veins, may be for an Example, by which, many through continual Feavers falling into evil Habits and Dropſies, have been perfectly cured.

Take of *the Roots of Smallage, Elicampane, Sparagus, Eringus, of each one ounce: Leaves of Agrimony, Ceterach, Maiden-hair, Dodder, Carduus, of each one handful: the tops of Sea Wormwood, and of the leſſer Centaury: of each half a handful: Winter Cherries one ounce: Spring Water ſix pints: boyl them till two pints of the ſtraining remain; in which diſſolve of the juyce of Succory, and Burnet refined, of each one pint: the juyce of Fumitory and Hops, of each ſix ounces: Fennel and Parſley juyce, of each three ounces: Vinegar of Squils one pint and an half: white Sugar ſix pound: make a Syrup, to which add of the Oyl of Vitriol as much as will make it ſharp; of which let the Patient take three ſpoonfuls before Break-faſt, and as much before Dinner and Supper.*

The Natural ſharp Baths ſhew the Efficacy of Vitriol, the uſe whereof is frequent and profitable in all Diſeaſes coming of Obſtructions.

But the Spirit of Vitriol mixed with the Salt or Spirit of Tartar, is much commended by the Chymiſts, and of them they make Tartar Vitriolate, and that rare mixture of Spirit of Vitriol, Tartar, and Treacle, which may be mixed with other openers.

Laſtly, There are divers Medicines made of Steel, both by Galeniſts, and Paracelſians, which plainly opening Obſtructions preſently, compel al men to uſe them, even thoſe who reject all Medicines made of Mettals, as Enemies to our Natures.

Theſe Medicines of Steel are made either in the Form of Wine, Syrups, Opiates, Pills, or Lozenges.

Steeled Wine is made thus:

Take of *the Filings of Steel four ounces: Eryngo Roots, and Elicampane, of each one ounce and an half: yellow Sanders one ounce: red Coral and ſhavings of Ivory, of each ſix drams: Cloves, Nutmeg, and Cinnamon, of each two drams: Flowers of Broom, Roſemary, and Epithimum, of each two pugils: the beſt white Wine ſix pints: ſteep them eight daies in Balneo Mariæ, or behind an Oven: then ſtrain them through a Hippocras bag, and let the Patient take two or three ounces every morning two hours before meat for fifteen daies, or more if need require.* Or make it thus:

Take of *Steel prepared with Sulphur, one ounce: Elicampane, and the middle rind of Tamariſk, of each half an ounce: Senna three ounces: Epithimum one ounce: Fæcula Brioniæ, and Cinnamon, of each two drams: Pouder of the three Sanders, one dram and an half: Agrimony Water, and white Wine, of each one pint: Infuſe them three daies in Balneo Mariæ. Let him take three or four ounces when it is ſtrained, three hours before meat.*

Commonly they uſe the Infuſion of Steel in white Wine, or Claret, for ordinary Drink, with much Water for two or three months together.

You may make a Syrup of Steel thus:

Take of *Filings of Steel ſteeped in Vinegar, two ounces: the inward rind of Tamariſk half an ounce: Ceterach half a handful: Cinnamon three drams: Wormwood and Agrimony Water, of each half a pint: white Wine one pint: Infuſe them ſix daies in a warm place: add to the ſtraining, Sugar one pound and an half: make a Syrup. Let the Patient take every morning two or three ounces.*

For the Preparation aforeſaid of Steel, you muſt ſteep it in Vinegar in the Sun, while the Vinegar is conſumed three times, and then grind it upon a Marble.

This Syrup may be made Purging, and better, if you diſſolve the Sugar with a pint of Water wherein three ounces of Senna, and half an ounce of Rhubarb have been ſteeped a whol night.

The Pouder of Steel is made thus, taken out of *Quercetan*'s Diſpenſatory.

Take of *the ſhavings of Steel, either commonly prepared, or with Sulphur, one ounce: the fæcula of the Root of Cuckow-pintle one dram and an half: Amber-greece half a dram (for the Poor, a*

Cordial

Cordial Species will ſerve inſtead of Ambergreece) Coral and Pearl prepared, of each two drams: Amber prepared and Cinnamon, of each four ſcruples: Sugar as much as is ſufficient to make a pleaſant Pouder, of which let him take half a ſpoonful, or two drams with Wine for fifteen dayes.

Of the ſame Pouder and Sugar diſſolve in Turnep Water and Confection Alkermes, may be made very pleaſant Lozenges to be taken as the former: Or,

Take of *Steel prepared with Brimſtone half an ounce: confection Alkermes two drams: Ambergreece one ſcruple: Sugar diſſolved in Roſe Water four ounces: make Lozenges: Let him take two drams every morning.*

Inſtead of the Pouder the Extract of Steel may be uſed, made in white Wine for thoſe who are dainty.

Divers Opiates are made alſo of Steel; theſe following are beſt.

Take of *the conſerve of the Flowers of Tamariſk and Maiden-Hair, of each one ounce and an half: conſerve of the Roots of Elicampane ſix drams: Steel prepared either with Sulphur or Vinegar one dram: Salt of Tamariſk one dram: Spirit of Vitriol half a ſcruple: with the ſyrup of candied Citrons make an Opiate, of which let him take two or three drams every morning*: Or,

Take of *the filings of Steel half a pound: white Wine one Pint and an half: mix them in a Glaſs, ſet it to the fire, let be boyled gently, ſtirring it up and down, till a ſcum ariſe, then take the frothy and fat part of the Steel which is ſeparated by the heat, and put it with Wine into another Glaſs: do thus four times, adding freſh Wine, heating, and ſeparating them, ſet it on a gentle fire, till it be hot and grow thick as Honey, keep it for your uſe, which is this,*

Take of *Steel ſo prepared ſix drams: Parſley and Carrot ſeeds, the ſpecies of Diacurcuma, and Diarrhodon Abbatis, of each one dram: Cinnamon half a dram: with clarified Honey make an Opiate, of which take three drams or half an ounce every morning.* Or,

Take of *Steel prepared with Brimſtone one ounce: the beſt Senna, Rhubarb, and Agarick, of each two drams: Diarrhodon Abbatis one dram: Saffron one ſcruple: with ſyrup of Roſes ſolutive, make an Opiate: of which let him take two drams every morning for fifteen dayes, three hours after meat.*

Pills of Steel are as good as the reſt, and they may be made thus,

Take of *Steel prepared with Brimſtone half an ounce: the beſt Aloes, Senna, Agarick and Rhubarb, of each one dram: Diarrhodon Abbatis half a dram: Saffron half a ſcruple: with ſyrup of Roſes ſolutive make a maſs of Pills: of one dram whereof make ſix guilded Pills, which give in the morning for fifeen dayes, three hours afore meat.*

To theſe Pills you may ad according to the kind of the Diſeaſe and the Patients occaſion, of Gum Ammoniack, Sagapenum, Opopanax, Myrrh, Gentian, Birth-wort, Maſtich, Nutmeg, and the like.

In all Medicines made of Steel, this is alwayes to be obſerved, That Exerciſe be uſed after them, as Walking, to make the ſtrength of the Medicine to go into the parts obſtructed: This Walking muſt be for two hours after; after which give a little Broth, in which opening Herbs and Roots have been boyled.

Beſides al theſe Remedies, the Chymiſts commend Mercurial Purges, of Mercurius dulcis, eſpecially given with ordinary Pills, or Extracts, becauſe Mercury doth violently penetrate, and open Obſtructions.

The *Bezoard* Mineral is very much commended, and given with Mercurius dulcis: You may give it thus made.

Take of *Bezoard mineral twelve grains: Mercurius dulcis ſix grains: conſerve of Roſes one or two drams: make a Bolus which muſt be given many dayes.*

If there be an Obſtruction of the Liver in a Chollerick body, with a hot and dry diſtemper of the part, then muſt you give cooling or temperate Openers, which ſhal be ſhewed in the Cure of Flatus Hypochondriacus, mentioned among the Diſeaſes of the Spleen.

For his ordinary drink let him take Water and ſmal Wine wherein Steel hath been infuſed: Or, a weak Decoction of Tamariſk, Agrimony, Ceterach, Maiden-hair, Burnet, all or ſome with Wine,

Some commend the Infuſion of the Wood againſt the Stone called Lignum Nephriticum for ordinary drink: Others the Decoction of Eglentine or Sweet-bryer which opens very powerfully, and ſtrengtheneth; and they ſay that many have been Cured of deſparate Diſeaſes by that alone.

But the Infuſion of the filings of Steel made in white Wine, or thin red Wine, doth open better mixed with the aforeſaid Waters, or with ordinary Water: for by this Medicine alone many Virgins have been Cured of the Green Sickneſs, and this Wine wil work better, if they take every morning two ounces of cleer Wine, beſides the ordinary drink.

CHAP.

Chap. 4. *Of the Jaundice.*

THe Jaundice is a yellow color of the whol Body, coming of Choller, ſpread over all the Skin.

It is therefore a Symptome of the Quality changed. And now preſently, that vulgar difficulty which is controverted by almoſt all Writers, offers it ſelf; namely, That the yellow color in the Cornea, doth immediately hurt the Sight, making all objects appear yellow. To which (that I may anſwer in a word, without circumſtances) I ſay, That it is a diſeaſe in the encreaſe of Number; for ſince the Cornea ought to be void of all color, that it may let the Species of Objects paſs through pure and unchanged, if it have any preternatural color, it hath a Diſeaſe in the encreaſe of Number, that is, more than what is neceſſary to the Natural Conſtitution thereof.

Authors do make two ſorts of Jaundice; Yellow, and Black. The Black proceeds from the Spleen and is very rare: therefore here treating only of the Diſeaſes of the Liver, we will ſpeak only of the Yellow Jaundice.

The ſpreading of Choller upon the Skin, comes from many Cauſes; which may be reduced to three Heads: namely, An Evil Diſpoſition of the Liver; An Obſtruction of the Bag that contains the Gall; And the malignity of the Chollerick Humor.

The Evil Diſpoſition of the Liver is divers; as Diſtemper, Inflamation, Obſtruction, Schirrus, and whatſoever may ſo weaken the part, that Excrementitious Choller cannot be ſeparated from the Blood, but is with it diſtributed through the whol Body.

The Obſtruction of the Bag or Cyſtis, which contains the Gall, hinders the paſſage of it into the Guts, whereby it remains in the Liver, and goes from thence with the Blood into the whol Body. This Obſtruction is either from groſs Flegm, or Choller abounding; ſomtimes from little ſtones which are often bred in the Bag of Gall; which may alſo be made narrow in the Paſſage, by the compreſſion of ſome part nigh unto it, which is inflamed or ſchirrous.

The Evil of the Chollerick Humor conſiſts, either in the great quantity thereof, which cannot be regulated by Nature, nor be ſeparated from the Maſs of Blood, or which ſo filleth the Bag of the Gall, that it cannot contract it ſelf to expel it; or it conſiſts in an evil quality, which by corrupting of the Humors, doth hinder their due Evacuation, or ſtirs up Nature ſuddenly to caſt it forth, as you may obſerve in a Critical or Symptomatical Jaundice. This Corruption happens in continual Chollerick Feavers; as alſo after Poyſon is taken, or from the biting of ſome venemous Creature, by which the whol Blood is turned into Choller.

The Signs of the Yellow Jaundice are manifeſt; namely, a yellow color through the whol Body, eſpecially in the white of the Eyes. Alſo an itching, and lazineſs, bitterneſs of the Tongue, ſomtimes Chollerick Vomitings, and Hiccoughs.

The Signs of the Cauſes are to be taken from their proper Fountains; for if the diſtemper of the Liver be hot, this Diſeaſe comes from Inflamation, Obſtruction, Schirrus, or the like: the knowledg of which is to be taken from their proper Chapters.

Theſe things properly ſhew the Obſtruction of the Bag of the Gall, white Excrements, and a Belly bound through the want of Choller, which uſeth to make the Excrements yellow, or red, and to ſtir up the Expulſive Faculty of the Guts like a Clyſter. The Urine is very yellow, inclining to red and if you put a Linnen clout therein, it will dye it yellow.

If it come from the malignity of the Chollerick Humor, the Excrements of the Belly are high colored, and alſo the Urine, eſpecially if it follow a putrid Feaver, when the Jaundice is a Symptome, and then after the coming of the Jaundice the Feaver remains: but if it be critical, the Feaver ceaſeth, and the Excrements with the Urine are wel colored. The External Cauſes, as Poyſon, and venemous bitings may be declared by the Patient, and thoſe about him.

The Prognoſtick of the Jaundice is various, according to the variety of Cauſes.

That is more Curable which comes from the Obſtruction of the Bag containing the Gall, becauſe its paſſages are neerer the Guts, and the Matter cleaving thereto, is eaſily ſent into them, provided that the Obſtruction come not from a ſtone, which becauſe it cannot be diſſolved, renders the Diſeaſe incurable.

The Jaundice coming from an Inflamation or Schirrus of the Liver, is moſt dangerous; for one commonly ends in an Impoſthume, the other in a Dropſie.

They who in a Feaver, have the Jaundice before the ſeventh day, are deſperate, *Hipp.* Aph. 62. Sect. 4. againſt which Aphoriſm, there is another of, *Hippocrates* oppoſed, which is in 4. *de victus ratione in acutis*, in theſe words: *In a Chollerick Feaver, if the Jaundice come before the ſeventh day, with chillneſs, the Diſeaſe is cured; but if it come without chillneſs, it is deadly.* There is

Reason for what he saith; for when in the third, fourth, and fifth day, the Crisis (or ground of Judgment) is healthful, if it be by Sweat, Urine, or Stool, why should not a Critical Jaundice fall upon those daies? And Experience from many allowed Authors doth testifie that the Jaundice doth often happen with safety before the seventh day. Now these Authors do interpret the aforesaid Aphorism thus; namely, That *Hippocrates* by the seventh day, understands any Critical day, and he mentioneth the seventh as the most noble day, and to be taken for all the rest. But that is a true Critical Day of Judgment, afore which, a ful Concoction of the Matter causing the Feaver, did appear.

The Cure of the Jaundice, is by taking away of the Causes: For if it come from a hot distemper of the Liver, or a Tumor in that part, you must consult with the Chapters afore mentioned for the Cure of them.

But that which comes upon acute Feavers, if it be Critical needs no Cure. Yet if it be Symptomatical, the Cure of it depends upon the Cure of the Disease upon which it depends.

That which comes from the Obstruction of the Cystis, or Bag of the Gall, is cured by taking away of the Obstruction, which may be conveniently done by the Remedies mentioned in the former Chapter. To which we may add these as more proper.

First take away part of the Humor with this following Bolus:

Take of *the Electuary of the Juyce of Roses, and Diaprunis solutive, of each three drams: the pouder of Rhubarb one dram: Saffron half a scruple: With Sugar make a Bolus; which you may give once or twice, if the Body be of a very ill habit.*

As for Phlebotomy, though *Galen* denyeth it, as unprofitable, yet if you perceive abundance of Blood, it is very good to abate it.

After general Medicines, this following Infusion used six or seven daies, doth commonly pluck this Disease up by the Roots, if it be but yong.

Take of *Madder Roots half an ounce: the greater Celandine one handful: the tops of Sea Wormwood, and of the lesser Centaury, of each one pugil: Cinnamon half a dram: Saffron half a scruple: Infuse them a whol night in eight ounces of white Wine, and add to the straining half an ounce of white Sugar. Let him take it in the morning three hours before dinner.*

Or you may make this Decoction following:

Take of *Celandine Roots and Leaves one handful: the Leaves and Flowers of St. Johns wort, of each half a handful: the shavings of Ivory and poudered Goose dung, of each three drams: Saffron half a dram. Put the Pouder of Goose dung and the Saffron in a clout, and boyl them all in equal parts of white Wine, and Wormwood Water to one pint: and when it is strained, add one ounce of Sugar. Give it for three morning draughts, and repeat it if you think fit.*

Quercetan commends for this purpose, the Dung of a green Goose that eats Grass in the Spring; and the dried white Dung of an Hen, given for divers daies to the quantity of half a dram or a dram; and he saith that the Dung of these Aerial Creatures, is full of Nitre and Sulphur, and hath a wonderful Faculty to cut, attenuate, and dissolve.

Dioscorides commends the Juyce of Horehound for this Disease, and since his time, others, and especially *Forestus*, who reports that some were only cured by the use of the Syrup of the Juyce of Horehound, when other means failed.

Gesner commends the Nettle Root thus prepared:

Take of *Nettle Roots one pound: Saffron one scruple: beat them wel, and take out their Juyce with white Wine, and let the Patient take four ounces every morning for four or five daies, and cover himself to sweat after it.*

While inward Medicines are given, let the Region of the Liver be anointed with this following Oyntment.

Take of *the Juyce of Smallage, Parsley, and Succory, of each one ounce: white Wine Vinegar half an ounce: the Oyl of Tamarisk two ounces: boyl them til the Juyces and Vinegar be consumed; then add of yellow Sanders and Spicknard, of each one dram: Wax, as much as will make a Liniment.*

After the Obstructions are taken away, the yellow colour will presently vanish by the strength of Natural Heat, which will discusse the Humor from the Skin. But that it may sooner be gone, make a Bath of warm VVater, and rub the Body therein with a Bag of Barley and Bean Meal.

Chap.

Chap. 5. *Of the Scirrhus of the Liver.*

THe Scirrhus of the Liver, is a hard Tumor without pain, bred of a thick Humor, faſtened and hardened upon the Liver.

This Scirrhus is Two-fold; either it is Exquiſite, or Perfect; or Imperfect. That which is a perfect Scirrhus, is laid down in the Definition propounded, which is without Pain or Sence.

That which is not exquiſite or perfect, hath ſome kind of pain, and comes from a Matter leſs hardened; in a word, it is a Scirrhus beginning, and not confirmed: but that which is exquiſite is confirmed, ſo that they only differ in Degrees.

A Scirrhus breeds in the Liver two waies; either from Defluxion, or Congeſtion of a thick and glutinous Humor upon the part; or from Inflamation, which diſſolveth the thin Humors, and leaveth the thick.

The Matter of the former, is Flegm or Melancholly, either ſent from other parts, or bred in the ſubſtance of the Liver by an evil Concoction. For the producing of this Humor, evil diet is a main cauſe, if it be of thick, cold, and viſcous, or clammy Nouriſhment; as alſo a Flegmatick or Melancholick Conſtitution, and a Natural ſtraightneſs of the Liver. From whence *Galen* ſaith, 13. Meth. That a Scirrhus eaſily breedeth in the Liver, Spleen, and Reins: In the Liver, becauſe the Paſſages are narrow, and it is nouriſhed with thick blood in the Spleen, becauſe it receiveth the thick blood: and laſtly, in the Reins, becauſe they are nouriſhed with thick blood.

The Cauſes of the latter Scirrhus, which followeth other Humors, is the immoderate uſe of diſcuſſing Medicines, or of Repercuſſives, which by cooling and binding, do thicken the Matter, and keep it from diſſolving. Beſides, the Matter of the Diſeaſe, which is properly cold and thick, and will not be diſſolved; or the weakneſs of the part, which cannot help the breathing forth of the Humors. And laſtly, a cooling and thickening Diet.

The ſigns of a Scirrhus in the Liver are, a hardneſs in the right Hypochondrion, and that more than in an Obſtruction, next a heavineſs in that part, eſpecially when there is violent breathing, no Feaver, nor pain, by which it is diſtinguiſhed from an Inflamation, or there is but little pain, as when the Schirrus is not exquiſite or perfect: There is leſs repoſe upon the left ſide, becauſe the Liver being hard and heavy, doth then lie upon the Stomach, and burden it: the color of the Face is pale, and and greeniſh, becauſe when the Liver is Schirrus, there is no good Blood produced by it: The whol Body alſo, is fallen away, becauſe there is neither Sanguification, nor diſtribution of Nouriſhment as it ought to be.

The Prognoſtick of this Diſeaſe is given by *Galen*, 2. *ad Glaucum, cap.* 4. in theſe words: *An inſenſible Scirrus is incurable, but that which is a little ſenſible is curable, though with much difficulty.* Alſo *Galen*, cap. 5. of the ſame Book, ſaith, *We have cured a Schirrus of the Liver often in the beginning of it; but when it hath been of long continuance, neither could I, nor any other that I ever heard of, cure it.*

An old inveterate Scirrhus turns to a Dropſie incurable, of which ſome die ſooner than others, if they have a looſneſs of the Belly therewith of long continuance.

A Scirrhus which followeth the Jaundice, or cauſeth the ſame, is dangerous. Whence *Hippocrates*, Aph. 42. Sect. 6. ſaith, that if the Liver grow hard in them who have the Jaundice, it is an evil ſign.

The Cure of a Scirrhus, is firſt by the taking away of the Antecedent Cauſe, by the Apozem which is preſcribed in the Obſtruction of the Liver. To which you may add other Medicines proper to open Obſtructions.

Afterwards you muſt diſcuſs the hard Matter with mollifying and opening things. For this end the Steel Pills above mentioned, are excellent, eſpecially if you add thereto, Bdellium, Ammoniacum, and Sagapenum.

But if the hardneſs be very great, you muſt give theſe Pills following, many daies together.

Take of *Gum Ammoniacum diſſolved in Vinegar, and ſtrained, and again made thick, two drams: Bdellium, and Storax, of each four ſcruples: mix them. Take one dram every other day.*

And in the daies between, let him uſe the Opiate, or ſtrengthening and opening Lozenges preſcribed in the Cure of Obſtructions.

Theſe following Pills have a wonderful Vertue to ſoften a Scirrhus, and diſſolve it.

Take of *the beſt Aloes, and Gum Ammoniack diſſolved in Vinegar, ſtrained, and again made thick, of each half an ounce: Mercurius dulcis two drams: Diagridium one dram: With Oxy-*

mel of Squils make a Maſs of Pills; of which let him take half a dram four hours before Dinner, for twenty or thirty daies together.

Zacutus Luſitanus, Obſ. 41. Lib. 1. Praxis Admir. reports that there was a ſtrong Scirrhus cured by the uſe of Conſerve of Horehound forty daies together.

Some Practitioners commend the uſe of Turpentine thus prepared:

Take of *Turpentine waſhed with white Wine one ounce and an half: Sugar half an ounce: Give one dram every day, or every other day, for it is an opening Medicine that provoketh Urine, and looſeneth the Belly.*

All the time of Cure, let the Patient take white Wine, or thin Claret ſteeled, for his ordinary Drink.

Alſo the other Preparations of Steel before mentioned, are very good.

Outwardly you muſt apply Fomentations, Oyntments, and Plaiſters, thus made:

Take of *Marſh-mallow Roots, Briony and Lilly Roots, of each one ounce: Mallows, Violets, Pellitory of the Wall, Wormwood, and Agrimony, of each one handful: Linſeed, Fœnugreek and Dill ſeed, of each half a dram: Chamomel, Melilot, and Roſe flowers, of each one pugil: boyl them in three parts of Water, and one of white Wine, or in Water and Vinegar. With the ſtraining, let the Region of the Liver be fomented every morning and evening.*

If the Scirrhus be very great, add to the Decoction, Flowerdeluce, wild Cucumers, and Dwarf-Elder Roots, and make the Decoction in Tripe Broth, and white Wine.

Take of *Oyl of Lillies, Chamomel, Melilot and ſweet Almonds, of each one ounce: Oyl of Roſes and Wormwood, of each half an ounce: Gum Ammoniack diſſolved in Vinegar three drams: Wax two drams: make a Liniment, with which anoint the part aforeſaid, after the Fomentation.*

If you deſire a ſtronger Liniment,

Take of *the Juyce of Briony and wild Cucumers, of each two ounces: the Oyl of Capars and Tamariſk, of each three ounces: white Wine one ounce: boyl them till the Juyce and the Wine be conſumed, then add two drams of Wormwood in powder, Gum Ammoniack diſſolved in Vinegar half an ounce: with a little Wax make a Liniment.*

Take of *the Emplaiſter de Mucilaginibus one ounce: Melilot half an ounce: Gum Ammoniack melted in the Juyce of Wormwood three drams: ſoften them with a little Oyl of Wormwood and Lillies, and make a Plaiſter to be laid on after the Liniment.*

The Leaves of Henbane boyled in Vinegar are good to be outwardly applied to the part, made into the form of a Cataplaſm or Pultis, with Oyl of bitter Almonds.

To theſe you may add Baths made of ſoftening and digeſting things, and of ſtrengtheners, ſuch as we preſcribed for Fomentations; and let the Patient uſe them by turns.

And finally, Make an Iſſue in the right Leg, that part of the Matter offending may be that way drawn forth.

Chap. 6. *Of the Dropſie.*

Hippocrates makes two kinds of Dropſies; namely, An Univerſal, and a Particular. An Univerſal Dropſie, is that which is in the whol Body, or over the whol Belly: a Particular, is that which is only in one part: hence there is the Dropſie of the Head, Breaſt, and Womb; of which, here we ſhall not ſpeak, but only of the Univerſal.

Galen gives three kinds of this Univerſal Dropſie; namely, Aſcites, Tympanites, and Anaſarca, or Leucophlegmaſia.

Aſcites is a ſwelling of the Belly, cauſed of a ſerous Humor; nor doth the Belly only ſwell, but many times the Feet, Legs, Thighs, and Cods. Nay, an Aſcites ſomtimes begins with a ſwelling in the Feet, which aſcends after to the Legs, and ſo to the Thighs and Belly.

This ſerous Humor, as it is of the Nature of Water, it is cold; but as it is ſalt, it hath in it heat, which then is encreaſed by the neerneſs of the Bowels, and more by the putrefaction which it gathereth by long continuance: hence comes a Feaver and Thirſt, namely, from the ſtinking ſalt vapors which do infect the mouth of the Stomach.

It falls out ſomtimes, that this Watery Humor, is not contained in the Cavity of the Belly, but in certain Bladders growing to the parts of the lower Belly.

An Example whereof is given by *Schenkius*, Lib. 3. Obſervation; and *Mauritius Cordæus*, Com. 5. in *Hipp.* Lib. 1. of Diſeaſes in Women. *Galen* ſuppoſed (and almoſt all Phyſicians, new and old, have followed him) that every Dropſie comes of a cold Liver, which cannot Sanguifie or make Blood compleatly, but inſtead thereof much Water, Flegm, or Wind. Which Opinion, as it is moſt true in Anaſarca, and approved; ſo in Aſcites and Tympanites it is much queſtioned by many

Modern

Modern Writers, becauſe in the opening of many that died of Dropſies, the Liver hath been found very ſound, as is manifeſt by many relations in thoſe Authors mentioned. Moreover, *Hippocrates* 2. Prorrhet. wittily affirms that a Dropſie may come either from the Liver, or from ſome empty part: by an empty part, he meaneth all that ſpace from the Ribs to the Guts, and the parts contained in it. Alſo *Hipp.* 4. *de morb. Mulierum*, mentions a Dropſie coming from the Spleen. To which places of *Hippocrates* they uſually anſwer thus, That the Liver is alwaies affected either primarily or ſecondarily; ſo that there is never a Dropſie before there is a hinderance of Sanguification, or breeding of Blood. But two Reaſons do ſtrongly oppoſe this Doctrine: The firſt is from the Experience before mentioned, namely, That if the Liver ought neceſſarily to ſuffer in the producing of a Dropſie, it would never be found free and unknit in the Diſſection of a dead Body. The ſecond is, That if the Liver ſhould breed watery Blood, it would be ſent into the whol Body, as in Anaſarca; nor can a ſufficient reaſon be given, why that ſerous Humor bred in the Liver ſhould be ſent to the Belly, and not to other parts.

As for the cold diſtemper of the Liver, that is denied by *Trallianus*, *Avicenna*, and others, who affirm that a Dropſie may ariſe from a hot diſtemper of the Liver, and cannot be cured but by cooling means. And this may be maintained by the Authority of *Hippocrates*, in 2. Progn. *A Dropſie* (ſaith he) *coming after an acute diſeaſe, is evil, for it doth not take away the Feaver.* If therefore a Dropſie may come while the Feaver is, it is cleer that there is ſtill a hot diſtemper. Neither could that ever pleaſe me, which is uſually ſpoken by *Galens* Servants, That the Native heat is diſſolved by a hot diſtemper, and much diminiſhed, and that diminiſhed heat may be called cold. For ſo in a Hectick Feaver, and other conſtant Feavers, in which the Natural Heat is much diminiſhed, we ſhould alwaies blame a cold diſtemper, and the Symptomes which follow ſhould be imputed to cold, and not to heat. From whence, who doth not perceive that there would ariſe a great confuſion in the ſearching into the Cauſes of Symptomes.

Among the late Writers, *Carotus Piſo*, whom *Sennertus* followed, hath dived moſt deep into the true Cauſes of Aſcites, which he affirms to come from a ſerous Matter contained in the Meat and Drink, which by reaſon of ſome preternatural Cauſe, is ſtayed too long in the Gate and Hollow Veins, not ſent into the Body, as in a Natural ſtate and condition it uſeth to be, but into the capacity of the Abdomen. This ſerous Humor is retained in the Veins, from the whol Body, by reaſon the attractive faculty of the Parts, to which it ſhould be carried, is either hurt or hindered.

Now the chief parts which draw the ſerous Matter, are the Liver and the Spleen. For they attract the Chylous Matter in which the moiſture of Meat and Drink is contained. As alſo the Spleen draws Drink to its ſelf, pure and without mixture; as *Hippocrates* taught, and Experience confirms, That they who drink much after Meat, do preſently avoid it by Urine; which learned Authors ſay, is by reaſon the Spleen ſucks the watery Matter before there is a perfect Concoction made in the Stomach.

The Attraction or drawing quality of the Liver and Spleen, is loſt chiefly by defect and weakneſs of Natural Heat: the Natural heat is debilitated by a cold or hot diſtemper, or by Suffocation.

A cold diſtemper coming either from too cold a Diet, from loſs of too much Blood and Spirits, or any other Cauſe, doth deſtroy the Natural Heat of the Liver and Spleen, and ſo hinder their Actions.

A hot Diſtemper doth diſperſe the Native Heat; whence being made weaker, the Liver and the Spleen become leſs Active. This comes from Feavers, much Wine, or hot Meats.

Laſtly, The Natural Heat is weakned by Suffocation, when there is too much Blood in the Veins, eſpecially if it be foul, as when the Terms or Hemorrhoids are ſtopt, by which the Blood was cleanſed formerly, but now by ſtoppage corrupted.

Alſo the Attraction or drawing vertue of thoſe parts, is hindered by Obſtructions, which hinder the free paſſage of the ſerous Matter. So a Dropſie followeth a Scirrhus of the Liver and Spleen, not only becauſe thoſe parts being weakened cannot produce good Blood, but eſpecially becauſe they are not able to attract, and ſend to other parts whatſoever is drunk.

Here it may be objected, That in a Dropſie the whol Body is nouriſhed by Blood bred in the Liver of a Chylous Matter, which it draweth to it ſelf. We anſwer, That the Liver doth better attract that which is moſt familiar unto its ſelf, and moſt fit to be made blood; but it draweth to it leſs than is ſufficient, by reaſon of the weakneſs of the attractive faculty. Hence it is that the Body grows lean, becauſe it draws ſome water along with the Chylus, and leaves the reſt in the Meſeraick Veins, and the Veins of the lower Belly, which is by degrees carried into the Capacity of the Abdomen.

We do not deny that Sanguification or making of Blood, is hindered in a Dropſie, eſpecially when the diſtemper is very cold or very hot, or the Obſtruction or Scirrhus great, for then there cannot be a perfect making of blood. But we deny that that is the next and immediate Cauſe of a Dropſie; but rather an effect thereof, when the Water corrupted in the Abdomen, doth alſo corrupt the Bowels that ſwim therein.

Next to the Liver and the Spleen, the Reins do attract the watery Matter which is in the hollow Vein, and free the whol body from the superfluity thereof, so that if at any time they do not their office, there remains much matter in the veins, which being sent to the Abdomen do quickly make an Ascites; now the attraction of the Veins may cease for divers Causes, because of a Cold Distemper, Tumors, Ulcers, and Obstructions, which wil Diminish, Abolish, and intercept their Function.

Lastly, The distribution of Water is hindered from some external Cause, as when much cold Water is drunk, which Nature cannot govern, nor sufficiently distribute into the Veins: So *Carolus Piso* reports of a yong man that had a Tertian Ague, and drinking Water exceedingly in his Fit fel into an Ascites, from which by the taking of one Lozenge of Diacarthamum he was Cured by discharging the Water which was in the Abdomen, but if he had continued drinking so much water any longer, he had not been so easily Cured, because it would have brought great obstructions and a cold distemper of the Bowels, by reason of the loss of natural heat.

But it is questioned of many by what wayes that serous matter should be carried by the Veins into the Capacity of the Abdomen, to whom we may plainly answer, by saying from *Hippocrates* that in a living body al things are passing to and fro, so that in time of necessity not only thin and serous Matter, but also that which is very thick may be sent through the insensible passages: So in a Pleurisie blood and matter wil pierce through the thick substance of the Pleura and Membrane which covers the Lungs, and be spit forth at the mouth: So in a Fracture of the Leg or Thigh, which hapens without hurt to the Muscles and Skin, the matter which floweth from the broken bone, pierceth through the substance of the other parts and wets the bouisters and rowlers.

So also in a Dropsie oftentimes a great quantity of Water is vented in one day by giving of Quicksilver, which cannot be except the Water conteined in the Abdomen do pass through the Tunicles of the Guts.

Nor is the Objection of *Fernelius* of any force, when he saith that Nature had in vain made so many open wayes, if the Humors can pass through those invisible passages: For we Answer, That in an ordinary and natural motion of Humors ordained for the nourishment of the whol body, those passages are necessary through which they may easily flow, but in an extraordinary case, provident Nature doth find out extraordinary wayes by which she may cast out hurtful Matter, or at least send it to a place less dangerous.

Fernelius Objects again, That in them who have died by a stoppage of Urine for twenty dayes together, it was never perceived that any Water went through those blind passages: We Answer, That Nature doth not alwayes work the same way in preternatural Causes, nor send hurtful Humors to the same places, but especially to those parts which are more disposed to receive them through weakness.

So in the Suppression or Stoppage of Urine, the Serous Humor flowes openly through the Veins and Arteries and fils them, and if it find any part weaker than the rest it falls forceably upon it: hence it is that some die of the hurt of one or other remarkable part. So nothing hinders (if the parts of the Abdomen in which the Veins and Arteries end) be grown weak, but that the Watery Humor may be sent into its capacity or hollowness.

Nor is that true which *Fernelius* would infer, namely, That a Dropsie never comes from suppression of Urine, for Reason and Experience teacheth the contrary: as we shewed afore in the Discourse of the Loss of Attraction in the Reins: but you must observe that the Stoppage of the Urine doth make an increase of Water rather in the branches of the hollow Vein, then of the Gate Vein or *Vena Porta*, by which the watery Humor chiefly flows into the capacity of the Abdomen as appears by what followeth.

Therfore we may Answer this Question, by saying, That the water got into the hollow of the Abdomen, by the insensible passages though there are also other manifest wayes by which it may pass.

Hippocrates, Aph. 55. Sect. 7. hath shewed them, for (saith he) they who have much Water about the Liver, if it get into the Omentum, or Kels, their belly will be filled with Water, and then they die. The meaning of which Aphorism is (though *Galen* did not plainly see it) that the Water from the Liver doth flow into the Branches of the *Vena Porta* which go to the Omentum, and when they are filled, either by their Tunicles made thin by Diapedesis or Rarefaction, or by the mouths of the Vessels being opened by Anastomosis, the Water gets into the Cavity of the Abdomen: This happens often in the Spleen also, when it draws Water in abundance from the Stomach, as appears by many sayings of *Hippocrates*; and in *lib. 4. de morbis*, he saith, That Water may press from the Spleen to the Omentum or Kell, in these words, *Drink is also carried into the Stomach with which when it is filled the Spleen takes it from thence and sends it to the Veins and the Omentum.* From which we may perceive, That Water chiefly gets into the Abdomen, by the Veins of the Omentum which are called Epiploicæ, and Gastrepiploicæ, although it may pass also through their Veins.

Besides

Beſides the aforeſaid Cauſes of a Dropſie, which are more ordinary, there are mentioned by Authors ſome leſs uſual, confirmed by Obſervation: and theſe come from the diſorder of ſome peculiar part, not only of the Liver and Spleen, but alſo of the Meſentery, Sweet-bread, Stomach, Guts, Reins, Bladder, and Womb, namely, when the *Homioſis*, or faculty to convert nouriſhment into themſelves is hurt, from ſome great Diſeaſe, ſo that their proper nouriſhment is corrupted and turned into Water. So *Galen*, Comment. Aph. 55. Sect. 7. ſaith, that watery bladders are ſometimes in the out-ſide of the Liver, which being broken, ſend Water downwards into the Cavity of the Abdomen, the encreaſe whereof breeds a Dropſie.

Fernelius ſuppoſeth that the Liver being very dry, hath clefts like the parched Earth, and that through them there flows a conſtant Water which fills the Cavity of the Abdomen. Others ſay that a Dropſie may come from the Guts, if they be perforated or pierced through, and yet the Patient dieth not preſently, but a watery Humor ſtill flows through them into the Cavity. It comes alſo from the Kidneys, if they be much Ulcerated, and water flow from them. So *Platerus* reports of one that in a Dropſie had many Ulcers in both Kidneys, from whence both matter and water flowed into the Cavity. There is alſo a Story in *Sennertus*, taken out of *John Heinzius*, of a certain Woman who had a Dropſie from the diſtemper of the Womb, whoſe Bowels were all ſound, except the Teſticles or Stones, which were found to be ſwollen as big as the Head of a new-born Child, being blew, hollow, and full of Ulcers, from which there came a ſerous Matter which cauſed the Dropſie.

The Dropſie called Tympanites, hath its name from *Tympanum*, a Drum, becauſe the Abdomen is ſtretched out like a Drum, and if you ſtrike it with your hand, it ſounds like it. This ſtretching comes from wind ſhut up in the Cavity of the Abdomen. But ſometimes this wind is in the Cavity of the Guts; which *Platerus* obſerved, laying in ſome that have been thought to die of a Tympany, after they were opened, have had no wind coming forth of the Cavity of the Belly; neither did their Bellies, but their Guts ſink, eſpecially the thin Guts, which were ſo ſtretched with wind that they came forth ſo rouled together that they could not be again thruſt into the Belly.

But we muſt obſerve that the wind which cauſeth a Tympany, is ſeldom contained in the Belly alone, but for the moſt part mixed with Water; as in an Aſcites, not only Water, but Wind alſo is contained; and both theſe Dropſies have their name of that which predominateth: if there be more wind than water, it is a Tympany; but if more water than wind, an Aſcites: but if they be equal, it is between both; ſo that we may doubt whether that Dropſie be a Tympany, or an Aſcites.

The Material Cauſe of Wind, is a crude Humor and thick, whether it be Flegm or Melancholly, which being ſtirred and made thin by heat, ſends forth thick vapors, which are hard to be diſſolved, and theſe are called *Flatus*.

This Crude and thick Humor, is partly in the Stomach and Guts, but eſpecially between the Membranes of the Midriff and Guts, from whence it is more hard to be moved than from the Cavity of the parts aforeſaid. The 11. Aph. Sect. 6. of *Hippocrates*, makes this very probable; *They who have pains and gripings about the Navel and Loyns, which cannot be removed, have a dry Dropſie.* For becauſe the Meſentery is joyned to the Guts by the fore part, and to the Loyns by the hinder part, we may eaſily perceive that the pains which reach from the Navil to the Loyns, come from the Meſentery. Beſides, The greatneſs of the pain, ſhews that the Cauſe is deep in the ſubſtance of the part, and cannot be removed: For if it were in the Cavity of the Stomach and Guts, it would eaſily be remedied.

Concerning the Efficient Cauſe, Authors differ; ſome ſay from a cold, ſome from a hot diſtemper. They which accuſe a cold diſtemper, think they have *Galen* on their ſide, who ſaies that wind is bred of a weak heat. To whom we anſwer, That heat may be ſaid to be weak in reſpect of the Matter which cannot be diſcuſſed or diſſolved thereby. But this is to be imputed to the Matter, which is rather defective than the Heat, which is commonly too great and preternatural. And we muſt acknowledg with the Learned, That a burnt Melancholick Humor is moſt fit to breed a Tympany, which proceedeth from the parching heat of the Bowels; which heat doth ſtir that Matter, and produceth from it thick vapors that are hard to be diſſolved.

The Dropſie called *Anaſarca*, comes of a Flegmatick Humor ſpread through the whol Body, and therefore the Body is ſwoln and white; from whence the Diſeaſe is called *Leucophlegmatia*. This Flegm comes from a cold Liver, which inſtead of good Blood, produceth crude and flegmatick; which when it cannot be turned into the ſubſtance of the parts, leaveth the crude part that is unfit for Nouriſhment upon them, and makes them ſwell; hence comes Anaſarca, or *Leucophlegmatia*.

This Diſeaſe beginning, is called *Cachexia*, or an evil Habit, and turns into *Leucophlegmatia*, from which it differs but in degree.

The Antecedent Cauſes are, all things that cool the Liver too much, and hinder its Concoction, as too much cold and moiſt Diet, the ſtopping of the Terms or Hemorrhoids, Obſtructions, cold Tumors,

mors, Scirrhus and large bleeding, and other great Evacuations, by which the Native heat is diminiſhed.

The Signs of a Dropſie, and every ſort of it, may be known by what hath been ſaid.

In an Aſcites, you may know that there is water in the Abdomen by its greatneſs, ſoft Swelling, and broad, and if you preſs the ſides, you ſhall eaſily hear a noiſe of Water, and when the Patient turns from one ſide to the other, and then the whol Belly lieth as it were on that ſide: then the Feet and Cods ſwell, but the higher part grow leſs; the Urine is little and thick, ſomtimes red, becauſe there goes but little water to the Reins and Bladder, and ſtaies long there, by which means it becomes red and thick. In the progreſs or encreaſe of the Diſeaſe, there is difficulty of Breathing, by reaſon of the abundance of water which lieth upon the Diaphragma or Midriff, eſpecially when the Patient lieth down, and therefore he is forced to ſtand or ſit moſt uſually. There is a troubleſom thirſt from the ſaltneſs of the Humor, with which the Stomach ſwimmeth. And laſtly, there is a conſtant lingering Feaver from the corruption of the Water, which at length doth corrupt all the Bowels ſwimming therein.

In a Tympany, the Belly being ſtrook, ſounds like a Drum; the Bulk of the Belly is leſs burdenſom than in an Aſcites: There were formerly pains about the Navel and Reins, when the Patient lieth with his face upwards, his Belly remains hard and ſtretched forth, nor doth it turn aſide when he turneth himſelf.

Laſtly, In an Anaſarca, not only the Belly, Thighs, and Leggs, but alſo the Hands, Arms, Breaſt, Face, and whol Body ſwel; and whereſoever you thruſt your finger upon it, it will pit, and leave an impreſſion. The color of the Skin is pale and Earthy, the Fleſh ſoft and looſe, the Water thin and white, breathing difficultly, and ſomtimes a lingering Feaver.

As to the Prognoſtick: Every Dropſie is dangerous, and hard to be cured, and the more hard by how much the elder, but Anaſarca is leaſt dangerous; but Aſcites and Tympany are ſomtimes one more dangerous than another, according to their Cauſes. So if Aſcites come from a Scirrhus of the Liver, or Ulcer of ſome internal part, it is more dangerous than a Tympany; but if it come of drinking too much Water, or new Obſtructions, it is leſs dangerous.

A Dropſie is more eaſily cured in Servants than in Free-men, in Country men than in Noble men; for they will be better conſtrained to abſtain from Drink and the like, and be more patient than they who have liberty.

A Dropſie from the hardneſs of the Spleen, is leſs dangerous, than from the hardneſs of the Liver, becauſe the Spleen is not ſo Noble a part.

A Dropſie coming upon an acute Diſeaſe, is evil; nor will it abate the Feaver, but cauſe pain and death. *Hipp.* 2. Prognoſt.

They whoſe Liver being full of water, diſcharge it into the Omentum or Caul, their Belly is filled with Water, and they die. *Hipp.* Aph. 55. Sect. 7.

He who hath Water between the Skin, or an Anaſarca, if that water which is in the Veins flows into the Belly, the diſeaſe is cured. *Hipp.* Aph. 14. Sect. 6. This Aphoriſm ſeems contrary to the former. But this contrariety is anſwered, by ſaying that *Hippocrates* in the former, by Belly, underſtood the Cavity of the Abdomen; but in this, Belly its ſelf; for if the water flow through the Belly, the Diſeaſe is at an end. Which Opinion is more clearly explained by *Hippocrates*, in Coacis, in theſe words: *In the beginning of a Dropſie, if there come a flux of the belly, without want of Concoction, or Crudity, it is prevented.* You muſt mark that it is in the beginning; for if a flux come upon an old Dropſie, it is not ſo ſafe, becauſe commonly there is ſome fault in the Bowels by continuance, as a Scirrhus, or corruption of ſubſtance, which begets new matter, and death alſo. Hence *Hipp.* in Prorrh. ſaith, that they who are to be cured of the Dropſie, muſt be *Euſplagchnous*, that is, thoſe that have ſound Bowels, free from the great Diſeaſes mentioned. Otherwiſe, if a flux of the Belly happen with a Scirrhus or corruption of the Liver, they die preſently, as *Galen* ſhews 2. ad Glau. cap. 5. And *Avicen* ſaith thus: *Straitneſs of breath, and flux of the belly, ſignifie death within three daies.*

Little Urine in Dropſies, is evil; the leſs, the worſe, becauſe the Drink runs into the Belly, and not into the Reins. Hence *Hipp.* in Coac. ſaith, *Little and thick Urine, and a Dropſie that is Feaveriſh, is deadly: but if the quantity of Urine encreaſe, we may hope well.* Which is elegantly laid down by *Celſus*: *And then* (ſaith he) *there is hope of Health, when they void more Urine than they drink: Therefore it is good every day to meaſure the Urine, and the Drink, and the Belly with a ſtring, eſpecially while Phyſick is given, to ſee whether it grow leſs or not; for if it encreaſe notwithſtanding the Medicines, it is deſperate.*

Impoſthumes, or ſpots in the Legs of Hydropical men, are deadly. *Hippocrates* confirms this 7. Epid. in the Hiſtory of *Bion* and *Cteſiphon*; the one whereof died preſently after an Impoſthume which ran in his left Knee: the other after he had a red and blewiſh gathering in his right Thigh.

Men

Men that are cured by Medicines for Dropſies, if they fall again into the ſame, are deſperate, *Hipp.* in Coac. For it ſignifieth that there is ſome incurable fault lurking in the Bowels, which after the water is emptied, reneweth it again.

If the Patient have ſound Bowels, and ſtrength, eat his meat, and concoct well, and be not ſick after; breath freely, have no pain, cough, or thirſt, and his tongue grow not rough, ſo much as in his ſleep; if Medicines preſently purge him; and if without Medicines he be bound, and in a Natural order; and if his Urine change according to his Diet, or if he be not faint. If all theſe things be preſent, the Patient is recovered; if ſome of them, there is hopes of amendment; if none, he is deſperate.

In a dry Dropſie, to piſs by drops is evil. *Hipp. in Coacis.*

A Tympany in a Melancholick Body, is deadly, and Remedies are given in vain.

If in a Leucophlegmatia, a ſtrong Diarrhœa follow, the Diſeaſe is cured. *Hipp.* Aph. 29. Sect. 7. but this Diarrhœa muſt be at the beginning, or at leaſt before the Diſeaſe be old, or the ſtrength of the Party weakened; but if it happen when the Patient is weak, it is dangerous.

The Cure of the Dropſie conſiſts in the Evacuation of the Matter, whether it be in the whol Body, or in the Abdomen or Belly; in taking away the Cauſe that produced that Matter, and in ſtrengthening of the Bowels, eſpecially the Liver.

The chief and moſt ordinary Cauſes are, great Obſtructions, and Scirrhus or hard Tumors, the Cure of which Diſeaſes is to be taken out of their proper Chapters. But if they will not ſuffice, you muſt uſe theſe following, which are more proper in Dropſies, and vary them according to the variety of Cauſes, and the Bodies ſick.

And firſt, you muſt give an ordinary Purge, by an opening Apozeme that expels flegm and water, made thus:

Take of *the Roots of Eryngus, Madder, Smallage, Parſley, and Elicampane, of each one ounce: Valerian, Aſarabacca, Dwarf-Elder, and Flowerdeluce Roots, of each half an ounce: the Bark of the Roots of Capars, and inward Bark of an Aſh and Tamarisk, of each ſix drams: the Leavs of Agrimony, Ceterach, Maiden-hair, Germander, St. Johns-wort, Wormwood, and the leſſer Centaury, of each one handful: Soldanella, or wild Mercury half a handful: the ſeeds of Carrots, Parſley, and Fennel, of each half an ounce: ſcraped Liquoris, and Raiſons ſtoned, of each one ounce: clean Senna one ounce and an half: Agarick tied in a clout three drams: the ſeeds of Dwarf-Elder, and Jallap Roots, of each one dram and an half: Ginger and Cloves, of each one dram: Broom, Elder, and Tamarisk flowers, of each one pugil: Boyl them in equal parts of ſteeled Water, and white Wine added towards the end, to a pint and a quarter. When it is ſtrained, diſſolve therein, Syrup of Succory with Rhubarb, four ounces. Make a cleer Apozeme, aromatized with three drams of Cinnamon, for four morning draughts.*

After Univerſal Purging, let the Patient take this following Pouder once a week:

Take of *Clean Senna, Gummy Turbith, Hermodactls, Dwarf-Elder ſeeds, Jallap, and Mechoacan, of each one dram: Cream of Tartar two drams: Cambugia, half a dram: the pouder of Diamber, Diarrhodon Abbatis, and Fennel ſeeds, of each one ſcruple: Sugar candy three drams: Make a Pouder of them all, of which infuſe two drams, or two drams and an half all night in four ounces of white Wine. Let him take the Wine and the Pouder in the morning.*

The Syrup of *Rhamus ſolutivus*, or Buckthorn, made of the Juyce of its Fruit, called Rhein Berries, with Sugar, given one ounce at a time, doth wonderfully purge water. It muſt be taken preſently after Dinner.

Or give the Magiſtral Syrup made of the Decoction of the Apozeme afore mentioned, the doſe of Purgers being encreaſed; or this following:

Take of *the Juyce of Damask Roſes two pints: the Juyce of the Roots of Danewort, Flowerdeluce, Succory Leaves, and Agrimony, of each half a pint: the ſeeds of Danewort, Mechoacan Roots, and of the beſt Rhubarb, of each two ounces: Spicknard three drams: yellow Sanders two drams: Cryſtal of Tartar one dram and an half: infuſe them a whol night, and after a little boyling ſtrain them; then put as much white Sugar as is of the Liquor: boyl it into a Syrup, and add to it of the ſalt of Wormwood half an ounce. Let him take two drams with opening Broth once in a week.*

Or inſtead of this Syrup, or at other times when it is not taken, you may give theſe Pills, which purge the evil Humors, and alſo open Obſtructions.

Take of *the beſt Aloes, ſteeped in the Juyce of Wormwood, half an ounce: Gum Ammoniack diſſolved in Vinegar and ſtrained, the beſt Myrrh, and Crocus Martis prepared with Sulphur, of each three drams: Salt of Wormwood and Tamarisk, of each two drams: Diagridium, and Troches of Alhandal, of each one dram: Saffron, Ginger, and Sal gem, of each one ſcruple: With Oxymel of Squils make a Maſs of Pills, of which give half a dram twice in a week two hours before Dinner.*

Alſo Purging Wines are much commended for the cure of the Dropſie, of which there are divers Forms. But theſe are beſt:

Take of *the Roots of Aſarabacca, and Mechoacan, of each two ounces: the French Flowerdeluce, and Bark of the Roots of Danewort and Elder, of each one ounce: Elicampane Roots half an ounce: dry Wormwood and Dodder of Time, of each one pugil: clean Senna one ounce: Soldanella or Sea-foal-foot two drams: the Troches of Rhubarb and Agrimony, of each one dram: Mace and Cinnamon, of each half a dram: Scammony four ſcruples: white Wine two pints and an half: Infuſe them three daies in Balneo Mariæ; the veſſel being well ſtopped, keep it without ſtraining. Let him take two or three ounces in the morning, twice or thrice in a week.*

Among Medicines for drawing forth of Water, the Juyce of French Flowerdeluce is very much commended, if it be drawn forth with white Wine, it may be given to three ounces; it provoketh ſtool and urine very powerfully. But becauſe it is very offenſive to the mouth and ſtomach with its ſharpneſs, it uſeth to be mixed with Manna or Honey. *Maſſaria* gives it thus:

Take of *Juyce of Flowerdeluce newly drawn with white Wine, three ounces; the beſt Manna one ounce and an half. Mix them for a Potion.*

Platerus in his Obſervations; *I gave* (ſaith he) *to one in a Dropſie, of the Juyce of Flowerdeluce to drink with Honey two ounces, and he often piſſed and purged; and after he had taken it twice or thrice, his Belly ceaſed ſwelling, and his Feet, and he was cured.*

Rhubarb is commended of ſome, becauſe it purgeth noxious Humors, and ſtrengtheneth the Liver. And *Stocherus* ſaith that he cured many with the uſe of Rhubarb given every third or fourth day, one or two drams in an opening Decoction. Alſo in *Scoltzius* his Epiſtles, there is a famous Story of one who was cured of a Dropſie, only by the uſe of Rhubarb, which he took every day in ſuch a quantity as was neceſſary to purge.

The Troches of Rhubarb are much commended by all Authors. And *Mathæus de Gradi* reports that a certain Duke of *Orleans*, was cured with them alone, taking two drams twice in a week.

Michael Paſchalius ſaith that he cured a Dropſie with the ſame, making them into Pills, by reaſon of their bitterneſs.

The Chymiſts commend the Extract of black Hellebore., *Aquila Cæleſtis*, and *Mercurius vitæ*, and they mix them with other vulgar Medicines, from whence followeth a plentiful Evacuation of Water. But they had need of ſtrong Bodies who take them.

Mercurius dulcis works moſt gently, and *Mercurius Diaphoreticus*. But *Antimonium Diaphoreticum* cures without manifeſt Evacuation, if it be calcined with Salt-Peter till it be white: but the Diaphoretick or Sweating Medicine made of the Butter of Antimony, cures all kinds of Dropſies beſt.

But you muſt obſerve in the giving of all ſorts of Purges, That they, eſpecially if ſtrong, are not to be given often, as *Galen* teacheth Lib. 9, *Cata Topous*, becauſe they weaken the body, and then there will more water be bred afterwards. Therefore you muſt preſcribe ſtrengtheners and openers oftener than purgers. And Experience teacheth us, That the Evacuation by Urine in this Diſeaſe hath better ſucceſs than that by ſtool.

Inſtead of Purgers, you may give Clyſters, which diſcuſs wind, purge water, and take down the belly, made thus:

Take of *Mallows, Mercury, and red Coleworts, of each one handful: Soldanella or wild Mercury half a handful: Annis, Caraway, and Dill ſeeds, of each three drams: Chamomel, Melilot, French Lavender and Broom flowers, of each one pugil: boyl them to a pint. In the ſtraining diſſolve of Diacatholicon one ounce: Hiera Picra half an ounce: Oyl of Dill and Lillies, and of common Honey, of each two ounces. Make a Clyſter twice in a week.* Or,

Take of *very ſowr Leaven half an ounce: common Salt one pugil: Boyl them in as much Water as is ſufficient: ſtrain it, and add to it, the Urine of a Child four ounces: Oyl of Rue three ounces. Clarified Honey one ounce. Make a Clyſter.* This *Valeriola* commends highly.

This following Clyſter, brings forth Water in abundance:

Take of *Coloquintida one dram, Infuſe it for a night in three ounces of white Wine: when it is ſtrained add thereto, Tripe Broth one pint: common Oyl two ounces: Salt-Peter melted one ounce: ſtrong Vinegar one ſpoonful: make a Clyſter.* Or,

Take of *the Pulp of Coloquintida one dram: Clean Bran one handful: boyl them in white Wine for a Clyſter.* Or,

Take of *Carthamus ſeeds one ounce: the beſt Agarick half an ounce: the pulp of Coloquintida three drams: Centaury the leſs, Germander, and both the Wormwoods, of each half a handful: boyl them to a pint. In the ſtraining diſſolve of Oyl of Chamomel, Rue, and Capars, of each one ounce: Honey of Roſes two ounces: make a Clyſter.* Or,

Take of *the Emollient Decoction one pint: thick vomiting Wine, the Infuſion of Crocus metallorum four ounces: Diaphœnicon one ounce: make a Clyſter.*

Blood-

Blood-letting here, is for good Reaſon omitted, except the Diſeaſe come from ſtoppage of the Terms or Hemorrhoids. And then you muſt not bleed except it be in the beginning of the Diſeaſe, before the Liver be grown too cold.

Iſſues, Bliſters and Scarrifications, uſe to cauſe Gangrenes, or mortifications in a Dropſie, becauſe the heat of the part being ſmal, is quickly extinguiſhed: Therefore it is better wholly to abſtain from theſe kind of Remedies, although ſomtimes they have done ſome people good.

Paracenteſis, or cutting of the Skin, is ſeldom to be uſed, becauſe few are cured thereby, eſpecially becauſe the Patients, or their kindered will not yield to it before the Diſeaſe is confirmed, and the Bowels are ſo putrefied that there is no hope. Therefore for the moſt part they die the ſecond or third day after they are cut. The wiſer ſort will have the Inciſion made in the beginning or encreaſe of the Diſeaſe, before the Bowels are corrupted. Neither is it neceſſary at that time, becauſe the diſeaſe being ſmal may more ſafely be cured with other Medicines.

Among empty ing Medicines, Sweat ings are accounted moſt profitable, which, as they are alwaies good in Anaſarca, ſo in a Tympany, or Aſcites, they ſomtimes hurt, namely, when drineſs of the Liver (which is uſual) cauſeth the Diſeaſe. Moreover, it is commonly impoſſible to make men in Dropſies ſweat. But if the Liver be not dry, Sweats are good in all kinds of Dropſies, eſpecially when they decline, to diſcuſs the reliques of the watery Humor by the Habit of the Body. So *Valeriola* reports that he cured an Aſcites with a Decoction of Guajacum given fourty daies together. It is good to make the Decoction with ſteeled Water and Wine. The Chymicks commend Antimonium Diaphoreticum.

Martinus Rulandus makes a Sudorifick of Juniper Berries, which becauſe they are forceable to provoke Urine, may do good both waies. It is thus made:

Take of *Juniper berries bruiſed three handfuls: Sack as much as is ſufficient: boyl them to halfs and give two ounces every morning, covering warm after it.*

Horatius Reſerus in *Scholtzius*, boaſteth that he hath cured many Boyes, and ſome Women of the Anaſarca with Syrup of St. *Ambroſe*, which is a Sudorifick: Its deſcription is in an old Diſpenſatory called *Luminare majus*, thus:

Take of *Gromwel ſeeds huſked two ounces: ſpring Water half a pint: boyl them till three or four ounces of water only remain; which being ſtrained, mix it with as much Sack, and give it warm; it will ſweat him plentifully if he be covered warm.*

But thoſe Medicines are beſt which purge by Urine, and the Cure is commonly better this way.

One of the chief, is two ounces of the Juyce of Chervil given every morning in Wine for many daies.

Opening Wines that purge by Urine are good in this caſe; as this,

Take of *Elecampane, Smallage, Fennel, and Flowerdeluce Roots dried, of each one ounce and an half: Roots of Valerian, Gentian, Aſarabacca, and Squils or Sea Onions, of each one dram: the middle Bark of an Elder, and Saſſaphras, of each ſix drams: dried Wormwood, Agrimony, Germander, and Maiden-hair, of each two drams: the tops of Centaury the leſs and Broom flowers, of each one dram: Parſley, Annis, and Dill ſeeds, of each one dram and an half: Cinnamon two drams: Spicknard half a dram: bruiſe them together, and infuſe them in white Wine ſome few daies, and let him drink thereof every morning.*

The ſteeled compound Wine preſcribed in the Obſtruction of the Liver, is good for the ſame.

The Decoction of Juniper mentioned, is to be reckoned among the Diureticks. And if you fear it is too hot, you may make it in Water, and put a little Spirit of Vitriol to it.

Fonſeca commends the uſe of Turpentine waſhed with Barley Water, and he gives half an ounce thereof twice in a week.

And laſtly, The Spirit of Salt, Tartar, and Vitriol, given in a true quantity with an Apozeme, or other opening Decoction for ſome daies, do wonders; becauſe they being very thin, do run into all the parts of the Body, and open them.

The Salts of Wormwood, Juniper, Bean Stalks, and the like, given in white Wine, do the ſame. Or in want of Salts you may make a Lee of the Aſhes of the ſame, which will be ſufficient

Mathiolus upon the 87. Chap. Lib. 1. of *Dioſcorides*, ſaith, *That a Lee made of Juniper Aſhes with white Wine, and four or five ounces thereof taken, doth powerfully provoke Urine, ſo that I have ſeen ſome men cured of a Dropſie with it alone.*

Moreover, In the whol time of the Cure, you muſt uſe ſtrengtheners to the Liver; for it is in vain to purge water, if you do not hinder the encreaſe of it: which you cannot do except you refreſh the Liver, and bring it to its former temper.

Among the chief Strengtheners is Cinnamon Water; of which you may give one Spoonful every morning, and before Supper.

But *Galen* in his Eight Book *Kata Topous* commends the Electuary called Cyphoides by the Arabians from the Wine whereof it is made, of which you may give half an ounce in the morning, according to *Hollerius* it is thus made,

Take of *Curans clenſed half a pound*: *boyl them in old Sack to the conſiſtence of a Pultis, ſtrain them after they are pounded, and then ad of the conſerve of Roſemary flowers, Citron bark candied, and Cinnamon, of each one dram*: *the Pouder of Aromaticum Roſatum, Diamargariton calidum, and Diacinamom, of each two ſcruples*: *Lignum Aloes half a dram*: *Saffron half a ſcruple*: *mix them for a ſoft Electuary.*

The Opiates preſcribed for the Obſtruction of the Liver are here very profitable.

The Conſerve of Sea Wormwood is very good, made of one part of the Leaves and three of Sugar with which *Matthiolus* in his Chapter of Wormwood ſaith ſome have been Cured.

Poterius makes an Opiate of Conſerve of Roſes, Specificum Somachium, and Crocus Martis, and Oyl of Vitriol, by which only Medicine he ſaith he hath Cured Dropſies. The Specificum Stomachium, is Antimony fixed.

The Cure of men in Dropſies lieth much in their drink: therefore there muſt be care of that, that he drink ſparingly, and endure thirſt as much as may be: for it is known that many have been Cured only with abſtaining from drink and eating of dry meats without other means: For Drink let him take Elicampane or Wormwood, Juniper, or Steeled Wine, or let him uſe the aforeſaid Steel Medicines. *Avicen* forbids men in a Dropſie to ſee Waters. But if you fear too much Heat or Drineſs, or if the Patient be Abſtemious, he may uſe the Decoction of Juniper, of Guajacum, or Saſſaphras, or of Madder, which provokes urin very much, either alone, or with white Wine: But becauſe he muſt abſtain from Drink (as we ſaid) and yet there is great Thirſt, it muſt be aſſwaged by Fits with waſhing the mouth with ſteeled Water and Vinegar, or with often chewing Maſtich or the like; for it wil draw water to the mouth, not only (as ſome think) out of the head alone, but from the Stomach and Cavity of the Abdomen, and therefore it will do much good.

Of Meats we ſay thus, That he muſt chuſe the Dryeſt and avoid Sweet meats as the Plague.

While you uſe Internals, forget not Externals, for they are of great force to diſcuſs the Humor of the Belly; as Fomentations, Bags, Oyntments, Pultiſſes, and Plaiſters: The Chief are made thus,

Take of *Marſh-mallow and Lilly Roots, Cypreſs barks, Capar barks, middle barks of Aſh, Tamariſk, dwarf-Elder, & the greater Snakeweed of each three ounces*: *Wormwood, Agrimony, Marjoram, Organ, Calamints, Peny-Royal, Rue, Ground-pine, Southernwood, and Elder, of each one handful*: *Parſley, Dill, and Cummin ſeeds, of each one ounce*: *Chamomel, Melilot, and Broom flowers, of each three pugils*: *Spickenard, Schœnanth, Nutmegs, Cloves, and Cinnamon, of each half an ounce*: *Salt and Allum, of each half a pound*: *boyl them all in a Lee made of Oak Aſhes, or branches, with this Foment the whol Belly with Spunges dipt therein and ſtrained.*

Or,

Take *the Urine of a ſound Boy, four Pints*: *Lapis Prunellæ, three ounces*: *boyl them to the conſuming of the third part for a Fomentation.*

Aqua-pendens Commends Lime Water, in which he dips a new Spunge which wil compaſs the whol Abdomen; this he ſtrains and binds on, by which he affirmeth, That the Waters that Cauſe the Dropſie are conſumed, the cold and moiſt diſtemper of the Bowels are taken away, and the hardneſs of the Spleen diſſolved.

Claudinus quencheth the Lime in a Salt Bath Water, that is either of Brimſtone or Salt-peter, and bindeth cloſe the Spunges dipped therein and ſtrained with Rowlers to the Belly, and keeps them there long, and then changeth them.

You may make Bags of the Ingredients of the former Fomentation boyled in white Wine, and applied warm to the belly.

After the Fomentation let the belly be anointed with Oyl of Dill, Rue, or Flower-de-luce, mixed with Pouder of Ammoniacum, Galangal, Dill, Bay-berries, and the like.

It is alſo good to anoint with the Oyl of Scorpions according to *Matthiolus*, and with a little Oyl of Roſemary.

Many do make Oyntments and Liniments of ſtrong Purgers, which draw VVater violently from the Dropſie, and aſſwage the Swelling of the belly, but they are dangerous, for the Purging Quality getting between the Muſcles and the Membranes, doth often ſtir up a deadly Looſeneſs.

After Liniments, or if they be omitted you may apply Cataplaſms or Emplaiſters: This following is the beſt,

Take of *the Roots of wild Cowcumbers well bruiſed and ſteeped twenty four hours in Vinegar of Squills, one pound*: *clarified Honey two Pints*: *mix them, and boyl them to the conſiſtance of a Cerat, and ad in the end four ounces of the Pouder of Cumminſeed, make an Emplaiſter for the belly to be renewed every day*: Or,

Take

Take of *dryed Cow-dung one pound*: *Brimſtone and Cummin ſeeds Poudered, of each two drams*: *New Wine boyled called Sapa*: *or of the Urine of a Boy, as much as will make a Cataplaſm.*

A Cataplaſm of Rhadiſhes bruiſed and laid to the Navel and Reins, doth provoke Stools and Urine.

Galen Commends a Cataplaſm of Snails bruiſed with their Shells, which muſt be kept to the belly till it fal off of its own accord; it draws water forth violently.

Valeriola makes it in form of a Plaiſter thus,

Take of *Cow-dung one pound*: *Goats-dung half a pound*: *boyl them in ſtrong Vinegar, and beat them in a Mortar with three ounces of Brimſtone, and one ounce of Allum*: *the Juyce of Spurge and dwarf-Elder newly drawn, of each three ounces*: *Lupine and Orobus meal, of each two ounces*: *the Pouder of Soldanella, Annis, Fennel, and Cummin, of each two drams*: *common parched Salt, three drams*: *Turpentine, four ounces*: *Pitch, ſix ounces*: *make a Plaiſter.*

It is worth the Obſervation which *Wierus* and *Varignana* ſay they have found by Experience that a Toad found in the Woods, cut through the belly and tyed to the Reins, doth provoke Urine violently; and when you wil evacuate more, apply another.

Petræus alſo reports that the Pouder of the ſame Toad dried and calcined in an Oven, drunk half a dram in Wine or other Liquor, doth wonderfully expel the Dropſie by Urine.

The firſt Inventor of which Experience deſiring thereby to deſtroy himſelf, was cured thereby contrary to expectation.

Alſo this following Cerat made of a Toad is excellent,

Take of *Toads two pound*: *the Juyce of dwarf Elder three Pints*: *Oyl one pint*: *Wax half a pound*: *boyl them in a luted Pot to the conſumption of half, ſtrain them for a Cerat*; *ſpread this upon a Leather and lay it to the Spleen it evacuateth all waters.*

All the time of the Cure you muſt ſtrengthen the Liver and Stomach, if the humor doth begin to abate, or is not ſo great that it hinders the Vertue of outward Medicines from coming to the part.

Take of *the Oyl of Orange flowers one ounce*: *the Oyl of Spike three drams*: *the Oyntment of Roſes, the ſtomach Cerot of* Galen, *of each two drams*: *diſtilled Oyl of Maſtich two ſcruples*: *the diſtilled Oyl of Wormwood one ſcruple*: *Oyl of Nutmegs one dram and an half*: *white Wax a little*: *mix them for a Liniment to be applied to the ſtomach.*

Take of *Sea Wormwood three drams*: *Horehound and Roſemary, of each two drams*: *Red Roſes two pugills*: *Chamomil flowers and Bay Leaves, of each half an handful*: *Orange peels and ſweet wood, Aloes of each three drams*: *Cypreſs Roots, Schœnanth, and Spikenard, of each half an ounce*: *with two parts of the beſt Wine, and one part of Wormwood and Agrimony Water make a Decoction, with which Foment the Region of the Liver with a ſponge firſt waſht in Wormwood Water.*

Take of *the Oyntment of Roſes and Cerot of Sanders, of each three ounces*: *Red Roſes, Endive and Sorrel ſeed, of each one dram*: *Spikenard, Schœnanth, dryed Wormwood, and Styrax Calamita, of each four ſcruples*: *Oyl of Maſtich or Wormwood as much as will ſuffice to make a Liniment to be applied to the ſame part after the Fomentation.*

For the moſt part in a Dropſie the Thighs, Legs, and Feet have a cold ſwelling, and for the diſcuſſing of it a Lye is good in which the Roots of Dwarf Elder, and Elicampane, Roſemary Leaves, Marjoram, Thyme, Bayes, Organ, Salt and Allum have been boyled.

Although the things aforeſaid are chiefly uſed, yet ſomtimes they are not neceſſary, namely, when the Dropſie comes in a hot and dry Conſtitution from hot cauſes which diſperſe the natural heat, as in vehement Chollerick Feavers, for then cold things for the Liver mixed with warm Openers are beſt, ſuch as are uſed in continual Feavers: And the Magiſtral Syrup above mentioned made of the Juyce of Roſes, Succory, and Agrimony.

For ordinary Drink give a Decoction of Succory Roots and Calcitrapa, or white Chamelion, which is not unpleaſant; or of other Openers, but in a greater quantity than above, which may quench thirſt, aſſwage the heat of the Liver, and moiſten the drineſs thereof: It is not amiſs to confirm this Doctrine by a famous example (though it be allowed by *Avicen*, *Trallian*, and others) becauſe it ſeems ſtrange to ſome. and is of great Conſequence: *Baptiſta Montanus* reports, *Conſ.* 263. in theſe words; *I ſaw* (ſaith he) *in Venice a certain Predicant Frier that was cured of an Aſcites and Tympanites*: *there were with me many famous Phyſitians*; *namely*, Papienſis, Eugubinus, Trincavella, *and others*: *He had* (*as I ſaid*) *an Aſcites with a Tympany, and a Conſumption with a Hectick Feaver*; *therefore we were bound both to dry and moiſten*: *therefore we were in a great contention*; *I was willing that he ſhould drink much, but things that Open, becauſe he had many obſtructions,*

ſtructions, and that moiſten becauſe he had a Conſumption: I preſcribed the Syrup of Vinegar with all things that provoke Urine: Eugubinus *would not allow him to drink, and told a ſtory of one who was cured by dry things:* Papienſis *to end the controverſie, ſaid, That he ſhould neither drink much, nor at all; we argued till night: the Noblemen brought their Phyſitians to their Boats, and there* Papienſis *ſaid to a Nobleman, what he had concealed formerly, If you would have this man cured, there is nothing to be done but what* Baptiſta Montanus *ſaith.*

In this caſe alſo Medicines of Steel, Tartar, and Vitriol are excellent, becauſe they ſtrongly Open and provoke Urine without any great heat.

But the tart, Vitriol Mineral Waters are beſt, becauſe they powerfully open the Bowels, provoke Urine, and correct the Diſtemper of the Bowels, whence experience ſheweth us that many Dropſies are every yeer cured at the Spaw.

Avicen reports in the Chapter of the Cure of Aſcites, of a Woman *which had a great Dropſie and eat an incredible number of Pomegranats, whereby ſhe was cured.*

And *Varignana* reports out of *Platearius*, That an Old Woman boyled the Juyce of Plantane to the Conſumption of half, and gave it to one that had a Dropſie from a Hot Cauſe every day, and ſo Cured him.

By theſe Examples it is plain, That ſomtimes a Dropſie is Cured with Cold things; and to theſe we may ad the teſtimony of *Chriſtopher a Vega*, lib. 3. art. med. ſect. 8. cap. 12. who ſaith there, *We ſaw one that had a Tympany from the Hot Diſtemper of the Liver whom we cured with cold things, laying upon the Liver the Juyce of Endive and Succory with a little Vinegar, and giving Endive and Succory to be eaten.*

The End of the Eleventh Book.

THE

THE TWELFTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Spleen.

The PREFACE.

ALthough the Spleen may be afflicted with all kinds of Diſeaſes, both Similary, Organick, and Common: yet we will only ſpeak of thoſe which are moſt ordinary in practice; and we will contain them in ſix Chapters. The firſt ſhall be of the Inflamation of the Spleen. The ſecond of the Pain. The third of the Obſtruction and Tumor, or puffing up of the Spleen. The fourth of the Scirrhus, or hard Tumor. The fifth of Hypochondriack Melancholly. The ſixth of the Scurvy.

Chap. 1. *Of the Inflamation of the Spleen.*

THe Inflamation of the Spleen is of the ſame Nature with that of the Liver: only it differs in this; That it ſeldom comes from pure, but from Melanchollick Blood. It hath the ſame Cauſes, both Conjunct, and Antecedent: but the Diagnoſis, or knowledg by ſigns, is different.

The ſigns of the Spleen inflamed, are ſwelling and pain in the left ſide under the Ribs, which ſomtimes reacheth to the Midriff, and the left Shoulder; alſo heavineſs, and beating in the ſame ſide, a conſtant Feaver, loathing of Meat, Thirſt, blackneſs of the Tongue, troubleſom lying on the right ſide, by reaſon of the heavineſs of the part lying upon the Stomach then; ſomtimes troubleſom lying upon the left, if the Tumor be great, for then it is preſſed both by the Stomach, and the Liver; ſomtimes the Tumor is in the ſhape of the Spleen, ſomtimes it fills the whol left Hypochondrion, ſomtimes it appears below the Navel, when the matter is encreaſed, and when the Inflamation reacheth to the parts adjacent, and eſpecially to the Navel.

Theſe ſigns are greater or leſſer, according to the divers mixtures of Humors. For if Choller be mixed with Melanchollick Blood, the Urine is more red, the Mouth bitter, the Thirſt greater, the Feaver ſtronger and worſe every third day; great watchings, and ſomtimes doting: if it be mixed with

with Flegm, the Color is pale, the Feaver and Thirſt is leſs, and the pain leſs: But if the Blood be only Melancholick, the hardneſs is greater, the color is black, and ſomtimes the Urine, and there is other ſigns of Melancholly predominating.

The Prognoſtick is almoſt the ſame with that of the Liver inflamed, but leſs dangerous, becauſe the Liver is the nobler Part. If it kill not the party, either it ends in a Criſis, or it is diſſolved or ſuppurated, or grows hard and turns into a Scirrhus. A good Criſis is when the left Noſtril bleeds, or when there is a purging by Stool or Urine.

The Cure of this Diſeaſe, is the ſame with that of the Liver: only obſerve theſe Differences.

Firſt, You muſt open the left Arm in this, and not ſo often as in the Inflamation of the Liver, becauſe the Liver being the Fountain of blood, wants greater Evacuation. That which is reported of the Salvatella Vein to diſcharge the Spleen ſo properly, is but a conceit, and is now out of uſe: you may better take blood out of the Liver Vein, called Baſtica.

Secondly, You muſt apply thoſe Topicks, or outward Medicines now to the left ſide.

Thirdly, You muſt not take ſuch care in the uſe of binding Medicines outwardly, becauſe the Spleen is not ſo noble a part, and needs leſs ſtrengthening.

Other things are to be taken out of the Cure of the Inflamation of the Liver.

Chap. 2. *Of the Pain of the Spleen.*

SOmtimes the Spleen is pained without Feaver or hardneſs; and this comes from wind which doth not only ſtretch the ſubſtance of the Spleen, which is almoſt inſenſible, but the Membranes that covereth it.

It is eaſily diſtinguiſhed from the Inflamation by the Feaver, and hardneſs being abſent, but hardly from the Chollick, becauſe the Colon is juſt under and over the Spleen: yet the pain of the Spleen is weighty, and in one place; but the pain of the Colon is ſtretching, ſharp, and movable, and runs about the whol Belly.

The Cure of this Diſeaſe, is with Clyſters that are Carminative, or that expel wind with convenient purging, and with Emollient and Diſcuſſing Fomentations mixed with Vinegar: As alſo with Liniments made of Oyl of Lillies, Chamomel, Capars, and Wormwood, with a little Spike and Vinegar.

If the pain remain after the uſe of theſe, apply a Cupping-glaſs to the left Hypochondrion, if there be no ſuſpition of the Inflamation or Defluxion.

Chap. 3. *Of Obſtruction, Tumor, or Puffing up of the Spleen.*

THe Spleen is no leſs ſubject to Obſtructions than the Liver, but more, becauſe it receiveth thicker and fouler blood, which is more eaſily contained in its Veins, or inſenſible Paſſages, by reaſon of the ſoftneſs and looſneſs of the part, which is more fit to receive thick Humors. And when thick Humors ſtick in the ſubſtance of the Spleen, it makes a Tumor, and an Inflamation in the part. And if the Humor by long continuance grow thick and hard, it breeds a Scirrhus; but as long as it is moiſt with Flegm, it is like an Oedema or flegmatick Tumor, which is moſt uſual with them who live in Marſhy moiſt places, or who live upon cold Diet. But if this Tumor be ſoft and looſe, it is called ſimply an Inflamation, or puffing up, the cauſe whereof, is partly flegm, and partly wind. They are commonly called Splenitick people who are thus afflicted.

The Cauſes of the Obſtruction of the Spleen, are the ſame with them of the Liver, and this or that part is, as it is more or leſs diſpoſed to receive them: Somtimes both Liver and Spleen are affected together; for a groſs Humor can hardly be in one part, but ſome of it muſt be carried to the other.

The Obſtruction of the Spleen is diſtinguiſhed from the Obſtruction of the Liver, from the Situation of the part; for there is a heavineſs in the left Hypochondrion, and ſomtimes pain, eſpecially after running or great walking or riding: and when you handle the Hypochondrion, there is a ſtretching and reſiſtance; Beſides, the Face is blewiſh, and there are other Signs of Melancholly.

This

This Diſeaſe is ſtubborn and of long continuance, by reaſon of the ſoftneſs and looſneſs of the part, which cannot therefore eaſily diſcharge the humor; and if it laſt long and be not Cured ſpeedily, it turns into a Scirrhus.

The Cure is the ſame with that of the Obſtruction of the Liver, by adding ſome things which do more properly reſpect the Spleen, and are fitter to prepare and purge Melancholly.

The Pills of Ammoniacum which follow, are to be added as moſt excellent, and to be uſed often,

Take of *the beſt Ammoniacum diſſolved in Vinegar of Squills one ounce*: *the extract of Aloes half an ounce*: *Cryſtal of Tartar one dram*: *Myrrh and Saffron, of each half a dram*: *Maſtich, Benjamine, Salt of Aſh, and Wormwood, of each one ſcruple*: *with Oxymel of Squills make a maſs of Pills. The Doſe is half a dram twice in a Week, with Purging between.*

In Apozemes and other Opening Drinks, Oxymel ſimple, and of Squills, or Sea Onyons may be very wel diſſolved, to cut and diſſolve powerfully the groſs and earthy humors.

Of all other Medicines thoſe which are made of Steel are the beſt to open the Obſtructions of the Spleen.

Alſo you may give Steeled or Ironed Waters for ordinary Drink, which are known to leſſen the Spleen (as *Celſus* ſaith) by this, becauſe Beaſts that are brought up at Smiths houſes have little Spleens.

To the Fomentation put Vinegar inſtead of white Wine, which wil make them peirce better, which is requiſite in a groſs humor.

Moreover *Galen* Commends Vinegar exceedingly in the Diſeaſes of the Spleen, uſed both inwardly and outwardly.

Put Hemlock to the Cataplaſms; as being moſt Powerful to Soften, and Diſcuſs Humors.

There is an Excellent Cataplaſm made of Green Tobacco; boyled in Oyl, and White Wine.

Of which alſo boyled to the Conſumption of the Wine, you may make a Rare Liniment.

Amatus Luſitanus, curat. 6. cent. 5. mentioneth a Cure of an Obſtruction of the Spleen remaining after a Quartan Ague, That it was taken away with a Decoction of China uſed twenty dayes after convenient Purging.

Chap. 4. *Of the Scirrhus, or Hard Swelling of the Spleen.*

THe matter of the Spleen cauſing obſtruction by continuance grows thicker, and makes a Scirrhus: And ſince the Scirrhus of the Liver and Spleen are both of one Nature, whatſoever we have ſaid of the Scirrhus of the Liver, may be here alſo uſeful.

The Knowledg alſo of the Scirrhus of the Spleen is the ſame with that of the Liver, but only the hardneſs is on the contrary ſide.

It is Diſtinguiſhed from a Windy Tumor; becauſe there is more Heavineſs in a Schirrhus, than in a Windy Tumor, which yeildeth to the Finger, and maketh a Noiſe; al which are not in a Scirrhus.

If it come only of Melancholly, there wil be evident ſigns thereof; but if it be mixed with Flegm, there is apparent in the whol body a Phlegmatick evil habit.

The Prognoſtick alſo is the ſame with that of the Liver; only this of the Spleen is more eaſily Cured; becauſe the leſs Noble the part is, the ſtronger Medicines may be Applied without Danger.

And Laſtly, The Cure is the ſame with that mentioned in the Scirrhus of the Liver.

And becauſe it is to be done by degrees, from mild to ſtronger Medicines: firſt you muſt uſe thoſe Remedies which we ſaid were good for the Obſtructions of the Liver and Spleen: and among the Chalybeat Medicines there commended, the Principle is the Pills of Steel, made with Amoniacum, and other things mentioned in the Obſtruction of the Liver.

Pills of Aloes, Ammoniacum, and Mercurius dulcis, are the beſt among the Medicines for the Scirrhus of the Liver.

But this following Opiate is the Medicine wil Cure, if it be not incurable:

Take of *Gum Ammoniack, Opopanax, and Bdelium, of each two drams*: *diſſolve them in white Wine*: *ſtrain and boyl them, then ad of confectio Hamech, and Diaphœnicon, of each two drams*:

drams: double Catholicon half an ounce: Pilulæ fœtidæ two drams: make an Opiate, of which let him take half an ounce with twenty grains of Mercurius dulcis for many daies together, and ſo the Tumor and hardneſs will vaniſh.

And beſides what was ſaid concerning the Liver, you muſt obſerve theſe following Precepts in in this Diſeaſe.

Firſt, Becauſe Blood-letting is much queſtioned, we reſolve that it may be good in the beginning. But it is good for nothing when the Diſeaſe is old.

Secondly, The dead or blind Nettle called *Galiopſis*, or *Pliny*'s Arch-angel, is commended by *Solenander* and *Fonſeca*, for a ſpecial Remedy; the Italians call it the Spleen Herb: this is given boyled in Wine, the quantity of an ounce, or one dram in Pouder, with Wine or other convenient Liquor or Decoction, with moſt admirable ſucceſs.

Thirdly, Beſides the Fomentations there mentioned, *Aquapendens* in his Chyrurgery, commends the fomentation of the Belly, with a Spunge dipped in Time Water, and ſqueezed; and with that he ſaith he hath cured the Scirrhus of the Spleen and Dropſie.

Fourthly, Beſides the Oyntments afore mentioned, *Amatus Luſitanus* commends this following as admirable, by which he ſaith he cured a Scirrhus of the Spleen; and he ſaith that he had it from the Phyſitians of *Ferraria*.

Take of *Common Oyl three pints: the Marrow of an Ox bone one pound: freſh Butter half a pound: the Juyces of Briony and Sowbread, of each one pint: boyl them gently till the Juyces are almoſt conſumed. Add to the ſtraining, yellow Wax eight ounces: the Pouder of Ceterach or Spleenwort, Capar barks, Tamariſk, and Agnus Caſtus ſeeds, of each three drams. Mix them into an Oyntment.*

Thus it is deſcribed by *Amatus*; but there is too much for one Patient, therefore you may leſſen it thus:

Take of *Common Oyl three ounces: Ox Marrow one ounce: freſh Butter half an ounce: the juyce of the Root of Briony and wild Cucumers, of each one ounce and an half: boyl them as afore, and add one ounce of Wax, and of the pouder of Ceterach: Capar and Tamariſk Barks, and Agnus Caſtus ſeeds, of each two drams.*

Fifthly, The Cataplaſms following are excellent:

Take of *the Roots of wild Cucumers one pound: Mallows and Violets, of each three handfuls: boyl them till they are ſoft, beat them and ſtrain them: then add of the Oyl of Capars and Tamariſk, Vinegar of Squills a little: make a Cataplaſm.*

Take of *ſowr Leaven two pound: Boyl it in equal parts of Oyl and Wine to a Pultiſs.*

Beſides the Plaiſters mentioned in the Scirrhus of the Liver, theſe are very good:

Take of *Gum Ammoniack four ounces: Diſſolve them in ſtrong Vinegar: then ſtrain them, and boyl them till the Vinegar be conſumed: then with a little Wax make a Plaiſter.*

Take of *Hemlock four handfuls: Ammoniacum half a pound: Infuſe them in Vinegar eight daies: then boyl them til the Ammoniacum be diſſolved: then ſtrain them through a linnen cloth, and boyl the Liquor again a little while, and with Wax and Oyl of Almonds, make a Plaiſter.*

Take of *the Juyce of Mallows, Creſſonis, the Stalks and Roots of Fern, of each two ounces: Gum Ammoniack four ounces: With a little Vinegar, firſt diſſolve them with a gentle fire, then boyl them, and ſtrain them: then boyl them again to the conſiſtence of a Syrup; and with one ounce of Oyl of Capars, and a little Wax, make a Sparadrap for the Spleen, to be renewed every third day.*

Aquapendens in the place cited, ſaith, that he cured many with this Plaiſter, which is made of two parts of Ammoniacum diſſolved in Vinegar, and one of the Juyce of Tobacco; one of the Rozin of the Pine-tree, Turpentine, and Juyce of Danewort; one of Oyl of Capars, and a little new Wax in the Form of a Cerat.

Chap. 5. *Of Hypochondriack Melancholly.*

Although all the parts beneath the Ribs, called Hypochondria, are affected in this Diſeaſe, yet its thought the Spleen is moſt, becauſe it receives the Melancholly, and therefore it is fitly placed among the Diſeaſes of the Spleen.

This Diſeaſe comes of Preternatural Melancholly, and other aduſt Humors, eſpecially Blood, or Choller, or Natural Melancholly.

This

This Melancholick Humor is not pure by its ſelf, but commonly mixed with others, as Choller, Flegm, and Water, from whence come the diverſity of Symptomes, which hereafter ſhal be mentioned. Theſe Humors breed in the Spleen, eſpecially when it is diſtempered with heat, and alſo in the Liver: hence it is that they draw meat and drink to themſelves, which is not concocted, that which is thin of the Chyle ſooner than that which is thick: and then the thicker part for want of ſomthing to carry it, ſtaies in the Meſeraick Veins, and the longer it ſtaies, the thicker it grows, and ſomtimes is burnt: and afterwards coming to thoſe parts, it is not well concocted. Moreover, thoſe parts in their Natural ſtate ſhould concoct by boyling, now do it by roaſting; hence comes this great aduſtion of Humors.

It may alſo be, that this Diſeaſe may be bred without the diſtemper of theſe parts, from evil Nouriſhment that breed Melancholly blood; and alſo from good blood retained too long in the veſſels, and being too much, as in the ſtoppage of the Terms and Hemorrhoids, which continuing long in the Veſſels, is burnt, and turned into Melancholly.

It may alſo come from the Stomach not well concocting, but turning it into a parched Crudity, from which thoſe evil Juyces are bred in the Liver, and the Spleen. And *Galen*, 3. de loc. affect. cap. 7. following *Diocles*, thought the proper ſeat of it was in the Stomach, becauſe in this Diſeaſe there are commonly ſigns of an ill Stomach: But it is more probable that the Stomach ſhould be afflicted ſecondarily from the Liver or the Spleen, as we will cleerly ſhew hereafter.

Theſe evil Humors are gathered into the Veins and Arteries, which are in the bottom of the Stomach, eſpecially in the great branches of the Gate Vein, the Spleen Veins, and thoſe of the Meſentery, Caul, and Belly, in which they have often great and grievous ferventations or workings; from whence ſtinking Vapors are ſent to the Brain, Heart, and Midriff, which cauſe thoſe divers Symptomes in thoſe parts, which we ſhall after mention.

Alſo the Humors are contained in the Bowels, eſpecially in the Spleen and Sweet-bread, and the Glandles of the Meſentery, the ſubſtance of which parts is ſoft, and like a Spunge, and therefore is more ready to receive them, and harder to caſt them forth. Beſides, the Glandles which are diſperſed through the Meſentery, to be a prop to Veins and Arteries, and to hinder leaſt they ſhould be preſſed by the Guts being full, or by any other thing: If theſe ſwell much, they do preſs upon the Veſſels, and hinder the paſſage of the Humors, whence come Obſtructions in thoſe paſſages.

Boyes and yong men are little ſubject to this Diſeaſe, by reaſon of their moiſt temper unfit to breed Melancholly: but men often, becauſe the Humors are burnt by heat in youth; and when that heat decaies, and the thin parts are exhaled, there is a great encreaſe of Melancholly.

The Antecedent and principal Cauſes of this Diſeaſe, are firſt Meats of evil Juyce, and hard of Concoction, which are fit to breed Melancholly; as brown Bread, or unleavened, or cruſty, Pulſe, Cheeſe, hard Eggs, and fried Meats, Water Fowl, Beef, Veniſon, Hairs, and all Salt and ſmoaked Meats, and many other things of hard ſubſtance.

Secondly, Great Paſſions of long continuance, eſpecially Sadneſs, are very powerful to breed this Diſeaſe becauſe they diſperſe the Spirits, by which means the Concoction is weakened, and ſo there is great Crudity, which being burnt by the hot Bowels turn into Melancholly.

Thirdly, Idleneſs, by which the Excrements are retained, eſpecially if there be much ſtudy and watching; hence it is that learned men, and ſuch as ſit much are very ſubject to this Diſeaſe.

Laſtly, The ſtoppage of the Terms and Hemorrhoids, both in reſpect of their quality and quantity produce it: For when Melancholick, Salt, and burnt Humors, uſed to be diſcharged by thoſe waies, if they are ſtopped they return to the Hypochondria and cauſe this Diſeaſe.

The Knowledg of this is taken from the Symptomes which follow, and they are many, becauſe almoſt all parts of the Body ſuffer thereby when it is high: We ſhall reckon them up, admoniſhing firſt, That all do not happen to all Patients, but ſome to one, ſome to another, according to the diverſity of the Humor, and the part affected.

Firſt therefore, the Stomach commonly ſuffers, not principally, as *Galen* from *Diocles* ſuppoſed; but ſecondarily: When Blood coming from the Branches of the Gate Vein, to nouriſh the Stomach is not good; from whence the Stomach being ill nouriſhed, doth ill concoct, and turns its Meat into corruption. Hence comes a circular Evil, when the Liver and Spleen ſend evil Blood to the Stomach, and the Stomach breeds evil Chyle to return to them, of which they make bad blood.

Therefore in this Diſeaſe the Stomach commonly concocteth ill, and turns the chief part ſomtimes into Water, ſomtimes into ſharp, ſowr, and clammy ſubſtance; which being not drawn by the Guts and Meſeraick Veins, becauſe unfit for nouriſhment, ſtaies in the Stomach; and coming upwards ſomtimes fills the Tongue with Spittle, ſo that the Patients ſpit much, and ſomtimes vomit.

Somtimes the Matter in the Stomach boyleth, and fermenteth; from whence comes wind, which doth not only ſtretch the Stomach, but the parts adjacent, and make the Heart ſo ſick that ſomtimes

the Patient swooneth. Sometimes the Wind is sent out upwards and downwards, and by insensible transpiration, or the Matter causing them is vomited forth.

Yet you must observe that al that is vomited out is not bred in the Stomach, but is sent from the Spleen and other parts to it: for sometimes the humors vomited are so sharp that they set the teeth on edg, and these are sent by the short vessel from the Spleen to the Stomach.

In some there is blood so sent, with Melancholly and other evil Humors, which is cast forth partly upward, and partly downward; as we shewed at large in the Vomiting of Blood.

In this Disease there is often belching and noise beneath the ribs, by reason of the abundance of Wind made of those Crude Humors: hence it was wont to be called the windy Disease. Now, how Wind is bred of Melancholly, we shewed in the Tympany.

Sometimes pains arise in the Stomach and Hypochondria, of the same Wind, which reach to the Back and Loyns, so that you would think it the Stone of the Kidneyes, especially if the Urine be thick and red, as usually it is.

The Belly is often bound, because the Meat is turned into clammy Matter, which sticks to the Guts, which the expulsive Faculty cannot cast out without help of Medicines, and therefore the Patients are constrained to take Purges and Clysters often.

Sometimes there is a Flux of the Belly, if the Humors grow sharp, and have in them much Choller or burnt Melancholly.

There is a heat in the Hypochondria, and a certain Inflamation inward, sometimes in one side, sometimes in another, from hot Humors contained therein, especially when they are moved by inward or outward means; so that the Face will grow hot and red from those vapors; and sometimes there is an Ephemeral, or Feaver, for a day, by those vapors sent through the whol Body.

The Urine is sometimes thick, sometimes thin. Thin, when thick Humors stop the passages through which it is as it were strained, thick, red, and troubled, by reason of the mixture of the thick Matter, which is very salt, and therefore is called (*Materia Tartaria*) and it lies at the bottom of the Urinal like a thick Sediment. Or some part of it sticks like red Sand to the sides, which makes many fear the Stone without cause, because this same is not bred in the Reins, but in the Liver, from a burnt and salt Humor, and you may know this, because it dissolves between the Fingers like Salt, which will not when it comes from the Reins.

Sometimes there is a Palpitation, or beating of the Heart, by reason of the vapors ascending, which while it labors to expel, make it move violently; and then the Patient thinks himself in great danger.

Sometimes there is a beating in the left Hypochondrion, when hot Humors are there; from whence vapors arise, and make the Pulse or Systole and Diastole of the Arteries greater; so that both the Patient and the standers by may feel it, which is chiefly after heat with Anger, motion, or drinking of much Wine. This beating is chiefly in the Cœliack Artery, which is the chiefest in that part. In an old Disease, it is sometimes constant; and this signifies an Habitual and incurable Disease. An Aneurism sometimes followeth this great breathing, from the enlarging of the Cœliack, or some other Artery, and from the hot blood in them, which being very thin and full of many hot Spirits, continually dilateth and stretcheth the Arteries while there is an Aneurism, such as *Fallopius* observed, *Lib. de tum. præter naturam, cap.* 14. in an old woman, who being opened had an Aneurism in her Belly, into which he put his fist. From which, mark by the way, the great providence of Nature, which fearing the breaking of an Artery through too much enlarging, hath made the coat of it as hard as a bone, as *Fallopius* observed in the same place. Also *Paræus* in his sixth Book, Cap. 28. tels the like story of an Aneurism, found not in the Belly, but the Breast, in the Venal Artery, which was so stretched that it could contain his fist; and also the inward Tunicle thereof was like a bone. And we have seen the like about two yeers agone, namely, an Aneurism in the Breast by the dilatation of an Artery, which would hold the fist of a Boy of fifteen yeers old; and the Tunicle thereof was grown like a Gristle.

The evil vapors that ascend from the Hypochondria, produce many Symptomes: for being sent to the Pallat and Tongue they dry those parts, and cause a thirst: when they go to the Lungs and Midriff, they cause shortness of breathing; when to the Membranes of the Brain, Head-ach; when to the Brain, noise in the Ears, dimness of Sight, Giddiness, Fear, and Sorrow, and divers Melancholly Phansies. And if they be malignant, and very sharp, they cause an Epilepsie, or Falling-sickness: if they come to the Nerves, Convulsions: and if they be stupifying they cause a Numbness, and bastard Palsey, Coma, and Apoplexy, if they get into the Brain. But if these vapors be hot and dry, they dry the Brain, and cause watchings, troublesom sleep, and frightful Dreams: and at first, though they sleep well after Supper til midnight, afterward they wake, some three or four hours, and some sleep again about three or four a clock, others not at all. The reason whereof is this: Because while the Chyle is carried to the parts that serve for the second Concoction, then the evil Humors lying in the Vessels, are stirred, and send up vapors, which being sent by the Veins and Arteries to the Head,

cause

cauſe watching, and if they be quickly diſcuſſed, they ſleep again; but if they continue long, they watch the other part of the night.

We have formerly ſpoken of all theſe Symptomes, and we ſay again, That all are not in all men, but more or fewer, according to the variety of the Humors, and parts affected.

This alſo is to be marked; It is not Eſſential to Hypochondriack Melancholly, that ſtretching, hardneſs, pain. and ſwelling, ſhould be in the Hypochondria, becauſe the cauſe is for the moſt part in the Branches of the Gate Vein, and Arteries adjoyning, and ſends from thence vapors to the Heart and Brain. Oftentimes there is ſtretching in the Liver and Spleen, which ſignifieth, That the Humors ſtick in thoſe parts: but if there be no ſtretchings, it is a ſign that the evil Humors lie in the Veins of the Meſentery, Caul, Sweetbread, and Stomach. Theſe proper Symptomes ſhew that the Stomach is affected with ſowr belchings, and ſtinking, or loathing, vomiting, want of concoction, and ſomtimes flux of the belly.

As for the Prognoſtick: This Diſeaſe is not deadly for the moſt part, but of long continuance, many times the whol life, therefore it is commonly called the diſgrace of Phyſitians, becauſe they do ſeldom cure it; and if the Patient ſeem to be cured, it returns again in a few months: it is alſo called the Scourge of Phyſitians, becauſe they who have it are continually asking new Medicines, and preſently ſatisfied therewith, and dayly complain to the Phyſitian for others.

The Flux of the Hemorrhoids doth good in this Diſeaſe, if it be moderate; but if it continue long it is dangerous.

A thick Urine is better in this Diſeaſe, than a thin and watery, which ſhews that the thick Humors are detained in the Body. Black Urine without a Feaver, doth often Cure this Diſeaſe.

Its good in this Diſeaſe to have a looſe Belly, and bad to be bound. Alſo Vomiting, if the Patient be refreſhed thereby, is profitable; but if it continue long, it is dangerous.

A Giddineſs, and continual pain in the Head in this Diſeaſe, ends in an Epilepſie, Blindneſs, or Apoplexy.

The Cure of this Diſeaſe, is in three things chiefly: firſt in opening Obſtructions: ſecondly in amending the diſtempers of the Bowels: and in diſcharging of the peccant humor, not omitting ſtrengtheners: For which a wiſe Phyſitian may uſe theſe following.

Firſt give a Clyſter, then this Potion:

Take of *Senna half an ounce*: *Annis ſeeds, and Cream of Tartar, of each one dram*: *Borrage flowers, Fumitory, and Sorrel, of each half a handful*: *Liquoris three drams*: *boyl them to three ounces. Diſſolve in the ſtraining, Rhubarb infuſed in Lavender Water one dram and an half*: *double Catholicon three drams*: *Compound Syrup of Succory one ounce. Make a Potion; to which you may well add in a ſtrong Melancholly, one dram of Confectio Alkermes.*

The day following, let Blood from the left ſide chiefly, or as the Liver or Spleen are moſt affected.

Then give theſe Broths:

Take of *Sparagus, Dog-tooth, and Succory Roots, of each half an ounce*: *Agrimony, Ceterach, Maiden-hair, Bugloſs, and Succory, of each half a handful*: *Cream of Tartar one dram*: *boyl them with a Chicken, and make Broth ten or twelve daies, adding four drops of Spirit of Vitriol to cool and open more.*

In old Obſtructions, you may add to the former, China Roots, Saſſaphras, white Sanders, Smallage Roots, and male Fern Roots, Bettony, Scabious, Coriander prepared, Raiſons, and the like.

If the Belly be bound, or the Body very foul, give in every third draught of Broth, half an ounce of Senna, with Annis ſeeds.

Or this Apozeme inſtead of the Broth:

Take of *Bugloſs, Sparagus, Succory, and Sorrel Roots, of each one ounce*: *the middle rind of Tamariſk and Aſh, of each half an ounce*: *Agrimony, Ceterach, Maiden-hair, Dodder, Succory, Fumitory, Hops, Bugloſs, and Borrage, of each one handful*: *the four cold ſeeds, Annis and Fennel ſeeds, of each two drams*: *Currance one ounce*: *Senna and Polipody of the Oak, of each two ounces*: *Dodder of Time one ounce*: *the beſt Agarick and Rhubarb infuſed by themſelves in Cinnamon Water, of each two drams*: *Mace and Cloves, of each one dram*: *the three Cordial Flowers, of each one pugil*: *Boyl them to a pint, and diſſolve in the ſtraining, Syrup of Succory with Rhubarb, and of Roſes ſolutive, of each two ounces. Make an Apozeme clarified and aromatized with two drams of yellow Sanders, for four morning draughts.*

Or give Cock Broth thus made:

Take of *Roots of Aſparagus, Bruſcus, and the bark of Capar Roots and Tamariſk, of each half an ounce*: *Agrimony, Ceterach, and Maiden-hair, of each one handful*: *Annis, Citron, and Cardius ſeeds, of each one dram*: *Senna half an ounce*: *Polipody of the Oak, and Epithimum,*

or Dodder of Time, of each three drams: Cinnamon one ſcruple: Cryſtal of Tartar one dram. Boyl them all with half a Cock, which let him take four mornings.

After you have ſufficiently purged, a Bath of warm Water is moſt convenient, uſed many daies, in which cool Herbs have been boyled, and ſweet Apples. Sometimes it is made of Barley and Almonds beaten, and put into a Bagg and boyled in Water. It muſt be often repeated, if the ſeaſon will permit; for *Galen*, 8. *de loc. aff. cap.* 6. ſaith that he cured many melancholick men, only with the uſe of hot baths, without any other Medicine. And if the Patient cannot endure a whol bath, let him have one for half the body.

And leaſt often waſhing ſhould hurt the Stomach, when he enters into the Bath, let it be anointed with Oyl of Nutmegs by Expreſſion, or the like.

When he goes forth of the bath, let the Region of his Liver be anointed with the Cerat of Sanders, or Oyntment of Roſes waſhed in Oxycrate.

After his laſt bath, let the Hemorrhoids be provoked with ſharp Suppoſitories, or with rubbing the Anus with Fig Leaves, or with a rough linnen Cloth; and with two or three Horſ-leeches applied to the moſt apparant places, take away five or ſix ounces of blood. And this muſt be done every Spring and Fall, and ſomtimes once a Month.

They who are uſed to have the Flux of the Hemorrhoids, if it hath been long ſtopped, ſo that they wil not appear, muſt have a Cupping Glaſs applied.

If after the Leeches are fallen off, they bleed ſtil, as ſomtimes they wil, ſtop them with Clay, or Pouder of Coal, or with Spiders Webs, or with Pouder of Lime, or with aſtringent Pouders taken up with the white of an Egg and Pledgets.

And if you cannot conveniently open them, it is good to draw blood from the inferior Veins, that the moſt impure may be voided.

An Iſſue burnt in the left Legg doth purge the Spleen and other Bowels from ſuperfluous Humors, and therefore forget it not.

But becauſe this Diſeaſe uſeth to be very ſtubborn, and after Purging, new Humors return, you muſt purge by fits, that the Body may be freed from them by degrees: which may be wel done by a Magiſtral Syrup, made thus:

Take of *new drawn purified Juyces, of the Flowers of Borrage, Bugloſs, Endive, Succory, Fumitory, and Sorrel three pints: the Juyce of ſweet Apples newly drawn and clenſed two pints: freſh Polipody of the Oak half a pound: clean Senna eight ounces: Dodder of Time three ounces: Agarick newly made into Troches one ounce: Ginger and Cloves, of each one dram. Infuſe them and ſtrain them according to art, till there remain five pints and a quarter of the Liquor; in which diſſolve the ſtraining of an ounce of Rhubarb diſſolved in the ſaid Juyces by themſelves with a little Cinnamon, and one pound of Sugar. Make of theſe a well boyled Syrup; clarifie it, and aromatize it with two drams of the Pouder of the three Sanders, keep it in a Glaſs, and let him take two ounces thereof, twice or thrice in a month, with a little Chicken Broth, boyled with Endive, Sorrel, Borrage, and Burnet.*

Or inſtead of the Syrup, you may give Pils, eſpecially in Winter, ſuch as were mentioned in the Obſtruction of the Liver; or if you fear they are too hot, you may make theſe following:

Take of *Polypody of the Oak half an ounce: Aſarabacca Roots, and Broom buds, of each one dram: Currance three drams: Cryſtal of Tartar one dram and an half: Bugloſs and Borrage flowers, of each half a pugil: Boyl them in Spring Water. Take half a pint of the ſtraining being well clarified, and ſix ounces of the Juyce of ſweet Apples alſo well clarified; and infuſe therein one ounce of clean Senna: Turbith and Agarick, of each three drams: Mace, Cloves, Cinnamon, and Dodder of Time, of each one dram: digeſt them four daies in Balneo Mariæ: then ſtrain them, and add to the ſtraining, one ounce of the Extract of Aloes made in Endive and Sorrel Water; Myrrh diſſolved in Wine and ſtrained, two drams: Salt of Tartar one dram. Evaporate them all, and inſpiſſate and thicken them at a gentle fire, adding towards the end when the matter is almoſt evaporated, Diarrhodon Abbatis Lætificans* Galeni, *and the Troches of Dialacca, of each half a ſcruple: bring them into a maſs for Pills; and let the Patient take half a dram once in a week, two hours before meat.*

Pereda witneſſeth, that he hath cured many Melancholick men with this following Pouder; and he cals it Bleſſed, and Divine

Take of *Dodder of Time half an ounce: Lapis Lazuli, and Agarick in new made Troches, of each two drams: Scammony one dram: Cloves twenty: mix them into a Pouder, and give two drams twice or thrice in a month with Whey or Borrage Water.*

If you cannot conveniently give often Purges, it is good every other day to give a Clyſter to revel vapors, and draw forth ſome part of the Humor: for if they go deep into the Guts, they take away the greateſt part of the filth from the Meſeraicks. We knew a Noble Man, who being long troubled with this Diſeaſe, was cured by often Clyſters, when other Medicines did nothing.

While

While you give intermitting Purges, let the Body at other times be moiſtened with Baths, or half Baths, or Fomentations, by which both the violence of the Humor is reſtrained, and the Body made moiſter.

Alſo at thoſe times, you muſt uſe ſtrengtheners, which will alſo open Obſtructions, and they uſe to be made often like Opiates, or a hard Electuary, or Lozenges, thus:

Take of *Conſerve of Bugloſs Roots half an ounce: Conſerve of Borrage Flowers, and Violets, of each one ounce: Conſerve of Roſes, and candied Citron peels, of each half an ounce: one candied Myrobalan: Confection Alkermes three drams: Powder of Ivory, Harts-horn, and Bezoar ſtone, of each one dram: Lætificans Galeni, and Diarrhodon Abbatis, of each two ſcruples: Coral and Pearl prepared, of each half a dram: Amber-greece half a ſcruple: the beſt Muſk five grains: Gold three Leaves: with Syrup of Apples, and of candied Citrons, make an Opiate, of which give the quantity of a Cheſnut two hours before meat, every day drinking after it a little white Wine.*

A plainer and better taſted Opiate, is made of one part of Confection Alkermes, and four parts of Conſerve of Borrage Flowers. And to open more powerfully, if you fear no hurt by hot things, add Conſerve of Tamarisk flowers, Elicampane Roots, Wormwood, Maiden-hair, and the Salts of Wormwood and Tamariſk, &c.

You may make Lozenges thus:

Take of *Diambra, Diamoſchi dulce, and Lætificans Galeni, of each one ſcruple: Confectio Alkermes three drams: Sugar diſſolved in Borrage and Roſe Water, four ounces: make Lozenges of two drams in weight, gilded. Let him take one every day two hours before meat.*

Or you may make them more pleaſant thus:

Take of *Confectio Alkermes two drams: Amber-greece one ſcruple: Sugar diſſolved in Roſe Water four ounces. Make Lozenges.*

Amber-greece alone, given five or ſix grains at a time every day with Wine or Roſe Water, doth cheer the Spirits and the Natural Heat, and much rejoyce the Heart.

Some Authors do much commend the uſe of Bezoar ſtone againſt all Melancholick Diſeaſes, becauſe it doth much ſtrengthen the Heart, and you may give five or ſix grains in Roſe Water, or other Liquor.

After the Body is well purged, if it be Spring or Summer, you may give Whey for fifteen or twenty daies, which will open the Obſtructions of the bowels, and amend the hot diſtemper. Make it by boyling and clarifying it, and putting into it every night two drams, or half an ounce of Epithimum.

You muſt proportion the quantity according to the ſtrength of the Stomach. For if it can eaſily paſs through the Veins, being ſomwhat open, and be ſent forth by ſtool and urine, it is good to give it in great quantities, as Mineral Waters preſcribed in the hot diſtemper of the Liver, with this Caution, That you ſtrengthen the Stomach with Baggs, and other things hereafter mentioned, and give every day at evening a Cordial ſtrengthening Opiate. Inſtead of Epithimum, you may mix with the Whey, the juyce of Succory, Borrage, or of any other proper cool Herb, thus:

Take of *Goat Whey four or five pints: the juyce of freſh Lemmons four ounces: the new juyce of ſweet Apples ſix ounces: Conſerve of Roſes or Violets, or white Sugar, one ounce. Clariſie theſe with whites of Eggs. Let him take every morning three or four more Cups thereof, if his Stomach will bear it.*

In Bodies that are very lean, after the Obſtructions are a little opened, you may give Aſſes Milk with Sugar of Roſes; and if there be rumbling in the Hypochondria, a little Aromaticum Roſatum, or Diarrhodon Abbatis wil do very wel.

But your ſharp and Vitriol Mineral Waters, are beyond all Medicines, which by correcting the diſtemper of the bowels, do powerfully open Obſtructions, eſpecially the warmeſt, which do make the Humor thin, and cleanſe it.

There is great diſpute among Authors concerning drinking thoſe Waters. Some (with *Sennertus*) do allow it, becau e they receive Vertue from their Minerals, and do thereby both cleanſe the paſſages, and ſend forth the filthy Humors which ſtick to them by ſtool and Urine: they warm the Stomach, and ſtrengthen the Liver and Spleen: And we may rather fear that theſe Waters wil hurt by the uſe of them external than internal, by heating and drying. Others (with *Claudinus*) do altogether deny them, by reaſon of their drying quality. Others (with *Montanus*) do neither altogether reject them, nor wholly approve of them; they ſay they are good, by reaſon of the coldneſs of the Stomach, which is alwaies in this Diſeaſe, and by reaſon of Obſtructions. But in regard the Liver and Spleen are hot, they wil have them defended with the cool Oyntment of *Galen*. And alſo the Loyns, for then (ſaith he) the water will not hurt, becauſe it ſtaies longer in the Stomach, and cold places, but only paſſeth through other parts. We ſuppoſe that the uſe of them is convenient, if the Stomach being cold have much thick and clammy flegm in it, and if the heat of the Liver be not very

great.

great. Which part is not like to ſuffer, if the aforeſaid Oyntment be not only given, but alſo cool Broths after the Waters; and after they have been uſed enough, cold and moiſtening baths for ſome daies.

Medicines made of Steel, uſe to be of great Vertue to open theſe Obſtructions, ſuch as are mentioned in the Obſtruction of the Liver, and of the Spleen, avoiding thoſe which do heat and dry much. In hot bodies you may give Steel prepared with Brimſtone or Vinegar, with Conſerve of Borrage and Succory, made in the form of an Opiate.

For dainty folk, the Syrup of Steel afore mentioned in the Obſtruction of the Liver and Spleen, is excellent; or the Froth which remains in the Glaſs after the Evaporation of the Wine which hath been often ſteeled, mixed with the aforeſaid Conſerves.

But Salt or Vitriol of Iron goes beyond all Medicines, becauſe it opens Obſtructions, ſtrengthens the Bowels, and qualifies their heat. The Doſe is from twelve to twenty grains, with a fit Liquor, Syrup, or Conſerve. But becauſe it is diſpleaſing to the taſte, I uſe to make it into Pils with the Mucilage of Gum Tragacanth. You muſt uſe it long, and therefore get a great quantity, which is not eaſie to be got after the way that *Beguinus* and others make it. We will ſhew you the eaſie way of making it, which few men know.

Take of *the Oyl of Vitriol, or of Sulphur, half a pint: the Spirit of Wine one pint: Put them in a new Iron Pan that is clean, and cover them well; within fifteen daies of them there will be a Salt-like gathering, which you muſt ſet in the Sun to dry it throughly, ſomtimes ſtirring it with an Iron Spatula: In Winter you may dry it upon a gentle fire, or in a Hot-houſe. Let the Salt being well dried, be kept in a cloſe Glaſs; for if it be expoſed to the Air, it eaſily turneth moiſt. Alſo the Pills that are made thereof, of Tragacanth, muſt be hardened with the Pouder of Tragacanth, and after put in a Glaſs, otherwiſe they will grow moiſt. You may continue this Medicine for a month or two, not only without hurt, but with great profit.*

Fonſeca commends theſe Pils following, which he cals *Diatartarum*, for opening Obſtructions by degrees, and purging Melancholly gently, and for allaying it.

Take of *the Pouder of Senna, and Salt of Tartar, of each one dram: Pouder of Cinnamon half a ſcruple: with Syrup of Lemmons make a Maſs, of which give three Pills made of half a dram one hour before Supper, to give him two or three ſtools, for Salt of Tartar hath great Vertue to allay black melancholick Humors; for it draweth to it ſelf by certain propriety ſowr things, as you may perceive when it is mixed with Vinegar, or Spirit of Vitriol, whoſe ſowrneſs it taketh away: For we muſt know, that* Fonſeca *by Salt of Tartar, meaneth Cryſtal of Tartar. Yet you may as well infuſe your Senna with the Salt of Tartar, and ſome drops of Spirit of Vitriol in ſome convenient Liquor.*

To open the ſame Obſtructions, ſome commend the Decoction of China, as we ſaid in the Obſtruction of the Spleen; which a wiſe Phyſitian may do with good ſucceſs.

Some commend the Juyce of VVormwood thickened into the form of a Pill, given either by its ſelf, or with Gum Ammoniacum; and after that preſently, Oxymel made of the Decoction of Aſarum Roots and Liquoris.

Others ſay, That Hypochondriack Melancholly hath been cured with the Decoction or Wine of Wormwood taken thirty or forty daies together.

The Juyce of Buglois is excellent, not to open Obſtructions as Wormwood, but to qualifie the Melancholick Humor. Therefore they give two ounces thereof with two drams of Sugar, and as much Wine as of both, for ten or twelve daies every morning.

The principal thing for this Cure, is to keep the Body alwaies ſoluble: Therfore the Patient muſt have ſome familiar Medicines, which he may often uſe before meat, ſomtimes one, ſomtimes another, leſt he grow weary of them. For this he may take the Magiſterial Syrup, and the aforeſaid Pils, and thoſe which were preſcribed for a coſtive Belly. To which he may add (out of *Montanus*) Venice Turpentine, which he orders to be ſwallowed in the quantity of an Acron, three hours before dinner, once, twice, or thrice in a week: for beſides that it looſeneth the belly, it alſo cleanſeth the Stomach, opens Obſtructions, provokes Urine, warms the Stomach, and doth not heat the Liver, but doth it good by opening and cleanſing it.

For his ordinary Drink let him uſe Water wherein Gold hath been quenched, or the infuſion of Tamarisk, Agrimony, Burnet in thin Wine, either alone, or made Phyſical in Vintage time with the Roots of Bugloſs, Borrage, with a little white Sanders and Roſemary Flowers.

The Decoction of the Sweet Bryar Root, is commended for ordinary Drink; for it openeth and ſtrengtheneth all natural parts.

The Decoction of *Lignum Nephriticum* doth open the Obſtructions of the Bowels without any manifeſt alteration. But ſteeled Water is more uſual. All which Waters and Decoctions, you may alſo mix with Wine.

While

While in the internal Medicines mentioned or any of them are uſed, you muſt apply External, as Fomentations, and Oyntments to the Hypochondria, ſuch as are preſcribed for the Obſtructions of the Liver and Spleen, making Choice of the Cooleſt.

You muſt alſo apply ſtrengthners to the Stomach, becauſe that part doth alwaies ſuffer in this Diſeaſe; therefore you may uſe thoſe Fomentations, Oyntments, and Emplaiſters mentioned in the Diſeaſes of the Stomach: Alſo thoſe Internal which wil not inflame the Liver; and eſpecially the Digeſtive Pouder to be taken after meat: in a Fit when the Vapors ariſing from the Hypochondria do trouble the Heart, Brain, and other parts, and produce great Symptomes, as Swoonings, Palpitations, Tremblings, Convulſions, Head-ach, and the like; you may uſe thoſe things which are given in Swooning, or the Mother; but among the reſt Laudanum uſed wiſely, doth wonders.

Chap. 6. *Of the Scurvy.*

THe Scurvy is uſual in the North, in moſt places thereof Common, but almoſt unknown in the South; ſo that al Writers that have Practiced in theſe Parts, have never mentioned it: and we may wel leave it out, becauſe in our Preface to this Book we promiſed to meddle only with the uſual Diſeaſes of the Spleen; but Experience hath taught us, That our Country is not altogether without it, for though it be not in every Symptom the ſame with that of the North, yet it hath enough to confirm it to be the ſame: for the aforeſaid Authors ſay that one Symptome is ſufficient to diſcover it; we have ſeen many Symptomes of it in many people, but becauſe it is not familiar here, and al our Phyſitians ſay we have it not, we would not abſolutely cal it a Scurvy, but we thought it better to cal it a Scorbutical Diſeaſe, ſuch an one as comes next to it, though it be not a true Scurvy.

For the Scurvy is nothing elſe but an Hypochondriack Diſeaſe, having a peculiar degree of Malignity from which more Symptomes ariſe than in the Hypochondriack Diſeaſe: this malignity comes from the putrefaction of Melancholly, not of every kind of melancholly, for it is often corrupted, from which other Diſeaſes ariſe and not the Scurvy, as a Quartan Ague, an Impoſthume in the Meſentery, and other parts; but of a peculiar and proper Melancholly which is agreeable to that Malignity. This is known by the Infection which is found in this Diſeaſe, becauſe al Authors hold it to be infectious. And becauſe al the degrees of malignity which lie in the Humors and produce divers Diſeaſes are unknown unto us and al men, therefore is this of the Scurvy obſcure and hidden; and it is wonderful that ſo many Diſeaſes ſhould ariſe from the variety of malignity which is in the Humors, as malignant Peſtilential Feavers, Smal Pox and Meaſels, Cancers and Elephantiaſis, the Pox, and many others. And eſpecially Elephantiaſis comes from a peculiar malignity in a Melancholick Humor, and ſo doth the Scurvy, and yet theſe two Diſeaſes differ ſo much, that none can tel their divers degrees of malignity.

Divers Symptomes common to both, do ſhew a great likeneſs of the Scurvy and Hypochondriack Melancholly: for al they which were mentioned in the former Chapter, are found in this Diſeaſe, as Crudities and want of Concoction in the Stomach, often ſpitting, flegmatick, ſharp, and ſtinking vomitings, noiſe in the Hypochondria, belchings, breaking of Wind downwards, vomiting of blood, and purging of blood, pains from wind under the ribs and in the ſtomach, ſomtimes Coſtiveneſs, and ſomtimes Looſeneſs, heat in the Hypochondria, beating of the Left ſide, Urine now thin, than thick, heart beating, thirſt, drought of the mouth, ſhort breath, head-ach, noiſe in the ears, dimneſs of ſight, giddineſs, ſorrow and ſadneſs, and divers dolings, convulſions, falling-ſickneſs, numbneſs, coma, watchings, troubled ſleep, and terrible dreams: The Reaſons of al which were ſhewed in the Chapter above, and they may agree with this of the Scurvy.

But if any Symptomes appear beſides theſe, which are not found in that, nor mentioned by Authors, nor belong to another Diſeaſe; you may conjecture that it is the Scurvy: The Chief are theſe, which are not al found in one Patient; but one of them is ſufficient to ſhew that the Diſeaſe is ſuch.

The Firſt moſt remarkable Sign is in the Gums, Mouth, and Teeth, in the Gums redneſs, itching, and putrefaction, and ſomtimes bleeding and ſtink, which are ſomtimes in the Palate, Jaws, and Teeth, which are looſe and black.

The Second, which is an evident Sign alſo, is Spots in the Legs which at firſt are Red, and after Purple, blue, and black: Somtimes there are in the Legs broad ſpots, black or blue, or both; theſe come from the ſerous filthy part of the blood which is unfit to nouriſh the body, and therefore is ſent by nature out of the Veins to the Skin, by the Nauſioſis of the Veins, as *Hippocrates* ſaies of Fractures, and this happens often in the Shins and Legs, becauſe nature uſeth to ſend the worſt Humors

to the moſt ignoble and remoteſt parts; ſomtimes when there is more plenty of matter you ſhal find them in the back, arms, neck, and face.

The third ſign, is ſhortneſs of Breath, and ſtraightneſs of the Breaſt, which comes commonly from thick vapors, ariſing from the Hypochondria, that get to the Midriff, as alſo from Tumors and ſwellings by wind of thoſe parts that preſs upon the Midriff, eſpecially from the ſwelling of the Sweet-bread, which commonly in this Diſeaſe is filled with groſs Melancholly: Hence the Patients complain not of their Breaſt, but of the part affected, whereby they feel the weight, and by reaſon whereof the Breath is ſhort, as *Eugalenus* noted well, who was much acquainted with this Diſeaſe, and many Obſervations therein: yet he knew not the cauſe of this weight, namely, the ſwelling of the Sweet-bread; nor doth any that write hereof make mention of it. Yet we obſerved it in My Lord *Andreyer*, Preſident of the Senate of Gratianopolis, whom we thought had the Scurvy, as you may reade in his Hiſtory, at length, in our Obſervations, Cent. 3. Obſ. 85. For being very lean, we did eaſily perceive with our fingers, a hardneſs in the Sweet-bread; and by handling of the part, he confeſſed that all his ſhortneſs of Breath and ſtraightneſs came from thence.

The fourth ſign, is Lazineſs, and heavineſs of Body, eſpecially in the Legs, which comes from watery and foul Humors, which come through the Veins to the Muſcles, and the whol Body.

The fifth ſign is in the Urine, which is divers, as in Hypochondriack Melancholly; but in this they ſomtimes differ, becauſe they are cleer and red like a Lye, from the plenty of ſalt Humors. The redneſs is higher and inclining to black, by how much the more ſalt humor there is. As in a Lixivium ſomtimes the Urine is very thick, with a red thick ſediment, like the Pouder of Bricks, and ſomtimes this Humor is ſo much, that it cauſeth burning and piſſing by drops, eſpecially in them who have this Diſeaſe from ſtoppage of the Hemorrhoids; and after it is ſetled, the third or fourth part of the Urinal is filled with thick and black filth, which makes ſome think it to be the Stone or Ulcer of the Bladder.

Somtimes the Urine varieth without manifeſt cauſe; to day thick, to morrow thin; now pale, then yellow, or red.

The ſixth ſign is from the Pulſe, which is now weak and unequal, leaping, or formicans, that you would wonder he ſhould live with it; anon it is great and hard, without Inflamation. And this is to be obſerved, That in time of fainting and ſwooning, with which he is often troubled, his Pulſe is greateſt and ſtrongeſt. Which comes from the Heart contending to caſt out thoſe vapors with which it is oppreſſed.

The ſeventh ſign, is pain in divers parts: in the Thighs heavy, and ſomtimes ſtretching; ſomtimes *Oſtokopos*, or at the bone; ſomtimes in the Shins, Ankles, Soals of the Feet, in the tips of the Fingers, in the Hips, Knees, and other Joynts, or parts to which the Salt Humors flow; ſomtimes in the Belly, like the Chollerick Chollick; and it comes from theſe Humors flowing upon the Caul: theſe in the Arms, Thighs, and Legs, are like thoſe of the Pox, and may wel deceive a Phyſitian in *France*, where the Scurvy is rare, and the Pox common.

But they may be thus diſtinguiſhed; The pains in the Pox are between the Joynts, and if they ſtay long, make knots, and there are, or have been then alſo other Symptomes of it, as running of the Reins, Ulcer of the Yard, Bubo, and the like, or Uncleanneſs with Women. But the Scurvy pains ſeize upon al parts indifferently; and then there are other ſigns of it, or at leaſt a Melancholick Conſtitution; and the Matter is certainly known, if the Patient wil truly ſay that he hath not been with unclean Women. Which cauſed our ſuſpicion in a Magiſtrate, who had a long time great pain in his Feet, Shins, and Thighs, and was brought very lean, ſo that you would have thought that he had the Maraſmus, or Conſumption: And when no Medicines for a long time would do him good, we from his Melancholick Complexion, and other ſigns, eſpecially becauſe he led a moſt chaſt life, and becauſe for many yeers his Gums did bleed at certain times, conjectured that it was the Scurvy, and by uſing of things againſt that Diſeaſe for ſome time, he was cured.

Somtimes thoſe pains remain in the Hypochondria, ſomtimes in the Loyns, ſo that they are weak, and can ſcarce go. Hence this Diſeaſe is called *Lumbago*.

Somtimes the pains are like the Stone, and the Urine is very red or black; and if you do not diligently obſerve, you will think they are bloody, and that it comes from the Reins wounded by the Stone, when it is from a ſcurvy ſalt Matter in the Spleen, and parts adjacent, ſent into the Urine.

Some have Head-ach, and heat at nights, if they caught this Diſeaſe from ſtoppage of the Hemorrhoids, by reaſon of the vapors which aſcend, and all the night after they are as in a Feaver all over their Bodies, which the next morning vaniſheth by ſweating.

They have often the Tooth-ach, without any evident reaſon or cauſe; and it is not in one place, but movable from one Tooth to another, making them looſe, and they again fix of their own accord, the pain and tumor being diſcuſſed.

Somtimes

Sometimes the pain of the Scurvy is in the ſides, imitating the Pleuriſie; from which it is eaſily diſtinguiſhed, becauſe it is without a Feaver, at leaſt a ſtrong one; the breath is not hindered, there is no Cough, no ſpitting, nor is the pain conſtant, but coming by fits.

Alſo it will be in the Joynts; and we muſt declare how it is diſtinguiſhed from a true Arthritis, or Joynt-gout. The pain of the Joynts in the Scurvy, is not fixed and conſtant in the ſame place, but runs from one Joynt to another, either on the ſame, or on the contrary ſide; ſometimes it vaniſheth, and then returns; ſo that he which now ſeems free, and in perfect health, is ſuddenly taken with pain, ſometimes with ſwelling, ſometimes without. But a true Joynt-gout ſeldom changeth the place.

The Joynt Scurvy hath this peculiar diſtinction: It is for the moſt part joyned with a ſmal Palſey, by reaſon whereof the Patient can hardly move the part affected; and when the Palſey ſeizeth or returneth, the pain doth ſo alſo.

The eighth ſign is from the divers hinderances of Motion, they have a baſtard Palſey; the Examples whereof we laid down in our Obſervations: and it is diſtinguiſhed from a true Palſey, becauſe this is conſtant; but in the Palſey from the Scurvy, he that yeſterday could ſcarce ſet one foot before another, can now ſtand, and walk with a little help, and it may be preſently after he cannot move at all: and ſometimes the motion is trembling, and with Convulſion, which doth not happen in a true Palſey. And this kind of Palſey cometh from a filthy kind of Matter or vapor, which gets into the Nerves and Muſcles. And if the Matter be ſharp, it cauſeth trembling and Convulſion by pulling the Nervous parts.

And Convulſions are not only in ſome peculiar part, but ſometimes in the whol Body like an Epilepſie, by a windy or watery matter full of ſharpneſs, and malignity, which is ſent to the Brain, which being diſcuſſed doth give eaſe, and gathered again, maketh new Convulſions.

Alſo in this Diſeaſe there is a Contraction of the Members, ſometimes of all, ſo that the Patient cannot move one Joynt; ſometimes of one, and that principally in the Leg, when the Tendons which are made to move the Leg grow hard and ſtiff in the Hams. This contraction comes by reaſon of the ſalt Humor that flows with much moiſture to the Nerves and Tendons; and when the thin and watery part, through continuance of time is conſumed, the thick is dried and made hard; from whence come theſe contractions of Nerves and Tendons.

Sometimes there is a contraction in the Gullet, ſo that the Patient can ſcarce ſwallow, and is in fear of ſtrangling. And this comes from aſtringent vapors, which contract the Oeſophagus, or Gullet.

The ninth ſign, is the Flux of the Belly, either with, or without blood. The ſimple Flux which is without blood, is diſtinguiſhed from others, in that the Excrements are thicker, and more than the quantity of meat that is taken; when a common Flux is more thin, and of Humors only.

The Flux of blood in this Diſeaſe is diſtinguiſhed from a Dyſentery, becauſe it is without pain of the belly, and it is thick blood which is ſent into the Guts by the Meſeraick Veins. Sometimes the Hemorrhoid Veins do receive that filthy blood, and ſend it forth: but if this flux of the belly continues long, the Veins ſwell, and ſend forth not only much blood, but alſo other ſalt and ſlimy Humors.

The tenth ſign, is a ſtinking Breath, which is common to all in the Scurvy, as *Fugalenus* witneſſeth, ſo that they which ſtand by cannot endure it, but muſt turn aſide their Noſe.

The eleventh ſign, is often ſhivering, with none or little heat following it.

The twelfth ſign, is an intermitting Feaver, which ſometimes they have, which are unlike the other ordinary Agues or Feavers: for in them the Pulſe is weak, ſlow, and unequal, eſpecially in the declination; but in the height it is commonly great and hard. Beſides, at the firſt coming there is ſuch a twitching in divers parts, eſpecially the Legs, that they ſuppoſe their fleſh to be torn; and ſometimes they have convulſive motions therewith. And though ſometimes this Ague is a Quotidian, Tertian, or Quartan, yet ſometimes the fits are diſorderly, coming once it may be, or twice in a month, without certainty.

The Thirteenth Sign is Tumors in divers parts; ſometimes hard, ſometimes ſoft like bladders, and ſometimes like an Eryſipelas, or red Tumor.

The Fourteenth Sign is Atrophy or Conſumption; which is ſo great in this Diſeaſe ſometimes that they are nothing but skin and bones like a Sceleton or Anatomy; eſpecially after long ſickneſs, which comes from the evil blood; ſo changed from its natural Condition that it cannot be made like unto the parts which ſhould nouriſh.

Fugalenus propounds many other Signs of the Scurvy, and *Sennertus* with others: ſome whereof are Common to many other Diſeaſes, which we will Conceal, leaſt they breed Confuſion.

And though (as we said before) the Scurvy is not ordinary in France, as in Poland and other Northren parts, and almost unknown; yet if any in Practising Physick shal observe al the Symptomes of Melancholly he shal find some inclining to the Scurvy, in whom some of the former Symptomes proper to the Scurvy wil appear.

As to the Prognostick: This Disease is hard to be Cured, as al other that come of Melancholly, and here much more hard, because of the malignity in the Melancholly which doth more cruelly overthrow the body, and wil not obey the greatest part of Medicines.

It is also dangerous because it many times brings a Consumption or Dropsie, and destroyes others by sudden death, by an Apoplexy, Swooning, and other acute Diseases.

Yet sometimes they who have seemed desperate have been Cured, and oftener in this Disease than in any other: And we have seen some brought to a Consumption by long pain, and bloody Flux (which by many circumstances we conclude to be from the Scurvy) to have been perfectly Cured.

Moreover, The Pulse is deceitful, especially in the Fits; it wil be so quick, smal, and unequal sometimes that the Patient seems to be at deaths door; yet after his Fit he wil rise from his bed, and is as formerly; As we peculiarly observed in a Dutch Schollar, unto whom we being sent for in the time of his Fit, thought that he would presently die; but the next day we saw him seemingly in very good health; and when we had examined the Circumstances of the Disease, we Concluded that he had the Scurvy, which he brought out of his own Country where it is very usual.

The same Cure is to be used in this Disease as in Hypochondriack Melancholly: because as we said at the first it comes from the same Humor more differing from its natural state; therfore for the most part it needs stronger Medicines.

But because this is a general Rule in Physick, That we alwaies begin with the weakest Medicines, and so proceed to stronger, if the former will not cure: It will be good in this Disease to appoint the whol course of Cure for Hypochondriack Melancholly, because a stubborn disease requires a long course; and if that will not root out the Disease, let us then use the Medicines more specifically proper: And it will not be amiss to mix some such with the other at the beginning.

These Specifical Medicines are called *Antiscorbutica*, or Medicines proper for the Scurvy, and there are many of them in Authors that have written of this Disease; whose strength chiefly depends upon a Volatile or flying Salt, of which they are very full, by which means they make thin and fluid, that thick, earthy, and salt humor, and at length discuss it. Moreover, they have a certain preservative and opposing Vertue against the poyson of the Scurvy which is in the Melancholick Humor. Among these, the chief is Dutch Scurvy-grass, which is not in *France*. Another is, Cresses of both sorts (but the Water-cress is best) Brooklime, Horse-Rhadish, the lesser Celandine, Wormwood, and Fumitory. To which may be added many others, but of less vertue, and all they are such which can prepare, correct, and tame the Melancholick Humor. Hence it is that we directed the Cure against Hypochondriack Melancholly to be used here: Those are, Carduus, Ceterach, all the Capillar Herbs, Hyssop, Germander, Bettony, Agrimony, Borrage, Bugloss, Elicampane, Asarum, Ditch Dock, Polypody of the Oak, Capar, Ash; and Tamarisk barks, Flowers of Elder, Tamarisk, and Dodder of Time.

In the choyce of these Plants, you must alwaies observe this, That you give the least quantity of hot things, and that you alwaies mix with them cold or moderate things, and in a greater quantity, especially in hot Countries, in which Melancholly is burnt. And besides the Capillar Herbs with Borrage, Bugloss, and Agrimony before mentioned, when there is a Feaver, or we fear heat, you may ad Endive, Succory, Sorrel, Juyce of Citrons, Lemmons, Orrenges, and also Spirit of Sulphur, or Vitriol, or whey.

Of these former Plants you may make many sorts of Medicines, which are all gathered by *Sennertus* out of all Authors, which every man may imitate as he pleaseth. Yet this we must mark, which all Authors mention, That the aforesaid Plants work more powerfully if you take their Juyce, or make them into Conserves; because the flying salt wherein all their vertue remaineth is gone by decoction, as also if the Plant be dried.

We have used these following forms with good success.

Take of *cleer Juyces, of Water-cresses, and Brook-lime, of each one ounce: the Juyce of Fumitory two ounces: white Sugar two drams. Make a Potion.*

Or,

Take of *the Juyce of Fumitory, and Water-cresses, of each two ounces: mix them.*

Or,

Take of *the Juyces of Sorrel, Fumitory, and Water-cresses, of each two ounces. Mix them.*

You may give more Juyce of Sorrel, if you desire to cool more, or Juyce of Lemmons, or the like.

The

The power of the Medicines, will be more to diſſolve that ſticking clammy Tartar, if you add one dram of Salt of Tartar with Spirit of Sulphur, or Vitriol, one ſcruple or half a dram; and becauſe in the uſe of theſe Medicines, we purge often, it is good to infuſe one dram or two of Senna all night in the ſaid Juyces, and give it every other day, or every third day.

It is worth your while to give ſometimes alſo ſome Steeled Medicines, ſuch as we preſcribed in Hypochondriack Melancholly; as alſo the ſtrengthening and opening Opiates, and others, as in wiſdom you ſhall think fit.

And laſt, Mineral Waters that are ſharp, and of Vitriol, uſed in due ſeaſon, are very beneficial for the Cure of this Diſeaſe.

The End of the Twelfth Book.

THE

THE THIRTEENTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Meſentery, Sweet-bread, and Caule.

The PREFACE.

MAny Authors are very ſhort in the explaining of the Diſeaſes of the Meſentery, Sweet-bread, and Caul; and the moſt of them have left them out, becauſe they are hard to be known, and for the moſt part only from Diſſection of dead Bodies; as appears by ſtories in Schenkius, Sennertus, *and others. Yet they are very ordinary and uſual: from whence* Fernelius *ſaith, That oftentimes there are cauſes of many Diſeaſes in the Meſentery: as of Choller, Melancholly, Diarrhœa, Dyſentery, evil Habit, Conſumption, Faintneſs, of lingering Feavers, Vomitings, Chollicks, Tumors, and Impoſthumes. And* Sylvius *called the Meſentery, the Mother of many Diſeaſes: by others ſhe is called the Phyſitians Nurſe. We may ſay the ſame of the Sweet-bread and Caul; for they are ignoble parts, and as it were ſinks of the Body, to which the noble Members do ſend their Excrements. And although theſe parts (as all other) are ſubject to all kinds of Diſeaſes, Similary, Organical, and Common, and many Symptomes ariſe from them; yet we will only ſpeak of thoſe which are moſt in practice, and comprehend this Book in five Chapters. The firſt ſhall be of the Obſtruction of the Meſentery. The ſecond of the Inflamation of the Meſentery. The third of the Impoſthume, Scirrhus, and Ulcer of the Meſentery. The fourth of the Diſeaſes of the Sweet-bread. The fifth of the Diſeaſes of the Caul.*

Chap. 1. *Of the Obſtruction of the Meſentery.*

THeſe Obſtructions in the Meſentery, come of the ſame Cauſes which are mentioned in the Obſtructions of the Liver and Spleen; but they happen more eaſily, and more often, by reaſon of the ſtraitneſs of the Meſeraick Veins, and eſpecially of the Milky Veins, which carry the Chylous Matter to the place of the ſecond Concoction: and when that Chylous Matter is filled with crude and thick

thick juyce it comes to paſs that not having a free paſſage, it ſticks in thoſe little Veins and makes Obſtructions. Alſo the Meſeraick Veins are ſtopped by thick Humors ſent from the Liver, Spleen, and other parts, and there continuing till they grow thicker, ſo that ſomtimes they cauſe a Scirrhus. With theſe Humors ſomtimes groſs Vapors are mixed, which uſe to be the cauſe of great Symptomes. To the Obſtruction, or rather making narrow of theſe Veins, we refer compreſſion, which comes from the Glandles which are ſpread through the whol ſubſtance of the Meſentery: for when theſe grow beyond meaſure, as in thoſe who have the Kings Evil, or Struma, they compreſs the Meſeraick Veins, and hinder both the paſſage of the Chylus, and of the Blood.

The Signs of theſe Obſtructions are to be divided into three kinds, as we did in the Obſtructions of the Liver; namely, into ſuch as ſhew the Diſeaſe, the Part affected, or the Cauſe.

The Signs of the Diſeaſe (that is) of the Obſtructions lying in the Hypochondria, and alſo the Signs of the Cauſes are the ſame with the Obſtruction of the Liver and Spleen, and are from that Chapter to be taken. But thoſe Signs which properly ſhew the peculiar Diſeaſe of the Meſentery, are ſtretching, and reſiſtance in the middle of the Belly, and under the Stomach, and about the Navel; a weight in the ſame parts, and ſomtimes a dull pain, and ſomtimes a moſt ſharp, when wind is contained in thoſe parts; ſomtimes there is pain in the back, becauſe the Meſentery is tied to that part: there is rumbling in the Belly, belching, and vapors flying to the Head, from whence come divers Symptomes: and laſtly, all thoſe which uſe to happen in Hypochondriack Melancholly, ſignifie Obſtruction of the Meſentery, becauſe that alſo proceeds, and is maintained by the ſame Obſtructions.

As for the Prognoſtick: This Diſeaſe of its ſelf, is not dangerous, becauſe an ignoble part can endure great evils without danger of death: moreover, you may apply ſtrong Medicines for the Cure, which being well adminiſtred, do commonly bring about the deſired effect; except Hypochondriack Melancholly riſe from thence, which uſeth to be called the ſhame of Phyſitians, by reaſon of the rebellious Nature of the Melancholick Humor. But becauſe this part hath not exquiſite ſence, and the Obſtructions do not alwaies greatly diſturb the Patient, they are often neglected, and become the cauſes of other moſt dangerous diſeaſes.

The Cure of this Diſeaſe is the ſame with that of the Obſtruction of the Liver, and you muſt fetch it from the Chapter treating thereof.

Chap. 2. *Of the Inflamation of the Meſentery.*

WHen the Meſentery, as I ſaid, is as it were the ſink into which the Noble Parts do ſend their ſuperfluous Excrements, which afterwards are ſent forth by Nature, either by Vomit or Stool; as you may ſee in ſome who ſend abundance of Humors forth at divers times by Vomit and Stool: if thoſe Evacuations be hindered by ſtoppage of the waies by which they are made, or by any other cauſe, thoſe Humors which are there detained, ſtaying long in the part, do get a preternatural heat, from whence come putrefactions, inflamations, divers Feavers, and impoſthumes. But an Inflamation is peculiarly made, when blood heaped up in the Meſeraick Veins, by the opening of ſome branch is ſent into the ſubſtance of the Meſentery: but becauſe by reaſon of Obſtructions it is chiefly gathered in thoſe Veins, therefore all the cauſes of Obſtructions may be referred to the Cauſes of Inflamation.

For the making of this Inflamation, that ſharpneſs and gnawing of the Humors gathered together, do much conduce, a fall or ſtroak upon the Belly, the weakneſs of the attractive concoction, or retentive faculty of the Liver; too much heat of the body, or inordinate uſe of cooling things; the critical motion of Nature in malignant Diſeaſes, or ſmal Pox, by which it ſends the peccant Humors into this ſink; a Diarrhœa, or Dyſentery ſuddenly ſtopped.

The ſigns of the Inflamation of the Meſentery are, a lingering Feaver without Thirſt, and great Symptomes, want of Appetite, a ſence of ſtretching and heavineſs beneath the Stomach, without great hardneſs, and which is not felt but by the hand preſſing of it, and without pain, worth the ſpeaking of, becauſe the part is of dull ſence; Chollerick ſtools, which commonly hath thin matter, without pain, ſomtimes pure, ſomtimes mixed with Excrements.

If the Meſentery be only inflamed, all the aforeſaid Symptomes are milder: But if the Liver or Spleen, or Guts, are alſo inflamed, all the Symptomes are ſtronger: And beſides, the ſigns of the aforeſaid parts affected will appear, which are to be taken out of their proper Chapters.

And becauſe the Inflamation and Impoſthume of this part, are very hard to be known if they be alone, by reaſon of the dull ſence of the part, and becauſe it performeth no action in the body, whoſe hinderance may be perceived; but only ſerveth for the diſtribution of the Chylus and the Blood: therefore they are rather to be diſcovered by conſequence, than directly, and according to artificial

conjecture;

conjecture; namely, when there is a Feaver and other Symptomes, and no sign of the Liver, Spleen, or Guts distempered. A half Tertian Ague sheweth that the Guts are inflamed with the Mesentery; which *Spigelius* observed to come commonly from the Inflamation of these parts. Also this Disease is distinguished from the inflamation of the Muscles of the Belly, because the Tumor and pain is enlarged according to their proportion, and they are commonly long, or over the whol belly, and more in the outward parts, so that they are perceived by the least touch, and they use to bring great pain, and a Feaver.

Lastly, This Disease is to be distinguished from the Humors of the Midriff, which have been, as yet, known to few Physitians: for in them there is alwaies great difficulty of breathing, removing of the Hypochondria, a Pulse hard and smal, without any sence of Tumor in the Hypochondria. And if the Tumor come of a hot cause, a sharp Feaver, great pain, doting, and Convulsions do follow; which Symptomes never happen when the Mesentery is only inflamed.

As for the Prognostick: This Disease is very dangerous; for it either ends in an imposthume, or there follows a rottenness, and corruption of the Mesentery. Oftentimes the Matter of the Disease is sent by Nature another way, and yet is not clean taken away, whence the Disease returns, and continues for many yeers, somtimes till death, now with a Feaver, then a Chollick, or Inflamation.

The Cure of the Inflamation of the Mesentery, is not unlike to that of the Liver and Spleen, and therefore you must peruse that.

Chap. 3. *Of the Imposthume, Ulcer, and Scirrhus of the Mesentery.*

THe Inflamation of the Mesentery often turneth into an Imposthume, yet every Imposthume thereof is not from Inflamation, but many times from vitious Humors therein contained, which putrefie, so that these Imposthumes come by degrees without a Feaver afore going, or other great Symptomes; as we see in other parts, when *Atheromata*, *Steatomata*, and *Melicerides*, and other kinds of Imposthumes are bred without Inflamation going before. And when they are broken, the Matter being voided, there remains an Ulcer which is hard to be cured. But if those Humors are very flegmatick, or Melanchollick, and resist putrefaction, they grow, and somtimes are hardened, and turn to a Scirrhus: somtimes they are as hard as a stone, as many affirm who have found stones in the Mesentery.

The Knowledg of the Imposthume in the Mesentery, is somtimes easie, somtimes hard; for if it comes from an Inflamation of that part, that being perceived by the signs in the former Chapter, it is a sign that the Inflamation could not be discussed, but suppurated and turned into an Imposthume. But when an Imposthume comes from evil Humors remaining long in the Mesentery, and at length putrefying, it is hard to know it; so that many Authors who have written Observations upon such kind of Imposthumes, say, that they never were known, but after death, when the Bodies were opened. For although for the most part, they may be known by the touch, yet somtimes they lie so deep, that they cannot be touched, and the part being dull in sence, that they will not be discovered by pain. But because they come divers waies, they must be thus distinguished.

If the Imposthume of the Mesentery, hath a visible Tumor, it is first to be discerned from an Inflamation and a Scirrhus: It is distinguished from an Inflamation if it come not from it, when there is no Feaver, or at least but smal, when none went before, nor any other signs that may shew an Inflamation; but if it follow an Inflamation, it can no other waies be distinguished than by hardness & continuance; for if the signs of Inflamation have continued twenty or thirty daies, it is a sign that it is turned into an Imposthume. It is distinguished from a Scirrhus by hardness, which is great in a Scirrhus, but in an Imposthume there is some kind of softness, as also by the want of pain altogether; for in an Imposthume there is alwaies some pain, especially if it be presled hard. Moreover, this Tumor is distinguished from the Tumor of other parts, by the Situation thereof, as we said before of the Inflamation of the Mesentery. But if the Imposthume lie in the Mesentery without any visible Tumor, there can be no certain sign, but by an artificial conjecture we may suspect, namely, if there be loathing of Meat, or vomiting without manifest fault of the Stomach, and a great fulness after little Meat, weariness of the whol Body, and fainting without manifest cause, if the Belly be unaccustomarily bound, or loose, and void stinking Excrements, and somtimes bloody, without suspicion of a Dysentery. To these you may add great watchings, and if they sleep they faint, and have great Sweats. And though somtimes there appear neither Feaver nor pain, yet there is commonly an obscure one; of which, if there appear no manifest cause, we must conjecture that it comes from this Disease, especially if any of the aforesaid

signs

ſigns be joyned therewith; as alſo if the Abdomen be violently preſſed, the Patient will perceive ſome inward pain: it is true, that by violent compreſſion you may cauſe pain in ſound places; but if you perceive more pain in one part than in another, after all parts have been preſſed, and when that part is alwaies moſt pained, and the more by preſſing, you may ſtrongly conjecture that the impoſthume is there.

If at length there come forth Matter, then the Impoſthume will be manifeſt. Commonly it is voided by ſtool of divers ſorts according to the diſpoſition of the part affected, and of thoſe adjacent.

Hence one while the Matter is pure and white in great plenty, without ſence of pain, when it is ſent by the Meſeraick Veins into the Guts, ſomtimes when the Impoſthume is in the thick and loweſt Guts, the Matter is mixed with the Excrements, ſomtimes it is ſent to the Reins, and caſt forth by Urine; ſomtimes being ſent in great quantities between the Peritonæum, and the Muſcles of the Abdomen, it falls into the Cavity of the Belly by breaking of the Peritonæum, or breaks outwardly by an Impoſthume, ſo that a great quantity of Matter flows from the Navel, and ſomtimes Worms therewith, through the corruption of the Meſentery. And that which ſent forth by ſtool (which is the uſual) is ſomtimes white and laudable, as was ſaid; ſomtimes mixed with blood or water, ſomtimes black blood, and ſtinking, ſomtimes other black Matter, or of divers colors. But whether this purulent Matter come from the Meſentery, Liver, Spleen, or other part, it is known by the proper ſigns of every part affected.

When the Impoſthume is broken, and the Matter floweth, it is certain that there is an Ulcer in the Meſentery, which ſomtimes is quickly cured, and ſomtimes it is of long continuance, and brings rottenneſs upon the whol part, and a Gangrene.

As for the Prognoſtick: The Impoſthume of the Meſentery is dangerous; for if it continue long in the part, as it often happens, it breeds filthy rottenneſs, or a Gangrene, or brings the Patient into a Conſumption or Dropſie. If it break, and the Ulcer be not quickly cured, but gets an evil condition, it hath the like event, a Gangrene, Conſumption, or Dropſie. Somtimes when the Impoſthume is broken, and very ſtinking Matter is ſent into the Cavity of the Belly, the Patient dies ſuddenly. The Scirrhus, or hard Tumor of the Meſentery is leſs dangerous, and if it be new will admit of a Cure; but if it be old, it brings the Patient to a Dropſie.

The Cure of theſe Diſeaſes, is to be varied according to the diverſity of them. And firſt, an Impoſthume bred requires opening and evacuation, and it muſt be ſoftened with opening and purging Medicines, ſuch as are laid down in the Obſtructions of the Liver and Spleen, not omitting outward Softeners and Looſeners, Fomentations, Cataplaſms, and Liniments, which do make the Matter of the Impoſthume thin, and open the paſſages that the Matter may better be voided.

After the Impoſthume is opened, you muſt cleanſe the Ulcer and heal it; for which purpoſe the Remedies mentioned in the Cure of the Ulcers of the Stomach, Liver, Reins, and Womb, are very good; of which a wiſe Phyſitian may take his choyce according to the divers diſpoſitions both of the Bodies, and the Diſeaſes.

And a Scirrhus of the Meſentery is cured with the ſame Medicines, which are ſet down for the Cure of the Scirrhus or hard Swelling of the Liver and Spleen.

Chap. 4. *Of the Diſeaſes of the* Pancreas, *or Sweet-bread.*

THe Ancient Anatomiſts knew no action of the Pancreas, or Sweet-bread, but the uſe only, namely, to prop the Veſſels, leaſt they ſhould be in danger of breaking, and to be inſtead of a Pillow to the Stomach, leaſt when it is full it ſhould be hurt by the hardneſs of the Vertebræ or Back-bone. But the Modern Anatomiſts have aſcribed very great action unto it; namely, the firſt preparation of the Chyle, and cleanſing of it, ſo that it may be brought to the Liver more pure; which the milky Veins ſeem to confirm, becauſe they are diſperſed through the Pancreas. Beſides, in the middle of it there is an open paſſage which goes to the Guts, by which it is probable that the Excrements of the Chyle are purged; therefore the Pancreas hath its Diſeaſes, which hurt the whol Body, eſpecially Obſtructions and Tumors, as the Meſentery hath; namely, when the Chylous Matter is crude and thick, and is brought to it from the Stomach, not ſufficiently digeſted, and when it doth not freely flow from it.

Riolanus obſerved a Scirrhus of the Pancreas, in *Auguſtine Thuanus*, that wrote the Hiſtory of his Times moſt elegantly in Latin; who when he had for four yeers, among other Symptomes, a heavineſs continually in his Stomach, eſpecially when he walked or ſtood ſtill, without Swelling or hardneſs in the Hypochondria, had a Pancreas as big as his Liver, after he was dead, hard and Scirrhus, full of knots like Pidgeons Eggs.

But becauſe the Pancreas is covered with the Stomach, its Tumors are ſcarce to be felt; and this is

the cause, because there is no mention commonly of them, and they have been found only after death: Yet you may make a handsom Conjecture of them, from what *Riolanus* observed in *Thuanus*, namely, If there be a sence of weight or heavines in the Stomach, and no Tumor or hardnes in the Hypochondria; and other signs of Obstructions than are mentioned in the Obstructions of the Liver, Spleen, and Mesentery. To which you may add pain, and other Symptomes of the Stomach, by reason of its neerness, shortness of breath, by reason of the compression of the Diaphragma; By which signs we suppose that the Lord *Audeyerius*, President of the Senate of Gratianopolis, had a Scirrhus of the Pancreas, and we could perceive it by touching, by putting our hand deep to the sides of the Stomach about the middle, because he was lean; and we found a hardness there, which being touched, pained him: the story whereof, is at large related in our 81. Observation, Cent. 3. And in the knowledg of the Scurvy we observed (which none that ever wrote thereof did) That in all Scurvyes there is a Tumor of the Pancreas, because you may find a straightness, oppression, and weight in the Region of the Stomach: And this Sign is laid down for a cleer one by *Eugalenus*, *Sennertus*, and others.

There are some stories in Authors, of Imposthumes found in the Pancreas, which were not discovered while the Patients lived. But by the Symptomes they had they may be partly known; as some like those of the Scirrhus; to which you may joyn these, a lingering Feaver, which is the companion of almost all inward Imposthumes, much watching, short sleep, and after it, pain, swooning, and cold sweats.

The Cure of the Obstruction, Scirrhus, and Imposthume of the Pancreas, is the same with those of the Liver, Spleen, and Mesentery. There you may fetch Medicines from the Chapters concerning them.

Chap. 5. *Of the Diseases of the Caul, or Omentum.*

Because the Omentum is a soft part, and fat, fit by reason of its loosness to receive Humors that come from other parts: It is subject to divers Diseases, as the Mesentery and Pancreas: And these are not described by Authors, because they can scarce be seen in living men, but only by Anatomy, as you may see in some Stories in our Observations. *Vesalius* saith that he saw in a Body opened, an Omentum so swoln that it weighed five pounds, when in its Natural condition it would weigh scarce half a pound. *Roussetus* in *lib. de partu Cæsareo*, reports that in *Paris* there was found a great Imposthume in the Omentum. *Riolanus* in his Anthropographia, saith that he saw an Omentum in a Noble Youth of ninteen yeers of age, so full of kernels, by which it received abundance of filthy Humors, the Mesentery and Pancreas being imposthumated, and the Spleen almost consumed. We also saw a Scirrhus Omentum in a Fryar of *Montpelior* all over the lower part of the Belly, and four fingers thick; it was of the color of the Spleen, so that it was probable that it was caused by Melancholly from thence, because he was of a Melancholick temper, and the passage is very open by the branches of the Spleen Veins, to the Omentum; by which branches (as *Hippocrates* teacheth, the water in a Dropsie is brought from the Spleen to the Omentum, from which by degrees it distils into the Cavity of the Abdomen.

But because the swelling of the Omentum can by no means be distinguished from that of the Mesentery, therefore we cannot appoint a distinct knowledg. It is true, that the Tumors of the Omentum are easier known at the first touch, because it is immediately under the Peritonæum; but the Mesentery is deeper. But the Tumors of the Mesentery arise greater towards the Peritonæum, and are sometimes so united to it, and the Muscles of the lower Belly, that they are sent forth by suppuration through the Navel, or other external parts.

Yet this Difficulty of Knowledg, doth not hinder the Cure, because the same Medicines serve for all Tumors that are alike in all the parts of the belly: but the Cure is worse to be made in the Omentum, because it hath not fit way, as other parts have for the purging of its self.

The End of the Thirteenth Book.

THE

THE FOURTEENTH BOOK OF THE PRACTICE OF PHYSICK.

Of the Diſeaſes of the Reins and Bladder.

The PREFACE.

THE *Reins and Bladder have divers, and all ſorts of Diſeaſes, both Similary, Organical, and Common; from which, divers Symptomes ariſe, both in the actions hurt, and alſo in the fault of the Evacuations. We will comprehend the chief in Nine Chapters. The Firſt ſhall be of the Stone in the Kidneys, and the pain of the Reins, called* Dolor Nephriticus. *The Second of the Stone in the Bladder. The Third of the Inflamation of the Reins and Bladder. The Fourth of Piſſing of Blood. The Fifth of the Ulcer of the Reins and Bladder. The Sixth of Diabetes, or Involuntary piſſing. The Seventh of the not holding of the Water. The Eighth of Iſchuria, or ſtoppage of the Water, and Strangury. The Ninth of Dyſuria, or ſcattering of the Urine.*

Chap. 1. *Of the Stone in the Kidneyes, and Pain in the Reins, called* Dolor Nephriticus.

THat is called *Dolor Nephriticus* which doth afflict the Ureters or Reins; the common people call it the Stone-Chollick, becauſe of the great affinity it hath with the Chollick, ſo that it is hard to diſtinguiſh them, as you ſhall ſee in the Diagnoſtick, or Signs.

The Cauſe of this Pain is manifold, but chiefly the ſtone or thick flegm. A ſtone continuing in the Reins, cauſeth either little or no pain, becauſe the ſubſtance of the Reins hath little Sence: but if it fall upon the Head of the Ureters, or get into the paſſage, and diſtend it, and cannot be brought to the Bladder by reaſon of its greatneſs, then it cauſeth grievous pain. But groſs flegm faſtened upon the Ureters, doth diſtend them; and cauſeth the Nephritical pain.

The leſs ordinary Cauſes are, thick blood fixed in the Ureters, or thick Matter coming from the Kidneyes, or other parts; ſomtimes wind gets into the Cavity, and cauſeth great pain.

There are many Controversies in Authors about the stone, which is the chief and usual cause of the pain of the Reins, which we shall not accurately declare, but only touch those things which are necessary to declare its Nature and Causes.

And first, they doubt under what kind of Disease they should reckon the stone; *Galen* placeth it among the Diseases in number, of those things which are wholly besides Nature, as also the Worms. For though a Disease in number properly doth respect living parts, whose number being encreased or diminished, maketh an organical Disease; yet those things which are preternaturally added to the number of those things of which the Body is compounded, ought to be referred to the Diseases in number, so that sometimes the bare qualities are sometimes referred to Diseases in number; when they do immediately hurt the actions, as yellowness in the Eye of one that hath the Jaundice, a noise in the Ears, and a bitter tast upon the Tongue.

Oftentimes the stone is reckoned among Causes of Diseases, as it breeds Obstruction or Distention.

It may also be placed among the Symptomes, those that are voided or retained: for if it be retained in the Kidneys, Reins, or Bladder, when it should be voided, it is to be reckoned among those things that are preternaturally retained: but when it is voided, it is to be reckoned among those that are voided wholly against Nature.

But there is more difficulty about the cause of the stone, both material and efficient. *Galen* and his posterity, thought that flegm was the material cause of the stone, which is thick and slimy, fit to be hardened, and (as they say of late) faculent, slimy, and Tartarous, and heat the efficient, which drieth and hardeneth that matter, and at length turneth it into a stone Which Doctrine is oppoſed with strong Reasons.

First, If it should come of a slimy and thick flegm, then it would often be bred in the Brain and the Stomach, in which such flegm doth chiefly abound. Neither will it suffice to say that there is not sufficient heat in those parts to harden it; because according to the Doctrine of *Hippocrates* and *Galen*, a gentle heat by a continual action is sufficint to congeal; and hence is the reason why old men do more often breed the stone, when yong men have hotter Kidneys; because the matter of the stone lies longer in old mens Reins, by reason of the weakness of the expulsive Faculty, and so it's longer concocted by the heat, and at length hardened.

Secondly, From *Aristotle*, 2. *meteor. cap.* 4. they which grow together by heat, are melted by moisture, as Clay. But the stone is never dissolved with water. Neither doth it hinder to say that a strong heat makes such a Concretion or growing together, that it cannot be dissolved by moisture, as in Bricks. For first, in Man there is not so great a heat; then the not dissolving of Bricks with Water is not because of the strong heat they had, but rather from the disposition of the Clay; for Clay made of common Earth, although it be baked in a Furnace, wil never be hard as a Brick, but alwaies be dissolved with moisture.

Thirdly, From *Aristotle* in the place mentioned, the heat that makes concretion must be dry. But there is a continual flowing of moisture into the Reins and Bladder, therefore such a drying and hardening cannot be in those parts.

Fourthly, Stones bred in Rivers and Fountains, in which there is no heat, and in some Dens and Holes that are very cold, tho water that fals turns into a stone; from whence strange shapes do arise. Therefore we must find another cause besides heat, and another Matter besides clammy and glutinous Flegm.

Fifthly, Flegm made hard is like Chalk, and is brittle, as you may see in the knots of the Joynts. But some stones are like flints, which they cannot be from Flegm: nor is there so much heat in mans Body to make it so.

This slimy flegm hath deceived the Physitians of all Ages, which is found in the Urine of many Patients, and they thought it to be the immediate Cause: But they were out. For first, In the stone of the Kidneys such Urines are seldom made, but often in the stone of the Bladder. But if this were the matter of the stone it would be alike in both. Therefore this Matter depends especially upon the proper Disease of the Bladder, for it is an Excrement of it distempered. The disease of the Bladder is this: we have seen in the Bodies of them who have died of the Stone in the Bladder, and who voided much of that matter, that the bladder grew fleshy, as thick as ones finger or thumb, so that it filled the whol Cavity, and lay next to the stone till by stopping the Urine it killed the Patient. But in those who made thin cleer Urine, their bladder was not altered. The Reason of these accidents are taken out of *Hipp.* Aph. 66. Sect. 5. If there be no Tumor in great and evil wounds, it is evil. And *Galen* gives the Reason because there is a suspition that the Humors which should come by reason of pain to the wound, are gone to some noble part. Moreover, it is Natural to all parts; as *Galen, lib. de diff. febr. cap.* 11. that they which are stronger, send that which hurteth them to the weaker, nor do they cease so doing till it come to the weakest. So when the part wounded is very weak, and therefore fit to receive Humors, if they come not thither, it is a sign that other parts are very weak,

which

which cannot ſend, and that others are weaker than the wounded, to which the humors are carried. Not only the bad Humors are carried to the wound, but alſo good blood, which Nature ſends to refreſh it. All theſe things are in the bladder that hath the ſtone. A great uneven ſtone, or ſharp, hurts the Tunicle of the Bladder; hence comes pain and weakneſs. And Nature to help it ſends more than uſual blood, and the ſtronger parts ſend their ſuperfluities. Theſe the bladder concocteth as much as may be into its ſelf, and ſo groweth thicker. But when it cannot take in all, eſpecially the evil Humors, hence come many foul Excrements, which from the Nature of the part turn ſo flegmatick. But in them who have clear Urine, either the ſtone hurteth not, which cauſeth the attraction, or ſome other parts are weaker than the bladder, to which the humors flow.

But becauſe this Doctrine doth deſtroy an old Opinion, we will confirm it by a cleer Example of the Womb. The Womb is Membranous, as the bladder: but in Women with Child it is fleſhy and thick; ſo that in the laſt months it is two fingers thick; becauſe Nature all the time ſends much blood to it to nouriſh the Child; which when the Child doth not wholly conſume, ſome part of it is taken into the Womb: and ſo it encreaſeth. The ſame is in the Bladder, though Preternaturally (which in the Womb is Natural) that when much blood comes to it, it converts it into its ſelf, and grows thicker. But if without being with Child, the Womb be diſtempered and made weak, then Humors ſuperfluous from other parts come to it, which when they cannot be taken into its ſubſtance, turns to the Whites. And that flux is a proper Excrement of the Womb, as the flegm is of the bladder. The ſame thing is in the Reins, though not ſo often; as when by a ſtone in them there is pain and weakneſs, Nature ſends much blood and humors to them, which when they cannot be turned into the ſubſtance of the part, they are turned into a ſlimy Excrement, which is voided in abundance; and this vulgar Phyſitians take for Matter or Pus, which is only flegm, or mixed with a little Pus, as when by the grating of the ſtone there is an Ulcer.

Some Modern Writers being converted with the aforeſaid Reaſons, have made a Juyce, which will turn into a ſtone to be the material cauſe of the ſtone called *Succus Lapideſcens*; and the efficient to be *Spiritus Lapideſcens*. They call the former a certain Humor naturally proper to turn into a ſtone: And this they deſire to prove by the breeding of ſtones in the Earth, which are by many Authors ſaid to come of Waters and things caſt thereinto to be hardened preſently; ſome Waters in Caves to be made Stones, and ſome part of the Wine groweth to the Veſſel, called Tartar; and Urines that are cleer, when they are cold grow to the glaſs. And although the peculiar fitneſs of the Matter to be thus turned, is not ſufficiently known; yet ſome ſay they have found it out, ſaying that it is of Salt mixed with Earth. Some Salts do grow hard in the Sun, and are eaſily diſſolved in Water; and if they be joyned with Earth like themſelves, by the force of the efficient cauſe they may be ſtones. So we ſee in Wines turned to Tartar: but Tartar calcined goes all into Salt, which ſhews that it is chiefly made of Salt. So in Urines that have much Salt, eſpecially in thoſe which have ſlimy matter, we ſee a Tartarous Matter cleaving to the glaſs. This Salt Matter, which is mixed with the Urine, comes from Meat and Drink ſo affected, and they are caſt forth in a ſound Body, nor are they retained in the Reins when the efficient Cauſe is abſent.

We have called the efficient Cauſe, *Spiritum Lapidificum*, or a Spirit that makes a ſtone: *Fernelius* calls it a ſtony diſpoſition, which is in the Reins commonly Hereditarily. But we like the foremoſt Title beſt. For firſt, ſome have ſtones which have them not Hæreditarily if they eat or drink things that breed them, becauſe in them there is both the Material and Efficient Cauſe; therefore the Hermets impute the Efficient Cauſe of ſtones to their proper ſeeds, which in a Matter rightly diſpoſed, produce their form.

Moreover, Many Hiſtories ſhew that Stones come from a Stone making Spirit, of Men, Beaſts, and other things turned into Stones by a Breath or Spirit out of the Earth. So in *Aventinus*, lib. 7. *Annal. Bavar. an.* 1343. that more than fifty Country men and their Cows, were turned into Stones. And ſo ſaies *Ortellius* in his Deſcription of *Ruſſia*, of whol Heards of Cattel. So alſo *Camerarius* reports of a South wind that bloweth ſome times of the yeer, in the Province of *Chilo*, in *Armenia*, by the blaſts whereof, whol Troops of Horſes are ſuddenly turned into Statues of Stone, and ſtand in the ſame rank and file in which they were.

This Stone making Spirit, is not only in the Reins of thoſe which have this Diſeaſe, but alſo in the Juyce of thoſe things that are eaten and drunk ſeparated from them; ſo that ſomtimes both come together: Hence it is that ſome that eat but any Meats that incline to the breeding of the ſtone, do preſently produce it, becauſe there is a Stone-breeding diſpoſition, or Stone-making Spirit in their Reins. But if their Reins be free from this Spirit, ſuch meat will not breed ſtones, becauſe their ſtone-making force is not ſtrong enough without the aſſiſtance of the Reins to convert that matter into ſtone. On the Contrary, if the ſtone-making power be greater in the meats that are taken, and they are often eaten, ſtones will be bred, although the Kidneys have no ſuch diſpoſition or ſtone-making Spirit. So we ſee in divers places, where the Water or Wine are full of ſtone-making juyce,

the

the greateſt part of the Inhabitants are ſubject to the ſtone; as we may ſee in *Ovid* concerning the Thracians, in theſe Verſes:

The Thracian Waters, all things Marble make,
Their Guts turn Stone that inwardly them take.

And contrary, If there be that ſtone-making vertue in the Kidneys, it makes ſtones of any nouriſhment, though never ſo wholſom. So about three yeers ſince, I ſaw one who for three or four months voided more than twelve little ſtones every day by Urine, when all that while he kept his bed, very ſick, and fed only upon Broth and Panadoes.

The Antecedent and Primary Cauſes, either reſpect the ſupply of Matter for the ſtone, or the conſtitution of the Reins, by reaſon whereof the ſtones do more eaſily grow.

The Stomach, Liver, Spleen, and Reins, do much cauſe the breeding and heaping up of Matter for the ſtone; chiefly the Stomach, if it do not wel concoct, there is a crude Chyle brought to the Liver; and from thence impure and Earthy Juyces are ſent with the Serum or Water into the Reins. A hot liver doth bake the Chylous Matter, and makes it fit to breed a ſtone; as alſo being too cold it makes crude blood moſt fit for the ſame purpoſe. A Spleen weak or ſtopped, or otherwiſe diſturbed, doth not ſufficiently purge the droſſie part of the blood, but ſends part of it to the Reins, which will more eaſily be turned into a ſtone. And laſtly, the Reins beſides their conjunct cauſe, which is a ſtony diſpoſition, are an Antecedent Cauſe in two reſpects; namely, in reſpect of their Temper, and of their Form. In regard of their hot Temper, they more violently draw the Stone-making Matter, and thicken it more: but in reſpect of their Form, they are an Antecedent Cauſe, if the Emulgent Veins are more looſe, ſo that that thick and Tartarous Matter may be more eaſily received into the Reins; or if the Ureters, and thoſe Veſſels that ſend the ſerous Matter to them, be too narrow, ſo that the thick Matter hath not a free paſſage, but is retained in the Reins.

Thick and ſlimy Nouriſhment doth chiefly afford Matter for the Stone, ſuch as are full of Salt, as Beef, Pork, Hairs, Geeſe, or things dried in the Smoak, or poudered, as Salt-fiſh, Shel-fiſh, Eeles, Pulſe, Cheeſ, and all Milk meats, hard Eggs, Cheſnuts, Pears, Quinces, Medlars, unleavened Bread, and Rice; thick Wine, ſharp or black, or new Wine not purged, ſtanding Waters, and ſuch as are full of ſtone-breeding Juyce.

To theſe add very hot Meats, as Pepper, Ginger, Garlick, Onions, old ſtrong Wine, which makes the Liver and Reins too hot, too ſtrong Diuretick, which carry the Matter that will cauſe the Diſeaſe too violently to the Reins; thick Garments, Down Beds, Baths, inordinate Lechery, which is a great Enemy to the Reins, violent Exercise, eſpecially after meat, too much feeding, or long faſting, great anger, and other paſſions.

The Signs of the Stone taken by themſelves, are equivocal, and common to other Diſeaſes: but if you conſider them all together, you may have certain Knowledg by them.

The Firſt Sign, is a fixed pain about the Loyns, ſomtimes heavy when the Stone is faſtened to the ſubſtance; which being of a dull ſence, hath a weighty pain; but as often as the Stone gets into the Head of the Ureters, then it cauſeth a ſharp and pricking pain, and this is called the Nephritical pain, or pain of the Reins, and it continueth while the ſtone is there; neither will it ceaſe to torment the Patient till the ſtone get into the Cavity of the Bladder, or turn back into the hollow of the Kidneyes.

The Second Sign, is bloody Urine, which comes from the opening or corroſion of the Veins which are diſperſed into the ſubſtance of the Reins, which comes from the rubbing of the Stone that ſticks in the ſubſtance; but if there be but little blood voided, being mixed with Urine it looſeth its color, ſo that the Urine looks like a Lye. This Sign is not alwaies, but ſomtimes depends upon other cauſes. But when it doth appear, it is one of the chief, which diſtinguiſheth the Stone from the Chollick. It uſeth to be cauſed by riding, much walking, and other violent exercise; for then the ſtone if it be rough and ſnaggy, being removed from its place, doth cut and tear the tender Fleſh of the Kidneyes.

The Third Sign, is thin Urine, water-like, and little, in the beginning of the fit; after which ſomtimes followeth a total ſtoppage, if both Ureters are ſtopped: but when the fit is paſt, and the ſtone that was fixed in the Ureters is fallen into the bladder, there comes forth much thick troubled Urine, with a ſandy Sediment.

The Fourth Sign, is often voiding of ſand and ſtones. Concerning voiding of a ſtone, it is evident, That if the Patient voided any formerly, though never ſo ſmal, when he had a fit, it is moſt certain that the Diſeaſe is the Stone. But concerning Sand we cannot ſpeak ſo infallible; for we may ſee many all their lives time void Gravel, and never be troubled with the ſtone; for ſand comes often from aduſtion of Humors in the Liver and Veins, and it ſticks to the ſides of the Urinal, and goes not to the bottom, as that which comes from the Reins. Beſides, if you rub it between your fingers, it diſſolveth, and is like Salt, when the other will not yeeld to the fingers, and will not diſſolve. And finally, becauſe this Sand is ſalt, it is diſſolved in hot Urine, nor will it appear while the Urine

Urine is ſo; but when it is cold it grows together to the ſides of the Urinal, not unlike the Cryſtal of Tartar; which being diſſolved in warm water, when it grows cold, congealeth and ſticks to the ſides of the Glaſs; ſo the Nature of them both is very like.

The Fifth Sign, is a ſtone voided, and this is moſt certain: For if any former Sign, though equivocal do appear, and a ſtone be voided, you may be certain of the Diſeaſe.

The Sixth Sign, is a numbneſs of the Thigh on the ſame ſide that the Back is pained of: for the ſtone being great, doth oppreſs the Nerve which is inſerted into the Muſcles of the Loyns, under the Reins, called by the Anatomiſts *Pſoas*, and thoſe Muſcles go to the Hip for its motion, ſuch a numbneſs is perceived by ſitting upon the Thigh, through the compreſſion; or in the Arm by long leaning thereon.

The Seventh Sign, is the drawing in of one ſtone, on that ſide where the pain is: For the Kidneys and Ureters being provoked with the greatneſs of the pain, do vehemently contract themſelves, and then the Spermatical Veſſels and all the parts adjacent are alſo contracted, and theſe Veſſels do raiſe up the ſtone which is joyned to them, ſo that it ſeems ſometimes to be fixed to the Groyn. And this retraction or drawing in of parts reacheth to the bladder and Guts: For in great pain the belly is bound, and Urine ſtopped; ſo that then Purges will not work by reaſon they are hindered by that Contraction.

The Eighth Sign is, loathing and vomiting by the connexion of the Kidneys with the Stomach, by the Membrane that comes from the Peritonæum, and by the Nerve of the ſixth Conjugation, two branches whereof reach from the Stomach to the inward Tunicle of the Kidneys. Therefore when thoſe ſenſible parts in the Kidneys are pulled, the Stomach conſenting, is ſtirred up to exclude that which hurteth; and firſt it ſends out Flegm, then yellow Choller, after green, if the evil continue, becauſe through long pain and watching the blood is altered in the Veins, and that part which is moſt diſpoſed for it, is turned into green Choller.

Finally, The Nephritical pain is ſo like the Chollick, that *Galen* himſelf was deceived in the diſtinguiſhing of them, as we ſhewed in the Diagnoſis or Knowldg of the Chollick: where alſo we laid down ſigns by which we may diſtinguiſh them, which we ſhall not need to repeat.

The Signs afore mentioned are equivocal, and one of them can ſcarce give a certain knowledg. Some Authors mention others, which are more equivocal and uncertain, but joyned with others they help the knowledg of the Diſeaſe, therefore it will not be amiſs to mention them.

Hipp. Aph. 34. Sect. 7. ſaith, *They who have bubbles in their Urine, have an old Diſeaſe in the Reins.* For theſe bubbles come from thick Humors full of groſs vapors, which are either bred in the Reins, or ſent from other parts to them, that matter is proper to breed the ſtone, and cannot be preſently cured, therefore the Diſeaſe is long. *Galen* in his Comment upon this Aporiſm, ſaith that the mouthes of the Arteries which come to the Reins, are opened by the ſharpneſs of the Urine, and thence comes a Spirit which being mixed with the Urine, maketh bubbles. But it is not probable that ſuch a groſs Spirit that will remain ſo long, ſhould come from the Arteries, and Urine being cold may long time ſo continue, as we ſee many bubbles many hours ſwimming thereupon. And alſo when the Arteries are opened by the ſharpneſs of the Urine, blood will alſo come forth. And the mouthes of the Veins having thin Skins, would be more eaſily opened, and ſo there would be alſo blood mixed with the bubbles.

Hippocrates alſo Aph. 76. Sect. 4. ſaith, *They who void little bits of fleſh, and things like hairs, with a thick Urine, do it from the Reins.* The bits of fleſh come from the Ulcer of the Reins, of which we ſhall ſpeak hereafter: but theſe thrids or hairs are ſaid by *Galen*, in his Commentaries, to come from thick and crude flegm, made long and round by the extraordinary heat of the Reins. Yet *Galen* confeſſeth, 6. loc. aff. cap. 3. that after a long ſearch he was ignorant of the cauſe of their length. *Avicen* ſaith that theſe thrids grow long in the veſſels of the Reins, or others; for in regard theſe are taken away by Diureticks, and the Patients acknowledg pain in the Reins, it is credible that they receive their form from thence. *Actuarius* doth directly ſay they come from the Ureters: For when the Reins abound with flegm, it goes with the Urine into the Ureters, and ſticking to them and growing thick by heat, it gets a long ſhape like a thrid or hair. But *Fernelius* writes that thoſe hairs come from the Paraſtatis or kernels, from his Obſervation, in which they grow long like hairs from the matter of the ſeed, which by force of the Diſeaſe flowing down by degrees, grows thick by heat, and that they appear much in thoſe who have lately had a filthy Gonorrhœa, and in thoſe women who have the Whites, or a foul Womb, and in that Urine which they make next after they have known a man. Others ſuppoſe, that thoſe thick Humors of which thoſe filaments or hairs are made, are firſt bred in the Veins, but take their form in the narrow paſſages of the Reins, through which, as through a ſieve, they turn ſmal, and after they deſcend into the Ureters, in which they grow dryer, till they are ſent into the bladder, neither can they be broken by reaſon of their toughneſs. Whatſoever the cauſe is, ſince the beſt Authors do agree that theſe hairs breed of thick flegm in the Kidneys,

or

or come to them from other parts, it is certain that they may turn into a ſtone, if there be an efficient cauſe fit to produce it. And therefore this may be a probable ſign of the ſtone.

As for the Prognoſtick. The ſtone of the Kidneys is very dangerous, for it uſeth to bring great evils; as Inflamation, Exulceration, great Pains, Watchings, dejection of ſtrength, Feavers, ſtoppings of Urine, and the like dangerous Symptomes.

If this Diſeaſe be Hæreditary coming from the Parents, it is incurable.

And becauſe *Hippocrates* ſaith that the Diſeaſes of the Reins are hard to be cured in old men, Aph. 6. Sect. 6. The Stone of the Kidneyes in old men is difficult, if not incurable.

If the pain of the Kidneys continue many daies, and cannot be cured with any Medicines, there is danger of death, and it is neer at hand when they are cold externally, and have a cold ſweat in the face. Urines that are firſt thin, and after thick, and have ſand at the bottom, do ſignifie that the fit is towards an end.

A Stone joyned with an Ulcer in the Kidneys, is incurable: for thoſe things which break the Stone, do exaſperate the Ulcer.

The Cure of the pain of the Kidneys, and ſtone ſticking in them, or in the Ureters, is by enlarging of the paſſages, and relaxing them by throwing forth the ſtone, and any other thing that hurts them, by removing or taking away the antecedent cauſe, and by taking away the pain. Which you may do with theſe Medicines.

Take of *Marſh-mallow and Lilly Roots, of each one ounce: Mallows, Violets, Pellitory, Bear-foot, of each one handful: Lin-ſeed and Fenugreek ſeed, of each half an ounce: fat Figgs, ſix: Chamomel and Melilot Flowers, of each one pugil: boyl them to a pint. Diſſolve in the ſtraining, Caſſia, and Diacatholicon, of each ſix drams: Oyl of Lillies and Violets, of each one ounce and an half: freſh Oyl two ounces: make a Clyſter to be given preſently.*

Afterwards open the Liver Vein of the right or left Arm, and take away eight or nine ounces of blood, according to the ſtrength and fulneſs of the Patient. Phlebotomy is very neceſſary to prevent Inflamation, which uſeth to come from continuance of pain.

After blood-letting, give this Clyſter.

Take of *the flowers of Chamomel and Melilot, the tops of Dill, Pellitory of the wall and Rue, of each half a handful: Annis, Fennel, and Cummin ſeeds, of each half an ounce: Make a decoction to one pint; in which diſſolve Diaphœnicon half an ounce: Turpentine diſſolved with the Yolk of an Egg one ounce: Oyl of Dill and Scorpions, of each three ounces. Make a Clyſter.*

To mollifie more, and aſſwage the pain after your Laxative, you may make one of Oyl thus:

Take of *Oyl of Dill and of Chamomel, of each half a pound: Oyl of ſweet Almonds two ounces. Oyl of Rue one ounce: mix them for a Clyſter.*

At the ſame time appply a Fomentation to the part pained, made of the Decoction of the firſt Clyſter, with Annis ſeeds and Fennel ſeeds, Oyl and Water, with Spunges.

Take of *Oyl of Scorpions compounded two ounces: freſh Butter, Hens Greaſe, Oyl of Lillies, and of ſweet Almonds, of each one ounce. Make a Liniment to be uſed after the Fomentation.*

Or this Cataplaſm:

Take of *Mallows and Pellitory, of each two handfuls: Parſley with the Roots one handful: Rhadiſh Roots two ounces: boyl them ſoft and beat them: then add of Onions roaſted, two: Oyl of Lillies, bitter Almonds, and ſweet Butter, of each two ounces. Make a Cataplaſm, which you muſt put between two thin linnen cloaths and apply warm to the Belly, according to the length of the Ureters, and heat it as often as it grows cold.*

You may alſo apply one either made of Pellitory alone, or with Eggs fryed in a Pan with Oyl of Chamomel, bitter Almonds, Scorpions in a cloth.

Or make it of Onions ſhred and fryed with Hogs Greaſe, or the Oyls aforeſaid, with five or ſix warm Eggs applied.

And becauſe in this Diſeaſe, there is abundance of crude Humors, after Clyſters (which muſt ſtill be repeated as the pain cometh) you may give a purging Medicine, eſpecially in form of a Bolus, leſt it be eaſily vomited up, becauſe theſe Patients are commonly ſqueazy ſtomached.

Take of *Caſſia new drawn with Oyl of ſweet Almonds one ounce: Diaphœnicon three drams: Pouder of Rhubarb one dram: with the pouder of Liquoris and Tragacanth, make a Bolus.*

If the Patient cannot ſwallow a Bolus, diſſolve purging things in the Decoction of Mallows.

But you muſt diligently obſerve that you muſt not give a Purging Medicine before the pain be allayed. For when the pain is great, a ſtrong Purge ſeldom works, becauſe then all the parts contract themſelves, and refuſe to help the Medicine.

But at that time you may give a Vomit, by which the plenty of Humors may be abated, and a revulſion is made from the part affected; and often Nature of her ſelf, when the pain is urgent, doth endeavor the ſame, and after it finds eaſe.

A gen-

A gentle Vomit which will alſo aſſwage pain, may be made thus:

Take of *warm Water four ounces: Sallet Oyl one ounce: ſimple Syrup of Vinegar one ounce and an half: Make a Vomit.*

If you will have a ſtronger, you muſt uſe Salt of Vitriol, or Mercurius vitæ, with which *Angelus Sala* ſaith, that he hath often cured this diſeaſe.

Before and after purging, you muſt give at the mouth, thoſe things which open the paſſages, and abate the pain: for which purpoſe the Syrup of Marſh-mallows preſcribed by *Fernelius* often given, is excellent. But becauſe it is not alwaies ready in the Shops, you may make it ſimply thus:

Take of *Marſh-mallows three ounces; boyl them to a pint: diſſolve in the ſtraining half a pound of Sugar. Let him take it often.*

This following Julep given often, is good to mollifie the Paſſages.

Take of *Barley one pugil: gray Peaſe half a pugil: Mallow and Marſh-mallow ſeeds, of each two drams: the four great cold ſeeds, of each one dram: fat Figs, eight: Sebeſtens, ſix: Liquoris half an ounce: boyl them to a pint and an half. Diſſolve in the ſtraining, Syrup of Maiden-hair four ounces. Give it at four draughts, twice or thrice in a day.*

Give for his ordinary drink, a decoction of Marſh-mallow Roots, one ounce and an half: Barley two pugils: Liquoris ſix drams, in five pints of water to a pint.

Or make Broths of Mallows, Marſh-mallows, and gray Peaſe, with much butter, and a little ſalt: or boyl the ſame in fat broth.

Or give Emulſions made of the four great cold ſeeds.

But Oyl of ſweet Almonds above all Medicines, doth mollifie and relax the Paſſages, and aſſwageth pain, if it be new drawn: give three or four ounces by its ſelf, or with white Wine, or a Decoction of Marſh-mallows, Liquoris, and gray Peaſe; or make a Potion of equal parts of Oyl of ſweet and bitter Almonds, becauſe bitter Almonds are good alſo to expel the Stone.

The day after you have opened the Arm, you may open the Ham or Ancle Vein on the ſame ſide, for that will derive the Humor, and the Patients find much eaſe thereby. Which Rule is given us by *Hippocrates*, 6. Epid. Part. 1. Aph. 6. and by *Ætius*, lib. 11. cap. 5.

And if the Diſeaſe laſt long, you may open the Hemorroids; according to *Hipp.* Aph. 11. Sect. 6. who ſaith, That it is good for Melancholick men, and ſuch as have the ſtone, to have their Hemorrhoids bleed. From the ſame branch of the Spleen there are Veins which go to the Reins, bladder, and Hemorrhoids.

If the pain be not aſſwaged by Fomentations, Liniments, and Cataplaſms aforeſaid, put him into a Bath made of the Emollient Decoction, with white Wine added, for it aſſwageth pain, at leaſt while the Patient ſits therein; but you muſt not uſe it much leaſt it take away ſtrength.

And laſtly, When the pain is very great with watching and weakneſs, you muſt give Narcoticks, and put two drams of Philonium Romanum, or five or ſix grains of Laudanum in a Clyſter, or three or four grains at the mouth, or one ounce of Syrup of Poppies in a convenient Julep.

After theſe Topicks have been uſed, in a long pain, it is good to apply a Plaiſter of Melilot, malaxed with Oyl of Chamomel and Dill.

This pain uſeth to be bred with ſome of theſe Medicines, and with repeating Purges (if they be needful) or giving Caſſia often. But if after the uſe of them it continue, it is moſt certain that they are great ſtones which ſtop the Ureters, which muſt be ſent out by Diureticks, which will break them. But you muſt firſt begin with the mildeſt, leſt by ſtrong and ſharp you inflame the Blood and the Reins. And you muſt conſider the habit of the Body: For a full Body will endure things that do more pierce and make thin; but a ſlender, leſs.

There are abundance of this kind in Authors, that diminiſh, break, and expel the ſtone, but we will give you only the moſt choyce.

Take of *Smallage, Parſley, Butchers Broom, Couch-graſs, and Sparagus Roots, of each one ounce: Mallow and Marſh-mallow Roots, of each half an ounce: Pellitory of the wall two handfuls: Annis, Fennel, Dill, Caraway, Carrot, Amye, Carthamus, Cummin, Rue ſeeds, and Bay-berries, of each two drams: Chamomel, Melilot, Dill, and French Lavender, of each one pugil: boyl them in white Wine to the conſumption of half. Diſſolve in the ſtraining, being one pint, freſh Butter four ounces; Honey of Roſes two ounces; red Sugar one ounce; Benedicta Laxativa half an ounce; one Yolk of an Egg; Oyl of Nuts, Lin-ſeed, and Dill, of each three ounces: mix them for a Clyſter, which let him keep two hours, if he can.*

Take of *Strawberry Water, and Saxifrage Water, of each two ounces: the beſt white Wine ſix ounces: Oyl of ſweet Almonds two ounces: Spirit of Vitriol one dram: mix them for three doſes. Give the firſt as hot as may be endured; after ſix hours give the ſecond as the former; and if this will not do (as it ſeldom miſſeth) let him take the third.*

You may ſooner make a Julep of Saxifrage Water, and Syrup of Violets, with fifteen or twenty drops of Spirit of Vitriol.

Take of *the Juyce of Pellitory drawn without fire three ounces: Juyce of Lemmons, and Oyl of ſweet Almonds drawn without fire, of each one ounce and an half. Mix them for a Julep to be given three or four times morning and evening.* Or,

Take of *the Juyce of Lemmons and white Wine, of each two ounces: Sugar candy half a dram. Take it inſtead of the Julep.*

Concerning Juyce of Lemmons you muſt note, That it muſt be uſed warily, for being given often and much, it maketh Exulcerations in the Stomach, from whence cometh the Flux called *Lienteria.*

Theſe Pills following are excellent:

Take of *Sal prunella, Cryſtal of Tartar, Salt of Ivy Berries, and of Water-creſſes, of each equal parts: with ſome proper Syrup or Turpentine, make a Maſs of Pills; of which give one dram every morning.*

This following pouder of *Quercetan* is much commended.

Take of *the inward skin of Hens Gizzards, and their white Dung, of each half an ounce: the inward skins of Egg-ſhels poudered, two ounces and an half: Rupture and Cinnamon, of each four ſcruples: Medlar ſtones two drams: Annis and Fennel ſeeds, of each one ounce: make them into very fine pouder, and give half a dram or a dram thereof in white Wine.*

The Aſhes of burnt Egg-ſhels from half a dram to an ounce given in white Wine, doth powerfully expel the Stone that ſticks in the paſſages of the Ureters.

Goats blood prepared is commended of all Authors, old and modern, as the beſt Medicine to diſſolve the ſtone. The Doſe is from half a dram to a dram.

The Water of Goats Blood diſtilled in a Glaſs in Balneo Mariæ, doth wonders. But you muſt feed the Goat one month with Saxifrage, burnt Juniper berries, Parſley, and other Diureticks, without Drink.

Hartman commends the Urine of a Goat in theſe words as a wonderful Remedy: *In the ſtoppage of the Reins by a great ſtone, or when the Ureters and Bladder are ſtopped by ſtones ſent thither, ſo that one drop cannot be voided, it is excellent if you take the Urine of a Goat taken out with his Bladder while he is yet alive, and drink and apply his Paunch and Guts to the Belly and Privities, for ſo the ſtone will be preſently conſumed without hurt to the Veſſels, and the Patient cured.*

The Pouder of Millepedum, or Sows, is excellent to diſſolve the ſtone, and we will teach the uſe thereof in the ſtone of the Bladder.

Alſo the infuſion of the ſame in white Wine, and continued

There is a Wine of Winter Cherries commended of *Arnoldus Villanovanus*, and they ſay it doth ſo bring forth the matter of the ſtone that you may take it up in your hand. And this is done by beating the Winter Cherries in white Wine, and giving the ſtrained Liquor.

Theſe alſo following are good:

Take of *Lapis Judaicus, or Jews ſtone, Pulvis Lithontribi Juſtini, of each one dram: Peach Kernels, Gum Tragacanth, and Cherry-ſtone Kernels, of each half a dram: bring them to Pouder, and with Turpentine make a Bolus, which give in three Doſes morning and evening.*

Take of *Horſ-Rhadiſh ſcraped two ounces: white Wine four ounces: ſteep them a few hours; then ſtrain them ſtrongly. Let the Patient take the ſtraining twice or thrice, at convenient hours.*

Savin Water given to an ounce or two, doth purge ſtones and gravel.

Take of *Mallow Roots clenſed in white Wine, ſix ounces: Burdock and Couch-graſs Roots, of each four ounces: Aſarum, Parſley, Valerian, and Fennel Roots bruiſed, of each two ounces: Maiden-hair, Saxifrage, Burnet, Golden rod, and Betony, of each four handfuls: Bazil, Burdock, Carduus, Mountain Oſier ſeeds, Medlar ſtones, and Peach ſtones, of each one ounce: Gromwel ſeeds two ounces: Lapidis Lyncis, and Judaici, of each one ounce and an half: Turpentine three ounces: Goats Blood prepared two ounces and an half: Saffron two drams: white Wine four pints: bruiſe them that muſt, and mix them all; diſtil them in* Balneo Mariæ. *Take two ounces of this Water three hours before Supper, drinking after four ounces of white Wine.*

Take of *the bark of the Roots of Carduus Aſininus one ounce: Liquoris two drams: boyl them to ſix ounces: let him take the ſtraining many daies. It doth wonderfully clenſe Stone and Gravel.*

Take *four pounds of ſhred Onions that are white; two pound of Sugar; one pint and an half of white Wine: diſtil them in* Balneo Mariæ *till they are dry. Give every morning two or three ounces for many daies together.*

The Aſhes of a Scorpion is commended by Practitioners, if you take one ſcruple at a time, with Water of Couch-graſs, Pellitory, or white Wine; but it is ſeldom uſed.

Mathiolus his Oyl of Scorpions is more in uſe; a dram taken at the Mouth with the aforeſaid Liquors.

The

The Chymiſts brag much of their Salts: among which the beſt is, Salt of Bean Cods, or Stalks, half a dram whereof, with white Wine works very well. And alſo Tartar vitriolate in the ſame quantity, They commend alſo Spirit of Salt, Vitriol, Mercurius dulcis, with their proper Vehicles or Liquors.

Outwardly you may help the Stone, if you continually chafe the Reins and Ureters with warm hands anointed with Oyl of Scorpions.

Alſo many Cupping-glaſſes from the Kidney affected downwards, applyed without Scarification.

Then anoint the Part with *Mathiolus* his Oyl of Scorpions; to which add a little pouder of Cantharides. Or make a Liniment of Oyl of Wax, Bricks, and Scorpions, of each equal parts; it is very piercing and good, if you fear no inflamation of the Reins.

You muſt obſerve in the uſe of Medicines to break and expel the ſtone, That they muſt not be uſed twice or thrice, but often, till the paſſages ſtopt are open; and while you give them, you muſt cheriſh the Reins and Bladder with Baths, Fomentations, Oyntments, and Cataplaſms, that the other may work the better. And you muſt give thin Liquor, as white Wine, often; and uſe inward Emollients, Looſeners, and Openers, to enlarge the Paſſages, and temper the ſharpneſs of other Medicines.

By theſe Remedies the pain of the Reins is cured, and ſtone diſſolved and expelled. But becauſe they who are dipoſed to this Diſeaſe, and cured, do often relapſe: therefore we muſt appoint ſome Preſervatives that we may hinder it as much as may be.

And firſt, if there be a Plethora or fulneſs, or the Reins and Liver hot, it is good to open a Vein, Spring and Fall, a Clyſter or gentle Purge being firſt given: And then to purge the Matter away which is proper to breed the ſtone before it come to the Kidneys, which you may do by a Vomit twice or thrice in a month, to thoſe which eaſily vomit.

Or you may give a Purge by a Bolus of Caſſia, Diaphœnicon, and Rhubarb, preſcribed in the Cure, or ſome other convenient Medicine every month; or two or three, according to the habit of the Patient, and the plenty of Humors, and that in the laſt quarter of the Moon.

Or if there be evil Humors, they muſt be purged Spring and Fall with a convenient Apozeme: for by that, not only the Antecedent and remote cauſe will be taken away; but alſo ſome part of the conjunct cauſe; as alſo the Obſtructions of the Bowels, which uſually accompany this diſeaſe, will be taken away, if you mix therein cleanſing and cutting Medicines.

Or inſtead of the Apozeme, you may uſe the Decoction of an old Cock made thus:

Take of *Polypody of the Oak, Carthamus ſeeds, of each one ounce and an half: Thyme and Epithimum, of each one pugil: Cummin, Annis, Dill, Fennel, Caraway, and Carduus ſeeds, of each two drams: Senna one ounce and an half: Gummy Turbith half an ounce: Cinnamon one dram: Cryſtal of Tartar two drams: beat them and mix them together, and put them into the belly of an old Cock; and then boyl them till the fleſh come from his bones. Let him take the Broth being ſtrained, at four mornings draughts.*

Or you may give this following Pouder commended of *Solenander*, by the uſe whereof he teſtifieth, that he cured many of the pain of the Reins, giving it in the fit.

Take of *Senna two ounces: the beſt Rhubarb half a dram: Turbith one dram and an half: Hermodactls two ſcruples: Polypody half a dram: Cinnamon, Ginger, Gromwel ſeeds, Saxifrage, Broom ſeeds, of each one dram; pouder them finely. Give one dram, or a dram and an half in white or thin red Wine, once in a month.*

Carolus Piſo doth extol this following Pouder:

Take of *Annis, Fennel, Caraway, and Cummin ſeeds, of each one dram: Coriander prepared half a dram: Liquoris and Burdock ſeeds, of each one dram and an half: Cinnamon and Galangal, of each one ſcruple: Gromwel and Broom ſeeds, of each half a dram: Diatragacanth frigid two drams: Diagridium one ſcruple: Senna as much as all the reſt: make a Pouder. The Doſe is one dram, with the Broth of gray Peaſe.*

Or you may make a Magiſtral Syrup thus:

Take of *Sparagus, Couch-graſs, Marſh-mallow, Knee-holm, and Parſley Roots, of each one ounce: Bettony, Burnet, Saxifrage, and Pellitory of the Wall, Maiden-hair, of each one handful: Bazil, Parſley, Gromwel, Broom, and Burdock, and Mountain Oſier ſeeds, of each two drams: Liquoris, Raiſons, and Polypody of the Oak, of each one ounce: Make a Decoction to one pint and an half. Infuſe in the ſtraining, four ounces of Senna: white Agarick two ounces: Ginger two ſcruples: boyl them a little, and ſtrain them: after diſſolve in it one pound of white Sugar. Boyl it up to a Syrup, and give thereof two ounces once or twice in a month, with the Decoction of Barley, Couch-graſs, and Gray Peaſe.*

Or if the Body be very foul, make Pils of Aloes and Agarick, and give two or three of them every other day before Dinner.

After Purging, give Diureticks, to bring forth the slimy Matter, and Sand that is about the Ureters.

For this end, make Decoctions of the Diureticks mentioned in the Magistral Syrup, with Sugar, into the form of a Julep, or Apozeme. Or Chicken, Goat, or Mutton Broth, to be taken many daies together after general Evacuations.

Also after every Purge, take some of these following, once or twice in a week.

Take of *the stalks and flowers of Beans three pound: Calcitrap one pound: beat them, and add one pound of Sugar candy; the Juyce of Lemmons one pint and an half: the Juyce of Oranges half a pound: the Decoction of Mallows, and Marsh-mallows wel strained two pound: Honey one pint: Distil them with a gentle fire, and let them not be burnt, nor the Liquor wholly consumed. Let the Patient take four ounces of this Water every morning.*

Take of *the stones of Medlars, and the pouder of Diatragacanth frigid, of each one ounce: dried Rest-harrow Roots, Liquoris, Melone and Gromwel seeds, of each two drams: Saxifrage, Broom, Rhadish, Knee-holly, Calcitrap seeds, of each one dram: Marsh-mallow and Sparagus seeds, of each one scruple: Sugar candy two ounces: make a Pouder. Of this let him take one spoonful thrice in a month in the morning, about New moon, Full moon, and Wain, drinking after a little white Wine, or red Pease broth, Sea-holly, and Liquoris, exercising after it.*

Carolus Piso highly commends this following Pouder, which he gave with his purging Pouder before mentioned, and took away many boxes of smal stones from a President of *Lorrain.*

Take of *Marsh-mallow and Violet seeds, of each half a scruple: Gromwel seeds, and Liquoris, of each one scruple: the Jews stone, and Spunge stone, of each six grains: the pouder of Dates, Medlar, and Cherry stones, of each two scruples: Melone Seeds three drams: make a Pouder. Give one dram with unleavened bread dipt in white Wine three daies together of the New moon, and let him drink red Pease broth after it, wherein the Roots of Marsh-mallows, Fennel, Sea-holly, Rest-harrow, and Parsley, and Juniper berries bruised have been boyled, adding a little white Wine, Honey, Butter, and Juyce of Lemmons.*

This following Electuary prescribed by *Zappata*, is excellent.

Take of *the Seeds of St. Johns-wort dried, and finely poudered, three ounces: Conserve of Roses or Violets one pound: mix them into an Electuary, of which let the Patient take half an ounce every morning three hours before meat the first two weeks two daies together; and after for fifteen daies once in a week; and after that once in a month, or oftener, according as the Disease requireth.*

Conserve of Roses, is better than Violets, because it correcteth the scent of the Turpentine which comes forth of the Seeds of St. Johns wort beaten. But Violets agrees best with the Reins.

These following Lozenges are very safe, and most excellent.

Take of *the four great cold seeds, and of Liquoris, all clensed one scruple: Burnet, Bazil, Parsley seeds, and Nutmeg, of each half a dram: Aromaticum Rosatum two scruples: Sugar dissolved in Winter Cherry Water, four ounces: make Lozenges of three drams in weight. Let him take one in the morning three hours before meat, drinking after it four ounces of Rest-harrow, or Rupture-wort Water, with two ounces of white Wine.*

The Wine of Winter Cherries described in the Cure, if it be drunk somtimes, doth take away the Matter that breeds the Stone, saith *Villanovanus.*

In the use of all Diureticks observe this, They must not be used too often because they draw to the part affected; there once or twice in a month, or somtimes seldomer, is sufficient, purging before, lest the Humors of other parts should be carried to the Reins.

Turpentine may be used oftener: for *Amatus Lusitanus* in Curat. 68. Cent. 2. reports of a Monk that had the Joynt-gout, and the Stone both, and could find help by nothing; at length by the use of Turpentine he was cured within six months of them both. Every morning he swallowed the quantity of a smal Nut with Sugar. And the reason why Turpentine often used doth not hurt as other Diureticks, in my Judgment is this; Because it looseneth the Belly withal; so that those gross Humors, which by other Medicines would be carried to the Reins, are sent out by stool.

But commonly Turpentine is used seldom, as other Diureticks, either alone, or with other Medicines, thus:

Take of *Turpentine ten times washed in Saxifrage or Pellitory Water, half an ounce: With Sugar make a Bolus.* Or,

Take of *Cassia newly drawn six drams: Turpentine half an ounce: Pouder of Liquoris two drams: mix them for a Bolus.* Or,

Take *half an ounce of Turpentine, and one dram of poudered Rhubarb: mix them for a Bolus.* Or,

Take *Four ounces of Turpentine, burn it upon a hot Iron that it may pouder, and give two drams with convenient Liquor.* Or,

Take

Take *Turpentine half an ounce*: *Pouder againſt the Stone, called* Pulvis Lithontribus, *two drams*: *mix it for a Bolus.*

Zacutus Luſitanus, Obſer. 58. lib. 2. Praxis admir. doth much commend Natural Ballom for expelling ſtones, and that a man of three ſcore yeers of age that had his Water ſtopped eighteen daies with ſtones, was cured thereby. Firſt he took ſome drops of it with Oyl of ſweet Almonds, encreaſing the quantity of both till he came to half an ounce of Ballom, and three ounces of Oyl of ſweet Almonds, within ten daies he voided ſix ſtones; and afterwards he was preſerved by the ſame Medicine, by taking in a morning half an ounce of Oyl of ſweet Almonds, and ſix drops of Ballom, by which means he made a Sandy Urine, and lived long. If you want Eaſtern Ballom, you may take that of *Peru*.

The ſame *Zacutus* in the ſame Obſervation, doth commend Tobacco Water, in theſe words: *I remember* (ſaith he) *that I took away many great ſtones faſtened in the hollow of the Reins, with diſtilled green Tobacco Water. If you want that, then uſe the Decoction.*

Moſt wiſe *Varandæus*, my Maſter, commends the Waters of ſome Baths, Balervacan, or Bitumenous for Preſervatives againſt the Stone, of which we have ſeen rare effects. We add his words: *There is* (ſaith he) *no better Medicine after Purging, than the drinking of Balervacan Waters; for by the heat which comes from the Bitumen, they diſſolve groß humors and ſtones, and by their Nitrous quality they cleanſe, and by their great quantity, do not only cleanſe the Guts, but Reins; ſo that it is incredible to tel what abundance of thick Water ſome have made after it. But when we fear the Inflamation of the Guts, we ordered them to abſtain from Wine, and gave them Chicken Broth with cold Herbs and Juleps. Therefore we put fat Flegmatick men into them once a day in the morning, having firſt anointed their Reins and Liver with ſome proper Oyntment, and bound them with doubled linnen cloaths, that the Excrements might be received from the Pores opened. And if their Bowels grow hot, they may after uſe ſweet Water Baths that cool and moiſten.*

Sharp Mineral Waters, or Vitriol, are alſo good to prevent, for they do not only diſſolve the ſlimy Tartarous Matter that breeds the Stone, but correct the hot diſtemper of the Liver and Reins, and therefore in hot diſtempers theſe are beſt.

And becauſe hot Bodies are hurt by hot things, we will preſcribe more temperate; as Bean and Rupture-wort Water, and Lemmon Water diſtilled. Slice them and diſtil them in Balneo Mariæ. And for their better cooling, ſtill them with Milk.

The Conſerve of Hipps, is Diuretick and cooling, and is commended by *Crato* in this caſe alſo.

The Conſerve of Marſh-mallow and Mallow flowers, which by mollifying and moiſtening helps the ſtones to come forth.

The inſpiſſate Juyce of Purſlain made into Pills, and given one dram at a time, doth powerfully cleanſe the Reins.

The dried Flowers of Pomegranates in one dram, doth purge the Matter cauſing the Stone.

And the like Quantity of the Dryed Spunge of white Thiſtle, given in like quantity, is excellent.

Freſh Butter with as much Sugar candy taken every morning faſting, doth cleanſe the Paſſages of the Urine, and hinder the breeding of the Stone.

Bitter Almonds taken ten or twelve in a morning, do the ſame.

Filberts alſo taken before meat, are commended by *Crato*, who ſaies that he found by Experience, that many long affected with the pain of the Reins, were cured by them. Which *Amatus Luſitanus* Curat. 78. Cent. 7. wiſely confirmeth, where he thus ſaith: *A man that had the pain of his back, and piſſed often red hairs, complained of his Loyns and Guts, for which he had took many things in vain; but contrary to all hope he was cured with eating of Filberts. For one counſelled him that if he would be cured, he ſhould eat Filberts with their inward Husks before Dinner and Supper. But he conſidering the Innocency of the Medicine, eat them at meat, and after alſo: by which he was cured perfectly, and his pain never returned.* *Amatus Luſitanus* in his Notes, adds this: *That not only that man, but many others have been cured thereby. Theſe are thoſe vulgar Nuts that Avicen reckons among the Medicines that conſume the Stone. But the queſtion is, by what faculty they work? whether by the dryneſs of the inward skin? But ſome ſay that they work by their Oyly quality.*

The Chymiſts commend the Spirit of Salt, and give ſome drops thereof in a morning with Broth, or other Liquor.

Zechius commends boyled Water given warm, the quantity of ſix or ſeven ounces, once or twice in a day, before meat. For it cleanſeth the Reins, and extinguiſheth the heat, ſo that they cannot after breed ſtones.

Let

Let his Drink be thin Wine, with the Decoction of Sea-holly. This *Crato* commends. And we have ſeen excellent effects thereby.

Sowr Wine called in French, *Unies*, drunk often, doth ſo much good, that ſome have Vinyards of thoſe Grapes on purpoſe.

To correct the hot diſtemper of the Reins, is the beſt Preſervative, by ſuch things as are mentioned in the hot diſtemper of the Liver. For they help the Reins and the Liver, from whence many times they are diſtempered.

Among the reſt, Whey drunken in Summer, a whol month together, is the beſt. And ſharp Mineral and Vitriol Waters, to cool al the Bowels.

You may apply this following Epithem often to the Reins.

Take of *Lettice, Water-lilly, and Roſe Water, of each three ounces*: *Roſe Vinegar two ounces*: *Apply them very warm morning and evening.*

This following Liniment is good, eſpecially in Winter.

Take of *the Oyl of Roſes, Water Lillies, and Violets, waſhed in Vinegar and Roſe Water, of each one ounce*: *the Mucilage of Marſh-mallows drawn in Pellitory Water, ſix drams*: *Wax, a little. Make a Liniment for the Reins morning and evening.*

The extraordinary heat of the Reins, is allayed with a plate of Lead, alwaies warm.

And laſtly, Becauſe the Crudities of the Stomach do breed the Stone, you muſt have an eye to that, and ſtrengthen it with ſuch things as are preſcribed in the Chapter of the Weakneſs thereof.

Chap. 2. *Of the Stone in the Bladder.*

ALthough we ſhould ſpeak of theſe Diſeaſes of the Reins in order, yet becauſe the Stone in the Kidneys and Bladder are of the ſame Nature, and what hath been ſaid of the one, may agree with the other, we ſhal ſpeak next of the Stone in the Bladder.

The Material and Efficient Cauſe is the ſame of both: only this Difference there is; That Children are moſt ſubject to the Stone in the Bladder, and Men to that in the Kidneys. The Reaſon of which, is given by *Galen*, 6. Epid. Sect. 3. becauſe thickneſs of Urine, which Children often have by Reaſon of their gluttony, is diſſolved by their gentle heat; neither doth it ſtay in the Reins by the help of the Expulſive Faculty of the Reins, which is ſtronger in that age; but being fallen into the Bladder, there it ſtaies longer, becauſe children given to play and ſleep, piſs more ſeldom. Moreover, their Urine is not ſo ſharp, neither doth it provoke the expulſive faculty of the Bladder, while the quantity is burdenſom, and ſo the dregs remain becauſe the Paſſage is very narrow; beſides, the bladder being ſtretched by the plenty of Urine cannot ſo exactly contract it ſelf to empty out all the Urine, but ſome remains in the bottom, which is thick, and fit to breed the Stone. On the contrary, old men do often piſs forth that Matter which is in the bladder, and their paſſage is larger; but the thick humor remains in the Reins, becauſe it is clammy, and cannot be diſſolved by their weak heat, or ſtrain through by reaſon of its dryneſs. Hence *Hippocrates in Coacis*, ſaith that the Stone in the bladder is not bred after fourteen yeers of age, to three ſcore, except it was there before.

Fernelius mentioned a new Opinion of the Stone, breeding in the Bladder, ſaying, That every ſtone in the bladder, had its beginning from the Kidneys, and grows afterwards in the bladder: For when in a fit of the ſtone, it fals from the Reins, if it be great, it ſtaies in the Bladder, and by getting new Matter it encreaſeth by degrees. For he affirmeth that in grinding of ſome ſtones taken out of the Bladder, he found as it were a Kernel which fel from the Reins of another color and ſubſtance, and that he never knew any that had a ſtone in the bladder, who was not formerly vexed with pains in the Reins. But this Opinion is caſt off by divers very good Authors, who by their Experience have found the contrary, and have taken many ſtones from the bladders of children, which have been wholly of the ſame color and ſubſtance within. And common Experience teacheth us, that Children have the Stone in the Bladder, who never had pain in the Reins, which would be otherwiſe if the ſtone came firſt from the Reins. It is true, that in men many times ſtones fall from the Kidneys into the Bladder, and encreaſe by the addition of new Matter; but we deny that it is alwaies ſo, and we conſtantly affirm, that many ſtones have taken their beginning in the bladder.

The knowledg of the ſtone in the bladder is difficult, eſpecially in the beginning, when it is little; but when it is great it is evident. But we ſhall diſcover it as much as we can by Art.

The Firſt Sign is, pain in the neck of the bladder, which is worſe towards the end of piſſing, and reacheth to the end of the Yard, like that which is in difficulty of Urine from Inflamation, called *Dyſuria*, and it is ſcarcely at firſt diſtinguiſhed from it, but when other ſigns appear.

The

The Second Sign is, Itching in the Yard, which makes the Patient ſcratch it often.

The Third Sign is, Weight in the Peritonæum, or inward covering of the Guts, and all about the Pecten where the Hair groweth, with a heavy pain, when the ſtone is great.

The Fourth Sign is, When there is a great ſtone there is great ſtoppage of Urine, with pain like women in travel, and dropping of water, and often endeavoring to piſs.

The Fifth Sign is, Stoppage ſuddenly in time of piſſing, by reaſon of the ſtone falling to the Orifice of the Bladder.

The Sixth Sign is, Eaſier making Water lying upon the back, becauſe it puts the ſtone from the Orifice to the bottom of the bladder.

The Seventh Sign is, Often ſtanding of the Yard, which comes from ſtoppage of Urine, and of the Inflamation of the bladder by the ſtone rubbing againſt it.

The Eighth is, An often deſire to go to ſtool, which follows the deſire of piſſing, by reaſon of the conſent of the Sphincter Muſcles of the Anus and Bladder; for when one is provoked, the other is provoked, becauſe they have branches from the ſame Nerve.

The Ninth is, The Patient cannot reſt in a place, but ſhakes his Leggs, and if the ſtone be great he can ſcarce ſtand upright, ride, or walk in rough places; for then the mouth of the bladder is much afflicted with the ſtone.

The Tenth is, That the Patient is helped by no Remedy, but worſe commonly; for all Medicines that go through the paſſages of the Urine, either do bring new matter, and encreaſe the evil, or carry away the flegm, which being about the ſtone made it leſs offenſive, but being bare, doth grate the inward Tunicle of the bladder.

The Eleventh Sign is, When the Patient is in pain of the Reins, and after a fit uſeth to void ſtones which cauſed it, but now voideth none as formerly, it is a ſign that the ſtone cauſing the pain is ſent to the bladder, and there remains, where by degrees it encreaſeth, and cauſeth the aforelaid Symptomes. Therefore if any after ſuch pain, voids no ſtone, and after a time begins to be ſtopped from making urine, it is very probable that there is a ſtone in the bladder.

The Twelfth Sign is from *Hippocrates*, Aph. 79. Sect. 4. *They who make a ſandy Urine have a ſtone in the Bladder.* Which Aphoriſm hath troubled many Wits. *Galen* in his Commentary thereupon, ſaith, that it is manifeſtly lame, and defective, becauſe *Hippocrates* left out half of it; for whether the ſtone be in the Kidneys or Bladder alwaies the Urin is ſandy. And *Hippocrates* himſelf contradicts this Aphoriſm, *Lib. de internis Affectionibus*, where he reproveth the old Phyſitians that ſuppoſed ſand in the Urine to be the ſign of the Stone in the Bladder. *Cardanus* in his Comment upon the ſame Aphoriſm, ſaith, That he voided for thirty yeers, firſt red, then white ſand, every day in abundance without any ſuſpicion of the ſtone either of the Kidneys or Bladder; and he further ſaith, that there are ſcarce one in ten who doth not void Gravel, yet few there are that are troubled with the ſtone in the Kidneys, and fewer with that in the bladder. The Spaniards void much Gravel, and yet are not ſubject to the ſtone.

We diſtinguiſhed of ſand in the former Chapter, which may ſignifie the ſtone: But we ſaid it was an equivocal ſign. For that ſand is ſometimes ſent forth by the ſtrength of the expulſive faculty, and is not kept in the Kidneys and Bladder any while. And if this ſand did ſhew the ſtone more ſurely, yet it would never declare that of the Bladder only. And therefore that Aphoriſm, as the words are, is falſe.

Beverovitius and *Salmaſius*, have greatly contended about this Aphoriſm (both Learned men) and good to open dark Sentences) and they have written both whol Volums of the ſame. It is not our intention to ſtay long upon it, determining this one thing for an end of all Controverſies; That the Opinions of Authors, which at firſt ſeem contrary to Truth and dayly Experience, are alwaies to be taken in that ſence which is moſt conformable to Truth, although the words will not bear it, which in ſuch a caſe are to be thought to be added by ſimple fellows in the Tranſlation, or the whol Sentence to be put in by them; as *Galen* ſaith often of ſome of *Hippocrates* his Sayings, That they are thruſt in by others, when they carry not the weight and Majeſty of *Hippocrates*. And the Opinion of *Beverovitius* concerning ſand in the Urine, ſeems not to be according to the mind of *Hippocrates*, nor to be of great uſe in Practice. Firſt, it ſeems not to agree with *Hippocrates*, who in his foregoing Aphoriſms, takes ſigns from things contained in the Urine; and following his matter in hand, ſaith, That Sand in the Urine, ſignifieth the ſtone of the Bladder. But *Beverovitius* inverts the Sence, and ſaith that *Hippocrates* is to be underſtood of Sand, which formerly uſed to be voided, that if they ſubſiſt, that is, be retained in the Bladder, and be no more ſent forth, it is a ſign that the Sand ſo retained is turned to a ſtone in the bladder. This Interpretation, as I ſaid, doth agree with *Hippocrates* his Intention, and it nothing avails for Practice: for they who uſe to void gravel, have ſome time of intermiſſion, in which there is not a ſtone bred in the Bladder. Nor hath it much weight that *Beverovitius* obſerveth, That *Hippocrates* in his other Aphoriſms, where he lays down the ſigns to be taken from the things contained in the Urine, doth not uſe the word *Subſidentia*, or ſet-

ling,

ling, or falling down; but the word Excretion, or voiding. As for example, they who piſs matter or blood, with thick and branny Urine, &c. But here he uſeth the word that ſignifieth ſetling, to ſhew that he meaneth ſomthing elſe. But we bringing all things to Practice, ſay that *Hippocrates* in this Aphoriſm, could not uſe a word which ſignifieth only ſending forth, or Excretion, becauſe he ought to diſtinguiſh that ſand which ſignifieth the Stone, from that which doth not. This Sand, as we ſaid in the former Chapter, ſettles in the bottom of the Urinal; but other Sand doth only ſtick to the ſides; and therefore *Hippocrates*, that he might diſtinguiſh them, ſaid well, They whoſe ſandy matter ſettleth; for others which do not ſettle, are not a ſign of the ſtone in the bladder.

But that we may bring this Aphoriſm to Truth, and Practical uſe, we ſuppoſe that the Opinion of *Johannes Zechius*, is the beſt; who makes it a proper ſign of the ſtone of the bladder, and there is great uſe of the Aphoriſm in Phyſical Practice, when by al other Interpreters. it is made unprofitable. And that *Zechius* may be honored by them who have not his Works, we think it worth our labor to repeat his words, which are in his Book of Conſultation, 58. Conſult. *Hippocrates* (ſaith he) *Aph. 79. Sect. 4. ſaid thus, which was never underſtood yet, either by* Galen, *or any other. They whoſe Urine hath a ſandy ſettling or ſediment, have the ſtone in the bladder. Which Sentence, if we ſhould take it according to* Galen, *would be falſe, becauſe we obſerve that many men do piſs ſand all their lives (whereof I am one) without any ſuſpicion of the ſtone in the bladder. From whence I cannot but wonder at* Galen, *and all the reſt after him, that they ſhould either not underſtand ſo uſeful an Aphoriſm (which I can ſcarce beleeve) or by reaſon of its ambiguity paſs it by. The whol difficulty is in the ſignification of the word* [Sabuloſa] *in Greek called Pſammodea: Hippocrates would have nothing underſtood thereby but thick gravel mixed as it were with fat Earth like Clay or ſnot in the bottom of the Urinal; a certain ſign of a great ſtone in the bladder. But becauſe there is nothing conſtant in man, it is not to be admired that ſome that have this Diſeaſe have not this ſign; as when the ſtone is ſmal, as we obſerved in Cardinal* Paleotus. *Now the cauſe of this muddy Excrement hath been ſhewed in another place.* So far *Zechius*; but where he ſhewed the cauſe of it we could never find. But we plainly ſhewed it in the former Chapter, when we ſaid that this ſnot-like matter is the proper Excrement of the bladder diſtempered, when it cannot concoct the great quantity of blood, and ſuperfluous humors which are ſent thither, and turn them into its ſelf, but turns them into that conſiſtence like ſnot; and this evil diſpoſition of the bladder comes from the ſtone therein. Let that be peruſed, for it maketh much for the underſtanding of what hath been ſaid.

But there ſtill remaineth one difficulty, for ſome have dayly flegmatick, ſlimy matter in their Urine, and yet are free from the ſtone in the bladder. And *Cardanus* reports of an Auguſtine Monk called *Leo*, that ſhewed him often ſo much congealed flegm in the bottom of the Chamber pot as was bigger than a Gooſe Egg, and yet he had not the Stone. To this doubt we anſwer, That the ſlimy matter that comes from the bladder, is to be diſtinguiſhed from that which comes from other parts, becauſe that which comes from the bladder, is more clammy and glutinous, ſo that it ſticks faſt to the bottom of the Pot or Urinal, and cannot be ſhaken off when the Urine is powred forth; but that which is from other parts doth not ſo cleave, but comes preſently forth with the Urine; Experience hath taught me this, which hitherto no Author ever yet obſerved. This clammineſs comes from the Nature of the Bladder, which is a Membrane, and apt to produce this glewineſs, as you may ſee Glew is made of Membranous Skins of Beaſts.

This tough glutinous Matter, I ſay, comes from the evil diſpoſition of the bladder, which is cauſed by the ſtone there, and we can thus prove it beſides what hath been ſaid; Becauſe we have known a Child of twelve yeers old, that had a ſtone in the Bladder, and piſſed continually a glutinous matter that cleaved to the bottom of the Glaſs. And after the ſtone was cut forth, he voided the ſame for a month, but afterwards none at all. Which cleerly ſhews that that Matter comes from the evil diſpoſition of the Bladder, which could not preſently be cured after the cutting: but after the Bladder was cured, that matter appeared no more, which ſhews that it came from no other part but the bladder.

For a Concluſion of this, let us take notice, That whenſoever this ſlimy matter appears with all the aforeſaid conditions, there is a ſtone in the Bladder; but when it doth not appear, it doth not follow that there is no ſtone, for it often happeneth that the ſtone is ſmooth, or little, and ſo doth not hurt the bladder, and then the Urine is alwaies cleer. This is a true ſign, that there is a ſtone when it appears; but when it is abſent, it is not a ſign of no ſtone.

Nor would this Objection, or rather Cavil, become a wiſe man, becauſe from our Obſervation before mentioned, we proved that ſuch matter might be voided by Urine, and yet no ſtone in the bladder, for it was cut forth. It is ſufficient that either a Stone was lately there, which was the cauſe of this Diſeaſe; and ſo this kind of Matter ſignifieth, either a Stone there now, or lately hath been there.

The laſt ſign is by tryal with the Catheter, and putting the finger into the Anus, which operation muſt

muſt be uſed to take away all doubt; for the moſt part it doth: for ſomtimes the Stone is covered with ſlimy matter, ſo that the Cutters themſelves are deceived thereby. But the Catheter is more uncertain than the finger, by which you may not be certain of the Stones being there, but of the form and bigneſs of it.

As for the Prognoſtick of this Diſeaſe: It is alwaies painful and dangerous; painful, becauſe only very ſmal ſtones can paſs through the Neck of the Bladder.

The great ones, if like flint, cannot be diſſolved; if ſoft like Chalk, or brittle, they may be diſſolved with long uſe of powerful Medicines, which for the moſt part the Patients wil not ſtick to, and therfore they are ſeldom cured; therfore there is often cutting, which how terrible it is, dayly Experience wil declare, becauſe many die under that Operation. Hence *Hippocrates* in his Oath commands his Diſciples that they uſe it not, but leave it to men of that Profeſſion only. But in Women, the Operation is leſs dangerous, becauſe their Paſſage for Urine is wider, and it may be done without cutting, only by enlarging the part.

The way of Cure is the ſame with that of the Kidneys, firſt Evacuation of the antecedent matter, Revulſion, and hindering of the breeding of it: and let the Matter conjunct, or the Stone it ſelf, be diminiſhed, worn away, or diſſolved; for which there are good Medicines in the Chapter aforegoing.

Of which, the diſtilled Water of Onions is moſt excellent, by which continued twenty daies we ſaw a ſtone bigger than a Bean thrown out of the Bladder.

But the beſt Authors and Experience teach, That things taken at the mouth cannot diſſolve the Stone in the Bladder. Hence it is that we commonly refer them to the Cutter. But becauſe there are many ſtories of men cured by ſuch Medicines, we wil ſpeak of the chief, that every one may try them, if he pleaſe, before he go to the terrible Chyrurgion. Somtimes the Stone is ſo ſoft and newly congealed that it is not impoſſible to diſſolve it; but hard flinty ſtones cannot.

Horatius Augenius, Tom. 2. Epiſt. Med. Lib. 9. Epiſt. 8. *I* (ſaith he) *have twice ſeen the ſtone broken in the Bladder. Once by chance I had the ſame of one* Janetus *a Printer at* Rome *in cure, whom I purged that he might be cut with more ſafety. For he had tried all the Venetian and Florentine Phyſitians. But when nothing did him good, he ſent for the Prieſt to conſult about his ſoul, and reſolved to be cut. The Prieſt being a Jeſuite, and hearing his Confeſſion, and the condition of his Diſeaſe, told him a Medicine, of which he had made tryal in himſelf and others. He tryed, and was cured in the ſpace of nine daies. The Medicine was this:*

Take of *the Pouder of Hog-lice or Sows, one dram, or four ſcruples at the moſt: Aqua vitæ half an ounce: red Peaſe Broth, nine or ten ounces. Let him take it five hours before dinner.*

I cured one of eighteen yeers of age, of a hot and dry complexion, by taking away ſome part of the Aqua vitæ, and gave it him but every other day, and at other daies of Bean and Strawberry Water, of each five ounces, with ſix drops of Oyl of Vitriol, and one ounce of the Julep of Violets to cool him, thus:

Take of *the pouder of Sows prepared, one ſcruple: Aqua vitæ two ſcruples: red Peaſe Broth eight ounces. Mix them, and give it ſix hours before meat.* Thus *Augenius.*

Sennertus in his Chapter of the Stone in the Bladder, tels a famous ſtory of *William Laurenberg*, Profeſſor of *Roſtoch*, who being old, and troubled with the ſtone, was unwilling to be cut, and therfore ſought for other Remedies. Firſt he tried the famous Water againſt the Stone, which is ſo much prized by Princes, which is thus made:

Take of *Salt of white Tartar one ounce: Parſley Water one pint: Mix them, and ſtrain them with a brown Paper; and with Orange peels make it yellow. He uſed alſo the Indian Jewel, called in Spaniſh,* Igiada, *which is moſt famous for breaking the Stone; but both to no purpoſe. Therfore he deſired to make tryal of the Medicine of Sows, which* Horatius Augenius *ſaith, cured two yong men.*

In imitation of whom, after general Phyſick, and good Diet, he took of Sows one ſcruple; the Spirit of Juniper two ſcruples; red Peaſe Broth ten ounces: which he took in the morning; but the firſt and ſecond time he found a ſtraightneſs in his Breaſt, and a fainting, ſo that he was conſtrained to take one dram of Treacle with the Potion; and ſo uſed it fifteen daies: but all this while he voided no gravel. And then he added other things, and made it thus:

Take of *prepared Sows two ounces: a Hares and Goats Blood prepared, wild Roſe Flowers, and purple Violet ſeeds, of each one ounce: Species Lithontribi, two ſcruples: mix them for an Antidote, of which take two ſcruples: the Diuretick Decoction ten ounces: the Spirit of Juniper two ſcruples.*

Which Medicine after he had taken it the ſecond time at five a clock in the morning, four hours after he felt a great pain under the *Os Pubis*, about the Neck of the Bladder: A little after he made a little Water, and therewith ſome thin red things like ſcales of fiſhes; which though they ſeemed to be ſlimy, yet when they were touched turned to ſand. So that it plainly appeared that they were the outſide of the Stone.

By the continuance of this Medicine, every fourth or fifth day he voided the like ſcales, and ſometimes bigger pieces, eſpecially when he uſed a ſweet bath. But when the neck of the bladder was wounded by the fragments and the ſtone, he uſed Medicines to aſſwage pain; and by the uſe of theſe Medicines, was in ſeventeen months cured. The Decoction was.

Take of *Liquoris four ſcruples*: *Roots of Marſh-mallows, Couch-graſs, Reſt-harrow, of each half an ounce*: *Winter Cherries twenty*: *red Peaſe ſix ounces*: *Raiſons one ounce*: *the four great cold Seeds, of each one ſcruple*: *Barley two handfuls. Boyl them in Winter Cherry Water, Reſt-harrow, Strawberry, and Bean Flower Water, of each one pint and an half*: *to the ſtraining add of the Syrup of Marſh-mallows four ounces.*

The Sows are thus prepared:

Take of *live Sows two pound*; *waſh them in Reſt-harrow Water*: *then drown them in Spaniſh Wine*; *then powr the Wine out, and put them in Glaſſes, the more Glaſſes the better, becauſe then they will dry better*: *Put theſe Glaſſes well ſtopt into the Oven when the Bread is drawn, that they may dry gently till they will pouder*: *then put ſome Spaniſh Wine upon this Pouder, as much as it will take in, and dry it again*; *do ſo thrice*: *and fourthly waſh it with this Liquor*:

Take of *Straw-berry Water three ounces*: *Spirit of Vitriol half a dram*: *mix them. Then dry it, and make it fine, and keep it in a Glaſs for your uſe.*

Beſides the aforeſaid, the uſe of the diſtilled Water of Goats blood, or of the Urin of a Goat newly ſlain, which was formerly mentioned in the Stone of the Kidneys.

If the Stone cannot be broken with Medicines, neceſſity requireth the manual operation, though it be dangerous, leſt the Patient die with lingering pain. This requires a skilful and wel exercited Artiſt, and that it may have good ſucceſs, as we have obſerved.

It is the Duty of the Phyſitian, before the operation to prepare the body by bleeding, purging, and diet, as the ſtate of the buſineſs requireth. And obſerve, that the taking away of a ſtone from a Woman hath no danger, becauſe it is done only by enlarging the Paſſage of the Urine, which in them is very ſhort.

If the Patient fear cutting, or want a good Chyrurgion, he may uſe aſſwaging Medicines leaſt the Stone ſhould eut and ulcerate the neck of the bladder, ſuch as are preſcribed for heat of Urine.

But if a ſtone faſtened in the neck of the bladder ſtop the Urine, it muſt be ſhaken back with lying upon the back with the leg up, and the body ſhaked; and then by a good fomentation or bath, and with a Catheter, let the ſtone be ſent back into the bladder.

Chap. 3. *Of the Inflamation of the Reins and Bladder.*

BEcauſe the Inflamation of the Reins and Bladder are cured with the ſame Medicines, therefore we will put them in the ſame Chapter, although the Signs are different, as ſhall be ſhewed.

This Inflamation is a Tumor of thoſe Parts, from the flowing of Blood or Choller unto them.

This is not very ordinary, becauſe the ſubſtance of thoſe parts is ſolid and thick; but ſomtimes it happeneth, becauſe the Kidneys are fleſhy and apt to receive blood: but the Bladder, though it be without blood, and ſpermatick, becauſe it receives blood for its Nouriſhment through the ſmal Veins, is without queſtion ſubject to Inflamation by too much blood; as other Membranes of the Brain, or Meninges, the Pleura, Mediaſtinum, and the like.

We ſaid that theſe Inflamations come from Blood or Choller, as when Flegm or Melancholly in the Blood make the parts thicker, becauſe they cannot pierce into their thick ſubſtance.

The Cauſes of this Diſeaſe, are either from things Natural, not Natural, or Preternatural.

From Natural things, when there is a Natural Infirmity of thoſe parts from the Parents, or a great looſneſs of them, a great heat originally in them, by which they draw plenty of Humors: In Youth theſe conduce much to an Inflamation.

From things not Natural, as much Venery, which weakeneth thoſe parts, and draws much blood or other Humors to them; Gluttony, Drunkenneſs, and eating of Salt and Spiced Meats; great Paſſions of the Mind, lying upon the back in a ſoft bed, great Exerciſe, ſtoppage of ſome great Evacuations, as of the Months and Hemorrhoids, or uſual bleeding at the Noſe, thoſe things which cauſe repletion and evil concoction, and drive the humors to the inward bowels.

From Preternatural things, as a ſtroak or wound upon the Reins, or about the Bladder; a preſſing or bruiſe of thoſe parts; conſtant Feavers, foulneſs of the Veſſels, or other parts that purge themſelves

ſelves by Urine, as in a Pleuriſie, Empyema or impoſthume in the ſide, Obſtruction of the Spleen, breaking of the Meſentery, and the like. And laſtly, Diſeaſes of thoſe parts do cauſe Inflamation, as the ſtone, great pain, exulceration, heat of Urine, and ſtoppage thereof, or the like.

The Signs of the inflamation of the Reins, are a weighty pain in the Reins, ſomtimes beating, if the place be affected where the Arteries are: And this pain extendeth to the parts adjacent, ſo that the Patient can neither lift himſelf up, nor ſtand upon his feet, and ſcarce turn himſelf, and neither lie upon his ſide, nor his Belly, becauſe then the part inflamed will hang down; therefore he lies alwaies upon his back, and if he either neeze, or otherwiſe move his Body, the pain is encreaſed. He hath a numbneſs or pain in the Leg on the ſame ſide, by reaſon of the Nerve that goes from thence to it. He hath difficulty of piſſing by reaſon of the heat which is ſent to the Urine, and filth mixed with it coming from the inflamed part. The Urine is firſt thin and yellow but after red and thick; he hath a conſtant ſharp Feaver, which is attended often with watchings, dotings, and other great Symptomes; alſo loathing and vomiting, by which he voids Choller, Flegm, and other Humors.

Somtimes the Gut Colon is inflamed, and if it be that part which is neer the Liver, it brings the like Symptomes: but here is the difference; In the Inflamation of the Reins, the pain reacheth to the ſhort Ribs, the Back, and Bladder; but that of the Colon tends more to the Belly, and there is a greater change of Excrements of the Belly, than in the Inflamation of the Kidneys.

But in the Inflamation of the Kidneys, there is a pain about the *Pubis* and *Perinæum*, in which there is heat, and ſomtimes redneſs. There is conſtant heat of Urine, but that is ſtopped when the part ſwelleth, and ſtoppeth the paſſage.

The ſtraight Gut ſuffers by reaſon of its neerneſs; hence it is that there is often deſire to go to ſtool with burning, ſomtimes the belly is bound, when the Gut is ſtopped by the inflamed Bladder. There are alſo other common Symptomes mentioned in the Inflamation of the Reins, as a Feaver, watching, doting, thirſt, and the like.

There can be no good Prognoſtick in this Diſeaſe: For the inward Inflamation of the noble inward parts, do threaten continual danger of death. It is moſt deadly when a Convulſion or dotage followeth, or the like great Symptome: and if there be a cold ſweat, death is at hand.

In the Inflamation of the Reins, if the Hemorrhoids follow, it is good.

If the Inflamation Suppurate, and the Impoſthume break, and go into the paſſages of the Urine, there is hope; but if it go by the Emulgent Veins into the Liver, and labor to get way through the Guts, it is dangerous.

A ſmal Inflamation of the Bladder with a Sediment in the Urine that is white and equal, promiſeth health.

An Inflamation of the bladder, is ſomtimes cured by an Eryſipelas, or Chollerick Humor ariſing in the Skin ſuddenly, and by making much Urine.

The Cure of both Inflamations of the Reins and Bladder, is made by revelling, deriving, cooling, and moderately repelling, by Anodines, Reſolvers or Ripeners, if need be, and the like: whoſe Matter and way of uſing, ſhall be as followeth:

And firſt, Phlebotomy is very neceſſary in the Liver Vein, on the ſame ſide the pain is, twice, thrice, or four times, or oftener, if the ſtrength will bear it, til the defluxion ceaſeth, which you may know by the abating of the pain. But in the Inflamation of the bladder, the right ſide is to be choſen by reaſon of the Liver, from whence, as from a Fountain, the blood floweth to the part.

After much blood is taken away, and revulſion is made by the upper Vein, you muſt alſo open the inferior for derivation ſake, in the Ham or Ancle; as alſo the Hemorrhoids are to be opened, eſpecially if they be ſwelled.

Cupping-glaſſes with Scarrification, are alſo good for Revulſion, both above and beneath, and Fricſtions with ſtrong Ligatures of the extream parts, to draw the humors outward.

After, and before blood-letting, give a mollifying and cooling Clyſter that is a little looſening, and let it be of a ſmal quantity, leſt it oppreſs the Tumor, thus made:

Take of *Marſh-mallow Roots one ounce*: *Mallows, Violets, Lettice, of each one handful*: *ſweet Prunes four pair*: *Barley and Violet Leaves, of each one pugil*: *make a Decoction to eight or ten ounces. In the ſtraining diſſolve of Caſſia, or Diaprunes ſimple, one ounce*: *Oyl of Violets four ounces*: *two Yolks of Eggs*: *Make a Clyſter.*

Allay the heat of the blood with Juleps and Emulſions made thus:

Take of *Endive, Lettice, and Purſlain Water, of each four ounces*: *Syrup of Pomegranates two ounces*: *Syrup of Water Lillies one ounce. Make a Julep for three draughts, morning and evening.* Or,

Take of *Sorrel Roots two ounces*; *Mallowes, Plantane, Purſlain, and Endive, of each one handful*: *the tops of white Poppies half a handful*: *Annis and Lettice ſeed, of each one dram*: *Borrage, Violets, and Water-lilly Flowers, of each one pugil*: *boyl them to a pint and an half*: *then add four ounces of the juyce of Pomegranates.* Or,

Take of ſweet *Almonds blanched one ounce: freſh Pine-nuts half an ounce: Lettice, Sorrel, Purſlain, and Poppy ſeeds, of each three drams: beat them according to art, powring on by degrees, of Barley, Lettice, and Purſlain Water, one pint and an half. Diſſolve in the ſtraining, Sugar of Roſes one ounce. Make an Emulſion for three Doſes, in which we leave out the great cold Seeds, becauſe being Diuretick they may draw ſomthing to thoſe parts, eſpecially in the time of the defluxion, but in the declination they may be uſeful. You may profitably add to the Emulſion, the Syrup of Poppies to ſtop the flux more violently.*

Alſo the parts inflamed may be cooled by Clyſters, made of the Decoction of the Julep aforeſaid, with Oyl of Roſes or Violets two ounces.

In the beginning of theſe Inflamations, purging is not proper; for it is to be feared leſt the Humors being moved, ſhould flow to the parts affected; ſo that if there then be a great flux of the Belly, it is to be ſtopped for that cauſe. But when the Inflamation is a little allayed, and the diſeaſe declineth, a Purge made of gentle things may be good, as of Manna, Caſſia, Rhubarb, Tamarinds, Diaprunes ſimple, Catholicon and Syrup of Roſes with a Decoction of Lettice, Purſlain, and other cooling things preſcribed in the Juleps. Or you may make a Bolus of ſome of them.

Outwardly, All the time of the Diſeaſe, you muſt apply cooling things that gently repel, as moiſt Epithems of the Water and Juyce of Plantane, Sorrel, Endive, Nightſhade, Roſes, with a little Vinegar, red Sanders, and Camphire. Liniments alſo of Oyl of Roſes and Olives, Violets, Cerat of Sanders, white Oyntment, or Populeon alone, or mixed with a little Vinegar, which you muſt apply to the parts aforeſaid, every hour cold.

Or you may make a Liniment of an Egg wel beaten, with a little Oyl and Roſe Vinegar.

Or you may make that which is excellent, of Oyl of Roſes, with Vinegar and Juyce of Knot-graſs, or Purſlain; to which add, if you pleaſe, a new Yolk of an Egg. Let theſe be applied cold upon a Cloth.

If the pain be very violent, it is not amiſs in theſe Epithems and Liniments, to mix a little Opium or Saffron.

Alſo you may make a Cataplaſm of Barley Meal, with Juyce of Endive, Purſlain, and Nightſhade, with Oyl of Roſes and Populeon. But this muſt be often changed leſt it grow hot.

Three things are to be diligently obſerved:

Firſt, That you uſe not Coolers too long, leſt the Matter be kept from breathing forth, and the Tumor grow hard or ſcirrhus.

Secondly, In the Inflamation of the Bladder, you muſt uſe leſs aſtringents and coolers, leſt you ſtop the Urine, which Symptome alone, is very uſual and dangerous in this cafe.

Thirdly, Cataplaſms in the Inflamation of the Bladder, are leſs neceſſary than Oyntments and Liniments, becauſe they burden the part, ſo that it is more hard to dilate it ſelf.

After you have uſed Coolers a ſhort ſpace, and often bleeding, when the defluxion is ſomwhat ſtopped, you muſt uſe Softeners and Diſſolvers; ſuch are, Fomentations of the Decoction of Marſh-mallow Roots, Mallows, Violets, Pellitory, Lin-ſeed, Fenugreek, Mallows, Cotton-weed, with Melilot, Chamomel, Roſemary flowers, and Roſe Leaves to ſtrengthen the part.

Then apply a Liniment of Oyl of Lillies, with a little Oyl of Chamomel.

Among the Diſſolvers and Anodines together, there is none better than the Cataplaſm made of Crums of Bread, made thus:

Take of white Bread Crums one pound; boyl it in Goats Milk to a Pultiß: then add three Yolks of Eggs; four ounces of Oyl of Roſes: half a ſcruple of Saffron: make a Cataplaſm, change it often. You may add a little Opium and Campbire if the pain be very great.

In the Inflamation of the Bladder, if you fear a Gangrene, you may make a ſtrengthening Cataplaſm of Bean Meal, and Orobus Meal, or Lupines boyled in Wine.

When the greateſt part of the Inflamation is abated, then you muſt uſe Decoctions and Liniments which do only diſſolve, that the reliques may be conſumed.

In the whol time of the Cure, you muſt have a ſpecial care of great Symptomes, as the Feaver, pain, watching, ſtoppage of Urine, and belly; of the ſtomach and other parts.

And as for the Feaver, pain, and watchings, it is moſt certain that the things mentioned to evacuate and alter, do much for the mitigation of them. But to them you may add Epithems, Liniments, and Roſe Vinegar, ſuch as uſe to be applied to the Region of the Liver, Heart, and Brain; and in time of neceſſity, Narcoticks both by mouth and Clyſter.

There are ſpecial Anodine Suppoſitories to take away the pain of the Bladder, or knots, made with Yolks of Eggs, and a little Opium, and juyce of Henbane, or the like.

If the Strangury or ſtoppage of Urine follow this Inflamation, you muſt cure them with Medicines taken from their proper Chapters.

If the Inflamation of the Reins cannot be cured by what hath been preſcribed, but it tendeth to ſuppuration, which you may know by the encreaſe of the feaver, pain, and other Symptomes; as al-

ſo by trembling and vomiting, by greater weight about the part, eſpecially when the Patient lieth on his ſound ſide; you muſt help Nature with Cataplaſms of Roots and mollifying Herbs, Line-ſeed, Chamomel flowers: To which being boyled and beaten, you muſt add Meal, Butter, Greaſe, or Oyls of the ſame vertues With which, if the Impoſthume break not preſently, and come forth by Urine, the Matter wil get into the Cavity of the Abdomen, whence wil proceed either ſudden death, or a Hectick Feaver. Sometimes the Tumor appears outwardly, and then you muſt open it either with a Potential Cautery, or an Inciſion Knife.

Sometimes thoſe Tumors grow hard, and ſcirrhus, when the Feaver is gone, and the pain remains with a greater ſence of weight, and a kind of numbneſs of the ſubject parts: And this is commonly incurable, and brings an evil habit, or a Dropſie. Yet you may try with mollifying, cutting, and digeſting Medicines, ſuch as were mentioned in the Scirrhus of the Liver.

Chap. 4. *Of Piſſing of Blood.*

BLood may come from divers parts to the paſſages of the Urine, and be mixed with it, and make it look like blood: but becauſe this happeneth but ſeldom, and we here treat only of the Diſeaſes of the Reins and Bladder, we ſhal ſpeak only of that bloody Urine which is made ſo from the defect of the Reins and Bladder. Blood flows from theſe parts, as from al the reſt (as we ſaid in Hæmorrhagy, Hæmoptyſis, vomiting of blood, and Hæmorrhoids) either by Anaſtomoſis, or opening of the mouths of the Veins, by Rixis, or Rupture, by Diabroſis or Corroſion, and ſeldom by Diapedeſis, or Rarefaction.

The uſual cauſes are much or ſharp blood, or a ſtone faſtened in the Reins: the Veins are often broken with plenty of blood; but Corroſion, or Anaſtomoſis, or opening comes from ſharpneſs: alſo corroſion or tearing may come from the ſtone, when being fixed in the Reins or Kidneys through violent riding, or other exerciſe, it is moved ſo that it hurts the parts with its roughneſs.

Alſo other cauſes may break the Veſſels beſides repletion, as a fal or ſtroak, lifting, carrying, vehement motion, and the like.

That blood which is brought forth by Urine from Plethory, is not alwaies a Diſeaſe or Symptome, but ſometimes for the good of the Patient, when Nature lates that which is burdenſom unto her by that means, as *Aretæus* reports that ſome piſs blood at ſeveral times, and when they do not, they have the Head-ach, miſts before their Eyes, and giddineſs.

Alſo the Bladder may bleed if it be wounded by a ſtone, or corroded by a ſharp humor; but it is but little, becauſe it is membranous, and without blood; but if the Sphincter Muſcle be hurt, or the paſſage of the Yard, there wil be much blood, as in extraordinary Venery is ſeen often, eſpecially when the *Proſtates* are inflamed by a Gonorrhœa, or running of the Reins.

The Signs of this Diſeaſe are from the Kind of it, from the Part affected, and from the Cauſe.

The Kind of this Diſeaſe is apparent to the Sences, for it is eaſie to know when blood is mixed with Urine, for it is like the waſhings of fleſh, with ſmal clodders at the bottom; ſometimes the Urine is like a Lye, when it ſtaies too long in the Bladder, by which means it grows black.

The place of the pain ſhews the part affected, for if it be in the Loyns, it ſignifies that the Kidneys are affected; but if it be in the belly below the Navel, the bladder is the part ſuffering. Moreover, if the blood comes from the Reins, it is mixed perfectly with the Urine; but if from the bladder, it is not mixed. *Hippocrates* ſheweth this Sign in two Aphoriſms, namely, in Aph. 78. Sect. 4. *They who ſuddenly piſs blood without force, have a Vein broken in their Reins*; and Aph. 80. of the ſame Section; *If men piſs blood, or there be clots or drops in the Urine, and pain in the lower part of the Belly, the Peſſen, or Perinæum, theſe have their diſeaſe from the Bladder.*

If it come from the ſtone, the ſigns thereof which are mentioned in its proper Chapter, wil appear; if they do not, you muſt conclude that it comes from too much blood or ſharpneſs thereof. The abundance of blood wil be known by the ſigns of repletion, and ſharpneſs by the ſigns of Choller or Melancholly predominating; alſo ſalt flegm in the Urine wil make a great ſtoppage of Urine, and piſſing of blood; this happeneth often in old men that are very apt to be troubled with ſalt flegm. And the piſſing of blood from ſharp humors, is diſtinguiſhed from that in the ſtone, that in which there were firſt pains of the Reins, and voiding of ſtones; but not in the other whoſe Urine is cleer, with no ſtrange things therein, And the Diſeaſe proceeds not only from immoderate Exerciſe, which is ordinary to both cauſes, but alſo from the paſſions of the mind, when it comes from ſharp humors which are much ſtired up by paſſions; ſo that they who are ſubject to this Diſeaſe after Anger and Sadneſs, or great diſturbance of the mind, uſe commonly to piſs blood.

As for the Prognoſtick. A plentiful and often piſſing of blood is very dangerous; for it wil bring either a Conſumption or a Dropſie: And if it continue long, it may cauſe an Ulcer in that part from

whence

whence the blood floweth; if much blood flow at one time, it wil cauſe a great ſtoppage of Urine in the Bladder, or ſome other evil Symptomes, as it encreaſeth therein, and grows evil qualified.

The Cure of this Diſeaſe is divers, according to the variety of the cauſe.

And firſt, if it come from blood abounding, or from ſharpneſs, it muſt be firſt cured with Phlebotomy on the ſame ſide, often and little for the better revulſion: And by Cupping, Friction, and Ligatures in the upper parts; and if blood flow violently, Cupping-glaſſes muſt be applied to the Hypochondria.

For derivation, let the Vein of the Ancle be opened, and the Hemorrhoids.

When watery Chollerick Humors cauſe it, let them be purged with Medicines mentioned in ſpitting of blood, often repeated at diſtance. To which alſo you may add theſe following, at your diſcretion.

Take of *the Pouder of torrefied Rhubarb one dram*: *prepared Coral half a ſcruple*: *Goats Whey, or Plantane Water three ounces. Make a Potion.*

Take of *Caſſia newly drawn half an ounce*: *the Pulp of Tamarinds ſix drams*: *Eaſtern Bole-armenick half a ſcruple. With Sugar make a Bolus.*

After due Evacuations and Revulſions, or at that time, if need require, you may uſe things to ſtop blood, and knit the Veins. And theſe are not preſently to be uſed at the firſt, leſt being ſtopped too ſuddenly it ſhould grow cloddy in ſome part. For this purpoſe the Juyce of Plantane newly drawn, is much commended, given four or five ounces in a morning and evening, which is good for any kind of bleeding. But if you fear it will cool the Stomach too much, you may boyl it a little with Sugar.

Sheeps Milk is much commended by *Foreſtus*, Lib. 24. Obſerv. 13. *Often* (ſaith he) *I have cured piſſing of blood with only Sheeps Milk ſix ounces, and one dram of Bole-armenick.* The ſame is an Experience of *Gatinaria*; who alſo commands that none do ſleep preſently, or exerciſe after it. Alſo *Hollerius* and *Duretus*, from *Avicen* and *Hippocrates*, commend the ſame.

Alſo Decoctions of Knot-graſs, Horſtail, Purſlain, and Bramble tops, are good for this, adding the third part of the Juyce of ſharp Pomegranates or Quinces.

Or to allay the heat of the Blood, let him take the Apozeme following many times, morning and evening.

Take of *Lettice, Purſlain, Plantane, and Comphry, of each one handful*: *all the cold ſeeds, of each one dram*: *Jujubes three pair*: *Liquoris half an ounce*: *Water-lillies, Violets, and Roſes, of each one pugil*: *boyl them to a pint and an half. In the ſtraining diſſolve of Gum Tragauth one dram and an half*: *Syrup of Violets and dried Roſes, of each one ounce and an half*: *Lapis prunellæ half an ounce*: *the Troches of Winter-cherries without Opium, half a dram. Make a Julep for four Doſes.*

To thicken and ſtop the blood more, put one ounce of Syrup of Poppies thereto.

Alſo you may give the Pouders that ſtop blood, as of red Coral, Blood-ſtone, Bole-armenick, ſealed Earth, either with the Apozeme, or with Roſe or Plantane Water.

If the Diſeaſe continue, give this Opiate:

Take of *Conſerve of Roſes, and Comphry Roots, of each two ounces*: *Sealed Earth, Bole-armenick, Sanguis Draconis, red Coral, Blood-ſtone, and Troches of Amber, of each one dram*: *Hypocyſtis, or Conſerve of Sloes, Kermes berries, and Plantane ſeeds, of each one ſcruple*: *with Syrup of Poppies and Myrtles, of each equal parts*: *make an Opiate, of which let him take the bigneß of a Cheſnut morning and evening, drinking after a little Plantane Water.*

If it yet continue, it is good to give at diſtance the Decoction of Myrobalans in Whey, or the like.

Hollerius affirms, and *Duretus*, that the Troches of *Gordonius* are the beſt for it.

Chriſtopher Vega commends the Troches of Amber given with Plantane Water, and ſaith that he cured this Diſeaſe with giving them only once at night.

For ordinary Drink, give the Infuſion of Maſtich wood in Wine, made thus:

Take of *ſliced Maſtich wood one ounce*: *ſpring Water four ounces*: *Infuſe them in Balneo Mariæ very warm in a cloſe Veſſel. Keep the ſtraining for your uſe.*

But becauſe clods of blood are often retained in the bladder, which beget grievous Symptomes, give warm Water and Vinegar, or Mallow Water and ſharp Vinegar warm. Let the Vinegar be ſo little that it is ſcarce taſted.

Apply Topicks to the Loyns that cool and aſtringe.

Take of *Snakeweed and Comphry Roots, of each one ounce*: *Plantane, Purſlain, Horſ-tail, Knot-graß, and Shepheards-purſe, of each one handful*: *Pomegranate peels half an ounce*: *Sumach, and Myrtle berries, and Hypocyſtis, of each two drams*: *Acron Cups, red and yellow Sanders, of each one dram*: *red Roſes three pugils*: *boyl them in Smiths Water, and a little Vinegar. With the ſtraining, let the Reins be fomented hot.*

Of

Of the ſame Decoction you may make a Bath to ſit in, adding more ſimples.

Take of *Unguentum Comitiſſæ, and refrigerans* Galeni, *of each one ounce and an half: waſh it with Oxycrate, and anoint the Loyns therewith.* Or to bind more,

Take of *the Juyce of Plantane and Blood-wort, of each two ounces: Vinegar half an ounce: Oyl Olive ſix ounces: boyl them till the Juyces be conſumed: then add of Sanguis Draconis, Maſtich, and Pomegranate peels, of each two drams: Camphire half a dram: Unguentum Comitiſſæ four drams: Wax as much as will make a Liniment: put a little Vinegar to it when you uſe it.*

Alſo a Plate of Lead ful of holes worn about the Reins, is good.

You muſt guard the Liver when it comes from ſharp Humors, with Epithems, and Oyntments.

When it comes from the Stone and Gravel; after Purging, Revulſion, and things that allay ſharpneſs, mentioned; you muſt uſe thoſe things that may gently cleanſe, as theſe that follow:

Take of *Pills of Turpentine, with Rhubarb one ounce: give half a dram in a morning, with two ſpoonfuls of Syrup of Scurvy-graſs every other day.*

But when he takes them not, give this Pouder and Confection following:

Take of *Liquoris two drams: the four cold Seeds, of each one dram: Purſlain and Lettice ſeed, of each half a dram: the Troches of Amber and burnt Harts-horn prepared, of each one ſcruple: Sugar as much as all the reſt; make a fine Pouder: give one dram with Mallows Water in which Quince ſeeds have been infuſed.*

Take of *blanched Almonds, and Pine ſeeds cleanſed, of each half a dram: Marſh-mallow ſeeds, and Winter Cherries, of each one ſcruple: Lettice and white Poppy ſeeds, of each half a ſcruple: Starch and Tragacanth, of each half a dram: Liquoris two drams: Sugar ſix ounces: With Pellitory Water make a Confection in Morſels. Take it morning and evening half an ounce.*

Stronger Diureticks are not convenient, for they wil provoke the flux.

And laſtly, Vitriol Waters are good to ſtop blood, cool the Reins, and expel ſtones.

Chap. 5. *Of the Ulcer of the Reins and Bladder.*

THe Ulcer of the Reins and Bladder, comes of three Cauſes; from an Impoſthume broken after Suppuration; from the ſharpneſs of Humors, ſuch as cauſeth piſſing of blood, which being violent and continual, doth ulcerate the parts, or from a ſharp ſtone that corrodeth them; the laſt is moſt uſual, the former ſeldom.

Among the Signs, the chief is voiding of Matter with Urine, which laſting long, doth ſhew that there is an Ulcer certainly in the Ureters. But whether the Reins, or the Bladder be affected, is known by the place of pain, whether it be in the Loyns, or neer the Privities. Moreover, If Matter come from the Reins, it is better concocted, white, thin, and not ſtinking, becauſe the body of the Kidneys being fleſhy doth better concoct; beſides, the Matter is more abundant, and more mixed with the Urine, which is voided like Milk, till after long ſtanding it ſettle to the bottom. That Matter which comes from the Bladder, is little, and not much mixed with the Urine, not ſo wel concocted, but crude, of divers colors, and ſtinking; for that part being without blood, and having little heat, cannot concoct ſufficiently. But often pure Matter is voided without Urine, from the neck of the Bladder, and then there is a continual difficulty of Urine, and pain in that part, which is not in an Ulcer of the Reins but by fits.

When the Ulcer is in the Reins, ſomtimes much Blood is voided, which is hard to be ſtopped, and ſomtimes pieces of fleſh and matter, or blood, ſomtimes ſo big as they hardly paſs, and cauſe pain; but from the bladder come ſcales, or skins, or bran.

And from an old Ulcer of the Bladder that is callous or hard, there flows that ſnotty flegm which we ſpake of in the ſtone of the Bladder.

As for the Prognoſtick: All inward Ulcers are dangerous, but theſe moſt, becauſe of the conſtant flux of Humors to theſe parts; for although the ſerous humor hath a cleanſing quality; yet here being mixed with other qualities, it doth not as in its Natural condition; and if evil, ſalt, and ſharp humors are mixed therewith, they will make and nouriſh an Ulcer.

New Ulcers of the Reins and Bladder are curable, old not.

They are incurable in old men, ſomtimes incurable in yong men, with much difficulty.

Ulcers that come from the Stone, and are maintained by it, cannot be cured before it be taken out.

The pain and Symptomes which accompany the aforeſaid Ulcers, cauſe watchings, and conſume the Body.

The

The Cure is by clenſing drying, and heating, as al other. For this purpoſe uſe theſe following.

Firſt, If there be a repletion, or inflamation in the part affected, let blood, firſt in the Arm, then in the Hand.

Then purge often, to take away the vitious humors that flow to the part affected, but with gentle things, as Caſſia, Manna, Syrup of Roſes, Agarick, Rhubarb, made into a Bolus; becauſe in a moiſt form being drunk, they quickly go to the Ureters, and encreaſe pain.

You may give this Opiate following:

Take of *Polypody of the Oak, and Liquoris, of each half an ounce: the four great cold ſeeds, of each one dram: Borrage and Violet flowers, of each half a pugil: Jujubes ſix pair, Damask Prunes three pair: ſmal Raiſons half an ounce: Senna one ounce and an half: Infuſe them all night in Barley Water; then boyl and ſtrain them: then diſſolve of Manna one ounce and an half; Caſſia three ounces: boyl them to an Opiate, adding in the end half an ounce of Rhubarb in pouder. Give one ounce at a time, once in a week, two hours before meat.* Or,

Take of *Caſſia two ounces: Manna one ounce and an half: the Mucilage of Fleabane ſeeds ſix drams: the four great cold ſeeds, of each one dram: the fuyce of Liquoris two drams: With Syrup of Roſes ſolutive make an Opiate.*

Theſe Opiates wil be better if you put Mercurius dulcis to them, becauſe Mercury doth cleanſe and heal al Ulcers both internal and external.

Turpentine is purging, and excellent in this Diſeaſe, becauſe it clenſeth the Ulcer. And you muſt give half an ounce thereof waſhed at once, with Pouder of Liquoris. But it is chiefly good when the Urine is thick.

Avicen commends Vomiting for this Diſeaſe, *Cap. de Ulcer. Renum, A Vomit* (ſaith he) *is the beſt way to cure an Ulcer in the Reins, becauſe it clenſeth and emptieth, and draweth the Humors from the part.* But *Ætius* in his Chapter *de ſuppuratis Renibus*; *If* (ſaith he) *any man will take a ſtrong Vomit every month, he will happily cure the Ulcer of the Reins, or any other evil that ariſeth from them.* Many Modern Phyſitians follow theſe; ſome gave warm Oyl and Water one hour before meat: which only Medicine being often repeated hath cured this Diſeaſe, as they ſay. But *Rondeletius* wil have them vomit after meat, becauſe then men vomit moſt eaſily; and he gives warm Water and Oyl, and anoints the Stomach with Oyl of Lillies. But you muſt never give a Vomit, but to them that are eaſie to vomit; for otherwiſe it would Inflame the Ulcer.

After due Evacuations and Revulſions, you muſt uſe Clenſers. The chief is, Whey taken every morning in abundance; or thin Hydromel, ſix or eight ounces in a morning in ordinary drink, or the Decoction of Barley and Liquoris with Sugar, and give Water and Sugar for ordinary Drink. You may boyl in Hydromel, if you fear heat, the cold Seeds, Liquoris, and Mallows. Aſſes Milk doth not only clenſe with its Wheyie part, but heal with its cheezy part, but you muſt not give it in a Feaver, or you may make this following Decoction to clenſe and eaſe pain.

Take of *Marſh-mallow Roots half an ounce: Plantane, Agrimony, Maiden-hair, and Mallows, of each one handful: Mallows and Melone Seeds with their Husks beaten, of each half an ounce: Winter Cherries ſix drams: ſcraped Liquoris one ounce: Barley one pugil: boyl them to two pints. Diſſolve in the ſtraining three ounces of Honey, and two ounces of Sugar candy: make a Julep. Take eight ounces every morning for ten daies.*

Thoſe Medicines you give for the Reins or Womb, muſt be given in great quantities leaſt they loſe their vertue before they come there.

Inſtead of them al, you may uſe Mineral Waters of Allum and Iron, by the conſtant uſe thereof the heat is corrected, and the Ulcer mundified and healed.

Some commend the Decoction of China, Sarſa, or Saſſaphras, or of Guajacum given thirty daies or more together, with a ſecond Decoction thereof for ordinary Drink, and a thin drying Diet; and leaſt the Bowels ſhould thereby be too much inflamed, they give cool Broths at night, and anoint the Reins with cold Oyntments. And this courſe is taken to dry up the matter, to purge and clenſe, eſpecially in them that are flegmatick, or have the French Pox, and have neither Feaver, nor Flux of Blood.

But in any caſe you may uſe with more ſafety this following:

Take of *Sarſaparilla three ounces: Shavings of Maſtich Tree two ounces: Saſſaphras one ounce: Shavings of Ivory and Harts-horn, of each ſix drams: Jujubes and Sebeſtens, of each half an ounce: Lignum Nephriticum four ounces: Barley two ounces. Infuſe them twelve hours in five pints of ſpring Water: boyl them to three pints, for ſix draughts, to be taken twice in a day; aromatize them with two drams of Cinnamon.*

After the uſe of Clenſers, when you ſee by the decreaſe of the quantity of Matter in the Urine, that the Ulcer is clenſed, as when it is white, and even, and not filthy, give drying, aſtringing, glutinating, and heating things; as theſe Troches following:

Take

Take of *Bole-armenick, ſealed Earth, and red Coral, of each three drams: Gum Arabick and Tragacanth, of each half an ounce: with Agrimony Water make Troches of two drams apiece. Let him take one every morning with boyled Milk, or the Decoction of Comphry.*

The Troches of *Gordonius* are beſt of all, becauſe they aſſwage pain and heat. Their Doſe is two or three drams, with Hydromel, or Barley Water, when you wil clenſe more; or with Goats or Sheeps Milk, when you wil glutinate more.

For the ſame, uſe this following Opiate:

Take of *Conſerve of old Roſes three ounces: Purſlain and Plantane ſeeds, Myrtle Berries, Bole, ſealed Earth, Sanguis Draconis, of each one dram: the ſhavings of Ivory, and Troches of Winter Cherries, of each half a dram: with Syrup of dried Roſes make an Opiate, of which give the quantity of a Cheſnut twice in a day.*

You may make knitting Juleps thus:

Take of *Comphry Roots two ounces: Plantane and Mouſ-ear, of each one handful: the tops of Mallows and Maiden-hair, of each half a handful: Liquoris half an ounce: Starch and Gum Arabick, Tragacanth and Bole, of each one dram: Lettice and Purſlain ſeeds, of each one dram and an half: red Roſes one pugile boyl them in Rain Water to one pint and an half. In the ſtraining, diſſolve four ounces of Sugar of Penides two ounces: make a Julep. Give eight ounces in a morning for ten or twelve daies.*

Alſo the following Pills are good:

Take of *Turpentine waſhed in Plantane Water one dram: Juyce of Liquoris and Gum Tragacanth, of each two ſcruples: Bole and Troches of Winter Cherries, of each half a ſcruple: With the Juyce of Horſ-tail make Pills. Let him take half a dram morning and evening.*

They are ſtronger made thus:

Take of *Marſh-mallow Roots and Comphry dried, of each two drams: Gum Arabick, Cherry and Plum-tree, of each one dram: Olibanum and Myrrh, of each four ſcruples: white Poppy ſeeds, and Winter Cherries, of each one dram and an half: Camphire two ſcruples: beat them finely, and add the weight of the third part of them all of Antimonium Diaphoreticum; and with Venice Turpentine make a Maſs. Give one dram morning and evening long from meat, and after it a little of his ordinary drink.*

If Turpentine cauſe pain, give inſtead thereof Juyce of Liquoris diſſolved in Pellitory Water.

And above all, new Milk from the Cow with one dram of Bole-armenick that is true, every morning, is excellent, as *Foreſtus* ſaies: And it is a ſecret of his Maſter *Helidæus*, becauſe it clenſeth and healeth the Ulcer.

Quercetan in his Diſpenſatory, commends the Water that is given for the Gonorrhœa, as good for the ſame, as well as other Ulcers.

Hartmannus commends an Opiate made of Conſerve of Roſes two parts; and the Pouder of the Seeds of St. Johns wort one part, given in the end of the Cure many evenings together. And alſo two or three grains of Mercurius Dulcis given every day in Plantane Water.

But Mercurius Diaphoreticus is better, if wel made, and as it were fixed: this cures al internal ulcers miraculouſly.

In old Ulcers, the Decoction of round Birthwort in white Wine with Sugar, is very good.

Alſo obſerve, what *Garcias ab Horto* ſaies, That in *Goa* they give Aloes and Milk for Ulcers in the Reins and Bladder, or to ſuch as piſs filth, and it preſently cureth.

Outwardly to knit give this Oyntment:

Take of *Juyce of Plantane and Nightſhade, of each four ounces: Oyl of Roſes three ounces: Vinegar one ounce: Litharge finely poudered one ounce and an half: waſhed Ceruß half an ounce: fine Pouder of Tutty two drams: Sanguis Draconis one dram. Make them into an Oyntment.*

Alſo you may uſe this following when there is no Inflamation.

Take of *Oyl of Roſes and Maſtich, of each two ounces: Myrrh, Aloes, Sarcocol, Sanguis Draconis, of each one dram: Starch and Gum Tragacanth, of each four ſcruples: Styrax Calamita one dram: white Wax as much as will make an Oyntment.*

In the Ulcer of the Bladder it is proper to make Injection twice in a day; firſt with Hydromel, or Whey, or the Decoction of Barley with Honey of Roſes to clenſe; then with Aſtringers and Binders made of Iron Water, in which Comphry Roots, Myrrh, Allum, and Sarcocol with Tragacanth have been boyled. But eſpecially with the Troches of *Gordonius* diſſolved in Milk.

Fabricius Hildanus cured a great Ulcer in the Bladder with this following Injection, and ſome few other Medicines, Obſ. 69. Cent. 3.

Take of *the Roots of Comphry one ounce: Agrimony, Pauls Bettony, Water Germander, Ladies Mantle, Sanicle, of each half a handful: boyl them to a pint. In the ſtraining diſſolve two drams of Honey of Roſes: mix them for an Injection.*

And you muſt obſerve that theſe Injections are not only to be made with a Syringe, becauſe they wil not enter into the Cavity of the Bladder, the Sphincter Muſcle being ſhut, but you muſt conveigh it in with a Catheter.

And becauſe in theſe Ulcers the pains are uſually great, you muſt through the whol Cure abate them with Anodines inwardly and outwardly. Inwardly with Syrup of Poppies, Laudanum, and the Troches of Alkekengi made for this purpoſe; as alſo with Emulſions made of the cold Seeds, and white Poppy Seeds, with a little Syrup of Poppies, or with the often giving of Conſerve of Marſh-mallow flowers.

Outwardly you may apply this Fomentation following, to the Reins.

Take of *Marſh-mallow Roots two ounces: Mallows, Pellitory of the wall, Violets, of each one handful: Lin-ſeed, Fœnugreek, and Winter Cherries, of each three drams: Chamomel, Melilot flowers, and Water Lillies, of each one pugil: make a Decoction, with which foment the part, not with Spunges, becauſe they have a ſaltneſs in them from the Sea.*

After the Fomentation you may apply this Liniment:

Take of *the Oyl of Violets, and of ſweet Almonds, of each one ounce and an half: Oyl of Roſes one ounce: Mucilage of Marſh-mallow ſeeds, and Fœnugreek, of each two ounces: Saffron one ſcruple: make a Liniment.*

Make this following Injection againſt the pain of the Bladder.

Take of *Fœnugreek and Quince ſeeds, of each one ſcruple: ſteep them one hour in one pint and an half of Barley Water: after ſtrain them, and make a moiſt Mucilage; to which add of Oyl of ſweet Almonds two ounces: Honey of Roſes ſtrained one ounce: mix them for an Injection.*

And if you inject warm Milk, it is excellent for the ſame purpoſe. In which if you diſſolve the Troches of *Gordonius*, you wil compleatly eaſe pain, and cure the Ulcer.

Chap. 6. *Of* Diabetes, *or extraordinary Piſſing.*

Diabetes is a quick and plentiful ſending forth of Drink by Urine; after which there comes a violent Thirſt, and conſuming of the whol body.

It is called Diabetes *apo tou diabainein*, from paſſing through, as Water through a Conduit pipe, which is called Diabetes. This Diſeaſe is alſo called *Dipſacas*, from the unquenchable Thirſt, and the Piſs-pot Dropſie, from the continual making of Water. It is ſeldom ſeen, for *Galen* in 6. de loc. aff. cap. 3. ſaith that he ſaw it but twice.

The next and immediate Cauſe of this Diſeaſe, from *Galen*, and al his followers, is held to be a hot diſtemper of the Reins, which makes them draw Water violently from the Veins, and ſend it to the Bladder being not able to contain it themſelves; the Veins being drawn dry, ſuck from the Liver; the Liver from the Guts and Stomach; hence comes a continual Thirſt after drink, which as ſoon as it is taken, it is forthwith carried from the Liver and Veins into the Reins, where by its quantity it ſtretch up the Expulſive Faculty, and burdening the Retentive Faculty, it is ſent to the Bladder.

Some ſuppoſe that this cauſe is inſufficient, becauſe the hot diſtemper of the Reins is an uſual diſeaſe, but Diabetes is very rare; therefore there muſt be ſomthing elſe that is leſs uſual, namely, a ſharp or ſalt Matter in the Kidneys, either of Choller or of Flegm, which doth continually provoke the attractive vertue of them; as in Chollerick Feavers there is a Thirſt which cannot be quenched, from the Chollerick Humor which is fixed to the coat or Tunicle of the Stomach, or from Chollerick Vapors ſent from ſome adjacent part into the Stomach, by the motion of ſome putrid Choller which lodgeth there. This Opinion is probable; but we think good to add thus much to it, That the Kidneys alone are not affected in this Diſeaſe, becauſe Choller and other burnt Humors are firſt tred in the Liver; and therefore they cannot be in any quantity in the Kidneys, but the Liver muſt participate of them. And if we may reaſon where Nature ſeems to be ſilent, we can ſay that there is a venemous quality concurring for the producing of this Diſeaſe. For that kind of Serpent called *Dipſacos*, found in *Lybia*, when it bites any man, doth ſend into him ſuch a poyſon as begets an unquenchable Thirſt. The like kind of venom may be bred in our Bodies, by a peculiar corruption of ſome humors, which may cauſe ſuch a Thirſt; for *Galen* teſtifieth that divers kinds of poyſons may breed in our Bodies. And if ſuch a kind of poyſon may be bred in our Bodies as may cauſe a deteſtation of Drink,

Drink, as in *Hydrophobia*, in which the Patient cannot endure the ſight of Water, or any Drink, why may not then there be produced another poyſon, which hath the contrary quality, to cauſe a great and unquenchable Thirſt? And hence may be the reaſon why this Diſeaſe is ſo rare; becauſe this kind of poyſon is ſeldom bred, but Choller and Salt Flegm, and the Diſeaſes from thence, are ordinary. And as the Diſeaſe called Dogs Appetite, which is compared to this for the unſatiable deſire of meat, is aſcribed by the wiſeſt Phyſitians to an occult quality; ſo this unquenchable thirſt may be ſaid to come from a peculiar and hidden quality.

The Signs of this Diſeaſe are cleer from what hath been ſaid; as an extraordinary making of Water, an unquenchable Thirſt, and a ſudden piſſing forth of what is drunk, a decay of the whol Body; for the moiſture which would nouriſh the Body, is piſſed forth with the drink. And though there be often a large Evacuation of Urine in ſharp Feavers, and other caſes, yet that is not to be called Diabetes, becauſe the aforeſaid Symptomes, as great Thirſt and Conſumption of the Body are not joyned therewith.

The Prognoſtick of this Diſeaſe is deadly, for it is incurable, except it be in the beginning thereof; for it preſently brings a Conſumption. In old men it is more dangerous; and when it comes after inordinate Lechery, or Agues.

The Cure is wrought by allaying the hot diſtemper of the Kidneys, and by ſtrengthening them by thickening the Humors that flow unto them, and by oppoſing the malignant quality thereof; all which may be done with theſe Medicines following:

In the beginning of the Diſeaſe while there is ſtrength, you may open a Vein, for to revel or pluck back, and cool the Humors; but it muſt be done divers times, and but a ſmal quantity of blood taken away. But if the ſtrength be decayed, or if this follow another Diſeaſe, Phlebotomy muſt not be.

You muſt give Mollifying and Aſſwaging Clyſters to draw forth the Excrements, made thus:

Take of *Lettice, Purſlain, Mallows, and Plantane, of each one handful: clenſed Barley, and red Roſes, of each one pugil: make a Decoction to one pint and an half. In the ſtraining diſſolve of Diaprunes ſimple ſix drams: Honey of Roſes, and Sallet Oyl of each two ounces: make a Clyſter, and uſe it often.*

You may alſo give a gentle Purge with Caſſia, and Pulp of Tamarinds, or the Decoction of Plantane, Purſlain, Lettice, Tamarinds, and Myrobalans, with Syrup of Roſes.

Some commend Vomits made of the Decoction of Rhadiſh Seed, and Dwarf-Elder with Oxymel, which doth Evacuate and draw from the Ureters.

To correct the diſtemper of the ſaid parts, and to thicken the Humors, Juleps made of the Waters or Decoctions of Lettice, Purſlain, and Plantane, with Syrup of Myrtles, Quinces, and the like, and Syrup of Poppies, in a ſmal quantity, adding the Pouder of Diatragacanth frigid, and the Troches of Sealed Earth, and the like.

Or to aſtringe more, make them thus:

Take of *Comphry and Plantane Roots, of each one ounce: Plantane Leaves one handful: Pomegranate Flowers, and yellow Myrobalans, of each one dram: Plantane and Purſlain ſeed, of each half a dram: red Roſes one pugil: boyl them to a pint. In the ſtraining diſſolve of Syrup of Quinces three ounces: make a Julep for three Doſes.*

For the ſame end you may make a Pouder, or an Opiate thus:

Take of *Plantane, Purſlain, and Coriander ſeeds prepared, and red Roſes, of each one ounce: prepared Coral, Bole-armenick, prepared Pearl, and Tormentil Roots, of each one ſcruple: Nutmeg half a dram: mix them into Pouder.*

Take of *old Conſerve of Roſes, four ounces: Bole, prepared Coral, and burnt Harts-horn, of each one ſcruple: with Syrup of Quinces make an Opiate.*

Eraſtus highly commends the Syrup of Comphry Roots and Sloes, which he ſaith he uſed with good ſucceſs in theſe Diſeaſes.

Alſo Narcoticks, or Stupefactives uſed wiſely, are very good, as new Treacle, Syrup of Poppies, and Laudanum.

If it continue long, Sheeps Milk, Cow, or Aſſes Milk, are excellent, if you firſt conſume the Whey thereof, with often quenching Flints therein, and he may uſe it in the morning, as we ſhewed in other Cures.

Sweating is commended by Authors, by which means the ſerous Humor is drawn outward. But it is to be miſtruſted, becauſe it is very like to purge by Urine, and encreaſe the diſtemper of the Bowels. But if it be uſed at any time, it muſt be of the mildeſt ſort, as of Roots of China, Sarſa, Endive, Borrage, Sorrel boyled in Water, or for thoſe who are conſumed, in Chicken Broth; but we think it ſafer to provoke ſweat by outward means; as by a vapor from ſome convenient Decoction in a wooden Inſtrument.

Such Sudorificks as are preſcribed in malignant Feavers, are excellent, eſpecially if Spirit of Vitriol be in them, to quench Thirſt, ſtay the flux, and reſiſt the malignity.

For Drink, let the Patient uſe Iron'd Water with ſharp and aſtringent Syrups, or a Decoction of Sloes, and the inward Bark of an Oak; by which Medicine even alone, *Eraſtus* ſaith that he cured this Diſeaſe in a Boy.

Outwardly, Apply a Fomentation to the Loyns made of Sorrel Roots, Plantane, Pomegranate peels, Sumach Seeds, and the like, with a little Vinegar; or, which is moſt proper, make a Bath of the ſame Decoction to ſit in.

And anoint the part with Unguent of Roſes, Sanders, and Comitiſſa mixed together, or this following:

Take of *Oyl of Roſes and Myrtles, of each one ounce: red Sanders, red Roſes, and red Coral, of each one ſcruple: Juyce of Plantane one ounce: Wax, as much as will make an Oyntment.*

Then you muſt allay the Symptomes that accompany this Diſeaſe, as thirſt, watching, conſumption, and the like, by their Remedies mentioned in their proper Chapters.

Chap. 7. *Of Piſſing the Bed, of Involuntary Piſſing, or not containing of Urine.*

THe not holding of the Urine conſiſts in the hurting of the Retentive action of the Bladder, as Diabetes, or extraordinary piſſing, comes from the hurt done to the attractive faculty, and Dyſuria from the diſtemper in the Expulſive: ſo this comes from the diſorder in the Retentive Faculty of the Bladder. This comes ſomtimes to people awake, and then the Diſeaſe is worſe; ſomtimes to them aſleep, and then it is leſs, becauſe then the animal Functions are exerciſed leſs freely. And this in time of ſleep comes two waies, either from weakneſs and looſneſs of the Sphincter Muſcle of the Bladder, as in ſucking Children, weak people, and ſomtimes in them of yeers, or from the hurt of the Imagination: for many do piſs their Beds, either from too much drink, or from the exquiſite ſence of the Bladder, and the Urines ſharpneſs, with ſome conſent of their will, when they dream they are piſſing againſt a wall, or other place; and they are ſo accuſtomed to it, that it is done without any diſtemper either of the Bladder, or its Sphincter; nor are they to be cured with Medicines, but by change of their fooliſh Imagination, as Children by whipping; or, in thoſe of yeers, by adorning thoſe places which they dream they piſs upon, with ſome coſtly things, and ſhewing them often.

The true cauſe of this is in the Sphincter Muſcle, which ſuffers either from its ſelf, or by conſent from other parts.

It comes divers waies by conſent, as when the whol Body is weak, and the vital heat ſpent, as in dying men, or when the whol Body, or half of it is taken with the Palſey, or thoſe branches of Nerves which come from the *Os Sacrum* to the Bladder: ſomtimes the looſneſs of the Muſcle comes from the pain only, and neerneſs to other parts affected, as in Women with Child, from the ſwelling and pain of the Womb, and in the great Diſeaſe of the ſtraight Gut.

The Sphincter Muſcle ſuffers divers waies by its ſelf, as when it is wounded, as in cutting for the Stone, or in deep Ulcers which hinder its contraction and ſhutting. But the chief and uſual cauſe is, a cold and moiſt diſtemper, which is moſt fit to weaken and make looſe the part. Which is produced of a cold and moiſt Native temper, Youth, old Age, Women, and the Diſeaſes of the whol Body, or ſome parts thereof, coming of a moiſt and cold diſtemper: to theſe you may add external cauſes, often mentioned.

But here we may diſpute how contrary Effects may be produced of the ſame Cauſe: for *Hippocrates* in Coac. ſaies that ſtoppage of the Urine comes of a cold cauſe, in theſe words; *A ſtoppage of Urine coming of cold is worſt of all*; now not holding, and ſtopping, are contrary. We muſt anſwer that when a cold diſtemper doth only hurt or aboliſh the ſence of the Bladder, there may be a ſuppreſſion of Urine, becauſe the Bladder cannot be ſenſible of provocation to expel Urine: but if the motive faculty which is in the Sphincter Muſcle be hurt, by reaſon of the looſneſs of it, the Urine cannot be retained.

The Signs of this Diſeaſe, either ſhew this Diſeaſe to be by conſent, and theſe muſt be taken from the Diſeaſes before mentioned, which are apt to produce this not holding the Urine, which if you find, you may conclude that the diſeaſe comes from them: but if they be abſent, then you muſt bethink your ſelf of the propriety of the Diſeaſe to the part, which will be eaſily diſcovered if it come from a wound and Ulcer, or the like Diſeaſe of the Sphincter: but if neither of theſe appear, you muſt conſider of the cold and moiſt diſtemper of the part; and this is known by the cauſes both internal and external, and by the effects which depend upon them, as ſoftneſs of the whol Body, whiteneſs,

neſs, looſneſs of the Nerves and Privities, Childhood, Age, evil Flegmatick Concoction, and the like.

As for the Prognoſtick.

This Diſeaſe is incurable in old men, by reaſon of their great moiſtneſs, and the loſs of Vital heat, which cannot be repaired.

In an acute Feaver, involuntary Piſſing is very dangerous; for it comes either of a Delirium, or from a great deſtruction of al the Faculties, which followeth the extinction of the Natural heat.

In Children it is cured when they grow elder, and the ſuperfluous humidity is by degrees conſumed, and the parts that were looſe, are more knit: But if they be not cured before twenty five yeers of age, they are incurable.

The Cure is wrought by amending the cold and moiſt diſtemper, and looſneſs of the Sphincter Muſcle; but that which comes by ſympathy from other diſeaſes, muſt be cured by the removing of them: as alſo that which comes from Wounds, Ulcers, and other manifeſt Diſeaſes, depends upon the Cure of them. Therefore we ſhall lay down a way of Cure proper both for Children and men, provided that the Phyſitian be skilful in the choyce of his Medicines, to give the gentleſt to Children, and that he encreaſe and diminiſh the quantity according to the Patients age.

Firſt, Here is little uſe of Phlebotomy, becauſe it comes from a cold diſtemper, and flegm; except there be a general Plethory in the whol Body, being youthful.

But Purging is alwaies neceſſary in this Diſeaſe, made of things that purge flegm, mixed with ſome aſtringents that are not only Alterers, but Purgers, as Rhubarb, and Myrobalans, and the like.

After, to dry up the Matter that is flegmatick, and to knit the part, you may uſe Pouders, Opiates, and Phyſick Wines, and the like, made thus:

Take of *Cypreſs Nuts, and Myrtles dried at the fire, ſhavings of Ivory, Coriander ſeeds prepared, red Coral, and Amber, of each two drams: Spodium, or burnt Ivory one dram, Cypreſs Roots, and Galangal, of each half a dram: With the Syrup of Citrons make an Opiate, of which let him take the quantity of a Cheſnut morning and evening. Drink after it a little red Wine.*

Or you may give the aforeſaid Pouder from half a dram to a dram, with red Wine twice in a day, long after, and before meat.

Take of *Comfry Roots half an ounce: Cypreſs Roots, and Galangal, of each one dram: Plantane, Horſ-tail, and Five-leaved Graſs, with the Roots, of each one handful: Cypreſs Nuts, Acron Cups, of each four ſcruples: Rue ſeed, Agnus Caſtus, Frankinſence, and Ivory ſhavings, of each half a ſcruple: red Roſes one pugil: red Wine four pints. Infuſe them twenty four hours, ſtrain them through an Hippocras Bag, adding of Cinnamon half an ounce: Sugar as much as is ſufficient to make a Claret, of which let him take three or four ounces twice in a day.*

Many proper things are propounded by Authors, which do conduce to the Cure of this Diſeaſe. *Galen* in his Book of Local Medicines, and of things eaſie to be prepared, commends the Brain and Stones of a Hair burnt. Alſo a Snail burnt, with its ſhell given to Drink. The Modern Phyſitians give Hares dung, pouder of burnt Mice, the Hoofs of Hogs burnt, the aſhes of Date ſtones, roaſted Hazel Nuts, pouder of Egg ſhels. But above all are commended the Pouder of Agrimony, and the inward Skins of Hens Gizzards dried, given either by themſelves, or mixed together with red Wine.

Solenander witneſſeth that he ſaw happy ſucceſs in a Medicine invented by one *Gilbert Holland*, a Roman Phyſitian: He took the Throat of a Cock, and dried it at the fire til it would pouder. He gave it before ſupper in red Wine, or with Oxycrate, for ſome daies together.

In people of yeers, ſweating Decoctions uſed twenty daies together, are good to dry the Body, made of Guajacum, and Saſſaphras; or Stuphs, Hot-houſes, Brimſtone Baths, and thoſe of Niter.

For his Drink, let him take ſharp red Wine without mixture, or with a little Ironed Water.

They who can drink only Water, may take Ironed Water, or that in which Coriander ſeed, or a little Maſtich hath been boyled. Or laſtly, for the better aſtringing, let them take Water in which new Tiles have been quenched, and boyl their meat with the ſame. But they muſt drink but little, eſpecially at Supper. And let the Patient make water when he goes to bed, and be raiſed again at midnight, and in the morning for the ſame purpoſe, and this wil alter cuſtom.

Outwardly to the Privities, apply warm, ſtrengthening, and drying things, thus made:

Take of *Elicampane Roots, Calamus Aromaticus, Acorus and Cypreſs Roots, of each half an ounce: Mints, Sage, Organ, Calamints, and Wormwood, of each half a handful: Cypreſs Nuts, Myrtles, Galls, and Pomegranate flowers, of each one dram: red Roſes one pugil: boyl them in equal parts of Smiths Water, and red Wine to two pints. In the ſtraining, diſſolve of and Allum, of each one ounce. Foment the Privities and Perinæum warm, morning and evening.*

Or

Or you may make a Bath of the same things in larger quantities.

After the Fomentation, anoint the same parts with an Oyntment of Oyl of Foxes, Rue, Flower-deluce, Unguentum Martiatum, Aregon, with Pouder of Mastich, Cypress, and Myrtles.

Or you may use Storax Liquid, or Indian Balsom, dissolved with a little Wine; or for rich folks Musk and Civet dissolved in Muskadel.

Or apply this Plaister to the parts aforesaid.

Take of *Labdanum, Mastich, of each two drams: Wood of Aloes, Styrax Calamita, Cinnamon, Turpentine, of each one dram: Myrtles, and Cypress Roots, of each half a dram: Juyce of Mints, and Horse-tail drawn with red Wine, as much as will make a Plaister.*

Lastly, If there be a defluxion from the head, which causeth the weakness; you must divert by Errhines, Masticatories, and Causticks to the Neck or Arm, and other Remedies, mentioned in the Cure of the Catarrh.

Chap. 8. *Of stoppage of the Urine, and Strangury.*

THe stoppage of Urine is called by Authors *Ischouria*; but when little is voided, it is called *Strangouria*: although this word be larger, and comprehends all dropping of Urine; but if it be without pain, and the Urine come by drops, with straining, it is a final Ischuria; but if it be with pain, it must be referred to Dysuria, or scalding of Urine.

Therefore Ischuria, or a whol suppression of Urine, is two-fold, namely true, when the bladder is full; or Spurious, when the Bladder is empty, and nothing comes to it from the Reins.

A true Ischuria comes of three Causes: The first is when the sence is lost in the Bladder, by reason of the Palsey, and obstruction of the Nerve that comes to it, or by the eversion of the Spirits, by whose defect it comes, so that the Bladder feeleth no pricking to expel, as in dotings, and sleepy diseases.

The second cause is a cold distemper of the Bladder, coming from internal or external cold causes, which dull the sence of the Bladder, and weaken its expulsion.

The third Cause is the narrowness of the Neck of the Bladder, which will not suffer the Urine to pass. *Galen* gives three causes of this, 1. *de loc. affect. cap.* 1. either the Muscle is swollen by an Inflamation, Scirrhus, or Imposthume, or the like; or there is a little flesh grown in the passage, by reason of a former Ulcer; or there is a hardness from some thick Humor of long continuance. Also the Passage is stopped by the Stone, by a Crude and Thick Humor, by a Clod of Blood or Matter.

Besides, The Urine may be stopt by a Tumor in some part nigh to the neck of the Bladder, from the swelling of the Womb, from the Excrements in the straight Gut, or from the Hemorrhoids growing big.

Somtimes it comes from the long holding of the Water, by which the Bladder is so stretched that it cannot contract it self to expel Urine, by which stretching, the Passage is stopt and contracted. Now the Bladder is filled by Urine too long detained, two waies. First, when a sound man by urgent occasions in the Market, Senate, Church Banquet, Running, and the like, holds his Urine for want of opportunity to void it, which stretcheth it so that it cannot again contract it self; and the pricking of the Urine is not perceived by reason of its dull sence from the distemper of the Nerves which come thither, when those Nerves which are for the contracting of the Muscle, are well and sound, which *Galen* saith befel one 6. de loc. aff. cap. 4. when his Back bone was strained.

That is called a bastard Ischuria, in which the Urine is stopped, and the bladder empty, because no Water descends into it. There is a two-fold Cause why no Urine comes to the Bladder, either because the Kidneys do not draw that wherof the Urin is made, and send it down, or because the Ureters will not receive it, therfore either the attractive or expulsive Faculty of the Reins is hurt. The attractive or drawing Faculty is hurt by the Error of the Object, or in its self. This is from a strong distemper, especially cold, or from some stoppage in the Reins, or in the Emulgent Veins. These Obstructions proceed from the Stone, thick flegm, or Matter that falls down thither. The obstruction of the Emulgents comes somtimes from too much blood, or serous Matter; a Story whereof we have in our Observations, Observ. 1. Cent. 1.

By the fault of the Object, the attraction of the Reins is hindered, when the serum or water is spent, as in burning Feavers; or sent to other parts, as in a Dropsie.

The Expulsive Faculty is hurt by the same Causes, namely, distemper, the stone, clods of blood, matter, or gross flegm, or Inflamation.

The

The Ureters do not receive the Serum, nor ſend it to the Bladder, by reaſon of Inflamation, or Obſtruction by the Stone, a clod of Blood, Matter, or thick flegm, or by a compreſſion from ſome humor in a part adjacent.

We muſt obſerve that both Kidneyes or Ureters are affected, for the total ſtoppage of Urine; for if one be open, the Urine may paſs.

The aforeſaid Cauſes, if they be violent, may make a total Obſtruction of Urine, which is called *Iſchuria*; but if they be ſmal, or remiſs, they make only an evacuation in part, which is called a Strangury; and both Diſeases come from the ſame cauſe, different in degrees.

A true Iſchuria is known by the weight and enlarging of the lower part of the belly, and by a Tumor in form like the bladder.

The Cauſes are known by things aforegoing, or that accompany it: For if it come from too great a quantity of Urine, which hinders the contraction of the bladder, the Patient wil tel you how that he forbore to piſs by reaſon of long riding, or the preſence of ſome people of Honor, and that before he never had any diſtemper in thoſe parts. But if he hath had a Delirium, a Palſey, or the like, you may refer the ſtoppage to them.

The Stoppage which comes from Tumors of thoſe, or the adjacent parts, or other Cauſes before mentioned, wil be known by their proper Signs.

The ſtopping of the paſſage of the Bladder is known by a ſearing Candle put in, or a Catheter; which if they cannot pierce, but are ſtopped by the way, ſhew that there is a either ſtone, or a Caruncle, or a little Excreſcens of fleſh, or the like in the paſſage.

And theſe are to be diſtinguiſhed; for if it be a Stone, there was formerly a pain of the Reins, whether it came from the Bladder or Reins. If a Caruncle, there was a ſtinking Gonorrhœa, or running of the Reins, or an Ulcer in the paſſage of the Yard that did long run.

And laſtly, If there be a Clod of Blood, or Matter, or Flegm, you ſhal ſee ſome part of it come out of the Yard, or it wil ſtick to the Catheter.

A Baſtard Iſchuria is hence known, There is neither extenſion, nor Tumor, nor weight about the Privities, but rather a kind of emptineſs thereabout; there is no deſire to piſs, no tickling in the bladder, and no Urine made, there went before the ſigns of the Stone in the Kidneys, or Ureters, or of Inflamation, or great fulneſs, or much drink was taken, which was not plentifully piſſed forth: whence the Veins might be ſwoln, or elſe there is a burning Feaver, or a Dropſie, which ſignifie the revulſion, and turning away of the Water or ſerous Matter.

As to the Prognoſtick. The ſtoppage of Urine is very dangerous, and if it continue above ſeven daies, it is deadly: for the Serum being retained in the Veins, doth oppreſs the Liver, infect the blood, and runs into the whol body, it brings danger of choaking, and being carried to the brain, produceth a Coma, or kind of Lethargy.

The ſtoppage of Urine which comes from the back, being wounded, or by a fall, or ſtraining of the Vertebræ, or back-bone, is incurable.

If the Patient ſtink of Piſs at his mouth or noſe, it is deadly.

If a Tenaſmus or Needing follow a ſuppreſſion of Urine, it is death in ſeven daies. And alſo if the Hiccough follow upon it.

The Cure of the ſtoppage of Urine, whether it be total or partial, muſt be by aiming at the Cauſes. And firſt, that ſuppreſſion which is called ſpurious, and depends upon the Diſeaſes of the Reins or Ureters, is to be found in the Cure of the Inflamation, pain, or ſtone of the Kidneys; that which comes from the fulneſs of the Emulgent Veins, is to be cured by large bleeding, and Medicines that purge Water. A true Iſchuria is cured by things that take away the cauſe: and firſt, if it come from Inflamation of the bladder, or parts adjoyning, you may find Medicines for it in the Cure of the Inflamation of the bladder.

But if it come from a ſtone in the neck of the bladder, you muſt uſe theſe Remedies following.

Firſt, you muſt lay the Patient upon his Back with his Thighs lifted up, and then ſhake him ſoundly to make the ſtone return into the Bladder: And if this wil not do it, uſe the Catheter. But if the ſtone be in the paſſage of the Yard, you muſt labor to get it out with your fingers, gently ſtroaking it to the end of the Yard; and you muſt put the Yard into warm Water or Milk, or the Patient into a Bath to open the Paſſage. But if you can neither get it out nor in, Practitioners ſay that you may bind the Yard on both ſides of it, and take it out by Inciſion.

The Obſtruction of the neck of the bladder, which comes from Inflamation, wil be cured with the proper Medicines againſt Inflamation. But in the mean while, if the Urine be there long detained, you may gently conveigh in a ſearing Candle dipt in a little Oyl of ſweet Almonds, avoiding the Catheter, leſt it cauſe pain, and ſo encreaſe the Inflamation.

If the ſtoppage of Urine comes from a Caruncle, you muſt take that away. This is done by proper Medicines conveighed thither with a Wax Candle, which muſt be done by a skilful hand. And if

the

the Caruncle swel and stop the Passage, necessity wil constrain you to use the Catheter to draw away the Urine, although there be danger left the part disturbed should swel more. But you must first make use of Revulsions, by bleeding, vomiting, and Repellers to the Privities, to take away the Inflamation of the Caruncle, that way may be made for the Urine.

If suppression of the Urine come from thick flegm, first it is good to purge with a Bolus made of Diaphœnicon and Rhubarb, and then to give Turpentine often with Pouder of Liquoris; afterwards a Decoction of opening Roots, with Oxymel, or Syrupus Bizantinus; not omitting in the mean while, Clysters, Fomentations, and Baths, that mollifie and open. And all those things will be proper which were propounded for the dissolving and expelling of the Stone.

And among the rest, Experience hath taught us that these following are excellent.

Take of *Benedicta Laxativa half an ounce: the Troches of Myrrh two scruples: the Decoction of Savin three ounces. Mix them for a Potion. By this a woman was presently cured of the stoppage of Urine.*

If there be abundance of Flegm in the whol Body, or in the Head, after blood-letting, from the beginning of the Cure, you must purge with an Apozeme three or four daies together.

Also the Julep mentioned in the Cure of the Stone of the Kidneys, made of the juyce of Pellitory of the wall, Sea-fennel, and Lemmons, with Oyl of sweet Almonds.

The Syrup of Rhadishes, of *Fernelius* his Prescription, given two ounces at a time, is very excellent.

Dodonæus in Observat. Cap. 48. reports of one of fourscore yeers of age, that was cured of a stoppage of Urine with dropping, by a Lixivium or Lye made with ashes of Egg-shels, and Rhenish Wine, once taken.

Arnaldus Villanovanus commends the Wine of Winter Cherries in this following History, mentioned in his Book of Wines. *There was in my time a Cardinal, who had not pissed for four daies, who was desperately swoln, and cured by the advice of a weak Physitian, with Winter-Cherry Wine, and he voided as much Urine as would fill a Bason. By that only Experiment, that Physitian being poor, and of smal parts, became a great rich man. Many God bestows his Blessings upon, his waies are unsearchable.* This kind of Wine, as *Arnaldus* shews, is made by taking five, or seven, or more Winter Cherries, and beating them with good white Wine, and then straining them, and giving them to be drunk.

Hog-lice also beaten with white Wine, and given to be drunk, are good for the same.

The Oyl of Scorpions, as *Mathiolus* prescribed it, given five or six drops in Broth or other Liquor, doth powerfully provoke Urine.

The often use of the Crystal Mineral, doth provoke Urine, especially when you fear inflamation, which is often caused in the inward Skin of the Bladder, by the stoppage of Urine.

The Spirit of Salt doth it better.

The Vulgar Medicine of the Juyce of Pellitory of the wal refined, four ounces with half an ounce of Sugar, doth very much good. You may mix therewith Sal Prunellæ, or Spirit of Salt.

If these stoppings from Flegm, do often return, there is nothing better than Brimstone, and Niter Bath-Waters; which both by drinking and bathing, do easily dissolve, cleanse, and consume that slimy matter.

A certain Noble man having his Urine suppressed many daies, after other Medicines taken in vain, by this following Clyster kept two hours in his Body, was cured.

Take of *the Roots of Smallage, Parsley, Butchers Broom, Dogs-tooth, Sparagus, Mallows, and Marsh-mallows, of each two drams: Pellitory of the wall two handfuls: Annis, Fennel, Dill, Caraway, Carrot, Ameos, Carthamus, Rue, and Cummin seeds, with Bay-berries of each half an ounce: Chamomel, Melilot, Dill, and French Lavender flowers, of each two pugils: boyl them in white Wine to halfs. In a pint of the straining, dissolve of fresh Butter four ounces: Honey of Roses two ounces: red Sugar one dram: Benedicta Laxativa half an ounce: one Egg: the Oyl of Nuts, Dill, Lin-seed, of each two ounces. Make a Clyster.*

The Chymists brag of their Medicines against this Disease; namely, Spirit of Salt, Vitriol, Sulphur, and Turpentine, which they give to half a scruple in convenient Liquors, or Chicken Broth. They Commend also the Salt of Tartar and of Bean Stalks, given from half a dram to a dram.

And for Revulsion of the Humor from the part affected, they give Vomits, and they boast that very many have been cured thereby.

You must all the time of the Cure, use Liniments, Fomentations, Cataplasms, and Baths, and other external things which must be the same that were before mentioned for the pain in the Kidneyes: Among the rest a Cataplasm made of Pellitory of the wall, fryed in Butter or Oyl of Scorpions, is excellent. Also a Bladder half full of Oyl; which will be of more force, if you boyl Spanish Flies, called Cantharides therein.

Commonly

Commonly they apply a Cataplaſm of fryed Onions with Hogs Greaſe to the Loyns and Privities, with ſome Eggs.

But raw white Onions beaten with Oyl into the form of a Cataplaſm, do far better, if they be applied to the Kidneys, Ureters, and Privities.

A Cataplaſm made of beaten Rhadiſhes, is good for the ſame.

When the Iſchuria comes of clotted blood, you muſt diſſolve it. For this purpoſe uſe Troches of Amber, the Rennet of a Kid or Hair, Mummy, ſimple Oxymel, and Oxymel of Squils, Syrup of Vinegar, and the like. Outwardly, a Cow-turd doth wonders, according to the Judgment of Learned *Ætius*, Tetr. 3. Serm. 2. Cap. 27.

Laſtly, When the Urine is ſtopt by Matter, or comes only dropping, you muſt uſe Cleanſers and Cutters, ſuch as were ſet down in the Cure of the Ulcer of the Reins and Bladder.

Chap. 9. *Of* Dyſuria, *or Scalding of the Urine.*

BY the word *Dyſuria*, we underſtand all painful piſſing, which the Modern Writers call Scalding of the Urine. Many Authors make it all one with the Strangury, becauſe there is painful piſſing; but they will have it differ from Dyſuria in this only, but becauſe in Dyſuria there is a greater quantity of Urine made, than in Strangury, which is therefore called piſſing by drops. But we had rather for Inſtruction ſake, call that Strangury which is piſſing little, without pain, and put them in one Chapter, becauſe they muſt be cured both the ſame way, and to treat here of all painful piſſing under the name of Dyſuria, being they come all of the ſame Cauſes, and are cured by the ſame Medicines.

The immediate Cauſe of painful piſſing, is a ſolution of continuity in the Sphincter Muſcle, or the paſſage of the Bladder: and therefore whatſoever can cauſe a wound in thoſe parts, may cauſe heat of Urine.

The moſt uſual Cauſe is ſharpneſs of Urine, ſomtimes without mixture of other Humors, which is cauſed by a hot diſtemper of the Bowels, or of the whol Body, or by eating of hot and ſharp Meats; but it often comes by mixture of hot and ſharp Humors, as Choller and ſalt Flegm. Somtimes matter coming from the Reins or Bladder, being ulcerated, may cauſe ſuch a ſharpneſs of Urine. Somtimes a white Humor like Milk comes plentifully forth with the Urine, and cauſeth ſcalding, which is commonly thought to be Matter from the Reins; but *Sennertus* denies it for this Reaſon, For if all the Reins were turned into Matter, they could not afford ſo much as is many times voided at once, every day for a week together. And he ſuppoſeth that it comes from an evil Concoction, firſt of the Stomach, then of the Liver, becauſe the error of the firſt Concoction cannot be mended in the ſecond, hence the Chylus, and then the Blood remains crude, not freed from its Salt and Tartar-like parts, which ought to be ſeparated in the firſt Concoction, and they being after ſucked into the Reins, and ſent to the Bladder, cauſe pain in piſſing. He ſaith that he was brought to be of this Judgment, becauſe a Learned man, who was troubled ſome weeks with heat of Urine, which he voided plentifully with half an Urinal ful of ſuch white Matter, was (when nothing elſe could aſſwage his violent pains) cured only with drinking of Sack.

Alſo a ſtone in the Bladder, if it ſtrike againſt the Neck of it in time of piſſing, cauſeth pain; and alſo large Gravel which grates upon the paſſage of the Urine.

Alſo Inflammation, or Ulcer of thoſe parts, cauſeth heat of Urine, becauſe the ſence is more quick at that time, and though the Urine be wel tempered, it is troubleſom; as we ſee externally how the leaſt touch is offenſive to a ſore place. So in a Gonorrhœa, as long as the Paraſtates are inflamed, there is a continual heat of Urine.

The Knowledg of this Diſeaſe is evident, for the Patient is forced to roar ſomtimes with pain. But you muſt diſtinguiſh the Signs of the Cauſes thus:

If it come from ſharpneſs of Urine, it wil be thin and high colored, ſomtimes like fire, or there wil be a viſible mixture of Choller, Flegm, or Matter; the Bowels wil be diſtempered, or the Patient hath eaten hot and ſharp meats, and endured great heat.

The Stone and Inflamation of thoſe parts are known by their proper Signs.

As for the Prognoſtick. This Diſeaſe of it ſelf, is not dangerous, but very painful: and according to the cauſe, it is ſomtimes hard to be cured, eſpecially in old men, which if they be decrepit, die thereof; and in all ages, if it continue long, it ulcerateth the neck of the Bladder.

The Cure is, firſt by taking away the Cauſe. And therefore if it come from the Stone, Inflamation, or Ulcer, you muſt cure them according to the Rules in their proper Chapters. But theſe things after mentioned, wil be good to allay the Symptome.

They who have it from the ſharpneſs of Urine mixed with hot Humors, are to be cured by the Medicines following.

And firſt, Phlebotomy is good to correct the diſtemper of the Liver and other parts. This muſt be often, according to the Plethory and Inflamation; firſt from the right Arm, to evacuate and revel the Matter; and after in the lower Veins, to derive it from the part affected; for which cauſe, *Hippocrates*, and *Galen* who followed him, do command the lower Veins to be opened in Diſeaſes of all parts beneath the Reins.

Purging alſo is good, of mild and gentle things, that cool, leſt the heat be encreaſed. Therefore do not give any thing but a Bolus of Caſſia alone, and indeed that is beſt. But you may make it cooler if you add the Pulp of Tamarinds. Or you may mix it with the Decoction of Lettice, Purſlain, and Mallow Tops, and give it many daies together, that the ſharp Humors may be brought back from the part by ſtool. But if you deſire to purge more by reaſon of the plenty of Humors, uſe this following:

Take *Lettice, Purſlain, Plantane, and Mallow tops, of each half a handful: Tamarinds half an ounce: yellow Myrobalans one dram: boyl them to ſix ounces, and add to it ſtrained, one ounce of Caſſia: ſtrain it again, and then add one dram and an half of Rhubarb infuſed in Lettice Water, with yellow Sanders, Manna, and Syrup of Roſes, of each one ounce. Make a Potion.*

In an old Dyſury, the purging Opiate preſcribed in the Ulcer of the Bladder, is very good.

A gentle Vomit is excellent, for it revelleth from that part affected, and hinders thoſe inconveniences which uſe to come by purging: Therefore give it once or twice in a week to them that can vomit eaſily.

By often Clyſters, the ſharp Humors are not only brought to the Guts, and ſent out by degrees, but the diſtemper of the parts is qualified.

They are made thus:

Take of *Marſh-mallow Roots one ounce: Mallows, Violets, and Lettice, of each one handful: Water Lillies, and cleanſed Barley, of each one pugil: boyl them to a pint: Diſſolve in the ſtraining, Caſſia new drawn one ounce: one Egg: and two ounces of Oyl of Violets. Make a Clyſter.*

The Mucilages of Seeds of Marſh-mallows, Quinces, and Fœnugreek, may be mixed with Clyſters to aſſwage pain.

But Clyſters of Milk only, or mixed with the aforeſaid things, uſe to be ſo powerful to allay heat and pain, that we have known ſome of long continuance cured by them alone, and a Bath, whereof we wil ſpeak hereafter.

Experience hath found out many things good to be taken at the mouth, to allay heat, and to correct the diſtemper of the parts. The chief are theſe following:

Take of *Water Purſlain, Lettice, Roſes, and Water Lillies, of each one ounce: Syrup of Violets and Water-lillies, of each ſix drams: Sal prunellæ one dram. Mix them for a Julep, repeat it often.*

Take of *Marſh-mallow Roots one ounce: Lettice, Endive, Purſlain, and Mallow tops, of each one handful: Melone, Guord, Mallows, Lettice, and white Poppy ſeeds, of each three drams: Jujubes and Sebeſtens, of each ſix pair: Violets, Roſes, and Water-lillies, of each one pugil: boyl them in a pint and an half. Diſſolve in the ſtraining, Syrup of Violets, Jujubes, and Poppies, of each one ounce and an half: Sal prunellæ half an ounce: make a Julep for four Doſes to be taken twice in a day.*

Emulſions alſo may be uſed although they be Diuretick, becauſe they cool and cleanſe the paſſage of the Bladder. Make them thus:

Take of *the four great cold Seeds, and white Poppy Seeds, of each three drams: ſweet Almonds blanched and infuſed in cold Water half an ounce: beat them in a ſtone Morter, powring on by degrees the Decoction of Barley, Liquoris, Purſlain, and Mallow tops one pint and an half: make an Emulſion for three Doſes, adding to each Doſe one ounce of the Syrup of Violets, and one dram of Lapis prunellæ, and if the pain be great add a little Syrup of Poppies, and one dram of Gum Arabick in pouder, or the Syrup of Marſh-mallows, according to* Fernelius, *or of Mucilages.*

You may make Broths thus:

Take of *Marſh-mallow Roots half an ounce: Mallows one handful: Liquoris half an ounce: Quince ſeeds one dram: boyl them with Chicken Broth: make it often.*

The Whey of Goats Milk is very good given in great draughts, as we ſaid in the hot diſtemper of the Liver.

And if there be no Feaver, you may with more profit give Milk by it ſelf, becauſe it doth not only cleanſe, but allay pain, and temper the ſharpneſs of the Humors.

In-

In an old Diſeaſe, it is good to give Mineral Waters that cool, eſpecially Allum, Iron, and Vitriol Waters; for by Experience we find that they have cured this Diſeaſe when it hath been inveterate.

Inſtead of the aforeſaid Juleps, the ſimple Decoction of Mallows, with Syrup of Violets, may be uſed; by which *Foreſtus* ſaith, Obſ. 4. Lib. 25. he cured a grievous Dyſury many times, and that there is nothing like it.

Foreſtus alſo Obſ. 3. of the ſame Book, that an Apothecary cured himſelf and others, with the white of an Egg beaten with Roſe Water.

He alſo reports that a woman cured an old man of *Delf*, with Chamomel flowers boyled in Milk.

Amatus Luſitanus, 58. Curat. Cent. 6. ſaith that a Woman was cured when all means failed, with Conſerve of Mallow flowers; ſhe took one ounce morning and evening, and drunk after it three ounces of Mallows Water. And Curat. 59. he ſaith that one who had a Dyſury, after he had voided a ſtone was cured by the ſame in three daies. The Conſerve of Marſh-mallow flowers, is of the ſame or greater Vertue.

Some commend the Troches of Winter Cherries given with convenient Liquor, the quantity of a dram, becauſe they are Diuretick, abate ſharpneſs and pain.

When the pain is very great, it is good to put the Yard when you piſs, into warm Milk, or a Decoction of Mallows and white Poppy ſeeds, or warm Water only.

A ſmal Decoction of Mallows with Syrup of Violets and Conſerve of Roſes, is good for ordinary Drink.

You may alſo make Injections into the paſſage of the Bladder, of Milk, or of an Emulſion of cold Seeds, Plantane Water, or Whey, with the Water of a white of an Egg beaten, or one ſcruple of the Troches of Winter Cherries.

External Medicines are alſo good, as Baths, half Baths, Fomentations to the Privities made of cool Herbs, Liniments of Oyl of Roſes, Water Lillies, Unguent of Roſes, *Galens* cooling Oyntment, Populeon with Camphire, and the Mucilage of Fleabane made with Plantane Water. Alſo you muſt apply Epithems that cool to the Reins and Liver, and the aforeſaid Liniments, and the things mentioned formerly for the ſame.

When ſharp and chollerick Humors flow from the Liver, you may derive by an Iſſue in the right Leg, or by opening the Hemorrhoids, which is very good in al diſeaſes of the Reins and Bladder; according to that of *Hippocrates*, Aph. 11. Sect. 6. becauſe from the Spleen Vein called *Ramus Splenicus*, there are branches go to the Reins, Bladder, and Hemorrhoids.

The End of the Fourteenth Book.

THE FIFTEENTH BOOK OF THE PRACTICE OF PHYSICK.

Of WOMENS Diſeaſes.

The PREFACE.

THoſe are called *Womens Diſeaſes which are proper to them only, and come from the defect of that part which is diſtinct in them from men*, viz. *the Womb*; *of which* Democritus *in his Letter to* Hippocrates *ſaid that it was the cauſe of ſix hundred miſeries, and innumerable Calamities. But we to lay down thoſe Diſeaſes of the Womb which are moſt uſual, will divide them thus: Some come from the Veſſels, and ſome from the Body of the Womb, or Cavity; others are in reſpect of its chief and nobleſt act of Generation. From the diſtemper of the Veſſels of the Womb, and the preternatural cauſes, come* Chlorotis, *or green Sickneſs, ſtoppage of the Terms, immoderate Flux, the Whites, Rage of the Womb, and the Mother. In the Cavity of the Womb are, Inflamations, Ulcers, Scirrhus, Cancer, Gangrene, Dropſie, coming forth, and ſhutting up thereof: theſe may hinder Generation but by accident. The Diſeaſes which are in reſpect of Conception, Breeding, and Bringing forth, are, Barrenneſs. acute and Chronical Diſeaſes of Women with Child, Abortion, difficult bringing forth, dead Child, Secundine retained, immoderate flux, or ſuppreſſion of blood, and the acute Diſeaſes of women in Child-bed. All which Diſeaſes we will ſpeak of in as few words as the dignity of the Matter will permit.*

Chap. I. *Of the Green-ſickneſs, called* Chloroſis.

THis Diſeaſe by *Hippocrates*, is called *Chloroſis*; by the Modern Phyſitians, the white Feaver, the Virgins Diſeaſe, the Pale color of Virgins, the white Jaundice, but vulgarly the Green-ſickneſs.

It may be defined thus: An evil habit of Body from the Obſtruction of the Veins of the Liver, Spleen, and Meſentery, and eſpecially of thoſe which are about the Womb, which is accompanied with a heavineſs or unwildineſs of the whol Body, beating of the heart, difficulty of breathing, a deſire of evil Food, and the like.

This

This Diſeaſe depends immediately upon the Obſtruction of the parts in the lower Belly, eſpecially of thoſe Veins which are about the Womb, whereby the free paſſage of blood to the Womb is hindered, which abounding in Virgins when they begin to have their Terms, and being hindered of its Natural courſe by thoſe Obſtructions, runs to the upper parts, and oppreſſeth the Heart, Liver, Spleen, Diaphragma, or Midriff, and other parts, deſtroyes their Natural heat, ſtops the Veſſels; hence is there an evil Concoction in the Bowels, and from thence their body is full of Crudities, which being carried forth, make an evil Habit. In other parts they produce divers Symptomes in the Hypochondria, a ſwelling of the Bowels, by which the Midriff is oppreſſed, which cauſeth ſhortneſs of breath. And becauſe groſs blood and wind are carried by the Branches of the hollow Vein, and great Artery into the Heart, which contend againſt them for fear of Suffocation, by often moving of its Arteries, there is a palpitation of the Heart, and often a beating in the Temples. Beſides, they have in this Diſeaſe a loathing of meat, becauſe the Stomach is filled with crude Excrements by reaſon of its evil Concoction and diſtribution: which excrements having gotten an evil quality by a peculiar kind of corruption, cauſe a deſire of evil meats, and things not ordained for nouriſhment, as Salt, Spices, Chalk, Coals, Aſhes, and the like, which Diſeaſe is called *Pica Malacia*, or ſtrange Longing, which we have at large ſpoken of in its proper place, among the Diſeaſes of the Stomach.

The Cauſes of the Obſtructions in the Veins of the Womb, and the Hypochondria, are thick, ſlimy, and crude Humors, coming commonly from evil Diet: for theſe Virgins drink great draughts of Water at bed-time, or in the morning faſting; or eat Vinegar, Herbs, unripe Fruits Snow, or Ice; hence it is that they loſe their Natural heat, and there is abundance of crude Excrements. Others ſleep too much, or are very idle, as Seamſters, which by ſitting full a day are very cold. Others watch too much, and uſe unſeaſonable exerciſe, as dancing preſently after meat, and ſo continuing with their Sweet-hearts all night. Moreover, they have great cares and diſturbances of mind by which the Concoction is deſtroyed, and the body filled with evil Juyce.

The Knowledg of this Diſeaſe is eaſie from the Symptomes following:

Firſt, The Face and all the Body is pale and white ſometimes of a Lead color, blew, or green; for crude, flegmatick, and ſerous Humors abounding, and being carried to the habit of the body, do diſcolor it; and if Choller or Melancholly be mixed with that flegm, the color will be yellowiſh, greeniſh or blew.

The Second is, Swelling in the Face and Eye-lids, eſpecially after ſleep, becauſe the motive heat being cloſed and contracted at night, raiſed more vapors than it could diſcuſs. The Leggs alſo and Feet, eſpecially about the Ankles, and the whol Body is looſe and ſoft by reaſon of the abundance of flegm.

Thirdly, Heavineſs and Idleneſs in the whol body, a lazy ſtretching forth of the Leggs from the Humors being fallen down.

Fourthly, There is difficult breathing, eſpecially when they move themſelves, or go up Hils or ſteep places, then the thick blood grows warm, and thence ariſe many vapors, which cauſe ſhortneſs of breathing.

Fifthly, There is Palpitation of the Heart and beating of the Arteries in the Temples when the Body is exerciſed, by reaſon of the ſame evaporation, which is raiſed from thick Humors heated by Exerciſe.

Sixthly, There is often a great Head-ach, and ſometimes in the hinder part of the Head, when the Womb ſuffers; but in the Forehead when the vapors ariſe moſt from the Hypochondria.

Seventhly, The Pulſe is ſwift and quick, as if they were in a Feaver, and therefore this Diſeaſe is called the white Feaver, by reaſon of the quickneſs of the Pulſe, which is for this reaſon; The vital faculty being weak, makes the Pulſe little, therefore Nature ſupplies the ſmalneſs of it with often beating.

Eightly, The ſleep is very ſound, they ſleep til midnight, except they be forcibly awaked; and this is from many thick vapors which ariſe from the filthy flegm.

Ninthly, There is a great loathing of wholſom meat by reaſon of the great collection of Crudities in the Stomach and parts adjacent; and theſe Humors when they grow worſe, cauſe the Pica, or longing for things that are not to be eaten.

Laſtly, When the evil encreaſeth, and the Obſtructions are multiplied, the Terms ſtop, which ſhews the Diſeaſe to be at the height, and confirmed.

As for the Prognoſtick: That Diſeaſe commonly is not dangerous, and continueth a long time. But if it be too much neglected, and ſuffered to take root, ſo that the Nouriſhment is hinder'd, there follow great Diſeaſes of the Natural parts, as ſcirrhous and other Tumors, and corruption of the ſubſtance of them, which cauſe death, by Dropſies, long Feavers and the like.

When the Diſeaſe is leſs, and comes only from the Obſtruction of the Veins of the Womb, in yong women it is cured by Marriage.

Women

Women that have long been in this Disease, either are barren, or their Children are diseased, and weak.

There is great hope of recovery when the Terms keep their ordinary course, and their due quantity and quality.

The Cure of this Disease is by opening Obstructions, by emptying of the filthy Humors from the whol Body, and correcting the distemper of the Bowels, and strengthening of them.

The Obstructions are taken away by the Medicines which were mentioned in the Cure of the Obstructions of the Liver and Spleen, adding some things which respect the Womb, and that are more proper to open those Veins.

First then, give a purging Medicine agreeable to the Patients temper, made of gentle things, to clense the first Region only, and a Clyster before it, if the Body be bound.

Then open a Vein, if the Disease be not very old, and the Maid very much without blood, and inclining to an evil habit. Let the Vein of the Arm be opened first, although the Terms be stopped; for if then you draw blood from the Foot, the Obstructions of the Veins of the Womb will be greater by their fulness. And if the Liver be most stopped, take blood from the right Arm; if the Spleen from the left.

After you have bled sufficiently, you must give an ordinary Purge, by way of an Apozeme, such as was prescribed in the Cure of the Obstructions of the Liver. To which you may add some Herbs that are proper to the Womb, as Mugwort, Feaverfew, Peny-royal; and if the Spleen be stopped you may add proper things for that, as Capar barks, Ceterach, or Spleenwort, Harts-tongue. If the temper be Chollerick, and there be signs of a hot and dry Liver, you must take all the hot simples out of the Apozeme, and put in cold openers instead thereof.

For the more delicate Virgins, instead of Apozemes, you may give the Broths prescribed in the aforesaid Cure of the Liver, and change the simples as we said of the Apozeme.

In the mean while you may use Fomentations and Liniments prescribed in the same Chapter, not only to the Liver, but to the Spleen and Womb.

After Purging, make this Bath following, to open and looſen the Vessels, and to dissolve and digest the Matter causing Obstructions, which are of such force that we have known sometimes the Terms to begin to flow at the third or fourth bathing, when they have formerly been long stopped.

Take of *Marsh-mallow Roots, Lilly Roots, Elicampane, Briony, wild Cucumer, of each two pound: Mallows, Violets, Mercury, Penyroyal, Feaverfew, Balm, of each four handfuls: Linseed and Fenugreek beaten, of each two ounces: boyl them in spring Water for a Bath. Let her go into it warm twice in a day, not sweating, long before and after meat, for two daies, renewing each day the Decoction.*

The day after the last Bath, if the Terms be stopped, let the lower Veins be opened, and take away three ounces of blood: and this may be done twice or thrice at that time, in which the Terms used to flow. Or if they never did appear at that time in which the Patient is most afflicted.

After these Medicines to strengthen the Bowels, and to wear away the reliques of the Obstructions, an opening and strengthening Opiate wil do very wel, described in the place mentioned; to which you may add two drams of *Fæcula Brioniæ*, and as much of Salt of Mugwort.

But because sometimes the Obstructions are so great that they wil not presently be cured, you must make a Magistral Syrup of the Ingredients to the Apozeme before mentioned, with an encrease of the purging Medicines in quantity, and let the Patient take it twice or thrice in a month.

The ordinary Pils mentioned in the Cure of the stoppage of the Liver, are most excellent; to which you may add the Medicines there mentioned, of Tartar, Vitriol, and Steel.

Zacutus Lusitanus, Observ. 99. Lib. 2. reports of a certain Woman which had the Green-sickness ten yeers with stoppage of her Terms, and could not be cured with divers opening and purging Medicines, and some made of Steel, that he cured her with nothing but Conserve of Mugwort given thirty daies together, drinking after it the distilled Water of Savin, in which Rhubarb had been a whol night infused.

The same *Zacutus*, Observ. 117. Lib. 3. tels of a Virgin, which eating much Salt every day, fel into a Diarrhœa of Choller, mixed with a Consumption, which he cured after general Medicines, with Goats Milk steeled, and cold things applied to the Liver.

In the greatest Obstructions, an Issue made in the right or left Legg, as the Liver or Spleen is affected, is very good.

After the Obstructions are opened, you must discuss the flegm like serous humors that remain in the Veins, and in the habit of the Body by sweats; for which you must use the Decoction of Guajacum in cold Constitutions, or of China and Sarsa in those that are hot, for fifteen or twenty daies; with this Caution, That every fourth or fifth day, you give a Purge to clense the Bowels of Humors which cannot be sent forth by sweat; and which if they continue wil grow hard and putrefie, and be the occasion of Feavers, and other Diseases. For this Purpose you may use Brimstone Baths, both for drink and bathing: for by the drinking thereof, when the passages are first open by the Medicines aforesaid,

aforeſaid, the Humor that is contained in the firſt and ſecond Region of the Body, is cleanſed and ſent forth by the belly and urine; and the third Region is cleanſed by ſweating in them.

And laſtly, Copulation, if it may be legally done, after the uſe of opening Medicines, is very good; for thereby the Natural heat is ſtirred up in parts Natural, by which the Veſſels of the Womb are much enlarged. And Experience teacheth, that ſomtimes theſe Women have their Terms the firſt night after Marriage, and that others who are in good health, have them before their accuſtomed time.

Chap. 2. *Of the ſtoppage of the Terms.*

THe Terms are ſaid to be ſtopped, when in a Woman ripe of Age, which gives not ſuck, and is not with Child, there is a ſeldom, ſmal, or no evacuation of blood by the Womb, which uſed to be every month.

The cauſe of this ſtoppage is either in the Womb, or in its Veſſels, or in the blood which comes, or ought to come that way.

Divers Diſeaſes of the Womb may cauſe this Diſeaſe; namely, a cold Diſtemper, and dry, which thickeneth and bindeth the Body of the Womb; or a hot and dry diſtemper by drying the part, or burning up the nouriſhment thereof, from whence come evil humors, which being faſtened in the part, hinder the Terms from flowing. Alſo the Organical Diſeaſes of thoſe parts, as inflamation, or ſcirrhus, the turning of the inward mouth thereof, or compreſſion from the Tumors of the parts adjacent, or the Omentum or Caul growing too thick. The thickneſs of the Womb it ſelf, Ulcer, or Scars, which they leave, or from the tearing of the Cotyledones, or Mouths of the Veſſels, in a great Abortion.

The Veſſels of the Womb do often ſuffer Obſtruction, which is the chief cauſe of ſtopping of the Terms, and they come from cold and thick Humors: ſomtimes there is a ſuppreſſion of thoſe Veins by binding of them, and that is from the parts adjacent being ſtretched and ſwoln, as we ſaid in the binding or cloſing of the Womb.

The blood offending either in quantity, quality, or motion, may be a cauſe of the obſtruction of the Courſes. It offends in quantity, when it is too much or too little; too much, when it ſtretcheth out the Veins, ſo that they cannot contract themſelves to expel it; as in the bladder when it is too full of Urine, it cannot contract it ſelf to ſend it forth; too little, when the Body hath not blood enough to nouriſh it.

The blood offends in quality, when it is thicker, and more ſlimy of its own Nature, by reaſon of the cold diſtemper of the Liver, and other parts, or from the mixture of thick and flegmatick or melancholick humors, from whence commonly Obſtructions come.

The blood offends in motion, when it paſſeth other waies, as by the Noſe, vomiting, ſpittle, urine, hemorrhoids, and many other parts. I ſaw a Maid who had a Sore in her head, which opened every month, and bled plentifully; and we have ſeen many that have ſent forth blood at fixed times by their Lungs; and this evacuation was inſtead of a Menſtrual flux.

The external Cauſes, are cold and dry Air, Northern winds, often going into cold water, eſpecially in the time of their flux; too little or two much meat, either too thick and cold, or too aſtringent; alſo hot things, as too much Salt and Spice, by drying of the ſubſtance of the Liver, and other parts, and by drying up the blood, by which it groweth thick, and fit to ſtop; violent exerciſe and watchings, which do conſume the blood; long ſleep, and idleneſs, which do weaken the Natural heat, and cauſe Crudities; too long retaining of Excrements; by uſual bleeding at the Noſe, Hemorrhoids, Diarrhœa, and other evacuations by vomit, urine, or ſweat; and laſtly, great paſſions of the mind, anger, ſudden fear, ſorrow, jealouſie, and the like.

The Knowledg of this is to be taken from the Patients relation; but becauſe it comes either from Natural or Preternatural Cauſes, we ſhal lay down ſome diſtinguiſhing ſigns, leſt the Phyſitian be deceived by Women that would diſſemble their being with Child, and leſt he ſhould raſhly preſcribe Medicines to provoke Terms to Women with Child.

Firſt, If they be with Child, they have commonly their Natural Complexion; but others are pale and ill colored.

Secondly, The Symptomes which Women with Child have at the firſt, do dayly decreaſe; but in others ſtoppage of the Terms, by how much the longer the Terms ſtop, by ſo much the more the Symptomes encreaſe.

Thirdly, In Women with Child, after the third Month, you may perceive the Scituation and Motion of the Infant, by laying your hand upon the inferior Belly; in others there is a Tumor to be felt, but

but it is œdematous or flegmatick, not hard; neither is it proportionable to the Womb.

Fourthly, If a wise Midwife touch the inward Mouth of the Womb, it will not be so close shut as in women with Child, but rather hard, and contracted, and full of pain.

Fifthly, Women with Child are commonly merry, and little disturbed; but when the Terms are otherwise stopped, they are sad and sorrowful.

The Signs of the Causes are these:

The faults of the Womb which use to cause stoppage of the Terms, shal be laid down in the following Chapters; but the greatest part of them is found out by touching, seeing, and relation of the Patients.

The Obstruction and straightness of the Vessels of the Womb are known by pain in the Loyns, and parts adjacent, especially in the time the Terms should flow, and if any thing flow at that time, it is slimy, white, and blackish. Now the Diseases of the adjacent parts, which may shut the mouth of the Womb, or the Veins, will appear by their proper signs.

You may know the abounding of blood in the Veins, by the swelling of the Veins in the Thighs and Arms, especially if the Woman be fleshy and red, and have fed high. You may suppose there is want of blood, if the Woman be fat, if she have had a long Feaver went before, or loathing of meat. The evil quality of the blood is known by the evil habit of the Body, by the distemper of the Liver, and other parts, and especially by the blood it self, if you can see some of it. The preposterous motion of the blood, when it flows another way, is manifest of it self.

As to the Prognostick. The stoppage of the Terms is very dangerous, and many great diseases come thereof, and some in the Womb it self, as swellings, imposthumes, and Ulcers; others in the whol Body, and divers parts thereof, as Feavers, Obstructions, evil Habits, Loathing, Dropsie, Heartach, Cough, short Breathing, Fainting, sore Eyes, Madness, Melancholly, Headach, Joynt-gout, and the like. *Hippocrates*, *Lib.* 1. of Womens Diseases, hath shewed the encrease of Diseases from the stopping of the Terms, in these words. *The third month after the stoppage of the Terms, they begin to feel suffocation, or shortness of breath, with horrors, heavines of the Loyns, and sometimes a Feaver.* But if it last long, the Belly grows hard, they piss much, they loath meat, and watch much, they grate their Teeth in sleep; and if they continue longer stopped, the pains will be greater; but in the sixth month, that Disease which was formerly curable, will be then incurable: then she wil be troubled in mind, and faint, vomit flegm, thirsty, the Belly about the Privities will be pained, there will be a Feaver, and the Body bound, and the Urine stopped, the Back will ach, and she will stammer. Afterwards the Leggs, Feet, and Belly will swell, and the Urine be red, bloody, and pain over all the Body, especially the Neck and Back-bone, and Groyns, and so they die of a Dropsie. Thus far *Hippocrates*. But here is a doubt, because the Author saith, That in the sixt month the Disease is incurable, when Experience teacheth the contrary: and *Hippocrates* himself, 4. Epid. reports that a Maid who had her Terms stopped for seven Yeers, was restored to health by the return of them. *Hippocrates* may be reconciled to himself, by saying, That after six months the Disease is incurable, when the Terms are in the Body or Cavity of the Womb, because there they putrefie, and come to suppuration, as in the After-birth, or Blood retained. But this is not to be understood of every Suppuration.

That Stoppage is least dangerous which comes from plenty of good Blood, or fat, bleeding, or other Evacuations, because those Causes may easily be removed.

That is hardest to be cured which comes from heavines of Humors, Obstruction of Vessels, or straitnes, because that stubborn Humor, getting into the innermost passages, cannot be got forth but by long pains and Medicines, which Women are very unwilling to receive.

That stoppage which cometh from the distemper only of the Womb, is worst, because the part being hurt by propriety is hard to be cured by reason of the continual flux of Humors, which the part is disposed to receive, and therefore is called the Jakes of the whol Body.

The Cure of this Disease is divers, according to the variety of the Causes. And first, if it come from too much blood, you must abate the quantity by Phlebotomy in the Arm; for if the lower veins should be first opened, the blood would be drawn more to the Womb, where it would make greater obstruction and distention of Vessels, and break them, or cause Inflamation of the Womb.

After the Plethory, or abundance of blood is taken away, you must draw the blood down by opening the lower Veins about the time that the Patient used before to be cleansed, as also by Frictions, Ligatures, Cupping-glasses, dry, and with Scarrification.

These things done, you must relax and soften the parts of the Womb with Fomentations, and Baths, and moistening Unguents; which if they cannot master the Disease, you may give Hysterical Purges, and such as do properly provoke the Terms, which we shal after describe, using the mildest.

If want of Blood be the cause, as after long Feavers, great Evacuations, and Extenuation of the Body, you must not provoke them till you have used Restoratives, and blood be renewed, and whatsoever

ever is the cauſe of extenuation be removed; which things being done, the Terms do commonly flow of themſelves; which if they do not, but Nature forgets her office, you muſt open the inferior Veins, and uſe the Medicines afore mentioned, ſo that you take not away too much blood, becauſe the ſtrength is little, and leſt the Patient fal into a Conſumption. But here you muſt diligently mark, That every extenuation of the body doth not ſignifie want of blood, but only after great evacuations & conſuming Cauſes; for it comes to paſs ſomtimes, that the Terms ſtopt in the Veins get an evil quality, which makes the blood unfit to nouriſh: hence comes leanneſs, although the Veins be filled with much bad blood, and then large bleeding is very good, as *Galen* confirms, Comment. 3. in Lib. 6. Epid. *I* (ſaith he) *cured a Woman that had her Courſes ſtopped eight months, when ſhe was lean by drawing much blood; as alſo others. But what happened to that famous Woman was remarkable; I opened a Vein when other Phyſitians feared the ſucceſs, and were againſt me, ſaying that it muſt hurt her, not only becauſe ſhe was lean, but alſo becauſe ſhe had no ſtomach to eat. But theſe yong Phyſitians had a more Sophiſtical way, to obſerve what happened to the Patients, and to neglect the affects and Cauſes, which are the ground of Cure. I took* (to my beſt remembrance) *the firſt day, a pint and an half of blood from the woman; the next day one pint; the third, not above half a pint, or eight ounces.* Thus *Galen*. By which it is manifeſt, That from lean women, of this diſeaſe, you may take a great quantity of blood, although the women of our Age will not endure it.

The ſtoppage of the Courſes comes from a prepoſterous motion of the blood, when it is ſent forth by the Note, Vomiting, ſpitting, or Hemorrhoids, and the like: The Cure is by repelling it from thoſe parts, and bringing it to the paſſage of the Womb. Firſt (while they bleed) you muſt waſh Arms, Head, and Face, with cold Water, and keep them from the uſe of thoſe parts, eſpecially loud ſpeaking; then you muſt open a Vein beneath. Two or three daies before they bleed, apply Cupping-glaſſes to the Thighs and Calves of the Leggs, ſomtimes dry, ſomtimes with ſcarrification; by provoking the Hemorrhoids, by Frictions, Ligatures, Walking, Fomentations, Baths of opening Herbs, Oyntments, Peſſaries, Clyſters for the Womb, and the like, which ſhall be deſcribed hereafter. The uſe of a Natural Bath is principally commended, if it be of Brimſtone or bitumen; into which let the Patient go often, long before, and after meat, not above the Waſt, and at the ſame time, let the upper parts be cooled with a Fan, leſt by the heat of the Bath, they alſo wax warm.

If Blood flow from the Hemorrhoids being diverted from the Womb, it is hard to be cured; for if you uſe Attractions to the lower parts, they will go by ſtool, and if you uſe Aſtringents below, they will repel from the womb by the neerneſs of parts. Therefore there is no way of Cure but this, That after you have uſed Attractive things beneath, you apply Topical Medicines to the Womb, which may draw the Humor now in motion, more unto the Womb.

But that Suppreſſion of the Courſes is of all other moſt frequent, which is cauſed by obſtruction of the Veins of the Womb. The Cure whereof, is in a manner the ſame which hath been propounded in the Caſe of Pale and diſcolored Virgins, ſome things only being added, which do more ſpecifically reſpect the Womb.

In the firſt place therefore, All thoſe things may be uſed in their order one after another, which have been preſcribed for the Cure of the Green-ſickneſs. And for the moſt part it falls out that the Obſtructions of the Bowels being opened, the Courſes flow of their own accord: whoſe Eruption may yet be furthered by the uſe of ſuch things as cauſe the Humors to work downwards; as opening of the Inferior Veins, about that time when the Courſes have been wont to come down; or inſtead of Blood-letting, Cupping-Glaſſes faſtened unto the Hips and Ankles, both without and with Scarrification, frictions of the ſame parts, and painful bindings.

If the Diſeaſe be ſo rebellious as not to give way to the former Remedies, we muſt proceed to ſuch as by a proper and ſpecifical vertue, do move the Courſes, which are wont to be uſed under divers forms. And in the firſt place, moſt effectual Pouders, and grateful to the Taſt, are thus made:

Take *Cinnamon and Amber, of each one ſcruple: Saffron half a ſcruple. Mix all, and make them into a Pouder, to be taken divers mornings one after another.* Or,

Take *Pouder of the Roots of Madder, ſuch as Diers uſe, and Sugar Poudered, of each one ounce. Mix them, divide all into three parts; of which, give one at the time in which the Courſes ſhould flow, early in the morning in hot Wine, while the Patient is yet in her bed; wherein let her continue five hours, well covered with cloathes. If her courſes ſhall not flow the next courſe of the Moon, at the wonted time, give her the ſecond part: If yet they come not, give her the third part at the third return of the time of her Courſes.* Or,

Take *Roots of round Birthwort half a dram: Savin Leaves dried one dram and an half: Dictamnus Cretenſis, and Troches of Mirrh, without Aſſafœtida, becauſe of the ſtrong ſmell, of each one dram: Elect Cinnamon two drams: white Sugar two ounces. Make all into a moſt fine Pouder, of which let her take two drams in the morning for certain daies together, with broth of red Vetches, wherein two drams of Cinnamon, and half a dram of Saffron have been boyled.*

Moſt excellent Pills are made after this manner:

Take *Troches of Mirrh one dram: Caſtorium half a ſcruple. With Juyce of Mugwort make ſmal Pills.*

Among familiar Medicines eaſily provided, are accounted the flowers of Lavender eaten with Honey many daies together, or Conſerve of Mary-gold flowers, given to the quantity of two drams at a time.

The Blood of a wild Goat, and likewiſe of a tame one, hath mighty vertue to bring down the ſtopped Courſes, according to that preparation and doſe propounded in our Cure of the Pleuriſie.

In hot Conſtitutions, Cream of Tartar uſed many daies together in Broth, or ſome Melancholly-driving Decoction, does further the Courſes ſtopped.

But the Pills of *Montagnana* are mightily praiſed, being thus compounded:

Take *Troches of Mirrh one dram and an half: Parſley ſeed, Caſtorium, Cinnamon, of each one ſcruple: Muſk ten grains. With Juyce of Smallage form all (being poudered) into twenty two Pills, gilt with Gold. Let her take two in the morning, or at her entrance into bed, for ſome daies together.* Or,

Take *Madder Roots, and round Ariſtolochia, or Birthwort, of each three drams: Agarick and Cinnamon, of each one dram: Saffron one ſcruple: With Juyce of Mugwort, make a Maſs of Pills; whoſe doſe is one dram.*

Old Leven is commended by many, the quantity of a Cheſnut, with the ſame quantity of Sugar, given three daies together. Yet it will do more good, if pouder of the Troches of Mirrh, Dictamnus, or ſome ſuch like be mixed therewith.

The moſt uſual and profitable Decoctions are made in this manner:

Take *Roots of Parſley, and great Madder, of each two ounces: red Vetches four pugils: boyl them to a pint and an half. In the ſtrained Liquor boyl Cinnamon Pouder one dram: Saffron half a dram: Honey as much as ſhall ſuffice: mix them. Let her take ſix ounces warm, in the mornings twice a day, before her Courſes break forth, or when they begin to flow, if they flow but ſparingly.* Or,

Take *Roots of Smallage, Aſparagus, Fennel, of each one ounce: Feaverfew, Maiden-hair, Nep, Peny-royal, of each one handful: Boyl all to a quart. To four ounces of the ſtraining, ad one ounce of Syrup of Mugwort. Let her drink it hot twice a day as before.* Or,

Take *Cyperus Roots, Angelica, Valerian, and Madder of the Diers, of each half a dram: Leaves of Mugwort, Peny-royal, Savin, of each half a handful: Seeds of Carrots and Seſeleos, of each one dram:* Dictamnus Cretenſis *one dram and an half: Choyce Cinnamon four ſcruples: Saffron one ſcruple; make a Decoction to four ounces. In the ſtraining add Syrup of Mugwort and Hyſop, of each half an ounce: make a Julep for one doſe. Let her take it every other day.*

Quercetanus in his *Pharmacopœia*, doth exceedingly commend two Decoctions: the firſt of which is thus made:

Take *Gromwel ſeed, Annis ſeed, Miſſelto of the Oak, of each three drams:* Dictamnus Cretenſis *one dram: Saffron one ſcruple. Beat what is to be beaten, and ſteep all in rich white Wine twenty four hours: afterwards let them boyl a little. Of this Decoction give the Patient four ounces.*

The other Decoction is thus deſcribed:

Take *the whol Spleen or Milt of an Ox: cut it in bits, and put it in a capacious Glaſs, ſo as it may fill the Glaſs half full, adding of Cinnamon groſly poudered, one ounce: Cloves half an ounce: Saffron two drams: of the beſt white Wine as much as ſhall ſuffice only to moiſten all that is in the Glaſs. Let the Glaſs cloſely ſtopped, be put into a* Balneum Mariæ *exceeding hot, ſo that it boyl twenty four hours together, until the Spleen ſhall be boyled and conſumed into little crums, and there remains a great quantity of Broth excellently well boyled, and of a very fragrant ſmel; of which let the Patient take in the morning four ounces, continuing the ſame for four or five daies, when her Courſes ought to flow.*

Diſtilled Waters ought to be preferred before other Liquors, as being more pleaſant to the taſte: and becauſe of their ſubtil thinneſs of parts, they pierce more eaſily to the obſtructed Veſſels of the Womb.

The Preheminence above all the reſt, is by *Mercatus*, *Rodericus a Caſtro*, and *Sennartus*, given to this following:

Take *a Loaf almoſt as ſowr as Leaven, indifferently baked, and hot; take away the Cruſt, and add thereto, of Honey twelve ounces, Pouder of Nettle ſeeds, Carrot ſeeds, Amy, Annis and Fennel ſeeds, of each one dram: Troches of Gallia Moſchata, red Mirrh, of each one ſcruple: Cotula fœtida, or ſtinking Fennel, half a dram. Infuſe all in three pints of the Decoction below deſcribed, which is made of red French Beans, and red Vetches, of each half a pugil: Juniper berries one ounce: Roots of Madder, Butchers Broom, wild Rhadiſh, Aſparagus, Smallage, and*

Parſley,

Parſley, of each two ounces: Green Germander one handful: Seeds of Amy, Annis, and Fennel, of each two ounces: Boil all according to Art. Then ſtil the liquor out in Balneo Mariæ; *of which give to the Patient two ounces early in the morning. Alſo there may be added Syrup of Maiden-hair, of Opening roots, of Mugwort. Alſo the Doſe may be augmented, the following daies, if the Stomach be not offended.*

A Decoction of Guajacum or Saſſafras is good in flegmatick bodies, alſo Dictamnus Creticus may be added; taking the ſame twelve or fifteen daies without ſweating. *Facchinus* relates an Experiment thereof, writing upon the ninth of *Rhaſis*, Chap. 66. I boiled (ſaies he) the Indian wood, and added Dictamnus thereto. By which I procured both her Courſes, and Child-bearing to a Woman which had wanted her Courſes five years, and had been Barren.

The Chymiſts commend Tartarum, Vitriolatum, Spirit of Tartar, Mixtura Spiritalis, Salts of Mugwort, Bawm, Celondine roots, and Valerian.

This Treacle-Water following is mervailouſly effectual to this intent.

Take old Venice-Treacle five ounces, Red Alexandrian, Mirrh two ounces and an half, Elect Cinnamon, Oriental Saffron, of each half a dram; Camphire two drachms. Pour upon them of the beſt Spirit of Wine, till it ſtand three fingers breadth above the Ingredients, and draw out the Tincture with a gentle heat, whereunto being poured off without ſtraining, add a ſixt part of the Spirit of Tartar; The Doſe is one ſpoonful with ſome appropriate Water, or Wine.

Whilſt the aforeſaid Remedies are in Uſe, Clyſters frequently injected are exceeding good, becauſe the Womb does reſt upon the ſtraight Gut, or *Inteſtinum Rectum*; and they may thus be compounded.

Take roots of Lillies one ounce, of Orice and Valerian, half an ounce of each, of Mercury leaves two handfuls, Mugwort and Savine of each one handful, Chamomel flowers and Lavender, of each one pugil, Seeds of Caraway and Nigella of each one dram; boil all to one pint. In the ſtrained Liquor diſſolve of Hiera ſimplex, and Benedicta Laxativa, of each half an ounce, Oleum Cheirinum two ounces, Electuarium de Baccis Lauri half an ounce. Mix all into a Clyſter.

Yea, And the truth is Purgations repeated at certain convenient ſeaſons will be very good, which may be in divers manners prepared.

And in the firſt place *Galen* exceedingly commends the Pils of Hiera, ſimple and compound; becauſe over and above their purging of ſuperfluous humors, they have a faculty of opening the narrow paſſages, and of cleanſing the Womb. Or,

Take Aloes three drachms: Maſs of Cochie pills one drachm, with juice of Savine forme twenty pills; of which give the Patient three before dinner, every third day. Or,

Take Aloes one drachm: Choice Rhubarb one drachm and an half: Diagrydium one ſcruple: Myrrh and Aſarum roots of each half a drachm: Spicknard one ſcruple. With Syrup of Mugwort make a Maſs of Pil-Paſte. The doſe is from two ſcruples, to a drachm, made into pils. Or,

Take of the Maſs of Cochie-pil-paſte half a drachm: Mercurius dulcis *twenty grains, with Syrup of Roſes ſolutive forme eight pills, or ſix, Let her ſwallow them early in the morning.*

Alſo outwardly, the Courſes ſuppreſt, are wont to be holpen with theſe Topick Medicaments following, which muſt be outwardly applied, to widen the paſſages, make thin the humors, and to rouſe and awake the Expulſive faculty.

Take roots of Briony, Lillies, Cyperus, Valerian, Angelica, Aſarum, Orice, and of Parſly of each an ounce: Leaves of Mugwort, Baies. Rue, Savine, Time, Roſemary, Penyroyal, Nep, Mallows, Mercury, of each one handful: Flowers of Elder, Cheiri, Chamomel, of each two pugils: Juniper berries two ounces: Boil all in Water and white Wine, with the ſtrainings, let the Patients belly and the parts about the Privities be fomented with a ſponge.

With the ſame Decoction, the Quantity of Ingredients being augmented, may be made a Bath to ſit in; wherein the Patient may ſit up to her Navil, and the boiled Herbs being put into a bag muſt be applied to her belly. But let her take heed of ſweating, which doth ſtop the Courſes.

Take Oyl of Lillies, Dill and Rue, of each one ounce and an half: Generous Wine three ounces: Squinanth, roots of Bindweed, Angelica, the two Birthworts and Savin leaves of each half an ounce. Let them boil till the Wine be conſumed. Let them be ſtrained and the Oyl preſſed out, wherewith warmed, let the ſhare and parts about the Privities be anointed, after fomentation, or ſitting in the Bath.

Moiſt ſuffumigations are made of the Vapour of the Decoction for the Fomentation, and for the ſitting-Bath, which being moderatly heated, muſt be covered with a cover that hath a hole in it, whereunto muſt be faſtened a long pipe, which muſt reach into the neck of the Womb, through which let her receive the ſmoake morning and evening, being covered with cloaths.

A drie Suffumigation may be thus made.

Take Cloves, Cinnamon, Mace, of each two drachms: Juniper berries half an ounce: Nigella seeds one drachm: Storax two drachms. Make all into a gross pouder, which being laid on Coles, let her receive the smoake into the Womb, after her manner aforesaid. Or,

Take Storax two drachms: Frankinsence one drachm: Benjamin, Alipta Moschata, of each half an ounce: Cloves, Lignum Aloes, Cinnamon of each two scruples: With the Mucilage of Gum Tragacanth, extracted with Cinnamon Water, make little Cakes for to burn as aforesaid.

Pessaries may be made after this manner.

Take of *leaves of Mercury bruised one handful*: *Pouder of* Hiera picra, *and* Benedicta Laxativa, *of each two drachms*: *Pouder of long Birthwort one drachm*: *Honey and juyce of Mercury, as much as shall suffice, make all into a Pessary,* Or,

Take of *Agarick, Mirrh, of each two drachms*: *Galbanum half a drachm*: *Saffron one scruple*: *With clarified Honey make all into a Pessarie, which put into a warm thin rag, and conveigh into the Womb; but let it not abide long there for fear of inflamation.*

Pilulæ Cochiæ minores, brought into the form of a Pessarie, doth excellently move the Courses.

Also injections are wont to be made into the Womb, which are wont to be called Womb-Clysters; for they wash away the filth which cleaves to the sides of the Womb, and they open the internal Orifices of the Veins. Now they are made of the Decoction of the Fomentation aforesaid, leaving out the more sharp things; or with a Decoction of fat Figs, with Mugwort, Penyroyal, and Mercury; or of the juyce of Mercury alone, purified, in which a little *Benedicta Laxativa* is dissolved. For we must by no meanes use more sharp Ingredients for fear of Inflamation. Yea, and after the use of the aforesaid Injections, which ought to be retained but an hour; it will be good to Inject a Decoction of Mallows, Barley, and Violet leaves, or a little Hydromel tempered with Whey of Goats-Milk.

In an old inveterate Disease, Issues made in the Legs may do very much good. For although *Semmertus* approves not of them, because they rather derive from the Womb, and teach the humors which were wont to flow unto the Womb, to come rather that way, and hinder their inclinations to the Womb: Yet have they been found to do much good by the frequent experiences of *Mercurialis*, *Varandæus*, and others. For by those Issues the superfluous humors are continually evacuated, and the Course of the humors is guided into the inferior parts. And the derivation of superfluous humors from the Womb, is so far from hindring the Flux of Courses to the Womb; that it rather furthers the same, by making the Blood more pure, and more obedient to the command of Nature, which with the Humors aforesaid, is not drawn unto the Issues. And hereunto, that these Humors, if they be not by these waies evacuated, being retained in the Veins, they double the Obstructions, and so do augment the suppression of Courses. Howbeit, We are of opinion, that the menstrual purgations being restored to their due Course, the Issues ought to be closed up, that Nature may accustome her self to exclude superfluous Humors by the Womb.

In the Use of the Remedies aforesaid, some precepts are to be observed worthy of Note.

First, That we must never use Medicines that move the Courses, but after Universal Purgations; least the Humors being plentifully carried to the Veins of the Womb should increase Obstructions; or being much attenuated, should reach into other parts of the Body, and produce grievous Diseases. As *Schenkius* relates in his Observations, that a Physitian of *Venice* gave a Woman that wanted her Courses a certain Apozeme to move them, not having first purged her Body of Flegm; and a little after she had taken her Apozeme, she fell into a Palsey.

Secondly, That in giving such things as bring down the Courses, we must begin with the gentler, proceeding by little and little to such as are stronger.

Thirdly, That Medicaments procuring the Flux of the Courses, must be given in greater quantity than ordinary, because their vertue is abated in their long passage from the Stomach unto the Womb.

Fourthly, That the Medicaments aforesaid, are to be given either in the morning, when the Patient is fasting, or sometimes at her going into, or coming out of the Bath: For so the Medicine slipping into a warm and opened Body, doth powerfully exercise it's strength; and this it doth yet more effectually, if it be given a little before the inferior Veins be opened.

Fifthly, That Pessaries, and Womb-Clysters, or Injections, are only to be prescribed to married Women, and such as have been carnally imbraced by Men; but to Virgins we must prescribe *Nascalia* (viz. Wool dipped in the Medicament) Fomentations, Baths to sit in, and Suffumagations.

Sixtly, In Choleriek or Melancholliek Constitutions, all hot Medicaments are to be avoided, and only the gentler and milder sort are to be used; and with them temperate Aperitives, or openers, as also moistning and softning Medicaments are to be mixed.

CHAP.

Chap. 3. *Of the Immoderate Flux of the Courſes.*

WOmens monthly Courſes, being moderate in quantity, and flowing in due ſeaſon, are Natural: But if they exceed in quantity, or come too often, or ſtay too long: They are to be accounted Immoderate, and beſides the intent of Nature.

The Cauſes of this Immoderate coming down of the Courſes, are the ſame which (we in it's proper place have ſhewed) do concur to Cauſe ſpitting of Blood; *viz.* An opening of the ends of the Veins, a ſoaking of the blood through the Coates of the Veins, a forcible rending of the Veins, and their being eaten through by ſharp humors; all which are cauſed by the bloods over great abundance, Heat, Thinneſs, or Sharpneſs: By ſome blow, fall, or wound: Which we have at large declared in our Speculations touching ſpitting of blood, ſo that it is needleſs here to repeat the ſame. Let the reader be pleaſed to peruſe that Chapter.

The Signes of this Infirmity, are either of the Diſeaſe it ſelf, or of it's Cauſe. Immoderate Flux of the Courſes is known by the il-bearing of the Patient, decay of ſtrength, want of appetite to meat, indigeſtion of Humors, ill Habit of the whole Body, colour of face like a dead Corps, ſwelling of the Legs, and other more grievous maladies, cauſed by decay of Natural heat paſt away in the Blood.

To know the Cauſes, obſerve theſe ſignes following: A thin Habit of Body, and ſoftneſs of the Fleſh, with ſuch a diet as tends to increaſe the wheyiſh, and thinner parts of the Blood; and eſpecially the Blood it ſelf appearing thin and watry, in the cloaths coming from the Patient, doth ſhew that the Blood hath ſoaked through the Veins.

That the Immoderate Flux is cauſed by an opening of the ends of the Veins, or a breaking of their Coates, is known by the Foregoing of Wounds, Falls, or Bruiſes; by the uſe of dancings, long outcries, carrying unuſual weights by a Perſon corpulent and full of Blood: By ſome foregoing great heat, extream Cold, Immoderate carnal imbraces, great Anger, and the like. The ſame may alſo happen after ſore labor in Child-birth, or by the unskilful handling of a Midwife; after a miſcarriage, or after a long ſtoppage of the monthly Blood, which makes the ſame being collected in too a great quantity, breaks out on a ſudden with violence.

That there is an Exulceration in the Womb, whereby the Veins are eaten through, appears by the Bloods dropping out by little and little with a ſence of pain and ſharpneſs; and by the Bodies being repleniſhed with ſalt and ſharp Humors. Alſo the blood which comes away, is at firſt Matteriſh, Wheyiſh, Blackiſh, or Yellow; and afterward if the Exulceration increaſe, ſome bits of the parts affected are eaten off, whereupon follows a great effuſion of Blood, hard to be ſtopped. Alſo there have proceeded ſuch things as are wont to breed bad Blood, ſuch as are the uſe of ſharp things in Diet, the uſe of Salt meates, of meates putrefied, and ſuch like.

As for the Predictions belonging to this infirmity, we are to know that, all large and long-laſting Iſſues of Blood are dangerous; eſpecially thoſe from the Womb, which hurts not only her that ſuffers them, but hinders poſterity.

That which comes by a ſoaking of the Blood through the Veins, is of al others the leaſt dangerous, as cauſing leſs expence of heat and Spirits, yet it continues longer, by reaſon of the continual ſupply of raw and Wheyiſh Blood.

The breaking of Veins, and the opening of their mouths, cauſe greater danger, becauſe they do ſuddenly Iſſue forth great quantities of Blood; yet are they ſooner cured, as happening for the moſt part, only in Bodies over ful of Blood, and otherwiſe healthy.

But of all others, that which Springs from Exulceration is moſt hard to cure, becauſe where the Ulcer is, there ſome part of the ſubſtance of the Veins is periſhed, which hinders the growing together again of that breach, whence the Blood Iſſues.

If the ſick party grow daily weaker and weaker, and the Diſeaſe ſtronger and ſtronger, it portends her death.

In an elderly Woman, over great Flux of her Courſes, is commonly incurable, and deadly.

The Cure of Immoderate Flux of Courſes, muſt be in a manner the ſame, which we have preſcribed to cure the immoderate running of the Hemorroids.

For in the firſt place, to draw the Blood from the part affected, the Patient muſt bleed in her Arm, not all at once, but by degrees, now and then ſtopping the Orifice with your finger, and then letting it bleed again. She muſt bleed plentifully, as much as her ſtrength can bear. For *Hollerius* in his Comment upon the 50. Aphor. of the 5. Sect. doth teſtifie that he hath ſeen many Women cured by large Blood-letting, when the Iſſue of their Blood, could by no other remedies be ſtopped.

Rubbings, Bindings, and Cupping-glaſſes, are good to cauſe revulſion, as in the cure aforeſaid we have

have ſhewed, eſpecially if the Cupping-Glaſſes be faſtened upon her Dugs, according to that Sentence of *Hippocrates*; If you would ſtop a Womans Courſes, faſten a very large Cupping-Glaſs unto her Dugs: Howbeit, if upon the ſetting on of the Cupping-glaſs, ſhe grow ſhort breathed, you muſt quickly take it off again.

Likewiſe the ſame Purgation may ſerve which we propounded in the Cure of the Hemorrhoids; and it muſt be reiterated once or twice in a week, until the impurity of the Bowels, and the Veins be taken away. For when the Chollerick and Wheyiſh Humors are taken away, which make the blood thin and ſharp, it leaves running of it ſelf. If the Wheyiſh parts ſeem moſt to abound, Mechoacan with Rhubarb will be a good Purge.

A Vomit likewiſe doth powerfully draw the Blood upwards, and is commended by *Hippocrates*, in his Second Book of Womens Infirmities. But the Vomit muſt be gentle, and often repeated. Alſo it may ſuffice for the Patient to put her finger into her Throat, and ſo procure Vomit: Yea, and the Truth is, it may ſerve the turn, and will be very profitable for her to provoke her ſelf to Vomit before her Dinners, but ſo as not to vomit, only to uſe ſome forcing thereunto. Unto which Remedies, theſe which follow may profitably be added, as being tried by very learned Phyſitians.

Take *the Shels of two new laid Eggs burnt, Frankinſence, Maſtich, of each half an ounce: Pearls prepared, red Coral prepared, and Amber, of each two drams: Blood-ſtone and Smaragd prepared, of each half a ſcruple: Barley made without Bran, two pugils: four whites of Eggs, and if need be, add a little Water, in which red hot Steel hath been quenched, and make two Cakes, which muſt be baked ſo hard in an Oven, that they may be beaten to Pouder. Of which Pouder give from half a dram to a dram early in the morning, in a draught or meſs of Broth made of Sheeps Trotters.*

John Michael Paſchalius doth witneſs that many Women long troubled with this Infirmity, have been cured with this Pouder.

Alſo the Pouder of Egg-ſhels alone is commended, a dram thereof being given divers mornings together; and it is accounted by ſome for a Secret.

Foreſtus commends the following Pouder, which he ſaies was one of the Secrets of his Doctor or Inſtructor, *Helidæus*.

Take *a Turtle Dove moderately fat, draw it, and waſh it with aſtringent red Wine, and Roſe Water mingled together, and put an ounce of Maſtich in the Belly of it, and ſow up the belly that none of the Maſtich may fall out: Then roaſt it upon a Spit, and inſtead of Butter, baſt it with Vinegar of Roſes, and ſave the fat which ſhall drop from it for your uſe. When it is excellently well roaſted, put it into a new glazed pot or pipkin, cloſed up with ſuch Materials as the Chymiſts uſe to cloſe their Veſſels with, that nothing may vapor out. Then let it be ſet into the Oven, till it be ſo dry that it may be beaten into a Pouder, Of which Pouder, let the Patient take one ſpoonful every morning in Plantane Water, or in ſome aſtringent Decoction. And with the fat which was reſerved at the roaſting, let the Reins of her back, her groins, and Privy-part, with the ſhare, be anointed.*

Our Country-women have an ordinary Medicine of the flowers of the long-ſtalked common Thiſtle, wherewith they uſe to curdle their Milk when they would make Cheeſe. They adminiſter theſe Flowers in Broth, or other convenient Liquor. Others uſe of the Runnet of a Kid or an Hare, to the quantity of ten grains, which both ſtops the flowing of the Blood, and diſſolves that which is clotted together in the Womb.

Galen accounts Juyce of Plantane newly made, to be the beſt Medicine in the world, being given to the quantity of three or four ounces.

Solenander adds to the aforeſaid Juyce, a quantity of Colophony, and avouches it to be a remedy that never fails; his words are theſe: *To ſtop an old flux of the Courſes, take two ounces of the Juyce of Plantane, and mingle therewith a dram of Colophony poudered, and give it the Patient to drink. Let her take it four times, and ſhe ſhall be undoubtedly healed, with Gods Bleſſing.*

The Juyce of Yarrow is very convenient in this caſe, if two or three ounces thereof be given with Syrup of Coral, or ſome other convenient Syrup.

The Juyce of Nettles is no whit inferior to, or rather exceeds the former in efficacy: It may be given alone, or in mixture with others of little faculty: Or a Syrup may be made of Nettles, to be ever in a readineſs.

A Water drawn out of the moſt tender Oak Leaves, which are of a reddiſh color, ſtops the aforeſaid flux.

Mercatus makes up a very effectual Water, after this manner:

Take *a Loaf made of Wheat Flower, Barley Meal, and Rice: break it in pieces, and powr upon it ſeven pints of Water in which red hot Steel hath been quenched: Whereunto add, red Roſe Leaves dried, three pugils: juyce of Plantane a pound: the Roots of the larger Comfry, being green and bruiſed, two ounces: the Herb Horſ-tail, or Shave-graſs, one handful: the pulp of Choak-pear,*

Choak-pears, and Quinces, of each two ounces: Purſlain two handfuls: Bole Armonick one ounce: Balauſtians, and the three ſorts of Sanders, of each half an ounce. Let all theſe be diſtilled in an Alembick. Let the Patient take of this Water three ounces mixed with half an ounce of Syrup of Purſlain, or of dried Roſes.

For the more tender ſort of Women, Broths may be made of Calves feet, with Plantane Leaves, or Bloodwort. Or to thicken the Blood, a Broth may be made of red Roſe-Water alone, and the Yolks of new laid Eggs. Likewiſe a Conſerve of Bramble Roſes is good for them, being often uſed, eſpecially if their Liver be diſtempered with heat.

In all Fluxes of Blood, Practitioners do uſe to adminiſter Water and Vinegar in a large quantity to be drunk down. But in this Flux of the Courſes it is to be feared as an Enemy to the Womb, which is a Menbranous Part.

Among the Speciſick or appropriated Medicines, are reckoned, Filipendula Roots, with the outer Rind of the Mulberry-tree Root, whoſe Poudes are adminiſtred to the quantity of a dram, in ſome convenient Liquor.

The Flowers of the Nut-trees are gathered when they are ripe and ready to fall, and poudered, and a dram given in a Cup of Wine warmed in the mornings, for divers daies together. *Solenander* witneſſeth that all are cured with this Medicament. Alſo it hath a peculiar propriety to help fits of the Mother.

Spicknard in very fine Poudor, and taken to a dram in ſome convenient Liquor, ſtops the Courſes: Alſo being conveighed into the Womb in Lint, Wool, Cotton, Raw Silk, &c.

Milk in which red hot Steel hath been quenched, being drunk many daies together, is very effectual in an old flux of the Courſes; for it allayeth the ſharpneſs of the Humors, and thickens them; it nouriſheth the Body, and ſtops the Flux. *Avicenna, Rhaſis*, and the reſt of the Arabian Phyſitians, extol this Medicine to the Skies: and ſo doth *Horatius Augenius*, a noted Italian Phyſitian. Yet it is not to be uſed, if we ſuſpect the Body is not yet cleer of the vitious Humors.

The Acid Mineral Springs, whether they have their Tincture from Vitriol, Iron, or Allum Mines, do much conduce to the ſtoppage of immoderate Courſes, both by removing the Cauſes, and by ſtrengthening the Bowels affected.

The Chymiſts do much commend the Tincture of Coral, and *Vitriolum Martis* [Vitriolated Steel] and many other Medicines, which you ſhall find in their Books.

Let the Patient uſe to drink the Decoction of Maſtich, Yarrow, or of the dried Lentiſch, or Maſtich tree. Alſo the Lentiſch or Maſtich Wood, may be ſteeped in black harſh Wine, which doth very much ſtrengthen the Bowels, and ſtop defluxions.

It muſt be diligently remembred, That in an old Flux, very aſtringent and thickening Medicaments, are not to be uſed long together. For it is to be feared, leſt they ſhould fill, ſtraighten, and ſhut up the ſecret paſſages of the Body, and ſo breed Obſtructions, and very much hurt the principal Bowels, which are wont to ſuffer very much in this Diſeaſe. But it is much better to perſiſt in the uſe of ſuch things as ſtrengthen the Liver, which have ſome aſtriction, but ſo moderate as can do no harm.

Ludovicus Septalius in his Medicinal Animadverſions, in the 144. Article, gives ſuch commendations of the Decoction of Orange Peels, as of a Medicine that never fails, that it will be worth our while to tranſcribe his very words. *When ſuch Medicines as theſe* (quoth he) *have been judiciouſly adminiſtred; in the next place, ſuch Medicines as have a thickening and aſtringing quality are to be uſed; among which there is one which I cannot omit to ſet down, wherewith I have cured almoſt an infinite Number of Women troubled with this Infirmity; which I kept long as a Secret, and afterwards communicated to ſome yong Students, whom I did inform in the Art of practiſing Phyſick, and now publiſh the ſame to the whol World for the good of Man-kind: which Medicine hath ſcarce ever failed me, when there was no Veſſel of the Womb exulcerated, that fed the Flux. It is a Medicine, eaſily gotten, and eaſily made, thus:*

Take *Seven pints of Water; boyl therein the rinds of three ſowr Orrenges not throughly ripe, being cut into little thin bits or chips, and boyl them till two parts of the Water be conſumed. Give eight or nine ounces of the ſtrained Liquor to the Patient in the morning to drink. If you would have it more effectual, put an handful of Mouſ-ear into it, when it is almoſt boyled. And it will be yet more powerful, if you boyl it in* Tunbridg *water, or the like Medicinal Spring water: or if you boyl the aforeſaid Ingredients in eight pints of water, till two third parts be conſumed, and then ſtrain it, and quench red hot Steel divers times therein.*

Externally this flux may be ſtopped by Medicaments applied to the outward parts of the Patients Body.

And in the firſt place, Fomentations may be thus made:

Take *the Roots of Biſtort* [Adder-wort] *Tormentil, and the peels of Pomegranates, of each one ounce: The Leaves of Plantane, Knot-graſs, Shepheards-purſe, and Horſ-tail, of each one handful:*

handful; Cypress Nuts, Balaustians, Myrtle-berries, Sumach, of each one ounce: Boil them in Water that hath had Iron quenched in it, and in red harsh Wine mixed together. Strain out the liquor, and Bath therewith, the whole Share and Privy-parts, warmish, but not hot.

Also, Boil a piece of Sea-sponge in strong Vinegar, and lay it upon the Patients Share, and Privities, and it wil powerfully stop the immoderate Flux of Courses.

A Bath made of the aforesaid Decoction, the Dose being augmented, will be good for the Patient to sit in: But care must be taken that it be not hot, but only warmish; otherwise it wil by it's heat, the more open the Veins of the Womb. A Bath made of the Decoction of Allum is very effectual; but it causeth barrenness.

After Fomenting and Bathing, the Patient must be anointed upon her Loyns, her Share, and Privities, and between the Water-gate, and the Dung-gate (which space is called *Perinæum*, and wants an English name) with an Ointment made as followeth.

Take *Oyl of Mirtles, of Mastich, and of Quinces, of each one ounce: Bole-Armoniack, Dragons-blood, and Carabe, of each one drachm: Vinegar one spoonful. Make all into an Ointment.*

Unguentum Comitissa may also be used, or *Unguentum de bolo* newly made, or this following Cerate, which is very effectual.

Take *Ship-pitch half an ounce: Male Frankinsence one ounce: Mastich half an ounce: Turpentine one ounce: Dragons-blood, Red Roses, of each two drams. Make thereof a Cerate to be applied to the Reins of the Back.*

Plaisters are also profitably applied unto the Navil, and Loyns, made of the Mass of Plaister against Ruptures, the Plaister against the Mother, and of Mastich Plaister, either alone, or mingled together: Or of the Plaister of *Vigo* for Fractures, which is most excellent; and works it's effect without heating the Part.

The following Cataplasmes, are much more effectual, and very prevalent in a large Flux of Blood, causing danger of Death.

They are made, either of Bole-armoniack, incorporated with juyce of Plantane and a little Vinegar, and so applied.

Or of Plaister of Paris, lib. 1. incorporated with ten drachms of Gum-Arabick one pound toasted at the fire, and laid upon the Parts aforesaid in Cotton-Wool: The Whites of four Eggs being first mingled with it. *Solenander* saith, that this Cataplasm stops al Womens Fluxes in one day.

A Cataplasm, or Pultis made of Nettles, fried in a Pan, and laid upon the Share and Privities, works more kindly than the former; rather by a specifical property, then by it's astringency.

Injections made of juyce of Plantane alone, are likewise conveighed into the Womb by an Instrument for that purpose; which is very effectual, and much cryed up by Practitioners. Juyce of Knot-grass may be used to the same intent. And sometimes we are wont to add to the aforesaid Juyces, of the Mucilage, of Gum Tragacanth one ounce: Starch one drachm: Water of Rose-stalks, and Seeds three ounces, which are mixed, and Injected into the Womb. Or,

Take of *the leaves of Knot-grass, Plantane, Yarrow, Shepherds-purse, Horse-tail, of each half a handful: Boil all in Water sufficient to half a pint. In the strained liquor dissolve three drams of Acacia, Dragons-blood, Bole-Armoniack, and Blood-stone, of each one ounce: Mix all, and make thereof a Clyster for the Womb.*

A Fume made with Vinegar, poured upon a red hot Iron Plate, and received by the Patient sitting over a Close-stool, is very profitable; or a Fume may be compounded after this manner.

Take of *Frankinsence, and Mastich, of each two ounces: Mirtles and Labdanum, of each one ounce: Amber, Red Roses, Balaustians, of each half a drachm: With the infusion of Gum Tragacanth in Red-Rose Water, make Cakes to burn under a stool as before.*

John Michael Paschalius doth testifie that he cured a Woman troubled neer seven months with this Disease, with the smoak of burnt Frogs: and he affirms that the smoak of a Mules Hoof, is an experimented Remedy, wonderfully effectual in this Case.

Astringent Pessaries, are likewise usual in this Cure. Howbeit, they profit little, seeing they can hardly reach unto the Orifice of those Veins, which are opened in this Disease. But if the Veins of the Neck of the Womb are opened, they may be useful; and are thus Compounded.

Take of *Juyce of Plantane, or Knot-grass two ounces: Troches of Carabe in pouder, and Acacia, of each one drachm: Mix them with the White of an Egg, rowl them in silk, and make a Pessary.* Or.

Take of *the pouder of Hypocistis, Acacia, Bole-Armoniack, Dragons-blood, Comfry roots, Lambs-tongue, Plantane, Galls, of each half a drachm: Juyce of Purslain, or Plantane, or Syrup of Red Roses, or Myrtles, as much as shall suffice, and with Cotton Wool make a Pessary.*

Pessaries are likewise made of the leaves of Purslain, Plantane, or Knot-grass, or some other convenient

venient Herb bruiſed, and rouled in a piece of fine Linnen; or the Counteſſes Oyntment wrapt in Wool, and put into the Womb.

Neither are we to neglect the waſhing of the Patients Legs with cold Water, or ſome aſtringent Decoction, which is commonly uſed by Practitioners, and doth not a little further the ſtoppage of the immoderate Courſes.

Touching the adminiſtration of Topical Medicaments, it is to be obſerved, That aſtringent Medicines, eſpecially the ſtronger ſort of them, are not to be applied before ſufficient Revulſions have been made, eſpecially by Blood-letting: for it is to be feared leaſt they cauſe Tumors, or other worſe Diſeaſes in the Womb. Wherefore alwaies, as far as the Diſeaſe will allow time, the Cure muſt be begun with internal Medicines of a thickening and aſtringent Nature, before we make uſe of the Topical Medicines aforeſaid.

This Method of Cure aforeſaid may with Judgment be accommodated to the Flux of Courſes, ariſing either from an opening of the mouths of the Veins, or from a dreining of the blood through their Coats, or from a breaking of the Coats of the Veins: But if it ariſe from an eating or exulceration of the Coats of the Veins, it ought to be cured after the ſame manner, as an Ulcer of the Womb is cured, of which hereafter.

In the whol Courſe of the Diſeaſe, while the foreſaid Medicaments are uſed, care muſt be had to ſtrengthen the Bowels, and to correct the vitious quality of the Blood, as we ſhewed in our Cure of the Hemorrhoids.

And to conclude, When the Flux is allaid, the ſame Rules of Prevention are to be uſed in this diſeaſe, which we preſcribed concerning the Hemorrhoids.

Chap. 4. *Of the Whites.*

A Woman is ſaid to have the Whites, the Womans Flux, the Flux of the Womb, or the White Menſtruals; when Excrementitious Humors do flow from her Womb, either continually, or at leaſt without any certain order, or courſe of time obſerved in their flowing.

And the ſaid Excrementitious Humors are ſomtimes white and flegmatick, very like to Whey, or Barley Cream; ſomtime they are pale, or yellow, or green by the mixture of Choller; ſomtimes watery by the admixture of ſerous Humors: ſomtimes blackiſh, by the admixture of Melancholly; ſomtimes ſharp and Corroſive, ſo as to eat into, and exulcerate ſome parts of the Womb; ſomtimes they are of a ſtrong and beaſtly ſmel, and other whiles again, not at all offenſive in that kind.

This Diſeaſe is wont to ſeize upon grown Women for the moſt part, and ſuch as are of riper Age; yet are not Virgins alwaies free from the ſame: ſo that ſome have done ill in daring to affirm, That ſuch Maids as are troubled with this diſeaſe, have parted from their Virginity, taking their Ground from the ſtraightneſs of thoſe Paſſages Naturally: For if Virgins have the Veins of their Wombs ſo large, that their wonted Courſes can flow through them, why may not the Whites likewiſe drop out by the ſame paſſages, ſeeing they are many times more thin and fluxive than the Blood it ſelf, as being wheyiſh and chollerick. The ſame is confirmed by the produced Experience of moſt learned Phyſitians, and dayly Practice teacheth me as much, *viz.* That the moſt chaſt and perfect Virgins in the World have had this Infirmity, of whom there could be no ſuſpicion that they had been corrupted. And *Fernelius* doth witneſs, That he ſaw a Girl eight yeers old which had this Diſeaſe, and was afterward a long time grievouſly troubled therewith.

The Excrementitious Humors aforeſaid, are bred either in the whol Body, or in ſome principal Part of the Body, or in the Womb it ſelf.

If the Humors flow from the whol Body, they proceed either from bad Diet, or from a vicious habitual diſtemper of the whol Body, and they take their courſe unto the Womb as unto a Sink, or Common-ſhoar, whereinto the reſt of the parts of the Body disburden themſelves.

The particular parts, by whoſe conſent the Womb ſuffers in this Diſeaſe, are chiefly, the Brain, Stomach, Liver, Spleen, Meſentery, and the Bladder, which diſpatch their Excrements unto ſuch parts as are more weakly, and ſo more diſpoſed to receive them.

Theſe Excrementitious Humors are bred in the Womb, becauſe when it is unable to digeſt its proper nouriſhment, by means of the weakneſs of its Retentive or Concoctive Faculty, the greater part of its Aliment is turned into Excrements, being imperfectly digeſted, or corrupted rather. It is imperfectly digeſted in cold diſtempers of the Womb; and it is corrupted in hot diſtempers thereof. And ſeeing the Womb by want of Digeſtion, is defrauded of its Nutriment, it preſently draws new Aliment, which being turned into Excrements, is by the Womb expelled as unprofitable; and new Aliment is continually drawn, whereby this flux of evil Humors from the Womb, becomes both plentiful and continual. The Womb is weakened and more diſpoſed to the Reception of theſe Excrements by Child-bearing, travelling in Child-birth, Abortion, and Contuſion, Inflamation, Impoſthumes, or Ulcers.

The Signs of this Diſeaſe, are referred to the Infirmity it ſelf, to the part affected, or to the cauſe producing the Diſeaſe.

The Diſeaſe it ſelf is eaſily known by relation of the ſick party, and it is often times attended with divers Symptomes, *viz.* Paleneſs of Face, want of Appetite, ſickneſs of Stomach, ſhort breathing, weakneſs, ſwelling of the Eyes, fulneſs, penſiveneſs and ſadneſs, thick Urines, turbulent, and many other accidents, which differ according to the diverſity of the Humors offending, as we ſhall declare more diſtinctly by and by.

The part affected, and the place in which theſe Excrementitious Humors cauſing the flux are bred, may be known by theſe following tokens.

If the matter of the Flux is bred in the whol Body, theſe ſigns do ſhew it; *viz.* Wearineſs and heavineſs not proceeding from any work, of which the Patient is eaſed, having disburdened her ſelf by the flux plentifully; and then again, when new matter is collected, ſhe begins to be weary and heavy as before; her Veins are full; her Feet, Hands, and Thighs, are apt to be numbed. And theſe ſigns do eſpecially diſcover only a plenitude of Humors. But that corrupt Humors do abound in the whol Body, is known by an evil habit in the whol Body [that is, an ugly ſickly appearance in the looks, and whol outward ſtate of the Body] a puffing up of the Hands and Feet, an itching and ſtinging in the whol Body, if the Humor be ſharp, and many ſuch ſigns as theſe.

If the matter offending reſide in ſome peculiar part; the Symptomes and Excrements proper to that part, diſcover the ſame; as for example: A pain, heat, and ſwelling of the Liver, with Cholleric Excrements, do ſhew the Liver to be affected; and the ſame Symptomes happening on the left ſide, with Excrements of a Melancholick appearance, do argue the flux to ſpring from the Spleen: Flegmatick Excrements, Stomach-ſickneſs, want of Appetite, and ſomtimes extream Appetite, frequent corruption of the meat, and ſowr belchings, or fatty (as of the Dripping-pan, or over-ſcorched fleſh) are ſure tokens of the Stomachs faultineſs.

Pain of the Head, Frothy Excrements, ſome uſual evacuation by the mouth or noſtrils being ſtopped, do witneſs that flux ſprings from the Head. If none of the aforeſaid ſigns of ſome part affected appear, then we may conjecture that the flux proceeds primarily from the womb. Alſo the Woman (in ſuch a caſe) is well colored, the matter flowing is but little in quantity, being the excrement of the womb alone. There have preceded ſuch cauſes as weaken the Womb, as are hard Travel, Abortion, a Fall upon the Belly or Back, immoderate Carnal Embraces, eſpecially if the woman have been too yong married, Tumors, Ulcers, and other Infirmities of the Womb, whoſe ſigns are propounded in their proper Chapters.

The Humor cauſing the Flux is known chiefly by the colors of that which comes away, which were a little before declared, and which appear in the cloaths wherewith it is received, if, as *Hippocrates* teacheth in his ſecond Book of Womens Infirmities, the ſaid cloaths being dried, ſhall be after waſhed in Water alone, and dried in the ſhadow: for ſo they manifeſtly declare the color of that Humor which moſt abounds in the Excrements. Hereunto may be added the ſigns of an Humor abounding in the whol Body, uſually delivered in that part of the Inſtitution of Phyſick, which treats of Signs.

In the laſt place, We are to propound ſuch Signs as diſtinguiſh this Diſeaſe from others like unto it, as namely, Excretion of Purulent matter proceeding from an Ulcer of the Womb, and the Gonorrhœa, or flux of Seed.

It is diſtinguiſhed from purulent Matter by the ſigns of an Ulcer in the Womb, which ſhall be ſet down in their proper Chapter; as likewiſe, becauſe the Purulent Matter or Quittor, is much thicker, whitiſh, and leſſer in quantity, if it be digeſted rightly; but if it be of a goary, ſanious, and fleſhy appearance, like blood and water mingled, there is then blood amongſt the matter, and it is wont ſomtimes to come away with ſtrings from the Womb, and with exceeding pain; alſo the Women that have Ulcers in the Womb or its Neck, admit not of Copulation but with pain, which exaſperates their Diſeaſe; but thoſe which are troubled only with the Whites, do willingly and patiently ſuffer themſelves to be embraced by their Husbands.

In the Gonorrhœa, the matter which comes away is not ſo much in quantity, is thicker, of a more ſhining whiteneſs, holds up longer from flowing, and ſeldom or never ſtinks. But if it be a virulent or venereous Gonorrhœa (ſuch as accompanies the Letchers Pocks) it is known by ſharpneſs of Urine, Ulcers of the Privy parts, and other Signs that argue Malignity.

The Predictions or Prognoſticks of this Diſeaſe, are as followeth:

This Diſeaſe in one reſpect may be called good, in another reſpect bad: Good, foraſmuch as commonly it is not attended with any danger of death; and bad, becauſe it is a ſtubborn Diſeaſe, long laſting, and moſt exceeding hard to be cured; foraſmuch as the flux of evil Humors having once taken this courſe, is very hardly turned out of its Channel, becauſe the Womb (as we ſaid before) is the Draught of the whol Body, whereby even in time of Health, the ſuperfluous Humors of the whol Body are monthly evacuated.

If

If this Infirmity get head, it may bring many other Evils upon the Patient, as Barrenneſs, falling down of the Womb, Exulceration, Cachexia, Dropſie, and Conſumption.

A Flux of Whites, blewiſh, bloody, ſtinking, is worſe than the white, pale, not ſtinking.

The longer this Diſeaſe hath laſted, the harder it is to cure.

It attends old Women to the grave for the moſt part, becauſe of their abounding with flegm, and the weakneſs of their Concoctive Faculty.

The Cure of this Diſeaſe is to be begun by a convenient purging of the Peccant Humor. And becauſe flegmatick and wheyiſh Humors do moſt commonly offend, ſuch things as purge thoſe Humors, muſt chiefly be uſed, and with them Purgers of Choller, or Expellers of Melancholly muſt be mingled, according as Choller or Melancholly is adjoyned to the Humor offending. An Apozeme therefore may be appointed both altering and purging for four or five daies by way of a ſolemn purgation, alwaies remembring that to the purging Medicaments, ſome aſtringent and corroborating things are to be added, leſt the Humors of the Body being ſtirred, ſhould fall more abundantly into the Womb.

Touching Blood-letting, it is a queſtion, whether it be convenient in this Diſeaſe or nor: For ſeeing this Flux is cauſed by ill Humors in the Body, which by Blood-letting are drawn into the Veins and ſo may corrupt the Maſs of blood; it ſeems there is in this caſe no place for bleeding. Alſo, ſince in this lingring Diſeaſe, the Patients ſtrength is much abated, and the Body often brought into a Conſumption, it ſeems unfit to weaken it yet more by blood-letting, and to defrauding it of its nouriſhment. Which Controverſie is thus decided; That if the flux be not pure and ſimple, but in ſome meaſure mingled with Blood, and it appear reddiſh, that then a Vein may be opened; as alſo if the Liver be very much heated, and the ſharpneſs of Choller be joyned with the flux. In other Caſes, eſpecially if the flux have endured long, it is better to abſtain from Blood-letting.

Bindings of the upper parts of the Body, and Cupping-glaſſes applied to the ſhoulder-blades, and to the back, wil be very uſeful to draw the Humors upward; alſo rubbings of thoſe parts wil be ſpecially profitable, firſt with finer and ſofter cloaths, than with rougher and courſer, which *Galen* dayly practiſed upon the Wife of *Boetius*, whom he cured in the ſpace of thirteen daies, as himſelf relates in his Book of Prognoſticks dedicated to *Poſthumus*, Chap. 8.

And beſides the Univerſal Purgation already propounded, ordinary Purgations are alſo to be adminiſtred, and frequently reiterated, that the ſuperfluity of Excrements may be the better evacuated by little and little, and that Nature may get a cuſtom to void thoſe Humors by ſtool, which formerly had their recourſe unto the Womb. To this intent, Magiſterial Syrups, Pills, and uſual Opiates may be compounded, ſuitable to the temper of the Patient, and the Humors offending. In this Diſeaſe cauſed by flegm, *Mercatus* commends a Syrup of the Decoction of *Lignum vitæ*, with Senna, Turbith, and Agarick; as alſo the following Pills:

Take *of the Maſs of Pills of Hiera picra, one dram: Agarick trochiſcated one dram and an half: with Honey of Roſes make them into Pills, of which let the Patient take early in the morning ſix or ſeven every third day: afterward, only three of them every fift or ſixt day.*

Or for the greater Aſtriction, as wel as purging, they may be thus compounded, in whatever Complexion.

Take *Choyce Rhubarb oft-times ſprinkled with the Juyce of Roſes, two drams: Citrine colored, white and black Myrobalans ſteeped in the Juyce of Roſes, of each one dram: Maſtich one ſcruple: Spicknard half a ſcruple: With Syrup of Roſes make all into a Maſs of Pills. Let the Doſe be one dram twice in a week.*

For a Flux ariſing of Seroſity, or Wheyiſh Excrements, Jallap is moſt excellent, which may be thus uſed:

Take *Jallap finely poudered one dram: Cinnamon finely poudered half a ſcruple. Mix them, and with a draught of Chicken Broth, give it the Patient in the morning.*

A Laxative Ptiſan dayly taken for a month together, hath cured a ſtubborn Flux of Whites, when nothing elſe could, as is to be ſeen in our Book of Medicinal Obſervations.

Vomiting is likewiſe much commended in this Diſeaſe, eſpecially in ſuch as are eaſie to vomit, becauſe ſuch indigeſted humors as are wont to be gathered about the Stomach, are hereby both evacuated, and powerfully revelled or drawn back from the Womb. Among convenient Vomits, Diaſarum of *Fernelius* his Invention is commended, half an ounce whereof, given in Water and Honey, or with one ounce of Oxymel, and warm Chicken Broth, twice or thrice in a month, moves three or four Vomits, without any trouble.

After ſufficient Purgations, ſweat may be procured to expel the remnants of the Excrementitious Humor; and alſo to cauſe a further Revulſion of the Humors falling into the Womb.

To this intent, a Decoction of *Lignum vitæ*, and Saſſaphras, will be good in ſuch as are flegmatick; and of China and Sarſaparilla in ſuch as are Chollerick and Melancholick, cooling and temperate Herbs being added, leſt the evil Humors be more exaſperated, and become more ſharp.

Or Sweat may be provoked by a Decoction of hot Herbs, as Nep, Calaminth, Fennel, Hyssop, Elecampane, Chamomel, Dill, and such like, the evaporation of which Herbs being artificially received upon the Patients Body, will procure sweat. A Bath may also be made of the same Decoction, by which sweat may be provoked. But in hotter Constitutions, a Bath of fresh fair Water blood-warm, will be sufficient, in which moderate and gentle sweats only may be procured.

Sulphurous Baths do also powerfully cause sweat, and consume the reliques of this Disease: and by help of such Baths we have known some Women cured, that no other means could help.

As touching Pils-driving Medicines, its a weighty question whether or no they are fit to be administred in this Disease? For they do not only provoke Urine, but the Courses likewise, by heating and attenuating the Humors contained in the Veins. Yet are they allowed by all Authors, and by *Galen* himself, who used them in the Cure of the Wife of *Boetius*: And the reason is, Because Pils-drivers do provoke Urine Primarily, and the Courses Secondarily, and as it were by accident or chance. Again, the Kidneys do perpetually draw Wheyish Humors unto themselves, whereas the Womb does only receive them; whereupon it is credible that the greatest part of such Humors, will have recourse unto the wates of Urine.

Now the Pil-driver which *Galen* used in the foresaid Woman, is a Decoction of Asarum and Smallage in fair Water; howbeit, it will be better temper'd, if it be made in Succhory Water.

A more compounded Pils-driving Broth, may be thus made:

Take *the Roots of Asarum, and of Smallage, of each one ounce: Leaves of Calaminth, and Soldanella, of each one handful: Elder flowers half a handful: Polypody, and Carthamus seeds, of each half an ounce: boyl all to a pint. Give five ounces of the Liquor or Broth strained, in the morning. If you would make it purgative, add a little Agarick, and a little Turbith boyled with the rest, in a Bag.*

It's questioned whether Issues in the Legs are good for this Disease; for by drawing the Humors downwards, they may decrease the Flux. Howbeit, experience hath shewed that they do good in old Fluxes, because by such passages, some part of the Excrementitious Humor is voided.

If Choleick and sharp Humors cause this Disease; not only purgers of Choller are to be given, but likewise Alteratives which cool and thicken, and are moderately Astringent; such as these Juleps following.

Take of *the leaves of Succory with the roots, of Endive, Borrage, Lettice, and Purslain, of each half an handful: of new Sebestens and Jujubes, of each seven in number: of the four greater cool Seeds, and white Poppy Seeds, of each half a drachm: of red Rose-leaves a pugil. Boil all in Water sufficient, unto a pint, and in the strained liquor dissolve Syrup of Quinces, or of dried Red Roses three ounces, and make a Julep, for three Doses.*

But if Melancholick humors abound, they are to be altered and Purged away, by Medicines proper to that intent.

The use of Chalybeate milk taken forty daies together, the quantity of four or five ounces, is very proper for either of the aforesaid Humors; whereunto may be added towards the end, a little Bole-armoniack, or *Terra Sigillata*.

In the whole Course of Curing, it is to be considered, whether any part of the Body be misaffected, and so may send the matter of the Flux into the Womb; and if so, then care must be taken for the use of that part.

For if Humors flowing from the Brain, do cause this Disease, Remedies are to be applied to that part; especially such as revel and divert the Fluxion, *viz.* Cupping-glasses frequently fastned upon the shoulders and Back, Medicines snuff up into the Nostrils, Masticatories, Vesicatories, and Issues made in the hinder part of the Head, or in the nape of the Neck; instead where of Setons may be used, which are more effectual. And *Fabritius Hildanus* in the forty one Cure of his first Century, relates that he cured a Woman long troubled with the Whites, and thereby Barren, by a Seton.

If the Humors flow from the Stomach, Liver, or any other part, suitable Remedies must be applied to that part.

The Body being prepared, and the offending Humor for the most part evacuated, or derived another way: We must proceed to corroborating and Astringent Medicaments. But they must never be used until the Antecedent matter be wel evacuated, and diverted. Otherwise, those Humors retained, do rush into the more noble parts, and stir up more grievous Symptoms. As *Galen* in the afore-cited place relates to have befallen the Wife of *Boetius*, whose Belly, swelled, by meanes of the unseasonable use of Astringents, by which the Wheyish Humors were retained in her Body, which were wont to pass away in the Flux. It is likewise to be remembred, that whilst we are in the use of Astringent Remedies, we do then divert the Antecedent Matter, and hinder the same from increasing, by the Remedies aforesaid. Amongst these principal corroborating Medicines, Treacle is reckoned, which is to be used in flegmatick Constitutions. Conserve of Roses, and of Wormwood,

my

may be mingled with the Treacle; Or the following Opiate may be compounded,

Take *Conſerve of Roſemary flowers one ounce: Conſerve of Calamus Aromaticus two drachms: Species of Diarrhodon Abbatis, and of Aromaticum Roſatum, of each one drachm: Red Coral prepared half a drachm: Treacle two drachms; with Syrup of preſerved Citron peeles Make all into an Electuary.* Or,

Take *old Conſerve of Red Roſes, Roots of Comfry, Bugloſs, and Citron peeles, of each one ounce: Red Coral burnt, ſhavings of Ivory, Bole-armoniack,* Terra Sigillata, *Dragons-blood, of each one drachm; with Syrup of Red Roſes dried: make all into an Opiate.*

The pouder of Sage, Sarſa-parilla, and Baulaſtians taken every morning in broath, is the Court-Ladies Medicine.

Zecheus commends this following Electuary, which he had often uſed with happy Succeſs.

Take *Gum Arabick, and Gum Tragacanth, of each two drachms: white and red Coral, burnt Eg-ſhels, Harts-horn, Dill ſeeds, Amber, of each four ſcruples: Honey of Roſes, as much, as will make all into an Electuary. Of which give half an ounce two hours before meat. Let the Patient ſwallow it down, and drink after it four ounces of Plantane Water, mingled with two drachms of red Wine.*

Juleps may be made of Roſe-water, Knotgraſs, and Plantane waters, with the Syrup of Myrtles, dried Roſes, and the like: Some of the aforeſaid pouders being added.

Mercurialis ſaies he frequently uſed a Decoction of Oak-leaves, with the Runnet of an Hare; wherewith he cured many Women of this Diſeaſe. His manner of making his Medicine was thus.

Take of *the Decoction of Oak-leaves five or ſix ounces: of the Runnet of an Hare, one dram: Let her take this Medicine eight or ten daies.*

When the Diſeaſe comes from Choller, the following Syrup may be prepared, which is ſtrengthening, Aſtringent, and cooling. Thus,

Take *red Roſe Water four pints: Spirit of Vitriol, ſo much as will make the Water a little ſharp; but ſo as ſcarce to be perceived by the taſte: red Roſes dried three pugils: Steep them in the Water cold, two daies; Strain it, and add thereto ſo much Sugar of Roſes, as will make a Syrup.*

And Finally, Thoſe Aſtringent remedies muſtred up in the former Chapter, touching the Immoderate Flux of Courſes, may be likewiſe uſeful in this Cure.

The Patient may uſe inſtead of ordinary drink, a Diet drink of China-roots, or Maſtich wood, with Aſtringent Wine mingled.

The ſame time that the Patient takes in ſuch things as are Aſtringent, and do ſtrengthen the Womb, ſhe muſt likewiſe uſe outward Remedies applied to the place affected, *viz.* Fomentations, Baths to ſit in, Oyntments, Plaiſters, Injections, Fumigations, and Peſſaries; ſuch as have been preſcribed againſt Immoderate Courſes.

But before theſe external Aſtringents are applied, the Womb muſt be well clenſed. Otherwiſe ſuch impurities would be therein retained, as returning back into the Body, may cauſe more grievous Diſeaſes. And in our clenſing, we muſt regard the Humor offending; for one ſort of Clenſers are fit for Flegmatick, another for Chollerick Humors.

If the Humor be Chollerick, let the Clenſing Injections be made of Barley-Water, Whey, Water ſweetened with Sugar. If it be Flegmatick, let them be made of Hydromel, or of the Decoction of Wormwood, Fever-few, and the like.

Alſo a Detergent Peſſary may be made of Treacle, and Turpentine; or of Mercury leaves bruiſed, and wrapped up in a fine Linnen rag very thin worn.

Let the Patient uſe theſe Clenſers, before the Aſtringents be applied, until her Womb be well purified; which may be known, if little or no Humors come therefrom.

After the Uſe of the Clenſers, the Fumes are firſt to be received over a Cloſe-ſtool, becauſe they dry and ſtrengthen the Womb; and they may fitly be made of Frankinſence, Ladanum, Maſtich, Sanders, Nutmeg, and Red-Roſe leaves. And afterwards we muſt proceed to other Aſtringent Remedies.

Chap. 5. *Madneſs from the Womb.*

WOmb-Furie is a ſort of Madneſs, ariſing from a vehement and unbridled deſire of Carnal Imbracement, which deſire diſthrones the Rational Faculy ſo far, that the Patient utters wanton and laſcivious Speeches, in all places, and companies, and having caſt off all Modeſty, madly ſeeks after Carnal Copulation, and invites men to have to do with her in that way.

This Immoderate deſire of Carnal Conjunction, ſprings from the abundance of Seed, from it's Acrimony,

crimony, and heat transceading the bounds of Nature, whereby it is made to heave and work in the Seminal vessels, as Yest works, whereby the parts made for generation, are vehemently stirred up, and inflamed with lustful desires. And from the same Seminal matter so affected, Vapors ascend unto the Brain, which disturb the Rational Faculty, and depose it from its throne. Howbeit, The Immoderate appetite of carnal Conjunction alone, without the help of any such vapors, is able of it self to master the Rational faculty, as also all other Immoderate passions; but especially Immoderate Love, which is called *Erotica affectus*, or Love-Melancholly.

Now the Seed acquires the aforesaid qualities, when it is over long retained in Bodies prone to lust, and full of heat; and therefore this Disease is incident to Virgins, and young Widows peculiarly; although it may also betide married Women, that have impotent Husbands, or such as they do not much affect, whereby their Seminary Vessels are not sufficiently disburthened, or their amorous affections duly satisfied.

Some hold, That the Seed being corrupted, acquires a malignant quality, which causes these grievous Symptoms. But they are not weldable, so holding, to shew any difference between this Disease, and fits of the Mother, which arise from the Seed being corrupted, and thereby infected with a malignant quality. For although several degrees of putrefaction do produce different degrees of malignity, from whence a great variety of Symptoms are wont to arise; yet these manifest qualities aforesaid, *viz.* great plenty of Seed, it's heat, Acrimony, and Fermentation in excess, together with the great heat of the genital parts; are sufficient to produce this Disease we treat of.

Now the Causes producing so hot, plentiful, and sharp stinging Seed, are youthful age, Sanguine complexion, and Cholerick, or melancholly adust; meats that nourish much, a plentiful table, especially if the meats be spiced; the frequent smel of Spices, Musk, Amber-greece, and such like: large sleeping, and upon soft beds filled with Feathers, or down; amorous Courtings, reading of lascivious Books, Dancings, and other pleasures usual in the meetings of youthful persons.

The Signes of this Disease may easily be gathered out of what hath been already said. But because it is wont to discover it self gradually, by little and little; it is fit to relate it's progress. In the beginning, whilst the sick persons do yet enjoy their understanding, they are more sad, and silent than ordinary, but with a wanton rowling of their Eyes, and a ruddyness of countenance; which ruddiness, is sometime more then at others? especially when mention is made of matters belonging to bodily lust, for then their breathing is changed, and their Pulse too, by Sympathy of the Heart, which made *Galen* boast that he knew the furious lusts of Women by their Pulse; because such Lovers, do of a sudden undergo divers changes of their Pulse, when desirable objects are presented unto them, or brought into their remembrance. Afterwards when the Disease is exasperated, they begin to scold, and to weep, and ever and anon they fall a laughing, they speak many things without rime, or reason unadvisedly, out of which no certain sence can be gathered; a while after, they repent of this their folly, until another fit take them, by reason of the inordinate motion of the peccant matter, which observes no certain period in it's Fermentations. Women possessed with this kind of dotage, when the Disease is come to it's height, do openly before all the world ask men to lie with them expressing the actions of Generation in the most proper, and broadest language, their mother tongue affords.

As for the Prognosticks of this Disease. It is a curable sickness, if meanes be used in time. But if it continue long, and take firm rooting, it turns into a true and perfect Madness.

There is a great hope of Recovery, when the distances between the fits begin to be longer than ordinary, or when the Patients Body, being grown lean becometh fat again, and when mention of matters pertaining to Generation, doth no longer affect or disturb them.

The Cure of this Disease tends to correct the hot distemper of the Bowels; especially of the Womb, and the Blood, and Seed; likewise to evacuate the sharp Humors, and Seminal matter offending. All which may be done by the following Remedies.

And in the first place, Blood must be often drawn, as far as the Patients strength can bear: that so the whol Mass of Blood, and the Womb it self may be cooled, and the fervent Blood may be withdrawn from the Veins of the Womb.

And if the Patients monthly Courses be stopt, the inferior Veins are afterwards to be opened, that they may by that means be brought down.

But if the Blood seems to have recourse to the Hemorrhoid Veins, which is known by their swelling and redness; the said Veins are to be opened by Application of Leeches

Afterwards a Purgation is to be given, made of the gentler sort of Medicines purging Choller or Melancholly, according as the one or other Humor shal seem to abound.

This purgation is to be followed by Juleps that prepare the matter offending, *Viz.* such as cool and gently open; which must be given three daies together.

Then a more strong purgation is to be administred, which may wholy extirpate the foresaid humors. To which intent these Purging Medicaments may be used, which was set down in our Cure of Madness, which must be now and then repeated.

After

After iterated Purgations, the following Bath being frequently uſed in the whol courſe of the diſeaſe, will be very uſefull to cool the whol Bodie, and temper the fervor of the peccant Humour.

Take *Leaves of Lettice, Willow-tree, Water-lillies, Vine-tree, Purſlain, Penny-wort, of each a handful: Flowers of Violet, Water-lilly and Roſes, of each two handfulls. Boyle all for a Bath, into which Blood-warm let the Patient enter, twice in a day, without ſweating, far from meal-tide.*

And forasmuch as a compleat, and entire Bathing cannot conveniently be continued for ſo many daies together; at leaſt the Patient may Bath her lower parts frequently in a part of the aforeſaid Decoction, yea or of meer Water, and the liquor muſt be only warmiſh: For the prime intention of this Cure is, that the Womb may be cooled to the purpoſe: which is confirmed by a remarkable Experiment propounded by Dr. *Harvey*, in his Treatiſe of the Child-bearing of a noble Lady, who had been more than ten yeers beſide her ſelf, by reaſon of this Womb-fury; whoſe Womb (after all things had been tried to reduce her to her wits, in vain) fell out, which they did not put up til the coldneſs of the external Air had healed its diſtemper; the event was, as the Doctor imagin'd, and ſhe grew quickly well, and her Womb was at laſt reſtored to its proper place.

For the greater cooling of the Body, it may be convenient to give the Patient Whey to drink many daies together.

And to be brief, Whatever hath been preſcribed in our Cures of Madneſs and Hypochondriacal Melancholly, will be good in this Diſeaſe, according as it ſhal be cauſed either by Choller or Melancholly.

Unto all which may be added ſuch things, which by a peculiar property, diminiſh and cool the Seed: Among which take theſe that follow for example.

Take *Leaves of Water-lilly, Willow, Agnus Caſtus, of each four handfuls: Lettice, Purſlain, Penny-wort, or Two-penny Graſs, of each a handful: the four larger cooling Seeds, Lettice, and white Poppy ſeeds, of each half an ounce: Dill ſeeds two drams: the flowers of Water-lilly, and Violets, of each one handful. Let all be ſtamped, being freſh, and let them be ſprinkled with Juyce of Lemmons, and diſtilled in Balneo Mariæ; and to every pint of the Water, add a dram of Camphire. Let the Patient take an ounce divers times.*

Or of all, or ſome of the Simples aforeſaid, a Decoction may be made, and ſweetened with Sugar, and a little Camphire put to it, to be taken divers times one after another.

Or an Emulſion may be made of the greater cool Seeds, Lettice ſeeds, and white Poppy ſeeds, extracted with the Waters of Lettice, Willow and Water-lillies, and ſweetened with Syrup of Violets.

An Electuary may be preſcribed after this manner:

Take *Conſerve of the Flowers of Water-lillies, Violets, and Agnus Caſtus, of each half an ounce: Conſerve of Roſes half an ounce: Lettice Stalks preſerved one ounce: Coral and Smaragd prepared, of each one dram: with Syrup of Violets, and water-lillies, make an Opiate.*

In the greateſt extremity of the Patients raving, ſuch things as procure ſleep, are very profitable, both inward and outward Medicaments, as they are ſet down in the Cure of Phrenzy and Madneſs.

In the whol courſe of the Diſeaſe, Clyſters which cool and gently purge, are to be uſed, taking heed of ſharp Clyſters, and ſuch as vehemently purge, which do exagitate the Humor contained in the Womb, or its Veſſels, whereby the Symptomes are wont to become more fiery.

Alſo Injections may be made into the Womb, of the Decoction of ſuch Herbs as have formerly been ſet down for Baths and other Remedies, whereunto *Sal Saturni* may profitably be added.

Frequent Clyſters may likewiſe be good to the ſame intent, being made of Vinegar allaied with Water.

Alſo cooling Oyntments are to be applied to the Loyns, Privity, the Share, and between the Water-gate, and the Dung-gate, made of Oyl of Water-lillies, Oyntment of Roſes, *Unguentum Album Camphoratum*, with the Juyces of Nightſhade, Henbane, and Water-lillies, melted together, adding a little Camphire.

Alſo a Plate of Lead is good to be worn continually upon the Reins.

In regard of the immediate Cauſe, ſeeing the evacuation of the ſharp and corrupted Seed, may cure the Diſeaſe; it is very good Advice in the Beginning of the Diſeaſe, before the Patient begins manifeſtly to rave, or in the ſpace between her fits, when ſhe is pretty well, to marry her to a luſty yong man. For ſo the Womb being ſatisfied, and the offenſive Matter contained in its Veſſels being emptied, the Patient may peradventure be cured.

But if the Patient cannot ſo conveniently be married, or the condition of her life will not bear that eſtate, ſome adviſe that the Genital Parts ſhould be by a cunning Midwife ſo handled and rubbed, as to cauſe an Evacuation of the over-abounding Sperm. But that being a thing not ſo allowable, it may ſuffice whilſt the Patient is in the Bath, to rub gently her Belly on the Region of the Womb, not

coming

coming neer the Privy parts, that the luke-warm temper of the Water may moderate the hotness of the Womb, and that it may by the moisture be so relaxed, as of its own accord to expel the Seminal Excrement, and that nothing else be done with the hand, save a little to open the Womb, so as the Water may pass into its more inward parts; forasmuch as the water will operate as much as any of those Medicines which are used to extinguish the seed withal.

Pessaries may be compounded to the same intent of the Leaves of Mercury bruised, with a little Myrrh or the Powder of Aristolochia or Birthwort; which must be put up, when the Patient is in the Bath, lest otherwise the VVomb should be over-heated; and after an hour, it must be taken away. And afterward, let an Injection be made into the VVomb of VVhey, or Barley water, with a little Juyce of Nightshade, Houseleek, or Hemlock, which is specially commended in this Disease.

To purge out the Seed, the following Bolus or Morsel will be very profitable.

Take *of Venice Turpentine three drams: Agarick trochiscated one dram: Carrot seed, Hemp-seed, and Lignum Aloes powdered, of each eight grains: With Sugar make all into a Bolus or Morsel to be swallowed.*

If the Disease do yet continue, let Issues be made in her Thighs; for nothing is better than by such meanes to draw the matter downward, from the Womb, to those inferior parts.

And if swellings of the Spleen shall arise, and Obstructions, during this Cure, as it often times happens; they must be carefully cured with their proper Medicaments.

Finally, Because in this Disease the Brain and Heart, are grievously affected, by reason of Vapors arising from the Womb, they are both of them diligently to be provided for; the Brain being secured by rubbing and chafing the lower parts, and by Cupping-glasses frequently fastened upon the Hipps, and Groins; and the heart defended by Cordial things outwardly applied, both Liquid and Solid, such as are described in our Chapter, touching decay of strength.

Chap. 6. *Of the Mother-Fits, or Womb-sickness.*

WHen Seed and Menstrual Blood, are retained in Women besides the intent of Nature, they putrefie and are corrupted, and attain a malignant and venemous quality: from whence venemous Vapors are elevated and carried to divers parts of the Body, from whence divers Symptomes do arise, and those so divers, that *Democritus* might justly say in his Letter to *Hippocrates*, That the VVomb is Author of a thousand sad Sorrows, and innumerable Calamities. And *Hippocrates* himself saies in his Book of Virgins Diseases, That miserable VVoman-kind is commonly laded with incomprehensible and manifold Diseases. All which Infirmities we intend to explain in this Chapter, under the name of Mother-Fits: herein imitating *Galen*, who in his sixt Book of Parts Affected, and the fifth Chapter, saies that the Mother, or Hysterical Passion, is but one name indeed, yet comprehending under it divers and innumerable Accidents. Notwithstanding all late Writers in a manner, do handle the Suffocation of the Womb, under the Title of Hysterical Passion, calling a particular Symptome by such a name as is common to many others, because it, of all the rest, is most frequent, and most troublesom. But herein the very best Authors seem to have been superfluous in their Treatises of Womens Diseases, while in different Chapters they describe several Diseases springing from the Womb, viz. Suffocation of the Womb, Head-ach, Epileptical fits, Palpitations of the Heart, Pulsation of the Arteries about the short Ribs, and in the Back, the Diseases of the Stomach, Liver, and Spleen arising from the Womb, and divers pains in sundry parts of the Body arising therefrom; seeing all these Infirmities do arise from one and the same cause, and are to be cured by the self same Medicines; so that the aforesaid Authors, are fain to repeat the same things over and over, in several Chapters, not without much wearines to the Reader.

We therefore, That we may more briefly, and methodically set down the Nature of all these infirmities, think it worth our labor, first to set down the universal Causes of them all; and afterwards to declare how those Diseases arise from the said Causes.

We have shewed in the beginning of this Chapter, that there are two special Causes of all these Symptoms, *viz.* the Womans Seed, and the Menstrual Blood, being retained beside the intent of Nature, and corrupted, and possessed of a malignant, and venemous quality; out of which malignant Vapors, do arise, and afflict divers parts of the Body. Unto which Doctrine generally propounded, two other things of greatest moment must be added, *viz.* First, That not only the Seed and menstrual Blood, do produce Hysterical, or Womb-sicknesses; but divers Humors also of an excrementitious Nature flowing into the VVomb, and by a long abiding, growing putrefied, and sending out filthy Vapors. This is verified by many Ancient VVomen, who being destitute of menstrual Blood and of Seed, are yet very much subject to these VVomb-sicknesses or Hysterical passions. Secondly, that not only vapors arising out of the aforesaid substances, are causes of these distempers, but the very Humors themselves are a cause, which finding no free vent by

the Veins of the Womb (into which as a Common-ſhore Nature diſburthens ſuperfluous Humors) by reaſon of the ſtoppage of the Monthly Courſes or of the Whites; they flow back again into the ſuperior parts of the Body, and doe infect the ſaid parts with that vitious quality, which they have contracted by their long abiding in the Veſſels of the Womb, or by their mixture with Seed, or Menſtrual Blood corrupted.

Theſe Foundations being thus laid down, let us ſee how Hyſterical Symptomes are ſtirred up by the Cauſes aforelaid, beginning with the Suffocation, or ſtrangling fits of the Mother, which is the moſt frequent and principal Sickneſs of theſe kind of Women, being accompanied with very many, and thoſe moſt grievous Symptomes. For beſides their breathing impaired, and ſomtimes aboliſhed, their whol Body becomes cold, their Speech and Pulſe is intercepted, ſo that they lie like dead Women; and ſome have been accounted dead, and laid out for Burial, and yet afterward Revived.

Now this Sickneſs comes by fits, which makes their returns ſomtimes ſooner, ſomtimes later; and endure ſomtimes a longer, ſomtimes a ſhorter time, according to the quantity of the Humor offending, which is ſomtimes quickly collected, and ſomtimes long in gathering; ſomtimes ſoon diſcuſſed, and ſomtimes long before it can be diſcuſt: For ſuch like Cauſes of Diſeaſes in the Body of Man, have their times of digeſtion and exaltation; which having arrived unto, they do ſuddenly, and as it were in a moment, break forth into action. Yea, and ſuch Humors being already collected in the Body, may for a ſeaſon lie hid, until being ſtirred by ſome internal or external Cauſe, they ſhed forth their poyſonous blaſts and vapors into other parts of the Body. Now the moſt frequent and noted Cauſes of this Commotion and Agitation of theſe Humors, are ſweet ſmelling things coming neer the Patients Noſe, or ſweet Meats taken in, which quickly bring Women ſubject to this Infirmity, into their fits; alſo vehement Anger, Terror, and other grievous Paſſions of the Mind.

Now there are divers Degrees of this Sickneſs, according as the Matter offending differs in Quantity, or Malignity. For ſomtimes the Choaking-fits, with want of breathing, are light and ſoon go over; ſomtimes it is extream, ſo that the Patient breaths not at all, and is attended with other Hyſterical or Womb-ſickneſſes, ſuch as Vomitings, Ravings, Convulſions, and Swoonings, or Faintings away.

And for the moſt part, more grievous Symptomes do ariſe from corrupted Seed, than from Menſtrual Blood, or other corrupted Humors. For look how much Seed retaining its Natural Diſpoſition, is of a more excellent Nature than Menſtrual Blood, by ſo much does it degenerate when corrupted, into a greater or worſer kind of Venom or Poyſon.

There are likewiſe other Differences of this Choaking Mother-ſickneſs, to be obſerved, viz. That ſomtimes the Patients have their Breath ſtopt as it were, ſomtimes they complain that they are choaked, as it were with a Rope that ſtrangled them; and ſomtimes their breathing is much abated, or aboliſhed, without any pain or ſence of ſtrangling. The Reaſon of which diverſity is this; That the ſimple Suffocation, and difficulty of breathing, do ariſe from abundance of Vapors, which do ſomtimes very much abound in Hyſterical or Womb-ſick Women, eſpecially when the Hyſterical Paſſion, and Hypochondriacal Melancholly are joyned together. Which Vapors or Winds, do compreſs the Midrif and Lungs, as it is wont to fall out in the windy Aſthma; but the ſence of choaking, in which the Patient feels her ſelf as it were ſtrangled in her Throat, depends upon a ſpecial property of the venemous Vapor; as there are other Poyſons in the greater World, which have ſuch a property of throatleing and choaking, as is known of one ſort of Muſhroms. And, that the venemous qualities bred in Hyſterical Women are divers, *Galen* does ſufficiently hint in his ſixt Book of the parts affected, Chap. 5. where he compares the malignity of this Vapor, to the venom of the Fiſh *Torpedo*, and to the ſting of a *Scorpion*; which Poyſons, though in quantity they are ſmal, in operation they are mighty, and being received into mans Body, they do in a ſhort ſpace of time, grievouſly afflict the ſame, and produce there in moſt vehement Symptomes. As for Reſpiration diminiſhed or aboliſhed, it is cauſed by the ſaid Vapors being endued with a Narcotick or Stupefactive power, which being mighty contrary unto the Heart and Vital Spirits, their action is thereby hindered, whence follows a cooling of the whol Body through defect of that Spirit which ſhould flow from the Heart, and a ceſſation of Reſpiration, becauſe there is now no need thereof. For ſeeing that drawing of Breath is neceſſary to cool our Hearts, when the Heart is extreamly cooled by the venemous Vapors aforeſaid, it needs none of that cooling which is cauſed by drawing in the Air, and ſo breathing ceaſes, becauſe there is no uſe thereof. We may alſo ſay, That the ſaid venemous and ſtupefying vapor, does aſſault the Brain, and hinder the Influx of the Animal Spirits, whereby the motion of the Midrif, and the Muſcles ſerving for reſpiration, is hindered; ad hereunto, That the Vital Spirits being deſtroyed, the Animal Spirits, which are made of the Vital, muſt needs be deſtroyed likewiſe.

In the place before alleaged, *Galen* reſolves a Doubt, which is this: That ſeeing it is generally held that a man cannot live without breathing, therefore it is impoſſible that Hyſterical perſons ſhould in their fits be quite deprived of breathing. To which he anſwers, That in an extream cooling of the

Heart there is no need of respiration, which if it were stopped, and the Heart vigorous and hot, present death would follow; but that little warmth which is yet remaining in the Heart, is cherished only by transpiration, or ventilation through the Pores of the Body; even as Creatures lying all the Winter in holes, do live only by transpiration, because they are exceeding cold, and that little heat they have, needs no ventilation by way of drawing in Air into their mouths.

Besides, The fore mentioned cause of Womb-suffocation, viz. A malignant and venemous vapor, some ad another, namely, The ascending or rising of the Womb into the superior parts of the Body, whereby the Stomach and Midrif are compressed; from whence, not only Hysterical Suffocations, but other sicknesses also do arise. This ascending of the Womb, *Hippocrates* propounded in his Book of the Nature of Women, in these words: *The Womb of Women being turned from their Natural posture, do strive towards the Liver, and bear violently upon the Midrif; for they are carried upwards, seeking moisture to refresh them, being over dried with Labor; and the Liver is the fountain of pleasing moisture.* And *Fernelius* in his sixt Book of *Pathology*, that is, of Diseases and their causes, Chap. 16. saies, he had often felt the Womb thus ascending, bearing up against the Stomach like a round Globe, and grievously oppressing the same, from whence it hath been often thrust down by force of hand, and manifestly driven back into its own proper place. *Eustachius Rudius* in the Second Book of his Practice, in the 51. Chapter, saies the same thing, viz. That he with his own hands hath felt the Womb raised as high as the Navel, and somtimes above the same, and hath by little and little thrust the same down into its proper place. But *Galen* in his sixt Book of Parts affected, Chap. 5. opposes this Opinion, and teaches that although the Womb may in some sort be moved, and ascend, yet that motion and ascention is very little, neither is it any waies possible, That the Womb should ascend unto the Stomach, so far is it from being able to transcend the same so far as to reach unto the Midrif. A very strong Reason hereof is brought from Anatomy, seeing the VVomb is so fastened in its proper place by four very strong Ligaments, that cannot be lifted up so high. VVhereunto the Defenders of this Opinion do make answer, That in the falling out of the VVomb, those Ligaments are so relaxed that it is wont to come without the VVater-gate, and therefore it may ascend as far up as it can go down, when those Ligaments are relaxed or slackened. To this we reply, That the falling out of the VVomb comes to pass by little and little, through length of time, by the moistening and softening of the Ligaments, caused by a defluxion of Flegm thereupon; but that which they call the Ascent or Rising of the VVomb or Mother, happens in a moment, and is as soon restored; and it is requisite that the Ligaments should have been first relaxed, and consequently all VVomen should be troubled with the falling out of their VVombs, who are subject to this Ascent or rising we speak of, because the occasions of this Ascent being ceased, the VVomb would of its own accord, and by its own proper weight fall downwards, and lie continually without the Body.

It is harder to make Answer to the Experience of *Fernelius*, *Rudius*, and others; of which they testifie themselves eye witnesses, who profess they have with their own proper hands perceived the Womb to ascend like a Globe or Bowl to the Navel and higher, being afterwards by them thrust down into its own proper, place. *Sennertus* makes answer to this, that the round body which was by them so felt, was not the Womb, but the Stones, with that blind Vessel, which from *Fallopius* the finder or first Observer thereof is called *Fallopious* his Trumpet, because he likened the same to the broad end of a Trumpet. For the Stones appertaining to the Womb being pendulous (that is, Hang dangling movable as on strings) and the Body of the Trumpet aforesaid being hollow as a pipe, lax and apt to move this way, and that way; when they are filled with corrupt Seed, with vitious Humoes, and with windy Vapors, and swell and strout again, they may move this way and that way in the lower Region of the Belly, and ascend as high as the Navel. And that such a round swelling may happen in the Stones and Trumpet, as is somtimes felt in hysterieall Women. The observations of *Riolanus* may teach (propounded in his Book called *Anthropographia*, where he relates) that in hysterical Virgins such as have had the Womb-sickness, He had found their Stones greater than his Fist, strouting with wheyish seed; also the Trumpet of the womb amplefied or inlarged and very much widened. And *Salius* observed some such thing in a certain noble yong Damsel troubled with suffocations or strangling of the womb, in whom one stone was swelled to the greatness of a large hand-bal, being filled with a saffron-color'd humor, very stinking, and sending forth a filthy and poysonsom kind of vapor: Which humor dyed the adjacent parts yellow, just as we see the Gut Colon where it is carried under the Liver, is by the Bladder of Gall rendered of a clay-like yellowish Colour

Yet is not *Sennertus* very far from the judgment of the Authors aforesaid; for granting, as he saies, that the Stones and Trumpet of the Womb, being filled with corrupt sperm, vitious Humors, and vaporous winds, do strout again, move to and fro in the lower Region of the Belly, and can ascend as high as the Navel; seeing those parts are contiguous with the Womb, they cannot be moved in the Region of the lower Belly, nor ascend unto the Navel, unless the Womb be moved with them:

them: ſo that this motion may be aſcribed to the whol Womb very well, as it conſiſts of its owne perfect parts together with ſuch parts as are knit there unto. Againe if the Stones and Trumpet being filled with vitious Seed, Humors or vapours, may be diverſly moued to and fro: Why may not the Womb being filled with like Humors and vapors, be moved with the ſame motion. The reaſon indeed of *Sennertus*, which he borrowed from *Galen* does convince, that the VVomb tied with four ligaments, cannot aſcend ſo high as the Midrif, no not as high as the Stomach; but it muſt not be denied, that it may be carried as high as the Navel, where the Authors aforeſaid perceived that Globe, both becauſe thoſe Ligaments may be ſomwhat ſtretched by matter working in them like yeſt, and like-wiſe becauſe the womb whiles it is blowne up, fils a greater ſpace, and may be perceived towards the Navel; ſo that whether the whole womb, or the parts faſtened there unto. *viz.* The Stones and the Trumpet be moved upwards, we may ſtill call it the Riſing of the VVomb or Mother and cleave to the Doctrin of *Hippocrates*.

Head-ach from the womb, comes divers waies; for ſomtime it poſſeſſes the whol Head, otherwhiles the forepart, and then again the hinder part thereof, and ſometimes it is felt about the Eyes, in ſuch manner as if the Patients Eyes would leap out of her Head.

Now theſe pains are cauſed by the aforeſaid ſharp and malignant Vapors mounting into the Head, and twitching as it were, or grating upon theſe Membranous parts: Alſo evil humors brought from the womb to the Head, may cauſe the ſaid pains. For vitious Blood; eſpecially the more thin and wheyiſh part thereof, aſcends from the womb into the Head, and being ſhed into the Membranous parts, breeds thoſe pains. VVhich pains are ſomtimes, pricking, ſmarting, and ſore as an Ulcer, by reaſon of the ſharpneſs of the Vapors, or Humors aſcending: Sometimes they are ſtretching, as it were, and ſwelling, becauſe of the plenty and multiplicity which diſcend and ſtretch: Somtimes they are pulſatory pain, beating like the Pulſe; when the Vapors or Humors are carried thither in the Arteries, or when the Arteries of ſome peculiar part of the Head are filled with over hot Blood.

The Falling-ſickneſs ſprings from the womb, being cauſed by the aforeſaid ſharp and malignant Vapors, which being poſſeſſed with a very great Acrimony and malignity, do vehemently, and ſharply ſmite the Nervous parts, whereby they come to be contracted, and whilſt they endeavor to expel what offends them, they draw themſelves together, and expreſs theſe convulſive motions.

Palpitation of the Heart, is often cauſed by the ſaid Vapors, being carried from the womb to the Heart, and provoking the expulſive faculty to the Heart.

Alſo a Pulſation is cauſed in the Arteries of the Back, and about the ſhort Ribs, by reaſon of an over hot Blood, carried from the womb into thoſe Arteries, and diſtending them, whereby their Pulſation becomes greater, which ſmiting the adjacent parts, cauſes a feeling of the ſaid Pulſation in them: Yet, ſomtimes ſuch Pulſations are cauſed in Hypochondriacal melancholly, which when we come to the Signs of this Diſeaſe, we ſhal diſtinguiſh.

Divers diſorders are likewiſe raiſed from the womb, in the ſtomach, liver, and ſpleen; from the ſtomach diſorders ariſe, as appetite loſt, or more than is fit, or deſirous of abſurd things; or Hiccoughs, Vomitings, Belchings, & Heart-burnings: al which Symptoms do ſpring from the aforeſaid vapors ſent into the ſtomach by the Hypogaſtrick, and Cæliack arteries, or other blind paſſages; & thoſe vapors do ſtir up this variety of Symptoms, according to the diverſity of their Nature, and the different degrees of their putrefaction, and malignity. For by their heat they cauſe want of appetite, and thirſt; but if they be cold they hurt digeſtion. And the coveting of abſurd things (as Chalk, Oat-meal, Smalcoles, Linſey-Wolſey cloth, &c.) is cauſed by the malignant quality of the Humors, and Vapors; as we have ſhewed in our Diſcouſe touching that Symptom: and according to the different kind of malignity, it comes to paſs that the Patients appetite inclines her too long, for this, or that od thing; as ſome for Coales, others for Clay, or Morter, Salt, Cinnamon, Nutmegs, &c. And from a certain kind of malignity ſprings likewiſe, the loathing of ſome certain meats; and which is more wonderful, in ſome hath been obſerved an univerſal loathing of al kind of Drink; as *Ludovicus Mercatus* relates concerning a noble Gentlewoman, which would not away with any Drink, and of another, who though ſhe deſired Drink, yet did ſhe Vomit it al up again, being likewiſe vexed with other grievous Symptoms. Where we may conjecture, that the evil Humors in that Gentlewoman, had attained ſuch a kind of malignity, as that is which cauſes Water-Fear in ſuch as have been bitten with a Mad-dog. It is, notwithſtanding, undeniable, that the diverſity of parts into which theſe Humors, and malignant Vapors are carried, conduce not a little to the variety of the Symptoms. For; If they are carried unto the mouth of the Stomach, they ſtir up Belchings, and Vomitings; if they ſtick to the Coates of the Stomach, they induce perpetual inclinations to Vomit; if they are endued with any ſingular Acrimony, they cauſe Hiccoughs, or pains of the Stomach; which pains may alſo ariſe from the plenty of Humors, weighing heavy upon, and ſtretching the parts containing.

The Liver is eaſily offended by menſtrual Blood retained, and by the Veins flowing back therein-to; hence ſprings the Green-ſickneſs, by reaſon of bad Blood flowing from the Womb into the Li-

ver, and from the Liver ſhed abroad into the whol Body. Hence come Swellings, Feavers, and other Diſeaſes very many, in the whol Body, and ſeveral parts thereof, forasmuch as all of them are nouriſhed by the Liver.

But if the vitious Blood aforeſaid do flow back from the Womb unto the Spleen, Swellings, Stoppings, and melancholick, and Hypochondriacal Diſeaſes are wont to be raiſed.

And, To conclude, Women feel divers kinds of pains in their Loyns, Thighs, and other parts, which ariſe from filthy Humors, and Vapors conveighed from the Womb into the ſaid parts: All which Symptoms, taking riſe from the Womb, ſhal be diſtinguiſhed from others which ariſe from other parts, and are like them, but produced from different cauſes; in our following Deſcription of the Signes of this Diſeaſe.

In the firſt place therefore, Womb-ſickneſs is known for the moſt part by what hath already been ſaid of it. For the fore recited Symptoms do appear therein, not al in every one, but ſome in one Patient, ſome in another, according to the differing condition of the Cauſes. Now theſe Symtoms are, Breathing depraved ſo, as ſometimes the Patient ſeems to be choaked; otherwhiles her breathing is leſſened or wholly taken away, without any trouble or Sence of Suffocation; Refrigeration, or cooling of the whol Body, and ſtopping or Interception of the Pulſe; ſomtimes alſo a taking away of Sence and motion; ſomtimes Ravings, Convulſions, Swoonings, Vomitings, and Hiccoughs are joyned together.

But for a more clear Diſcovery of this Diſeaſe, thoſe Signs are firſt to be propounded, which ſhew the Diſeaſe approaching, ſuch as have a noyſe in their lower Belly (firſt from the Navel downwards) with belching or inclination to Vomit; Wearineſſes, Yawnings, and ſtretchings, proceeding from a flatulent matter, which begins to mount from the Womb into divers parts of the Body; a ſad Look pale Face caused by the drawing back of the Natural heat, from thoſe Parts, to it's Fountains.

When the Diſeaſe gathers ſtrength, a ſence of ſtrangling begins to trouble the Patient, as if they had ſwallowed ſome great morſel which ſtuck in their Throat. Afterward their breathing ſtops, and their Suffocation is increaſed. And in concluſion al their Vital, and Animal actions, are depraved, diminiſhed, or aboliſhed. Hence ſpring Ravings, Convulſions, and other grievous Symptoms. In ſome the Womb is ſenſibly toſſed and tumbled, and gathered round like a Foot-bal; and felt after that manner in divers parts of the lower part of the Body. And when the Hyſterical, or Womb-Fit begins to go over, a certain moiſture flows out of the Water-gate, their Guts rumble, they lift up their Eyes, redneſs ſprings up in their Cheeks, Sence and motion is reſtored, their Body grows warm, they fetch deep Sighs, and ſo the Sick-Party by little and little, is freed from her Fit.

By the Signs propounded, Womb-ſickneſs may eaſily be diſtinguiſhed from ſuch infirmities as are of kin, or otherwiſe like the ſame, *viz.* the Syncope (Swooning-ſickneſs) Apoplexie (blaſting Planet-ſtriking)) and the Falling-ſickneſs: howbeit the difference between Womb-ſickneſs, and thoſe diſeaſes aforeſaid is peculiarly to be noted.

And in the firſt place, by three general Signs we may conjecture that theſe Symptoms which are common to Womb-ſickneſs, and the aforeſaid maladies, do proceed rather from the Womb, than from any primary miſaffection of the Heart or Brain. The firſt whereof is, that if the ſick Patient be ſubject to Womb-ſickneſs, and hath been often anoyed with aforeſaid Symptoms; when they come afreſh, we may conclude the Diſeaſe to be no other than Womb-ſickneſs. The ſecond is, That when Women begin to feel thoſe Symptoms, they complain that their Womb is out of order. A third is, That in Womb-ſickneſs Women do feel great eaſe when ſtinking things are put to their Noſes, and ſweet ſmelling things are put in by the Water-gate, which in thoſe other infirmities falls not out.

And the Hyſterical, or womb-ſickneſs is more peculiarly diſtinguiſhed from that which we cal Syncope, or the Swooning-Fits, becauſe in the Syncope, the breathing and Pulſe do wholly ceaſe; but in the VVomb-ſickneſs, it remaines in a ſmall meaſure, til they come into the very height of the Fit, wherein is moſt danger. Secondly, The Swooning Fits come more quickly, and ſeaze upon the Patient, as it were on a ſudden. But in the VVomb-Fit, there proceed evident tokens of the approaching Fit. Thirdly, The Patients Face is paler in the Swooning-fits, than in the Womb-fits; yea verily, ſome Women have a ruddy countenance in their Fits of the Mother, and than the Diſeaſe is ſufficiently known by that Sign alone. Fourthly, In the Swooning Fits, we find commonly cold, and Diaphoretick Sweats, which in the Womb-fits appear not. Fiftly, The Swooning Fits are ſhorter, and the Patient is ſoon either wel or dead; but the ſtrangling Fits of the Mother laſt longer, continuing a whol day, or divers daies together ſometimes. But it is to be remembred, that the Swooning-ſickneſs, and the Womb-fits are ſomtimes joyned together, when the Heart is more grievouſly afflicted than ordinary, or when the Patients ſtrength hath been much weakned by protraction of the Diſeaſe; and then the Symptoms of both Diſeaſes may be mixed one with another.

The Womb-Fit is diſtinguiſhed from the Apoplexie; Firſt becauſe that in the Womb-Choaking

king-Fits, the Joynts are not ſo looſened, neither is the Sence of feeling wholly gone, as in the Apoplexie; but if they be pricked, or have their hairs puld off, they give a ſufficient Sign with their Hands that they feel the pain. Secondly, In perſons Apoplectical, Planet-ſtruck (as the ſimpler ſort do phraſe it) there is a perpetual ſnorting of the Patient, but in the Womb-ſtranglings, not. Thirdly, Womb-ſtrangled Patients when their Fit is over, remember what was done and ſaid, during their extremity; but in the Apoplexie it is not ſo.

It is diſtinguiſhed from the Falling-ſickneſs; Firſt, Becauſe convulſive motions are not alwaies joyned with Hyſterical Suffocations; and thoſe that do accompany the womb-Fits, are not ſo Univerſal as in the Falling ſickneſs, but moleſt only one or two members. Secondly. The Pulſe is greater in the Fits of the Falling-ſickneſs, than it uſes to be when the Patient is wel; but in the Mother-Fits it is quite contrary. Thirdly, In the Falling-ſickneſs, the Patient fomes at the mouth, but in the Mother-Fits there is no ſuch foming. Fourthly, In the Falling-ſickneſs, the Patient remembers not what was done to her during the Fit, but in the Mother-ſickneſs ſhe remembers al, as we ſhewed before. Fiftly, Thoſe that have Fits of the Mother, do in the end of the Fit come to themſelves like perſons awaked from ſleep, with a noyſe in the lower part of the Belly, the Womb as it were becoming quiet, and returning to it's Natural place, and ſometime much humor flows from the Womb, which doth not befal ſuch as have the Falling-ſickneſs.

We muſt alſo enquire how ſuch as are in the Fits of the Mother, may be diſtinguiſhed from thoſe that are quite dead; ſeeing many Hiſtories relate that ſome Women in that Caſe have been accounted dead, appointed to buryal; yea, and ſome buryed. The waies which Authors preſcribe to make this tryal, are divers: For either they lay teazed wool, or light Feathers upon the Patients mouth, and if they ſtir not ſhe is given over for dead; or they apply a bright looking Glaſs to her mouth, which will be dulled with her breath, if ſhe be yet alive; or they ſet a cup full of water upon her breaſt, and if the water ſtir not, they account the party dead. Theſe Signs do for the moſt part hold good, but they are not perpetual, neither do they put the matter paſt diſpute; ſeeing as was ſaid before, ſome VVomen in theſe Fits do live only by Tranſpiration, as thoſe live-wights which live in holes al the winter, and fetch no breath at al by their mouths. VVhich though it very ſeldom fals out, yet it is a very good Caution, not to ſuffer women which die of this Diſeaſe, to be buried til the third day after their death, or at leaſt til they begin to ſtink.

The Signs of the Cauſes are likewiſe to be declared; which Cauſes we have ſhewed to be three, *viz.* Seed retained and corrupted; Menſtrual Blood in like manner retained and corrupted, and vile humors contained in the veſſels, or in the Cavitie of the womb.

If this Diſeaſe ariſe from Seed retained, or corrupted, there have preceeded al thoſe Cauſes, which might encreaſe, gather together, and corrupt the Seed in the veſſels; as flouriſhing age, ripe for Generation, or formerly accuſtomed to the actions thereof, which of late it hath left off; Sanguine complexion, an idle life, and given to pleaſures; a rich and plenciful table, with the uſe of ſuch meates as are eaſily corrupted. In ſuch perſons if the womb-Fits happen, they having their Courſes wel, we may gueſſe they come from Seed retained.

If theſe womb-Fits depend upon the Menſtrual Blood retained and corrupted, as their cauſe; the Patients Courſes are either wholly ſtopt, or flow very little, and to no purpoſe; and ſhe her ſelf is not to ſeek for carnal Embracements: but wel provided; And ſome Symptoms do attend this ſuppreſſion, as Melancholly, Watſifulneſs, Sluggiſhneſs, Drowſineſs, Head-ach, ſwelling of the Dugs heavineſs of the Loyns and Thighs.

That this Diſeaſe comes from evil Humors is known, by the Patient having her Courſes well, being exerciſed ſufficiently with actions of Generation, by her being ſtept into years, or being very full of evil Humors, or being troubled with ſome other Diſeaſe in her womb.

We muſt alſo ſet down theſe Signs of thoſe other Symptoms which we formerly deſcribed, as ſpringing from the womb.

Head-ach coming from the womb is known, becauſe the Patient hath not her Courſes right, the pain does chiefly trouble her, or is moſt increaſed, at, or neer the time of her Courſes flowing, and her womb is out of order. Alſo we may diſtinguiſh whether an Humor, or a Vapor cauſe this pain; for if the pain be not great, heavy, and preſſing, and come by fits; it comes certainly from a Vapor: but if the pain be continual, joyned with heavineſs, it ſhews an Humor contained in the part; which if it be Chollerick, the pain is biting, pricking, and acute or ſharp; if it be Flegmatick, it cauſes ſleepineſs; if Melancholly, Sadneſs.

Pantings of the Heart, and beatings of the Arteries about the ſhort Ribs and Back; Diſeaſes of the Stomach, Liver, and Spleen; and divers pains may be conceived to ariſe from the womb, if theſe other Signs and Symptoms of the womb affected, before recited, be likewiſe preſent. As alſo, if by putting ſweet ſmelling things to the water-gate, and ſtinking things to the Noſe, the Patient do find ſome kind of eaſe.

What concerns the Prognoſtick, or Predictions of this Diſeaſe; If it is a malady which ſeldom kills

kills the Patients, but uſes to ſtick a long time by them. But ſomtimes they are in danger of death by reaſon of ſwooning fits that happen, or by ſome extraordinary Convulſion. Likewiſe if the fits are frequent and hard to be removed, it is to be feared, leſt Reſpiration being ſo often hurt, the Native heat ſhould be ſuffocated, and the Patient come to die.

That Womb-paſſion is worſt, in which more parts are drawn into conſent; and that is bad which ſprings from corrupted Seed, or from a long ſuppreſſion of the monthly Courſes.

In Elderly perſons, this Diſeaſe is hardly curable, becauſe of that plenty of Corruption wherewith they are wont to abound. In yonger VVomen, it commonly ceaſes when they begin to bring forth Children.

In VVomen with Child, and that lie in Child-bed, it is a dangerous Diſeaſe; in the former, for fear of Miſcarriage; in the latter, becauſe of their weakneſs after Child-bearing.

For a VVoman troubled with theſe VVomb-fits, to ſneeze is good, for it ſignifies ſtrength of Brain; and by the motion of ſneezing, the Malignant Vapors which beſiege the Brain, are diſcuſſed; and likewiſe the vitious Humors contained in the VVomb evacuated.

A twofold Cure belongs to this Infirmity: one in the fit, another out of the fit. In the fit, thoſe vapors which cauſe it are to be diſcuſſed and drawn back from the part affected; the Humors contained in the VVomb which ſend up thoſe Vapors, muſt be voided; and the VVomb when it is removed out of its proper place (which often happens according to *Hippocrates*) muſt be reſtored to the ſame again.

Firſt therefore, The ſick party muſt be laid upon a bed in ſuch a poſture, that her Neck and Shoulders lie high and ſloaping, but her Thighs and Privy parts lie low and ſhooting downwards, for ſo the VVomb is more eaſily reduced.

Then muſt her lower parts be tied very hard, ſo as to cauſe pain; likewiſe they muſt be well rubbed and chafed; alſo Cupping-glaſſes are to be ſet upon her Hips; and a very large Cupping-glaſs ſet upon her Share is very profitable. But take heed that you do not apply a Cupping-glaſs upon the Patients Navel, which many ignorantly are wont to do, for by that means the VVomb is drawn upwards again. VVhen Convulſions happen, or ſwooning fits, hard rubbings with courſe cloaths are good upon the ſoals of the Feet, alſo with Vinegar and Salt; it is good likewiſe to pluck off ſome Hairs from the Head and Share, to cramp the fingers of the Patient, whoop aloud in her ears, and ſuch like.

It is alſo good to lay unto the ſoals of her Feet, this Epiſpaſtick, or drawing Cataplaſm or Pultis.

Take *Leaves of Artemiſia (Mugwort) Feaverfew, Rhue, of each a handful: Sage, half a handful: Pidgeons dung poudered three ounces: Black Soap an ounce and an half: Amber, Frankinſence, Maſtich poudered, of each a dram and an half: Juyce of Rue, and Vinegar, allayed with Water, as much as ſufficeth to make all into a Cataplaſm.*

At the ſame time, ſtinking and ſtrong ſmelling things are to be put unto her Noſe; as Partridg feathers burnt, old Leather burnt, and Brimſtone fired, Jeat or Agate Oyl, a Pomander of Aſſafœrida, Caſtoreum, Galbanum, Rue, moiſtened with Syrup of Artemiſia, or with Vinegar; Garlands of Rue, Tanzy, Wormwood. But if the VVoman be Epileptick, or ſubject to the Falling-ſickneſs, we muſt abſtain from the ſtronger things before mentioned, becauſe the Brain being therewith offended, is put into a Commotion, by which means the Humors are tumbled ſuddenly into the Ventricles thereof, and the Syptomes are made more grievous.

The ſmoak of Tobacco blown into the Mouth and Noſtrils of the Patient, does quickly free her from the fit.

Contrary wiſe, ſweet ſmelling things muſt be put unto the VVomb, as ſome grains of Muſk or Civet wrapped in Cotton-wool.

The following Pouder may be blown up her Noſtrils.

Take *white Pepper, Muſtard ſeed, Pellitory, Caſtoreum, of each one ſcruple; make it into a very fine Pouder.*

If the Patient be very much oppreſſed with her fit, let her be provoked to ſneeze, according to that Aphoriſm of *Hippocrates*, his 5. Section, 35. *To a Woman troubled with Womb-fits, or hard Labor, if ſhe happen to neeze it is good.* Neezing is many times provoked by the foreſaid Pouder; and if that alone will not do it, a little white Hellebore, or Euphorbium may be added.

Alſo Oyl of Amber or Agates, may be anointed upon her Noſtrils.

But laxative and wind-expelling Clyſters do exceed all other Medicaments, in diſcuſſing ſuch filthy Vapors as cauſe the fit: which may be made after this manner:

Take *Mercury Leaves, Pellitory of the wall, Mugwort, Penyroyal, Rue, Calaminth, of each one handful: Caraway ſeeds, Cummin ſeeds, and Bayberries, of each two drams: Boyl all to a pint and an half. In the ſtraining diſſolve* Hiera Picra, *and* Benedicta laxativa, *of each ſix drams: Oyl of Rue three ounces: Camphire half a ſcruple. Mix all into a Clyſter.*

If the firſt Clyſter be not ſufficient, another muſt be given of the ſame or ſuch like Decoction, diſſolving therein, Diaphœnicon ten drams: Turpentine diſſolved with the white of an Egg one ounce: the aforeſaid Oyl, and half a ſcruple of Camphire diſſolved in Oyl of Water-lillies.

And in a word, The Diſeaſe continuing, a third Clyſter muſt be given meerly Hyſterical and diſcuſſing, but not purging, which will be very effectual, compounded after this manner:

Take *Oyl of Rue four ounces*: *Aqua vitæ one ounce*: *Canary Sack three quarters of a pint*: *Galbanum two drams*: *Mix all, and make a Clyſter, and adminiſter the ſame after a Laxative Clyſter.*

A Clyſter of Vinegar, tempered with Water, does preſently aſſwage the Mother-fit, by compreſſing and coagulating the vapors, which cauſe the ſame.

The ſame does a draught of Vinegar allaied with water, being taken in at the mouth.

Authors do likewiſe counſel that the Patients belly above the Navel, be ſtrongly girt with a ſwath-band, that the womb may be thereby reduced, and the vapors hindred from aſcending.

Concerning letting blood, it is a great queſtion, Whether it be convenient in the fit, or no? For ſeeing there is at that time a great weakneſs in the Patient, and ſometimes deſpair of life, and the body is cooled all over by malignant vapors which infeſt the Brain and Heart, which can no waies be expelled by blood-letting; no queſtion the uſe thereof is very dangerous during the fits. And of this Opinion are *Varandæus* and *Sennertus*. But *Mercatus* and *Rodericus a Caſtro*, do determine contrarily, That a Vein ought to be opened in the Patients Ankle or Inſtep, when the Diſeaſe ſprings from an abundance of Menſtrual blood retained; and that the Patients ſtrength oppreſſed with the burden, the paſſages obſtructed with too much blood, and the danger of ſuffocation hence ariſing, can be remedied by no other means but bleeding; ſeeing in this caſe, neither ſtinking ſmels, nor ſweet ſmels, nor Cupping-Glaſſes, can bring the Patient out of her fit. *Philippus Hoechſtetterus* in the ſecond part of his Obſervations, makes it appear by certain Hiſtories, that bleeding in the Foot hath done much good: Inſomuch, as a certain Nun, which had been ſpeechleſs, and in Convulſion fits for two daies together, two hours after ſhe had bled, began to ſpeak, and to eat and drink. I am of Opinion, a Vein may be opened, if the Pulſe be ſtrong, and there be evident tokens that blood doth ſuper-abound: But if the Pulſe be weak, we muſt forbear, and ſtay till the fit is over for a more convenient ſeaſon, in which blood may be ſafely taken away.

Plaiſters are profitably applied under the Navel, of the Maſs of *Emplaſtrum Ceronum*, which molliſies and diſcuſſeth, and ſo is better than the vulgar Womb-Plaiſter, which doth ſomwhat bind, and therefore may retain the vapors and malignant humors. Plaiſters are likewiſe made of Galbanum and Aſſafœtida, or of Caranna, and Tacamahaca, either alone, or with ſome Spices mingled with them. As for Example:

Take *Gum Caranna half an ounce*: *Pouder of Nutmegs, and Cloves, of each half a dram*: *Oyl of Amber four drops*: *Turpentine two drams. Make all into a Plaiſter. Such Plaiſters are to be made in faſhion of a Shield, or Scutcheon. and in the pointed part of the Plaiſter, which muſt be laid towards the Water-gate, ſome grains of Muſk or Civet are to be put, that they may ſend forth a ſweet ſmell, and thereby allure the Womb back again. Three grains of Muſk may be put in a little Cotton, moiſtened with Oyl, and thruſt into the hole of the Navel: then lay on a ſmal Plaiſter of diſſolved Galbanum. This ſome Women uſe for a Secret.*

Or four grains of Camphire may be diſſolved in Oyl of ſweet Almonds, and put into the Navel, and a Diapalma Plaiſter laid over it.

If the Diſeaſe ſeem to be ſoſtered by plenty of wind and vapors, Fomentations and Baths will be good, of the Decoction of Rue, Mugwort, Time, and Calaminth, Fennel ſeed, Annis ſeed, Cummin ſeed, Bay-berries, Chamomel Flowers, Dill flowers, &c.

Alſo little bags may be prepared with Cummin ſeed, Annis ſeed, Carrot ſeed, Salt, Rue, Bran, in them, and applied very hot, and often renewed Or,

Take *Oyl of Rue four ounces*: *Spirit of Turpentine half an ounce*: *Mingle them, and dip therein a piece of Bread hot out of the Oven, and lay it upon the Navel.*

Alſo it will be good to anoint the lower part of the belly, the Region of the womb, Share, and Loyns; becauſe ſuch anointings do dilate the Paſſages, attenuate the Vapors, and diſcuſs them. They may be made of Nard Oyl, Spike Oyl, Oyl of Dill, Seſamine, Saffron, Lillies, and Sweet Almonds.

Authors do very much commend a fume of the warts which grow upon Horſes Legs; which being dried in an Oven, and beaten to Pouder, they are burnt under the Noſes of women in theſe fits as a preſent Remedy, whereby women are wont to be in an inſtant delivered of their fits, to the admiration of the by-ſtanders.

If the Diſeaſe ſpring from Retention of Seed, nothing is better than carnal Conjunction, as ſoon as the Patient is out of her fit, if ſhe be married.

Inſtead of carnal Conjunction, where that cannot be had, many adviſe that the Patient be rubbed and

and tickled by a Midwife in the Neck of her womb, into which the Midwife muſt put her fingers anointed with Oyls of Spices, that ſo the offenſive Speech may be voided. But ſeeing that cannot be done without wickedneſs (underſtand by a ſilly ſuperſtitious Papiſt, that counts it a meritorious good work to burn Mother and Child in her womb alive, as at *Jerſey*, and a wickedneſs to free a ſick body of a little offenſive humor) a Chriſtian Phyſitian muſt never preſcribe the ſame.

To Diſcuſs thoſe malignant Vapors which cauſe the womb-fit, many Medicines are wont to be given down the Throat, among which is a dram of old Venice Treacle, with water of Mugwort, Peny-royal, and Balme; Troches of myrrh, to the quantity of two ſcruples: or Oyl of Amber to five or ſix drops, with the ſaid Liquors.

Pills are frequently uſed; the beſt are made after this manner.

Take *Caſtorium, Myrrh, Aſſa-fœtida, of each one ſcruple: fœcula Brioniæ half a ſcruple: ſeeds of Rue and Saffron, of each ſeven grains: with Syrup of Mugwort make twelve pills. Let her take three or four; if ſhe cannot ſwallow them, let them be diſſolved in Water of Mugwort.*

Theſe following Pills are good in a violent fit, which they are wont to remedy without fail.

Take *Aſſafœtida one ſcruple: Caſtoreum ſix grains: Laudanum three grains; make all into three or four Pills. Let her take them preſently.*

Pilulæ Fœtidæ majores, although they be purging, yet are they given to good purpoſe in the Fit, to half a dram. For they gently evacuate, and are not wont to work till the fit be over; ſo that there is no danger in their working.

Alſo many waters are wont to be given in the fit, *viz. Aqua vitæ*, Cinnamon water, or Treacle water.

Or a ſpecifical water may be made after this manner.

Take *Zedoary roots, Carrot ſeeds, Lovage roots, of each two ounces: red Myrrh, Caſtoreum of each half an ounce: Piony roots four ounces: Miſſeto of the Oak gathered at the wain of the Moon, three ounces: powr upon all theſe being prepared, four pints and an half of Feaver-few-water. Spirit of Wine half a pint; let them digeſt three daies, and afterward ſtill them. The doſe is a ſpoonful, by it ſelf, or with ſome other convenient liquor.*

A more eaſie water to make, more pleaſant to taſte, and no leſs effectual is this following.

Take of *the juyces of Bawm, and Borrage clarified, of each two pints: the beſt Saffron one dram. Let them be infuſed, and diſtilled in* Balneo. *The Doſe is a ſpoonful with Broth. This following potion is vulgarly uſed.*

Take of *Cinnamon Water half an ounce: Turnep Water four ounces: Caſtoreum four grains. Make all into a potion, or draught.*

Oyl of Amber given to three or four drops, in Orenge-flower-water, or ſome other ſpecifical, doth quickly rid away the womb-fit.

The following potion is wont to do very much good, as it is to be ſeen in our obſervations.

Take *Water of Mugwort, Roſes, and Orenge-flowers, of each one ounce: Cinnamon Water three drams: Confection of Hyacinth ſtone one dram: Diamargaritum frigidum (that is the cooler perled pouder) half a ſcruple: Saffron four grains. Make them all into a potion.*

Orange flower water doth good alone, given three or four ounces; but mingled with Musk, and Dragons blood, it doth wonders: witneſs *Solenander* in theſe words. *A certain Woman was vexed with moſt cruel Symptoms, Head-ach, Belchings, contraction of the Body, pain in her Groin, grinding of her Teeth; ſomtimes falling to the ground ſpeechleſs, with her mouth ſhut, ſo as ſhe could not open it; and all this through diſorder of her Womb. Many remedies being uſed in vain, a certain old Woman comes, and gives her thirteen grains of Musk, and as many of common Dragons blood, in four ounces of Orenge-flower Water; ſhe was cured, and never felt the like griefs any more. I have in the like caſe given the ſame Medicine divers times, and alwaies with good effect.*

An Elks Claw is alſo very good in theſe fits, according to the experiment of *Appollonius Menabeus* in his Treatiſe of the Elk. Chap. 10. in theſe words. *I confeſs I have both heard from others, and found by my own Experience, that an Elks Claw is a preſent remedy for the Suffocation of the Mother. For being called to help a Woman in thoſe Fits, I gave her the raſpings of the Elks Claw with Zedoary, with which, and with other remedies adminiſtred according to the rule of Art, I did the Cure with Honor. And when I underſtood, that ſhe was wont to be troubled with thoſe Fits oftentimes, I injoyned her to wear a piece of Elks Claw continually about her Neck: Which when ſhe diligently obſerved, for the ſpace of three months that I was in the place, ſhe was ever free from thoſe Fits, and gave me often times thanks for my advice.*

Camphire fired, and caſt into the water, and there abiding till it be quenched, is an excellent Remedy, given to the quantity of a dram.

The Cats-tails of the walnut, in the Epiſtles collected by *Laurence Scholtzius*, in the Letter written from *Thomas Mouſet* to *Peter Monavius*, are extolled with this Commedation. *In Srangulation of the Womb, the Cats-tails of the Walnut tree, are a ſingular Medicine being dryed, and poudered.*

You

You may give two ſcruples with two drops of Oyl of Amber. I never knew any thing more excellent in that Diſeaſe.

Two moſt excellent Remedies may be made in the form of Pouders, which I have oftentimes tried.

The one is of the After-birth of a woman that lies in of her firſt Child, dried in the Chimney, and beaten to pouder. The Doſe is a dram in ſome convenient liquor. It preſently takes away the fit.

The other is made of two parts of Brimſtone, and one of Nutmeg. Pouder them and give a dram.

Pouder of Jeat given to half a dram, or one dram, will do much.

The Pouder of Elder-berries of Quercetanus taken a dram in Wine, cures the Epilepſie, or Falling-ſickneſs, by conſent of the Womb, and being taken the ſecond time, makes that the fits return not.

Where that Pouder cannot be had, the ſame quantity of Soot from the Chimney, may be given in an Egg ſoft boiled.

And becauſe the Womb is oftentimes filled with evil, and Excrementious Humors, from whence ugly Vapors are raiſed up; we muſt be careful to purge the ſame, which may be moſt conveniently done by this following Peſſarie.

Take *Diaphœnicon one dram*: *pouder of Hiera picra half a dram*: *Turpentine three drams*: *mix all, and with Tow make a Peſſary.*

For her ordinary drink let the Patient drink a thin weak Decoction of Cinnamon, Caraway, or Annis ſeeds.

Touching Wine, It is a queſtion whether it may be given a Woman in theſe fits. *Hippocrates* in his firſt Book of the Nature of Women ſeems to commend the ſame: and there is much reaſon to back his opinion. For an extream refrigeration of the Body, and Languiſhment of natural ſtrength, cannot be better holpen, than by giving the Patient a Cup of rich Canary. But *Avicenna* wholly forbids it. And indeed, Becauſe this Diſeaſe depends for the moſt part upon Seed retained, or of Blood and foul Vapors carried up from the Womb: Wine by it's thinneſs, and exceeding piercing faculty, doth more exagitate and vex the morbifical matter. Whence we ſee by common Experience, that Women troubled with this Diſeaſe, are worſe if Wine be given in their fits. To Compoſe this Contention, we ſay; that Wine ordinarily is not to be given during the fit, but upon extraordinary occaſion: Namely when the Patients ſtrength is extreamly decai'd, ſhe hath Swooning fits joyned with the Mother fits, or ſeems to be at the laſt gaſp: all other Remedies tried in vain, we make uſe of Wine as our laſt Refuge, and preſent help.

In this Cure we muſt be very careful, if the Patient be with Child, and prudent in our adminiſtration of Medicaments; neither muſt we uſe thoſe more vehement and ſtinking ones, leaſt we cauſe miſcarriage; and we muſt perform the Cure rather by outward than inward Medicaments.

In the Courſe of the Cure, care muſt be taken of the Heart and Brain, and if they ſeem much oppreſſed, they muſt be releived by ſuch Medicines as are proper unto them. To the Heart, Wine, and Orange-flower-water, or Imperial water, or Treacle of Andromachus diſſolved in Wine, muſt be applied by wetting things therein, and laying them upon the Region thereof; or hot living Creatures are to be applied thereunto. For to ſtrengthen the Head, thoſe Remedies muſt be uſed, which are ſet down in our Chapter of ſleepy Diſeaſes.

When the fit is over, Care muſt be taken to prevent the return thereof, either wholly, or at leaſt for a long time: which is done by a removal of the Cauſes, and by ſtrengthening the Womb.

In the firſt place therefore at a convenient ſeaſon; but eſpecially in the Spring and Fall, the Patient muſt be yeerly evacuated, beginning with a purging Potion, or ſome other Medicament ſuitable to the nature of the Patient; alwaies adding Hyſterical things.

And then, If Blood ſeem ſuperfluous, it muſt be drawn firſt out of the Arm, and then out of the Foot; chooſing as neer as poſſibly the middle ſpace between the Patients monthly purgations.

Afterwards, That the redundancy of evil Humors may be ſufficiently prepared and purged out, an Apozeme muſt be compounded, altering, opening, and purging, to be given at four or five times.

If Nature ſeem to incline to the opening of the Hemorrhoids, they muſt be opened by application of Leeches. And *Mercatus* doth witneſs in his 13. and 14. Counſel, that they have much profited in theſe fits.

After general purgation, to diſcuſs the remainders of the morbifical matter, a ſweating Decoction will be good to give divers daies together; made of Saſſafras, Guajacum, with ſeeds of Fennel, Rue, and Agnus Caſtus.

To the ſame intent Sulphurous, and Bitumenous Baths will be very good, ſuch as we have at *Baleruca*, by whoſe uſe many are holpen, as daily experience ſhews.

In this Diſeaſe being of long continuance, beſides the remedies aforeſaid, it will be good to purg the Patient frequently, by uſual Pills, Syrups or Potions. VVhich may be made after this manner,

Take *Troches of Agarick one dram and an half: Hiera of Coloquintida one dram: Carrot ſeed, Agnus Caſtus ſeed of each one ſcruple: mirrh, Coſtoreum, Diagrydium of each half a ſcruple: Turpentine, as much as ſhall ſuffice to make all into a Maſs. Let her take hereof half a dram, or two ſcruples twice or thrice in a month.*

The following Syrup is mightily extolled by *Mercatus*, as a wonderful Syrup, and very profitable for all womb-ſick women. in his 13. Counſel.

Take *Juice of Herb Mercury and the Cream of Carthamus ſeeds of each ſix ounces: Scorzonera water ſeven ounces Sugar as much as ſhall ſuffice to make it into a Syrup. Add hereunto while it boyls, Confection of the Hyacinth ſtone, Confection of Kermes Berries, and Pouder of the Electuary* de Gemmis [*that is, made of precious Stones*] *of each two drams: Let the Doſe be two or three ounces.*

Take *Briony Roots three drams, Senna Leaves half an ounce: Agarick two ſcruples: Ginger one ſcruple: Cinnamon one dram: Let them ſteep all night in Fountain water. In the ſtraining mix one ounce: of ſyrup of Damask Roſes. Make hereof a potion to be taken twice or thrice in a month.*

Pilulæ fœtidæ majores [that is ſtrong ſmelling Pils made of Gums] taken twice in a month to half a dram, are very profitable.

In ſuch as eaſily vomit, it is good to provok to caſt, once or twice in a month, after this manner:

Take *Agarick cakes* [*troches of Agarick*] *one dram and an half: Oxymel one ounce: Bawm water, and Mugwort water, of each three ounces: Mix all into a vomiting Potion.*

Chymiſts give ſalt of Vitriol in ſome appropriate water, from half a dram to one dram, and cry it up for a ſpecifick remedie in womb-fits.

After all particular evacuations are ended (that is after each evacuation) ſome ſtrengtheners are to be adminiſtred, ſuch as this following Electuary.

Take *Conſerve of Roſemary flowers Betony, and Bawm, of each one ounce and an half: Species of the muſked Electuary, and of Electuary of Calaminth of each half a dram: With ſyrup of Mugwort Make all into an Electuary.*

Treacle by it ſelf is very proper for this occaſion, which for hotter conſtitutions may be tempered by the mixture of Conſerve of water Lillies, Maiden-haire &c.

But the following pouder is far more effectual, which heales old and ſtubborn womb-fits, if it be frequently taken one dram at a time, in Wine, in a bolus or morſell made up with ſyrup of Mugwort.

Take *Gentian Roots, white Dittamnus, tormentill, pellitorie, Rhaponticum, Biſtort, Ariſtolochia, or Birthwort the rounder, Chamelion thiſtle, Bay-berries, Angelica, Maſter-wort, Coriander ſeeds prepared, annis ſeed, juniper berries, Maſtich, Bole armoniack,* Terra Sigillata, *of each two drams and an half: Orientall Saffron three ounces and an half. Make all into a fine pouder, and keep it in a cloſe veſſel.*

Neither muſt we omit ſuch Medicaments, which are wont to help theſe fits by a peculiar property thought to be in them: An Example whereof may be this that follows, made in Pills, becauſe of the ungrateful taſte of the Simples.

Take *Aſſa fœtida half a ſcruple: Caſtoreum, Mirrh, Galbanum, Sagapenum, of each one ſcruple. With Honey of Mercury make a Maſs; of which give the Patient half a ſcruple, or a ſcruple frequently.*

Platerus makes Pills of extreamly odoriferous Ingredients, after this manner:

Take *of Muſk ſix grains: Benjamin half a dram: Sugar one dram: With Cinnamon Water make them into a Maſs for Pills. The Doſe is half a ſcruple.*

Thoſe Hyſterical Waters before ſet down to be given in the fits, may likewiſe be profitably uſed out of the fits, a ſpoonful or two in a morning, when the Patient is free, by way of prevention.

Mathiolus extreamly commends the briony Root, in theſe words: *Briony doth wonderfully help Women ſubject to ſtrangulations of the Womb, ſo as to free them from their choaking fits, and cure them. Truly I knew a Woman, dayly almoſt vexed with theſe fits for a yeer together, who being at laſt taught by an ordinary Herb-man, to drink white Wine, wherein an ounce of Briony Root had been boyled, once in a week, when ſhe was going to bed: when ſhe had uſed this Medicine for a yeer together, ſhe was perfectly recovered of that Diſeaſe.*

The Liver of a Wolf dried, and one dram taken, may prevent the fits of the Falling-ſickneſs proceeding from the Mother, if it be given three or four times after an ordinary Purgation.

The Chymiſts do commend *Vitriolum Martis* [that is, Vitriolated Steel, or chalybeated Vitriol, or Salt of Steel] whereof they give a grain or two, with a double quantity of Sugar, many daies together, in Wine or other fitting Liquor.

And

And the Truth is, it may be given to twelve, fifteen, and twenty grains in ſome convenient Conſerve; or it may be made into Pills, with Mucilage of Gum Tragacanth.

Cream of Tartar frequently taken, is alſo very good in the Cure of this Diſeaſe.

Theſe two Medicines do good, not only by opening, but alſo by cooling; for oftentimes an hot diſtemper is rooted in the womb of VVomen ſubject to this Diſeaſe, ariſing from Blood retained within its Veins, and over-heated; as *Galen* ſaies in Hypochondriacal Melancholly, That there is a burning diſtemper in the Parts under the ſhort Ribs, by reaſon of blood retained in them by obſtructions, and there over-heated. Thoſe things therefore which have power to cool the Womb, are very proper in this caſe, ſuch as are Baths to ſit in, Vinegar and Water mingled and drunk down, or injected, and ſuch like. Unto which we may add the Hiſtory related by Dr. *Harvey*, touching the Childing of a woman long afflicted with womb-fits, not curable by all that could be done; who at length, after many yeers, was cured by means of the falling out of her womb: Becauſe her Womb expoſed to the Air was cooled, and ſo its Inflamation and hot diſtemper was repreſſed.

Alſo the uſe of Steel it ſelf is much commended by ſome Practitioners, as very convenient for all Infirmities of the VVomb. VVhoſe Preparations look for in our Cure of Obſtructions of the Liver.

Iſſues made in the Thighs, are likewiſe very good. For they derive and turn aſide evil Humors from the womb, by reaſon of thoſe Veins which are common to the womb and Thighs.

Neither are Amulets to be neglected, faſtened about the Patients Neck, and hanging down upon her Navel, as we formerly mentioned touching the Elks Claw, good in this caſe.

Some commend Peucedanum, or Hog-fennel root, hung in a ſtring about the Neck. And our women do with good ſucceſs, wear a piece of Aſſafœtida in a thin rag of cloth. I have known ſome that have worn a Foxes Pizzle and Stones dried, tied about their Neck in a ſtring, and reſting upon their Navel, and by that means preſerved themſelves from the womb-fits.

Some wear a piece of Wolfs fleſh dried, or of the Liver of a Wolf, not without profit.

As for external Remedies after every Purge, or at leaſt once in a month, eight or ten daies before the monthly Purgations of blood, Fomentations or Baths to ſit in will be good, that the Humor cauſing this Diſeaſe being reſolved, may more eaſily find its way by the opened Paſſages of the Courſes, and flow out with them. They may be made of the Roots of Marſh-mallows, Briony Roots, Orris Roots, Madder, Valerian, Angelica, Mugwort Leaves, Nep, Feverfew, Bawm, Bayberries, and ſuch like.

To diſcuſs the remainders of the Matter cauſing the Diſeaſe, and to ſtrengthen the Womb after Fomentation, or ſitting in a Bath, as aforeſaid, the following Plaiſter may be laid on under the Navel.

Take *Gum Tacamahacca and Caranna, of each two drams: Alipta Moſchata half an ounce: Agnus Caſtus ſeeds, one dram and an half: of each of the Sanders half a dram: Turpentine, Labdanum, Wax, of each as much as ſhall ſuffice to make a Plaiſter.*

If this Diſeaſe ariſe from the Seed retained, uſe thoſe Remedies which we have formerly ſet down to quench and diſcuſs Seed in our Cure of Womb-Fury.

Chap. 7. *Of Inflamation of the Womb.*

INflamation of the Womb, is a Tumor or ſwelling of that Part, ſpringing from blood that is ſhed into the ſubſtance thereof.

And the ſaid Inflamation poſſeſſes either the whol Womb, or ſome part thereof; and it is produced either by pure blood, and is called meerly *Phlegmont*, an Inflamation; or it comes from blood mingled with Choller, and it is called *Phlegmone eryſipelatodes*, a chollerick Inflamation of kin to the Roſe, or St. Anthonies fire; or it hath its original from blood mingled with flegm, and is called *Phlegmone œdematodes*, a flegmatick Inflamation; or it comes from blood mingled with Melancholly, and is called *Phlegmone Scirrhodes*, which is a Melancholick Inflamation or Swelling.

The Cauſes which produce or encreaſe this Diſeaſe, may be divers; viz. A Sanguine Conſtitution over loaded with blood, or infected with choller; a natural looſneſs of the womb with wideneſs of the paſſages, air extream hot, inflaming the humors, or very cold compacting & knitting them together, and ſo ſtopping the monthly Courſes flowing, or ready to flow; vehement Exerciſe, immoderate carnal Conjunctions, a blow or fall lighting upon the Wombs Quarters; Perturbations of Mind more violent than ordinary, eſpecially wrath; acrimonious or ſharp vehement meats, of a hot nature, and whatever elſe is taken in of a fretting and vehement operation, as Authors report of Canthatides, That they are very hurtful as well to the womb as the bladder; ſharp Peſſaries long time uſed, or purging Medicines, or ſtrong alteratives, ſuch as barren women are wont to take and rend from all quarters; Retention of the Courſes encreaſing the over fulneſs of blood; or over great flux of Courſes relax-

ing the Passages, and bringing the Humors from all the parts of the Body to the Womb; likewise Cupping-glasses fastened about the privy parts, may violently draw the blood and humors unto the Region of the Womb, and there detain them. Laborsom Child-birth may cause as much; Abortion, a violent handling of the parts of Generation by an unskilful Midwife; and a troublesom inconvenient bearing of a Child in the Womb.

The Signs to know the Disease by, are, Swelling, Heat, and Pain in the Region of the Womb, with a continual Feaver. But because the strait Gut (that is, that which is united to the Dung-gate) and the Bladder, do lodg in the same quarters with the Womb, therfore must we distinguish this Disease by other signs: such are, Suppression or diminution of the Courses, and their paleness or yellowish citrine color, with pain in their coming forth; and in the absence of the Courses certain stinking and rotten stuff sweats through the Vessels of the Womb, and bedews the VVater-Gate. Whereinto if search be made, it will plainly discover the Disease: for the inner mouth of the womb will be found to swell, to be drawn inwards, and subject to pain if touched; the neck of the womb will appear red and inflamed, the Veins dispersed there-through, strutting with blood.

If the whol Womb be inflamed, all Symptomes will be more vehement. If the Inflamation be rather in the neck of the womb, the heat and pain is spread most towards the Groyns and the Water-Gate. If the former side of the womb do suffer, the Bladders fellow-feeling wil be the greater: If the hinder side of the Womb be inflamed, the strait Gut will be more compassionate, and the pain wil stretch it self towards the Loyns. If the right or left side of the womb be inflamed, the heat and pain wil appear most about the one Groyn; and the Thigh of the same side wil be heavy, and as it were in a sort burdened.

The Signs of the Causes are these. If the Inflamation spring from pure blood, al the Symptomes are milder; but if there be Choller mingled therewith, the Feaver is more burning, and al the Symptomes are more vehement; but if the blood be Flegmatick or Melancholick, the Feaver wil be less acute, but the Disease more lasting, and more stubborn. And here we are to consider such Signs as may inform us what Humor is most predominant in the whol Body.

If the Inflamation turn to an Imposthume and gather Matter, the pain and Feaver are encreased, and shaking fits come without any certain course, yet commonly they take their turn about Evening. And al the other Symptomes are heightened. When Suppression is accomplished, al the Symptomes are mitigated, and Swelling rises higher, whereby somtimes the Excrement of the Guts, or Urine is stopped. But if the Inflamation be discussed without Suppuration, the Swelling lessens, and the Symptomes becomes gentler.

If it turn to a Scirrhus (that is, hard swelling) the Feaver, Pain, and other Symptomes are diminished; the Swelling abides, becomes harder; likewise the weight and heavines remain, both in the womb, and the adjacent parts, so that the Patient can hardly stir her self.

A good Prognostick cannot be made of this Disease because it is very dangerous, and for the most part deadly. But more or less danger is threatened according to the greatnes of the Disease, its Causes and Symptomes, as thus:

If the Inflamation possess the whol Womb, its a desperate Disease; but if only a part be inflamed, there is some hope of help.

If a VVoman with Child have a Chollerick swelling in her womb, its deadly. *Hipp.* Aphor. 43. Sect. 5. For the Child dies by reason of the greatnes of the Inflamation, whereupon follows Abortion, which coming upon the back of a grievous disease, kils the Mother. *Galen* in his Comments upon this Aphorism, doubts if this be not true of every Inflamation of the womb as well as of the Chollerick, and whether it be possible that a Child in such a case can live.

Inflamation of the womb easily degenerates into a Gangrene, Because the womb, as it were the Bodies Close-stool, receives a mighty charge of nasty Excrements, by which the inbred heat is easily suffocated.

Ravings, turning of the womb, Hiccoughs, Coldnes of the Hands and Feet, Diaphoretick sweat seizing on a woman in this Disease, do portend sudden death.

If an Inflamation of the womb come to Suppuration, its hopeful that it may be cured; but a foul Ulcer will follow, which wil make the Patient to pine away with a lingering Feaver, or to fall into the Dropsie.

If the Inflamation turn into a Scirrhus, the evil becomes lasting, and often brings a Dropsie.

To cure this Infirmity, the Course of the Blood to the Womb is to be drawn back, it is to be driven from the womb, it is to be diverted another way: that which is flown in and contained in the part, is to be resolved. And if the swelling tend to suppuration, it is to be furthered, and when it is broken, the Matter or Quittor must be voided out; Which may be done by the following Remedies.

An Emollient and cooling Clyster being premised, let Blood be drawn from the Basilick Vein of the Arm, on that side on which the Womb is most affected; or from both Arms, if the swelling be in the

the whol Womb; and let the Blood-letting be repeated twice, thrice, or four times, according to the ſtrength of the Patient, and the greatneſs of the Inflamation.

After ſufficient Revulſion, the Diſeaſe being come to its height, when there is no longer ſuſpition of any preſent flux into the Womb, the lower Veins are to be opened, to derive from the part affected. In which ſence we muſt underſtand, *Galen* in his Book of Blood-letting, and in his 13. Book of the Method of Healing, where he teacheth, That in the Inflamation of the Womb, we muſt open the Veins about the Knees and Anckles. But ſo long as there remains any Indication of Revulſion, it is better to open the Veins of the Arm.

Alſo to revel or draw back the Humors, Frictions are good, and Ligatures or bindings of the uper parts, and Cupping-Glaſſes ſet upon the Shoulders, Loyns, and Back.

If vitious Humors (eſpecially Chollerick) do abound in the Body, which are as it were the Coach of the other Humors to hurry them about the Body; they are to be evacuated with gentle Medicaments, as Syrup of Roſes, and Syrup of Violets ſolutive, Manna, Rhubarb, Catholicon, or Electuary Lenitive; for ſtronger Medicaments by ſtirring the Humors over much, would excite the Flux of Humors more abundantly to the part affected.

And vomiting Medicaments, though preſcribed by *Avicenna*, ſeem no way convenient in this caſe: For if they be mild and gentle, they evacuate nothing to ſpeak of: If they be ſtronger, they cauſe a great Agitation in the Body, by which means the Humors being in a Commotion, may flow more plentifully unto the part diſeaſed.

In regard of the greatneſs of the Feaver, cooling Medicaments are to be uſed, as Juleps and Emulſions; whereunto, if very great wakings, pain, and tumblings and toſſings do diſquiet the Patient, ſome Narcoticks may be added, which may likewiſe be given by themſelves.

After the Firſt Evacuations, let outward Medicines be applied to the lower part of the Belly, between the Navel and the Share, and about the Kidneys; firſt of all repelling and cooling things, in the form of a Liniment, an Epithem, and Cataplaſm.

The Liniment may be made of Oyl of Roſes waſhed in Vinegar, or of Oyntment of Roſes, *Ceratum Santalinum*, or *Galens* cooling Oyntment, with a little Vinegar added.

The Epitheme may be made of the Waters or Decoction of Plantane, Sorrel, Nightſhade, the tops of white Poppies and Roſes, adding a little Bole-Armoniack, Dragons Blood, and *Terra Sigillata*.

The Cataplaſm or Pultiſs may be made of the Crums of fine Manchet boyled with Milk, to which a little Oyl of Roſes may be added, with Juyce of Henbane. Nightſhade, and the whites of Eggs; or of Barley Meal, Linſeed, Fenugreek ſeed, with Oyl of Roſes; whereunto likewiſe the aforeſaid Plants being bruiſed may be added.

Injections muſt be made into the Womb, compounded after this manner:

Take *Plantane Leaves, Water-lilly Leaves, Nightſhade, and Endive, of each one handful: red Roſes two pugils. Boyl all till a third part of the Water be conſumed: and add to the ſtrainings Oyl of Mirtles one ounce: Vinegar half an ounce. Make an Injection.*

Of the ſame Herbs bruiſed with Oyl of Roſes and Vinegar, Peſſaries may be made, and put into the Womb.

Neither muſt Repelling, and Refrigerating Medicaments be long uſed, leſt the Swelling harden and degenerate into a Scirrhus. Wherefore ſoftening and diſcuſſing things are to be mingled with the repelling Simples; with this Proviſo, That the longer the Inflamation is from its Infancy, the greater muſt be the quantity of Digeſtives. So that to the foreſaid Medicaments may be added, Mallows, Marſh-mallows, Mugwort, Fenugreek, Chamomel, Melilot; their Doſe being augmented or diminiſhed, as the caſe ſhall require.

In the mean while, if the Patient be coſtive, ſhe muſt be helped by gentle Purgatives. Yea, and the truth is, frequent Clyſters may do a great deal of good to temper the Inflamation, ſeeing the Womb reſts upon the ſtreight Gut, called *Inteſtinum rectum*. But let them be little in quantity, that they may be kept the longer, and that they may not compreſs the Womb; of which this may be an Example.

Take *Marſh-mallow Roots, the Leaves of Mallows, Violets, Lettice, of each one handful: Nightſhade half a handful: Violet flowers, red Roſes, of each a pugil: ſowr Prunes, ten: boyl them in Barley Water. In ſix ounces of the ſtrained Broth mix three ounces of Oyl of Roſes, and make all into a Clyſter.*

If the Patient be in great pain, to the aforeſaid Clyſters may be added, the Yolks of Eggs, the fat of an Hen, Breaſt-milk, Mucilage of the ſeeds of Fenugreek, Lin-ſeed, or Mallows; yea, and a little quantity of Opium, with ſome Saffron.

In ſuch a caſe, Injections into the Womb may likewiſe be made, of Goats or Sheeps Milk, with Opium and Saffron, of each three or four grains, and a little Roſe Water.

Or

Or unto Peſſaries may be added a little Opium with a little Saffron, the whites of Eggs, and Oyl of Roſes. Or Peſſaries may be made of *Philonium Romanum* with Cotton. Or a Fomentation to eaſe pain, may be prepared on this manner:

Take *Marſh-mallows Branch and Root, Violet Leaves, of each a handful: Chamomel, Melilot, Roſes, of each a pugil. Boyl all for a Fomentation.*

When the Diſeaſe begins to decline, Purgation is to be iterated with gentle Purgatives. And when the Diſeaſe tends to a Reſolution or Concluſion (which is known by remiſſion of the Symptomes, and becauſe the part is not ſo oppreſſed with any Heavineſs) Diſcuſſives muſt be uſed in greater quantity than any of the foregoing Medicaments. Or this Cataplaſm may be made.

Take *Ponder of Marſh-mallow Roots one ounce: Chamomel and Melilot flowers, of each two drams: Mugwort Leaves poudered, Barley and Bean meal, of each half an ounce: boyl them a little in harſh red Wine; add new Hogs Greaſe, Oyl of Chamomel and Lillies, of each one ounce. Make a Pultiß or Cataplaſm.*

Fomentations and Baths to ſit in, may likewiſe do good in this caſe.

If the ſwelling cannot be diſcuſſed, but ſeem to tend to ſuppuration, it is to be furthered by the following Cataplaſm:

Take *Marſh-mallow Roots poudered, Chamomel flowers, Melilot, Meal of Lin-ſeed, Fenugreek, of each one ounce: fat Figs, eight: boyl all to the conſiſtence of a Pultiß. Then add the yolks of four Eggs: Saffron half a ſcruple: Oyl of Lillies and freſh Butter, of each an ounce. Make of all a Cataplaſm.*

When Matter or Quittor is made, which may be known by the abatement of heat and pain, and by a certain inundation perceivable by the touch, the Matter quaking like a quagmire, endeavor muſt be uſed to break the Impoſthume by moving of the Body, by coughing, by neezing, by faſtening Cupping-glaſſes, by cleanſing and attenuating Injections, or by Peſſaries that wil draw and break. As for Example.

Take *Gooſe-Greaſe half an ounce: Turpentine two drams: Rue ſeeds poudered, Nitre, Orice Roots, of each half a dram. Mix all, and with Wool make a Peſſary.*

When the Impoſthume is broke, we muſt endeavor to purge out the Quittor or Matter, and to cleanſe and conſolidate or cloſe up the Ulcer, as ſhall be ſhewed in the Cure of an Ulcer of the Womb, in the Chapter immediately following.

Chap. 8. *Of an Ulcer of the Womb.*

After a ſuppurated Inflamation of the Womb, follows an Ulcer, which likewiſe depends upon other Cauſes, namely, ſo many as may cauſe an Eroſion, fretting, or gnawing the ſubſtance of the Womb.

The Cauſes therefore hereof are, An Impoſthume breaking, Sharp Humors flowing into the Womb, Sharp and Corroſive Medicines conveyed into the Womb, or taken at the Mouth, as was ſaid before touching Cantharides or Spaniſh Flyes.

The Antecedent Cauſes are all ſuch things, which we have formerly ſhewed, have power to cauſe an Inflamation, as difficult Child-birth, violent and unbridled Carnal Conjunction, a long flux of Sharp Humors from the Womb, wounds, fals, and bruiſes, and eſpecially a venemous Gonorrhea, and the Lechers Pocks, the infection whereof is ſoon communicated to the Womb, and its Neck.

The Differences of this Diſeaſe, are taken from the place, the magnitude, the figure and complication with other Infirmities.

In reſpect of the place, that is to ſay, the ſeveral parts of the Womb; the Ulcer is ſomtimes poſſeſſed of the Neck of the Womb, and its inner Orifice; ſomtimes it is in the bottom, though but ſeldom. Somtimes, and that moſt frequently, it ſeizes the inner ſurface of the Womb; ſomtimes, but ſeldom, it aſſaults the outer ſurface; whence it comes to paſs, that ſomtimes the Quittor of theſe Ulcers comes out by the Bladder or Guts, or if it ſettle in the Cavity of the Abdomen, Impoſthumes ariſe about the Patients Groyns, of which *Hippocrates* ſpeaks in his 47. Aphor. Sect. 5.

In reſpect of Quantity, ſome are great, others ſmal Ulcers, according as they take up more or leſs ſpace in the Womb; which if they be little and ſuperficial, they differ little from the Scab and Itch; but if they be great, grievous, and as it were devouring, they are called by *Hippocrates*, *Noma*, that is, eating Ulcers.

In regard of their Figure, Ulcers are called Round, Long, Hollow, or Fiſtulous, that is, like a Pipe.

In regard of Complication with other Infirmities, they are called Phlegmonous, Cancerous, Scirrhous, Painful, VVater-bloodiſh, Poyſonous, and Infectious.

The Signs of an Ulcer bred in the VVomb, are, Pain and biting in the womb or its neck, voiding of

of ſnotty Matter or Quittor out of the Womb, which Diagnoſis wil be more illuſtrated, if the Cauſes producing the Ulcer, ſuch as we have muſtered up, have preceded.

If the Ulcer poſſeſs the neck of the womb, it is diſcerned by the ſight, by help of the Womb perſpective Inſtrument; alſo by the Midwifes hand, or in the genial Embracement, in which the Patient feels a troubleſom pain, But if the Ulcer be in the bottom of the Womb, the pain is felt about the Share, and the Excrements flow more abundantly.

If the Ulcer pierce to the outward ſurface, the Patients Urines or Stools appear Matteriſh, or a Fluctuation is perceived in the Paunch, or a Swelling towards the Groyns, where it threatens to Impoſthumate.

If the Ulcer be ſingle and benign, the Quittor is little, white, and not ſtinking. But if it be malignant and eating, the Quittor will be greeniſh, Lead colored, and party-colored, coming away with great pain and ſtink.

If it ſhall ariſe of the Lechers Pox, Gonorrhœa will uſher it in, or attend upon it, and other tokens of the Whore-maſters Pox will appear.

For the Prognoſticks of this Infirmity, *Hippocrates* in the firſt Book of Womens Sickneſſes, ſaies, That no Ulcer in the Womb ought to be ſlighted, becauſe it is in a part of exquiſite feeling, which hath a fellow feeling with the principal parts of the Body, and is very much diſpoſed to receive a flood of Excrements from them.

If the Ulcers of the VVomb prove Cancerous, Phagedenick, or VVolf-iſh [ſuch as we ſimple people cal the VVoolf, and tel ſtrange tales about, how it eats fleſh, &c.] hollow, or fiſtulous, they are for the moſt part incurable, and do vex the poor Patients miſerably, all their life long.

Ulcers in the Neck of the VVomb are more eaſily cured, becauſe Medicaments may be applied to them immediately.

In women that are recovering of this Diſeaſe, it is a token of perfect health, if they begin to conceive, and conveniently to receive the Mans Sperm, or if they have their monthly Courſes orderly and without pain.

The Cure of a womb Ulcer, muſt tend to hinder the flowing in of ſuch Humors as either beget or cheriſh the Ulcer, and to cleanſe the Ulcer, and cauſe it to come to a coalition. To which purpoſe the following Remedies may be uſed.

And firſt of all, If the Patient be over ful of blood, or the Ulcer have an Inflamation joyned therewith, a Vein in the Arm muſt be opened, and repeated ſo often as there ſeems danger of a new Fluxion; which is eſpecially to be done when the Patient hath her Courſes, that they may flow the leſs, becauſe they are wont to ſupply Matter to the Ulcer, and to cauſe other Humors to flow unto the womb.

Alſo Purgation is very neceſſary, that the Body may be freed from evil Humors; and it ought to be procured by the gentler ſort of Purgatives, as Senna, Rhubarb, Tamarinds, Myrobalans, Catholicum, and ſuch like; and Purgation is often to be repeated, that evil Humors may be diverted from the womb, and it is in this caſe of ſuch moment, that *Foreſtus* witneſſeth in the 48. Obſervation of his 28. Book, That *John Tiengius*, a Phyſitian of *Amſterdam*, cured a Gentlewoman of *Amſterdam* of an Ulcer in her womb, to whom he gave every fourth day, five ounces of the Decoction of Senna, Epithimum, red Roſes, and Indian Myrobalans ſweetened with Sugar, uſing to caſt cleanſing Decoctions, as Injections into her womb.

For to be ever in a readineſs, This following Magiſterial Syrup may be compounded.

Take *of the greater Comfry Roots, and new Polypody of the Oak, of each one ounce: Citron peels dried, ſix drams: Leaves of Plantane*, Vinca pervinca, *Ladies mantle, Sorrel, Maiden-hair, of each a handful: Liquoris ſcraped and ſplit, and Raiſons ſtoned, of each one ounce: Senna cleanſed ſix ounces: Carthamus ſeeds bruiſed two ounces: Agarick newly made into Cakes and bound in a Cloth, ten drams: Muſk-melone ſeeds, and Annis ſeeds, of each three drams: the Cordial Flowers, Roſemary Flowers, and Epithimum, of each one pugil. Make of all a Decoction in Barley Water, in part whereof infuſe of choyce Rhubarb half an ounce: Cinnamon one dram. In a pint and half of the ſtrained Liquor, diſſolve three ounces of the Syrup of Damask Roſes, and as much Sugar as ſhall be requiſite to make it into a Syrup perfectly boyled. Of this let her take two or three ounces, twice or thrice in a month with ſome Decoction of Agrimony and Plantane, or the Infuſion of Rhubarb in Endive Water.*

If the Patient be eaſie to vomit, a purge upwards by Vomit, is to be preferred before the other, becauſe it draws back the Humors from the womb.

In the ſpaces between purging, a Vulnerary Decoction is long to be uſed, which may be made after this manner:

Take *Leaves of Agrimony, Burnet, Knotgraß, Plantane, of each half a handful: China Roots three drams: Coriander ſeeds one dram: Currence half a dram: red Sanders one ſcruple. Boyl all in the Broth of a Chicken. Let the Patient take of the ſtrained Liquor morning and evening.* Or,

Take

Take *Leaves of Mugwort, Plantane, Yarrow, of each one handful: Rhaponticum half an ounce: Agnus Caſtus ſeed one dram. Boyl all in a ſufficient quantity of white Wine. Sweeten the ſtrained Liquor with Sugar; and give her two or three ounces in a morning,*

If a Feaver urge, and great quantity of bloodyiſh Quittor be voided, Whey and Milk will be very good; let her take eight ounces or more in a morning, adding a little Honey of Roſes, or Sugar.

If her fleſh begin to fall away, with tokens of an Hectick Feaver, Milk, eſpecially Aſſes Milk, muſt be given with Sugar of Roſes for a whol month.

Sweat-provoking Medicines may likewiſe do good where there is no Inflamation, nor hot diſtemper, to dry the Ulcer, and to revel the ſerous humors towards the habit of the Body.

Turpentine waſhed in ſome convenient water for the womb, as of Mugwort or Feaverfew; or in ſome water reſpecting the Ulcer, as of Plantane, and red Roſes, taken now and then with Sugar of Roſes, doth cleanſe and conſolidate or fil up the Ulcer.

Pils of Bdellium given to a dram at a time, or every day, or once in two daies one ſcruple, do very much good, and ſtop the blood in caſe it flow.

Or new Pills may be made on purpoſe, to be uſed after the ſame manner, thus:

Take *Bdellium three drams: Mirrh, Frankinſence, of each one dram: Sarcocolla, Storax, Amber, Cheb-Myrobalans, of each half a dram: red Coral two ſcruples. With Syrup of Poppies make a Maſs fit for Pills, whereunto, in caſe of extream pain, a little Opium may be added.*

Trochiſci Alkekengi [Cakes compounded with Winter-Cherries, of which conſult my *London Diſpenſatory*] with Opium, are likewiſe (being poudered) given to drink down, where the Patient is troubled with great pain.

Alſo to mitigate pain, the ſame Remedies may be uſed, which we preſcribed for that intent, in our diſcourſe of the Inflamation of the womb.

This following Pouder is very effectual to dry up the Ulcer:

Take *Acacia, Juyce of Hypociſtis, of each one dram: Dragons blood, fine Starch, Plantane Roots, Birthwort, or round Ariſtolochia Roots, of each half a dram: Bole Armoniack one dram: Maſtich, Sarcocolla, of each half a dram. Make all into a moſt fine Pouder, whoſe Doſe let be one dram, with Plantane water, red Roſe water, or water wherein Steel hath been often quenched.*

Zacutus Luſitanus in the 87. Obſervation, and the 88. of his ſecond Book, propounds an Electuary and a Water, wherewith he witneſſeth that he had cured Ulcers of the womb judged incurable. Any one may find the Deſcription of them in the places above cited.

To cleanſe, dry, and fill up the Ulcer, divers ſorts of Injections are uſually made; which are nevertheleſs, not to be uſed, until the Inflamation be firſt taken away, which is oftentimes attendant upon theſe kind of Ulcers; and until the pain be aſſwaged, which is not only very troubleſom, but alſo by vexing the part, it is wont to encreaſe the flux of Humors.

In regard therefore of that ſame Inflamation and ſharpneſs of Humors, let Emulſions of the cooling Seeds, Whey of Goats Milk, or Milk it ſelf, either alone, or mingled with the Juyce of Plantane and Shepheards-purſe; or if need be, a Decoction of Poppy heads, and the tops of Mallows be firſt of al injected. Some Practitioners are of Opinion, that luke-warm water alone, doth very much good in theſe caſes, if it be often injected. And there is reaſon for it, ſeeing by that means the heat and Inflamation of the womb is tempered, the pain is aſſwaged, and the filth adhering to the Ulcer is waſhed off. *Valeſcus de Taranta*, doth approve of cold water likewiſe, in theſe words: *I have known* (ſaies he) *ſome women, who perceiving they had Ulcers in their wombs, did waſh them with cold Water, and then wipe them clean, and dry them with linnen cloaths, which they did often put in at the Watergate. And by theſe means often renewed, they came many times to be perfectly cured.*

The hot diſtemper taken away, and the pain aſſwaged, or for the moſt part diminiſhed, we muſt proceed to Clenſers, firſt uſing the more light and eaſie Clenſers, and after the more ſtrong.

The gentle Clenſers are, Whey taken with Sugar, Barley water ſweetened with Sugar, or Honey of Roſes, to make it more clenſing; or Hydromel ſimple (ſee my *Diſpenſatory*, a mixture of water and honey boyled a while together.)

For a more ſtrong Clenſer, uſe the Decoction of Barley, Lintels, ſhaled Beans, and the Leaves of Smallage, Pellitory of the wal, Plantane, boyled together, a little Honey of Roſes being added to the ſtraining.

When the Ulcer is very foul, the wound-decoction commonly called *Aqua Catapultarum*, is the beſt thing that can be uſed, whoſe Compoſition is thus:

Take *the Roots of Gentian, Rhapontick: Zedoary, and round Ariſtolochia or Birthwort, of each one ounce: white Wine ſix pints: boyl all till a third part of the Liquor be conſumed. In the ſtraining*

ſtraining diſſolve half a pound of white Sugar. Let it be kept for uſe as occaſion requires.

Or the following Decoction may be provided:

Take *of whol Barley, courſe Bran, and red Roſes, of each one pugil: Leaves of Agrimony, Wormwood, Woodbind, and Smallage, of each one handful: Beans and Lentils, of each three drams: ſcraped Liquoris, Orice Roots of Florence, and Zedoary, of each two ounces. Boyl all in water, adding towards the end, a little white Wine.*

If the Ulcers be very ſtinking and ful of rotten Quittor, there may be added to the Decoction, a little *Unguentum Ægyptiacum, Collyrium Lanfranci*, or the Pouder of dulcified Mercury.

When the Ulcer ſhal be wel ſcoured and clenſed, we muſt uſe drying and ſolidating things, made after this manner.

Take *the greater Comfry Roots, Biſtort Roots, of each one ounce: Leaves of Plantane, Horſtail, Shepheards-purſe, Ladies Mantle, Mouſ-ear, Yarrow, of each one handful: red Roſe Leavs half a handful: Boyl all in water, and make thereof an Injection.*

With the which or like injection, this following fleſh-creating Pouder may be mingled.

Take *the Roots of Orice, Birthwort, great Comfry, of each half an ounce: Mirrh one ounce: Aloes three drams. Make all into Pouder, of which half an ounce may be mingled with every Injection.*

Turpentine waſh'd in Plantane Water to the quantity of two drams, diſſolved with Honey and the Yolk of an Egg, wil do very much good, mingled with the Injection; and the more if the fleſh-creating Pouder be alſo added.

The Oyntment *Pompholygos, de Ceruſa, de Plumbo*, of each ſix drams for a Doſe, mixed together, are likewiſe uſed in Injections. But the Egg-yolk Oyl, rubbed about with a Peſtle in a Leaden Morter, is better than al the reſt.

Fumes received through a cloſe ſtool, do pierce to the deep Ulcers which are about the bottom of the Womb, and dry them: Which may be thus prepared:

Take *Frankinſence, Mirrh, Maſtich, Storax, Juniper, Gum, Labdanum, of each one ounce: Turpentine as much as ſhall be requiſite. Make all into little Cakes for to be burnt under a cloſe ſtool.*

In a moſt ſtubborn Ulcer, Cinnabarus or Minium being added to the Fume-Cakes, bears away the bell from al other Medicaments.

Alſo Baths that are drying, Sulphurous, and Allumiſh, are uſed in long Ulcers: and Phyſitians are wont to ſend their deſperate Patients to thoſe Baths, as the laſt Remedy.

It wil not likewiſe be unprofitable to apply convenient Plaiſters to the Region of the Womb, ſeeing their vertue can paſs to the innermoſt parts of the womb, by the inviſible pores of the Body.

If an Ulcer be in the neck of the womb, it muſt be ſmeared with ſcouring and drying Liniments, or Oyntments. The Scourers may be made after this manner:

Take *of the Juyce of Smallage two ounces: Honey of Roſes one ounce and an half: Turpentine half an ounce: Barley Meal as much as ſhall ſeem convenient. Boyl them all gently, and make them into the form of a Liniment or Oyntment.* Or,

Take *the round Birthwort half an ounce: Horehound, Centaury the ſmaller, Agrimony, of each half a handful. Boyl them in a fit quantity of Hydromel. To the ſtrained Liquor add the pouder Florentine Orice Root two drams: Barley meal, and clarified Honey, of each as much as ſhall ſuffice. Make all into a Liniment or Oyntment.*

And ſometimes the Oyntment *Pompholygos* is uſed, adding thereto, Frankinſence, Maſtich, Mirrh, Aloes, as the Nature of the Ulcer ſhal require.

When the Ulcer is ſufficiently clenſed, a drying and ſcar-contracting Oyntment is to be laid on, which may be thus made:

Take *Tutty Pouder waſhed half an ounce: Litharge of Gold and Silver, Ceruß, Sarcocolla, of each two drams: Oyl and Wax as much as will ſuffice. Make all into an Oyntment.*

It falls out ſometimes, That Ulcers of the Womb do penetrate unto the ſtreight Gut, and ſometimes unto the Bladder; which is known by the Quittor iſſuing through the Water-Gate, or the Dung-Gate.

If the Quittor or Matter come out by ſtool, Lenitive, Scouring, and Drying Clyſters are to be uſed; ſuch as we propounded in our Cure of the Bloody-flux.

But if the Quittor come away by Urine, gentle Piſs-drivers and cooling wil be requiſite, which may purge out the filth ſent into the Bladder, and further the Cure of the Ulcer; ſuch as are, Emulſions of the greater cold Seeds, after which, Turpentine muſt be uſed, and other Medicines preſcribed for an Ulcer of the Bladder.

If the Ulcer degenerate into a Fiſtula, which chiefly fals out when it opens outwardly towards the Hip, though it may likewiſe happen in the Womb it ſelf, and its Neck; it is to be conſidered, which

is better for the Patient, to leave that Passage free and open, to which Nature hath been accustomed, and by which she endeavors to disburden her self of manifold Excrements, or to stop the same. If it be judged best to keep it open, a palliative Cure must at least be made, by Purges frequently repeated, and Sweat-provokers are to be administred twice in a yeer,; also scouring Injections, and strengthening must be used, and *Emplastrum Diapalma Divinum*. and such like Plasters, are to be laid upon it. But if there be hopes to make a perfect Cure, and heal up the Fistula, such Medicines must be applied, as are wont to be used for the cure of other Fistulaes.

If Ulcers happen in the Water-Gate, or in the Cavity of the Womb, by reason of the Lechers Pox, they cannot be Cured without the General Cure of the said Pox. In the performance of which Cure, of many waies, there is none better than Fumigations of Cinnabaris or Minium; for they do not only help to rid the whol Body of that Infection, but being received into the Cavity of the Womb, they do in a peculiar manner hasten the Cure of these kind of Ulcers. Likewise in the Cure of this Disease, by Quick-silver'd Oyntments, the said Oyntments must be conveighed into the inner parts of the Womb.

In whatsoever Ulcers of the Womb, if the Neck thereof be molested with an itch, as it often falls out, by reason of a deflux of a sharp and salt Humor into that part; to pacifie the said Itch, a Pessary wil be good, dipped in *Unguentum Emulatum cum Mercurio*; or in *Ægyptiacum* dissolved in Sea-water, or in Allum water; or in new Butter wherein Quick-silver hath been killed, with some Brimstone mingled.

Chap. 9. *Of a* Scirrhus, *or a Painless hard Swelling of the Womb.*

THe Nature, Sorts, and Causes of a Scirrhus, or hard Swelling in the Womb, are the same which have been set down in our Chapter of the like Swelling in the Liver, and need not in this place be vainly repeated, but must be sought for in the said Chapter.

Howbeit among the Antecedent Causes, this is proper to an Hard-Swelling of the Womb, and is very frequent, namely, for women when the flux of their Courses or Child-bed purgations are upon them, undiscreetly to expose themselves to the cold Air, or to drink cold water; whereby the flux is stayed, and the retained blood grows thick, and is condensed, and at length produceth a Scirrhus or stony hard Swelling in the Womb.

The Signs of such a Swelling bred in the Womb, are, An hardness felt in the Region of the Womb, such as resists the touch, which hardness represents the compass of the Womb; an heaviness in the same place, and a sence of some weight bearing down, especially when the sick woman stands, as though the womb would fal down into the water-Gate; but when they sit or lie, it bears upon the streight Gut with its weight. There is no Feaver nor pain; wherein it differs from an Inflamation, or at most there is but very little pain in an imperfect Scirrhus, but in the Womb there is none. If it follow an Inflamation, the Feaver and pain ceases, the hardness and resistence abiding. If it be in the Body of the Womb, it is easily discerned by handling the parts about the Share; but if it be in the Neck of the womb, it may be perceived by ones finger. It is distinguished from a Mole by the preceding Causes; and because in a Mole, if the Courses flow, they flow disorderly, but in this Hard Swelling they keep their order; and in a Mole, the womans Dugs strout with Milk, but in the Hard Swelling they are extenuated.

As for the Prognostick Signs, Every Scirrhus or hard stony Swelling, is very exceeding hard to cure; for an extream Hardness once contracted can hardly be softened; also Natural heat is so very weak in that part where there is such a Swelling, that it can very hardly discuss an hard and almost stony substance.

A great and unvanquishable Scirrhus, or stony Swelling, doth at length bring the Dropsie to keep him company.

A Scirrhus, or stony hard Swelling of the womb, if it be tampered withal with over hot and moist Medicaments, it turns into a Cancer.

The Cure of this Disease aims at two things, the Antecedent Cause, and the conjoyned or concomitant Cause.

In respect of the Antecedent Cause, a Vein must be opened, first in the Arms, if the Disease be of no very long continuance; afterward in the lower parts, especially when the Patients Courses are stopt.

The opening of the Hemorrhoid Veins, is also very profitable in this case: For they do both evacuate dreggy blood, and they turn the Humor from the womb, because of the communion which the Veins have with the womb.

Purging is likewise necessary, by fits repeated, procured by such Medicines as purge Melancholly, using

uſing firſt the gentler, and then the ſtronger ſort by degrees.

And before the Purges, ſuch things muſt be given as prepare the Melancholly Humor, and open the narrow paſſages of the Excrements, in the form of Apozems, Juleps, or Broths, according to the diſpoſition of the ſick party.

And beſides the ordinary Openers, Medicines with Steel, muſt be likewiſe uſed, whereby thoſe ſtrongeſt Obſtructions cauſed by thick and rebellious Humors in the Womb and other parts, may be diſſolved.

And that ſuperfluous humors may be derived from the womb, Iſſues may profitably be made in the Thighs, which are to be kept open until the Patients monthly Courſes (which are commonly ſtopt in this Diſeaſe) ſhal return unto their ordinary form, in reſpect of time, quantity, and quality.

In reſpect of the conjoyned Cauſe, Emollient and Reſolving Medicaments are to be applied outwardly, compounded after this manner:

Take *the Roots of Marſh-mallows and Lillies, of each two ounces: the leaves of Mallows, Violets, Marſh-mallows, Bears-foot, of each one handful: Leaves of Mugwort, Nep, of each half a handful: Seeds of Line and Fenugreek, of each one ounce: Flowers of Chamomel and Melilot, of each a pugil. Make a Decoction of all, wherewith the Region of the Share, and the Groins muſt be fomented, a warm ſponge being firſt dipped therein, and then ſqueezed out, and ſo laid on, and held to the parts aforeſaid.*

For the greater mollifying, the Decoction may be made in Water and ſweet Oyl, or in the Broth made of a Wethers Guts.

There may alſo be added to the Decoction, that it may become more powerful, the Roots of Briony and wild Cucumers; for we muſt begin with the milder, and proceed to the ſtronger by Degrees.

Of the ſame Decoction (augmenting the quantity of the Simples) may a Bath be made for the Patient to ſit in, which is very effectual in this Caſe, and more powerful than a Fomentation.

Alſo frequent Clyſters and Injections into the Womb, are to be made of the ſame Decoction, whereunto the Oyls of Lillies, Chamomel, or ſweet Almonds may be added.

Take *of the Oyl of Lillies, and ſweet Almonds, of each three ounces: Mucilage of Fenugreek ſeed extracted with white Wine one ounce: Hens, Gooſes, and Ducks Fat, of each one ounce and an half: new Butter and Hogs Greaſe, of each two ounces: Wax and Turpentine as much as ſhal ſuffice. Make all into an Oyntment.*

This which follows, is approved in al hard Swellings, being deſcribed by *Rhaſis* in his Seventh Book, dedicated to King *Almanſor*.

Take *Bdellium, Ammoniacum, Galbanum, of each equal quantities: Beat them in a Morter with Oyl of Ben, and of Lillies; then add the Mucilages of Fenugreek Seed, Lin-ſeed, and Figs, in equal quantities. Make all into an Oyntment.*

Of the ſame Materials, adding Wax, may a moſt effectual Plaiſter be made, to be applied to the Region of the Womb, both before and behind. Or a Plaiſter may be applied made of *Emplaſtrum Diachylum ireatum.*

A Cataplaſm or Pultiſs may be made of what remains after the Decoction aforeſaid, being beaten and forced through an Hair Searce, adding of the meal of Lin-ſeed and Fenugreek ſeed, of each an ounce: ſix Figs: two drams of Orice Root: half a dram of Saffron: Hens Greaſe, and Oyl of ſweet Almonds, of each a ſufficient quantity. Make of al a Pultiſs.

The Bitumenous clay taken out of Brimſtone Baths, and ſuch as are Bitumenous, is profitably applied as a Cataplaſm.

The Fume of the Stone called *Pyrites* [that is, the Marchaſite, or Fire-ſtone] being made red hot, and quenched in Vinegar, is by *Galen* wonderfully extolled for diſſolving all ſtony hard Swellings, ſo that it works like a Charm. In the ſaid Vinegar, Savory and Pellitory may be boyled: but care muſt be had, leſt your *Lapis Pyrites* prove to be the Stone called *Plumbarius*, or the Lead-ſtone, which would do very much hurt.

Finally, All the Medicines, as wel internal as external, which were before deſcribed in our Cure of the hard Swellings of the Liver and Spleen, may alſo be uſeful in this caſe.

Yet muſt theſe Medicaments in the whol courſe of the Cure be moderated and accommodated with the greateſt judgment and diſcretion imaginable, leſt the hard Swelling become harder; or (which is much worſe) degenerate into a Cancer, Which al Practitioners fear, when Medicaments are unwarily adminiſtred for a long time together: ſo that it is better ſometimes to pauſe, and give or apply nothing, that we may mark what good is done by the former applications. For it is vain ſtriving, when the Swelling (having loſt al ſence of feeling) hath put on the Nature of a ſtone.

Chap. 10. *Of a Cancer of the Womb.*

A Cancer is a hard Swelling of the Body or Neck of the Womb, which reſiſts the touch, and cauſeth a moſt vehement pain, as it were pricking and cutting the part affected.

It is cauſed by black Choller gathered in that part, or by reaſon of a Scirrhus, or ſenceleſs hard tumor ill cured, which eaſily turns into a Cancer, eſpecially in this part of the Body, by reaſon of the copious afflux of blood, which being retained in thoſe Veins which are nigh unto the Scirrhus, and not ſufficiently evacuated by the monthly purgations, it becomes aduſt or burned, and acquires a malignant diſpoſition.

It is ordinarily reckoned to be of two ſorts, Ulcerate, and not Ulcerate.

So long as the Morbifick matter is of leſſer Acrimony and Malignity, it cauſeth a Cancer not ulcerated; but when it grows more ſharp by putrefaction or aduſtion, it doth exulcerate the tumor, and produce an ulcerated Cancer.

The Diſeaſe may eaſily be known by the definition propounded; for if an hard Tumor reſiſting the touch, be felt in the Body of the Womb, or its Neck, cauſing a pricking and cutting pain, we may pronounce boldly that it is a Cancer, Yet it is more evidently diſtinguiſhed by the eye-ſight, when it may be ſeen as in the Neck of the Womb it may be, with help of a Womb-perſpective Inſtrument; for we ſhal ſee an uneven and bunching ſwelling, Lead-colored or black, compaſſed about with certain branches of Veins, as it were with roots; but if it be ulcerated, it ſends forth a certain blood-watry quittor or matter, which is yellow or black, and ſtinking, and ſometimes blood, by corroſion of the Veins which paſs through that part, ſometimes in ſuch quantity that the Patient incurs danger of death. Hereunto is added a ſmal Feaver, unquietneſs, Stomach-ſickneſs, an heat in, and about the Water-Gate, &c.

By way of Prognoſtication, we can only ſay thus much, That a Cancer is incurable, be it ulcerated or not ulcerated. Which as it is true of al Cancers, not excepting thoſe in the outer parts of the Body, much more is it of a Cancer in the Womb, by reaſon of that perpetual Common-ſhore of Excrements which flows into the part.

Seeing then a perfect Cure cannot be hoped for, we muſt content our ſelves with ſuch a Cure as is called *Palliative*. The ſcope whereof is, to hinder a not ulcerated Cancer from ulcerating, and an exulcerated Cancer from becoming more exulcerate: and in both to allay and temper the extremity of the pain. Which muſt be done, firſt by univerſal Purgations of the whol Body, and by other Medicines which may qualifie and evacuate the black Chollerick, and Melancholick blood, and hinder the further generation thereof. In the number of which are, bleeding in the Arm, Anckle, and Hemorrhoid Veins; Potions, Apozems, Juleps, Broths, Milk, Whey, cold Mineral Waters, and ſuch like Remedies as theſe uſually preſcribed by Practitioners for the Cure of al Cancers in what part of the Body ſoever. And eſpecially Purgations muſt be frequently reiterated, that the antecedent matter of a Cancer may be abated.

And then outward Remedies are to be uſed, ſuch as are moderately cool and aſtringent, without any corroſive or biting quality; they are commonly applied in form of Liniments or Oyntments. The beſt are made after this manner:

Take *Oyl of Myrtles and Roſes, of each two ounces: Juyce of Nightſhade and Houſleek, of each one ounce. Stir all together in a Leaden Morter, with a Leaden Peſtle, until they grow black: then add Litharge of Silver, and Ceruß, both waſhed in Scabious Water, of each two drams: Camphire ten grains. Make all into an Oyntment, with which let the part affected, be ſmeared three or four times a day.* Or,

Take *Oyl of Egg-yolks, and of Roſes, of each one ounce and an half: Sugar of Lead one dram. Stir them together in a Leaden morter till their color change.*

This following puts down al the reſt, wherewith Swellings of the Dugs which have been accounted Cancerous, have been perfectly cured.

Take *Egg-yolks Oyl two ounces: Juyce of Nightſhade and Veronica or Houſleek, of each half an ounce: Quick-ſilver not killed two drams. Stir them luſtily together in a leaden morter, with a leaden peſtle, till they become thick as an Oyntment.*

The foreſaid Oyntments are to be conveyed into the womb upon long tents, or upon wax Candles, wound in Linnen. But Injections may much more eaſily be conveyed into the Womb. They are compounded on this manner:

Take *Barley Water half a pint: Nightſhade and Plantane Water, of each two ounces: Water of Houſleek one ounce: white Troches of* Rhaſis *two drams: Sugar of Lead one dram. Make of all an Injection.*

If pain be very vehement, add to four ounces of the Injection, one ounce of Syrup of Poppies.

Alſo

Also let the part affected be fomented with the waters of Plantane and Nightshade, or their Decoctions; whereunto may be added the Leaves of Water-lilly, white Poppy, red Roses, and Camphire. Which Decoction may also frequently be injected into the womb, and it will become much more effectual, if it shal be wel wrought about in a Leaden morter, or a dram of the Sugar of Lead be added to it.

Among Specifick Remedies, Frogs are commended, being washed and boyled, and laid on as a Pultis, or their Broth being used as an Injection. Also the Decoction, or juyce of River Crabs, injected into the womb. As also Herb Robert used inwardly or outwardly.

If the Cancer be ulcerated, the Dose of Minerals must be augmented in the foresaid Liniments, and to them the ashes of River Crabs may profitably be added. And with the Injections, the white Troches of *Rhasis* may be mingled, and Barley Water with the Materials of the foresaid Injection.

If pain be very urgent, Fomentations of Mallows, Marsh-mallows, Water-Lillies, Poppy, Henbane, Green Coriander, Dil, Fleawort seeds, Milk, Saffron, and the like, are to be used at convenient seasons; or Pultisses made of them are to be applied. And of their Decoctions, Injections, and Baths to sit in, may be provided.

Yet wil not al these Medicaments somtimes serve turn to pacifie a most cruel pain, which somtimes gives the Patient neither rest nor sleep. Which compels us many times to make use of Narcotick or stupefactive Medicines, which in this Disease, by reason of the exceeding Heat of the Humors, do less hurt. And I have seen a woman, having a Cancer in her Dug, that took every night for four months together, two or three grains of Laudanum, and had no hurt, but very great comfort thereby.

If from an ulcerated Cancer much blood do proceed, as it often fals out, let Juyce of Plantane with a little Frankinsence be injected into the womb.

Chap. II. *Of Mortification, or Gangrenation, and Sphacelation, or Blasting of the Womb.*

A Gangrene is the corruption or mortification of a part beginning; but when it is wholly corrupted, and dead, it is said to be Sphacelated, or blasted.

In the Genital parts of Women, this Disease is easily bred, because those parts are moister and softer than ordinary, and do easily receive the Excrements of the whol Body.

It often follows an Inflamation, Imposthume, Ulcer, or Cancer il cured, when the vital heat of the part, is choaked or destroyed. It is choaked in great Inflamations, when more blood flows in than the Natural heat of the part can digest, or turn into Matter. It is destroyed, either by a cold distemper extinguishing it, or by an hot one, dissipating and resolving the same.

A beginning Gangrene is known by an unusual heat felt in the part, a horror and trembling seizes upon the Patient, with a languishing and quick-beating pulse, and with fainting away, or swooning. And seeing this Disease doth for the most part happen to the Neck of the Womb, so that the part affected may be perceived by the Eye; it is discovered to be soft, Lead-colored, black and carrion like, and may be prickt or cut, and the Patient never feel it; and it sends forth besides, a stinking and carrion-like smel.

As for the Prognostick or Predictions belonging to this Disease. It is a most grievous, most dangerous Disease, and for the most part deadly: yet it hath been observed by very many Authors, That the Womb being putrefied and Gangrenated, hath either fallen away of it self, or been cut away, the womens lives being saved: which Observations of Authors, *Schenkius* hath collected to a great number, in the fourth Book of his Observations.

The Cure is performed with the same Remedies which are wont to be applied to other parts being Gangrenated, if it be in the Neck of the Womb, or tend toward the outward parts; as namely, with Scarrifications, and washings or bathings with a Decoction of Wormwood, Mirrh, and such like, with the Oyntment called *Ægyptiacum*, the Cataplasm called *De Tribus farinis*, which is thus made:

Take *Barley meal, Bean meal, and Orobus meal, of each two ounces: Oxymel one pound: Boyl them to the thickness of a Pultiss or Cataplasm. Whereunto if there be added, meal of Lupines, Mirrh, Aloes, and Wormwood, it will be more effectual.*

If any part of the Womb be wholly corrupt and dead, it must be cut off; or if the Womb fall down, it must be separated, by binding the Ligature every day faster and closer. Of which kind of Operations, there be many Examples collected by *Schenkius* in the fourth Book of his Observations.

Wierus also relates in his Observations, That he cured a woman of twenty five yeers of age, who

in

in the hotteſt of the Dog-daies, had a certain little bunch growing in her Water-Gate. Whereunto an unskilful Chyrurgion applying Pultiſſes that were not proper, within a few daies, all that part began to putrefie, grow black and dead, and the Diſeaſe paſt on with incredible ſwiftneſs towards the Dung-Gate. And *Wierus* undertook the Cure after this Method: Firſt, he ſquirted good ſtore of the Juyce of Nightſhade and Plantane with a Syringe into both the Paſſages three or four times a day; between which times, he applyed a bolſter wet with the foreſaid Juyces, Vinegar being mixed therewith; which growing dry was wet again with the ſame Liquor. And in this courſe of reiterated Application he continued til the fervent heat was quenched, and the putrefaction began to ceaſe. She took in the mean while, thrice every day a Potion, of the Decoction of Sorrel, Scabious, Burnet, Damask Prunes, the tops of Borrage and Bugloſs, Marigold flowers, with Water, Sugar, and Vinegar, made in the manner of a long, acid, or ſharp Syrup. Her Diet was ſpare, but cooling and tart, to prevent putrefaction. On the third day, the fury of the burning heat, and of the putrefaction, was abated. Whereupon he commanded the black and dead fleſh to be drawn or plucked out with a little Forceps [Chyrurgions Inſtrument, like Tongs or Pincers] and ſeparated round about from the live fleſh, without any pain, and ſo to be cut off. Then he conſumed the reliques even to the live fleſh with the Oyntment called *Ægyptiacum*. And proceeded to cicatrize, or bring it to a Scar, after the ſame manner which is uſed in other Ulcers.

In the whol courſe of the Cure, care muſt be had to ſtrengthen the Heart, both by things given in, and applied outwardly: Likewiſe Emollient, Cleanſing, and Refrigerating Clyſters, are frequently to be given, which do much help the part affected, by reaſon of Neighbor-hood.

Chap. 12. *Of the Wombs Wind and Water-Swelling, or Dropſie.*

THe Inflation or blowing up of the Womb with Wind, and its Dropſie, are by Writers confounded or jumbled together; ſo that they call the Inflation, a Dropſie coming of wind; whereas the Dropſie properly ſo called is ingendered by a watery Humor, Yet are they diſtinguiſhed, and there is a certain puffing up of the Womb with wind, ſuddenly ruſhing in, and ſtretching the ſame, and cauſing vehement pain, as in the Chollick; which becauſe it continues not, but is ſoon diſcuſſed, it deſerves not the name of a Dropſie; and ſuch a puffing up is often ſeen in Hyſterical women which have the Womb-fits.

There is therefore to be reckoned a two-fold Dropſie of the Womb; one from Wind, which is like that ſort of Belly-dropſie which is termed *Tympanitis*, or the Drum-belly Dropſie: another ariſing from a wheyiſh Humor, anſwering to the Dropſie of the Belly, called *Aſcites*, that is, the Bottle-belly Dropſie: Some add a third ſort, anſwering to the third ſort of Belly-Dropſies, called from its cauſe, *Leucophlegmatia*, that is, white-flegm Dropſie, which is ſeldom ſeen in the courſe of Practice. Yet I have ſeen a Gentlewoman, which in one day voided ſuch plenty of thick flegm out of her womb, as might weigh probably ſix or ſeven pound weight: which flegm long retained, might doubtleſs have cauſed in her, a Dropſie of the womb.

Wind and water cauſing a Dropſie of the Womb, are contained either within the Cavity of the Womb, or in its Membranes, or in certain Bladders. Touching the Cavity of the VVomb, it is ſomwhat doubted how Wind and Humors can be contained therein, ſeeing there is ſo eaſie a Paſſage through the Neck and Mouth of the VVomb. We anſwer, The inner Orifice or Mouth of the VVomb, may be cloſed up divers waies; either by thick flegm ſticking faſt thereunto, and growing hard, or by a Scirrhus, or ſome other cauſe. *Mercatus* conceives, That a ſnotty kind of flegm is voided by the mouthes of thoſe Veins which are ordained for the monthly Purgations, and that of the ſaid ſnotty flegm a skin is framed, which covers all the inner ſurface of the VVomb, within which thin skin, the wheyiſh and windy Matter is contained. But *Fernelius* thinks, That water may be contained in the womb, without any thing amiſs in its mouth, but barely by its conſtriction or purſing of it ſelf together. All theſe ſorts are to be allowed of, and may be confirmed by divers Examples.

And firſt of all, Examples of VVinds contained in the VVomb-Cavity, are recited by *Sennertus*, in the Fourth Book of his Practice, Part 1. Sect. 2. Chap. 10. The firſt is taken out of *Valeſcus de Taranta*, touching a certain Jewiſh woman of *Liſbon*, who taking her ſelf to be with Child, when ſhe expected to be delivered, a great quantity of wind came away, and ſo her womb was brought down again. The Second is taken out of *Mathiolus de Gradi*, who relates the ſame thing to have befallen his own wife. And other Examples taken out of *Dodonæus*, *Thadæus Dunus*, and other VVriters, do teſtifie the like Caſes; and we ſee the ſame often in the courſe of our Practice. Whereunto may be added a Hiſtory, which we ſhall in the Cure relate out of *Solenander*, of a woman who by

by means of a Fumigation made of Nutmegs, let wind fly out of her Womb, which gave a report like a Piſtol.

And Examples of Water contained in the Womb are propounded by the ſaid *Sennertus*, out of *Rhaſis*, who ſaw a woman out of whoſe Womb there flowed twenty five *Cotila's* of water, which is a Meaſure not uſed with us, containing about half an Ale Pint. Alſo out of *Jacobus de Partibus*, and *Dodonæus*, who relate ſuch a like Story. And *Veſalius* Diſſected or Anatomized a woman, in the hollowneſs of whoſe womb, were found above ſixty *Auſburg* Meaſures of water, each Meaſure containing three pints, and the mouth of her womb was grown to a wonderful hardneſs.

And that water is ſomtimes contained in the womb in bladders, many Authors do teſtifie, who have ſeen examples thereof in ſome women, who voided ſuch bladders ful of water from their wombs; among the reſt *Aetius*, *Valeriola*, *Chriſtopherus a Vega*, *Mercatus*, *Platerus*, and *Fabricius Hildanus*.

Somtimes alſo women with Child have a Dropſie at the ſame time in their wombs, as *Fabricius Hildanus* relates of his own wife, whoſe Belly was ſwelled to a monſtrous greatneſs; and at the time of her delivery, ſhe voided firſt of all, eighteen pints of water, and half an hour after, nine pints more; and at laſt ſhe was delivered of a Boy, ſtrong and healthy. The like caſe we find in *Skenkius*, but with a contrary event, concerning a woman, who being delivered of a living Child, continued ſtil big-bellied, and her belly growing ſtil greater and greater, ſhe died of it, and her womb being opened, a great quantity of water was found therein.

Finally, *Fernelius* hath an Example, in the ſixth Book of Diſeaſes, Chap. 15. of water retained in the womb, only by reaſon of the cloſe ſhutting of the mouth of the womb, without any other fault therein. The ſtory is of a woman that had a Dropſie in her womb, who as often as ſhe had her monthly Purgations, voided al her watry Excrements out of her womb, filling ſix or eight Baſons with a very hot yellowiſh water, til the ſwelling of her belly was wholly abated. The next month the like redundancy of watry Excrements being collected, was in like manner evacuated.

The immediate Cauſe of the windy and watry Swelling of the womb, is the weakneſs of Natural heat, reſiding in the Liver or Spleen; and from thoſe parts, wind, flegm, or wheyiſh humors are tranſmitted into the womb; or the weakneſs is in the womb it ſelf, whereby the ſaid Excrements are therein collected and heaped together.

And the Cauſes which weaken Natural heat, either directly, or by accident, are very many, and the chief are, of thoſe things which are collected by Phyſitians, *Res non Naturales*, things not Natural. So, cold air, eſpecially after Child-birth, heedleſsly received into the womb, is a moſt effectual cauſe of this infirmity. Alſo cold Air unſeaſonably received when the Courſes flow, and going frequently into cold water, or padling in the ſame, eſpecially during the ſaid flux, is a cauſe thereof. So is much uſe of cold Meats, or windy, as fruits, Herbs, Beans, and Peaſe, and likewiſe of Vinegar: Cold water plentifully and unſeaſonably drunk down, long and deep ſleep, painful childing and abortion eſpecially if it often happen, immoderate flux of the Courſes, exhauſting the Natural heat, or their ſuppreſſion choaking the ſame. Add to theſe, the proper Diſeaſes of the womb, as ſwellings, ulcers, and ſuch like, which do reſolve the heat of the part; or elſe ſhut the mouth of the womb, and hinder the egreſs of Menſtrual blood, and excrementitious humors.

In the Diſcovery of this Diſeaſe, many things are to be conſidered:

Firſt, How this particular Dropſie of the womb, may be known and diſtinguiſhed from that of the whol Body?

Secondly, How the ſeveral ſorts of this Womb-Dropſie may be diſcerned, as whether it come from wind, from wheyiſh Humors, or from flegm?

Thirdly, Whether it proceed primarily from ſome infirmity of the womb, or by fault of ſome other parts of the Body?

Fourthly, Whether the Matter offending be contained in the Cavity of the womb, or between its Membranes, or in certain Bladders?

Fifthly, How to diſtinguiſh it from other Tumors of the womb?

Sixthly, How from being great with Child?

Seventhly, How it may be known from a Mole?

As for the Firſt Queſtion. It is diſtinguiſhed from an Univerſal Dropſie of the Belly, in that the Womb-Dropſie ſwels chiefly the lower part of the Belly; whereas the univerſal Dropſie diſtends equally the whol Belly in all the parts thereof. Again, In the Womb-Dropſie, paleneſs and falling away of the fleſh of the whol body, are not ſo ſoon diſcerned as in the univerſal Dropſie, in which alſo for the moſt part, there is evident thirſt and drineſs of the tongue, which are not found in the womb-Dropſie, in which al other Symptomes are likewiſe far more gentle, than is uſual in the univerſal Dropſie. In a word, In the Womb-dropſie, ſome wind breaks out of the womb by fits; or a little water comes away, which evidently declare, that wind or water are contained in the womb.

To the second Question we Answer thus. That the sorts of Womb-Dropsies may be known from one another after this manner. If it arise from wind, the lower part of the belly being struck gives a sound; the belly is afflicted with pricking paines, which reach sometimes as far as the Midrif, Stomach, Loyns, and other parts; sometimes wind breakes evidently out of the neck of the Womb. Likewise, women often feel their Wombs riseing like a Globe towards their stomachs. Sometimes their breath is short and the sick woman when she awakes out of sleep, oftentimes is much troubled to fetch her wind. After all meat and drink whatever, they are worse. They often belch, and their belchings give them ease. They are oft troubled with Womb fits or suffocation of the Mother. Sometimes they are pained below the navel, so as they cannot endure to be touched. Those Signes do also appear in the Inflation or Blowing up of the Womb with wind, which differs from this Disease (as was said before) only in this, that the Inflation is of less durance, but a Dropsie of wind continues a far longer time.

But if the Wombs Dropsie arise from a wheyish Humor, the Region thereof appeares soft and flaggy; whereas wind stretches it stif: there is a greater heavines in the part and a noyse as of water flowing this way and that way: some water now and then drops from the Privity. And finally if it arise from flegm, the softness and flagginess of the part will be yet greater, and encrease daily more and more; and the bordering parts, as all under the Navel, the Privy parts, the space between the Privity & Fundament, with the Loynes, will be seen to swell with a Phlematick kind of Swelling.

To the Third Question we answer thus. If there be apparent tokens of the whol Bodies being misaffected, as by acute or long feavers, immoderate fluxes of blood, grievous distillations from the Head, Weaknesses of the stomach: swellings of the Spleen or Liver and other stubborn Diseases of those parts, with which the Wombes Dropsie began, encreasing as they encreased; it will be more than an even lay, that the Womb receives the matter of it's Dropsie from those parts by way of a flux of Rhewm. But if this Womb-swelling happen, when the whol Body is in good health, and do succeed particular diseases of the Womb, such as are hard Travels in Child-birth, Suppressions of the monthly courses, or over great flux thereof, Ulcers, Chollerick, or Melancholick, or hard Tumors, we may conjecture, that the Wombes-Dropsie doth depend upon those particular dispositions, and that the matter causing the said Tumor, is gathered together in the Womb it self, by means of its inability perfectly to digest and assimilate its nutriments.

To the fourth Question, we may Answer by saying, That the Matter which is contained in the cavity of the Womb, doth make a much larger Swelling, than when it is contained in bladders. Again, when it proceeds from a wheyish humor, a greater fluctuation of the water is perceived than when it is contained in bladders. And if so be, little bladders full of water be voided out of the Womb, it's a most certaine sign, that the Humour is contained in the little bladders.

To the first Question we must Answer; that the Wombs-Dropsie is Differenced from Tumors of blood or Choller, arising in the Womb: because in such Tumors or Swellings there is a feaver and a pain which is encreased by the least touch; also the Inflamation reaching even to the parts of Generation. And it is distinguished from Scirrhous and Cancerous Swellings, because in it there is no such great Hardness, which can resist the impression of the Finger, but it rather gives way, and pitts.

To the Sixth Quære wee say: When a woman is big with Child, the Swelling is not so even and depressed, but it is sharp, buncheth out, and seems greater about the navel than elswhere. Secondly, In Greatness with Child, after some months, women are for the most part somwhat better than they were, because the Child grown big consumes the greater part of those humors, which in the first months were burdensome: But the Dropsie, the further it proceeds the worse it growes. Thirdly, In greatness with Child, the child is manifestly perceived to stir, after the third or fourth month; which is not in the VVomb-Dropsie. Yet it falls out sometimes, that when the Dropsie is caused by wind, a certain Palpitation is preceived in the VVomb; but it is easily distinguished from the moving of a Child, which is more even, and is wont to be perceived in divers parts of the Belly. Fourthly, In Greatness of Child, the womans Duggs swell; but in the Dropsie they are extenuated and become smaller.

To the seventh Quære we Answer, that in a Mole, women find a kind of Heavines in their VVombs, which they feel not in the VVomb-Dropsie; and when they lie on the one of their sides, they preceive the weight to roul like a stone to that side. Again, in the Mole, violent flux of Courses comes by fits, namely, every third or fourth month; which happens not in the VVomb-Dropsie. Lastly, in case of a Mole, the Duggs swell, and sometimes have milk; in the VVomb-Dropsie, quite Contrary.

As touching the Prognosticks of this Disease. A simple Inflation or puffing up of the womb with wind, because it lasts not, is without danger. Yet if not quickly cured it may grow to a true Dropsie.

A Womb-Dropsie caused by a good conditioned Humor void of putrefaction, is wont to proue a long

long Diſeaſe; yet may it in proceſs of time be cured, yea ſomtimes, the water flows of its own accord out of the womb, and the Patient recovers her health.

But if the Humor be malignant, ſharp, or putrid, which is known by the grievous Symptomes following; the Diſeaſe is dangerous, and for the moſt part deadly: For if the Diſeaſe depend upon ſome private Diſeaſe of the Womb, it betokens a perfect ruine of the natural Functions of that part; whence follows at laſt an univerſal Dropſie of the whol Body. But if the Womb ſuffer by conſent of other parts, viz. of the Liver, Spleen, or Stomach, the Miſchief will be the greater, and ruine is thereby threatned to the whol Body. Hence it was well ſaid of *Aetius*, Such as is a womans womb, ſuch for the moſt part, is the reſt of her body.

If wind or water be contained in the Cavity of the womb, it is more eaſily cured than if it be ſhut within little skins or bladders.

The Cure of this Diſeaſe is performed almoſt by the ſame Remedies which have been propounded to cure the Dropſie and Green-ſickneſs. Whereunto ſome things more properly belonging to this diſeaſe muſt be added. And in the firſt place concerning Blood-letting; In the Diſeaſe, being new, proceeding from a ſuppreſſion of the Courſes and from ſome Plenitude ſtill appearing, blood-letting may be convenient; otherwiſe it wil hurt, ſeeing natural heat is exceedingly weakened and diminiſhed; and ſtubborn Obſtructions cauſed by a cold Humor, do cauſe fear of an Univerſal Dropſie.

But Purging is altogether neceſſary, and muſt be often reiterated, as we ordered in the forenamed Diſeaſes.

After ſufficient Purgation, Openers, Diureticks, and ſuch things as move the Courſes, are to be given, ſuch as are deſcribed in the places aforetaid. Unto which, theſe following may be added.

Take *Roots of Smallage, and of Madder, of each half an ounce: the Leaves of Savin, Feaverfew, Penyroyal, of each one pugil: Carrots ſeeds one dram. Boyl all in the Broth of a yong Pidgeon, and let her drink the ſtrained Liquor divers daies together.*

Before ſhe drink of the Broth, let her twallow one of the following Pills.

Take *of the beſt Caſtoreum, Mirrh, Madder, of each half a dram: Saffron twenty grains. With Juyce of Lemmons make all into nine Pills.*

After which Medicaments the Patient muſt exerciſe her ſelf ſtoutly, by which means, not only the Excrements bred in the bowels, and the whol compaſs of the Body, may by aſſiſtance of Heat be diſſipated; but all which is contained in the womb, may be voided out, the bladders being broken by violence of the Exerciſe.

If the woman do eaſily vomit, ſomthing may be profitably given her twice in a week to that end; by which means, not only the Humors which were wont to flow unto the womb, will be recalled, and brought forth; but the foreſaid bladders ſticking in the womb, and ſomtime containing a watry Humor, happily may be broken by the vehement motion and agitation, whereupon the Humor offending wil be voided.

To diſcuſs the ſaid Humor contained in the womb, the following Bolus, or Morſel, will be moſt effectual.

Take *of Mineral Borax half a dram: Saffron twenty grains: With Juyce of Savin, make all into a Morſel. Let it be taken twice in a week.*

Sweat-drivers are likewiſe very profitable in this diſeaſe, for by them, wheyiſh and flegmatick humors, whether in the womb, or the whol body, are diſcuſſed and evacuated.

In the mean while, the inbred heat of the Stomach muſt be ſtrengthened both with things given in, and outwardly applied, deſcribed in the Cures of the diſeaſes of that Part.

And outwardly, Medicines muſt be applied to ſtrengthen the womb, and to diſcuſs the Humors contained therein.

And in the firſt place, Fomentations and Baths to ſit in, may be made of a Decoction of Briony roots, wild Cucumer, the leavs of Danewort or Dwarf-Elder, Mercury, Elder, Origanum, Calamint, Wormwood, Rue, Sage, Marjoram, Time, Bay, Penyroyal, Mugwort; Seeds of Broom, Carrots, Cummin, Annis, Fennel; Berries of the Bay and Juniper Tree; Flowers of Chamomel, Melilot, and Roſemary. Of which, little bags may likewiſe be made, boyled in white Wine. Or the foreſaid Ingredients, or ſome of them, may be boyled in the Lye made of the aſhes of Vine-boughs.

And that the foreſaid Fomentations may work the better, they are to be applied before and behind: and the ſick woman ought to ſweat, if ſhe can, in her bed, or in a Stove conveniently prepared. Which likewiſe may be procured by help of a Bathing Tub.

In a windy Dropſie, dry Fomentations will be more profitable, with bags of Milet, Salt, Cummin-ſeed, and Bran fryed in a pan and beſprinkled with Wine.

After Fomentation let her Belly from the Navel downward, be anointed with Nard Oyl, Oyl of Dill, Oyl of Rue, Wormwood, and Southernwood. Which Oyls, if drawn out by Chymical Art, they wil be much more effectual.

After Unction, lay on a Plaiſter of Bay-berries, or a Pultiſs of Cows and Sheeps Dung, with Seeds of Smallage, Parſly, and Cummin, as alſo Honey boyled therewith.

To the ſame purpoſe the Skin of a Sheep newly killed is commended, ſprinkled with warm Canary Sack, and laid warm upon the Belly.

Clyſters are frequently to be given, made of the Decoction of Wormwood, Origanum, Penyroyal, Rue, Centaury, and the like: Or of the Oyl of Rue, Nuts, and Dill, with white Wine, Hypocras, or Muskadine. In which Clyſters diſſolve *Benedicta Laxativa*, *Hiera Diacolocynthidos*, *Terebinthinam*, Contection of Bay-berries, Roſemary-flower Honey, and the like.

Injections into the womb may be very profitable to evacuate the Humors contained therein, being compounded after this manner:

Take *Roots of Arabacca three drams*: *Leaves of Penyroyal, Calaminth, of each half a handful*: *Savin a pugil*: *Mechoacan a dram*: *Annis ſeed, Cummin ſeed, of each half a dram. Boyl all, and in ſix ounces of the ſtrained Liquor, diſſolve an ounce of Oyl of Orice, and as much of Elder Oyl, and make thereof an Injection.*

To the ſame end may Peſſaries be made, thus:

Take *Coloquintida and Mechoacan, of each one dram*: *Sal Nitre ten grains*: *boyled Honey as much as ſhall ſuffice. Make all into a Peſſary.* Or,

Take *Bindweed Roots, Roots of Eſula, of each a dram*: *Seed of Gith, or Nigella Romana half a dram*: *Honey as much as ſhall ſuffice. Make all into a Peſſary.* Or,

Take *Elaterium half a dram*: *bruiſed Figs as much as ſhall be requiſite. Make them into a Peſſary.*

When the Swelling of the womb proceeds from wind, a Fumigation of Nutmegs is very helpful, being commended by *Solenander*, in theſe words: *A woman newly out of Child-bed, expoſing her ſelf over ſoon to the wind and air, fell into inſufferable pains, neither could ſhe find any help. At laſt comes an old well experienced Midwife, and calls for three Nutmegs groſly poudered. Then ſhe put an Earthen pan with hot Coals under the woman, and ſprinkled the pouder of Nutmegs upon the Coals, ſo placing the pan, that the woman might receive the ſmoak through a funnel into her womb by the Water-Gate. At the ſame time ſhe was ſmoaked above with the ſame Fume: Which when it had penetrated into her body, the woman preſently cries out, I muſt needs go to ſtool: which ſhe had hardly ſpoken, but a hiſſing and ſound was heard, ſuch as is made when Gun-pouder is fired being ſhut in a narrow box: which wind being expelled, the woman was perfectly well in a moment. Being adviſed by this Experiment, having upon like occaſion uſed the like Remedy, I have very often found it to do much good.*

In the ſame caſe, Cupping-Glaſſes with much flame, is profitably ſet upon the Navel, for it excellently diſpels wind.

If the Diſeaſe come from Humors, Iſſues are to be made in the Thighs, that by thoſe Fountains the filth of the womb may be by little and little drained out.

Brimſtone and Nitrous Baths are commended likewiſe by many, both to drink, and to be waſhed in; provided there be no great heat of the Liver or whol Body, conjoyned with this Diſeaſe.

For the pain of the womb, which is frequently troubleſom in this Diſeaſe, *Amatus Luſitanus* commends the water or Decoction of Chamomel flowers, given to the quantity of four or five ounces.

And finally, If the Inflation or puffing up of the womb happen after Child-birth, there wil need no other Purgation than that by the womb: Which if it find any hinderance, it muſt be helped forwards by drawing Peſſaries, and by Cupping-Glaſſes faſtened to the Thighs, and by other Medicines deſcribed in our Chapter of Suppreſſion of Courſes. And if there be wind, the Fumigation made of Nutmeg aforeſaid, will be moſt ſeaſonable.

Chap. 11. *Of the falling down of the Womb.*

When the womb loſeth its Natural Scituation, and fals towards the Water-Gate, the Diſeaſe is termed, the falling down, or ſlipping forward of the womb.

Many Differences there are of this Diſeaſe, differing only in degrees: For ſomtimes only the inner neck falls down into the Water-gate: ſomtimes the whol body of the womb fals downwards, but does not appear without the Water-Gate, in the threſhold whereof appears the inner mouth of the womb, in likeneſs of a mans Yard, or a Gooſe Egg with an hole in it. Other whiles with the bottom turned out, it hangs without the Water-gate like a mans Cod, or an Oſtridges Egg, ſave that it is rugged, and hath an uneven ſurface: and it is in a word, ſomtimes ſo relaxed, that it falls ſo far out as to reach the Patients Thighs.

The

The immediate Cauſe of the falling down of the womb, is the Rupture, or Relaxation of thoſe Ligaments, which are wont to retain it, and its Neck in their proper place.

A Rupture of the foreſaid Ligaments may proceed from all violent Cauſes, as a blow, a fall, dancing and leaping, lifting ſome heavy burden, or carrying the ſame, violent compreſſion of the Abdomen, vehement Coughing which dures long, violent neezing, eſpecially in Child-bed, hard ſtraining to ſtool, difficult Travel, violent extraction of the Child out of the womb, or of the After-birth; vehement endeavor of the womb to caſt out ſomwhat offenſive thereunto, as a dead Child, a Mole, or an After-birth: for then, according to *Galen*, in his Third Book of Natural Faculties, the ſame thing betides the womb, which is wont to happen to two wraſtlers who endeavor to throw one the other upon the ground, till both fall together. Hereunto add, frequent ſetting of Cupping-Glaſſes upon the Thighs, and very vehement agitation of Body, or of Mind.

Relaxation or ſlackening of the Ligaments is cauſed likewiſe by divers cauſes, as by a long-laſting Catarrh, divers Crudities, which are caſt out into the womb, as the ſink of the whol Body. Whence it is that women long troubled with the Whites, can ſcarce avoid this Diſeaſe, eſpecially elderly women which are moſt of all troubled therewith. Add hereunto external cauſes, as over-frequent bathing, eſpecially in cold water; Southern and moiſt Air, eſpecially being received into the womb after Child-birth; moiſt Diet, much drinking; Idleneſs, long ſleep, and all other cauſes, which may decreaſe flegm, and cauſe its flux into the womb.

The Signs whereby to know this Diſeaſe are evident to the ſence. For the womb is found ſticking in the Water-gate like an Hens or Gooſes Egg, or like a Clew of Thrid, with the perceivance of a weight preſſing upon the Water-Gate, when the Patient ſtands upright. And while they ſit or go to ſtool, a vehement pain is felt about the privy Parts, and the Region of *Oſſacrum*, or the Hanch-bone. If it hang far out, the greater pain and heat is felt, the urine comes away by little and little, and makes the womb ſmart as it paſſeth.

The Cauſes procuring this Falling-down of the womb, may be thus diſtinguiſhed. If it proceed from loonets or ſlackneſs of the Ligaments, it comes by little and little, hath the leſs pain, and white Purgations have preceded, or other Cauſes moiſtening the womb, and relaxing the Ligaments thereof. But if it proceed from a breaking of the Ligaments, the pain is more vehement, and blood ſomtimes breaks forth; and ſuch Cauſes have preceded which have been able to break with violence the Ligaments.

As for the Prognoſticks belonging to this Diſeaſe. The Diſeaſe of it ſelf is not dangerous; yet is it very unhandſom and troubleſom, hindering the Patient from freedom to go and walk at will; alſo from Conception and convenient expurgation of her Courſes.

Yet may it ſomtimes occaſion death, if pains, Feavers, convulſions, or other grievous Symptomes be joyned therewith.

Alſo the womb in this Caſe is ſomtimes corrupted through diſtemper of the Air, or by violent impulſion, and becomes Gangrænated, which neceſſitates it to be cut off.

The Diſeaſe being freſh, and the womb coming not far out, is more eaſily cured than when it is an old Infirmity, and the womb comes far out.

In yonger women, the womb is more eaſily reſtored to its place than in Elderly women.

Falling down of the womb, by reaſon of the Ligaments being broken, is incurable.

To come to the Cure. The womb is to be thruſt back into its Natural place, and to be detained there; and the fault of its Bands or Ligaments muſt be corrected; If they be broken, by things that do glue and ſodder together; if they be relaxed or ſlackened, with things drying, aſtringent, and ſtrengthening. All which may be done by the following Medicaments.

In the firſt place therefore, That the womb may more eaſily be reſtored to its place, the Guts and Bladder muſt be disburdened, leſt preſſing the Neck of the womb, they ſhould hinder its reduction; foraſmuch as the neck of the womb reſts upon the ſtreight Gut, and the bladder reſts upon the neck of the womb.

When the Gutts and Bladder are diſcharged of their Excrements, let the woman lie along upon her Back, with her thighs wide aſunder, and her knees drawn upwards, and let her with her hands thruſt her womb inwards; and force it ſtill upwards into the neck, ſo as to turn it inwards as it goes, till all is returned within the cavity of the Belly which ſhould contain the womb. Or if ſhe is not able to do it her ſelf, let her do it by help of the midwife; or uſe a thick blunt ended ſtick with Cloaths wrapt about it, by which it may be forced further into the Cavity of the Belly, than is poſſible by the hands to drive it. Or, for fear of hurting her Body, a Peſſary may be made of Linnen Cloth often doubled and rowled together with a ſtring tied faſt thereunto, and accommodated to this ſervice of thruſting up of the womb.

But if the womb fallen from its place ſhall ſwell, ſo that it cannot enter into the cavity of the Belly, the ſwelling muſt in the firſt place be removed. And if there be an inflamation, ſuch things muſt be applyed as are fit to heal the ſame. If otherwiſe it be blown up, ſuch things muſt be uſed

as will diſcuſs the inflation. *Rodericus a Caſtro* waſhes the ſwollen womb with a Decoction of Beets, and then ſprinkles it with vineger and ſalt, and ſo when the ſwelling is abated, he reduceth the ſame.

The ſame *Rodericus a Caſtro* writes, that it is very good towards reſtoring the fallen womb, for a Phyſitian or a Chyrurgion to come with burning red hot Iron in his hand and to make as if he would thruſt it into the womb. by that means nature contracts her ſelf, and the womb with her, and any other part that ſticks out of the Body. For he relates that a certain very expert Chyrurgion did by this ſtratagem force Back a mans Gutts, that were ready to come out at a wound in his belly, when other remedies did no good. For holding a great red hot Iron in his hand, the Patient looking on, he made as if he would Clap it upon the wound. VVith the ſudden fright whereof the Gutts were preſently drawn back into their place.

Avenzoar in his Second Theizir, Tract 5 Chap. 4. Propounds ſome ſuch thing as this. *When this diſeaſe* (ſaith he) *begins firſt to appear, the Phyſitian may gently cure the ſame. And it is reduced all theſe wayes, viz. by your hand If you pleaſe; and if not make her lie on her Back and let ſome Body ſit upon her breſt, and another upon her thighes; and then cauſe her to be frighted putting ſome creeping Vermin upon her Leggs, ſuch as Mice, Eſts, frogs and ſuch like; by which let her be ſo frighted as to endeavour to get away by drawing her Leggs and thighs up to her; whereby all her Members and her whol Body may at once be contracted: by which meanes the Womb will return unto its own place.*

Zacutus Luſitanus following *Avenzoar* relates the following ſtory in the 66 obſervation of his Second Book. *Coming to a woman* (ſaies he) *which had her Womb fallen down the ſpace of a year & an half, with extream hardneß; it ſeemed very hard by reaſon of its ſtretching out to be reduced to its place; eſpecially ſeeing* Avenzoar *ſaies, that this work muſt be done before the Womb be grown hard. I deviſed many remedies for this diſeaſe; aſtringent Inſeſſions, Peſſaries, Plaſters, Confections. At laſt, having wraſtled ſtoutly with the diſeaſe, I could do no good. I betook my ſelf to this ſtratagem. I put Mice tied by the tailes, between the womans Leggs. Which running up her Thighs, the woman is mightily frighted, and forthwith* (a ſtrang thing to ſee) *her Womb is reduced into its proper place. This done, The Plaſter againſt Ruptures being laid upon the Region of the Womb and to the Groynes, ſhe remained for the time to come free from that Diſeaſe.*

Before the VVomb be repoſed in its place, it muſt be anointed with the Mucilage of comfrey Roots, or with an infuſion of Gum Tragacanth. Then are pouders to be ſprinkled thereupon, which have no aſperity or ſharpneſs, leaſt they hurt the VVomb or its neck; but of quality rather gluing than aſtringent or binding. Such an one may be thus made.

Take *Frankincenſe, Maſtick and Sarcocolla nouriſhed* (that is, well ſteeped ſo as to drink up as much of the Milk as it can hold) *with Breſt-Milk, of each one dram. Mummy, Gum-arabick, Acacia, Hypociſtis, of each half a dram. Make all into a moſt fine Pouder, to be ſprinkled as aforeſaid.*

The ſame Pouder may be applied in form of an Oyntment, if it be mixed with the aforeſaid mucilages, or Oyle of Saint Johns wort, or ſome other conſolidating thing.

After the VVomb is conveniently replaced, all art muſt be uſed to retain the ſame in its place, the woman lying in her bed, a little bending, with her thighes gently ſtretched out and the one reſting upon the other. And let her abide ſome daies in this poſture, and put in at the Water-gate a little wooll, cotton, or ſponge wet in harſh red VVine, or in Roſewater wherein Acacia or Hypociſtis hath been diſſolved.

To further this Retention of the VVomb in its place, Cupping-Glaſſes with much flame are frequently to be faſtened under her Duggs and upon her Navel.

Likewiſe ſweet ſavors are be preſented to her Noſe, and ſtinking things to be applied to her Genitalls, unles ſhe be ſubject to fits of the Mother.

Let the ſaid Parts be fomented with a Decoction of aſtringent things made in red VVine and the VVater of a Smyths Forge.

Alſo Practitioners uſe a Bath to ſit in, made of the Same Decoction. In which there needs caution. For it is to be feared, leaſt in that poſture, the VVomb ſhould again fall from its place, eſpecially at the beginning, while the Diſeaſe is yet freſh. But when it hath held the Patient long, and ſhe is provided of a convenient kind of Truſs, ſuch a bath will do much good.

After the ſaid Bath a Fumigation will likewiſe be very good, of Frankincenſe, Maſtich, Sandarach, red Roſes. Others indeed do commend a Fumigation made of a ſalted Eel-skin.

Injections into the VVomb will work much more effectually than thoſe remedies which are outwardly applied: they may be compounded of the Decoction for the Fomentation or Sitting Bath aforeſaid,

Oyntments and plaſters will likewiſe be good in this caſe ſuch as were deſcribed in the Immoderate flux of Courſes and in the VVhites; and as ſhall hereafter be propounded to prevent Abortion.

The

The Retention of the Womb in its place may likewiſe be holpen, by aſtringent and ſtrengthening Medicaments taken in at the Mouth. And among the reſt, the following Pouder frequently taken is very proper for this Diſeaſe.

Take *Mullein two drams: Myrtle Leaves, Garden Parſnep Seeds of each one dram: Shavings of Harts-Horn, half a dram: Aſhes of Cockle-ſhells one dram: red Coral two drams: Make all into a Pouder. The Doſe is one dram with harſh red Wine.*

Touching theſe aſtringent Medicaments both internal and external it is to be obſerved; that they muſt be warily uſed, if the womans courſes do ſtill flow at their ſeaſons, leaſt they being ſuppreſſed may cauſe more grievous Diſeaſes to follow. The beſt ſeaſon for theſe Medicaments, is when the Patients courſes are paſt.

Theſe Remedies are to be contained twelve or Fifteen daies together. Alſo care is at the ſame time to be taken, that the Patient be neither coſtive nor looſe. For if the Excrements be hard, the Womb is eaſily thruſt out by the Patients ſtraining at ſtool; and a looſe Belly doth relax or ſlacken the bands or Ligaments of the Womb.

While the foreſaid Remedies are uſed, we muſt reſiſt the Antecedent Cauſe, by ſuch things as ſhall purge out and diſcuſs thoſe flegmatick humours which relax and ſlacken the Ligaments of the Womb.

And firſt convenient Purgations muſt be ordered; which muſt not be violent in their operation and diſturbing, leaſt they caſt the Womb out of its place again, bringing abundance of humors into thoſe parts.

Some allow of vomiting, becauſe it draws the humors into the upper parts of the Body: and in that reſpect it would be profitable, if it were not to be feared in another regard: Namely becauſe it is performed with great ſtraining, and drives the Womb downward, as much as neezing. Yea and experience hath taught that nothing doth more effectually facilitate hard travel, and bring the Child ſooner into the light, than a Vomit given to the Childing woman.

After ſufficient Purgation, a Decoction of Guajacum is to be given three weeks together that every day the Patient may ſweat in the morning. And in the Evening let her Belly beneath the Navel be fomented with a Decoction of Sage, Origanum, Marjaram, Time, Feaverfew, Tanſie, Wormwood, Rue, red Roſes, Cyperus Roots, Calamint, Cypreſs Nutts, and the like ſimples boyled in Smythes Forge-water and red Wine. After the Fomentation, the Fumigation and Liniment may be uſed which were before deſcribed.

Inſtead of a Sweat-driver, or after the uſe thereof, Bathes ariſing from Sulphurous Mines, will be ſingularly profitable, ſuch as our Balerucan Baths; and experience hath ſhewn that many have bin cured by ſuch Bathes.

And that a woman may be ſecure that her Womb fall not down again, which it is very apt to do; or if there be no hope of a perfect cure let her wear ſuch a kind of truſs as is called *Hyppocrates* his Girdle. Whereby women are ſo guarded and defended, that without fear of the falling down of their Wombes they may go about and do their daily buſineſſes; alſo their Womb is thereby defended from the cold. They are made almoſt after the ſame manner, as truſſes that are uſed againſt Ruptures or Burſtennes.

Peſſaries are likewiſe very profitable in deſperate Fallings down of the Womb, which ſome do make of a good long piece of cork covered over with Wax. Others make of Wax alone, ſome round, others ſquare, triangular, oval or any other faſhion; which are conveighed into the Cavity of the Womb, and are never taken out, but keep the Womb in its place: ſo as the women notwithſtanding do all their uſuall enployments, conveniently are enjoyed by Men in carnal conjunctions, do conceive, carry their big Bellies, and bring forth. VVhich is confirmed with many Examples by *Franciſcus Roſſetus* in his Book entituled *De Partu Cæſareo*, Sect. 6. Chap. 5. and by *Baubine* in his Appendix to *Roſſetus*. All which are tranſcribed word for word by *Schenkius* and *Sennertus*, in their proper Chapters, where they are to be ſeen.

Chap. 14. *Of the Womb ſhut up, or Imperforated.*

VIrgins that have their Wombs cloſed up, are ſaid to be imperforated, or unboared, like a Barrel of Beer that hath no hole to put in a Spigot. Now this Cloſure of the Womb is wont to be in three places; viz. In the inner Mouth of the Womb, in its Neck, and in the outward mouth of the Womb next the Water-Gate. And it is cauſed, either in the firſt formation of the Infant, when ſome Membrane is drawn before the mouth of the Womb, or its neck; or by ſome precedent wound or ulcer, which growing whol again, the parts of the neck of the womb, or its lips come to be cloſed together; or by tumors ſhutting or ſtopping up the inner Orifice; or by ſome compreſſion, ſtreightneſs, or diſtortion, which hinders the mans Yard and Seed from going in, and the Monthly Purgations from coming out.

This

This Disease is in part easie, and in part hard to be known. If the closure or stoppage be in the outward Orifice of the Privity it is discerned by seeing & feeling. But if it be in the Neck or Mouth of the Womb, it is not discerned til the courses begin to break out, or til the parties begin to addict themselves to generation. For when the time of their monthly Purgations is come, pains and gripings are felt in the Region of the Womb at certain periods of times, with a sence of weight, yet no flux of Courses follows; the Conjecture will be more probable, if the Virgin be of a good habit of Body, not troubled with any Obstructions, or Cachectick dispositions. The Disease persevering, their wombs swel, so that Maidens seem to be with Child; and sometime their whol Body swels, which likewise seems as it were black and blew through the abundance of blood. But if the closure do possess the neck of the womb, it is perceived in the first Carnal Conjunctions, because it doth not admit the Mans Yard.

Lastly, If the Closure be in the Orifice or Mouth of the Womb, it is hardly discerned; yet may it be in some measure perceived by the hand of a skilful Midwife; and it gives some suspition thereof when the mans seed doth presently slip away, as soon as it is cast in.

As for the Prognostick. If the Closure be in the Orifice of the Privity, it is easily cured, being opened by a slight Section. But if it be in the inner parts, it is much harder to cure.

When the Passage is stopped with a Membrane, its more easily cured; but when the closure is caused by a fleshy matter, as it happens after Ulcers, the Cure is more difficult.

The Closure of the inner Orifice of the Womb is incurable, because the Instruments of Chyrurgiry cannot be applied to open the same.

The Cure of this Disease, because it belongs chiefly to Chyrurgiry, we shall dispatch in few words.

If the Closure of the Womb have been caused in the first formation, it is to be opened by cutting only. The manner of which cutting is largely described by *Sennertus*, in its proper Chapter.

But if the Closure have been occasioned by reason of an Ulcer, as it happens in the Whores Pox; it is to be considered, whether it be only an excrescence of flesh not wholly stopping the passage, or a perfect and entire growing together of the sides of the neck, or of the lips. For, if flesh only be grown up, endeavor must be used, convenient Evacuations being premised, first to prohibit the encrease of that flesh by drying and discussing Medicaments, then to diminish the said flesh by Medicines of Frankincense, Birthwort, Bark of Frankincense, Roses, Balaustines, Mastich, Mirrh, Aloes, and such like. Which not doing the deed, we must come unto such flesh-consumers as are least painful, as burnt Allum, *Unguentum Ægyptiacum*, and such like. And at last, if this will not consume the flesh, it must be cut off round about, with the same Instrument wherewith the superfluous flesh breeding in the Nose, called *Polypus*, is wont to be cut off. But if the neck of the womb be wholly grown together, we must try to renew the Ulcer, and with the foresaid Medicaments to remove the superfluous flesh. And if that cannot be, we must undertake to cut it, in the very self same manner, as we are wont to cure the natural coalition of the neck of the womb.

If the passage of the womb be shut up by some tumor, proper Remedies are to be appointed thereunto; such as have been propounded in the Inflamation, Scirrhus, and Cancer of the womb.

If it be caused by compression of the neck of the womb, or of the inner mouth therof, the compressing cause is to be taken away, which may be divers, viz. A Stone in the Bladder, a Swelling in the streight Gut, Fatness of the Caul, the Legs or Thighs distorted, and going a-play; the Cure of which accidents see in their proper place.

In streightness of the Passage, which is chiefly caused by hardness or dryness, we must work with things moistening emollient, and laxative; with Baths to sit in, Fomentations, Liniments, and Pessaries: and so when the part is relaxed, a little pipe of Lead may be put in, or of white wax artificially contrived, and smeared with Butter, or some emollient Oyl, which let her always carry, or at least in the night when she goes to bed, and in the day time, let a Pessary conveniently made of Cotton be put in the place, being smeared with Oyntment of Marsh-mallows, or such like.

In Distortion, the same Method of Cure, very neer, is to be observed; and let the pipe be so framed, that it may gently bow the contrary way to the distortion; and so the neck of the womb may by little and little be reduced to its due place.

Chap. 15. *Of Barrenness.*

THis word *Barrenness* or *Sterility*, is not in this place taken in so strict a sence, as to signifie only a total defect, and perfect abolition of Conception; but in a large and ample signification, so as to comprehend all kind of impotency, and every impediment of Conception: namely, When a woman at such an age in which she ought naturally to be capable of Conception, and using the company

pany of a man, doth not conceive. And this defect is termed *Agonia*, or *Atecnia*, that is, Inability to conceive or bear children.

And this Barrenneſs or Impotency of Conception, is cauſed divers waies; all which for cleerneſs ſake, we may reduce to four Heads, according to thoſe four Natural Operations which are required to perfect Conception.

The Firſt of which is, That the Woman in her Genial Embracements, do conveniently receive the Mans Sperm into her Womb.

The Second, That ſhe retain the ſame a convenient ſeaſon.

The Third, That ſhe cheriſh and preſerve the ſame in her Womb.

The Fourth, That ſhe afford fitting Materials to form the Embryo, or firſt Conception, and duly to augment the ſame, as need ſhall require.

Hence Four Impediments of Conception do ariſe; viz. If the woman receive not the Seed; If ſhe retain it not; If ſhe preſerve and cheriſh it not; If ſhe nouriſh it not ſo as it encreaſe and grow.

Reception of the Seed is hindered by many Cauſes; by things Natural, things not Natural, and by things Preternatural. Among things Natural hindering the Reception of the Sperm, in the firſt place is reckoned, yongneſs of Age, in which, by reaſon of the ſmalneſs and ſtraitneſs of the Genital Parts, the woman cannot receive the mans yard, or not without very great pain, which makes her worſe for Genial Embracements. The ſame effect is cauſed by over great Age, ſeeing that in elderly Virgins, the Genital Parts, through want of being exercited in actions tending to Generation, do become withered, flap, and flaggy, and ſo ſtrait, that they cannot afterwards eaſily admit a mans Yard. Likewiſe, all ſuch as are naturally lame, with diſtorted Legs, and their Crupper-bone depreſſed, can hardly put themſelves into ſuch a convenient poſture during the genial Embracement, as neceſſary that the Seed may be duly and rightly received. Hereunto add over great fatneſs, which ſtraitens the Paſſages of the womb, and by greatneſs of the Belly, hinders the right and fit Conjunction of the man with the woman. And laſtly, a cold diſtemper of the womb, makes women dull and liſtleſs, ſo that they enjoy no pleaſure (to ſpeak of) in the Genial Embracement, or it is long before they are provoked with deſire; ſo that the inner Orifice of the Womb is not timely enough opened to receive the Mans Sperm.

Among things not Natural, Paſſions of the Mind hold the firſt rank, and eſpecially hatred between Man and Wife; by means whereof, the Woman being averſe from this kind of pleaſure, gives not down ſufficient quantity of Spirits wherewith her Genitals ought to ſwel at the inſtant of Generation, that her womb skipping as it were for joy, may meet her Husbands Sperm, graciouſly and freely receive the ſame, and draw it into its innermoſt Cavity or Cloſet, and withal bedew and ſprinkle it with her own Sperm, powred forth in that pang of Pleaſure, that ſo by the commixture of both, Conception may ariſe.

The things Preternatural which can hinder the Reception of Seed, are certain Diſeaſes incident to the Genital Parts, or to ſuch as border neer upon them; as Tumors, Ulcers, Obſtructions, Aſtrictions, Shuttings up, Diſtorſions, Stone in the Bladder, and other ſuch like.

The Second fault in Women, which hinders Conception, viz. When the Seed is not retained, depends either upon the over great moiſture of the Womb, namely, when the womb is filled with many excrementitious Humors, by which becoming looſer and more flaggy than is fit, it doth not rightly purſe and contract it ſelf together, ſo as to retain the Sperm; or the Orifice of the Womb is ſo ſlack that it cannot rightly contract it ſelf to keep in the Seed; which chiefly is cauſed by Abortion, or hard Labor in Child-birth, whereby the fibres of the Womb are broken in pieces one from another, and they, and the inner Orifice of the Womb over much ſlackened. And that ſame immoderate moiſture may ariſe both from the proper Conſtitution of the woman, and from external cauſes of moiſture, ſuch as Baths, Idleneſs, moiſt Diet, and eſpecially from the Whites; which flux of Whites happens very frequently, ſince the Womb is as it were the Common-ſhore, whereunto all the parts of the Body do diſcharge their Superfluities, ſo that this is wont to be the moſt frequent and ordinary Cauſe of Barrenneſs.

The Third Cauſe hindering Conception, viz. When the Sperm is not ſufficiently nouriſhed in the Womb, depends upon ſuch things as are apt to corrupt the Seed, as every diſtemper of the womb; namely, a cold diſtemper, which extinguiſheth the Seed; an hot diſtemper, which diſſipates the Spirits; a moiſt diſtemper, which robs the Seed of its due thickneſs; and a dry diſtemper conſumes and drinks up the Seed: and thus the Seed being by theſe diſtempers corrupted and degraded from its natural Conſtitution, becomes unfit for Conception. To theſe Cauſes, Authors do add Witchcrafts, and Charms, by which all confeſs that Conception may be hindered. Likewiſe external things, as Meats and Poyſons may do as much, ſuch as are reckoned up by Authors, viz. Among Meats, Vinegar, Mint, Water-Creſſes, Beans, and ſuch like: and among Poyſons, or at leaſt ſuch things as have a certain venemous property cauſing Barrenneſs, The Agate or Jet, the Matrix of a

Goat

Goat or Mule, Glow-worms, Sapphires, Smaragds, and the like. And laſtly, Malignant and venemous Diſeaſes, may exceedingly corrupt the Seed, and render it unfit for Generation, as the Conſumption, Leprous Infections, Whores-Pox, ſtinking and cancerated Ulcers.

The Fourth and laſt Cauſe of Barrenneſs, viz. When the woman doth not yield convenient matter to form the Conception, and to augment the ſame, depends upon a want of Seed and Menſtrual blood; ſo over yong women and over old, do not conceive, through want of both thoſe Materials. The Age of a woman fit for to conceive, is commonly determined to be from the fourteenth to the fiftieth yeer of her Age. Yea, and though thoſe foreſaid Materials are not wanting, if yet they are ill diſpoſed, they are not fit for Generation. And they may be ill diſpoſed through divers diſtempers, and other Diſeaſes; likewiſe by reaſon of bad Diet, producing none of the beſt blood. So women which gorge themſelves with much raw fruit, and cold ſmal drink, breed wheyiſh blood unfit for Generation. Yet we muſt needs confeſs, that ſome women have conceived who never had their Courſes, as may be collected out of the Obſervations of divers Authors; yet ſo much Menſtrual blood was collected in thoſe women, as uſeth to remain over and above in ſuch as have their Courſes, though they had not ſo much as to cauſe their monthly Courſes.

To the Cauſes hitherto muſtered up, muſt be added a certain diſproportion or unſutableneſs between the Mans Sperm, and the Womans, which makes they cannot be rightly mingled, nor conſpire to the Joynt-making up of an Embrion or Rudimental Infant; though there be in the mean while, no ſenſible defect, either in the Man or Wife. And it ſomtimes happens, that the ſame man can have a child by another woman, and the ſame woman by another man; whereas they have lived together in the married eſtate barren. It comes likewiſe to paſs, That a woman ſhall live with a man for ten or more yeers together, and not conceive child, and afterward ſhall begin to conceive and bring forth: the Cauſe of which accident is, The change of Temperature cauſed by yeers, whereby the Seed comes to have another temper, ſo that being before diſproportioned to the mans Seed, it comes by change of Age to be fitly proportioned thereunto. Now this diſproportion of Seeds, conſiſts chiefly herein; When men much exceeding in ſome quality belonging to their temper, are joyned with women which partake of the ſelf ſame exceſs, viz. When over hot men are joyned with over hot women, over cold men with over cold women; for thoſe diſtemperatures can procure no mediocrity in the Seeds, and other cauſes neceſſary to Generation. Some fly likewiſe to occult or hidden qualities, which make the Sperms to agree, or diſagree, though no exceſs of the firſt qualities can be diſcerned.

To theſe Authors add an hidden kind of Diſpoſition, which makes ſome women barren, though no manifeſt cauſe of ſuch Barrenneſs appear in them.

The Signs of Barrenneſs, we will run over according to theſe four ſorts of Cauſes propounded.

And in the firſt place, Cauſes hindering Reception of Seed are not hard to be diſcovered, being evident to our very Sences. For tenderneſs of Age is eaſily obſerved, and ſo is an over elderly ſtate of yeers; and the evil conſtitution of thoſe parts which border upon the womb, as when women halt, have crooked wreathen Legs, have their Crupper-bone depreſt, or are over fat; as for the cold diſtemper of the womb, we ſhall treat of that in our third Rank of Cauſes. Hatred between Man and Wife is known by relation of themſelves, or of thoſe that live with them. Alſo the particular Diſeaſes hindering the reception of Seed, as Tumors, Ulcers, Obſtructions, Aſtrictions, ſhuttings up, Diſtortions, may be known through ſearch of the Genital Parts made by a Midwife or Chyrurgion.

Of the Cauſes hindering the retention of Seed, which make the ſecond Rank; we ſhall treat of over great moiſture among thoſe of the third Rank; as for Abortion and hard Travel, they are known by the womans relation.

The Cauſes of the third Rank, viz. Which have power to corrupt the Seed do require more exquiſite ſigns to know them by, which we ſhall proſecute as followeth.

A Cold Diſtemper of the Womb, is hereby known, In that the Woman longs not after Carnal Embracements, and feels little pleaſure therein; her Face is ſoft, whitiſh, and cloudy; her feeling is dull about her Share, Loyns, and Thighs; ſhe voids thin and crude Sperm, and with little pleaſure; her Courſes are ſuppreſſed, or they come very ſparingly, and keep no conſtant orderly time, and they are pale and diſcolored. Add hereunto, Diet preceding of a cooling Nature, conſiſting of a long uſe of Fruits and Herbs, with much drinking of cold ſmal Drink.

A moiſt diſtemper of the womb is known by the lax, and ſlap, flaggy, ſoft habit of the womans body, her much lifting, frequent and almoſt continual flux of Whites; plenty of Courſes, thin and watry, no appetite to fleſhly Conjunctions, heavineſs of her Loyns, aptneſs to miſcarry, plenty of Urine, and a moiſt Diet.

An hot Diſtemper is known, by the manly and ſtrong habit of the womans Body, ſuch as is ſeen in Viragoes and Amazones; by a ruddy countenance, black hair of the Head and Eye-brows; a ſtrong and

and manly voyce; ſhe is frequently diſpoſed to be angry, over prompt to all kind of actions, her thirſt cannot be ſatisfied, her Urine is yellow, her Courſes few, their color is a dark red, their heat and acrimony ſo great, that oftentimes they exulcerate the ſecret Paſſages; their Privities itch, and they are prone to carnal Embracements; they are quick and ſuddain in the voiding of their Seed; they have frequent Pollutions, and luſtful Dreams.

A dry diſtemper of the womb is known by the ſmal quantity of Courſes; drineſs, itching, and choppings of the Mouth of the Womb; little excretion of Sperm in the Genial Embracement; trouble arising from over much carnal Conjunction, and Leanneſs.

If the Seed be corrupted, and Barrenneſs cauſed by Witch-craft, all other ſigns will be abſent, which are wont to declare the Natural and manifeſt cauſes of Barrenneſs. There will be likewiſe ſome alienation of minds between the married Couple, of which neither of them can give any handſom account; yea, and ſomtimes they can both of them, but ſeldom ſhoot forth their Seed, and that with Labor and Difficulty.

Diet or poyſons that extinguiſh Seed, if they have been taken in, we ſhall come to knowledg thereof, by diligent queſtioning of the woman, and thoſe that are about her.

And laſtly, Malignant Diſeaſes, ſuch as are of power to extinguiſh the Sperm, as Leprous Manginеſs, the Whores-Pox, and ſuch like, are known by their proper ſigns.

The fourth Cauſe of Barrenneſs, which conſiſts in defect or badneſs of the Menſtrual blood, is known, firſt by the over great fatneſs of the whol Body, to the nutriment whereof the blood is carryed away, and conſumed, and is not allowed for the nutriment of the child in the womb. The ſame is likewiſe known by great Leanneſs of the Body, and extream ſlenderneſs; for when there is not blood enough to nouriſh the Body, it can hardly ſuperabound to nouriſh the Conception.

And in a word, All ſuch things as conſume, and much diminiſh the blood, if they have preceded, or be at preſent in the Patient, they ſignifie want of blood in her body; ſuch as are, extream labors and pains-taking, immoderate ſitting up, and watching, auſtere faſtings, large bleedings at noſe or elſewhere, acute or chronical Feavers, Fiſtulous Ulcers, and Iſſues that run much.

Somtimes likewiſe, over great quantity of blood, doth hinder the nouriſhment of the Seed, and of the Conception; for the Seed is oppreſſed with ſo great plenty, and cannot exerciſe its formative faculty: which is wont to happen in full bodyed, and ruddy women, ſuch as live a jovial life, and delight in Feaſting, whoſe wombs are alwaies bedabled with a continual moiſture.

Now the ill diſpoſition of the womans blood, may be known by the ill habit of her Body, the color of her Courſes, and other ſtrange diſpoſitions, together with an ill diet foregoing.

The diſproportion of the Husband and the Wifes Seed is hardly known; but if both of them be of a very hot, or a very cold Conſtitution, we may conjecture, That the diſproportion ariſeth from thoſe diſtempers; if other more manifeſt cauſes of Barrenneſs, do not appear.

It is yet harder to diſcover that kind of Barrenneſs which depends of a certain hidden diſpoſition, no manifeſt cauſes thereof appearing. Yet many Experiments are related by Authors, whereby to know whether a Woman be Naturally Barren, which though they carry no great certainty with them, yet are Phyſitians neceſſitated ſomtimes to make uſe of them, in favor of Princes and Nobles, who are permitted to divorce their Wives, in caſe of Barrenneſs.

Hippocrates in Aphor. 59. Sect. 5. ſaith, *If a Woman conceive not, and thou wouldeſt know whether ſhe ſhall conceive or not, cover her with blankets, and burn ſome perfume under her, and if the ſmell proceed through her Body, up to her Noſtrils and Mouth, know that ſhe of her ſelf is not Barren.*

The ſame *Hippocrates* ſuppoſeth that it may be known whether a woman be fruitful or not, by putting a head of ſcraped and peeled Garlick into her Womb; for if the next day the ſmel ſhall come into her mouth, ſhe is apt to conceive; if not, ſhe is barren.

Or put Galbanum ſoftened at the fire, and encloſed in Silk, into the womans womb at night, and bind her whol head in perfumed Linnen; if in the morning the crown of her head ſhall ſmel of Galbanum, the woman is wel purged, and wil be fruitful.

You may try the ſame, if you put a little Baliſom mingled with Water, and received in Cotton, into the Womb, binding it with a ſtring to her Thigh; for if the womb do draw it inwards, it is a moſt approved ſign of fruitfulneſs.

Amatus Luſitanus commends this following as a moſt true ſign: He takes a dram of a Hares Runnet, which diſſolved in warm water, he gives the woman to drink, being in a bath of hot water, and faſting. If the Woman do then feel pains in her Belly, he pronounceth her fruitful; if not, barren.

Many ſeek to know the Barrenneſs of a woman by her Urine, wherein they ſteep Barley: which Barley, if it grow within ten daies, they count it a ſign of Fruitfulneſs; if not, they account it a certain token of Barrenneſs.

And others, Finally, do powr the Womans water upon Bran or Fenugreek, and take it for a note of Barrenness, if Worms breed there.

For a Conclution to these Discoveries, We shall diligently consider and enquire, whether Conception and Generation be not hindred by fault of the Man, or any defficiency in him. For in such a Case, it were vainly done to torment the Woman with a multitude of Medicines. Barrenness proceeding from the Man, may be known by the diseases of his Genital parts, as inability to raise his Yard, want of Sperm, Swelling of his Stones, Gonorrhœa, and the rest. And it gives some token hereof, if the Man be faint-hearted and Womanish by Nature, if he want a Beard, be slow in casting forth his Sperm, and his Sperm be cold, so that his Wife feel it cold in her Womb; if he have little or no Lust to Carnal Embracements, and perceive very little pleasure therein. And lastly, If such Causes have preceded which are of power to make the Seed unfruitful.

The Prognostick must be regulated according to the Method of the Causes, as we have ranked them.

And in the first place, Tenderness of Age hinders conception only for a time, which cannot be expected till the Woman is more grown. But Elderly years cause a Total dispaire of Conception. But if the Parties Courses do as yet proceed, in due season, there may be yet some hope of Conception; howbeit very smal, especially in such Women as are at the fortieth yeer of their Age; for although Women that have had Children younger, are likewise wont to Conceive at that Age; yet such as have never been with Child, have little reason to hope that they shal Conceive at that Age, because the Womb having been so long unimployed, is become withered, shrunken up and unfit to Conceive Child.

Barrenness which is caused by an evil shape of the Members, as in such as are Lame, have distorted Thighs, or their Crupper-Bone depressed; is incurable.

But if Barrenness proceed from over Fatness, or some distemper of the womb not over old, the cure is to be hoped, by procuring leanness and by correcting the Distempers.

That Barrenness which is caused by other diseases, as by a Swelling, an Ulcer, Obstruction, whites, want of Courses, falling of the Womb, Consumption, Leprous Mangyness, Whores-Pox, and such like; is easier or harder to cure, according as the said diseases are either easie to be cured or hard.

For the Cure of this disease, whichsoever of the causes aforesaid hath produced the same; we must seek the removal thereof.

And in the first place, the straitness of the Genital Parts in regard of youngness of Age, needs no cure, for as Age encreases, they attain to a convenient wideness. But in the mean time, it is necessary that the Party abstain from Carnal Conjunction; because the oversoon use thereof, doth spoil the natural constitution of those parts.

Barrenness which is caused by lowness of stature, or Elderliness of years, is incurable, yet endeavour may be used to help the same, by Emollient and Relaxing Medicaments, provided the Courses do still flow.

Over great Corpulency, must be corrected by an extenuating Diet and convenient Evacuations.

If Barrenness seem to arise from a bad Course of Diet, as in persons given over much to Belly-cheer, to Wine, or small Drink, such women are to be reduced to an exact Course of Life; and all excess of eating and drinking must be avoided.

Viragoes and strong constitution'd women, such as come neer to the Nature of Men, that they may be rendred fit for conception, must by all the art possible be effeminated, and reduced to such manners as become their sex; all meats of grosser nourishment being forbidden them, and all labours and exercises; their Courses being made conveniently to flow, by plenty whereof they may be abated of their manly courage, and grow soft and gentle. And if their monthly courses shall not suffice to that end, their humors must be diminished, by frequent Blood-letting, and purging; and by frequent bathing and other alteratiue remedies, the whole habit of their Bodys must be moistened and cooled.

If Barrenness be caused by Closure of the Womb, by distorsion, by obstructions, by Tumors or Ulcers; all these must be remedied by such Medicaments as are propounded in those Chapters which treat of their Respective cures.

Barrenness depending upon an hidden property in the woman which is natural to her, is incurable, and therefore it ought diligently to be enquired after, least remedies be applied in Vain.

If Barrenness come by witch-craft, Charming, or hidden power of Medicaments, there is little place for Physick; but the party must have recourse to prayers and supplications, which being Zealously poured forth, by men eminent in piety, do procure Help from the Almighty.

Howbeit against Medicines which by a secret power do cause barrenness, certaine Amulets are propounded by Authors, which have a peculiar vertue to resist the malignity of such Medicaments. *Cardan* will have it, that the Pizzle of a Wolf worn about the woman, will frustrate all such

Incantations

Incantations and faſcinations. Others do much commend the Adamant and the Hyacinth Stone. The Antients called Saint John-wort, the Divel-driver. The ſame vertue is likewiſe attributed to the Squil or Sea-Onion, to Eryngus, Sagapenum, Rue, & other things, being worn by Man & Wife. Alſo certain it is, that for the parties concerned, to endeavour confidently to deſpiſe and ſlight all Charmes and Witch-crafts, is very profitable in this caſe. Alſo (if the Author of the Witch-craft be not known) it is good for them to Change their Habitation, and to forſake their Houſes, Beds, wearing Cloathes, and other Houſhold ſtuff, wherein the Charmes are oftentimes concealed.

If an hot Diſtemper be the cauſe of Barrennes, the ſame Cure is to be uſed, which was deſcribed in the hot diſtemper of the Liver. But if the Exceſs of Heat be yet more violent, recourſe muſt be had to thoſe things which have bin deſcribed in our Chapter of Womb-fury. But the camphire muſt be left out of thoſe Medicines, Becauſe it is held to be a very great Enemy to fruitfullneſs.

Extream Dryneſs, hindring Conception, muſt be cured by a reſtorative Diet; and if the Conſumption of the fleſh be much, we muſt have recourſe to the Cure of an Hectick feaver *viz.* Uſe of Milk, frequent bathing, and ſuch like.

But the moſt frequent Cauſe of Barrenneſs is a cold and moiſt diſtemper of the whol Body and of the Womb, which is often accompanied with the Whites, whoſe particular Cure muſt be fetcht from its proper Chapter. But the following Medicaments may be peculiarly applied to theſe diſtempers, which by a diſcreet Phyſitian may be varied; ſo as to make them more heating or drying, according as Moiſture ſhall the more offend.

And in the firſt place flegmatick humors abounding in the Body are to be evacuated by purging, diuretick and ſudorifick Medicaments. And certain Revulſions are to be made, by Iſſues in the Armes, Neck, or thighs. Alſo the principal parts are to be ſtrengthened with Treacle, Mithridate, Tablets or Lozenges of Aromaticum Roſatum, Confection of Alkermes and ſuch like. Alſo Purgations muſt be repeated at certain diſtances of time, if Evil humors do ſeem to abound.

Afterward we muſt proceed to ſuch things, which do by a peculiar virtue or ſpecifick property ſtrengthen the Womb, help Conception, and procure deſire of fleſhly Imbracements, of which kind of Medicaments there are innumerable formes deſcribed by Authors. We ſhall in this place chuſe out the principal and ſet before you,

And in the firſt place, An Electuary may thus be made.

Take *Roots of Eryngus and Satyrion candied or preſerved, of each one ounce. Green Ginger candied, half an ounce. Filbert Kernells, Pine-Kernells, and Piſtachios of each ſix drams: one preſerved Nutmeg. Seeds of Rocket and Water-Creſſes of each two drams. aſhes of a Bulls Pizzle, the Reins of the Sea-Scinkos and ſhavings of Ivory, of each one dram. Confection of Alkermes three drams. The Powders Diambra and Diamoſchum* Dulce, *of each one ounce and a half. Amber Greece half a dram. With Syrup of Preſerved Citrons, make an Electuary, of which let her take the quantity of a Cheſſnut, at her lying down to ſleep, twice or thrice in a week, drinking a ſmall draught of Canary Sack or Hyppocras, after it.*

In the form of a Pouder, the following Medicaments may be adminiſtred.

Take *Seeds of Rocket, Siler Montanum, of each half a dram, ſhavings of Ivory, Cinnamon, Nutmeg, of each a dram, Muſk (in ſuch as can away with it) three grains. White Sanders three drams. Mix them and make of all a Pouder. The Doſe is one dram in Canary. Or*

Take *Seeds of Rocket, wild Parſnep, Cinnamon, Pouder of the Nutmeg, Electuary Diambræ and Diamoſchus, of each one dram: the Matrix of an Hare, a Bores-ſtones, a ſtaggs Pizzle, Cloves, of each half a dram: Muſk and Amber-greece, of each ſix graines, Sugar the weight of all the reſt. Mingle them, make them into Pouder, whoſe Doſe is two drams with rich Canary.*

The Afterbirth of a woman is believed to be of great efficacy, being dried and Poudered and taken to the quantity of a dram.

Some Reckon as a ſecret the Pouder of the Liver and Stones of a Boare-Pig which the Sow his Mother farrowed alone without any Brothers or Siſters by him. This Pouder they ſay cures Barrenneſs both in men and women.

Matthiolus in his Comments upon *Dioſcorides* cries up the Seed of the Herb Amy, in theſe words: *The Seed of the true Amy, which is brought from Alexandria, does exceedingly help the Barrenneß of women. For experience hath ſhewn, that many have bin made fruitful only by the uſe of this Seed. For if it be drunk a drams weight in a morning in ſtrong Wine, or in broath of fleſh, being finely Poudered, every other day three hours before Meat, it gives great hopes of Children. But the Man muſt have to do with his Wife only on thoſe daies in which ſhe does not take the Seed.*

In ſuch women whoſe bowells are apt to be Inflamed, the ſhavings of Ivory will be very good, taken to the quantity of a dram in White Wine, for four or five daies together, after the monthly Purgation.

The Eſſence of Satyrion, deſcribed by *Crollius*, is moſt excellent in this caſe, if it be given from a ſcruple and two ſcruples, to a dram, in a Cup of Muſcadine.

Salt of the ſaid Satyrion is alſo very effectual, given to the quantity of ten grains in Muſcadine, after the Courſes.

Divers Decoctions are wont to be made to the ſame intent. The moſt effectual, are theſe which follow:

Take *Eryngo Roots one ounce: Mugwort, Nep, of each a handful: Boyl them in white Wine. Give a Cup of the Decoction morning and evening, with a dram of* Tryphera Magna, *made without Opium, nine daies together.*

Quercetanus highly commends this which followeth:

Take *of the Stones of a Ram prepared with Wine and dried, the Matrix of an Hare prepared after the ſame manner and dried, Mace, Cinnamon, Cloves, white Ginger, Seeds of Ammeos, of each two drams: Saffron a dram and an half: Hazel-nut Kernels, and Piſtachios, of each three drams. Beat ſuch of theſe as require beating, and boyl all in a quart of Muſcadine till a third part be conſumed. Let her take three or four ounces of this Decoction in a morning three hours before meat, and that three daies together; and upon the fourth let her lie with her Husband.*

The diſtilled Water following, is likewiſe very effectual.

Take *of Cinnamon, Cloves, Nutmeg, Mace, of each an ounce: Cubebs, long Pepper, Galangal, Zedoary, Seeds of Ameos, Seſeleos, of each half an ounce: Juniper Berries one dram: rich white Wine, Roſemary Water, Marjoram water, Balm water, of each as much as ſhall ſuffice. Let them digeſt together ſix daies, and then diſtil them, and give of the ſtilled Water morning and evening two or three ſpoonfuls.*

Pena and *Lobellius* propound as a Secret not to be communicated to any living Creature, the diſtilled Oyl of the ſmaller, and more delicate ſort of ſweet Marjoram, mingled with the Runnet of an Hare, and a little Muſk, to facilitate Conception.

If a woman upon the fourth day of her monthly Purgations, ſhall drink about half a pint of the Juyce of Sage with a little Salt, and a quarter of an hour after ſubmit her ſelf to the Genial Embracements of her Husband, many grave men affirm, ſhe will undoubtedly conceive. With which Medicine, *Aetius* teſtifies that the Ægyptian Women after a great mortality by Peſtilence, had abundance of Children.

To the foreſaid internal Medicaments, external Medicaments muſt be joyned. In the uſe whereof, it is diligently to be obſerved, that before we go about to dry, bind, and corroborate the womb, that the filth contained in the Cavity thereof be firſt drawn away and purged, leſt it either flow back into the noble parts of the Body, or be more affixed to the ſubſtance of the Womb. Firſt therefore ſuch things muſt be given as purge the womb, after this manner compounded:

Take *Diaphœnicon and Hiera Picra, of each half an ounce: Turpentine and Honey of Mercury, of each one ounce: Caſtoreum a dram. Mix all, and according to art bring them to ſuch a conſtitution as ſhall be fit to make Peſſaries, to put into the Womb.* Or,

Take *of Hiera Picra half an ounce: Agarick trochiſcated and poudered, Orice Roots of Florence, of each one dram: old Mithridate, and Diaphœnicon, of each two drams. With Juyce of Mercury, make a Peſſary. Roul it in a cloth, put it up when ſhe goes to bed, and let her keep it two or three hours.*

If the Womb be very full of Excrements, a more ſtrong Peſſary muſt be put in, after this following Injection.

Take *Leaves of Wormwood, Mugwort, Mercury, and Rue, of each one handful and an half: Pulp of Coloquintida ten grains: Agarick trochiſcated half a dram: Ginger and Myrrh, of each a ſcruple. Boyl all in water and white wine to a pint, wherein diſſolve two ounces of Honey of Roſes. Let three ounces of this Liquor be injected into the Womb for three daies together, in the morning, and when ſhe goes to bed, after her Courſes have done. Then put up this following Peſſary.*

Take *Hiera Picra, and Benedicta Laxativa, of each an ounce: the pulp of Coloquintida, and Agarick trochiſcated, of each half a dram: Spicknard, Seeds of the Roman Nigella, Savin Leaves poudered, of each a dram: Incorporate them with Honey of Roſemary flowers, and include them in a piece of Silk. Make Peſſaries hereof, and put one into her womb, when ſhe is going to bed, and let it bide there two hours, and afterward waſh the part with white Wine.*

To ſtrengthen, faſten, and dry the womb, theſe following Medicaments may be uſed:

Take *Roots of round Birthwort half an ounce: Lignum Aloes three drams: Cypreſs Nuts and Roots, of each two drams: Calamus Aromaticus a dram: Dictamnus Creticus, Winter Savory, and Mirrh Leaves, of each one handful: choyce Mirrh, Storax, and Benjamin, of each two drams and an half: Stœchados, Roſemary flowers, and Marjoram, of each one pugil: Boyl*

all

all in a ſufficient quantity of ſtrong white Wine. In a pint and an half of the ſtrained Liquor diſſolve two drams of Troches of Alipta Moſchata, Amber-greece, and Muſk, of each ſeven grains: Civet five grains. Make hereof an Injection into the Womb warm, morning and night for certain daies together.

Before or after the Injection, this following Fumigation may be uſed:

Take *Troches of Gallia and Alipta Moſchata, of each two drams: Storax, Benjamin, and pure Ladanum, of each half an ounce: Lignum Aloes, and Lignum Rhodium, of each one dram: Nigella Seeds, Cubebs, and Cloves, of each four ſcruples: Amber, and Tacamahacca, of each one dram and an half: Mace half a dram. Make of all a Pouder, of which with Orange-flower water, wherein Gum Tragacanth is diſſolved, make little Cakes or Troches: of which, let one or two be laid upon burning coals, and let the ſmoak be received by a Funnel into the Patients Womb.*

The poorer ſort may be ſmoaked with Mirrh, Frankincenſe, Lignum Aloes, Storax, Benjamin, Cinnamon, and Cloves, of each a like quantity. After the Injection and Fumigation, let the following Peſſary be put up.

Take *Frankincenſe, Maſtich, of each two drams: Troches of Gallia and Alipta Moſchata, of each four ſcruples: Biſtort Roots, Cypreſs nuts, Shavings of Ivory, and red Roſes, of each one dram: Styrax, Benjamin, and Ladanum, of each two ſcruples: Calamus Aromaticus, and Cypreſs Roots, of each half a dram. Make them into a Paſte with Orange-flower Water: then with thin linnen cloth, make two Peſſaries of ſufficient greatneſs; one of which put up when ſhe goes to bed, anointing the top thereof with a little Oyl of Nutmegs and Civet mingled together.*

It is furthermore related of Garden Garlick, That if it be beaten with Oyl of Spike, and thruſt into a piece of Linnen made like a Pudding-bag, and ſo put up far within the Womb, that it powerfully brings down the Courſes being ſtopt, and wonderfully delights the womb, and purgeth it: ſo that hereby, many have been brought to conceive Children, who for a long time had been paſt all hope of ever having any.

Before the ſtrengthening Injections and Fumigation, a Bath to ſit in may be uſed for an hour together, before the Patient goes to bed; and it may be thus prepared.

Take *Roots of Briony, Maſter-wort, Valerian, Orice, Enula Campana, of each three ounces: Leaves of Marjoram, Mugwort, Nep, Penyroyal, Mercury, Sage, Bay, of each four handfuls: Bay-berries, and Juniper Berries, of each an ounce: Boyl all, and make thereof a Bath for the Patient to ſit in.*

As for total Baths, ſuch as ariſe from Brimſtony and Bituminous Mines, are moſt excellent; and very many women in this Condition, do flock unto ſuch Baths, as to a Sanctuary.

After Bathing and Fumigation, the Share, and the ſpace between the Privities and Fundament, muſt be anointed with this following Oyntment:

Take *Oleum Nardinum, & Moſchatellinum, of each an ounce and an half: Oleum Cheirinum half an ounce: Pouders Diambræ, and Diamoſchi, of each one dram an half: Liquid Storax one dram: Civet ten grains: Muſk, Amber-greece, of each ſix grains: a little white Wax. Mix all, and make them into an Oyntment: Wherewith let the parts aforeſaid be anointed. Within let her be nointed with Civet, or Indian natural Balſom. Or let the Man ſmear his Yard with Civet immediately before he joyn himſelf.*

Finally, Let Plaiſters be applied to the Share, and to the Loyns, which let her wear continually, or at leaſt every night, until the laſt week, in which her Courſes are wont to flow. Let them be made after this manner:

Take *of the Rowl of Emplaſtrum pro Matrice four ounces: Of the Rowl of Emplaſtrum de Maſtiche two ounces: Tacamahacca, and Caranna, of each one ounce: Pouder of Tormentil and Biſtort Roots, of each three ounces: Pouder of Mirtle two drams: Pouder of Aromaticum Roſatum four ſcruples: Soften them with Oyl of Quinces, adding thereto a dram of Oyl of Nutmegs. Spread it upon Leather, and ſhape two Plaiſters, the one round to be applied to the Share; the other ſquare for the Loyns of the Patient.*

Chap. 16. *Of Acute and Chronical Diſeaſes of Women with Child.*

THe Acute and Chronical Diſeaſes of women with Child are the ſame in Eſſence or Nature, and have the ſame ſigns, with the like Diſeaſes in women not with Child, or in men; wherefore it is needleſs in this place, to ſpeculate thereupon, let the Reader pleaſe to look for them in their proper Chapters.

But

But the Prognoſtick of theſe Diſeaſes is not the ſame; becauſe in women with Child they are far more dangerous, and very often times mortal. So ſaith *Hippocrates* in Aphor. 31. Sect. 5. For a Woman with Child to be ſeized by an acute diſeaſe, is deadly. For if the Diſeaſe have a Feaver joyned with it, there is a two-fold danger attending the ſame (as *Galen* ſhews in his Commentary upon this Aphoriſm) one from the Feaver, which will kil the Child; another from the ſlender diet which is requiſite to the Cure of the Feaver, but is not ſufficient to nouriſh the Infant in the Womb. Or if it be an acute Diſeaſe without a Feaver, as the Falling-ſickneſs, Apoplexy, Univerſal Convulſion of the whol Body, the Mother and Infant cannot withſtand the violence of the Diſeaſe, neither can they bear ſuch ſtrong Medicines as are requiſite to the Cure of thoſe Diſeaſes. Yet we muſt know that this Prognoſtick is not perpetually true. For we know by the Teſtimonies and Examples in Authors, and by dayly Experience, That many women with Child having acute Diſeaſes, eſcape with their lives.

But Chronical or lingering Diſeaſes, as Intermitting Agues, Catarrhs, Teneſmus, &c. do threaten Abortion, and if they cauſe it not, they can hardly be cured before the woman be brought to bed, but do keep her company till ſhe lie down.

Diſeaſes Acute and Chronical in the firſt and laſt months, are more dangerous, than in the intermediate months. For in the firſt months, the bands wherewith the Infant is faſtened to the Womb are weak, ſo as they may eaſily be broken, and the tender Infant is more eaſily over preſſed with thoſe preternatural Cauſes. But in the laſt months, namely, the ſixth, ſeventh, and eighth, the Child being grown greater, requires much nouriſhment, which in theſe Diſeaſes it is deprived of. Alſo the foreſaid bands do not ſtick ſo faſt as in the third, fourth, and fifth months, in which there is leſs danger of Abortion. Therefore *Galen* doth excellently compare the Child in the Womb to Fruits hanging on a Tree, which upon their firſt growing out have very tender ſtalks, ſo that they may be eaſily ſhaken off with the wind, or any other violent commotion; and when they are neer ripe, they hang not ſo faſt upon the bough, as in the intermediate ſpaces they did.

Likewiſe the Cure of the foreſaid Diſeaſes in women with child doth remarkably differ, as touching their Diet, and thoſe two grand Remedies, Blood-letting and Purging; whereunto we may ad Medicaments which evacuate by other waies, viz. Such as move the Courſes, Piſs-drivers, and Sweat-drivers, becauſe it is feared leſt by theſe evacuations, abortion may be cauſed: of theſe therefore we ſhall only treat at preſent, referring what elſe belongs to the Cure of theſe Diſeaſes, to the proper Chapters, where ſuch reſpective Diſeaſes are handled.

As for Matter of Diet, it is not to women with Child in Acute Diſeaſes to be enjoyned ſo ſpare, leſt the little Infant be famiſhed; neither is it to be allowed ſo liberal, that the Feaver ſhould be thereby ſtrengthened; but we muſt ſteer a middle courſe, with this Caution, That in the firſt months of their Belly-burden, a thin Diet be enjoyned, and in the latter ſomwhat more ſolid and plentiful, becauſe the Child doth then ſtand in need of more nouriſhment. Yet if there muſt needs be ſome error in Diet, it is better to err in keeping too full, than too ſlender diet; for recovery is chiefly to be expected from the ſtrength of the Mother, and the Child.

Touching Bleeding, that Aphoriſm of *Hippocrates*, viz. the 31. of Sect. 5. is preſently brought in oppoſition, where he ſaies, *If a woman with child be let blood, ſhe miſcarries, eſpecially if the child be grown.* And *Galen* renders the Reaſon in his Comment, Becauſe the Blood being let out, the Infant wants its nouriſhment, whence follows Abortion. On the other ſide, daily Experience ſhews, That in very many Diſeaſes of big-bellyed women, eſpecially acute diſeaſes, as the Pleuriſie, Inflamation of the Lungs, continual Feavers, and ſuch like, blood-letting is neceſſary, and may be adminiſtred, not only in the firſt, but alſo in the middle months, and ſomtimes in the laſt months of a womans Belly-bearing. Which if it be omitted, both Mother and Child are in great danger of death. And to this latter Opinion the Elder Phyſitians aſſent, not diſſenting from the Mind of *Galen* and *Hippocrates*, by ſo doing. For therefore it is they held a woman would miſcarry, if being with Child, ſhe were let blood, becauſe blood being taken away, the Child would want its Nouriſhment. So that if blood may ſo be taken away, as that the Infant ſhall not want its Nouriſhment, there wil be no danger of Abortion thereby.

Now to the caſe may ſtand: As firſt, In the firſt Months of a Womans Belly-bearing, while the Infant in the womb is little, and wants but little Nouriſhment, for then its Nouriſhment by bleeding will not be drawn away, eſpecially if certain ſigns of ſuperfluity of blood be apparent in the Mother. So that from the firſt month to the fift blood-letting, may be ſafely practiſed. But in the middle and laſt Months, greater circumſpection is to be uſed, becauſe the Child being greater, and wanting more Nouriſhment, cannot ſo ſafely admit of Phlebotomy. Howbeit, if the Woman abound with blood, and a ſmal quantity be taken away, ſhe may ſafely be let blood, becauſe hereby the Diſeaſe will be allaied; neither wil ſo much Nutriment be thereby withdrawn from the Child, as to cauſe Abortion. But if it ſeem that *Hippocrates* thought otherwiſe, let us conſider that we let blood after a far other faſhion than the Antients did, they let blood by pounds, and we by ounces. The very truth is, there

is

is no better way to preſerve women from Abortion, than by blood-letting, when it ſprings from over-much blood ſtrangling the Infant, and overwhelming the ſame, in ſuch women as have been accuſtomed out of their time of being with child to have a plentiful flux of Courſes for divers daies together. Thus *Petrus Salius Diverſus* in the 22. Chapter of his Book of particular Diſeaſes: *I for my part proteſt* (quoth he) *that I have preſerved many women from Abortion, which they had often ſuffered, only by letting them blood in the firſt months of their being big. Neither would I have it thought, that no other kind of blood-letting may be practiſed in childing women, ſave that which is ſparing or moderate. For ſomtimes plentiful bleeding in the laſt month hath done very much good. And I have ſomtimes experienced this plentiful Blood-letting in the laſt month, when the women with Child were afflicted with a burning Feaver, and were full of Blood hoping thereby an abatement of the Feaver, and an haſtening of the Birth, both which I obtain'd by blood-letting, and ſaved both child and mother in danger of death, by this only Remedy. Which being in ſome Patients omitted, and neglected by Phyſitians, minding more the words of* Hippocrates, *than the matter it ſelf, hath been the cauſe that both child and mother hath miſerably periſhed, being ſtrangled by the plenty and fervency of blood.* So far *Salius*. *Amatus Luſitanus*, in the 57. Cure of his 1. Section, let a woman with child of eighteen yeers of age, blood, in the ſixth month, four times with happy ſucceſs, ſhe being in a burning Feaver. And *Rodericus a Caſtro* in his third Book of Womens Diſeaſes, Chap. 21. writes, that he let a woman of *Liſbon* blood, who had a Pleuriſie in the eight month, and was given over for deſperate by other Phyſitians, four times and no leſs one after another, and ſhe recovered, and had a healthy Boy. And to conclude, If I may freely relate ſomwhat from mine own Experience, I will ſet down the following Hiſtory, which is a rare one, and worthy to be regarded. *The Wife of* John Vicules, *Citizen of* Montpelier, *had three miſcarriages one after another at ſeveral times of her being with child: When ſhe was the fourth time with Child, about the end of the ſecond month, ſhe was taken with the ſame pains of her Belly and Loyns, which had been the uſual fore-runners of her former miſcarriages. I being called to her, and conſidering ſhe was a Sanguine Woman, and full of Blood, preſently cauſed four ounces of blood to be taken from her; and within half an hour the foreſaid pains quite ceaſed, and the Woman was ſo well that ſhe would not uſe thoſe other Medicines which I preſcribed for her to prevent Abortion.* Now thoſe Symptomes appeared in the ſelf ſame time, wherein ſhe was wont to have her Courſes, when ſhe was not with Child. Again in the third month of her being with Child, at the ſame period of time, the ſame Symptomes return upon her: She ſending for me, deſires I would order her to be let blood, ſeeing the month preceding ſhe had found ſo ſudden help thereby. I conſent, and ſhe is again let Blood, with like good ſucceſs as before. In like manner in her fourth, fifth, ſixth, ſeventh, and eighth months the ſame Symptomes returning, in their juſt diſtances of time, ſhe was again let Blood and preſently recovered. The laſt of her bleedings was but eight daies before the beginning of her ninth month, with like profit as before; and about the end of the ninth month the ſaid woman brought forth a living Male-child and Luſty.

Yet I would not have a young Phyſitian moved with theſe examples be too bold in letting women Blood in their laſt months of being with Child. But the Nature of the Diſeaſes and of the women muſt be diligently conſidered, that Medicaments may be conveniently ſuited thereunto. Allwaies remembring that ſins of omiſſion are lighter than ſins of commiſſion, and that it is better in a doubtfull caſe to fall ſhort, than to outpaſs the due and fitting bounds. Yet when he finds the evident indications of Blood-letting, let him boldly draw Blood, firſt enforming the by-ſtanders or friends of the ſick, that there is more danger of abortion, and of the death of Infant and Mother from the Cruellty of the diſeaſe, than from Blood-letting: and allwaies remembring that but little Blood be taken away, that the Child may not miſs of its nouriſhment. And if plenty of Blood require a larger quantity to be taken away, let it be done at divers times and not all at once.

Wherefore the foreſaid Aphoriſm of *Hippocrates* does not abſolutely forbid the opening of a vein, but only warnes that Phyſitians be wary what they do in that kind. Which is elegantly delivered by *Cornelius Celſus* in the 10. Chapter of his 2 Book, in theſe words. *The Antients did judg that young and old people could not bear Blood-letting. And they perſwaded themſelves that a woman with Child, let Blood would miſcarry. But experience hath ſince taught us, that theſe are no generall Rules, and there are other conſiderations of more weight, which the Practitioner is to regard. For it matters not of what Age the Patient is, nor what ſhe hath in her Body, but what her ſtrength is. So that if a young man be weak, or a woman not with Child be weak, Blood is ill taken from them, for the remaining ſtrength dies, and they periſh. But a ſtrong Child, and a ſtrong old man, and a woman with Child that is luſty, are ſafely cured by bleeding.* So for *Celſus*. Some latter Phyſitians have dared to open the lower veins in women with Child, to Cure the Falling-ſickneſs by conſent of the Womb, the venerial and peſtilential Bubo, yea, and to prevent abortion, as we may ſee in *Zacutus Luſitanus* in his Book of Wonderful Cures Obſ. 23. Book. 1. and Obſ. 130 and 151 of Book 2. Who by his own and other mens

experiments

experiments endeavours to prove, that such Blood-letting may be safely practised. Which I leave to prudent Physitians to consider of.

We said about the beginning of this Chapter, that there is no difference in Curing the diseases of women with Child, saving with respect to the greater remedies; which difference must be in them thus determined, *viz.* That the diseases which hold women not with Child, as vomiting, want of appetite and the like; in them being not with Child, they are to be Cured rather by vomiting than by Blood-letting, because they come from evil humors abounding in the stomach and the whol Body; but in women with Child, they need rather Blood-letting, because they Spring from Blood retained in in the very beginning of their being with Child. And experience hath taught that the vomiting, which is wont often to trouble women with Child, is in the first months of Childing exasperated by purges; but by bleeding much abated, yea and wholly taken away, if the Blood-letting be iterated every month till the symptom cease.

The use of Purging in women with Child *Hippocrates* hath defined in Aphor. 1. Sect. 4. Women with Child (saith he) are to be purged if the humor offending do work in the fourth month and to the seventh, But these about the seventh less. And we must take heed what we do when the Child is very young, or old. *Galen* in his Comment saies that there is the same proportion between a Child in the Womb and fruit upon the true. For fruit when it first grows upon the bough, it is held by a very tender stalk, and therefore quickly falls, being shaken by a vehement wind. afterwards when they are grown greater, they are not easily separated from the boughs. And yet when they are fully ripe they fall off of their own accord. In the same manner women suffer abortion in the first and last months, because in them the Child is not so fast tied to the Womb. But in this Age of ours, purges are wont to be given to women with Child in all the months (very neer) of their being with Child in diseases springing from the tyranny of humors & excrements vitiated, when the matter is in motion and works, or when it is concocted: so often as there is more danger feared from the evil humor causing the disease, than from the commotion raised by the purging Medicaments. Gentle and harmless Medicaments have made Physitians bolder in this kind, such I mean as we use at this day, as Rhubarb, Myrobalans, Cassia, Manna, Senna, Agarick and the like. But we must allwaies remember that saying of *Hippocrates*; and we must more freely give purges in the middle months and more warily in the first and last. Also the use of Pills is ever more suspected in women with Child; both because they make a greater commotion in the Body, and also by reason of the Aloes, which by reason of the extream bitterness is an enemy to the Child, and is thought to open the mouths of the veines. But if sometimes the use thereof seems necessary, in some grevious infirmities of the stomach, which are wont frequently to infest women with Child the first months of their being with Child bearing, let it be carefully washed with Rose-water, that the acrimony thereof may be taken away; or let it be mixt with strengthening and astringent things, as Rhubarb, Mastich and such like.

Clysters are not very safe, because by compressing the Womb they may cause abortion. So that when there is need of them, and in women accustomed to that kind of evacuation, they must be made in less quantity, and of such things as are rather mollfying and lenefying than much purging.

In a word, touching Sweat-drivers, Piss-drivers, and such things as move the Courses, our Opinion is, That Movers of the Courses properly so called are never to be used in women with Child. And Piss-drivers because they likewise are apt to bring down the Courses, ought to be suspected; and if the necessity of some disease require the use of them, the gentler must be made choice of. And finally, Sweat-drivers may be safely given, because they drive the humors out, by the habit of the Body, whereby no danger of abortion is incurred, in so much that some women in the middle of their being with Child, have bin Cured of the whores Pox, without harm to their Child.

Chap. 17. *Of Abortion or Miscarriage.*

Abortion or Miscarriage is the bringing forth of an imperfect or unripe Child. And consequently a child dead in the Womb, is not counted an Abortion, till it be excluded. So that whether alive or dead Child be brought fourth, not being ripe, nor having attained to the just term of growth which it ought to have had in the Womb, it is to be termed an Abortion, or Miscarried Child.

The Causes of Abortion are some internal some external. The internal may be reduced to four heads, viz. to the Humors, to the Child, to the Womb, and to the Mothers diseases.

The humors may cause Abortion while they offend in quantity or in quality.

They offend in Quantity either by way of excess or of Defect.

Humors offending by way of excess are seen in a Plethorick or over-full Constitution of Body; for Blood being more plenty full than is requisite to Nourish the Infant in the Womb, flowes into the veines of the Womb, and is excluded by way of the monthly Courses, and brings away the Child with it.

Defect

Defect of Humor fitting to Nouriſh, ſprings from ſuch Cauſes, which are able to draw the Nouriſhment from the Child, as faſting, whether voluntary or forced; as when women with Child loath all kind of Meat, or vomit it up again; a thin diet in acute diſeaſes, immoderate bleeding by the Noſe, Hæmorrhoides, Womb, or by immoderate Phlebotomy. Whereupon *Hippocrates* in Aphor. 34. Sect. 5. If a woman with Child go very much to ſtool, it is to be feared that ſhe will Miſcarry. Hereunto may be referred extream leanneſs of the whol body, wherein there is not Blood enough to nouriſh the Infant. Of which, *Hippocrates* in Aphor. 44. Sect. 5. Speakes thus. *Women with Child being very lean, not by nature, but accident, as famin, long-ſickne ſs &c. they Miſcarry, untill they get their fleſh again.*

In reſpect of the Child, Abortion may happen, if it be over great, ſo that it cannot by reaſon of its bulk be contained in the Womb; hence it falls often out that little Women miſcarry eſpecially if they be married to Men Bigger than ordinary whoſe Children grow very great, and find not in the Womb place large enough to contain them, till they come to their perfect growth. Which made *Hippocartes* ſay in his Book of ſuperfœtation. *If any Woman conceive frequently, and do duly and at a certain period of time Miſcarry, as in her ſecond, third, or fourth month, or later: the narrowneſs of her Womb is in fault, which is not able to contain the Child as it grows great.* Alſo plurality of Children may cauſe abortion, as when two or three or more are contained in the Womb at one time; for then the Womb overloaden excludes the Children before the fit time: which is the cauſe that Women often Miſcarry of twinns. Alſo the dead Child is to be reckoned among the cauſes of Abortion: for as ſoon as the Child is dead; Nature doth forthwith ſet her ſelf to caſt it forth.

Abortion happens in reſpect of the Womb it ſelf, if it be not of largneſs and capacity enough, ſufficiently to widen it ſelf according as the Child grows, as was ſhewed above out of *Hippocrates*. As alſo if there be any thing preternatural in the Womb, as an Inflamation, a Scirrhous Tumor, an Impoſtume and very many diſeaſes beſides. And finally if the Womb be overmoiſt and ſlack, that it cannot contain the Child ſo well as it ought to do.

In reſpect of the Mothers diſeaſes, Abortion comes two waies. Firſt of all, when as her diſeaſes are communicated to the Child, whereby it is killed, or ſo weakened that it cannot receive due nouriſhment nor growth; ſuch as are continual and intermitting feavers, the Whores-Pocks and many ſuch like. Secondly, when the ſaid diſeaſes of the Mother, do cauſe great evacuations or great commotions of the Body, as Large Bleedings, from what part of the Body ſoever, fluxes of the Belly, grievous Swoonings, Falling-ſickneſs, Vomiting, and *Tenesmus* [that is perpetual going to the ſtool and voiding nothing but a little ſlime] which above all other diſeaſes is wont to cauſe Abortion, becauſe by that frequent and almoſt continual endeavour of going to ſtool, which perpetually attends this diſeaſe, the Muſcles of the Belly are perpetually contracted, and do more compreſs the Womb than the ſtreight Gutt upon which the Womb reſts; which continual compreſſion or ſqueezing of the Womb, doth at laſt cauſe Abortion.

External cauſes which further Abortion, do ſome of them kill the Child, others draw away its nouriſhment, and others diſſolve thoſe bands wherewith the Child is faſtened to the Womb.

The Child is killed by greivous commotions of mind, as Anger, ſadneſs, Terror &c. meates earneſtly longed for and not obtained, ſtrong purging Medicaments, ſuch things as provoke the Courſes, ſuch things as drive forth the Child; ſuch things as are reckoned by a ſecret property to deſtroy the Child in the Womb; abominable ſmells, eſpecially the ſtink of a Candle ill put out.

The Child is deprived of its nouriſhment, by the Mothers being famiſhed, and by immoderate loſs of her Blood, eſpecially when the Child is big. As *Hippocrates* teaches in the Aphor. 60 Sect. 5.

The bands which faſten the Child to the Womb are looſed by vehement exerciſe, Danceing, Running, Rideing, or Joking in a Coach or Cart; carrying of an heavy weight, or lifting it from the ground, a violent fall and ſquelch, a Blow upon the Belly that mauls the Child, vehement motion of the Belly by coughing, vomiting, looſneſs, neezing, convulſions, crying out, immoderate or over wanton venereal embraces. And in a word, vehement motion of the Armes, by drawing ſomewhat violently to a Body, by turning a wheel, or doing ſome ſuch work, may exceedingly further Abortion or Miſcarriage.

The Signs of preſent Abortion are manifeſt of themſelves. But ſuch as go before Abortion, and prognoſticate the ſame, are theſe; An unuſual heavineſs of the Loyns and Hips, a loathneſs to ſtir, Appetite gone, ſhivering and ſhaking coming by fits, pain of the head, eſpecially about the Roots of the Eyes; a ſtraitening of the ſides, and of the Belly above the Navel; the flagging or falling, and extenuation of the Dugs, which made *Hippocrates* to ſay in Aphor. 37. Sect. 5. *If the Dugs of a woman with child do ſuddenly grow ſmall, that woman will miſcarry.* For the extenuation of a womans Dugs in ſuch a caſe, doth ſignifie want of blood in thoſe Veins which are common to the womb, and to the Dugs, by means of which defect, the child is in danger to miſcarry. But if Abortion ſhall

be cauſed by ſome external efficient, cauſing violent agitation of the Child in the Womb, and a burſting of the Veſſels, with a pain raiſed in thoſe parts; the Spirits and Blood run ſpeedily to the genital parts, of which the Dugs being deſtitute, grow ſmaller than they were. Furthermore, Plenty of Milk dropping from the Dugs, doth argue a weak Child, and conſequently portends Abortion; according to *Hippocrates* in Aphor. 52. Sect. 5. But if frequent pains, and almoſt continual, do torment the Reins and Loyns, reaching towards the Share as far as *Os ſacrum*, with a certain endeavor of going out of the Womb, it is a certain ſign of a woman that will ſhortly miſcarry. For thoſe parts do ſignifie that the Membranes and Ligaments wherewith the child is faſtened to the womb are ſtretched and torn in ſunder. And if ſo be that pure Blood, or ſuch as is wheyiſh, or water flowing from the Womb, do follow the foreſaid pains and endeavors of coming out; it ſhews that Abortion is hard at hand, and that the Veſſels and Membranes of the Womb are broken, and the mouth of the Womb open. At the ſame time, the ſituation or poſture of the Child is changed; for whereas it lay high and poſſeſſed the middle of the Womans Belly like a Sugar-loof bearing out; it is now gathered, round like a Foot-ball, and rolled down towards the Water gate. Alſo oftentimes there follow grievous Symptomes, as ſhiverings, tremblings, Palpitations of the Heart, Swoonings, and abundant Bleeding.

Hereunto may be added what *Hippocrates* teacheth us in the ſecond Book of Popular Sickneſſes, Text 17. That if after violent external cauſes, ſuch as are a blow, a fall, and ſuch like, vehement pain, and perturbation ariſe in a Woman with Child, ſhe ſuddenly (or at moſt the ſame day) miſcarries; but if the external cauſe were weak, the Abortion may be differred till the third day, which being once over, there is no longer danger of Abortion, becauſe ſuch wounds and hurts, are wont to grow well again upon the third, or at moſt, the fourth day, or very much to be mitigated and aſſwaged; whereupon the Child is again confirmed in the Womb and retained. Which Precept is of great moment in the Practice of Phyſick, that women with child being hurt by ſome external accident, ſhould keep their bed for three daies or longer, and uſe ſuch Remedies as prevent Abortion.

The Prognoſticks of Abortion may be divers, after this manner:

Women are more endangered by Abortion, than by due and timely Child-birth, becauſe it is more violent, and unſeaſonable; for as in ripe Fruit, the Stalks are looſened from the Boughs, and the Fruit falls of it ſelf; ſo in a Natural Birth, the Veſſels and Ligaments wherewith the Child is tied to the Womb, are looſened and untied as it were of their own accord, which in caſe of Abortion muſt needs be violently broken aſunder.

Very many women become Barren by their Miſcarriages by reaſon of thoſe exceeding rendings & tearings which do wholly overthrow the diſpoſitions of the Womb.

Much bleeding accompanied with fainting, raving, and convulſions, is wont to cauſe death; and *Aretæus* teſtifies he never ſaw any eſcape, who in the time of their Abortion, or afterwards, had Convulſion fits.

Inflamation of the Womb cauſed by Abortion, is for the moſt part deadly; for Blood flowing to the Womb in great quantity, is not purged out, but putrefies therein, and regurgitates or flows back into the upper parts; whence ariſe burning Feavers, pantings of the Heart, Heart-burning, and other Symptomes enumerated before.

Abortion is more dangerous in a woman that never bore Child before, becauſe being unaccuſtomed to Pains, and having thoſe Paſſages more ſtrait, ſhe is longer and more vehemently tormented.

Women very lean or very fat, are more endangered by Miſcarriage; the former, becauſe of their weakneſs; the latter, becauſe of the narrowneſs of thoſe Paſſages by which the Child muſt come forth.

Abortion is more dangerous in the ſixth, ſeventh, and eight months, becauſe the Child being the greater, is excluded with the more pain and difficulty.

Women which have a more looſe and moiſt womb than ordinary, do miſcarry commonly without danger, eſpecially in the firſt month; becauſe thoſe parts in ſuch women, do eaſily give way, whence their pain and trouble is the leſs.

Hippocrates in the ſecond Book of Popular Sickneſſes, affirms, That to miſcarry of a male Conception of three-ſcore daies old, helps a Woman whoſe Courſes are ſtopped, by ſtopping of Courſes, he underſtands only their imminution, when women are not ſufficiently, or conveniently purged, at their monthly ſeaſons; for by ſuch an Abortion or Miſcarriage as aforeſaid, thoſe ſtopped paſſages are opened, and the Blood is drawn towards the womb, which came thither but ſlowly in former times. Our ordinary women ſeem to have taken notice, of the truth of this ſaying of *Hippocrates*. who touching an Abortion of a few months, are wont to ſay by way of proverb, *A miſcarrying woman is half with child again.*

The Cure of Abortion conſiſts in Preſervation, for that which is paſt cannot be helped. But all the Symptomes which follow Abortion, are the ſame which accompany women duly brought to bed.

The

The Preſervation from Abortion hath two principal Points or Heads: The one concerns the woman before ſhe is with child: The other when ſhe is with child.

Before the woman is with child, all evil diſpoſitions of body which are wont to cauſe Abortion, muſt be removed: as fulneſs of blood, badneſs of Humors, and peculiar Diſeaſes of the womb, viz. Diſtempers, Swellings, Ulcers, and ſuch like.

Fulneſs of Blood opens the Veins of the womb, or ſtrangles the Infant while it is in the womb. This if it be a pure and ſimple Plenitude, may be cured by Blood-letting, ſuch as ſhall anſwer the quantity of blood ſuper-abounding.

But badneſs of Humors, is either chollerick and ſharp, ſo as to open the Orifices of the Veins, or by provoking Nature, to ſtir up the expulſive faculty, whereby the child comes to be expelled with thoſe evil humors; or by reaſon of plenty of Excrements heaped together in the firſt Region, and diſtending the Belly, it ſuffocates the child; or it vitiates the blood in the whol habit of the Body, rendring it unfit to nouriſh the child, or it fills the Veſſels of the womb which retain the child, full of ſlime and ſnot.

This Badneſs of Humors may likewiſe be holpen by blood-letting, but it muſt be in a leſſer quantity, ſeeing the principal ſcope of the Cure, is by frequent Purgations, to take away the ſuperfluous Excrements of the Body. And in the ſpaces between Purge and Purge, ſuch things muſt be uſed, as help the diſtemper of the Bowels, mitigate the ſharpneſs of Humors if there be any, or thicken the ſaid Humors, in caſe they be too thin. Or if flegmatick Humors are too rife, they muſt be diſcuſſed by Sweat-drivers, Pils-drivers, and other Remedies. Howbeit we muſt diligently obſerve, that whatever ill humor abounds, Iſſues are wonderful profitable to prevent Abortion: of which *Zacutus Luſitanus* gives a ſpecial note, in theſe words: *By moſt happy Experiments I have obſerved, That frequent Abortion cauſed by corrupted Humors which flow from the whol Body to the Womb, and by their evil diſpoſition or abundance do kill the child, is hereby as by a moſt preſent help prevented. Many women did miſcarry upon this very account, among which ſome having often times brought forth a Child of ſeven months or four months growth, but torn and putrefied, could by no other means be freed from ſo great a Calamity, ſave by Iſſues made in their Arms and Thighs, which were alwaies made at the beginning of the fluxion; by which means they went out their time, and brought forth Children healthy, and not defiled with any Infection.*

The peculiar Diſeaſes of the Womb, as over great Moiſture, Swellings, Ulcers, and ſuch like muſt be cured by their proper Remedies deſcribed in the Chapters which treat of them.

In women with Child, if the ſame Cauſes be preſent as in other women, the difficulty is yet greater, becauſe big-bellied women cannot ſo eaſily bear all kind of Remedies. Yet, leſt being deſtitute of all help, they ſhould remain in extream danger of Miſcarriage and Death, ſome kind of Remedies are to be uſed.

In caſe therefore the Patient be too full of blood, ſhe muſt have a Vein opened, though with child, eſpecially in the firſt months; and that the ſecond and third time, if need be. Alwaies remembring that there never be much blood taken away at a time. Of which kind of bleeding we have diſcourſed more at large, in the foregoing Cure.

And when there is an abundance of ſome very bad Humors, gentle Purgations muſt be reiterated, eſpecially in the middle months of a womans being with Child. And if a moiſt, rheumatick, ſnotty, or windy diſtemper do annoy the Patient, we may ſometimes proceed to a Sudorifick Diet, at leaſt a gentle one, in the ſtronger ſort of women.

Mean while, in the whol courſe of being with child, aſtringent and ſtrengthening Medicaments are to be uſed, ſuch as have a vertue to hinder Abortion. Many of which have been deſcribed in our Chapter of immoderate flux of Courſes; whereunto theſe following may profitably be added.

Take of *Kermes, and Tormentil Roots, of each three drams: Maſtich one dram and an half. Make all into a Pouder, of which give the Patient half a dram at certain diſtances of time, or as much as may be taken up upon the point of a knife.* Or,

Take *red Coral two drams: Kermes berries, Date Stones, of each one dram: Shavings of Ivory half a dram: Pearls not bored through, a ſcruple. Make of all a Pouder.*

Or let her ſwallow every day certain grains of Maſtich in the morning.

Our ordinary women do frequently uſe Plantane Seed, which they take in the morning about the quantity of half a dram, with Wine and Water or in an Egg, or Broth, or by it ſelf, almoſt every day, the whol time of their being with Child, and that not in vain.

To the ſame purpoſe very effectual Electuaries are compounded, according to this following Example:

Take *Conſerve of Roſes two ounces: Citron peels candied ſix drams: Myrobalans candied, Pulp of Dates, of each half an ounce: Coral prepared, Pearls prepared, and Shavings of Ivory, of each a dram. With Syrup of Quinces, make all into an Opiate, of which let the Patient take often the quantity of a Cheſtnut.*

If a Liquid form ſhall be more deſired, a Decoction of Tormentil Roots, ſweetened with Conſerve of Roſes, may profitably be given.

The following Lozenges are very good; for they ſtrengthen, and do by little and little free the Body from Excrements, though ſomtimes they do not viſibly purge.

Take *Mace, the three ſorts of Sanders, Rhubarb, Senna, Corals, Pearls, of each a ſcruple: Sugar diſſolved in Roſe-water, four ounces. Make all into Lozenges, weighing three drams apiece. Let her take one twice a week by it ſelf, or diſſolved in a little Broth.*

Outwardly Oyntments and Plaiſters are to be applied, made after this manner:

Take *Ship-pitch half an ounce: Frankincenſe an ounce: Maſtich half an ounce: Dragons Blood and red Roſes, of each two drams. Make all into a Cerate or Plaiſter.* Or,

Take *Oyl of Myrtles, and Maſtich, of each an ounce: red Sanders and yellow, Hypociſtis, Acacia, of each half an ounce: Spodium, red Roſes, of each two drams: Bole Armoniack, Terra Sigillata, Shavings of Ivory, of each two ſcruples: Turpentine waſhed in Plantane Water an ounce: Wax as much as ſhall ſuffice. Make all into a Cerate or Plaiſter; ſpread it upon a Cloth, and apply it to the Reins.*

Plaiſters are compounded of the Maſs of *Emplaſtrum pro Matrice*, and *Emplaſtrum contra Ruptu-ram*, to be applied to the Region of the Share, and of the Loyns. Or after this manner following:

Take of *the Maſs or Rowl of* Emplaſtrum pro Matrice *three ounces: Biſtort Roots, Acacia, Hypociſtis, Pomegranate peels, of each half an ounce: Ladanum ſix drams. Moiſten and ſoften them with Juyce of Quinces, and make a Rowl of Plaiſter for the uſe aforeſaid.*

Concerning Plaiſters it is to be obſerved, That they muſt not be worn long together, but taken off ever and anon; otherwiſe, if they ſtick too long upon the Back, they do ſo heat the Kidneys, that the poor women are ſomtimes troubled with ſharpneſs of Urine, or do ſomtimes piſs Sand, Stones, yea and Blood it ſelf.

Neither muſt we omit ſuch things which are accounted by a ſecret property of their Nature to retain a Child in the womb; as an Ægle-ſtone worn about the Neck, a Load-ſtone applied to the Navel, Corals, Jaſpers, Smaragds, Bones found in the Hearts of Stags, and ſuch like, worn under the Arm-pits, or hanged about the Neck.

Zacutus Luſitanus in Obſ. 152. of the Second Book of wonderful Cures, commends a Girdle made of the Hide of a Sea-horſe; and if that be not to be had, he ſaith a Wolfs Skin may profitably be uſed inſtead thereof.

And that the ſucceſs of theſe Medicaments may be happy, the Patient muſt be enjoyned to reſt and keep her ſelf as quiet as poſſibly ſhe can, both in her Body and Mind; alſo to abſtain from Genial Embracements, which do vehemently towze and diſquiet the Womb. For while the Womb opens it ſelf to comprehend the Mans Sperm, with which it is exceedingly delighted, it drives forwards the lately conceived Child, not yet throughly faſtened in the womb.

But if notwithſtanding the Medicines aforeſaid, by reaſon of the vehemency of the Cauſe, whether it be internal or external, the Patient be ready to Miſcarry, we muſt apply our ſelves to do the beſt we can, with theſe following Remedies. And in the firſt place, ſo ſoon as pains and throws ſhall be perceived in the lower part of the Patients Belly towards her Share, in her Loyns, and about the *Oſ ſacrum*, we muſt ſeek to allay and ſtop them, both by things given in, and outwardly applied, according to the variety of Cauſes. For if Abortion be provoked by Crudities and Winds (which is moſt uſual when it begins from an Internal Cauſe) a Pouder muſt be given, compounded of *Aromaticum Roſatum*, and Coriander Seeds: Yea, we may give of the *Aqua Imperialis*, if the quantity of flegm and wind be very great.

At the ſame time let Carminative, or Fart-forcing Medicaments be applied below the Patients Navel: ſuch are, bags of Annis ſeed, Fennel ſeed, Fœnugreek ſeed, Flowers of Chamomel, Elder, Roſemary, and Stœchados mingled together; Or a Roſe Cake fried in a Pan with rich Canary, and ſprinkled with Pouder of Nutmeg and Coriander, or the Caul of a Wether newly killed, or his Lungs laid on warm.

If with theſe means the pains ceaſe not, let a Clyſter be caſt in, made of Wine and Oyl, wherein two drams of *Philonium Romanum* may be diſſolved, or Narcoticks may be given inwardly in a ſmaller Doſe, to allay the violence of Humors and Winds, as we are wont to do in pains of the Chollick.

But if by reaſon of contumacious pains that will not be aſſwaged, or of the violence of ſome external cauſe, blood begin to come away, Revelling Medicines are to be applied, to withdraw the courſe of the blood from the Womb: ſuch are, Rubbings of the uper parts and painful bindings; alſo Cupping-Glaſſes faſtened to the Shoulder-blades, under the Dugs, and under the ſhort Ribs on both ſides. Yea, and if the Woman be ful of Blood, it will not be amiſs to take ſome blood from her, both when ſhe begins to void blood, and eſpecially before it begins to come; and the blood muſt be taken away at ſeveral times, a little at once.

And

And if all this will not ſuffice, but the Flux of blood continues, we muſt proceed to aſtringent and thickening Diet, and Medicaments; and ſo the Pouders and Electuaries formerly deſcribed, may be adminiſtred. Alſo Juyce of Plantane new drawn, and Syrup of Poppies to the quantity of an ounce, with Pouder of Bole-Armoniack, or Dragons-blood.

Alſo outwardly may be uſed Fomentations binding and ſtrengthening, made of Pomegranate peels, Cypreſs Nuts, Acorn Cups, Balauſtians, Grape-ſtones, and ſuch like things boyled in Smiths water, and red Wine.

Or a little Bag full of red Roſe Leaves and Balauſtians, may be boyled and applied hot to the Patients Belly.

Hereunto may be added the foreſaid Plaiſters and Cerecloaths: Or for to cauſe the more aſtriction, make a Cataplaſm of aſtringent Pouders, with Turpentine, and the whites of Eggs, which muſt be ſpread upon Tow, or courſe Flax, and applied to the Navel and the Reins warm. The Tow which ſhall be applied to the Navel, muſt be moiſtened with Wine; that which is to be applied to the Kidneys, in Vinegar.

The two following Medicaments are accounted for Secrets, and it is beleeved they will certainly hold the Child in the Womb, if they be uſed before it be looſened from the Wombs Veſſels.

Take *twelve Leaves of Gold: Spodium a dram: the Cocks Treading of three Eggs that are not addle. Mix all very well, till the Gold be broken into ſmal Atomes. Afterwards diſſolve them in a draught of white Wine, and give it to drink three mornings together.*

At the ſame time let the following Cataplaſm be laid on.

Take *male Frankincenſe poudered two ounces: five whites of Eggs: Let them be ſtirred about together over hot coals, alwaies ſtirring them that they may not clodder together: add Turpentine to make them ſtick. Then ſpread it upon Parcels of Tow, which lay upon her Navel as hot as ſhe can poſſibly endure them, twice a day, morning and evening, on the three daies aforeſaid.*

Chap. 18. *Of Hard Child-birth.*

HArd Travel in Child-bearing, is ſuch as keeps not the due and ordinary Laws of Nature, taking up longer time than ordinary, and accompanied with more vehement pains than are uſual, and other more grievous Symptomes.

Divers cauſes hereof may be aſſigned both internal and external. The internal depend either of the Mother, of the Womb, or of the Child.

In reſpect of the Mother, Travel with child may become ſore and hard, by the weakneſs of her Body, either Natural, or in regard of Age, as in very yong and very antient women, or in regard of Diſeaſes wherewith the woman was troubled during the time of her going with Child, or is ſtill troubled. Hereunto alſo Leanneſs, and over great drineſs of the whol body, may be added; as alſo over fatneſs, and groſsneſs compreſſing and ſtraitening the paſſages of the womb; ill ſhape of ſuch bones as border upon, and embrace the womb, as in ſuch as limp, wind ſtretching the Guts; ſtone or preternatural tumor poſſeſſing the bladder, and preſſing the Womb; and the ill conſtitution of the Lungs, and other parts ſerving for Reſpiration, becauſe holding the Breath is very neceſſary to exclude the Child.

In reſpect of the Womb, divers Diſeaſes thereof may cauſe a ſore Labor, as Swellings, Ulcers, Obſtructions, Aſtrictions, Stoppages ariſing from preternatural Cauſes.

In reſpect of the Child, Hard Travel is cauſed, when there is ſome fault therein, in reſpect of its ſubſtance, its quantity, its figure, and certain things thereunto belonging.

The Child is faulty in regard of Subſtance, when it is dead or putrefied, or ſome waies infected, or weakened with ſome Diſeaſe, ſo that it hath no ability to contribute to its own excluſion.

In regard of Quantity likewiſe, the Child doth not further its own Birth, which is either diſcrete or ſevered quantity, or concrete and joyned; the former is called Number, the latter Magnitude. In regard therefore of continued quantity, the child is faulty, if the Body or Head of it be over great; which makes the Birth thereof become difficult and laborſom; in regard of the disjoyned quantity of the child or burden, Labor becomes difficult, as when there are more than one in the womb; ſo the Birth of Twins is more painful than of a ſingle Child, for the moſt part.

In reſpect of the Figure, or Scituation of the Child in the Womb difficult Travel happens many waies; as when the Child endeavors to come forth with its feet or its hands foremoſt, or puts out one hand only, or one foot; or when it endeavors to come forth doubled, with its breech, or its belly foremoſt.

In

In regard of the Childs Adjuncts or certain things belonging to the Child, difficulty of Travail happens, when those membranes which encloſe the Child are more thin than ordinary ſo that they come to break, ſooner than they ſhould; whence followed an over quick effuſion of the waters conteined therein, whereupon the mouth of the Womb remaines dry at the time of the excluſion of the Infant; or where the foreſaid Membranes, are more thick and compact than ordinary, by which means, the Child is hardly able to breake them.

External Cauſes depend upon things neceſſary and things contingent, the things neceſſary are ſuch as Phyſitians commonly call *res non naturales*, things not natural. So a cold and dry air, and the Northern-wind are very hurtfull to women in travail, becauſe they ſtraiten the whol Body, drive the Blood and ſpirits inwards, and prove very deſtructive to the Infant coming forth of ſo warm a place as the Womb. Alſo air more hot than ordinary diſſipates the ſpirits and exhauſts the ſtrength both of Mother and Child, eaſily introduceing a feaveriſh Inflammation into a Body repleniſhed with ill humors, and exagitated.

Meates raw and hard to digeſt, or of an aſtringent quality, taken in a large Quantity before the time of travail, may render the ſame laborious, the ſtomach being weakened and the common paſſages ſtopped, which in this caſe ought to be very free and open.

Sleepyneſs and Sottiſheſs do ſlacken the endeavours both of the Mother and the Child, and ſhew nature to be weak.

Unſeaſonable ſtirring of the woman doth much delay the Birth of the Child, whenas ſhe refuſes to ſtand, to walk, lie down, or to ſit upon the Midwifes ſtoole, as need ſhall require; or when ſhe is unduely agitated to and fro; whence it comes to paſs that the Child cannot iſſue in a fitting poſture, or looſes the good poſture it had, by reaſon of the Mothers undue and diſorderly moveing her ſelf.

The retention of Excrements at the time of Travail, as of Urin diſtending the Bladder of hard excrements in the ſtreight Gutt; and hemorrhoids much Swelled, do ſtraiten the neck of the Womb, and divert nature from her endeavour of expelling the Child.

And in a word, vehement Paſſions of mind, as Fear, Sadneſs, Anger, may very much encreaſe the difficulty of Child birth.

To things contingent are referred Blowes, Falls, wounds, which may very much hinder the Birth: hereunto likewiſe appertain the parties aſſiſtant in time of travail to help the labouring woman, viz. ſtrong women and maid ſervants, which may lift her up and ſupport her when ſhe is in her labours, and eſpecially an expert Midwife, which ought to mannage the whol Buſineſs. For if the Midwife err in her office, it is wont to cauſe difficulty of Birth. For ſometimes the Midwifes do over ſoon exhort the Childing woman, to hold their breath and to ſtrain themſelves to exclude their Child, while the bands which faſten the Child to the Womb, are as yet unlooſed; by which means, the ſtrength of the woman is waſted before hand, which ſhould have bin reſerved to the juſt time of her travail. Yea and the truth is, while the Midwifes do overſoon perſwade the Childing women, that the time of their travail is at hand, they bend all their ſtrength to exclude the Child, and oftentimes violently break thoſe bands with which the Child is faſtened, and caſt themſelves into no ſmall Jeopardy.

Hard Travail is known both by the Childing woman, and by the Aſſiſtants, but eſpecially by the Midwife. And in the firſt place, if the woman continue a longer time than ordinary in her Labors, as two, three, four or more daies whereas a truly natural Child-birth ought to be accompliſhed within the ſpace of 24. Houres. Again, it is a Sign of an hard Labor, if the womans paines be weak, and are long before they return, and if her paines are more about her Back than Privities. And the Cauſes of hard travail, are known by relation of the Childing woman, and are for the moſt part evidently to be ſeen. So the weakneſs of the woman, her over leanneſs, or over fatneſs, is perceived by the habit of her Body. Diſeaſes of the Womb are known by their proper Signes. The Childs weakneſs is known by its weak and ſlow moving it ſelf. But the Signes of a dead Child ſhall be declared in the next Chapter. The greatneſs of the Child may be gathered from the ſtature of the Parents, eſpecially when a big-Bodyed man is matched with a little woman. But when there are none of theſe Signes, and the woman labours ſtoutly, and the Child ſtirrs and makes its way ſufficiently, and yet the travail is hard and painful; it is a token that the ſecundine or After-birth is ſtronger than ordinary, and can hardly be broken, which conjecture is more probable, if no water or moiſture come from the woman dureing her Labors. The diſorderly poſture of the Child is perceived by the Midwife, and the other Cauſes are viſible to the Eye, as we ſaid before.

As for the Prognoſtick. Hard-Travail, is of it ſelf dangerous in which ſometimes the Mother, ſometimes the Child and ſometimes both do looſe their lives.

If a woman be four daies in Labor, its hardly poſſible the Child ſhould live.

Sleepy diſeaſes and convulſions which befall a woman in Travail are for the moſt part deadly.

Sneezing which befalls a woman in ſore Travail is good. Out of *Hippocrates* in his Aphoriſmes.

To

To cure difficulty in Child-birth firſt all cauſes which may delay the birth, are as much as may be, to be removed. And afterwards, ſuch Medicines as further the Birth are Methodically to be adminiſtred.

And in the firſt place it is common among the women to give a groaning wife a ſpoonfull or two of Cinnamon Water. Or Cinnamon it ſelf in Pouder with a little Saffron may be given, or half a dram of *Confectio Alkermes* may be drunk in a little Broath. Alſo Saffron alone being given ten graines in every Meis of Broath the woman takes, or every hour being taken in a little Wine is very good Or.

Take *Oyl of ſweet Almonds and White Wine of each two ounces. Saffron and Cinnamon of each twelve graines Confectio Alkermes half a dram. Syrup of Maiden Hair one ounce and an half. Mix all and make thereof a potion.*

If this ſhall not ſuffice, but that ſtronger things, muſt be uſed, the following potion will be moſt effectual, which I have had frequent experience of.

Take *Dictamnus Cretenſis, both the Birthworts, and Trochiſes or Cakes of Myrrh of each half a ſcruple. Saffron and Cinnamon of each twelve grains. Confectio Alkermes half a dram: Cinnamon Water half an ounce, Orange-flower and Mugwort Water of each an ounce and an half: Make all into a potion.*

Among the more effectual ſort of Medicaments are numbred Oyl of Amber, Oyl of Cinnamon and extract of Saffron, which do in a little quantity work much. viz. Extract of Saffron to five or ſix grains, Oyl of Cinnamon to four or five Drops; Oyl of Amber to twelve or fifteen Drops, in VVine, Broth or other Liquor.

Sneezing haſtens the Birth, or *Hippocrates* in the Aphor. 35. Sect. 5. Sneezing which happens to a woman in ſore Travail is good. Sneezing may be provoked by the following Pouder.

Take *White Hellebore half a dram. Long Pepper one ſcurple. Caſtoreum five grains. Make all into a Pouder, and blow thereof into her Noſtrills the quantity of a Peaſe.*

The ſame *Hippocrates* prescribes another Remedy in the firſt Book of womens diſeaſes, which is omitted by all authors almoſt. And that is the opening of one of the lower veines of the Body, which he propounds in theſe words *But if* (ſaith he) *a Big-bellied woman be ſo ſtopped that ſhe cannot bring forth, but continues divers daies in her pains: if ſhe be a young woman, vigorous and full of Blood, her Ancle veines muſt be opened, and Blood taken away, according as her ſtength will bear,* Although this remedy be never uſed by our Practitioners, and it ſeems much to be feared, becauſe in Travail nothing is ſo needful as ſtrength, which may be weakened by Blood-letting: Yet if difficult Travail do ariſe from fullneis of Blood, which *Hippocrates* doth inſinuate in thoſe words, where he ſaies *If the woman be young and in the prime of her ſtrength, and very full of Blood*; there is no queſtion, but bleeding may be very profitable, becauſe the Veines being very full of Blood, are wont to make al other inward paſſages of the Body more ſtrait. Whence it comes to paſs, that in pains of the Stone in the kidneys, the like Blood-letting doth often work wonders, and facilitate the expulſion of Stones conteined both in the kidneys and Ureters.

Alſo hard Travail may be holpen not only by thoſe inward Medicines preſcribed, but likewiſe by outward

Let the Midwife therefore frequently anoint the Womb of the Childing woman with Oyls of Lillies, ſweet Almonds, Lin-Seed, and ſuch like.

Alſo let her belly be fomented on the nether parts with an emollient Decoction of Marſh-mallow and Lilly Roots, Leaves of Mallows, Violets, Mugwort, Seeds of Line and Fenugreek, with the flowers, of Chamomel and Melilot.

Let ſharp Clyſters be adminiſtred, by the provokeing virtue of which the expulſive faculty of the womb may be likewiſe rouſed up; and the Gutts being emptied will afford larger ſpace for the womb.

Let her Navel be anointed with Oyl of Amber. Some commend the Gaul of an Hen applyed to the ſame part.

Alſo ſuch things may be uſed which are thought by a peculiar property to help the Birth: as Ægle-Stone, Load-Stone, Storax, and the reſt being faſtened to the Hipps.

Hartmannus Commends the Eyes of an Hare taken in the month of *March*: which are carefully to be taken out and dried entire with Pepper. Let one of theſe with Pepper be ſo tied to her Belly, that the Sight of the Eye may touch her belly: and it will bring forth the Child, be it alive or dead. Which being done take away the Eye leaſt it bring forth the Womb it ſelf. He ſaies likewiſe that it is good to bring out the Mole.

Heed is likewiſe to be taken that the woman carry no Precious Stones about her, either in rings or otherwiſe, but let her lay them al away: for many of them are conceived by a peculiar property to retain the Child in the womb.

If the Child ſeem to be weak, it muſt be refreſhed, both with ſtrengthening things given to the Mother, as warm wine, Confectio Alkermes, Cinnamon Water; and alſo with things outwardly

applied

applied, as with a Cruſt of Bread, or a Roſe Cake ſtrewed with Pouder of Nutmegs, Cinnamon, Cloves, Kermes Berries, and ſprinkled with *Aqua Imperialis* or with warm Wine. Or with a peice of Wether-Mutton a little broiled upon a Gridiron, and ſprinkled with Water of Roſes or of Orange-flowers; with the call of a wether newly kil'd, not yet cold, and ſuch like.

If the Child begin to come forth in a diſorderly manner, as by putting out one Foot, one Hand, or any other way; the Mid-wife muſt no wayes receive it on that manner, but thruſt it into the Womb again, and compoſe it to a right and natural poſture or form of egreſs. Which muſt be done by laying the Childing woman on her Back in the Bed, with her Head ſomwhat low and her Buttocks high: and then gently preſſing her Belly towards the ſhort Ribs, and thruſting the Child into the Womb. Afterward let the Midwife endeavour to put the Child into a right poſture for coming out, by an artificial Hand procuring that the Child turn its face towards the Mothers Back, and its Buttocks and Thighes let her lift up towards the Mothers navel, and ſo haſten the ſame unto a natural manner of coming forth.

When all Hope of the Childs coming forth is paſt, or when the Mother is almoſt dead, ſome Authors proceed to the Cæſarean Section [that is to cut the Child out of the Womb, as *Cæſar* was cut out] of which *Franciſcus Roſſetus* hath Printed a moſt elegant Treatiſe; in which by many reaſons and examples he endeavours to ſhew, that ſuch a thing may be ſomtimes done with good ſucceſs. Howbeit, ſeeing this Operation is very dangerous and terrible, it ought ſeldom or never to be practiſed by a diſcreet Phyſitian, that would preſerve his own reputation.

Chap. 19. *Of A Dead Child.*

IN ſore Travel of Child-birth by reaſon of great and long Labour, the Child is oftentimes killed; and ſomtimes before a womans pains come upon her, the Child happens to die through ſome preternaturall accidents, ſuch as thoſe which are wont to cauſe Abortion; and if it hath not attained to the due time of natural Birth it cauſes Abortion, but if it have, it cauſes an hard and ſore Travel, Becauſe in a due and naturall Birth, both the Mother and the Child ought to join their Forces, to bring it from the Dark Dungeon to the Liberty of Day.

All ſuch things therefore which cauſe difficult Child-birth being in a greater and more grievous degree, are of power to kill the Child. But eſpecially the Child is wont to be kild, if it come in ſo untoward and prepoſterous a figure, that it can by no means be brought forth in that manner neither can the Midwife or Chyrurgion draw it forth, or reduce it to a better Poſture. For while ſticking thus in the mouth of the Womb, it fruſtrates all the endeavours of the Mother ſtraining her ſelf to exclude it: it comes to paſs, that in thoſe ſtrainings, various motions and compreſſions, ſomtimes both Mother and Child, ſomtimes the Mother alone and ſomtimes the Child alone doth die. It is to be admired which *Fabricius Hildanus* writes, touching two women which died through hard Labour, in whom their Wombes were found broken aſunder and the Heads of the Infants in their Mothers Bellies. By which we may gather, how ſtrongly a luſty Child doth labour to work it ſelf out of the Mothers Womb.

A Dead Child is known, when the motion thereof ceaſeth, which either the Mother did feel, or the Midwife perceive by her hand laid on, or other warm and ſtrengthening things which were wont to awaken and rouſe up the powers thereof when they were in a ſlumber or ſtupified. Alſo the Mother find a greater ſenſe of weight, with which and pain of the Belly they are troubled: when they turn from one ſide to another they perceive the Child to roul from one ſide to another like a Stone. The lower part of their Belly feels very cold, the native heat being extinguiſhed and thoſe ſpirits diſſipated, which were formerly in the Child; their Eyes become hollow and troubled: their face and Lips are pale; their extream parts appear cold and of a Leaden-colour: their Duggs become ſlap and flaggy, and at length, when the Child rots, ſtinking moiſtures flow from the Womb, like water and blood: their belly is blown up with vapours aſending thereunto: a filthy ſmell, and a ſtinking Breath comes both out of the Mouthes of ſuch women, and from their whol bodies. If the After-Birth be excluded before the Child, it is a certain token that the Child is dead in the Womb.

As to the Prognoſtick. A Child dead in the Womb is a very exceeding dangerous thing, and if it be not timely voided forth it is wont to cauſe Feavers, Faintings, Dead-ſleeps, Convulſions and death it ſelf.

Yet ſomtimes a Child dead in the Womb may be kept a long time, as appears by many ſtories related by divers Authors, which *Schenkius* hath collected in great number as rare Caſes, and *Sennertus* hath tranſcribed out of him, touching many Women which have voided the Bones of Children dead and putrefied in the womb, by their Water-gate, their Dung-gate, and by a Swelling that broke in their Belly.

I have

I have ſeen one Woman which voided all the bones of her child by her Navel, and her Navel growing afterwards whol again, ſhe recovered her perfect health.

The Cure conſiſts wholly in the Excluſion or Extraction of the Child; for ſeeing great danger of life attends the Mother ſo long as the dead Child is in her Womb, as ſoon as ever by the foregoing ſigns, we certainly collect the Child is dead, we muſt make haſt, to force it out. Which is done by the ſame Remedies which were formerly propounded to haſten the Birth. But among them we muſt chuſe out the moſt ſtrong and effectual, whereunto ſome other things may be added which are yet ſtronger, after this manner:

Take *Leaves of Savin dried, round Birth-wort Roots, Troches of Mirrh, and Caſtoreum, of each one dram: Cinnamon half a dram: Saffron a ſcruple. Mix all into a Pouder. The Doſe is a dram in Savin Water.* Or,

Take *Dictamnus Creticus, Savin, Borax, of each a dram: Mirrh, Aſarum Roots, Cinnamon, Saffron, of each half a dram. Mix and make all into a Pouder. The Doſe is a dram in the foreſaid, or ſuch like Liquor.*

In the mean time, let the Fomentations aforeſaid be applied to the Privities, the Share, and ſpace between the Water and the Dung-Gate; adding Briony Roots, Roots of wild Cucumer, Florentine Orice, round Birthwort, called *Ariſtolochia rotunda*, and Broom-flowers.

After Fomentation, anoint the ſaid Parts with *Unguentum de Arthanita*, or with this following:

Take *Ariſtolochia rotunda, or round Birthwort, Coloquintida, and Agarick, of each one dram: Gum Ammoniack diſſolved in Wine and Bulls Gall, of each two drams: With Oleum Cherinum, as much as ſhall ſuffice. Make all into an Oyntment.*

Alſo let this Peſſary be put up into the Womb:

Take *Ariſtolochia rotunda, Orice Root, Black Hellebore, Coloquintida, Mirrh, of each one dram: Galbanum, Opopanax, of each half a dram: With Ox Gall, make all into a Peſſary.* Or this:

Take *Ammoniacum, Opopanax, Caſtorium, Sagapenum, black Hellebore, wild Vine, round Birthwort, Pulp of Coloquintida, Scammony, of each one ſcruple: Euphorbium one dram: With Juyce of Rue, Bindweed, wild Cucumer, and an Oxes Gaul, make all into a Peſſary.*

Zacutus Luſitanus in Obſ. 154. of the Second Book of his ſtrange and Admirable Cures, doth teſtifie, that a dead Child in the ninth months growth, producing many Symptomes in the Mother, was driven out by this Peſſary, and by help of an Oyly Bath, wherein was mixed the Decoction of ſuch Herbs as do open and widen the Paſſages of the Body.

A Fumigation of Galbanum, or an Aſſes Hoof, may be received by a Funnel into the Womb.

If the Matter hang long, it will be good, the woman being ſufficiently ſtrong, to give her a purging Medicine; whereby evil Humors, which in this caſe are eaſily collected, may be evacuated, and the dead Child conſequently caſt forth.

Angelus Sala, in his Book which he calls *Triumphus Emeticorum* (that is, the Triumph of Vomits) doth witneſs, That in this caſe he had often with happy ſucceſs given four or five grains of *Mercurius vitæ*, which doth moſt powerfully expel the dead Child, and excel all other Medicines in that point. Which notwithſtanding, in regard of its vehement working, requires great Caution and Diſcretion in the Phyſitian that would uſe it.

If after Medicines long tried, the dead Child cannot be ejected, we muſt implore the Chyrurgions aid. Who may pull it out, either by Inſtruments, as *Paulus Æginera* deſcribes the manner, or only help of the hand, as is taught by *Carolus Stephanus, Bauhine*, and others; all which are diligently tranſcribed by *Schenkius* and *Sennertus*.

Chap. 20. *Of the After-birth retained.*

IN a Natural Birth, commonly the Secundine is excluded preſently after the Child, yet ſometimes it is retained in the Womb, by which means the Mother is in great Danger of her life.

The internal Cauſes of this retention are, the over thickneſs of thoſe coats, and their too great compactneſs, by which means they cling more faſt to the ſides of the Womb: their being ſwelled through confluence of humors, which is ſtirred up in a laborious Travel, weakneſs of the Mother cauſed by hard Labor, ſo that ſhe wants ſtrength to exclude the After-Birth; and the ſhutting up of the Mouth of the womb, after the Child is come away. But the external cauſes are, the Cold Air, by force whereof the Secundine is repelled and the Wombs mouth ſtopped; Certain ſmells by which the Womb may be enticed upwards or agitated; ſome greivous paſſion of mind, as fear, or ſuddain

or frowardneſs of the Childing woman, which will not abide in ſuch a poſture nor uſe ſuch endeavours as are neceſſary to this work; the over great weight of the Infant, by which the Navil-ſtring is broak unawards and the ſecundine is left within; and the Error of an unexperienced Midwife, which cuts the Navil-ſtrings too ſoon, or holds them not faſt in her left Hand; as ſhe ought to do, for if ſhe let them go, they are drawn back into the Womb, and there lie hid with the After-Birth, which they ought to have holpen to pull out.

The Tokens of a Secundine retained are needleſs, its apparant of it ſelf; yet ſomtimes a bit thereof is ſevered from the whol and retained, which is not ſo eaſie to be known; yet it may be known, becauſe the Womb after the Birth, doth yet labor to caſt ſomwhat forth, although thoſe endeavors are not ſo great as formerly; there is perceived in the womb, a ſence of pain and heat, and after certain daies, a filthy and carrion-like ſmel exhales from the Womb.

The Retention of the Secundine is a very dangerous thing, and if it continue ſome daies in the womb, it acquires a filthy putrefaction, whence ariſeth an acute Feaver, aptneſs to vomit, fainting, difficulty of breathing, a Diaphoretick Sweat, Coldneſs of the extream parts, Hyſterical Fits, Fits of Falling-ſickneſs, and at laſt death it ſelf.

Hippocrates in the Second Book of Popular Sickneſſes, by the example of a certain Carriers Wife, doth hint unto us, That it is good in this caſe, when corrupt blood doth ſuddenly come from the womb in large quantities, for it is hopeful, that thoſe Membranes being rotted and waſted, will flow forth upon the ſixth or ſeventh day.

The After-birth retained, is expelled by the ſame Remedies which were propounded to drive out the dead Child, whereunto we may add ſome appropriated or ſpecifick Medicaments, mentioned by Authors.

Geſnerus and *Augenius*, do very much commend the ſtones of a gelded Horſe, cut in pieces and dried in an Oven. The Pouder whereof is given, as much as can be taken up between three fingers, with the Broth of a Fullet: which Medicine, if need be, muſt be twice or thrice reiterated.

Rulandus gave thirty drops of Oyl of Juniper with happy ſucceſs.

Some adviſe the Childing Woman to hold an Onion hard between her Teeth, and ſqueeze it there, ſwallowing down the Juyce; and ſhe is to bite it ſo three or four times, ſtill ſucking out the Juyce, and ſwallowing the ſame; and at laſt to drink a draught of warm Wine upon it, which preſently helps her.

Foreſtus makes relation of a certain Midwife, which received this following Secret from a Jewiſh Phyſitian. Shee took the green Tops of Lovage, ſhe ſtamped them, and ſtrained out the Juyce with the beſt Rhenish Wine, and gave a draught of it to the Patient.

Angelus Sala commends *Mercurius vitæ* in this Caſe, as well as in the Expulſion of a dead Child.

Hereunto add, Sneezings, Fumigations, Fomentations, Liniments, and other Medicines both inward and outward formerly deſcribed in the caſe of a dead Child.

The following Decoction uſed by a Country woman of ours, hath done wonders.

Take *Vinegar of Roſes eight or ten pints: Bay Leaves, and Bay Berries, of each three handfuls: one Roſe Cake cut in bits. Boyl all together, and let her Hips and Legs be a long time together bathed, from her groyns down to her feet. Upon the uſe hereof, the Womb hath opened of its own accord, and the After-birth fallen away. To this Decoction may fitly be added, of Myrrh, and of the two Birthworts, of each one ounce.*

And among other helps, the hand of a skilful Chyrurgion can do much, being put into the womb, before the Inflamation or Inflation be augmented. For he laying hold of the After-births, and gently turning them this way and that way, may draw them out, and free the woman from ſo many Symptomes, and tireſom Medicines.

If the Secundine can by no means be perſwaded forth, but ſtick ſtrongly to the womb, and there putrefie, ſuppurating things are to be put into the womb, cleanſing things being mingled with them, that as much as is putrefied, may be by little and little brought forth. To which intent *Rondeletius* commends *Unguentum Baſilicum*, eſpecially if it be diſſolved in the following Decoction.

Take *Leaves of Mallows with their Roots, three handfuls: Roots of the two Ariſtolochia's, or Birthworts, of each ſix drams: Lin-ſeed, and Fœnugreek ſeed, of each half an ounce: Violet Leaves one handful: Flowers of Chamomel, and the ſmaller Centaury, of each half a handful. Boyl all in Water, mixing therewith (if there need great ſuppuration, or reduction to Matter) a little Oyl; but if there be more need of deterſion, or cleanſing, add a little* Unguentum Ægyptiacum.

CHAP.

Chap. 21. *Of Immoderate Flux of the* Loches, *or Child-bed Purgations.*

THe Immoderate Flux of Child-bed Purgations called from the Greek, *Loches*, is not to be eſtimated from the quantity, or the time of continuance; becauſe that in divers Natures, Ages, and Courſes of Life, it is very different; but from the ill-bearing of the woman and her weakneſs therefrom ariſing.

The Cauſes of this immoderate Flux, are the over wide opening of the Veſſels, or their rending in hard Travel, or the violent drawing forth of the After-birth; or a more than ordinary quantity of blood, which hath been collected in the Veins of the Womb, during the whol courſe of the Womans being with Child; or the thinneſs and ſharpneſs of the ſaid Blood, which doth too much open the Mouthes of the Veins, and provoke Nature to Excretion.

Immoderate flux of the Child-bed Purgations is known, as hath been ſaid, from the ſtrength of the woman which is dejected through the exhauſtion of her ſpirits that iſſue with the blood; alſo the blood is clotted, and the Patient loaths all meat, is pained under her ſhort Ribs, feels a diſtention of her Belly; her Pulſe is weak and frequent, her ſight is dimmed, ſhe hath noiſe in her Ears, is ſubject to Swooning and Convulſions.

As all great Fluxes of Blood are dangerous, becauſe blood is the Treaſure of our Life, ſo immoderate flux of the Child-bed Purgations is more dangerous than the reſt, becauſe of the travel which goes before, and weakens the Patient. But the danger is more or leſs, according to the greater or leſs quantity of the blood which comes away, and as the Symptomes are more light or grievous which attend the ſame; which made *Hippocrates* to ſay, in the 55. Aphoriſm of the 5ſt Section. *If Convulſion or Swooning betides a Woman upon her Feminine Purgations, it's a ſhrewd ſign.*

The Cure of an Immoderate flux of Blood, conſiſts in one only Point, viz. The ſtoppage of the ſaid flux. Yet extraordinary care is to be taken, leſt that be kept within, which by theſe Purgations was wont to be carried away, and to prove the cauſe of grievous Infirmities. And therefore if the flux do not extreamly urge, we muſt begin with lighter Medicaments, proceeding by little and little if need ſhall require, to ſuch as are ſtronger.

And in the firſt place, The violent Motion of the Blood is to be bridled by an incraſſating or thickening Diet, as by Panadoes, Gruels, Rice, Starch, with Calves-foot Broths, Pears, and Quinces boyled, roſted Fleſh ſprinkled with juyce of Pome-granates.

Let her have pretty plenty of Meat, but not at once, but divers times one after another. For by this means the Heat and Spirit which in the Womb do aſſiſt to the Expulſion, are called away to the Stomach, and by that means the Patients ſtrength is reſtored.

Let her Drink be Water that hath had Iron quenched in it, or Gold, or in which a little Maſtich hath been boyled. Then ſuch things are to be uſed as do revel the Blood into the ſuperior parts, as rubbings and bindings of the upper parts, Cupping-glaſſes faſtened under the ſhort Ribs on either ſide.

It is good likewiſe to bath the Patients hands in hot Wine, in which *Confectio Alkermes*, or Venice Treacle hath been diſſolved.

Alſo let her Belly be moderately ſwathed with a Rowlet or Swath-band; becauſe hereby the Veſſels of Blood will be preſſed together, and the immoderate flux hindered.

Let Linnen Cloths be applied to her Loyns moiſtened with a mixture of Water and Vinegar, by which the blood contained in the *Vena Cava*, is tempered, and the motion thereof hindered.

If the flux be very immoderate, and weaken the Patient, ſo that there is danger of Death, we muſt have ſpeedy recourſe to ſtronger Remedies: Among the reſt, this following Potion hath commonly good ſucceſs.

Take Waters of Plantane, Orange flowers, and Roſes, of each one ounce: Syrup of Corals, or where it is wanting, of red Roſes one ounce: Sal Prunella one dram: Dragons-blood ten grains. Make all into a Potion.

If the flux do yet continue, a Pouder, or an Electuary for divers Doſes, may be preſcribed after this manner:

Take Blood-ſtone four ſcruples: Pouder of Bole-Armoniack, red Coral, prepared Pearls, of each one dram: Seeds of Plantane, Coriander prepared, and grains of Sumach, of each two ſcruples: Mix all, and make them into a moſt fine Pouder, of which let her take one dram with the Decoction of Knotgraſs and Syrup of Quinces.

Take *Conſerves of Roſes and of Comfrey Roots of each one ounce: Bole-Armoniack, Troches de Carabe and prepared coral of each one dram: with ſyrup of coral or of dried red Roſes make all into an Electuary, of which let her take the Quantity of a Cheſtnut, drinking a little of her ordinary drink after it.*

Alſo a fomentation and an Oyntment will profitably be applied outwardly, made after this manner.

Take *Topps of the red Maſtich or Lentiſch, Plantane, Cypreſs, Olive, and Solomons Seal of each one handfull: Red Roſe Leaves two pugills: Myrtle Berries one ounce and an half: Cypreſs-Nuts, ſix: Peels of Pomgranates two pugils: Boyl all in Steel-quenched Water and aſtringent harſh red Wine, and with the ſtrained Liquour bath the Privie Parts, very lukewarm, and almoſt coldiſh.*

Take *of the Counteſſes Oyntment or* Unguentum Comitiſſæ *two ounces: Juyce of Plantane one ounce: worke them together into one Oyntment, to be uſed after the fomentation.*

Alſo an Injection may be made of the juyce of Plantane into the Womb, commended by *Galen* in the fifth book of his Method, or of the Decoction of the foreſaid fomentation.

Other remedies not helping, to open a vein in the Arm is a preſent Cure, if the Blood be drawn out in diſtant ſpaces of time; for experience hath taught, that many women given over as incurable have by this means recovered.

And finally, the diſeaſe ſtill remaining, all Medicines preſcribed for the immoderate flux of the monthly courſes, may be uſed in this Caſe likewiſe.

And among the Medicines for immoderate Courſes, Cataplaſmes were propounded to be applied to the ſhare, and Loines; unto which the following Cataplaſm or pultis may be added, very good for all immoderate fluxes of Blood, but eſpecial for theſe Child-bed Purgations.

Take *Pure Soot from the Chimney not mixt with Dirt eight ounces: work it luſtily with the ſtrongeſt Vineger, and make a pultis to be applied to the Reines of the Back.*

And it is here ſpecially to be noted touching ſleep; that while the Blood flowes plentifully, the woman muſt not be ſuffered to ſleep, for many by that means are taken away, becauſe the natural heat retiring inward, cauſes the flux to be greater. And if ſleep in ſuch a caſe cannot be avoided, ſome muſt be alwaies by of the ſervants to feel her pulſe and mark how ſhe fetches her Breath.

In a word, if clotters of Blood do ſettle in the Womb, and cauſe a pain and ſtretching therein; endeavour muſt be uſed ſpeedily to bring it out, leaſt coming to putrefy, they tranſmit filthy vapours to the Brain and Heart and cauſe a feaver. Therefore the Childing woman, if ſtrong enough, ought to walk gently, or ſtand bolt upright for ſome time together, or to ſit upon the groaning Chair, as if ſhe had luſt to ſtool. And if this ſuffice not, the clotters are to be diſſolved with a warm Decoction of French Barly and a little Oxymel or honey of Roſes injected into the Womb. But here we muſt go warily to work leaſt while we bring out the clotters, the flux of Blood be afreſh provoked.

Chap. 22. *Of Suppreſſion of Child-bed Purgations.*

THe good and happy ſucceſs of Child-bearing doth eſpecially depend upon the convenient and orderly flux of the Loches or Child-bed Purgations; ſeeing the Impurities which have bin collected in the veins of the Womb, during the nine months time of the womans Belly-baring, are wont to be avoided by theſe evacuations; but if they be ſuppreſſed wholly or diminiſhed, infinite Dangers and Calamities ariſe thereby viz. acute Feavers, Phrenzies, Madneſs, Melancholies, Quinzies, Pleurnies, Inflammations of the Lungs and other ſwellings, which are for the moſt part malignant.

The Cauſe of this ſupreſſion or imminution are, the thickneſs of the Blood, narrowneſs or obſtruction of the veſſels, which hinders the free egreſs of the Blood; cold air heedleſly received into the Womb, which cloſes the Orifice of the veſſells, taking cold at the feet, drinking of ſmall cold Drink, fear, Affrightment, ſadneſs and other Paſſions of the mind, which withdraw the Courſe of the Blood from the Womb.

This ſuppreſſion is manifeſt of it ſelf, and the diminution thereof is not to be judged by the Quntity which comes away, becauſe ſome women have more ſuperfluous Blood and ſome leſs. But the perfect knowledg thereof is gathered from the ſupervenient Symptoms ſuch as are a ſwelling of the Belly, a pain poſſeſſing the nethermoſt part of the Belly the Loines and Groines; redneſs of face, difficulty of breathing, perturbation of the Eyes, ſhivering fits, Feavers, Fainting fits, and other Symptomes related before.

The Prognoſtick is drawn out of the Symptomes propounded as ſupervenient to this Diſeaſe, for they being for the moſt part dangerous, the cauſe from which they ſpring muſt needs be very dangerous likewiſe.

Childing

Childing women are freed from the foreſaid danger, if ſome other evacuation happen which may at leaſt in ſome meaſure ſupply the defect of theſe purgations, as Bleeding at the Noſe or by the hemorrhoid veins: plenty of Urine with a ſooty ſetling, or plentiful ſweating. Or if after ſome daies Lead-colored, black, and ſtinking matter begin to flow forth. But it is to be feared, leſt by the corrupt blood, ulcers ſhould be bred in the womb.

The whol Cure of this Malady, conſiſts in the provocation of theſe Purgations, which muſt be endeavored by ſuch Medicines as provoke the Courſe of the Blood downwards, and open the Veſſels of the Womb.

And in the firſt place, Emollient, Purging, and Opening Clyſters are to be adminiſtred, made after this manner:

Take *Roots of Marſh-mallows, and Water-lillies, of each one ounce: the long and round Birthwort, of each three drams: Leaves of Mallows, Marſh-mallows, Pellitory, Mercury, of each one handful: Line ſeed, and Fenugreek ſeed, of each half an ounce: Flowers of Chamomel and Elder, of each two pugils: Boyl all to a pint. In the ſtrained Liquor diſſolve, Oyl of Dill, and Lillies, of each one ounce:* Hiera ſimplex, *half an ounce:* Unguentum de Arthanita *one dram. Mix all into a Clyſter.*

Let her Thighs be rubbed downwards; let the Toes of her Feet be tied till they ake again; let divers Cupping-Glaſſes be fixed to her Groyns and Hips, and let ſome of them be ſcarrified.

If theſe means ſuffice not, open the Veins about the Knees, or of both the Thighs; or the Hemorrhoid Veins, if Nature ſeem to incline that way.

If a Feaver be cauſed by ſuppreſſion of theſe Purgations, a Vein muſt be opened in the Arm, as ſhall be ſaid in the Diseases of Women in Child-bed.

This following Fomentation may be applied to her Belly beneath the Navel, and to the Privy Parts.

Take *Roots of Marſh-mallows, Lillies, Briony, Angelica, and Birthwort, round and long, of each an ounce: Leaves of Mercury, Mugwort, Penyroyal, Savine, Calaminth, of each one handful: Line-ſeeds, and Fenugreek ſeeds, of each an ounce: Flowers of Chamomel, Melilot, Elder, Tanſie, of each a pugil. Beat them and cut them according to art, and put them into two bags, which boyl in Fountain Water, and apply by courſe one after another.*

After Fomentation anoint the foreſaid Parts with Oyl of Lilies, Sweet Almonds, and Seſamum, adding thereto a little Saffron.

Hereunto may be added ſuch Peſſaries and Fumigations as have been ſet down in our Chapter of Suppreſſion of the Courſes, beginning with the moſt gentle.

Let her drink a Decoction of opening Roots, Cinnamon, and red Vetches with a little Saffron. Or,

Take *Opening Roots, of each two drams: Leaves of Bettony, Endive, Maiden-hair, of each a handful: Schœnanth one pugil: Annis ſeed, and Fennel ſeed, of each one ſcruple: red Vetches a ſpoonful: Boyl all to a pint and an half. To the ſtrained Liquor ad Cinnamon Water two drams: Syrup of the five opening Roots three ounces. Let her take four ounces twice a day.*

Before the Feaver be encreaſed, we may ſometimes give Troches of Mirth one dram, with white Wine or Fennel water.

Foreſtus uſeth the following Decoction though there be a Feaver.

Take *French Barley one handful. Liquoris ſcraped half an ounce:* Schœnanth *one dram and an half. Boyl all to a pint, for three Doſes.*

For the weaker he cauſeth one dram of Schœnanth to be boyled in Chicken Broth, which he gives the Patient to drink.

Alſo a Purgation may be convenient, ſeven or nine daies after ſhe is delivered, of the Infuſion of Rhubarb, Agarick, or Senna, or with a Laxative Broth made of opening Herbs and Roots with Senna; or with an ounce and an half of Manna diſſolved in Broth.

Chap. 23. *Of Gripings after Child-bearing.*

GRipings do ſo frequently betide Women in Child-bed, that very few Women are free from them. But they are not wont to ſeek to the Phyſitian for theſe Pains, becauſe within two or three daies they go away. But if they happen more ſharp, and of longer durance than ordinary, they are forced to ſend for the Phyſitian, who before he preſcribe any thing, muſt conſider the Cauſes.

The chief Cauſes of Gripings and Pains after Child-birth, are the plenty of Blood, its thickneſs, ſharpneſs, and narrowneſs of the Veſſels. For the Veins of the VVomb, having for nine months forborn their uſual evacuation of blood, and the blood being gathered in great quantity, and by its retention

retention becoming thick and ſharp; while it goes through the narrow paſſages, it cauſeth pain, which return by fits, as often as the womb endeavors a new expulſion of blood; which being over, they ceaſe till ſuch time as other blood doth ſeek its way forth.

Sometimes theſe gripings are cauſed by Winds, or by Cold received into the Womb, but not ſo often.

Theſe Pains are differenced from others which are wont to afflict the Belly, by their continuance, and by the diſtances of holding up, which they obſerve according to diſtant fits of the bloods iſſuing forth: and the women themſelves can eaſily diſtinguiſh theſe pains from all others.

Thick blood is known by clottering, but the thin blood by its tenuity, freſh color, or yellowiſh.

If the Pain ſpring from wind, it is more wandring, being ſometime in one part of the Belly, and ſometimes in another; neither doth it obſerve the diſtances in which the Blood iſſues. If cold Air have entred the Womb, it may be known by a relation of what hath been acted about the ſick woman.

Theſe pains are not dangerous, but for the moſt part exceeding troubleſom: therefore muſt be removed or mitigated as ſoon as may be.

The Cure of theſe Gripings ought to be directed to theſe ends; viz. That the Veſſels of the Womb be made wider, the Blood thinner, and its ſharpneſs mitigated. All which may be accompliſhed by theſe following Medicaments.

And firſt of all, let the Patients Belly be gently ſwathed that her womb may ſettle, and not be moved this way and that way, as often falls out after Child-birth, by reaſon of the ſudden evacuation.

Then give her three ounces of Oyl of ſweet Almonds new drawn, with an ounce and an half of Syrup of Violets, and two ounces of Hippocras.

Let Clyſters be caſt in of Milk and Sugar, with the Yolks of Eggs.

Or they may be made of a Decoction of Chamomel flowers, and Mugwort in Pullet Broth, adding Oyl of Lillies, and the Yolks of Egs.

Anoint her Belly with Carminating or Wind-expelling, and opening Oyls, as Oyl of Dill, Rue, Jaſmine, or with this following, which being of great efficacy, ought to be made in time convenient, and kept in the Apothecaries Shop for ſuch occaſions.

Take *Roots of round Birthwort, Orice, and Peony, of each one ounce: Cypreſs Roots half an ounce: dried Leaves of Mugwort, Feaverfew, Origanum, Calaminth, Penyroyal, Dictamnus Cretenſis, Wormwood, Savin, Rue, Bettony, and Sage, of each one handful: Flowers of Rolemary, Stechados, Lavender, Chamomel, Dill, St. Johns wort, and Elder, of each half a handful: Bay-berries, and Juniper berries, of each half an ounce: Seeds of Cummin, Rue, Piony, Carrots, and Agnus Caſtus, of each three drams: Cloves, Nutmeg, Cinnamon, Ginger, of each two drams: Storax, and Mirrh, of each one ounce. Let all being beaten and cut, be ſteeped in ſix pints of old Oyl, adding a little white Wine. And put them in an Earthen Veſſel cloſe ſtopped, the ſpace of a week; and then boyl them over hot Embers the ſpace of four or five hours; then let the Oyl be ſtrained out, and reſerved for uſe. If the foreſaid Oyl be wanting upon occaſion, let the foreſaid ſimples boyl in equal portions of Oyl and white Wine, till the white Wine be conſumed; then let the Oyl be ſtrained out.*

Alſo a Fomentation may be made of the Decoction of Mugwort, Bawm, Bay-leaves, Calaminth, Carrot ſeed, Cummin and Caraway Seeds, Flowers of Cheiri and Chamomel in Water, white Wine or Milk. Or the following Cataplaſm may be applied.

Take *three or four Onions well boyled in Water; beat them in a Morter, and put thereto Seeds of Line and Cummin beaten, of each one handful: As much Chamomel flowers: Barley Meal as much as ſhall ſuffice to make all into a Puttiſs. And if need be, add a little of the Water wherein the Onions were boyled. Spread it upon a Cloth, and apply it warm to her Navel.*

It is likewiſe profitable to apply the Skin of a weather newly flead off while it is warm, to her Belly. For this kind of warmth is very neer of kin to our Natural heat, concocts and mitigates the cauſe of the pain; alſo it hinders the Skin of the Belly from gathering into wrinkles.

Theſe following Medicines may be given inwardly:

Take *Carrot Seeds poudered one dram: white Wine three ounces: Mix them. Give it warm twice a day.* Or,

Take *Nutmeg, Annis ſeed, Cinnamon, of each one ſcruple: mix them into a Pouder to be taken in white Wine; or give one ſcruple of Oyl of Nutmegs in Broth.* Or,

Take *Date and Peach Kernels, of each half a dram: Nutmegs four ſcruples: Pouder of* Diamargaritum Calidum *two drams: Annis ſeed one dram: Cinnamon two ſcruples: Saffron ten grains: Sugar the weight of all the reſt. Make all into a moſt fine Pouder, whereof give two drams in Wine twice or thrice a day, if the pains are much.*

Foreſtus

Foreſtus gave a Decoction of Chamomel flowers in Beer, or a Decoction of Mugwort and Chamomel in Pullet Broth with good ſucceſs.

It's good preſently after ſhe is brought to bed, to give her the Broth of an old Cock, three daies together early in a morning while ſhe is faſting, with a little Cinnamon and Saffron.

The following Pouder taked preſently after the delivery of a woman, doth wonderfully preſerve her from Gripings; inſomuch that it is thought, If it be given a woman after her firſt Childing, ſhe wil never after in her following Lyings-In, be troubled with theſe Gripes.

Take *the greater Comfry Root dried one dram: Peach Kernels and Nutmeg, of each two ſcruples: Amber half a dram: Amber-greece half a ſcruple. Make all into a Pouder; of which let her take one dram in white Wine, or if ſhe be Feaveriſh, in Broth.*

For her ordinary Drink, let her uſe a Decoction of Mugwort with Cinnamon.

If the Gripings be cauſed by Chollerick and ſharp humors, they are cured much after the ſame manner that the Chollick is cured, when it proceeds from Choller. As for Example:

Take *Syrup of Violets and Borrage, of each one ounce: Mucilage of Quince ſeeds drawn out with Violet Water, half an ounce: Water of Borrage and Scorzonera, of each three ounces. Mix all, make thereof a Julep for two Doſes.* Or,

Take *Oyl of ſweet Almonds two ounces: Syrup of Violets an ounce: Borrage Water half an ounce. Mix all for a draught.*

External Medicines muſt likewiſe be uſed, ſuch as are laxative and emollient, which do likewiſe by one and the ſame labor, eaſe pain.

Oftentimes, after they are brought to bed, women are pained in their Groyn, by reaſon of their wombs being gathered together like a ball in their Groyn. It is cured by applying to their Navel a Plaiſter of Galbanum and Aſſafœtida, in the midſt whereof, ſome grains of Muſk muſt be put.

Chap. 24. *Of Acute Diſeaſes of Women in Child-bed.*

WHat we ſaid before touching the Acute Diſeaſes of women with Child, we may now repeat touching the Acute Diſeaſes of women in Child-bed; viz. That they have the ſame Eſſence, and the ſame Signs, with the like Diſeaſes in women which are not with Child, and in men. So that we ſhal refer the Reader for the Theory of theſe Diſeaſes, to their proper Chapters.

Now theſe Acute Diſeaſes are for the moſt part, continual Feavers, both Eſſential, as *Synochus putrida*, a continual Tertian, and the reſt; and alſo Symptomatical, which accompany inward Inflamations, as the Pleuriſie, Inflamation of the Lungs, Inflamation of the Liver, Phrenzy, and ſuch like.

Yet there is a peculiar ſort of Feaver, which befals almoſt al women in Child-bed, which is called by them the Feaver of their Milk, which is wont to befal them about the third or fourth day after they are brought to bed, when their Milk begins to encreaſe in their Breaſts; and it ariſeth from the reflux of the blood from the womb to the Dugs, and the motion and agitation thereof. Which kind of Feaver is reckoned among the Diary Feavers of the longeſt durance; neither needs it any Medicines, becauſe within three or four daies, viz. about the ninth after her delivery, it is finiſhed by ſwear. It is diſtinguiſhed from putrid Feavers, becauſe commonly it ſeizes the woman about the fourth day, after her being delivered, and her Dugs begin to be filled with Milk, and to be troubled with hardneſs, pain, and heat; with heat and heavineſs in her Back and Shoulders; alſo her Child-bed Purgations flow duly, which ſeldom is ſeen in putrid Feavers.

Now putrid Feavers do befal women in Child-bed from three cauſes, viz. Suppreſſion of their Child-bed Purgations or diminiſhing, by the heaping together of bad Humors during the time of their Belly-bearing, which were agitated by her Labors, or by Errors in their Diet. Some add immoderate flux of the Child-bed Purgations, which is rather a ſign of the ſecret badneſs of Humors cauſing the Feaver, but cannot be it ſelf any cauſe thereof.

In ſuppreſſion of the Child-bed Purgations, the blood and vitious humors which are collected during the whol time of her going with child, do flow back again into the greater Veins, and there putrefie, and ſometimes are carried to the Liver, Spleen, and other parts, in which they raiſe Inflamations; or if they abide in the Veins of the womb, they putrefie, and ſo cauſe a Feaver, in thoſe women which were before in perfect health.

But if (the Child-bed Purgations duly flowing) a feaver ariſe, it comes either from ſuperfluity of Choller, or from errors in Diet. Evil Humors agitated by the Labors and Pains of Travel, do eaſily inflame and putrefie, and ſtir up a feaver. Errors of Diet may happen divers waies: And firſt in point of eating in which women that lie In, are wont to be very faulty, ſtopping themſelves with

plenty

plenty and variety of Dishes, which cannot be by them digested, but causeth putrefaction in their Bodies. Another error is committed when Childing women do unadvisedly expose themselves unto the cold Air, especially while their Milk-feaver is in its vigor, which is wont to be terminated by sweating and transpiration, which is hindered by heedless admission of the cold Air, whence it comes to pass that the Feaver which of it self was void of danger, and would in a few daies have ceased, is changed into a dangerous putrid Feaver.

There is yet another frequent Cause of the Feavers of Childing Women, viz. When the After-births are not wholly cast forth, but some portion remains behind. This happens principally in the Womb-Liver, a part whereof is sometimes annexed to the Womb, and left there, doth putrefie; which makes the Child-bed fluxes to come forth greenish, stinking, and Carrion like; and if within few daies it be not separated from the womb, and excluded, it casts the sick woman into great danger of death, seeing it may mortifie the Womb.

If Clotters of Blood, or any other preternatural thing, shal remain in the Cavity of the womb after Child-bearing, it may thereby be known, because the neck of the womb remains soft and open, neither is the inner Orifice thereof shut, neither is the womb drawn upwards; and whereas, when all goes well after Child-birth, the womb is drawn upwards, and its neck and orifice are quickly shut. An Example hereof is propounded by Dr. *Harvey*, in his Treatise *de Partu*, concerning a woman who having a malignant Feaver, and being very weak miscarried; and after exclusion of a perfect Child, and uncorrupted, yet being very weak, with a creeping Pulse and cold Sweats, she was ready to give up the Ghost. He feeling her womb, perceived the Orifice thereof lax, soft, and very wide; and putting in his fingers, he drew forth a Mole as big as a Gooses Egg, having certain holes in it containing a clammy, black, and stinking putrefied matter, and the woman was soon freed from the foresaid Symptomes, and quickly recovered her health.

It happens likewise in some women that the Orifice of the womb presently after their delivery, is so shut up, that the blood contained within the womb, suddenly clottering and putrefying, causeth most sad Symptomes, and when no Art can bring it forth, present death follows. Yet Dr. *Harvey* relates in the place aforesaid, the History of a woman cured by him of this Disease. The Lips of the Water-gate were swelled, and very hot; the mouth of the womb was hard and close shut: He opened it a little with an Iron Instrument which he forcibly put in, so as it would admit an Injection made by a Syringe; and thereupon, clotted, black, and stinking blood, some pounds in quantity came away, by which means the sick woman had present ease.

The Prognostick of these Feavers herein only differs from the Prognostick of such like Feavers which happen to those that are not in a childing condition; because through the Labors of Child-birth, the strength of the Patient is more dejected; and by reason of the Child-bed Purgations suppressed there is a greater redundancy of Humors in the Veins; and in both respects the Party is in greater danger.

The Decision of that famous Question, Whether the computation of the daies of the womans sickness, ought to be made from the beginning of her Disease, or from the day in which she is delivered of her Child, makes much to cleer the Prognostick of this Disease, especially to foretel the Crisis. Which Question we shal therefore thus briefly determine: If the Birth of the Child were natural, attended with no grievous symptomes, and the Child-bed Purgations were as they should be, and the Feaver come some daies after, the account ought not to be made from the day of the Childs birth, but from the day the Feaver began, which was provoked by some other preternatural Cause, viz. Evil Humors lurking within the Body, or from some external Cause. But if the Child-birth were hard and beside the Course of Nature, and the Feaver arose after three or four daies; we must reckon from the day of the Childs birth; because then the whol order of the Body began to be overthrown, and the Humors to be disturbed, which was followed by the Feaver. So in grievous wounds of the Head especially, though the Feaver come not til after the fourth or fifth day, yet the account is wont to be made from the day of the wound received, because the Humors began then to be in a commotion, and to be disposed to cause a Feaver.

The Cure of these Feavers, differs not from the Cure of other Feavers, unless in point of those great Remedies, Blood-letting, and Purging,; in the administration whereof, there is no smal scruple, which we shal briefly endeavor to remove.

As for letting of Blood in acute Diseases of women in Child-bed, the disagreement of Authors is so great, by reason of the contrary Indications on the one side, and on the other, that we can scarcely find two of the same mind. We shal briefly in these following Theorems or Maxims, propound that Opinion which cometh neerest the Mind of the wisest Authors, and is in the course of Practice most successful.

An Acute Disease befals a Child-bed woman, either in the beginning, or in the middle, or in the end of her Lying In.

If it happen in the beginning, and the woman be plentifully purged, there must be no other evacuation

cuation of blood, than that which is directed by Nature when ſhe rightly and conveniently performs her Operations. But if the Child-bed Purgations are ſuppreſſed, or flow ſparingly, let the interior Veins be opened, and take a good quantity of blood away: becauſe at that time the Child-bed Purgations of blood, ought by the appointment of Nature to be plentiful.

If an Acute Diſeaſe happen in the middle time of her Lying In, two things are to be conſidered. The one is, Whether the Morbifick matter be contained in one particular place, or if it be diſperſed through the Veins? The ſecond, Whether the Woman hath been conveniently purged or not, in regard of quantity? If the Diſeaſe proceed from matter ſcattered abroad, as in Feavers, and the woman hath not been fully purged, the lower Veins ought to be opened: becauſe both the Morbifick Matter wil be diminiſhed, and her Natural flux wil be provoked. But if the woman have been ſufficiently purged, and the Diſeaſe get ground, and the Natural Evacuation have not been ſufficient for the Diſeaſe, the inferior Veins muſt be opened notwithſtanding; and ſo much blood muſt be taken away, that by two Evacuations that may be accompliſhed, which the Diſeaſe requires, according to the Doctrine of *Galen*, in the ninth Book of his Method, Chap. 5.

If the Feaver be very high, and great heat vex the Patient, let that be done which we ſhal preſently declare; which ought to be performed when the Diſeaſe ariſeth of Matter driven into ſome corner, and there putrefying.

In a particular Acute Diſeaſe, as the Pleuriſie, Inflamation of the Lungs, Squinzy, and the like; we muſt mark whether the Fluxion be only beginning, ſo that the Diſeaſe is only ready to ſeize upon the Patient, or is in its beginning, and very little blood be collected in the part. For then the inferior Veins are to be opened, that revulſion may be made to ſuch oppoſite parts as are at greateſt diſtance from the part affected, and by that means that prepoſterous motion of Humors may be ſtopped. But if the fluxion be already in good meaſure begun, and an Inflamation bred which proves very troubleſom, whether the woman be ſufficiently purged, or not, the ſuperior Veins are preſently to be opened right againſt the Part affected, becauſe ſuch an Evacuation draws Blood out of the Part Affected. But if the inferior Veins ſhould be opened, which are neither next the part affected, neither can evacuate therefrom, both the ſtrength of the Patient will be weakened by the evacuation, and that matter which is by Nature driven into a corner, and ſubdued, wil not be thereby diminiſhed. And ſo you muſt either draw all her blood in a manner out of her Veins, to revel the matter of the Diſeaſe from the part affected; or the woman will be killed by the Diſeaſe before ſufficient Revulſion be made. Neither need we fear, leſt by taking blood from the upper Veins, we ſhould draw the Courſe thereof from the womb, becauſe in ſuch caſes the ſuperior parts of the Body do abound with blood. And although much blood be taken away, yet are not the Veins ſo emptied, that they ſhould be forced to draw new blood from other parts. Yet for the greater Caution, it will not be unprofitable before blood be taken from the ſuperior Veins, to cauſe the Thighs to be luſtily rubbed, and preſently after to tie them with bands ſo hard as to pain the woman, which muſt abide ſo bound til the bleeding be over, and a little after they may be looſened; and now and then Cupping-Glaſſes muſt be faſtened to the ſame parts, or at leaſt they muſt be again wel rubbed. So we may procure an evacuation of the Matter offending, and yet preſerve the Natural courſe of the blood towards the Womb.

The ſame courſe is to be taken in vehement and burning Feavers: For although the matter offending be diſperſed through the Body, yet is the burning heat ſo great about the Heart and Bowels, that it cannot be ſo wel extinguiſhed by the opening of a ſmal, and far diſtant Vein, as by the opening of a neerer and greater, ſuch as is the Vein called *Baſilica*.

This Method of Curing may be obſerved not only in Child-bed women, but in other women who are taken with Acute Diſeaſes, and have their monthly Courſes upon them.

If in the end of a Womans Lying-In, an acute Diſeaſe befal her, the ſame Courſe muſt be followed as in the middle, the ſame conditions being obſerved; obſerving this for a Rule, That by how much a woman is further from the beginning of her Lying-In, by ſo much more ſafely may the uper Veins be opened; but the neerer ſhe is to the beginning, yea, even in the middle, we are to open thoſe Veins with the greater premeditation. And if the Diſeaſe be not importunate, nor the ſharpneſs thereof require ſuch a thing, and the Natural Purgation be copious, we muſt wholly abſtain. But if the Purgation be ſcanty, we muſt open the inferior Veins to ſupply that which is wanting in the Evacuation. But if the contrary ſhal happen, let us follow that Rule which we preſcribed to be followed, in the urgency of an acute Diſeaſe.

The uſe of Purging in Childing Women that are held with acute Diſeaſes, ſhal be comprehended in theſe following Maxims.

While the Child-bed Purgations do Naturally flow, a Purge is never to be adminiſtred; for it is to be feared leſt Nature be diverted from her buſineſs.
